THE
ENCYCLOPAEDIA OF ISLĀM

10-11-11

ADDITIONS AND CORRECTIONS

- P. 1^a, *Bibliography* art. ECĪJA, l. 3, read: "ii. 1. p. 58" for "i. 58"; *ibid.*, l. 4, read: "Nahr Sūs (l. *Shōsh* = Guadajoz)" for "a Nahr Sūs"; *ibid.*, l. 6, add: *Dā'irat al-Mā'arif*, iii. 679 *sqq.* (*Oshbūna* [Lisbon] l. *Oshūna* = *Osuna*).
- P. 30^a, *Bibliography* of the art. ERITREA, add: Quirinio Maio, *La Colonia Eritrea*, Torino 1891; Nicoletti Altimari, *Da Assab a Cassala*, Rome 1899; Anonymus, *Tre Anni in Eritrea*, Milano 1901; Penne, *Per l'Italia africana*, Rome 1906.
- P. 33^b, l. 27, add: New edition by L. Cheikho, *Corpus scriptorum orientalium, Scriptores arabici*, Beirut 1906—1909, Ser. iii., vol. vi. and vii.; *ibid.*, l. 36 at the end of the article, add: published by P. Chébli, in *Patrologia Orientalis*, Paris 1907, iii. 125—242.
- P. 102^a, l. 28, add: Cf. Evaristo Carusi, *Sui Rapporti fra Diritto romano e Diritto musulmano* (Estratto degli *Atti della Società italiana per il Progresso delle Scienze*, Siena 1913, vii., Riunione), Rome 1913.
- P. 104^a, l. 42, read: "three" instead of "two"; l. 43, add: the edition of the *Risāla* forming the introduction of the *Kitāb al-Umm*, ed. Būlāk 1312.
- P. 116^a, Art. FIṬRA, *Bibliography*, add: Ibn Ḳutaiba, *Mukhtalaf al-Ḥadīth*, ed. Cairo, p. 158 *sqq.*
- P. 141^a, Art. GHARB, l. 24, add: Cf. Michaux-Bellaire, *Le Gharb*, Paris 1913.
- P. 158^a, Art. GHAZNAVIDS, *Bibliography*, add: Ḥamd Allāh Mustawfī, *Ta'rikh-i Guzida*, ed. Browne, i. 390—410; al-Bondārī, ed. Houtsma, *Recueil de textes relatifs à l'histoire des Seldjucides*, ii., see Index.
- P. 189^b, Art. AL-ḤADIRA, *Bibliography*, l. 3, add: [for other MSS. cf. *Cat. Cod. Arab.*, Leiden, i. 353 *sqq.*; *Zeitschr. d. Deutsch. Morgent. Gesellsch.*, lxxviii. 380, N^o. 1597].
- P. 191^a, l. 1, read: "reliable" instead of "reliableh".
- P. 192^b, l. 31, l. 7 a. f., read: "known" instead of "know".
- P. 210^a, Art. ḤAḌRAMAWT, *Bibliography*, add: C. Snouck Hurgronje, *Enkele zegswijzen en een raadsel der Ḥadhramieten*, in *Feestbundel M. J. de Goeje*, Leiden 1891; *do.*, *L'interdit séculier (rifgèh) en Ḥ'adhrāmôt*, in *Revue africaine*, 1905, p. 92—99; *do.*, *Zur Dichtkunst der Bā 'Atwah in Ḥadhramôt in Orient. Stud.*, Th. Nöldeke . . . gewidmet, p. 97—107; *do.*, *Sa'd es-Suwēni ein seltsamer Wali in Ḥadhramôt*, in *Zeitschr. f. Assyriol.*, xxvi. 221—239; *do.*, *Arabie en Oost-Indië*, Leiden 1907, p. 19 *sq.*, French transl. in *Revue de l'Hist. des Rel.*, 1908, lviii., p. 74 *sq.*; C. - P. 258^a, Art. ḤANDŪS, l. 7, read: "*Ḥandūsiya*" instead of "*Ḥandūsiya*"; l. 21, read: "*Berberes*" instead of "*Bèrberes*".
- P. 260^b, l. 15, 25, 28, 30, 36, read: "Musailima" instead of "Musailama"; l. 23, 35, read: "al-Radjdjal b. 'Unfuwa" instead of "Radjdjal b. Unfuwa".

- P. 262^b, l. 20, read: "Note 1" instead of "Note 19".
- P. 264^b, Art. HARAR, *Bibliography*, add: R. Basset, *Chronologie des rois de Harar*, *Journ. Asiat.*, 1914, p. 245 *sqq.*
- P. 265^a, l. 8, read: "ḳā'immaḳām" instead of "ḳā'immaḳām"; l. 33 a. f., read: "Makīami" instead of "Maḳrami".
- P. 266^a, Art. HARBA, *Bibliography*, add: Schwarzlose, *Die Waffen der alten Araber*, see Index.
- P. 267^a, l. 18, read: "Bārghāl" instead of "Barghāl".
- P. 269^b, l. 5, read: "125, 1" instead of "125 9".
- P. 279^a, l. 4, read: "d'Alcaudete" instead of "d'Alcandète".
- P. 281^b, *Bibliography*, l. 14, read: "d'Alcaudete" instead of "d'Alcandète"; add: Berbrugger, *Les époques militaires de la grande Kabylie*, Alger 1857, p. 79 *sqq.*
- P. 282^b, l. 17, add: Vaudal, *Le pacha Bonneval*, Paris 1885, p. 52—60.
- P. 286^b, l. 19, read: "MANĀF" instead of "AL-MANĀF".
- P. 288^b, l. 29, read: "Tabarca" instead of "Tabacco".
- P. 290^a, l. 15 a. f., add: (cf. R. Basset, *Notes sur les Mille et une Nuits*, iii., *Rev. des Traditions populaires*, 1897, p. 146—152).
- P. 290^b, l. 7, add: The romance was published in Tatar Kazan 1867; l. 15, add: Three chapters of a Malay adaptation of this romance have been edited (without indication of MSS.) and translated by P. P. Roorda van Eysinga (*Tjēritēra dari pada sōrang bērnama Hatim Tayi in Uittreksels uit Maleische Geschiedenissen*, p. 6—14, appendix to his *Maleisch en Nederduitsch Woordenboek*, Batavia 1824—1825; Dutch transl., in *De Oosterling*, 1835, i. 352 *sqq.*; cf. also J. J. de Hollander, *Handleiding bij de beoefening der Maleische taal- en letterkunde*, Breda 1893, 6th ed., p. 14^w—14^f). A MS. of the Malay version is found in Paris (A. Cabaton, *Catal. somm. des MSS. . . . indo-polynésiens*, p. 227, N^o. 61, ii.); l. 28, add: cf. also R. Basset, *Bibliogr. des auteurs arabes*, extr. des *Annales universit. de l'Algérie*, sept.—déc. 1913, p. 2.
- P. 295^b, l. 5—6, read: "Muṣṭalaḥ" instead of "Muṣṭalaḥ".
- P. 299^a, Art. HERĀT, l. 6—7, read: "Muṣallā" instead of "Maṣallā".
- P. 299^b, l. 6, read: "Ḳādjar" instead of "Kādjar".
- P. 307^a, l. 17 a. f., add: G. Marçais, *Les Arabes en Berbérie*, Constantine 1913, 1^e partie, Ch. i.
- P. 312^a, l. 20, add: de Sacy, *Mémoire sur divers événements de l'histoire des Arabes avant Mahomet*, Paris 1785; Price, *Essay towards the History of Arabia*, London 1824; l. 35, add: R. Basset, *La Qasidah himyarite*, Alger 1914; l. 38, add: cf. Glaser, *Mitteil. über einige sabäische Inschr.*, Prague 1886.
- P. 313^a, l. 7 a. f., add: Garcin de Tassy, *Hist. de la littér. hindoue et hindoustanie*², Paris 1807, vol. i., Introd.
- P. 314^a, l. 16—17, read: "Mohan Lal" instead of "Mohanhal".
- P. 320^a, l. 15, add: see also Max van Berchem, *Voyage en Syrie*, Cairo 1915, p. 135 *sqq.*
- P. 320^b, l. 6 and 27, read: "Wellsted" instead of "Wellstedt"; ult., read: "Ortoḳids" instead of "Urtuḳids".
- P. 385^b, l. 26, after "iv. 87—178", add: (iv. 92—94 in Friedlaender, *op. cit.*); l. 17 a. f., add: cf. also Goldziher, *Stellung der alten islam. Orthodoxie zu den antiken Wissenschaften*, in *Abh. der Kgl. Preuss. Akad. der Wiss.*, 1915, phil.-hist. Kl., N^o. 8, p. 27—29.
- P. 391^b, l. 21, add: R. Basset, *Rech. bibliogr. sur les sources de la Salouat al-Anfās*, Algiers 1905, p. 21.
- P. 396^b, l. 39, add: Besides the works quoted in the article: Bargès, *Complément de l'histoire des Beni Zeiyan*, Paris 1887, p. 205—217.
- P. 397^a, l. 21, add: R. Basset, *Notice sommaire des mss. orientaux de deux bibliothèques de Lisbonne*, Lissabon 1894, p. 4—6.
- P. 399^b, l. 27 a. f., read: "35" instead of "55"; ult., add: in part translated in Gayangos, *The Muhammedan Dynasties in Spain*, i., App. E, ii., App. A.
- P. 400^a, l. 3, add: cf. also Dozy, *Recherches*², i. 21—40.
- P. 401^b, l. 3, add: Franck, *Moïse Maimonide, sa vie et sa doctrine (Etudes orientales)*, Paris 1861, p. 317—360).
- P. 410^b, l. 6, add: al-'Abbāsī, *Ma'āhid al-Tanṣīṣ*¹, p. 51—57; Bahā' al-Dīn al-'Āmilī, *al-Kashḳūl*, p. 58; MS. Paris, Bibl. Nat., N^o. 3594, f. 77 *sqq.*
- P. 411^a, l. 9, add: cf. J. Tkač, *Über den arab. Kommentar des Averroes zur Poetik des Aristoteles*, in *Wiener Studien*, xxiv. 70 *sqq.*
- P. 414^b, l. 25 a. f., add: R. Basset, *Mélanges africains et orientaux*, Paris 1915, Ch. vii.

- P. 417^b, l. 24, read: "xvii." instead of "xviii".
- P. 424^a, l. 29, add: On Ibn al-Ṭiṭṭakā, cf. also the observation by Mirzā Muḥammad Ḳazwīnī in the Persian introduction to his edition of Djuwainī's *Ta'rikh-i Djahān-gushā*, i. (G. M. S., xvi.), 34 sq. (see also *Kīt. 'Umdat al-Ṭālib fī Ansāb Āl Abī Ṭālib*, Bombay 1318, p. 159 sq.). According to the same author, *ibid.*, p. 14, the proper title of the *Kītāb al-Fakhri* is *Munyat al-Fudalā' fī Tawārikh al-Khulafā'* of which the history of the 'Abbāsids by Hindūshāh b. Sandjar, entitled: *Kitāb Tadjārib al-Salaf*, is an enlarged Persian translation. The Bibl. Nat. of Paris possesses a defective manuscript of the latter work (N^o. 373 in Blochet, *Catal. des Mss. persans*, i. 251), but several copies exist in Ṭeherān.
- P. 426^a, l. 10, read: "Asafū" instead of "Asafir".
- P. 435^b, l. 13 a. f., add: Jouannin, *La Turquie*, p. 243—252; La Jonquière, *Hist. de l'empire ottoman*, p. 311—313.
- P. 436^a, l. 33, add: Barbier de Meynard, *Ibrahim fils de Mahdi*, in *Journ. Asiat.*, 1896, Ser. 6, xiii., p. 201—342; Humbert, *Arabica analecta inedita*, Paris 1838, p. 60—72; al-Itidli, *I'lām al-Nās*, Cairo 1297, p. 144—148.
- P. 447^a, l. 18 a. f., read: "Abu 'l-Nadjm" instead of "Abu Nadjm".
- P. 491^b, l. 10 a. f., read: "al-Ālamgiriya" instead of "al-Ālamgiri".
- P. 560^b, l. 30 a. f.: The equation is to be read as follows:
- $$2.97 \times 6 + 2 \times \frac{2.97}{6} = 18.81 = 4.72 \times 4 = 18.81$$
- P. 565^a, l. 18 a. f., read: "ittiḥād" instead of "ittiḥād".
- P. 566^b, l. 8 a. f., read: "329 sq." instead of "322".
- P. 590^b, l. 24 a. f., read: "ma'mūr" instead of "ma'mūr".
- P. 592^a, l. 17, add: Gaudefroy-Demombynes, *Le pèlerinage à la Mekke*, Paris 1923.
- P. 594^b, l. 24 a. f., add: E. Chantre, *Recherches anthropologiques au Caucase*, Lyon 1885—1887.
- P. 601^a, l. 5, read: "amghār" instead of "amrar".
- P. 602^a, l. 3 a. f., add: H. Basset, *Essai sur la littérature des Berbères*, Alger 1920.
- P. 613^a, l. 8 a. f., read: "162 sq." instead of "1623".
- P. 617^b, l. 29 a. f., read: "des" instead of "der"; l. 2 a. f., read: "südlichen" instead of "südliche".
- P. 618^a, l. 20 a. f., read: "Drewnestei" instead of "Drewnestei"; l. 9 a. f., read: "Winogradow, Feodosiya" instead of "Minogradow, Feodesiva".
- P. 796^b, Art. KĀMIL, l. 18, read: "vowel" instead of "consonant".
- P. 730^b, Art. ḲARA DENİZ, l. 26 sq., read: "ed. Société géographique de Paris, 1839, mare Ponti quod vulgariter Mare Majus appellant".
- P. 787^b, l. 27 ab infra, read: "maf'ūlun" instead of "maf'ūlātun".
- P. 884^a, l. 21—22, read: "In November 1922 Turkey abolished the Sultanate and on October 30, 1923, declared itself a Republic".
- P. 885^b, fin., add: *Oriente Moderno*, Rome 1922 sq.
- P. 1059^b, l. 18, read: "Köprüsu", instead of "Köprüsuya".

Vol. i., 1071^b, l. 7 sqq., read: "Dō'AN (DAW'AN)" instead of "Dō'AN (DAW'AN)"; l. 28—30, drop "Hamdānī mentions, etc."; l. 36—37, read: "p. 86, 21, 24, 87, 18, 21" instead of "178, 25 and 181, 18"; l. 38, add: Sprenger, *Die alte Geographie Arabiens*, §§ 254—256, 310, 439; van den Berg, *Le Ḥadhramout*, p. 13, 23 sqq., 42; de Goeje, *Revue Colon. Internat.*, 1886, i. 106 sq.; Landberg, *Ḥadhramūt*, see Index.

EBU, the Ottoman-Turkish pronunciation of Abū [q. v., i. 73^b *et seq.*].

ĒCIJA, the capital of a district in the eastern province of Seville in Spain with 25,000 inhabitants, is picturesquely situated on the left bank of the lower course of the Genil, which is navigable below it, in a torrid valley, — whence it is called el Sarten de España “the bakehouse of Spain”; its streets are narrow and its church towers (formerly minarets) covered with azulejos. It is the ancient Iberian Astigi of which the Arabs made *Istidja*, *Etidja* (rarely *Essidja* in this period) whence is derived the Spanish Ēcija (st > c, z, as in Basti, Baṣṭa, Baza; Caesaraugusta, Saraḡoṣṭa, Zaragoza; Musta‘rab, Mozārab etc., cf. Gröber, *Grundriss der Romanischen Philologie*, I², p. 520). After the battle of Laguna de la Janda in 711, the Roman Colonia Julia Augusta Firma, one of the four *conventus juridici* of the Provincia Baetica and the Gothic see of Astigi was forced to conditional surrender by Ṭarīk after a siege of a month; in the history of the Arab period it played an important part, particularly as the north-western stronghold of the renegade ‘Omar Ibn Ḥaṣṣūn [q. v. and the article NOBASTRO, i. 736^b] in his long rebellion, till the town was taken in 891 by Emir ‘Abd Allāh of Córdoba [cf. the article CARMONA, i. 829^a]. It had always a large Mozarab community, was taken in 1240 by Ferdinand III of Castile, and repopulated with Christians in 1262 by Alfonso X the Wise after the expulsion of the Morescoes. In 1402 it was made a city (*ciudad*) by Henry III and throughout the history of the kingdom of Granada it plays an important part as one of the frontier fortresses of Castile as it did at a later period again in the war of the Spanish Succession and the Peninsular war.

Bibliography: Yāḡūt, *Mu‘djam al-Buldān*, i. 242; *Marāsid al-Iḥṭā’*, iv. 98; Abu ‘l-Fidā, *Geography* (French translation), i. 58 (wrongly speaks of a Nahr Sūs, on which Ēcija lies, although shortly before he had mentioned the Shennil = Genil as flowing past Granada); Madoz, *Diccionario geográfico-estadístico-histórico*, vii. 438; Eduardo Saavedra, *Estudio sobre la invasión de los Arabes en España*, p. 77; Dozy, *Histoire des Musulmans d’Espagne*, ii. 287—290; Simonet, *Historia de los Mozárabes*, Índice 935; Varela y Martel, *Bosquejo histórico de la Ciudad de Ēcija* (Ēcija 1892), p. 352.

(C. F. SEYBOLD.)

EDESSA. [See URFA.]

EDFU (ḲDFU, ḲṬFḲ), a town on the west bank of the Nile, the Apollonopolis Magna of the Greeks and Romans, about halfway between Thebes and Assuan, the capital of

the district of Edfu in the province of Nubia. The name goes back to the Egyptian Thōt, Coptic Athō. The place is chiefly celebrated for its temple of Hōrūs built in the Ptolemaic period but this, which in course of time became buried in ruins, is rarely mentioned in Muhammadan literature. An archaeological note is given by Makrizi, who says that in the viiith century a female figure of stone was dug up there; she was represented as sitting on a chair with legs crossed and wore a kind of net; on the back was a tablet the inscription on which is described as Greek. — The Arab geographers often extol Edfu for its wealth in palms and describe it as a flourishing city to which numerous villages, estates and islands belong. About the year 1400 A. D. it comprised 24,762 *feddān*, its taxes amounted to 17,000 dinars, according to other authorities 20,000. The character of the inhabitants is also highly praised. In the modern period the chief industry is its potteries. The inhabitants, the great majority Muhammadans, with a few Copts, number (according to Boinet Bey) 4760, including the suburbs 14,261.

Mehren), p. 35, 232 *et seq.*; Ibn Duḡmāk, *Kitāb al-Intiḡār*, v. 29; Ibn al-Djifān, *al-Tuhfa al-saniya*, p. 191; Makrizi, *Khitaṭ*, i. 237; d’Anville, *Mémoires sur l’Égypte ancienne et moderne*, p. 209; Quatremère, *Mémoires*, i. 44; ‘Alī Bāshā Mubārak, *al-Khitaṭ al-djadida*, viii. 44 *et seq.*; Amélineau, *Géographie de l’Égypte*; Boinet Bey, *Dictionnaire géographique de l’Égypte*; Maspero, *Égyptische Kunstgeschichte* (German edition of Steindorff); Baedeker, *Ägypten*, p. 330. (E. GRAEFE.)

EDIRNE (Gr. Ἀδριανούπολις, Engl. ADRIANOPLE, Fr. ANDRINOPLE, in Idrisi, transl. Jaubert, ii. 383 (أدرنوبولس) was taken from the Byzantines in 763 = 1362 with the surrounding country by the Ottomans under Murād I. The Turkish sources give 761, 762 and 763 A. H. as the date of its capture and the statements of western writers on the point are equally divergent and indefinite; Jirecek in his *Geschichte der Bulgaren*, p. 328, decided on 1363 but Murād I’s letter on his victory of the beginning of Dhū l-Ḳa‘da 763 = end of August 1362 in Feridūn, *Munshiyyāti Selāṭīn*, i. 91 *et seq.*, suggests 763 = 1362 as the date; cf. v. Hammer, *Gesch. d. Osm. Reiches*, i. 163 *et seq.*; Zinkeisen, i. 218—221; Gibbon (ed. Bury), vii. 31.

The city picturesquely situated on an elevation at the confluence of the Maritza, Arda and Tundja in the centre of a fertile depression, had been strongly fortified against Bulgar invasion in the later years of the Byzantine Empire; Murād I made it the European residence (*maḡām*) of the

Sultāns — 768 A. H. is the year given. During the wars of succession between the sons of Bāyazid I, Mīr Suleimān Çelebi and, after his death, Mūsā Çelebi continued to use it as such. Even after the conquest of Constantinople (1453) it continued to be the second residence while Brusa fell completely into the background. The Sultāns stayed there regularly for longer or shorter periods with the whole court and government, notably before the campaigns against Austria and Poland but also for the sake of the hunting there. From Ahmed I's reign (beginning of the xviiith century) Adrianople became the favourite residence of the Sultāns: Mehemmed IV (1648—1687) spent the greater part of his reign in Adrianople; in Muṣṭafā II's reign (1695—1703) the Sultān's lengthened stay in Adrianople led to a revolt of the Janissaries and to his deposition. Henceforth Adrianople was only visited occasionally by the Sultāns and in the course of the xviiith century it was gradually abandoned as a royal residence. During the Russo-Turkish wars of the xixth century, Adrianople was twice occupied by the Russians, in 1829 from the 20th August—20th November and in 1878 from the 20th January to the end of March. The government of Adrianople was in earlier times (till 1826) in the hands of the Bostāndjibāshi [q. v., i. 766]. Justice was administered by a Mulla Kādī of high rank. After the administrative reforms Adrianople became the capital of the wilāyet of the same name and in 1911 the headquarters of the Fourth army corps (*kol ordu*). On the 25th March 1913 the town was captured by the Bulgarians after a siege of five months.

Adrianople was for long of great importance under Turkish rule not only as a royal residence and military centre but also as a commercial town; in the xvth century the original Greek population was joined by numerous Jewish emigrants from Spain, Armenians, Ragusans and other foreigners who carried on trade with the west.

The city grew considerably; the old Byzantine fortified town (the so-called *warosli*) remained to the Greeks, Armenians, Jews and Franks while the Turks settled outside the walls. In 1850 there were over 30,000 hearths, i. e. about 150,000 inhabitants; with the retirement of the Sultāns from Adrianople began the gradual decline of the city; about the time of the Russo-Turkish war of 1828-1829 the population was estimated at 80,000—90,000 of whom 50% were Turks, 33% Greeks and Bulgars, and the remainder Jews, Armenians and Franks. The number has since risen to somewhat over 100,000.

From the time of the sons of Bāyazid to the reign of Murād IV (the middle of the xvth century) and for a brief period again under Muṣṭafā II (1675—1703), Adrianople was one of the mints of the Ottoman Empire.

The splendid monuments of architecture in the city date from its period of greatest prosperity in the xvth and xviith centuries. Of Byzantine buildings there have survived the ruins of a church called Aya Sofia. The ancient quadrangular fortress had four huge round towers at the corners and twelve square towers in each wall. Nine gates are mentioned, viz.: *Kule Kapısı*, *Top K.*, *Kafes (Kafesli) K.*, also called *Mihal K.*, *Kecedjiler* or *Kazandjilar K.*, *Oghrin (Egri) K.*, *Manias K.*, *Tawik K.*, *Inedjilar* or *Stambul K.*, *Orta K.* (according to *Enis al-Musāmerin*; cf. Niebuhr, *Reisen*,

iii. 164). The number of gates and their names in Ewliyā, iii. 428 and v. Hammer, *Gesch. d. Osm. R.*, vi. 700 differ from these. The *Porte Triomphale* illustrated in Sayger-Desarnod is probably identical with the *Germé K.* in Djewri, p. 6 *et seq.*

The New Imperial Palace on an island formed by the Tundja was built by Mehemmed II in 1452 and Selim I (1512—1520); later Sultāns added individual kiosks and other buildings. By the beginning of the xixth century it had begun to fall into decay; in 1829 the peace with Russia was signed there; on the 17th January 1878 the Turkish troops retreating before the Russians blew up the main buildings. The outlook tower dating from the xviith century still remains. We infer from the accounts of European travellers of the xviith and beginning of the xviiith centuries, that the Serai was similarly planned to the Old Serai of Topkapı in Constantinople, cf. the last account in v. Moltke, *Briefe aus der Türkei*, 6th ed., p. 150. According to Ewliyā the New Serai occupied the hunting-ground of the Greek emperors: as a matter of fact the site does seem identical with the "meadows of Connema" on the Tundja where in 1337 the wedding of the Bulgar Crown-Prince Michael to a Byzantine princess was celebrated (Kantakuzen, *Hist.*, i. 508). — The Old Serai lay near the Selimiye on the "planetree square" (*Kawaḥ Meidāni*) and is said to have been built by Murād I in 767 A. H. (according to others in 820 A. H. by Mehemmed I); it was afterwards — according to Ewliyā in the reign of Suleimān I — adopted as barracks for the 'Adjemoghlan, like similar buildings elsewhere (the Galata Serai, the Serai in Brusa, etc.) and is known to have been used as such to the end of the xviiith century.

The Mosques. The old churches were apparently left to the Christians at the conquest with the exception of the Çelebi Djāmi^c, which is considered the oldest mosque; another mosque, the *Kılıse Djāmi^c*, situated like the preceding within the walls, with an ancient consecrated fountain, was turned into a mosque by Mehemmed II. Gerlach in 1578 counted 15 Greek churches.

The oldest mosque is that of Bāyazid Yıldırım also called Kupeli Djāmi^c, near the Mihal bridge on the Maritza; 792 is given by Hādjī Khālifa, *Taḳwīm*, as the date of its erection while the author of the *Enis al-Musāmerin* gives 802 A. H.; Ewliyā says it was completed by Mehemmed Çelebi.

The second oldest mosque is the "Old Djāmi^c" (*Eski Djāmi^c*, formerly also called *Ulu Djāmi^c*), begun by Mīr Suleimān Çelebi, continued by his brother Mūsā and completed by Mehemmed I, though some authorities say it was only finished by Murād II; it was burned down on the 14th Redjeb 1159 (30th July 1746) and restored the following year.

Murād II built three mosques, the largest of which was the Üş Şherefeli, so called from the three balconies on two of its four minarets; it took ten years (841—851 A. H.) to build (*Enis al-Musāmerin*). The same Sultān built the Dār al-Hadīth Djāmi^c (in 838 A. H.), in the forecourt of which is the mausoleum of the two princes Hasan and Orkhān, sons of Murād II, and a year later (839) the Murādiye, originally a Mewlewi monastery.

From this earlier period the following mosques also date:

1. Eşhe (Ā'isha) Kadın Djāmi^c, on the

road to Stambul, built in 823 by 'A'īshe Sultān, daughter of Mehmed I.; 2. Khōdjā Elyās at the gate Kafeskapu, dating from 825 H.; 3. the mosque of Mihalbeg on the Tundja, with hospital and poor-kitchen dating from 825 H.; 4. the Beilerbei Djāmi', dating from 832 H., as well as the mosque of Şarūdje Pasha, which is well-known because the head of the Grand Vizier Kara Mustafa who was executed after the unsuccessful siege of Vienna in 1683, is buried there.

In the reign of Mehmed II. there were built: the Selim Çelebi Djāmi' (in 867, or 873 A. H.), the Sultān Djāmi', founded by Sittī Sultān, wife of the Sultān, in 877 H., the mosque at the Zāwiye of Şādiķdede (882 A. H.), and the mosque of Djezeri Kāsim Pasha (883 H.)

Bāyazīd II. built the mosque, which bears his name, on the bank of the Tundja during the years 889—893 (1484—1488); it was particularly celebrated for its splendid philanthropic endowments (medrese, hospital and asylum, poor-kitchen) and is therefore sometimes also called Yeni 'Imāret Djāmi'. His Vizier Suleimān Pasha founded another mosque near the "New Bridge". In the reign of Selīm I, Lari Çelcibi built a mosque in 920 A. H.; Suleimān I built the mosque attached to the Zāwiya of Şhūdja' and the Tashlik Djāmi', the latter being one of the famous Sinān's works.

The most celebrated building in Adrianople, the Selimiye mosque was built for Selim II in 976—982 (1568—1574) by the architect Sinān, who describes it as his greatest masterpiece by which he surpassed even Aya Sofia. Situated on the highest part of the town with a large cupola and four slender pillarlike minarets each with 3 balconies and as many staircases, and a spacious forecourt, and splendidly equipped in the interior, it became the court-mosque of the city. In Adrianople Sinān also built the mosque of Khāşşeki Sultān at the New Bridge and the mosque of Defterdār Mustafa Pasha.

40 large and small mosques in all are mentioned besides a number of medreses, schools of Tradition (*Dār al-Hadith*), Dervish monasteries and Zāwiyas. The Selimiye is further said to have had a library containing 5000 volumes.

The bezezins (warehouses), çarshi (bazaars) and khāns (fondachi) of this city are equally celebrated. The "Old Bezeztin", a wakf of the Dār al-Hadith Djāmi' was built by Murād II, the other, a wakf of the "Old mosque" by Sultān Mehmed I. These are surpassed by 'Alī Pasha's Bazaar (967 = 1559-1560) built by Sinān for Semiz 'Alī Pasha, and the Shoemakers' Bazaar (*Kawwafar Çarshisi*, also called *Uzun Çarshu*), built by Murād III as a Wakf of the Selimiye mosque. Among the 18 larger khāns may be mentioned: the Khān Rustem Pasha, built by Sinān, that of Mustafa Pasha (*İki Kapulu*) and the largest of all, the Khān 'A'īshe Kadın, near the mosque of the same name, built in 1018 (1609-1610) by Ekmekdjizāde Ahmed Pasha.

The Serais of the Viziers and Pashas (detailed in Ewliya, iii. 458 *et seq.*) were also very numerous; they were, like the Imperial Palace, left to fall to pieces after Adrianople lost its importance as the second royal residence.

The stone bridges over the Maritza and Tundja, which in part date from the Byzantine period, deserve special mention. The following are given:

1. the bridge at the Serrādj-khāne, built in 855 (A. H.) by Shihāb al-Din Pasha, collapsed at the beginning of the xviith century and was rebuilt; 2. The bridge of Bāyazīd II over the Tundja, with 6 arches; 3. the bridge near the mosque of Bāyazīd I, dating from the Byzantine period and repaired by Suleimān I in 951 A. H.; 4. a bridge of the year 1010 A. H. at the tomb of the saint Sefershāh; 5. the Mihāl bridge, of the Byzantine period, repaired in 823 by Mehmed I and in 1050 A. H. by Kemankesh Mustafa Pasha; 6. the New Bridge of Ekmekdjizāde Ahmed Pasha of the year 1027 A. H.

The aqueducts were built by Suleimān I and restored in the beginning of the xviiith century (v. Hammer, *Gesch. d. Osm. Reiches*, vii. 66).

Bibliography: The detailed monograph on Adrianople compiled by Khibri 'Abd al-Rahmān of Adrianople in 1046 (1637-1637) under the title *Enis al-Musāmerin* (Royal Library of Vienna 1052) is extracted in Hādjdji Khalifa's *Rumeli und Bosna*, transl. by v. Hammer, Vienna 1812, p. 1—15 and in Djewri's *Chronicle* (Stambul 1291) cf. v. Hammer, *Gesch. d. Osm. Reiches*, x. 691 *et seq.*; besides the long section in Ewliya Çelebi, vol. iii., we may quote the descriptions by European travellers in the xviith and xviiith centuries (John Covel in the *Early Voyages and Travels in the Levant* by Th. Bent, London 1893; Antoine Galland, *Journal*, ed. by Ch. Schefer, Paris 1881; E. Chishull, *Travels in Turkey*, London 1747; *Letters of Lady Montague*, letters 25—34). The decay of the city in the beginning of the sixteenth century is described by George Keppel, *Narrative of a Journey across the Balkans* (London 1831), i., and Moltke, *Briefe über Zustände und Begebenheiten in der Türkei*, 6th ed., p. 150 *et seq.*; Nicolas de Nicolay, *Navigations* etc. gives types of the inhabitants in the xviith century. Views and plans of the mosques and other buildings are given by C. Sayger et A. Desarnod, *Album d'un voyage en Turquie en 1829-1830* (Paris n. d. fol.), Thomas Allom and Robert Walsh, *Constantinople*, vol. ii. 73 and 77, and notably by C. Gurlitt, *Die Bauten Adrianopels in Orientalisches Archiv*, v. i. p. i. and ii. (cp. with Jacob in *Der Islam*, vol. iii. 358—368).

(J. H. MORDTMANN.)

EDJNEBI, the Turkish pronunciation of the Arabic *Adjnabi*, "stranger" [q. v., i. 141^h].

EDREMID, the capital of a Kazā of the Sandjak of Karasi in the Wilayet of Brusa, with a population of Turks and Greeks (c. 8000 souls in all of whom 2000 are Greeks, in 1883 houses), is situated 5-6 miles inland from the port of Akçai in the uppermost corner of the Gulf of Edremid. The ruins of the ancient Adramyttion (*Ἀδραμύτιον*, *Ἀδραμύτιον* in the Byzantine authors, *أدرمتو* in Idrisi) are at Karatash on the sea near the Skala of Kemer-Edremid. Adramyttion was destroyed by the Turcoman Tçzçzç who had established himself in Smyrna since 1090, and after it had been rebuilt the town again suffered at the hands of another Turk Monolykos in 1115 (*Alexias*, ii. 224, 245, ed. Reifferscheid). To defend it against such attacks Manuel I fortified the town (about 1160; Niketas, p. 195). Early in the sixteenth century Edremid fell into the hands of the Karasioglu of Bergama, after the Genoese

of Phocaea had undertaken the defence of the town against the Turks (Pachymeres, ii. 557 *et seq.*). When Sultān Orkhān dispossessed the Karasioghlu about 1345, Edremid passed with the other lands of this dynasty under Ottoman rule. In 1403 Timūrlank's troops on their return march from Brusa to Magnesia made a raid on Adramyttion, Assus and Pergamon from Balikesri (Ducas, p. 72, compared with Sheref al-Din). It is not known when the town was transferred from the sea-coast to the interior.

EDRIS. [See IDRIS.]

EFENDI, an Ottoman-Turkish word borrowed from the Byzantine Greek ἀφέντης (Du Cange), derived from the ancient Greek αὐθέντης "sir, master", a legal term (used by Phrynicus, Polybius and even Euripides with this meaning). This name is given to men who have had a liberal education; ordinary people and subordinate officers are called *Agha* (Aa by elision of the velar) they receive the title *Efendi* when they have completed their literary education. *Efendim* (abbreviated familiarly and jokingly to *Efem*), "Sir", "madam". The Kādī of Constantinople is also called *Istambol Efendisi*. The *Ra'is-Efendi* (for *Ra'is al-Kuttāb* = "chief of the scribes") was before the reforms the Secretary of State for Foreign Affairs. The Sultān also holds but not exclusively the title *Efendimiz* = "our Lord"; the Arabs of Egypt apply the analogous expression *Efendi-nū* to the Khedive. This term is purely Turkish and has penetrated everywhere that Ottoman influence has made itself felt.

Bibliography: J. Psichari, *Efendi*, in the *Mélanges Havet*, p. 387—427; A. de Biberstein Kazimirski, *Dictionnaire Arabe-Français*, i. 41; Barbier de Meynard, *Dictionnaire Turc-Français*, i. 42-43.

(CL. HUART.)

EGERDIR, the capital in a Kaṣā of the Sandjak of Hamidābād in the Wilāyet of Kōniya, situated on a tongue of land at the south end of the lake of Egerdir, with a few thousand inhabitants, all Muhammadans; on the adjacent island of Nisi (Νῆσι), Turkish Nisin, Nis adasi with a monastery live about 1000 Turkish-speaking Greeks. The town presumably fell into the hands of the Saldjūks at the same time as the district of Isparta, which Kiliđj Arslān III conquered (600-601 A.H.) (see Houtsma, *Recueil* etc., iii. 62); its citadel which is now destroyed is said to have been built by Kaiḡubād I. After the break-up of the Saldjūk empire, Egerdir became the capital of the Turkoman Hamidoghlu; one of the first rulers of this dynasty, Felek al-Din (beginning of the xivth century) gave it the name Felekbār, or Felekābād (Abu 'l-Fidā, *Geography*, transl. by Reinaud, ii. 2, 134). In 783 or 784 A.H. the last Hamidoghlu sold his kingdom to Murād I and Egerdir thus passed under Ottoman rule. Timūrlank conquered the town and the fortified island of Nisadasi on the 17th Sha'bān 805 = 11th March 1403, (Sa'd al-Din, according to Sheref al-Din on the 17th Redjeb) on his march through Anatolia and gave them to the Karamanoghlu whom he restored; the latter had to return them to the Ottomans in 1425 with the

district of Hamideli. The town has no less than 30 large and 18 small mosques and also a small library with 218 manuscripts; the name was originally pronounced Egridür (Ibn Baṭūṭa, ii. 267; Ibn Faḍl Allāh in *Not. et Extr.*, xiii. 360, 384).

Bibliography: Sa'd al-Din, i. 211 *et seq.*; Hādījī Khalifa, *Djihānumū*, p. 640; Sarre, *Reise in Kleinasien*, p. 142 *et seq.*; cf. the article HAMIDOĞLU. (J. H. MORDTMANN.)

EGIN, the capital of a Kaṣā containing about 60,000 people in the Sandjak of Kharput in the Wilāyet of Ma'mūrāt al-Aziz, occupies a picturesque site about 3000 feet above sea-level in a wooded hollow, where the river widens, on the right bank of the Kara Şu or western Euphrates, N. E. of 'Arab-kir surrounded by a crescent of hills 1300 feet high, down whose sides fall numerous streams. The town is believed to have been founded in the xth century by Armenians from Waspurakān (see St. Martin, *Mémoire sur l'Arménie*, i. 189). So recent a writer as Von Moltke still describes it as a stronghold of the Armenians, who leave it in their youth for Constantinople and return with the wealth they have amassed. More recently the population estimated by Cuinet at 19,000, by Yorke at 15,000, is composed one half of Armenians the other of Turks. In 1895-1896 there were massacres of Armenians in the town.

Bibliography: Hādījī Khalifa, *Djihānumū* (Constantinople 1145), p. 624; Ritter, *Erdkunde*, x. 790—792; H. von Moltke, *Briefe über Zustände.... in der Türkei*, p. 378 *et seq.*; V. W. Yorke in the *Geogr. Journ.*, viii. (1896, ii.), p. 333 *et seq.* (R. HARTMANN.)

EGRI, German Erlau, archbishopric and the political centre of the Hevesian comitate in Hungary, was in Turkish hands from 1576 to 1687. It is particularly celebrated for its heroic and successful defence under Stephan Dobo from the 9th Sept. to the 18th Oct. 1552 against overwhelming forces under the Vizier Ahmed (Von Hammer, *Gesch. d. Osm. Reiches*, iii. 307 *et seq.*; Jorga, *Gesch. d. Osm. Reiches*, iii. 243). It was not till 1596 that the Turks, in the reign of Mehemed III, succeeded in taking it (v. Hammer, *op. cit.* iv. 262 *et seq.*; Jorga, *op. cit.* iii. 321 *et seq.*). In 1687 the town surrendered to General Caraffa on the death of the commander of its garrison, 'Othmān Rustem Agha (v. Hammer, *op. cit.*, vi. 507; Jorga, *op. cit.*, iv. 229).

EGRI-DAGH. [See ARARAT i. 420b.]

EGYPT.

The name Egypt — the etymology is more correctly preserved in the German form Ägypten — is derived from the Greek Αἴγυπτος of which only the abbreviation *Kibē* survived into the Muhammadan period as the name of the inhabitants of the country. The land itself is known by the old Semitic name the Arabic form of which is Miṣr; from this the colloquial language has made Maṣr. The Muslim conquest began at the end of the year 18 = 639. From that year to the present day Egypt has been one of the centres of the political, cultural and religious development of Islām. Nowhere else has Islām come into such active contact with modern Europe as in the land of the Nile. It is a very difficult task to give a survey of the multifarious aspects of Egyptian life in the purely Muslim period but with this modern development it becomes well nigh impossible. If in

spite of this an attempt is here made to give a comprehensive survey, it is only possible by making an essential distinction between mediaeval and modern Egypt. The modern period in Egypt begins with the French expedition of 1798 and with Muhammad 'Alī. There are many connecting links between the old and the new period but it is nevertheless an entirely new Egypt with entirely new aspects which must be treated in quite a different fashion in such an article as this, that arises in the nineteenth century. The invasion of the Nile valley by European civilisation has been for the latter of immensely greater moment than even the rise of Hellenism was. An entirely new period begins with the Khedives in contrast to which perhaps the whole history of Egypt and certainly the Muslim period forms a distinct unity. The subject has been divided with reference to this distinction. Here we shall only discuss mediaeval Muhammadan Egypt (639—1798) and refer the reader to the article **KHEDIVES** for Egypt under European influence.

I. THE HISTORICAL DEVELOPMENT.

As all the dynasties and important men are dealt with in separate articles, the object of this article is only to give a general survey and detail the historical aspects and events which cannot or ought not to be given in the separate articles.

Survey of

A. H.	the rulers of Egypt.	A. D.
18—21	Conquest by 'Amr b. al- 'Āṣ.	639—641
21—38	Governors for the Or- thodox Caliphs. . . .	641—658
38—132	Governors for the Umai- yads	658—750
132—254	Governors for the 'Abbā- sids	750—868
254—292	Dynasty of the Ṭulūnids	868—905
292—323	Governors for the 'Abbā- sids	905—935
323—358	Ikshīdīd dynasty	935—969
358—567	Fāṭimid Caliphs	969—1171
567—648	Aiyūbid dynasty	1171—1250
648—792	Bahṛī Mamlūks	1250—1390
792—923	Burdjī Mamlūks	1390—1517
923—1212	Ottoman Pashas and Mamlūks	1517—1798
1212	Napoleon's Expedition. Beginning of the mo- dern period	1798

The great conquests in Syria and the 'Irāk displaced the capital Medina to the outskirts of the new empire. Byzantine Egypt constantly threatened the young empire and even Medina itself lay perilously near the Byzantine naval harbour of Klysma (Kulzum, Suez). Egypt with its rich corn-supplies must also have appeared a much more desirable acquisition to the central government than the more distant Syria or 'Irāk, at least a regular traffic in corn to the Ḥidjāz began immediately after the conquest. It is most improbable therefore that there is any historical foundation for the Arab story that Egypt was conquered against the wish of the Caliph. By the year 18 (639) the raiding policy of the early years of the conquest had already been abandoned for one of permanent occupation. The state of affairs in Egypt

at that time invited the Arab conquest. The ten years of Persian rule had been followed by a strong Byzantine reaction after the victories of Heraclius. The latter hoped by his *εὐφροῦνον* to terminate the endless strife between Monophysites and Dyophysites and at the same time give the resuscitated empire an united church. But it was too late, the Monophysite Egyptians, who apparently never grasped the Monothelitic proposals for compromise, believed that the hated creed of Chalcedon was to be forced upon them. As at the same time the financial claims of the empire on Egypt were very great and the administration of church and finance were in the same hands, it may be imagined that the attachment of the Egyptians to Byzantium was not overgreat. In 631 the emperor Heraclius had sent Cyrus, previously Bishop of Phasis in the Caucasus, to Alexandria as Patriarch and at the same time head of the civil administration. For ten years this man sought by every means in his power to persuade the Coptic church to adopt the *εὐφροῦνον* and at the same time to increase the revenues of the treasury. The portrait of Cyrus is painted blacker and blacker by later Coptic tradition; for not only did he indirectly pave the way for the Arabs but he was the governor of Egypt who concluded the most important treaties with the Arabs. It is from Cyrus that the essential features of the half-legendary character of the Muḥawḳis [q. v.] of Arab tradition are derived. The conqueror of Egypt was 'Amr b. al-'Āṣ [q. v., i. p. 334^b *et seq.*]. He had already distinguished himself in Syria and now appeared unexpectedly in December 18 (639) on the eastern frontier of Egypt from which the troops had been withdrawn and about a month later (Muḥarram 19 = January 640) captured Pelusium with only 3000—4000 men. 'Amr could not risk a decisive battle till he had been reinforced by about 5000 men under the leadership of Zubair, the celebrated companion of the Prophet. With these he defeated the Byzantines under the Augustalis Theodoros in the battle of Heliopolis (Radjab 19 = July 640), which was immediately followed up by the occupation of one of the suburbs of Babylon [q. v., i. 550]. The citadel of the town held out for some time longer. Cyrus who was within its walls entered into negotiations with 'Amr in spite of considerable opposition in his own camp and then left Egypt to have the treaty proposed with 'Amr ratified by the Emperor. Heraclius was exceedingly enraged, Cyrus was accused of treason and banished; soon afterwards Heraclius died (23rd Šafar 20 = 11th February 641). As his death seemed to destroy all hope of relief, the citadel of Babylon capitulated on the 21st Rabi' II = 9th April 641. The eastern Delta and, as Babylon was the key to the upper Nile valley, Upper Egypt also thus fell into 'Amr's hands. He now crossed the Nile and following its western arm, slowly advanced on Alexandria via Nikiu, the see of a bishop, which surrendered on the 26th Djumādā I = 13th May. Here he met with a vigorous resistance and, although able to occupy the surrounding country temporarily, saw for the time being no hope of actually capturing the strongly fortified seaport. We are not very well informed as to the gradual expansion of his power in the rest of Egypt. Meanwhile affairs had taken a sudden turn in Constantinople. Cyrus was sent back to Egypt to get the most favourable terms

possible from 'Amr. Cyrus returned to Alexandria on the 2^d Shawwāl 20 (14th Sept. 641). His further course of action is not quite clear. In contrast to his previous attitude he now assiduously courted the support of the Copts and it is not improbable that he wanted to establish an Egyptian primacy under Arab suzerainty. In autumn he concluded, unknown to the Alexandrines, the final treaty of surrender with 'Amr by which the city was to be vacated by the Greeks by the 16th Shawwāl 21 (17th Sept. 642). On payment of a certain tribute the inhabitants were guaranteed liberty of life and property as well as the free exercise of their religion. At first they were very indignant at this treaty but ultimately bowed to necessity. The Greeks abandoned the city and it was surrendered to the Arabs at the expiry of the appointed period. Cyrus died before the surrender took place. To protect his rear, 'Amr undertook an expedition in the following winter (22 = 642-643) against the neighbouring Pentapolis (Barqa) and thus concluded the conquest of the land. It was not Alexandria but Fuṣṭāṭ, the city which had grown out of the camp before Babylon, that was chosen as the capital of the country [see the article *Cairo*, i. p. 816 *et seq.*]. Once again the Byzantines were stirred to activity. In 25-26 (645) a Byzantine fleet under Manuel suddenly appeared in the roadsteads of Alexandria and the city rose in rebellion and welcomed the Byzantines. At this time 'Amr was no longer at the head of affairs in Egypt but he had to be summoned there, as his successor was not able to cope with this unexpected development. His military genius once more triumphed; in a short time he drove the Byzantines out of the country and conquered Alexandria for a second and last time — on this occasion by force of arms — in 25 (646).

The last step in the conquest was to render secure the southern frontier. Egypt has on the whole natural boundaries, the sea in the north, the Libyan desert in the east and the Arabian desert and the Red sea in the west. It was only the southern frontier that was undefined. It was defined by an expedition under 'Abdallāh b. Sa'd who had replaced 'Amr as governor for a time before the second occupation of Alexandria and filled the post a second time till shortly before the murder of 'Othmān. In 31 = 651-652 he advanced against the Christian kingdom of Nubia, south of Assuan, reached Dongola (Dumkula in al-Kindī, ed. Guest, p. 12 and 13) and in Ramaḍān of the same year concluded a treaty with the ruler of the Nubians which has been preserved (*Kitāb al-Fihrist*, i. 200. 12 *et seq.*; cf. *Zeitschr. für Assyriol.* xxii. 141 *et seq.*). By its terms an official exchange of commodities with Nubia was instituted. This agreement was called *baḥḥ* [q. v., i. 608^b *et seq.*] which — it may be added here — is probably derived from the Latin *factum*. Down to the Mamlūk period Philae (Bilāḥ) formed the southern boundary of Egypt. The most northerly point in the Nubian kingdom was called al-Qaṣr.

When in the reign of the Caliph 'Othmān quarrels everywhere broke out between the Fiscus and the Arab troops, 'Abdallāh b. Sa'd had to leave Egypt and it was from Egypt that the assassins of 'Othmān went to Medina (35 = 656). Egypt was next under 'Alī's rule till it was taken from him by 'Amr b. al-ʿĀṣ, the Anti-caliph Mu'āwīya's general (38 = 658). Henceforth it re-

mained in the possession of the Umayyads except for the brief period of the nominal suzerainty of the Anti-caliph 'Abdallāh b. al-Zubair, who held Egypt from 64-65 (683-684). Of the governors of this period 'Abd al-ʿAzīz b. Merwān [q. v., i. 36^b], the brother of the Caliphs 'Abd al-Malik, was of special importance for the country; he ruled the land practically independently from his headquarters in Ḥelwān. It was he who gave the administration the character it long maintained. The later governors of this period are of more importance for economic than purely political history. When the dynasty was overthrown, Egypt was the last refuge of the unhappy Merwān II, who met his end here. This event made such an impression on the Coptic Christians that it has found a place in the Coptic Apocalypse of Daniel where Merwān appears as the seventeenth king with the number 666 ($M + \epsilon + p + o + v + z + \nu = 666$). Severus of Ashmūnain gives a very remarkable account at great length of his end from the mouth of an alleged eyewitness which presents a marked contrast to the brief statements in the Muḥammadan chroniclers (ed. Evetts, p. 119 *et seq.*; ed. Seybold, 173 *et seq.*; Hamburg text of Severus, ed. Seybold, p. 165 *et seq.*). The Abbāsids here appear as "Turks" and in the Apocalypse of Daniel the conqueror of Merwān as Pitourgos. It is important to note these Christian echoes of the tragedy because the passing of the Caliphate from the Umayyads to the Abbāsids seems from the Muḥammadan historians to have made no particular impression on the Egyptians. From the point of view of economic history also this transition was of importance.

Under the 'Abbāsids the country was ruled by governors, who till the year 242 = 856 were usually Arabs. In this year the last Arab governor left the country which was henceforth to be governed by Turks only till Aḥmad b. Ṭūlūn founded the first Turkish dynasty. Ma'mūn was the only Caliph to visit the Nile valley and even the feudal vassals appointed by Ma'mūn and his successors between the Caliph and the governors rarely visited Egypt. The most important historical movement which, though in the main completed in the pre-Ṭūlūnid period, went on down to the Mamlūk period, was the spread of Arab culture and the Muslim religion in Egypt. These were not identical developments; for the Egyptians who remained Christians soon began to adopt the language of the ruling classes also and by the fourth = tenth century we find that the Coptic ecclesiastic has to write Arabic if he wishes to be understood. Arab culture was spread by various causes. The town-dwelling Arabs, who were concentrated in the capital Fuṣṭāṭ, the Arabs who held the higher offices in the Coptic speaking provinces contributed very little to the propagation of Arab influence in the provinces. The introduction of the Arabic language in the government offices said to have taken place in 87 (705-706) — in reality both Greek and Arabic were used down to the beginning of the second century — did not affect 10% of the population. The chief factor in the spread of Arab culture which gave it so much greater effect than the preceding Hellenism, was the gradual settlement of the country districts by Arab nomads. Unlike the Greeks who were town-dwellers and built up civic communities of great importance in the history of civilisation the Arabs had not from

the first been dwellers in cities. The men of Mecca and Medina like the Arabs of Syria of course quickly adapted themselves to the environment of a large city, but they required pastures to be maintained for them, they wanted their *rabī wa-laban*, and out of such a country life permanent settlements frequently grew up in the provinces. The numerous Bedouin tribes on the other hand who came to Egypt in the train of the picked troops of the regular army or were deliberately transported thither as in the case of the Kais in 107 = 725 or lastly gradually migrated casually and without any settled plan led a very nomadic life. These tribes and clans gradually advanced southwards on the borders of the cultivated country on both sides of the Nile valley. Their cattle-rearing was of benefit to the agrarian population who supplied them with corn. Their relations however were frequently less peaceful particularly as the turbulence of the Bedouins added to the extortions of the treasury became a continual source of affliction to the Copts. Sections or even whole tribes gradually succumbed to the advantages of a settled life and thus a strong vein of Arab blood was constantly being added to the Coptic people of the Nile valley. This process of assimilation is still going on and the government of the Khedives has done much to make these always unruly Bedouins of the frontiers adopt a settled life. From the authorities, rare for the early period but copious later (cf. El-Macrizi's *Abhandlung über die in Ägypten eingewanderten Stämme*, ed. Wustenfeld) it would appear that quite a considerable migration took place which even sent offshoots as far as the Sūdān. How far direct immigration of tribes and individuals (traders) across the Red Sea into Upper Egypt also played a part has not yet been investigated, but Strabo's description of Coptos in Upper Egypt as a half Arab town is suggestive. The traffic on ancient trade-routes was certainly doubled after Arabia and Egypt had become parts of one and the same empire. These wandering Arabs were of course never great carriers of civilization but the ancient civilization of the Nile valley assimilated them and only the Arabic language remained. The mixing process must have been greater than the anthropological and moral similarity of the modern fellah with the peasant of the period of the Pharaohs would lead one to suppose. The power of assimilation possessed by the climate of the Nile valley which has been observed in animals, must certainly have done its work, but without a great deal of mixing it is inexplicable that the Coptic peasant in the country with his essentially conservative nature should have adopted another language. Not only did the Arabs become nilotised but the Copts must have been arabicised to a greater extent.

Side by side with this adoption of Arab culture, the spread of Islām usually went hand in hand but the latter also followed other laws. In religion the Arabs brought the Copts freedom from the Byzantine yoke but the latter were not the less hostilely disposed to Islām. At the time of the conquest there were two ecclesiastical communities opposed to one another, the Jacobites i. e. the Coptic church and the Malkites i. e. the orthodox Byzantine church represented by Cyrus. As was their custom the Arabs supported the heterodox movement, and the Jacobites attained unrestricted power, they annexed quite a number of Malkite churches and monasteries and took

advantage of their good relations with the Arab rulers to win as many Malkites as possible over to their side. For example they succeeded in getting a double poll-tax levied on Malkites which caused many to become Jacobites. This method was afterwards used by Islām against Christians of both sects. As the Arabs were at first hailed by the Copts as their deliverers from the Byzantine yoke, it naturally followed that even in the early years after the conquest numerous conversions to Islām took place, but on the whole active proselytising was hardly noticeable in the early decades after the conquest. The Arab government even regularly appointed a patriarch and 'Abd al-'Aziz and others allowed the building of new Christian churches which was quite contrary to the later practice and the Shari'a. We get the impression from Christian Arabic sources of the time that the Arabs were only concerned about the money they extorted from the Christians but there were of course at the same time occasional attacks on their religion also; thus, for example, al-Aṣḡagh, the son of 'Abd al-'Aziz forced the Christians to take part in the *ṣalāt*. The Arab government also found itself forced on economic grounds to take steps against the monastic system which deprived the land of the best of its youthful vigour and it was natural that the Christians had to pay a very considerable tribute, which ceased when they adopted Islām. In spite of official recognition the Christians were sometimes badly treated by the Muhammadan populace. All these reasons explain the rather rapid progress of Islām in Egypt and make it seem remarkable that as late as the viiith = xivth century there should have been popular risings on account of the number of Christian officials in the Diwān (Macrizi, *Al-Ḥitaṭ*, ii. 512 *et seq.*). This war on Christian officials lasts throughout the whole history of Egypt. At the end of the first century A.H. we still find Christians in the highest offices in the civil administration. 'Omar II's attempt to replace the lower officials also by Muslims (*Der Islam*, ii. 365) was predestined to failure. In the course of centuries Christians were gradually replaced by Muslims throughout the public offices but the mechanism of administration was so complicated that its management remained for centuries a privilege of the Christian Copts. As late as the Fātimid period we still find Christians and Jews, who at most only formally professed Islām, even in the office of wazīr. That the diwāns at this time were full of Christian officials is clear from al-Sairafi's polemic in his account of the *Diwān al-Inṣhā'* (*Ḳānūn Diwān al-Rasā'il*, p. 94 *et seq.*). The similar state of affairs in the Mamlik period has already been discussed. In all cases one can see that the government for the time being protected Christians — probably for fiscal reasons — but it had occasionally to make concessions to the fanaticism of the mob. Individual rulers also as, for example, the Fātimid al-Hākim had sometimes the same views as the mob. We can thus observe that in course of time the demands of the Shari'a gradually won greater influence in everyday life, for example the prescription of a distinctive dress for Christians and Jews, the interdiction of riding on horseback, of building new churches etc., but even in times of great excitement these orders were only put into execution for a brief period; for otherwise popular anger against their neglect would not have con-

stantly broken out again. Maḳrīzī who deals with these matters in several passages of his *Khīṭaṭ* marks two important dates in the progress of Islām in Egypt. The first of these is the period following the great Copt rising in the reign of Ma'mūn. The gradually increasing pressure of taxation had goaded the Copts to several risings, which were ruthlessly put down by Ma'mūn and his generals (see Becker, *Beiträge zur Geschichte Ägyptens*, p. 129 *et seq.*). From that time on the Copts began to adopt Islām and the Arabs gained power in the country districts. At a much later period we find the Copts causing a crisis not only in the capital but throughout the country in the reign of Nāṣir b. Ḳalā'ūn in 720 *et seq.* = 1320 *et seq.* Churches were destroyed, Christians tortured and in one of the smaller towns such as Ḳalyūb 450 Christians became converts to Islām in one day (Wustenfeld, Macrīzī's *Geschichte der Ägypten*, p. 81); this place may be taken as typical of the rest of the country. The last resistance of the Christians seems thereby to have been broken and the advance of Islām reached the stage at which we now see it. It is only in Old Cairo and certain districts of Upper Egypt that Coptic communities of any size have survived. According to a calculation, in Becker's *Beiträge*, p. 113 based on the yield of the ḍjīza, the proportion of Muslims seems by Saladin's time to correspond to what it is to day. But this is probably not correct; for the average assessment of ḍjīza is now known from papyri recently discovered to be much lower than the amount there taken on the authority of the Shari'a so that the number of Christians in Saladin's reign is to be placed at a much higher figure. It is not till the later Mamlūk period that we can say that the process of conversion to Islām is concluded although it had made great progress as early as the beginning of the Ṭūlūnid period.

The history of Muhammadan Egypt as an independent state begins with the Ṭūlūnids [q. v.]. Their accession had been preceded by a period of decline in the economic prosperity of the land as its resources had been recklessly exhausted by the government (cf. *Beiträge*, p. 136 *et seq.*). The governors or the often independent finance-administrators were simply tax-farmers. The revenues of the country went partly to Baghdad and partly into the pockets of successive governors without the country itself benefitting in the slightest therefrom. This state of affairs was changed on the foundation of an independent dynasty. The money now remained in the country. When independent of the central government, Aḥmad b. Ṭūlūn [q. v.] no longer made a point of plundering the country but rather tried to make it yield a permanent revenue and increase the glory of his dynasty. From being a dependency Egypt developed into the centre of a great empire, the government improved, and general prosperity increased as at all times when the country has had a strong government. For the first time for centuries Syria was again ruled from Egypt and the whole history of antiquity as of the later Muhammadan period shows that the destinies of these two countries are closely bound up. In this direction lies the natural expansion of an independent Egyptian kingdom. In one point, however, the Ṭūlūnids showed themselves true parvenus. While the contemporary Persian dynasties were creating a national

civilization, the Ṭūlūnids were content to be imitators. Just as at one period the German rulers had each to have their little Versailles, the capital of Egypt was modelled on Samarra and Baghdad. This fact has been much exaggerated and Fustāt-Cairo denied any genuine development in art or culture (E. Richmond, *The Significance of Cairo*, *Journ. Roy. As. Soc.*, 1913, p. 23 *et seq.*). What is undoubtedly true in this, is that a new period in the history of Egypt begins with the Ṭūlūnids and that Egypt did not escape the general development of Muslim civilization.

In tracing the history of Egyptian civilization from 18—1212 = 639—1798 the period may be divided into four very distinct periods, the Arabic, the Arabo-Persian, the Perso-Turkish and the pure Turkish, throughout which it must never be forgotten that the backbone of the populace was Arabicised Copts. The pre-Ṭūlūnid period may be described as the Arabic. The Arabo-Persian period covers the rule of Ṭūlūnids, Iḳḥshīdids and Fāṭimids. The influence of Persian culture becomes gradually more and more marked. In spite of their Shī'ite creed the Fāṭimids make no break in the development of culture. A new stage only begins at the end of the Fāṭimid period with Saladin and the Aiyūbids. They brought the spirit and culture of the great Salḍjūḳ empire to Africa also. In art and industry, in political and intellectual life, indeed even in calligraphy the dawn of a new era may be observed which we shall discuss in detail below. This second Perso-Turkish period covers the whole Mamlūk period as the Mamlūks regarded themselves in everything as the successors of the Aiyūbids, whose political ambitions and even the titles of their court officials they inherited and maintained. The fourth and last period is that of Ottoman rule in which Egypt is a Turkish province. The successors of the Mamlūks created nothing of value to civilization.

From the point of view of political history we get quite another picture. The epochs 18—254 = 639—868 and 923—1212 = 1517—1798 serve as prelude and epilogue to the great period of Egyptian independence. The latter falls into three periods of which the Fāṭimid is the middle one. The pre-Fāṭimid period is characterised by the struggle of the Turkish governors for independence from the central government of the Caliphate. The independence of the Ṭūlūnids became possible by the great slave rising after the suppression of which the brief glory of the dynasty was soon at an end. Iḳḥshīd and his successors had to deal with less resistance, the Iḳḥshīdid kingdom being a parallel to the Ḥamdānid and Buyid kingdoms, political entities which only became possible on the dissolution of the 'Abbāsid empire. This is the period of the struggle for the right to exercise suzerainty over the Caliph. The two Egyptian dynasties only lasted into the fourth century A. H. They had neither a national nor a religious footing in the country. They were based on the ability of their founders whose kingdom was held together for some time longer after their death by the community of interest of those who had assisted them. They are ideal examples of the wonderful chances in a soldier's career in those days, their rulers were promoted generals and yet something different from the Praetorian rulers of the Mamlūk period. The idea of rightful

succession had not yet been quite obscured by license and opportunism. Beside the soldiers we have a further important factor in the financier. A phenomenon like the *Madhārīyūn* family, whose members without the slightest military power at times unofficially ruled Egypt purely by their economic superiority, is a characteristic of the period. The bureaucracy and the tax-farmer, those inheritances from the ancient world, had not yet lost their power before the all-destroying militarism of the Mamlūk period. The pre-Fātimid period differs markedly from the post-Fātimid in its internal structure as well as in its political attitude although the two have many features in common.

The character of the Fātimid period itself is quite different. For the first time Egypt had a dynasty full of vitality founded on a religious basis. Egypt itself was, however, not Shi'ite and the easy manner, in which Saladin restored orthodoxy, shows that the creed which had been forced upon the country had only been formally adopted. But the prestige of religion was of inestimable value for the preservation of the dynasty and controlling the ambition of the generals which could only find an outlet by becoming at most mayors of the palace. Mu'izz had not come, like the Ṭūlanid and Ikhshīd, as the representative and envoy of a legitimate ruler to the country but as the autocratic ruler of a powerful kingdom for whom the way had been prepared by his generals. The first Egyptian Fātimid had thus not to gain his position gradually by force of arms but came with all the prestige of a ruler of North Africa and surrounded by the halo of religion and the regal splendour of an Imām and Caliph. The Fātimid kingdom was organised on the model of the 'Abbāsīd or rather after still older Persian prototypes. They had nothing to learn when they arrived in Egypt but understood perfectly how to reconcile the ancient administrative system of the country with their assumptions of hierarchy. Not only were they themselves in part excellent rulers but they took care to surround themselves with statesmen of great ability. Their authority offered an almost insurmountable barrier to the encroachments of the military. In the long run the fate of the 'Abbāsīds naturally overtook them also and the Mamlūk system arose out of their troops, but it was only through Saladin and his successors, more particularly through the military fiefs and the abolition of the bureaucracy intermediary between the rulers and the people that the Mamlūks became an all-supreme power and a scourge to the citizens.

The contemporary political problems of the Fātimid period also were quite different from those of the preceding epoch. It is true that there again was a struggle for Syria — even in the reign of the conqueror of Egypt — it was no longer however a war against a powerful Caliphate but against the Buyīds and Saldjūks. Between the latter and the Fātimid kingdom lay a number of small, independent kingdoms some of which sided with the East and some with the West. It was a war between 'Abbāsīds and Fātimids for mention in the *khutba*. It was an insignificant episode from the point of view of the history of the world but to the Fātimids it was the fulfilment of their highest ambition when the *khutba* was pronounced for them and their "holy fathers" for a brief period (449-450 = 1058) even in Baghdād, the

capital of the 'Abbāsīds, by the ephemeral usurper Basāsiri. At its zenith the Fātimid empire was the only great Muhammadan power in the eastern Mediterranean. Here we have the historical antagonism of two great powers, — which extended as far as Sicily and South Italy — namely that of Byzantium and Egypt. They created the pre-eminence of Egypt, which was still further increased by Saladin and survived into the Mamlūk period. This golden period in Egypt's history lasted from al-Mu'izz to al-Mustansir and has been described for us in glowing colours by the Persian Nāsir-i Khusraw, shortly before its economic and political collapse in the reign of the last-named Caliph. No other land in Islām could then compare with Egypt. It was only under the great Saldjūk Sultāns that the 'Irāk regained its premier position. Syria was lost to the Fātimids before the Saldjūk invasion. Had it still been held by Egypt, Syria might have been able to make a powerful defence against the inroads of the Crusaders which were shortly to break in upon it, but an enfeebled Egypt and the small Atābeg states could not do this successfully.

Fātimid power began to decline rapidly everywhere after the famine and rebellions in the reign of al-Mustansir. Badr al-Djamālī [q. v., i. p. 560] and his son al-Afḡāl [q. v., i. p. 146] could only temporarily check its decline. The praetorian government ruined the country; another factor was the invasion of the Crusaders and Amalrich stood at the gates of Cairo when the star of the Fātimids was about to set. This period of retrogression takes us to the third period of Egypt's prosperity under the Aiyūbids [q. v., i. p. 221^b *et seq.*] and the Mamlūks [q. v.].

Saladin restored the glory of Egypt anew. The features of the new epoch outlined above are only the expression of a new period in the political history. The well-nigh inexhaustible natural wealth of Egypt enabled every new ruler to devote himself to foreign politics on a large scale, if only he knew how to bring order into domestic affairs. The tasks, which wrecked the declining power of the Fātimids, the suppression of rebellions at home and the repulse of the Crusaders, were successfully accomplished by the Aiyūbids and their successors. The struggle between East and West now centres round Egypt and the name Damietta [q. v., i. p. 910^b *et seq.*] recalls many important events in the history of the later Crusaders. Relying for support on the religious reaction of the Saldjūk period, the Aiyūbids were the true *Shahīds*, who recognised the purpose of their dynasty in war against the enemies of Islām. They reunited Syria to Egypt and held it for a long period. But this glorious dynasty unfortunately lacked any cohesion among the members of the family; split up into numerous lines, the main object of the dynasty seemed to be exterminate itself in internecine warfare. Whoever held Egypt had the advantage, as it was the centre of the kingdom. Saladin, al-ʿAdil and al-Kāmil were essentially Egyptian rulers. The power of the Aiyūbids lay in the Ghuzz [q. v.]; here lay the possibility of an ethnic basis for the dynasty but it was destroyed by the rivalries of the individual lines. Unity no longer lay in the ruling family but in the ethnic relationship of the troops of the kingdom consisting almost entirely of slaves (Mamlūks). While those who fought under the Aiyūbid flag were not all Turks but included Slavs and Greeks, the Turkish element consider-

ably predominated. As they were constantly at war with one another, the various members of the dynasty became more and more dependent on the good will of their generals and ultimately became mere playthings in the hands of ambitious commanders. It thus created no great stir when in the end the rulers, whose power had now become purely nominal, disappeared from the scene and those who had for long had the real control of the government now openly assumed responsibility for their actions.

The idea of a dynasty slowly disappeared. Although associations with the Aiyūbids remained throughout the whole political system and although *Kalā'ūn*, among the Bahrī Mamlūks, was able to found a kind of dynasty, with the Circassian Mamlūks the government was a military oligarchy not only in principle, but in practice. The development of the military fiefs gave an entirely military character to the government. It was a feudal state, based not on the possession of land but on rent, relying for its defence not on free-born yeomen with a permanent interest in the soil, but on purchased slaves who were afterwards set free. The Mamlūk aristocracy was a kind of stratum above the Egyptian people proper, which was at times plundered in the most shameless fashion. Constantly quarrelling with one another, ruling the country as they pleased, ethnically a body of foreigners, numerically in no proportion to the native Egyptians, their survival for several centuries, particularly their energetic bearing, and their great architectural activity, which required enormous financial resources, appears at first sight a puzzle. It should never be forgotten that it was the Mamlūks, who under Baibars formed the barrier which checked the advancing tide of Mongol invasion. The battle of 'Ain Djālūt was no chance success, for *Kalā'ūn* and other Sultāns again and again repulsed the Mongols (*Ilkhāns*). This is the great debt that the world owes to these slave Sultāns, for they saved Egypt from the fate of 'Irāk and it is due to them that the Nile valley has had a continuity of development in culture and political institutions unlike any other Muslim country. Beside this great feat the final expulsion of the Crusaders seems an insignificant and easy success. The subjection of Nubia also was of less importance for the history of Egypt than for that of the Sūdān. On all sides the same great power of expansion can be traced. The Egyptian government stood at the centre of international interest as a powerful organism. Its relations with the Golden Horde arose out of their common opposition to the *Ilkhāns*, but Byzantium and other European kingdoms also sought the friendship of the powerful Mamlūk Sultāns. During the same period one splendid building arose after another in Cairo in spite of the fact that the constant wars were consuming immense treasure. The old buildings which at the present day still give Cairo its characteristic appearance are almost all Mamlūk. Whence came the power and the money to do all this in a state with such a precarious constitution? It was probably in the first place the unusual ability of a series of great rulers like Baibars, *Kalā'ūn*, Nāṣir, Barḳūk, *Ḳāit-Bey*, that brought the land this prosperity. In a state organised like that of the Mamlūks where every one carried a marshal's baton in his knapsack, it was only men of unusual ability that came to the top; there was a

kind of survival of the fittest in the system. In spite of their fondness for quarrelling with one another at home, they developed a strong *esprit-de-corps* in face of danger from abroad. The Mamlūks, moreover, were mainly Turks or Circassians, that is to say, unusually powerful members of naturally warlike peoples, selected for the slave-market. The rivalry among the individual amīrs further provided an excellent military training. It was a clever move of Baibars to offer a home in Cairo to the 'Abbāsids, driven out of Baghdad by the Mongols. The claims of the Mamlūk Sultāns to the throne which were by no means sound, were raised above all suspicion by this step. This clever coup raised their prestige in a way which can hardly be understood at the present day. The great Mamlūks by no means lacked the qualities of rulers. From time to time something was done to improve the state of the country, canals were made, or reforms undertaken. The Arab Bedouin element had become very strong in the country alongside of the Fellahin and energetic steps had to be taken against it from time to time so that agriculture again suffered. The splendid culture of this period could not possibly have been maintained out of the income from the land alone, although the rural population was very heavily burdened. The great source of the governments revenue was the Indian trade which passed through Egypt as will be discussed below. When it ceased, the dominion of the Mamlūks came to an end. When the Portuguese obtained a footing in the Indian Ocean and the Red Sea and diverted trade with India round the Cape, a blow was struck at the very heart of Egypt's prosperity. Fortune had willed that in the same decades the might of the Ottomans began to threaten the Nile valley like some inexorable fate. Egypt thus became a Turkish province and its golden age was over. The whole eastern Mediterranean began to sink into the background by the transfer of the world's trade to different routes and the discovery of America. The focus of civilization had shifted. The period 1517—1798 is for Egypt one of stagnation; the great events in the world's history had their scene elsewhere.

Selim I entered Cairo on the last day of Rabī' I of the year 923 (22nd April 1517). The last Mamlūk ruler *Tumān Bey* had previously been hanged at the Bāb Zuwaila. Selim and his successor *Sulaimān* organised the constitution of the country with great caution. The holder of the new Pashalik was not to become too powerful nor was the Mamlūk constitution of the military upper stratum to be completely suppressed. The Pasha and six bodies of troops under Beys with two *Diwāns* or supreme councils were to hold the balance. The Mamlūk system thus found new scope for its energies. For about a century the Pashas had some real authority and initiative but after a few unfortunate experiences the Porte began to change its representatives every two years thereby making it impossible for them to have any permanent influence. An endless series of Pashas files before our eyes, whose authority gradually becomes weaker before the power of the Beys; mutiny, deposition or assassination became daily events and ultimately the Porte was forced to send only Pashas, who were acceptable to the Mamlūks and who soon sunk to be mere figure-heads. The *Ṣayikh al-Balad*, the governor of the

city, became the most important figure and next to him the second great official was the *Amīr al-Ḥadjjī*. The prosperity of Egypt continued steadily to decline. But the yearly tribute, which at first had yielded 600,000 piastres, also began to decrease until it finally ceased altogether. The history of these times has been little investigated as the monotonous sameness of a provincial history with its chronicle of petty quarrels between Beys and Pashas is hardly an inviting task. The best account is still that of Marcel in the great work produced by the French expedition. Egyptian troops occasionally took part in the Persian, Syrian and Arab wars of Turkey but the fact that these wars have no importance for the history of Egypt best shows how the times had changed. We find accounts of epidemics and bad harvests, each of which was worse than they had ever been before, appearing in the annals with equal monotony from time to time. Once again, for the last time, we have a movement of some importance emerging from the general turmoil. This was Ali Bey's [q. v., i. p. 291¹¹ et seq.] rising during the Russo-Turkish war in 1182 (1768). Syria once more became a dependency of Egypt and only an evil fate prevented a development of affairs under 'Ali Bey such as Egypt later experienced under Muḥammad 'Alī. But 'Ali Bey, as early as 1187 (1773), succumbed to the treachery of a faithless friend. The Porte tried to quell the disorder that arose by sending an army under the Kaḫḫān Pasha Ḥassān in 1200 (1786) — it was its first energetic interference in the affairs of Egypt since the conquest — but the attempt failed; the ringleaders retired to Upper Egypt and complications with Russia made strenuous action impossible. The ringleaders were soon afterwards able to return to Cairo. These were Ibrāhīm Bey and Murād Bey who now filled the position of *Shāikh* al-Balad one after the other. Their common interest in exploiting the population had led these two rivals to throw in their lot with one another. They were the opponents of Napoleon. The Mamlūk system had destroyed itself. When Egypt yielded to Turkey the great part it had played in history and when the fertilising stream of international trade ceased to flow, the Mamlūk system inevitably collapsed bringing with it the ruin of Egypt.

To this brief sketch of the history of Muḥammadan Egypt before the intervention of European influence we might add that the Muslim historians are acquainted with a pre-Muḥammadan history of Egypt in which legend and history are hopelessly intermixed. Egypt had from the beginning had a peculiar interest for the Muslim because it is several times mentioned in the *Qur'ān*. The celebrated Miryam al-Kibṭiyya, one of the wives of the Prophet, also belonged to Egypt. Jesus' stay in Egypt was well known to Muslim Tradition and even the ancient *Ḥadīth* has a chapter on the *Faḍā'il Miṣr* which are very much expanded in the Egyptian historians. Their histories did not stop there but give a whole system of pre-Muslim dynasties in which Coptic tradition and Gnostic speculation are mixed in an extraordinary fashion. (Maḥrizī, *Khīṭaṭ*, i. 134 et seq.; Kaḫḫashandī, transl. by Wüstenfeld, p. 117 et seq. and the same scholar's article *Die älteste ägyptische Geschichte nach den Zaubern- und Wundererzählungen der Araber in Orient und Occident*, i. (1862), p. 326 et seq.). Blochet has recently made

the first attempt to investigate more closely the constituent elements of these cycles of legends (*Riv. degli Studi Orientali*, ii. (1909), p. 717 et seq.; iii. (1910), p. 177 et seq.; iv. (1911), p. 47 et seq. and p. 267 et seq.). All accounts of cities and monuments are full of such tales whose existence only can be mentioned here.

2. CONSTITUTION AND GOVERNMENT.

a. Political Divisions.

In the Arabic geographers and historians we find the administrative unit in the older period the *kūra*, a district taking its name from its principal town, and in the post-Fātimid period the province (*amāl* or more usually plural *amāl*). In the modern period the *amāl* have been given the name *muḍiriya*. The comparison in Milne, *A History of Egypt under Roman Rule*, p. 216 makes it appear that the most important administrative districts of a higher and lower class have remained unaltered from Roman times to Muḥammad 'Alī, but closer investigation shows that the similarities between ancient and modern times are quite accidental. The political configuration of the country has undergone considerable alterations in the course of centuries. The ancient division into nomes was followed in the Roman period by that into pagi and pagarchies, which in their turn under the Byzantines became entirely remodelled in a more complicated fashion with the increasing influence of the great landlords. The best account of the conditions in this period is to be found in Mathias Gelzer, *Studien zur byzantinischen Verwaltung Ägyptens* (*Leipziger Hist. Abhandlungen*, xiii.). Islām developed the Byzantine system as it found it. The first accurate information is given by the Aphrodito papyri of the end of the first (beginning of the eighth) century. They yield the following picture. Egypt was at this time a province of the Caliph's empire governed by a *σύμβουλος* = amīr. Upper and Lower Egypt were separate administrative divisions but not, as might perhaps be expected, so that all subdivisions fell into one or other of these two. The heads of *kūras*, which appear as real administrative units and corresponded to the Byzantine pagarchies, were all directly under the governor general. The ancient nomos was now purely a geographical term. The villages (*karya*) into which the *kūras* were divided, were ruled by *πρωτοκωμῆται*, Copt. *Lashane*, Arab. *Māzūt*, plur. *Mawāzīt* (for further details and bibliography see *Der Islam*, ii. 361 et seq.) who were under the government of the *kūra*. We have no detailed account of the further development of this system and the few notices that exist have not yet been systematically studied. The division into *kūras* remained the basis of the administrative system down to the Fātimid period. We do however find larger areas containing a number of *kūras* referred to under a single name, such as *Asfal al-Ard*, Lower Egypt, which is sometimes also called *al-Rif*. *Asfal al-Ard* was divided into *Baṭn al-Rif* (the land between the two Nile arms) and *al-Ḥawf al-Gharbi*, the fertile Delta land west of the Rosetta arm and *al-Ḥawf al-Sharḳī* east of the Damietta arm. Upper Egypt, *al-Sa'id*, was divided into Hither and Farther. But all these names are those of geographical rather than political divisions; and their denotation varied. The *kūras* themselves were by no means inflexible in their boundaries. They were sometimes broken

up or combined with others. Their identification has further been rendered much more difficult especially in the Delta by the considerable shifting that has taken place in the course of the Nile. Valuable preliminary work in this direction has been done by A. R. Guest, *The Delta in the Middle Ages* in the *Journ. R. As. Soc.*, 1912, p. 941 *et seq.* The number of *kūras* is variously given and certainly varied from time to time. According to Maḳrīzī (*Khitaṭ*, i. 73, *ra*) there were 25—38 in Lower Egypt, 31—37 according to Guest's investigations. The figures for Upper Egypt vary between 28 and 30. Lists are given in Maḳrīzī, i. 72 *et seq.*; ed. Wiet, i. 306 *et seq.*; *Bibl. Geogr. Arab.*, v. 73; vi. 81; vii. 331; Ibn Duḳmāk, iv. 128; v. 42; Kaḷkaḷshandī, transl. Wustenfeld, p. 92 *et seq.*; Yāḳūt, iv. 549. To these must be added the so-called *kūras* of the *ḡibla* on the Red Sea and the Sinai peninsula (Kaḷkaḷshandī, i. c. 100 *et seq.*). The oases [see BAḤRIYE, i. p. 587^b *et seq.*, DĀKHLE, i. p. 899^b *et seq.*, and KHĀRGE] and Barka had a separate government. In Maḳrīzī, whose authority is al-Ḳudātī, the number of *ḡaryas* in each *kūra* is given. According to a statement of the year 345 (956) the number of *ḡaryas* in the whole of Egypt was 2395 of which 1439 were in Lower and 956 in Upper Egypt (*Khitaṭ*, i. 73, 35; Ibn Duḳmāk, v. 43). There were said to have still been over 10,000 flourishing *ḡaryas* a century after the Arab conquest but this statement seems to be an exaggeration (Maḳrīzī, ed. Wiet, i. 312). The number is said to have afterwards diminished rapidly.

It is obviously in the steady decline of Egypt's prosperity that we find the reason for the gradual alteration in the political division of the country. The administrative units were gradually increased in size because the decline in revenues and the decrease in population led to the combination of districts each of which in a period of more intensive cultivation required separate arrangements for its administration. At the end of the Fāṭimid period the old *kūras* were replaced by *ʿamāl*. As Musabbiḥī still knew the old arrangement and we possess a list of the new *ʿamāl* of the end of the reign of Mustanṣir (Abū Ṣāliḥ, ed. Evetts, fol. 7^a, 8^a), the new arrangement probably dates from Badr al-Djāmālī, the reorganiser of the Fāṭimid kingdom after its collapse. It is improbable that there was any thorough reorganisation of the political divisions of the country at one time, but after the catastrophe under Mustanṣir the great setback the land had received made its effects apparent with startling suddenness in the administrative practice of the country also. The *ʿamal*, which is occasionally used as a synonym of *kūra*, was not a wider denomination than the *kūra* but its equivalent. In place of the 50—70 *kūras* we suddenly find 26 *ʿamāl* into which Egypt was divided. (*Khitaṭ*, i. 72, 26 *et seq.*). Ten of these were in Upper and sixteen in Lower Egypt. But the process did not then come to an end, the land continued to decline and the administrative units increased in extent but decreased in number. The celebrated cadastral survey of Muḥammad b. Ḳalāʾūn, the so-called *Rök Nāṣiri* of 715 = 1315 mentions only 15 provinces, 9 of which were in Upper Egypt (*Khitaṭ*, i. 74, 3; ed. Wiet, i. 312), and when Egypt's prosperity was at its lowest ebb under the Ottomans, the number had sunk as low as 12 (v. Hammer, *Geschichte des Osman. Reiches*, ii. 653) or 14 (de Sacy, *Institut Royal de France*,

i. 91), at the time of the French expedition there were 16 including Damietta and Rosetta. The variation in the number of provinces is not of course always directly connected with the prosperity of the country; for in Lower Egypt we find partitions or combinations made quite arbitrarily — for example Ibn Duḳmāk counts 8 divisions there and Ibn Djīfān as many as 12, or 13 with Djizeh which he counts in Upper Egypt, although he is writing after the composition of the *Rök Nāṣiri*, — but the main reason for the replacement of the numerous *kūras* by a few provinces was undoubtedly the economic decline and desolation of the country. A parallel is offered by the history of the political administration of Egypt in the 19th century. Writing in the 60's Alfred von Kremer (*Ägypten*, ii. 8) mentions the combination of several provinces called Mudīyas since the beginning of the Khedival period, into one "from motives of economy". It is only in quite recent times that these provinces have come to mean more than the ancient *kūras*; for their subdivisions called *markaz* correspond to the ancient *kūras* and the modern *nāḥiyas* are simply the ancient *ḡaryas*. To make a general survey possible, we have chosen from the numerous lists of provinces, that of the *Rök Nāṣiri*, that of the Napoleonic period and that of the present day but it should not be forgotten that in the intervals considerable variations have taken place. The large cities of Alexandria and Cairo and several fortified towns on the frontiers have always occupied a separate position as can only be briefly indicated here. At the present day the following gouvernements (*muḥāḡẓa*) still exist: Cairo, Alexandria, Suez Canal and Suez under the Ministry of the Interior and al-ʿArīṣh i. e. the Sinai Peninsula under the Ministry of War (from the *Djoghraḡfiyā Miṣr wal-Sūdān*, published by the Egyptian Ministry of Public Instruction, 2nd ed., 112 *et seq.*). At an earlier period Burullus, Rosetta, Damietta and the seaports on the Red Sea occupied a similar position.

b. Administration and Finance.

A history of Egyptian administration cannot yet be written but a few indications may stimulate further work on the subject. For no period do we have an absolutely clear picture and the Arab period is particularly obscure. The organisation of finance formed the centre of the whole administration, for punctual and abundant revenue from taxation was the main object for which the country was governed. With the money thus obtained the army and the officials were paid and authority maintained. The financial system was from the very first exceedingly complicated and its administration in detail was only understood by Coptic officials who throughout the centuries of the history of Muslim Egypt were regarded by the fellāḥin as blood-suckers and by the ruling military classes as swindlers. In addition to this most important class of officials, we find in the period of prosperity under Caliphs and Sultāns a whole series of court and high central administrative offices about which we are much better informed than about the actual mechanism of the machinery of government.

In the early centuries of Arab rule two political functions were sharply distinguished, the governorship and the treasury. The governor, *Amīr*, had control over the military and police only — the latter under a *Ṣāḥib al-shurṭa* — and was appointed *ʿalā ʾl-ṣalāt wa ʾl-maʾūna*. Alongside of him was the head of the treasury the *ʿAmīl* who was appointed *ʿalā ʾl-kharāj*. These two officials had to keep a strict watch on one another. As head of the military and executive the *ʿAmīr* was the first, but they were equal in rank and the administrator of the treasury even had the greater influence as an anecdote in al-Kindi, ed. Guest, p. 109 clearly shows. The two offices were only occasionally combined (cf. *Beiträge*, ii. 154). Ibn Ṭūlūn did not become master of the situation until he had obtained control of the taxes also. This division of authority extended throughout the financial system. Under the Arab *ʿAmīl* there were, down to the beginning of the ʿAbbāsīd period, two Copt chief secretaries to the treasury, *chartularii*, who did not, however, for example, control the diwāns of Upper and Lower Egypt respectively but administered both jointly. At the beginning of the ʿAbbāsīd period we still find two officials at the head of the treasury but it seems that they administered the two divisions of the country separately (Severus of Ashmūnain, Hamburg text, ed. Seybold, 196, 15; the vulgate text of Severus has a different reading). The receipts for corn delivered to the state granaries also were signed by two officials (*Zeitschr. für Assyriol.*, xx. 101). This system taken over from the Byzantines survived for centuries. Even in the Fātimīd period and later we still find in addition to the chief of the treasury or to a *Mushārīf a Nāḡir*, a controller, who had to countersign all documents (Ibn Mammātī, p. 7; an example is given in *Khiṭaṭ*, i. 82, 28). In the first century A. H. the old eparchy with its *dux* at its head was still retained for financial purposes; below the *dux* were *ζυγοστάται*, who remitted payments to Fustāt. Their duties are not quite clear. In particular it is uncertain what relation the *dux* had to the pagarch, *Ṣāḥib al-Kūra* or *διοικητής*. We find the governor writing to him and demanding the taxes. He had to

appear from time to time at the seat of the government to render accounts and had a representative (*ἀποκρισιάρχος*) permanently there. The *māzūt* (see above) and the clerks were local officials. The collectors of revenues in kind were called *kabbāl* (*Papyri Schott-Reinhardt*, i. 45); they were chosen by the community. The Aphroditō papyri (*Papyri Schott Reinhardt I*; *Greek Papyri in the British Museum*, Vol. iv.; *Zeitschr. für Assyriol.*, xx. 68; *Der Islam*, ii. 245) contain information about the taxes at the end of the first century and at the same time of the oldest period also. The government expected two kinds of taxes from the *Ṣāḥib al-Kūra*, the *δημόσια* and the *ἐκστρατιάρινα*. Both were levied on the subdivisions of the *kūra* by the central authority in accordance with returns prepared and sent in beforehand, and were communicated to them directly in a document (*ἐντάγγιον*), which had, however, to pass through the hands of the *Ṣāḥib al-Kūra*. The *δημόσια*, i. e. the regular principal taxes were divided into 1) *χρυσικά δημόσια* = *ḫiṣya*, a tax paid in money only and 2) *σιτικά δημόσια* = *ḫaribāt al-ṣaʿām*, a tax paid in kind, wheat or barley. The amount of each tax was fixed by the central authority. The system of taxation was therefore a collective one throughout and it was the business of the local officials to distribute these assessments. The *χρυσικά* were provided for out of a) a land-tax (*δημόσια γῆς*), b) a poll-tax (*ἀνδρισμός, διὰ γράφον*) c) local rates (*δαπάνη*). Artisans etc. who did not possess land contributed to the land-tax also. The poll-tax was not at first a general one but it is not yet quite clear on what basis it was levied. Besides these taxes in money there was the *embola*, which was, however, occasionally paid in money also (*ἀπαργυρισμός* = *ḫaman*). A portion of it was to be applied to local purposes in the form of provisions (*δαπάνη*) and the remainder sent to the storehouses in Babylon or Alexandria. The "extraordinary" taxes were quite as regular as the *δημόσια*. Materials for shipbuilding, tools, or skilled workmen and sailors and their pay were demanded from the *kūra*. The *kūra* had to prepare and provide these and ultimately even to buy them. Substitution by the payment of an equivalent in money was not desired but probably the individual members of the community paid their share in money. All these taxes come under the heading of liturgy. The state of affairs as depicted in the papyri does not agree at all well with the statements of the Arab jurists on *ḫiṣya* [q. v., i. 1051 *et seq.*] and *ḫharāj*; the points that arise out of this are discussed in these articles. In contrast to the interpretations of the jurists an old historian quoted by Makrīzī *Khiṭaṭ*, i. 77, 5 *et seq.*; ed. Wiet, i. 323 *et seq.* gives an excellent account of the system, which well illustrates the collective character of the taxation and is quite reconcilable with the evidence of the papyri. At a later period Muḥaddasī, (ed. de Goeje, 2nd ed., p. 212, 14) tells us that there really was no proper *ḫharāj* in Egypt, but that the soil belonged to the government and the peasant only tilled it; the rent was taken in kind by the officials after the harvest and the remainder was the peasant's share. Although the word *ḫharāj* regularly appears in Egyptian documents of the ʿAbbāsīd period with the double meaning of tax in general and land-tax in particular, Muḥaddasī's statements are substantially correct because *ḫharāj* and rent were combined in Egypt (*Zeitschr. f. Assyriol.*, xxi. 312).

To understand the whole agrarian system of Arab Egypt it must be remembered that at the time when the Arabs assumed authority in Egypt, the government was nowhere directly in touch with the actual tax-payers, the peasants, but owing to the Byzantine system of *patrocinium* an intermediary class of powerful *patroni* had come into existence guaranteeing the taxes and these were recognised as land-owners. The peasants themselves were bound to the soil and could only change their abode after obtaining permission. Throughout the early period of Islām we find the struggle to keep these colonists (*djāliya*, *φυράδες*) on the land. It is not yet quite clear if and in how far these great land-owners were replaced by regular officials or if they — and this is more probable — remained in existence as private tax-farmers and guarantors till they were gradually replaced by Arabs. In any case the administrative practice of the Fātimid period — and probably we here have the survival of a much older system — recognises three classes of tax-collectors (Ibn Mam-mātī, 8, 1): 1. *bi-amāna*, i. e. people who are absolutely trusted to deliver the taxes without guarantee; 2. *bi-badhl* i. e. those who claim to be able to bring in more than their predecessors and who are pledged to pay the amount yielded by their predecessors as a minimum; 3. *bi-damān*, i. e. those who pledge themselves to pay a fixed sum and must make up that amount. The latter class, probably the most common, had its analogue in the public bestowal of estates (*kaṭāʿi*) which were granted to private individuals by public auction (*taṣāyud*) on a certain sum being guaranteed as rent and taxes, which was practically *damān* or *taḥabbul* and technically known as *ikṭāʿ*. These *kaṭāʿi* originally comprised probably only the government estates and the *agri deserti* (*marwāt*), but, as far as can be seen, more valuable estates were gradually added to them in the long run. It is still doubtful if the farming out of the *kaṭāʿi* was separated from the administration of other taxes. In any case the difference between an official tax-farmer and a private individual, who under the protection of the state guarantees taxes on the land he rents from the state, was not very great especially as the *kaṭāʿi* included not simply the soil but the men who lived on it also and even whole villages. At a later period all the land became *ikṭāʿ* and *ikṭāʿ* received the meaning of military fief. This process which has already been investigated by Silvestre de Sacy (cf. his still important work *Sur la Nature et les Révolutions du Droit de Propriété territoriale en Egypte*, Institut Royal de France, i., v., vii.), shows several stages. Under the Abbāsids and the dynasties of independent governors the letting of the estates took place annually by a kind of public auction in the 'Amr and afterwards in the Tulūnid Mosque. The allotment was for a period of four years to make up for failure of harvest and other contingencies. This rent was the *kharaḍj*. Sums expended in improvements, maintenance of canals etc. were allowed to be deducted. The remainder, often very considerable, was the profit of the lessee. What the relations of the latter with the local authorities were is not known. Every 30 years a new survey was made (*Khiṭaṭ*, i. 82). At the beginning of the Fātimid period this system remained unaltered, and any one could still be a candidate, but by the later Fātimid period the

military formed the great majority. We read of *diwān al-umara'* which yielded good return, and of soldiers' estates which yielded a poor return (*Khiṭaṭ*, i. 83, 4). The tenants were called *muḳṭa'*. The leases were for 30 years. These conditions the existence of which in Egypt can be dated 501 = 1107-1108, can be shown to have existed in Irāk two centuries previously (v. Kremer, *Einnahme-budget des Abbasiden-Reiches*, p. 17). In Irāk as in Egypt the persons of influence — and these were in the long run the soldiers — gradually paid less and less in taxes and thus these estates in time became appanages or military fiefs while the tax or rent due on the land came to be looked on as reward for service. According to Maḳrīzī (*Khiṭaṭ*, i. 95, 22) Nizām al-Mulk took the decisive step in this direction (cf. also Bondarī, ed. Houtsma, p. 58) and from the year 480 = 1087 on his example was generally followed. He probably only legalised the actual practice. A great period of prosperity is thus said to have been brought to these estates. This may be true for the districts held in fief by the Emīrs but for the countless small fiefs this step spelled ruin. For it was not merely a question of a rent which the state had confiscated but the individual villages and districts passed into the possession of the fief-holders who took the place of the treasury in the districts concerned. This practice was probably first brought to Egypt by Salādin or one of his successors. In 515 = 1121 one could still trace a clear distinction between tax-farming and military fief (*Khiṭaṭ*, 83, 18). As the troops did not pay, an immense debt (*ḥawāḳi*) had grown up which was remitted in that year. These very *ḥawāḳi* show it was not yet a question of real military fiefs, which soon afterwards became quite usual. Of course a large share of these estates or their yield still remained at the disposal of the government, for the ruling power for the time could not entirely give up the great rents derived from agriculture. An interesting register of distribution is given in the *Khiṭaṭ*, i. 87 for the Aiyūbid period after Salādin. From time to time new conditions of allotment arose out of new surveys. Thus we read in the Mam-lūk period of an arrangement by which 4 twenty-fourths (*ḳirāʿi*) of the land to be allotted were reserved for the Sulṭān, 10 for the Emīrs and 10 for the soldiers. We are best informed about the so-called *Rāk Nāsiri*, the survey of Muḥammad b. Kālāʿūn of the year 715 = 1315 (*Khiṭaṭ*, i. 87 *et seq.*). Here the proportion was 10 to the Sulṭān and 14 to the appanages. The poll-taxes (*djawāli*) in the country were included for the first time in the *ikṭāʿ* but a in the large towns they were allotted separately. The *muḳṭa'* became more and more absolute master of his fief. Ibn Dīrān's book gives a much later system of division from the end of the Mam-lūk period. In the Ottoman period the *multazim* developed from the *muḳṭa'* and he then appears as the direct owner, for which see de Sacy, *op. cit.* The charters granting fiefs were called *sidjill* in the early period and in later times *mithāl*.

In Maḳrīzī's time all Egypt was divided into the following seven classes of lands (*Khiṭaṭ*, i. 97, 14): 1. those which belonged to the privy purse, *Diwān al-Khāṣṣ* (this *diwān* replaced the vizierate in the reign of Ibn Kālāʿūn, Kaḳkashandī-Wüstenfeld, p. 157) and appertained to the *Diwān Muḫṫad* (instituted by Barkūk, *ibid.*, p. 158); 2. fiefs of the

emirs and soldiers; 3. waḳḳs of the most varied description; fiefs could also be made waḳḳ but they often ceased to be so (on this point see *Der Islām*, i. 95 *et seq.*); 4. *Aḥbās* (a particular kind of waḳḳ; to be identified with *riḳḳ*), cf. Ḳāḷkashandī, *Ḍaw' al-Ṣubḥ*, 250 sub N^o. 8; 5. *Amlāk*, estates purchased from the treasury which had become private property (the rent from them again became a fief; cf. Ḳāḷkashandī-Wüstenfeld, 158, iv. where the Arabic text of the manuscript has *amlāk* for 'treasury of the crown-lands'; cf. also de Sacy, *op. cit.*, i. 86 *et seq.*); 6 and 7 desert or unirrigated land. This division survived with many inner changes down to the French period, but it cannot be discussed here in all its details. Those interested may be referred to de Sacy's work already quoted several times and to Lancrét, *Mémoire sur le système d'imposition territoriale et sur l'administration des provinces de l'Égypte dans les dernières années du gouvernement des Mamlouks* (*Description de l'Égypte, État Moderne*, 2nd ed., xi. 461 *et seq.*); Le Comte Estève, *Mémoire sur les finances de l'Égypte depuis sa conquête par le Sultan Sélim Ier jusqu'à celle du général en chef Bonaparte* (ib., xii. 41 *et seq.*); Tallien, *Mémoire sur l'administration de l'Égypte à l'époque de l'arrivée des Français* (*Mémoires sur l'Égypte*, iii. 190).

After this survey of its agrarian policy we will return to the organisation of the state itself. The primitive arrangements of the early centuries continued with the occasional institution of new diwāns through the period of the Ṭūlūnids and Iḳḥshidids also, only with this distinction that in this period the chief authority centred in the person of the ruler himself. It is said of Ibn Ṭūlūn that he introduced a constitution which was not Arab, that he was the first to have a vizier — in deed but not yet in name —; Iḳḥshid, we are told, first introduced the *rawātīb*, allowances (*Ḳhiṭaṭ*, i. 99, 19); we do not know very much about these institutions however. It is not till the Fāṭimid period that we have a good account of the constitution. According to Maḳrīzī, (*Ḳhiṭaṭ*, i. 91, 27) the natural division of the *diwān* is threefold: 1. *Kitābat al-Druyūsh*; 2. *Kitābat al-Ḳharāj*; and 3. *Kitābat al-Inshā' wal-Mukātabāt*. We find this threefold division actually in use under the Fāṭimid Wazirate. Our knowledge of the *Diwān al-Inshā'* is particularly accurate; for besides *Ḳhiṭaṭ*, ii. 224 *et seq.* and Ḳāḷkashandī (ed. Wüstenfeld), 188 there is a special work by al-Ṣairafi on the *Ḳanūn Diwān al-Rasā'il* (ed. 'Alī Bahgat, Cairo 1905), an invaluable contemporary document, which was copied by Ḳāḷkashandī in his great work *L'Art du Style*, without its title being given and post-dated. For further information see Becker, *Beiträge*, iii. The *Diwān al-Djāish* was of the greatest importance even in the pre-Fāṭimid period. In it lay the genesis of the Diwān system at least as far as the Arabs were concerned. The military Diwān was reorganised four times in the early period, but it was not till the rise of the Turkish guards and the Berber and negro troops of the Fāṭimids that it was placed upon an entirely new basis. Maḳrīzī's account of this development (*Ḳhiṭaṭ*, i. 94) is most instructive. The troops originally received pay (*aḳā*) and this went on till the system of military fiefs arose; at all periods, however, salaries in cash and *ikṭā'āt* existed side by side in the military Diwān (Ḳāḷkashandī-Wüstenfeld, 190 *et*

seq.). Herein lay the connection between the military Diwān and the *Ḍawāwīn al-Amwāl*, or finance offices, which are detailed on p. 191 *et seq. op. cit.* The revenues of the state are lawful or unlawful with reference to the *Shar'ā*. On the lawful cf. the article BAIT AL-MĀL. The unlawful were mainly the civic *mukūs* i.e. a vast amount of small taxes and all sorts of monopolies. The list of the *mukūs* abolished by Saladin in *Ḳhiṭaṭ*, i. 104, 6 gives a good idea of their nature in the Fāṭimid period; it is said that Ibn Ṭūlūn abolished the *mukūs* (*ibid.*, ii. 267, 33) but even Ibn Ḳalā'ūn had to abolish most oppressive abuses of this kind (*ibid.*, i. 87, 15). The abolition of the *mukūs* was a favourite move by powerful rulers who wished to be assured of popular favour (*Der Islam*, i. 99). These taxes were called *hīlālī* in opposition to the *Ḳharājī* taxes; the former were reckoned by the lunar and the latter by the solar year. Ibn Mudabbir, the greater antagonist of the Ṭūlūnids is said to have been the first to introduce this kind of tax into Egypt (cf. *Beiträge*, ii. 144 *et seq.*). Accounts of the monopolies and other unlawful sources of revenue in the Fāṭimid period are given in *Ḳhiṭaṭ*, i. 107—111; Ibn Mammāṭi, 10—26; Ḳāḷkashandī-Wüstenfeld, 159—171. The warehouses (of books, weapons, clothes etc.) which are detailed in Ḳāḷk.-Winst., 175 and *Ḳhiṭaṭ*, i. 408, formed an important part of the Fāṭimid *Ḍawāwīn al-Amwāl*.

But these offices in the Diwāns formed only a part of the hierarchy of officials in the Fāṭimid period. The latter may be subdivided as follows: A. Military Officers (*Arbāb al-Suyūf*): 1. Officers in the army such as vizier, chamberlain (*Ṣaḥīb al-Bāb*), field-marshal (*Isfahsalār*) etc. 2. the household with numerous officers in more immediate attendance on the Caliph. B. civil officers (*Arbāb al-Aḳlām*): 1. the ecclesiastical officers (chief *ḳāḍī*, chief *da'i*, *muḥtasib*, the head of Bait al-Māl, al-Nā'ib, and the *Ḳorān*-readers; 2. the offices in the Diwāns in the threefold division described above with numerous subdivisions; 3. the physicians; 4. the court-poets. All these officials lived in the court. Other classes were outside like the governors. Here we have followed Ḳāḷk.-Wüst., 181 *et seq.* For other officers in the provinces see Ibn Mammāṭi, 7 *et seq.*

The Fāṭimid system of state and court officials developed into the complicated system of Mamlūk period which differed in details. Our sources for the latter are excellent (cf. *Ḳhiṭaṭ*, ii. 204—229 and *passim*; Ḳāḷkashandī, *Ḍaw' al-Ṣubḥ*, 234—269; transl. Wüstenfeld, 157 *et seq.* and *passim*; 'Omari's chancery-manual, *al-Ta'rif bil-muṣṭalah al-sharīf*; Quatremère, *Sultans Mamlouks*; Khalil al-Zahiri, *Zubdat Kashf al-Mamālik*, ed. Ravaisse; Ibn Iyās, *Bada'i' al-Zuhūr*; van Berchem, *Corpus Inscriptionum Arabicarum*; Blochet, *Histoire de l'Égypte de Maḳrīzī*). It is quite impossible here to give a detailed account of the elaborate organisation of the Mamlūk state. We can only mention a few characteristic differences between the Mamlūk and the Fāṭimid systems. Development proceeded along three lines: Persian influence became very strong, the number of offices was considerably increased and they became more and more the prerogatives of the military classes. In place of the *Dār* or *Ḳhasānat al-Sharāb* we find the *Sharābkhānāh*, the *Ḳhasānat al-Firūsh* becomes the *Firāshkhānāh*, the *Ḳhasānat al-Surūdī* the *Rikāb-*

khānāh and so throughout. The *Ṣāhib al-Madjlis* becomes *Djāndār*, the *Ṣāhib Bait al-Māl* the *Khāzindār* and so on. But the offices also became more numerous. In place of the ecclesiastical offices of the Fātimid period fully detailed above we find the following ten in the Mamlūk period: Chief Kādī, Military Kādī, Muftī Dār al-ʿAdl, Wakīl Bait al-Māl — who had only to deal with purchases and sales by the treasury — Muhtasib, Naḳīb al-aṣhrāf, Nāzīr al-bimāristān, Nāzīr al-aḥbās, *Shāikh al-shuyūkh*, Nāzīr al-awḳāf. A few of these offices still exist and it is interesting to note that they first arose in the post-Fātimid period. A similar multiplication in the number of offices in the army and government must also have taken place. The way in which all offices gradually become the prerogatives of the army is also remarkable. The most important was the office of Nāʾib or Vice-Sultān; the holder is called *Sultān muḥtaṣar* in *Dawʿ al-Subḥ*, 246, 2. The representative of the Sultān was an ecclesiastic in the Fātimid period; the Nāʾib was at the same time the introducer of ambassadors and thus performed the duties of the later *Mihmandār*. It was quite in keeping with the changes in the constitutional principles when under the soldier Sultāns only a military man could act as representative of the Sultān. The *Nāʾib Kāfil* — there were also subordinate *Nāʾibs* — was the highest official in the state but subordinate to the Vizier when there was one. The Vizier had become purely an administrative official and, being a civilian, had the title *Ṣāhib* which is explained in *Khīṭāṭ*, ii. 223, 20. Even in the Fātimid period, however, the number of posts held by military officers was very considerable; we have for example already seen that the court consisted almost entirely of officers in the army, it strikes one as strange for example that such an official as the *Ḥāmil al-Dawāt*, the "Bearer of the Inkpot", the later *Dawāt-dār* [q. v., i. 931] should have been a soldier. But the alteration in the significance of this office clearly shows the new spirit that had entered all the old forms. Many offices with similar titles changed their character at different periods. All these interesting questions are still quite uninvestigated. — Nothing shows more clearly how military the constitution of the state had become in the Mamlūk period than its organisation in the Ottoman period, the most important features of which have already been pointed out. On this subject, besides Marcel, the reader, may be referred to de Sacy's work where important sections of the Egyptian *Ḳānūn-Nāmah* are published.

3. AGRICULTURE, INDUSTRY AND COMMERCE.

Egypt is dependent on geographical conditions for its economic prosperity. The Nile with its regular rise makes it possible in this desert sub-tropical land with a scanty rainfall to support a large agricultural population which, when strengthened by union into one state, need only fear disturbance from foreign influence in the north and south. The river at the same time forms an incomparable natural means of communication whereby products can be exchanged and trade and industry thus secured. In the second place there is the favourable situation of Egypt in relation to the commerce of the world. Egypt was from the earliest times the natural market for the exchange of goods between Africa, Asia and Europe. The land thus not only gained the profits of this

through-trade but had a splendid opportunity for realising its own raw produce and the products of its industry. The importance of these geographical factors was much more apparent in the middle ages than at the present day with the levelling influence of intercourse with foreign countries and the progress of invention. In the middle ages the annual rise of the Nile affected the whole life of the country as may be seen from the example quoted in *Beiträge*, i. 47 *et seq.* The amount of revenue from taxation depended on the Nile and the price of flour and bread varied from day to day with its level. In Assuan the rise of the Nile is first noticed in the last week of June and in Cairo in the beginning of July. The flood has half reached its height in Cairo about the 15th August and is at its height at the end of September. After fourteen days it begins to fall, has half sunk by the middle of November and reaches its lowest level at the end of May. At the present day the difference between the highest and lowest level is 23 feet in Assuan and in Cairo 16 feet (Baedeker, *Egypt*⁶, p. XLVI). In the middle ages the level of the Nile was measured by Nilometers (*mīḳyās*) in ells (*dhirāʿ*) and fingerlengths. The Arabs built Nilometers in Assuan, Dendera, Anṣīnā, Ḥulwān and lastly the best known one on the island of Rōḍa (see i. p. 821). In the early centuries of Islām 16 ells was the height desired while 12 and 18 were the critical points below and above; for it was possible to have too much even of a blessing; in the later middle ages from the ixth = xvth century the level of the land had so risen that 16 ells were no longer sufficient but 17-18 ells were the normal and floods rose occasionally as high as 20 ells (Kalkashandī-Wüstenfeld, 22 *et seq.*). When it rose the river did not simply overflow its frequently very high banks, but was also led by an extensive system of canals which changed considerably in the course of centuries into the land behind. The canals were closed till the Nile had reached a certain height. The opening of the *Khaliḍj* at Cairo was one of the greatest festivals of the year and was celebrated with old-time ceremonial and splendour, like all the Nile festivals which were taken over practically unaltered by Islām (ib. 209 *et seq.*; Ibn Taghribirdī, ii. 480 *et seq.*; *Khīṭāṭ*, i. 470 *et seq.*). The greatest and most important of these canals have been described in detail by the writers (Kalk.-Wüst., 23 *et seq.*; *Khīṭāṭ*, i. 70 *et seq.*). After the fertilising water had spread over the whole land it was allowed to stand on the fields for some time — in a system of tanks — to deposit its fertilising elements and then run off again. Seed was then rolled into the still moist earth in the most primitive fashion. The harvest was ripened in a few months and the land lay fallow and dry till the next flood. This utilisation of the flooded land once a year was called the winter crop (*al-aṣnāf al-shitawīya*). Its principal products were wheat, barley broad beans (*fūl*), peas, chick-peas, lentils, flax, clover, onions, garlic, lupines. The winter crop is to be distinguished from the summer crop (*ṣaifīya*) on land permanently irrigable; the latter's products were, sugarcane, melons, lubia, sesame, cotton, colocasia, auberge, indigo, radishes, turnips, lettuce, cauliflower (from *Khīṭāṭ*, i. 101 *et seq.*; Ibn Mammātī, 29 *et seq.*; cf. also Kalkashandī-Wüstenfeld, 33 *et seq.*; von Kremer, *Ägypten*, i.

197 *et seq.*). Vines, date palms and a few other fruit-trees also flourished. In certain places with a plentiful water-supply, such as the Faiyūm, rice was also grown. Durra was cultivated in Upper Egypt. On permanently watered land as many as three crops might be obtained in a year by following a certain rotation. The Egyptian agricultural and revenue year was the Coptic solar year. It began with the month Tūt. In Makrizi, *Khitaṭ*, i. 270 *et seq.* (transl. Casanova, 54 *et seq.*) and Ibn Mammāṭi, p. 26 *et seq.* there is an instructive list shewing what agricultural duties and what taxes etc. fall in each month. For comparison with modern conditions we may here recommend the reader to the *Textbook of Egyptian Agriculture*, by G. P. Foaden and F. Fletcher, 2 vols., Cairo 1908—1910, published by the Ministry of Education. As the land yielded its harvest by the solar year and taxes were paid by the Arab lunar year a whole year had to be dropped after 33 lunar years as 32 solar years corresponded approximately to 33 lunar years. This equation by which no one lost or gained anything as it only existed on paper, was called *taḥwīl al-sana* (*Khitaṭ*, i. 273 *et seq.*; Casanova, p. 66 *et seq.*). The quality of the soil and with it its rent and tax-paying capacity varied considerably. While in the modern period a distinction is only made between *raiṭ*, the land reached by the flood, and *sharāḳī*, the land not affected by it (von Kremer, *Agypten*, i. 179), the middle ages distinguished a whole series of grades of lands, which are detailed by Ibn Mammāṭi, p. 28 *et seq.*; *Khitaṭ*, i. 100; Kalkāshandī-Wüstenfeld, p. 152. The unit of agricultural land was the *faddān* (= acre), which was divided into 400 square *kaṣabas* of Ḥākim (*Khitaṭ*, i. 103, 16); 1 square *kaṣaba* at the present day = 16 square yards; 1 linear *kaṣaba* = 4 yards. The ell, *dhirāʿ* was smaller (at the present day = 2 feet). On the manner of measuring cf. Ibn Mammāṭi, p. 32 *et seq.* The most important cubic measure was the *Irṭabb*, the ancient Artabe = 198 litres of 6 *waibas* (1 *waiba* = 33 litres), but there were Artabes of different sizes. The standard weight was the *kinṭār* (44.9 kg) of 100 *riṭl*. One *riṭl* is therefore a little less than 1 lb. A distinction was made between *Laithi* and *Djarawi* *kinṭārs* (Kalk.-Wüst., p. 224).

Egypt is usually regarded as the typical agricultural country but Mommsen has pointed out that in ancient Egypt a large section of the population lived by industry. The industries of Egypt were naturally all dependent on agriculture for their raw material, for example the textile industry, the manufacture of oil and ointments, which were also exported. Only a few industries depended on imported raw material such as the unimportant iron manufactures of the seaport of Tinnis and Dilās in Central Egypt. The silk which was frequently employed in the textile industries was also imported (probably from Syria). The imports of leather were limited to the hides of rare animals as the leather trade of Central Egypt had its materials supplied by the land itself. Weaving was by far the most important industry. It was only carried on on a large scale in the towns which we know to have been centres of the Christian population: Tinnis, Damietta, Bahnasā, Ashmūnain, Asyūt and Akhmīm. The Arabs themselves had no manufactures. A distinction may be made between the manufacture of woollen, cotton and

linen goods. Lower Egypt was the centre of the linen industry, and to some extent Central Egypt also while the manufacture of wool and cotton seems to have been confined to Central and Upper Egypt. Wool was manufactured into veils, garments and carpets in numerous factories between Bahnasā and Akhmīm. Besides the celebrated veils 30 ells long which were sold in pairs, imitations of the red woollen goods of Armenia were manufactured. The wool of goats was used for the manufacture of camelotto-like stuffs. The woollen goods made in Upper Egypt were exported in large quantities and were famous as far as Persia. Cotton which at the present day is the dominant factor in Egyptian agriculture, was also grown and manufactured in the Arab period and even earlier. Bahnasā was the main centre of this industry. In the oases garments were made of the cotton grown there but here the industry was only prosecuted to supply the local demand and nothing seems to have been exported.

By far the most important branch of the Egyptian textile industry was the weaving of linen, the great centre of which lay in the northeast and northwest corners of the Delta, in Damietta and Tinnis in the east and Alexandria in the west. Its products were carried throughout Europe and Asia (Ali Bahgāt, *Les Manufactures d'Étoffe en Égypte au Moyen Âge*, Institut Égyptien, 6th April 1903). We possess very full details of the looms of the east. Around Damietta and Tinnis there were a number of smaller places in and around the modern Lake Menzaleh each of which produced its local specialities. Common to them all was the manufacture of a fine linen cloth, called *sharb* of which a single piece cost as much as 100 dinars. In Damietta it was manufactured only in white and in Tinnis only in colours. In addition the manufacture of brocades and silk appliqué work flourished in all these places. Tinnis alone had 5000 looms. The men and not the women wove as was the case even in the time of Herodotos. This industry was therefore not organised in the womens' apartments but in a way peculiar to itself which can be reconstructed by a careful examination of the sources. It has been thought that the whole industry was a state monopoly. This is incorrect. We can distinguish clearly between state and private enterprises. To understand the gigantic scale of some of these state factories it must be remembered that the robes produced there were officially given away as presents in large quantities; the whole court received new garments twice a year; besides, in those days robes were bestowed as orders are at the present day, perhaps even oftener and more indiscriminately. Besides a large wardrobe was a form of investment not to be despised in a period when the hoarding of objects of value was a securer way of saving money than investing capital in industry. Such products of the royal looms as came into the market came from the wardrobes thus formed by disgraced nobles. When the robes were finished in their place of manufacture they were sent to Cairo where those destined for the Caliph were fitted in one of the womens' apartments of the palace, where 30 girls worked under the supervision of a manageress. This is the only trace we find of the Byzantine gynaeceaeon. The private factories were organised on quite different lines. Outside Damietta on the river bank lay

large buildings in the upper stories of which were workrooms which the weavers could hire. It was here that the valuable stuffs were prepared. Unfortunately we do not know who let these rooms, whether it was the state or rich private individuals. All sales were conducted by brokers licensed by the state. They were the only authorised middlemen. But it was probably they also who supplied the workers with material. They kept accurate note that each worker actually used up the material supplied him for the manufacture of a certain garment. What he saved in material was deducted from the price paid him. When the garments had been woven their further treatment was a highly specialised branch of industry. The first man folded them, the second wrapped them up, the third laid them in baskets and boxes and the fourth tied them; each required to be paid and made his sign on the box. They were then loaded on ships and sent away to be sold.

The other industries can only be briefly detailed. Egypt did not have the olive tree; it was only grown here and there as a garden tree. All olive oil had therefore to be imported and a cheap substitute to be found for lamp-oil. The Egyptians prepared the latter even in ancient times by pressing certain seeds which contain oil. The following were cultivated for this purpose: radish, rape, lettuce, sesame, saffron, mustard, flax and hemp. The manufacture of oil probably never exceeded the demands of local requirements. The remains of the crushed seeds were used as cattle food. The only industrial use of oil was in the soap factories which must have been especially numerous in Koptos. Soap was made in various colours and was a popular article of commerce. The manufacture of sugar from the sugar-cane was rather more important. Sugar-cane must have been, as at the present day, very often eaten raw but more usually pressed to obtain the sugar which was considered such a delicacy. We have only to read the accounts of various writers of the castles and figures in sugar which were made in thousands and sent by the Caliph to all the officials, to understand that this was a most important industry. Sugar was also exported. Although we know nothing of the organisation of these sugar mills, the actual technical processes are well known. — In addition to these the most important industries there were smaller ones like the manufacture of papyrus which disappeared with the introduction of paper in the ivth (xth) century. We cannot here go into the great number of smaller industries. The individual trades were under *Shahkis* and organised into guilds.

Great activity in agriculture and industry presupposes the development of trade. We are unfortunately not well informed about the corn trade. Like all trade in the produce of the soil it was under strict state control but it was probably not entirely a state monopoly. The revenues of the state in kind were however again sold by the state; cf. for example the state traffic called *bakṭ* [q. v., i. 638]. Corn was exported to Arabia and Syria and flour also to the former. We know almost nothing of private commerce. We only read frequently of rises in prices produced by private speculation. But the state also speculated as it usually had exactly the same interests as the organiser of a private enterprise. Flax played a certain part as an article of commerce next to

wheat. The centre of the flax trade lay above the Faiyūm in the Nile valley, the Faiyūm itself only produced an inferior quality of flax. The corn trade of Upper Egypt had its centre farther south at Manfalūt near Asyūt. Corn, flax and cotton were exported abroad and even to Italy. Foreign trade in general may be divided into three well marked fields: *a.* trade to Nubia and the Sūdān via Assuan and Asyūt; *b.* the through trade in Indian goods via the harbours of the Red Sea and lastly: *c.* the Mediterranean trade.

Arab gold and silver coins were current up to the second cataract and above it the trade was carried on entirely by barter. Nubia chiefly exported slaves, which after the foundation of black regiments (*ʿabid*) by Ibn Ṭūlūn were required in large numbers. There were also considerable exports of gold from the ʿAllāḫī gold washings. The gold coined at the state mint was obtained chiefly from Takrūr i. e. the Sūdān. We do not know how it came to Egypt, possibly via Assuan and Asyūt. Egypt exported to the Sūdān in return, corn and textiles and also glass beads, combs and corals (cf. ASSUAN, i. p. 492-493). In the early centuries of Islām Assuan was by far the most important town in Upper Egypt. In the Fāṭimid period Ḳūs gradually rose to importance and ultimately supplanted it, which was probably due to the prosperity of trade with India. (cf. the article *Ḳūs*, i. 210⁴). The development of Indian trade was a result of the commercial activity of the Egyptian nobles. In the pre-Fāṭimid period the renting of land and the usurious trade in corn connected with it formed the usual outlet for the investment of private capital. At all periods shops, baths and inns formed a favourite outlet for private enterprise. But under the Aiyūbids and Mamlūks Indian trade became the favourite form of investment. It lay in the hands of a company who called themselves *Kāramites* and had their headquarters in Ḳūs and Cairo. The etymology of the word is uncertain. The *Kāramites* had a bank which conducted international business on a large scale. An attempt was made on one occasion under the Mamlūks to oust them from their position as intermediaries in the spice (particularly pepper and cinnamon) trade, but it failed. They had at all times to suffer from the encroachments of the state. All goods passing through Egypt were liable to the *zakāt*, which in Saladin's time was levied at 5-6 places at the rate of 2½ % each time. This made a total customs duty of 15% of the value. In the last year of Fāṭimid rule spices to the value of 800,000 dinārs passed through Cairo. This probably did not increase in the later period. As long as Baghdad flourished, Indian trade went via that city; the Jewish "Radānites", who at that time traded between the Mediterranean and the Red Sea did not touch the Nile valley at all. It was only with the decline of Baghdad and especially after its fall that Egypt became the great centre of exchange until this trade lost its importance with the discovery of the sea-route to the East and of America.

We have abundant material for the study of the Mediterranean trade of Egypt in western sources and in the commercial treaties published by Amari (*Diplomi Arabi*). There are two excellent works covering the whole field: Heyd, *Geschichte des Levantehandels* and Schaube, *Handels-geschichte der Römischen Völker des Mittelmeer-*

gibetes. De Goeje has recently published a short study entitled, *Internationaal Handelsverkeer in de Middeleeuwen* (K. Akademie van Wetenschappen, 4^{de} Reeks, Deel ix.). We further propose to give here a few notes on the tariff policy of Egypt and the state trade with its monopolies carried on through the customhouses of which a clear picture is given by Arabic sources hitherto neglected. It is only for the Fātimid and post-Fātimid period that we have fairly detailed information, naturally enough as intercourse with Europe only began with the Crusades. Commerce with the Italian cities must have been more important than the trade with Byzantium and the west in the pre-Fātimid period. Customs duties were levied in proportion to the value of the goods. In the early period the basis of the tax was one tenth, in Saladin's time a fifth of the value, but it varied between 10⁰/₁₀₀ or less and 35⁰/₁₀₀ or more according to the nature and place of origin of the goods. The tenth became the favourite levy; for example Pisa paid it on wood, iron and pitch i.e. entirely on articles which Egypt required to import. Precious metals were for brief periods duty-free but as a rule the tax on them was 2½—10⁰/₁₀₀. The policy of the Egyptian tariff system was to attract to the country certain raw products which it could not do without and were not produced in it. These were principally wood and iron and all the articles required for shipbuilding and the munitions of war. Wood, iron and pitch recur continually in all commercial treaties; the Egyptians did everything they could to encourage such imports. On the other hand Europeans knew that Egypt required these articles to maintain its military efficiency. The Popes of the Crusading period therefore repeatedly declared these to be contraband of war. The re-export of these articles was also forbidden; for the dogana i.e. the diwān, the government customhouses, bought them up at the current price. We thus find the state acting not only as an intermediary but as the purchaser and the process was as follows: when a merchant imported a number of goods, including wood or iron, he had first of all to pay the duties on his whole cargo in wood and iron. If he had still a fair quantity of the latter left then the government bought it from him. But he did not receive the whole price in gold but only a third while he had to take two thirds in alum. Side by side with the buying up of all imported wood all forests were government property, and on them we have full details (Ali Bahgat, *Les Forêts en Egypte, Institut Egyptien* 1900, p. 141 *et seq.*). Wood, iron, pitch, oakum etc. were state monopolies because they were not produced in the country and were necessities. To keep the price as low as possible the government had also a monopoly of such valuable native products as were much desired by foreign countries, notably alum, natron and emeralds, to use them for exchange. Alum was dug up in the Libyan desert and the oases by Bedouins and brought to certain harbours on the Nile notably Kūs, Akhmim, Asyūt and Bahnasā. The government purchased it at these places at 30 dirhems the cwt., or even cheaper. Private trade was forbidden and strictly punished. The average amount exported by the state through the dogana was 5000 cwts; it sometimes rose to 13,000 cwts. The market price varied from 4—6 dinārs per cwt. Only a small proportion of the

alum remained in the country, the chief purchasers being the dyers as alum is used for red dye; but the total disposed of in Cairo was only 80 cwts. The Egyptians had to pay a higher price than foreigners, viz. 6½-7½ dinārs a cwt. The natron was obtained in Wādī Naṭrūn, on the western borders of the Delta. Here the Bedouins only acted as carriers. The large industry itself was in the hands of a staff of officials and workmen appointed by the state. A cwt. cost the state about 2 dirhems at the mines and was sold in Cairo and Alexandria for 70 dirhems, which showed a considerable profit in spite of the high cost of transport. The latter was not exorbitant as the Arabs had to carry one third of every consignment free. In the working of the emerald mines of the Arabian desert the state again appears as a monopolist. The deposits were in cavities which were entered with lights and ropes. While private enterprise was allowed a free hand in the gold washing industry of the Bodjā country, the state maintained full control over the emerald mines. The workers were paid by the government, which also supplied them with tools. The workers were only allowed to leave the mines naked so that they could not conceal any stones. The stones obtained went to the Sulṭān's treasury. On the whole monopolies were a characteristic of the later period. In the Mamlūk period the state claimed first right to everything. This practice, which was however known previously, was called *farḥ*; i.e. the state claimed for itself exclusively the part of middleman. This subject has as yet been but little investigated. M. Sobernheim's *Das Zuckermonopol unter Sultan Barsbey* (*Zeitschr. für Assyriol.*, xxvii. 75 *et seq.*) is an excellent study of one branch of it.

The above material will shortly appear in an extended form with full references and illustrative passages in *Beiträge*, iii. Preliminary articles are to be found in *Klio*, ix. 2, p. 1 *et seq.* and *Der Islam*, i. 93 *et seq.* Ibn al-Hādīdj, *Madkhal*, iii. gives an unrivalled account of the details of trade and industry. With the exception of the works of the French expedition no preliminary work has been done on the economic conditions of the Ottoman period.

4. INTELLECTUAL ACTIVITY AND ART.

It is quite impossible to give a full appreciation of the intellectual activities of Egypt in the Muslim period in the space at our disposal here. We can only emphasise the fact that in Egypt we have an unbroken literary development from the beginnings of Islām to the present day. The bearers of famous names, who held appointments in mosques and madrasas, libraries and hospitals as well as in the diwāns are innumerable, not to speak of popular intellectual movements, the popular romances, and the shadow plays. The architects and artists to whom the golden age of Egypt owed its splendid edifices are mostly nameless and it is as yet hardly possible to comprehend their influence and inter-connection. Certain it is that we have here a vast amount of mental energy to which the whole of mediaeval Egypt owes its soul. With this wealth of material all that can be investigated here is what are the essential and what the special features of the intellectual culture of Muslim Egypt. Egypt was in the first place the cradle of important schools of Shāfiʿī and Mālikī Law. Secondly Sūfism as elsewhere here

left its special character on external forms of organisation. In the third place a love for the Nile valley and the splendour of its ancient history had created a historical tradition, which was unequalled by that of any other Muslim country and lastly Egypt was the home of the Oriental popular tale.

The beginnings of intellectual activity in Egypt are quite obscure. It is clear that the inhabitants of the Nile valley played no part in the decisive controversies of the earliest days of Islām; Egypt was only a province and occupied with other affairs. Maḳrīzī (*Kḥiṭāṭ*, i. 332) tells us that the various camps followed the teachings of the "Companions" and Tabrūn among them. Thus the Egyptians attached themselves to 'Abd Allāh b. 'Amr, the son of the conqueror and in a later generation to Laith b. Sa'd. 'Abd Allāh is said to have expounded decisions of the Prophet and eschatology. Now there has actually survived on papyrus a *Ṣaḥīfa* of 'Abdallāh b. 'Amr passing under the name of Ibn Lahī'a, with traditions which deal with the last judgment (*Papyri Schott-Reinhardt*, i. 9). This Ibn Lahī'a is one of the best known traditionists of Egypt of the first half of the second century. He and Laith are the principal authorities of the period. Al-Kindī, ed. Guest, provides us with an excellent means of studying how the great religious wars of the East, the development of ritual and of the Fīkh have left their traces in Egyptian practice also. A certain Mawlā, Yazīd b. Abī Ḥabīb, in the time of 'Omar II, appears to have been the first actual teacher of Fīkh, who discussed *ḥarām* and *ḥalāl*. The Mawlā's on the whole played a considerable part in Egypt. The Mālikī *madhhab* attained importance at a very early period. It is said to have been first introduced by Mawlā 'Abd al-Raḥīm (died 163 = 779). The Mālikī ritual reigned supreme till in 198 = 813 al-Shāfi'i came to Egypt and soon attracted a large following. He worked here till his death in 204 = 820 and his tomb is revered to this day. The Ḥanafī rite was occasionally represented by a Ḥanafī judge sent from Baghdād, but its first representative at once met with a vigorous opposition, led by Laith b. Sa'd, because he wished to abolish the *alḥās* (al-Kindī, 371 *et seq.*; *Kḥiṭāṭ*, ii. 334: cf. also ib. ii. 294 *et seq.*). The Mālikī and Shāfi'i schools thus remained predominant till the coming of the Fātimids, who organised everything after the Shī'ite-Ismā'ili fashion. It is not generally known that the Shī'ite creed was not something new or unheard of in Egypt; in *Kḥiṭāṭ*, ii. 334 *et seq.* we have not only a history of the beginnings of the Shī'a but a more particular account of its development in Egypt. Even before the Fātimid period there were sanguinary street-riots and the fanatical orthodox negro militia used to ask the people for their creed: "*man kḥāluka?*" Whereupon they had to answer "Mu'āwiya" (ib. 340) — a proceeding which can only be explained by the presence of a strong Shī'ite opposition. The greater part of the population was, nevertheless, always orthodox and therefore felt it deeply when with the Fātimids the Shī'a of Ismā'ili type was declared the only valid *madhhab*. The well-known addition was at once made to the *adhān*, the *ṣalāt* was pronounced over 'Alī, Fātima and their children, the *ḥasmala* had to be uttered aloud, certain prescriptions of the *farā'id* were altered, the

ru'ya and the *tarāwīḥ* abolished in *Kamaḍān*, the sale of *melūkhiyā*, Mu'āwiya's favourite vegetable, forbidden and many other changes made. Under Ḥakīm they even went so far as to introduce the public execration of the orthodox Caliphs but popular opinion protested against this and other Shī'a prescriptions also were from time to time replaced by orthodox. During the brief interregnum in 425-426 = 1033-1034, during which the *khutba* was read for the Imām Muntazar, there were 4 Qādis: an Imāmi, an Ismā'ili, a Shāfi'i and a Mālikī. The old principal orthodox rituals had thus survived and at once developed considerably when at length Saladin restored the orthodox creed to the land which so desired it.

Even under the Fātimids intellectual pursuits flourished. The vizier Ibn Killis gathered jurists and dogmaticians, poets and grammarians around him and made great efforts to propagate an Ismā'ili Fīkh in Egypt. The Banu 'I-Nu'mān, a celebrated family of qādis during the golden age of the Fātimids, worked with similar aims. (R. Gottheil in the *Journ. Amer. As. Soc.*, xxvii. 217-296). Endowments began to be set aside for scholars, the *Dār al-Ḥikma*, the first Muslim university was founded (*Kḥiṭāṭ*, ii. 342, 4), and *Ḳor'ān*-readers, jurists, grammarians and physicians appointed to it. When it was closed, the *Dār al-'Ilm al-ḡadida* was opened (ib. i. 445, 2). A staff of 35 lecturers was maintained at the Azhar Mosque (q. v., i. 532 *et seq.*) (ib. ii. 341, 1). The libraries of the Fātimid Caliphs (ibid., i. 407 *et seq.*) testify to their active interest in intellectual pursuits. This activity did not, however, really reach its zenith till the Salḡūḡ religious reaction entered Egypt with Saladin. It is a peculiar feature of these warlike times that not only the Aiyūbids but also the great Mamlūks, who were all simple soldiers, took the greatest pleasure in and richly endowed intellectual pursuits, more particularly those connected with religion. Madrasas and *Khānkās* sprang up like mushrooms. The material foundations were now prepared on which the study of the Fīkh and Ṣūfism could flourish. Naturally madrasas were at first built only for the Mālikis and Shāfi'is. But even by this period Abū Ḥanīfa's school had entered Egypt. The number of Ḥanafī madrasas was disproportionately great. This is explained by the fact that Nūr al-Dīn was an enthusiastic Ḥanafī (ib. ii. 343, 30). The appointment of qādis for the three principal rituals also dates from this period; Baibars al-Bunduḡdārī was the first to add the Ḥanbalī as a fourth but this ritual never attained great influence in Egypt (Suyūṭī, *op. cit.*, i. 274). The internal arrangements of the madrasas presented features peculiar to Egypt. Each ritual seems originally to have had its own madrasa; Saladin for example, founded madrasas for the three principal rituals. It soon became common for two rituals to unite in one madrasa and in no particular combination. There were frequently separate chairs for Ḥadīth and *Ḳor'ān* reading in addition to the Fīkh. But by 641 = 1243 we also find all 4 *madhhab*s combined in one madrasa (*Kḥiṭāṭ*, ii. 374, 1); in large madrasas medicine was also taught, being the sole secular subject (ib. ii. 380, 2). It appears particularly remarkable to any one acquainted with the later relation of the Fīkh to Ṣūfism that, from the viiith = xivth century on, a Fīkh and a Ṣūfī school were frequently conducted

alongside of one another in the same madrasa and sometimes even the same *Shaiikh* had charge of both (ib. ii. 392, 14; 394, 18; 398, 9; 399, 12). It can readily be understood how after Saladin the teachings of *Ash'arī* in dogmatics were regarded as indispensable by all these teachers. This showed itself in the rejection of Ibn Taimiyya. With the decline of the madrasas and the mismanagement of the late Mamlūk and Ottoman periods the Azhar has more and more become the focus of the intellectual life of Egypt.

In spite of the official patronage of the Hanafi school, it was the old established schools of Mālik and Shāfi'i that made the most remarkable development. Even in the early period of Islām we find here among the Shāfi'is al-Muzanī and al-Nasā'ī, one of the six canonical traditionists, who spent a long time in Egypt; of the later period we may mention the Subkīs, Bulḡinī, Zakariyā al-Anṣārī, Ibn Ḥadjar al-ʿAsḳalānī, Suyūṭī down to Sharbīnī and Shabramallīsī. The most important of the Shāfi'is, however, were the two great Shāfi' authorities al-Ramlī (*Nihāya*) and Ibn Ḥadjar al-Haiṭhamī (*Tuhfa*), of whom the first was an Egyptian, while the second at least began his career there. The *Fihrist* gives quite a long list of names of Egyptian Mālikī scholars of the early period. It was from Egypt that the whole of North Africa and Spain was won for the Mālikī school. For the later period special mention should be made of Ibn al-Ḥādīdj, the author of the *Madkhal*, and later still Laḳānī, Udjhūrī, and Zarkānī. While all later writers were merely copyists of older authorities it was nevertheless they who kept alive intellectual interests before the coming of European influence. Their activities were chiefly directed to the Fatwā, through which alone a certain development was possible. Nevertheless a gradual deadening of the intellectual life was going on always.

No preparatory studies have as yet been made for the history of Sūfism in Egypt; nevertheless it has always played an important part from the time of the Aiyūbids and Mamlūks to the present day. One of the earliest mystics, Dhū 'l-Nūn [q. v., i. 963^b *et seq.*] was an Egyptian; Ibn al-Fārīd, perhaps the greatest Arab mystic poet, belonged to the Nile valley and it was from here also that Būṣīrī's *Burda* set forth on its triumphant career throughout the whole Muslim world. The Sūfiya as an organised body is first mentioned in 200 ≈ 815; a brotherhood played a certain part in some political troubles (al-Kindī, ed. Guest, p. 162). The brotherhood system reached its zenith under Saladin and his successors, to which the long list of Khānḳāhs and Zāwiya in Makrizī's *Khīṭaṭ*, ii. 414 *et seq.* bears eloquent testimony. The first Khānḳāh was a *Dār Sa'īd al-Su'adā* (*Khīṭaṭ*, ii. 415) which was used for other purposes in the Fātimid period but made a waḳf by Saladin (569 = 1173). It was originally destined for Sūfis from abroad but soon became the centre of Egyptian Sūfism. Its *Shaiikh* bore the title *Shaiikh al-Shuyūkh*, which was afterwards given to all heads of Khānḳāhs. These Sūfis in the Aiyūbid period took a prominent part in the public ritual of the chief mosque. The *Shaiikh* appeared under a baldachin and went in ceremonial procession with his adepts on Fridays to the mosque where they read certain lessons before and after the Ṣalāt al-Djumu'a. There were Sūfi

settlements of this kind not only for men but also for women (*Khīṭaṭ*, ii. 428, 1), which succoured divorced women for example and offered them shelter. Only a few of these seem to have been reserved for definite brotherhoods (e. g. ib., ii. 432; 435, 10, 25 — for example the 'Adawiya, the order of *Shaiikh* 'Adī had a settlement here —, they were usually called after a *Shaiikh* or the founder. The names of orders so well known in Egypt later are entirely lacking in this period; Makrizī however (ixth = xvth century) already mentions al-Fuḳarā al-Aḥmadiya al-Rifa'iya (*Khīṭaṭ*, ii. 428, 25). The history of the individual *ṭarīḳas* has not yet been written. The development leads in any case to the conclusion that the following were considered the four great *Ḳuṭbs*: 'Abd al-Ḳādir al-Gilānī, Aḥmad al-Rifa'i, Aḥmad al-Badawī, the saint of Ṭanṭa and Ibrāhīm al-Dasūḳī. Of these "pole stars" Badawī and Dasūḳī were Egyptians and Rifa'i also is said to have died in Cairo (ib., ii. 428, 27). The communities called after these saints are the *Ḳādiriyya*, which has no subdivisions in Egypt, the *Rifa'iyya*, which is divided into 3 *bayūt* but is governed by one *Shaiikh* (Bāziya, Malkiya, Ḥabībīya), the *Aḥmadiyya*, the most popular order in Egypt, which is divided into 16 subdivisions each with its own *Shaiikh* (*furū'*) of which the Baiyūmiyya and the Shīnāwiyya are the best known and lastly the *Barāhīna*, the two independent branches of which are called *Shahāwiyya* and *Sharānība*. This scheme which like the next is taken from 'Alī Mubārak (*Khīṭaṭ dīdāda*, iii. 129) is of course not a product of last century but has gradually arisen within the period discussed in this article. Besides these four communities attaching themselves to the four *Ḳuṭbs*, the *Shādhilis* had settled in Egypt at quite an early period and they even had an Egyptian eponym. From the list of Egyptian mystics in Suyūṭī, *Ḥusn al-Muḥādḍara* (Cairo 1299), i. 292 *et seq.* it might be assumed that they were predominant in the earlier period. 'Alī Mubārak, *Khīṭaṭ dīdāda*, iii. 129, gives 13 *furū'*. He also mentions the Sa'dīya, the Naḳshibandiya, the *Khelwatiya* with 4 *furū'* and lastly the *Mirghaniyya*, which was most popular among the Berbers. The latter is a comparatively modern foundation. At the present day all the brotherhoods are under the *Shaiikh* al-Bakrī, in whose family the blood of the Wafā'i shāriḥs and the descendants of Abū Bakr, the Ṣiddīqīs, is mingled. For centuries the Bakrīs have played a prominent part in the spiritual and more particularly the mystic life of Egypt. The public appearances of the dervishes are now limited to accompanying the Kiswa and the Maḥmal and to the feasts of the various Mawlid, particularly Mawlid al-Nabī, which was formerly celebrated with great splendour in the Ezbekiya and now in the 'Abbāsiya. It seems as if reforms were to be introduced under the present Bakrī.

The most important intellectual contribution made by Egypt is its historical literature. There is no country in the world which through its historical monuments has such a stimulus to the study of history as Egypt. Nevertheless the Muslims never succeeded in getting beyond fables as regards the pre-Muḥammadan history of the country. The fullest survey of this literature (cf. above p. 11 *infra*) is given by Ibn Waṣīf Shāh. At a very early period, however, an interest in the Muslim period itself arose which followed three lines: political

history, biography of scholars and studies in topography and archaeology, the so-called *Khīṭaṭ* literature. The same author frequently cultivated all three fields. The origins are very obscure. A. R. Guest has collected all that is to be known about the early history of the historical literature that has survived in the brilliant introduction to his edition of al-Kindī. In Ibn 'Abd al-Ḥakam (died 257 = 871), the oldest author that has survived to us, the later subdivision into the above three branches is not yet found. In al-Kindī (d. 350 = 961), however, we find them treated in separate sections. In the field of the history of scholarship it was most difficult to preserve local character. Here two interests combined, that of the criticism of tradition and the biographies necessary for it and that of pride in local celebrities, among whom were early reckoned scholars who had made but a temporary sojourn in Egypt. From al-Kindī to Ibn Ḥajjār al-ʿAskalānī, from Ibn Yūnus to Sūyūṭī and Maḳrīzī's *Muḳaffā* there run unbroken series. Although Egyptian *kādis* or Egyptian scholars in general may be discussed, the principle of selection is the connection with Egypt. We are likewise only referring here to those who specialise on Egypt among writers of political history; for people like Subkī for the history of scholars and Nuwairī for the historical encyclopaedia belong to another field. What delightful collections of details we owe to the gossip Ibn al-Dāyā for the Tūlūnid period, the versatile Ibn Zulfāḳ, and the diffuse chronicler Musabbiḥī for the Fāṭimid period. An appreciation of the whole work of the Fāṭimid historians is given in *Beiträge*, i. A characteristic distinction from the earlier period, which becomes gradually more marked from the Fāṭimid period on, is the preponderance of officials who were historians. Musabbiḥī gives a wealth of official documents and this becomes the rule with Ibn al-Ma'mūn and Ḳāḍī Fāḍil. The very minute descriptions of etiquette at the Fāṭimid court in Ibn Ṭuwair seem to be copied from a book of court ceremonial. Ibn Mammātī gives from personal knowledge rules for the *Dīwāns* and later al-ʿOmārī a chancery-manual, the most perfect work on the latter's model being *Kalkashandī's*. In his *Ta'rikh al-Faiyūm* al-Nābulusī publishes an official memorial and in his *Lum'a* a thinly veiled petition for reinstatement in office. Finally writers like Ibn Duḳmāḳ and Ibn Dīr'ān use or reproduce boldly records of official surveys. Of course concurrently with this we have the discussion of history proper; we need only mention Ibn Iyās and the numerous authors in Syria who at that time embraced both Egypt and Syria in their histories of the Empire. There is no Muslim country that can point to so perfect a historical tradition — on its political institutions also — as Egypt.

Lastly the *Khīṭaṭ* literature is quite unique. In other countries the rudiments of it may, it is true, be found but nowhere has this style of literature attained such a development as in Egypt. Although none of these al-Kindī's and al-Ḳuḍāṭī's was a Pausanias, yet according to Oriental ideas they maintained a high level of accuracy. An unbroken chain runs from the above mentioned fathers of this literature through Ibn Abi 'l-Barakāt, *Djawwānī*, Ibn 'Abd al-Zāhir and Ibn al-Mutawwaj down to Maḳrīzī's *Khīṭaṭ*, an invaluable work in spite of all its faults. It is true that Maḳrīzī

merits relatively little of the credit; for the book is really the work of centuries. If it be taken with the same author's *Muḳaffā* and the *Sulūk*, we get a fairly good idea of the pre-Ottoman period's contribution to the history of Egypt.

Our sketch of the intellectual life of Egypt would be incomplete without a brief reference to the popular literature, whose home was in Egypt or which at least received its final form here. For the tales of the 1001 Nights the reader may be referred to the article ALF LAĪLA WA-LĪLA (i. 252^b *et seq.*). The great romances of Antar, Zāhir Baibars, Saif b. Dhū Yazan and the Banū Hilāl have been much less studied (*Bibliography* in Brockelmann, *Gesch. d. Arab. Lit.*, ii. 62; on the significance of the Saif romance, cf. *Der Islām*, i. 172 *et seq.*). The character of the eccentric Fāṭimid Ḥakīm early became the subject of a romance (De Sacy, *Exposé de la Religion des Druzes*, i.). Of a more burlesque nature is the Egyptian shadow-theatre, on the earliest representative of which, Ibn Dāniyāl, G. Jacob has published numerous studies (*Geschichte des Schattentheaters*, p. 36 *et seq.*; extracts from Ibn Dāniyāl's *Taif al-ḡayāl*). Of great importance for the stratum of culture depicted in these pieces is G. Jacob's *Ein ägyptischer Jahrmakkt im XIII. Jahrhundert* (*Bayer. Ak. d. Wiss., Sitz. Ber.*, 1910, 10).

However difficult it may be to draw a distinction between what is common to Islām in general and what is peculiar to Egypt in the fields of literature and science, in art it is almost impossible, for the development of art and culture in Egypt is indissolubly connected with that of the whole Eastern Mediterranean and the buildings of Cairo are only so often quoted as examples because they are easy of access and so well preserved owing to favourable historical circumstances. As mentioned above, some critics have gone so far as to deny any Egyptian character to this art of Cairo. Art and science are international possessions in Islām. But in spite of all international influence Egyptian art and architecture retained a certain indigenous character; it is quite as much at home there as the doctrines of a Mālik or a Shāfi'. In the beginnings of Islām Coptic architecture enjoyed a great reputation, for in many foreign buildings we find *Ḳibṭ* appearing as masons provided by *leiturgia* (cf. *Der Islām*, iii. 403). The earliest buildings of Islām in Egypt must therefore have had a Coptic character although even in the oldest mosques the tradition which the Arabs had brought with them decided their general plan and disposition. We know very little about these early centuries. The history of Muslim art in Egypt begins with the Tūlūnid Mosque, on the ornamentation and architectural principles of which very lively differences of opinion exist (cf. the articles by Herzfeld and Strzygowski in *Der Islām*, i.-ii. and ib. ii. 396, with the literature given there; more recently Herzfeld, *Erster vorläufiger Bericht über die Ausgrabungen von Samarra*, Berlin 1912). Are the ornaments, is the principle of pillar and arch construction, is the peculiar form of minaret indigenous or imported from Samarra? These are the questions the settlement of which must be left to the historians of art. The general character of the Tūlūnid culture is in favour of the theory of importation but it is also quite possible that only the external and obvious elements were brought from the east

and then imitated in native architecture and art. We meet with similar questions in the Faṭimid period with its new and strange but pleasing art, whose Persian character cannot be denied (pointed arches, innumerable patterns, exuberant Kūfic). Here also Herzfeld sees in the ornamentation continuations from the Tūlūmid period, while S. Flury combats this development (*Die Ornamente der Hakim- und Ashar Moschee*, 1912). Van Berchem was the first to discuss Faṭimid art in the *Journ. As.*, 1891, p. 411 *et seq.* and Strzygowski has more recently dealt with it in *Mshatta and Amida*. The most important architectural monuments are detailed in the article CAIRO, i. p. 822 *et seq.* A new period begins with Saladin. It is in keeping with the reactionary character of his epoch that the art of the period also shows a new spirit, which finds an external expression in the substitution of Naskhī as an decorative script in architecture in place of the previous exuberant Kūfic. With the new requirements of the period, new kinds of buildings like the madrasa, or the khānḳāh arose, which continue to develop under the Mamlūks. The cupola style of building which existed under the Faṭimids, gradually becomes prevalent and assumes more and more markedly eastern forms and we have already seen that the whole Mamlūk period was characterised by Persian influence. The use of stalactites as a means of transition from the quadrangular base to the springing of the dome, underwent a constant and richer development. Another borrowing from the East is probably the accentuation of the façade, unknown at an earlier period, which we first find in the Aḳmar Mosque of the late Faṭimid period and attains its artistic zenith in the grandiose gates of the Sulṭān Ḥassān-Mosque. For further details cf. the articles CAIRO, ARABESQUE, MASJID as well as the literature given there and the following works, Franz Pascha, *Cairo*; Saladin-Migeon, *Manuel d'Art musulman*; Stanley Lane-Poole, *The Art of the Saracens in Egypt*; Herz Bey, *Le Musée national de l'Art arabe* (Catalogue); Gayet, *L'Art arabe*; Fouquet, *Contribution à l'Étude de la Céramique orientale (Institut égyptien, 1900)*; Artin Jacoub, *Contribution à l'Étude du Blason en Orient*. The really scientific study of Egyptian architecture and decorative art is still in its infancy, it has not yet even been satisfactorily explained what is peculiarly Egyptian in it.

A civilization, which excludes foreign influence, is as a rule the result of the establishment of political boundaries. Egypt as a state has only from time to time been limited to the valley of the Nile. Egypt was at first a province of the Caliphate and then the centre of an empire including Syria and other countries. There are further to be considered the cosmopolitanism of Muslim civilization and the migratory tendency of Muslim sciences, to be brief the picture given above is, at least in the fields of intellectual life and art not exclusively Egyptian but is characteristic of the Muslim civilization of the whole of the Nearer Asia. Egypt, as we have seen, certainly has indigenous characteristics but it owes its intellectual productive power mainly to the continual immigration of powerful intellects, who were attracted by the splendours of Cairo, the city of the Caliphs and Sulṭāns. Mediaeval Egypt offers a brilliant picture but the Muslim military constitution already contained the seeds of decay. It was an exhausted, impoverished and desolated land that the French

expedition found on its arrival. The new Egypt is a work of the Khedives and of Europe. As to how a modern advancing Egypt has been developed from the mediaeval anarchy of the Mamlūks, cf. the articles devoted to the Khedives, Muḥammad 'Alī and his successors.

Bibliography: The most important works have been given in the text. Cf. also the articles on separate dynasties and rulers. A comprehensive survey of the ground covered here has not yet been written. Our best authorities are S. Lane-Poole, *A History of Egypt in the Middle Ages* and J. Marcel's history in the *Description de l'Égypte*; Else Reitmeyer has written a systematic though not historical *Beschreibung Ägyptens im Mittelalter* (Leipzig 1903).

(C. H. BECKER.)

EİYÜB. [See AİYÜB, i. 1220 *et seq.*]

EKREM-BEY, MAHMÜD, one of the most important of modern Turkish lyric poets, wrote ballads and romances after French models and, by introducing these new forms, improved the poetry of his native land. His collections of poems *Naghame-i Seher* ("Morning Lays"), *Zemzeme* ("Whisperings") and *Gendilik* ("Youth") enjoy a great popularity. He also wrote several plays; of these the most original is the *Waşlat* (1874), the history of a slave who falls in love with the youthful son of the house and is thereupon sold by her mistress. The poet was still alive in 1902.

ELIAS. [See ILYÄS.]

ELISA. [See ALISA, i. p. 300b.]

ELIXIR, Arab. *al-iksir*, also *iksir al-falāsifa*, the secret means by which the alchemists believed base metals could be transmuted into silver and gold; synonymous with "the philosopher's stone". Although it has not yet been found in the older Greek alchemical works, it can hardly be doubted that the word is derived from the Greek ἔξιρον "powder for wounds". It is frequently mentioned in the writings of Djābir b. Ḥaiyān edited by Berthelot. It enters the metals and permeates them like poison in a body; a small quantity will transmute a million times its weight in metal to gold. It can only be kept in vessels of gold, silver or rock-crystal as it attacks glass. According to the definition in the *Mafātih al-ʿUlūm* the *iksir* is the drug which transforms molten metal into gold or silver when it is boiled with it. In less credulous circles, however, it was also called *mashhūr al-ism*, *ma'dūm al-djism*, famous in name but of unknown composition. The word elixir, elixir reached the scholastic philosophers through the chemical works of the Arabs, notably Ibn Sīnā ("Avicenna in *Libro de Anima*"); among the earliest may be mentioned Roger Bacon (*Opus Minus, Speculum Alchemiae* etc.) and Albertus Magnus in the xiiith century; in the works ascribed to Raymundus Lullus, the properties attributed to it are vastly increased. Even in Roger Bacon and probably in his Arabic sources also we find the elixir also considered a means of prolonging life; for since it can make perfect the baser metals and heals their "diseases", it surely could remove the imperfections of the body, keep it sound and prolong life. Such "elixirs of life" were prepared for centuries and are still made out of all sorts of ingredients.

ELKĀSS MĪRZĀ, the younger brother of Shāh Tāhmāsp I., who appointed him governor of Shirwān after the conquest of this province. Elkāss soon afterwards rebelled against Tāhmāsp and after the defeat of his troops fled to Constantinople through the Crimea (954 = 1547). Sultān Sulaimān eagerly seized this opportunity for a new campaign against Persia, gave Elkāss a splendid reception and then sent him to the Persian frontier under the command of the Ūlāma-Pasha. On Elkāss's advice the army marched against Tabriz. He took part in the capture of this town and the conquest of Vān and advanced as far as Isfahān, Kūmm and Kāshān at the head of a body of adventurers, but quarrelled with Sulaimān when the latter summoned him to rejoin him. He sought refuge with the Kurds (956 = 1549), but was taken prisoner by the Kurd prince Suhrāb and handed over to Tāhmāsp, who imprisoned him in the fortress of Qahqahā (Alamūt) where he died in 987 = 1579. According to another account he was able to return to Meshhed on Tāhmāsp's death. He wrote several poems.

ELMALU (Turk. "Appletown"), a market-town in Asia Minor, the capital of a Qazā of the Sandjak of Tekke in the Wilāyet of Kōniya, S. W. of Adalia, between this town and Deñizli, at the east end of Lake Wālān, with about 6000 inhabitants, mostly Muslim peasants (the Christians are merchants and artisans), twenty mosques, three Greek and one Armenian church and fine Turkish baths. The climate is healthy and the temperature low. The Qazā has about 20,000 inhabitants of whom several thousand are nomads and includes 75 villages and two Nāhiya, Fenike and Egerdir-Kārdiç. Fenike, the name of which reminds one of the Phoenicians, 40 miles south of Elmalu, is a small seaport with 3000 inhabitants mainly Greek Orthodox; near it are Lycian tombs and a Phoenician inscription. The country is mountainous and rich in forests and pasture, corn, olives, oranges and building-wood.

There are also three villages of this name in Asiatic Turkey, of which one is in the Qazā of Urdū in the Wilāyet of Trapezunt, the second is on the shore of Lake Vān, and the third is in the Sandjak of Malaṭiya, in the Wilāyet of Maṣmureṭi Ḥāziz.

(CL. HUART.)

ELUL, Arabic AILUL, the name of the twelfth month in the Syrian Calendar; see TAʿRĪKH.

ELVIRA, from the Arabic ILBIRA (rarely LE-BIRA and YELBIRA; this should be read in Yākūt, i. 348 with Fleischer, v. 40 instead of *Belbira*) from old Iberian *Il(l)ibēri*, *Ilberri*, also *Eli-bēri*, *Elberri* etc. = New Town: *ili* town *berri* new (Municipium Florentinum Ilberitanum of the Romans) was in the later period of the Arab conquest and under the Umayyads the name of the province afterwards called Granada, whose Arab capital was at that time *Qastiliya* or *Medinat Ilbira*, only incorrectly called *Ilbira* alone, and lay 1¼ miles N. W. of Granada, N. of the Genil between the modern Atarf (Arab. *al-Ṭarf*) and Pinos Puente at the foot of the southern slopes of the Sierra de Elvira which still bears its name: the name once so celebrated is still preserved in the Pozos de Elvira, the "Well of Elvira" and in Granada in the Puerta and Calle de Elvira in the N. W. like the ancient Castilia in the farmplace *caseria*, Castilia, *Qastiliya*. — *Medinat Ilbira* was once the rich and flourishing capital of the province of the Arabs from Syria who settled here; but it began to decline steadily in 400 = 1009-1010, when as a result of the great Berber rebellion in Córdoba and the provinces the inhabitants migrated to the adjoining town of Granada so that the town in time fell completely into ruins. Its ruins were still considerable in the xivth century when they were visited by Ibn al-Khaṭīb [q. v.]. The question whether the ancient Iberian and Roman Ilber(r)i (cf. the first known Spanish Council at Elvira in 304 or 305) and the Gothic see lay on the site of the modern Granada [q. v.] or on the site now occupied by the ruins of the Arab Elvira, is probably to be decided in favour of Granada. The Arabs then, following their usual aversion to the capitals of their predecessors, must have in this case also moved the site of the capital of the province and at first retained the old name for the province only: *Kōrat Ilbira* with the capital *Medinat Ilbira* = *Qastiliya*.

Bibliography: the most important work is, Dozy, *Recherches sur l'Histoire et la littérature de l'Espagne pendant le Moyen-âge*³, i. 327—335: "Castilia, Ilbira, Elvira" and p. 335—340 "Ilberri, Grenade" (but on p. 328 Yelbira should be read for Balbira, see above; and the reference to Muḥaddasī, p. 236 l. 1 should be deleted, as Ṭābira should be read there for Libira); Yākūt, i. 348; iv. 97 (*Qastiliya*); iii. 788 (*Gharnāṭa*); *Marāṣid al-Iṭṭilāʿ*, iv. 158; Idrisi, p. 175, 203 (Arab.); Qazwīnī, ii. 337; Abu 'l-Fidā, p. 167; trad., i. 238; Simonet, *Descripción del Reino de Granada*² (1872); do., *Historia de los Mozárabes*, Índice s. (C. F. SEYBOLD.)

ELWEND, ARWAND in the Arab authors and graecised as OKONTES by classical writers (Achae-menid inscription, Semiramis legend), still called ERWEND or NARWEND in the district, a lofty granite mountain mass, about 17,560 feet high, a spur of the Zagros system, S. W. of Hamān,

which owes the fertility of its gardens to its wealth in water and snow. The scanty accounts of the Arab geographers are mainly confined to in part fantastic stories of a well on the top of the mountain, which Muslim tradition describes as one of the wells of Paradise no doubt with reference to older religious ideas which clung to the spot, cf. Jackson, *Persia Past and Present*, p. 146, 170—173.

(R. HARTMANN.)

EMİN. [See AMİN, i. 343.]

EMİN PASHA, a distinguished German explorer and coloniser of Africa. Emin whose real name was Eduard Schnitzer was born in Oppeln (Schlesia) on the 28th March 1840. From 1858—1864 he studied medicine and science in Breslau, Berlin and Königsberg, taking his Dr. Med. degree in March 1863. In autumn 1864 he went to Antivari which at that time was still a Turkish possession. Here he began to practise medicine privately but in the following summer he was appointed quarantine and medical officer for the district. Schnitzer became a particular favourite of Ismā'il IIakki Pasha, the governor of northern Albania, who resided in Scutari and his wife, a native of Transylvania. After Ismā'il's death in 1873 he lived for two years with his widow, whom he left towards the end of 1875 to go to Kharṭūm. In the middle of April Gordon, then governor of the Equatorial Provinces appointed him government medical officer in Ladó. Schnitzer took up his duties here on the 7th May 1876 and adopted the name Emīn Efendi, professing to be a Turk educated in Germany. On the 3rd June he was sent as Gordon's diplomatic agent to king Mtesa of Uganda and in 1877-1878 to Kabrega of Unyoro and a second time to Mtesa. At the end of June 1878 Gordon, who had meanwhile become Governor-general of the Sūdān, appointed Emīn governor of the Equatorial Province on the suggestion of the Russo-German explorer Junker. Emin, who now received the title Bey, and later Pasha, displayed a wonderful activity in the advancement of civilization in his new office. He controlled the Danākīl (a kind of irregular soldiery) who were always inclined to raiding, furthered trade, agriculture and civilisation in general and extended his territory. When he took over the government, the province showed a deficit of £30,000 annually, but after three years a surplus of £1200 (cf. G. Schweitzer, *Emin Pascha*, p. 220 *et seq.*) which at a later period when Emīn was cut off by the Mahdists from Egypt was stored in the form of ivory. When Gordon left the province the number of stations in it was 15; Emīn raised it to 50. At the beginning of the Mahdi's rising (1881-1882) Emīn's territory stretched 400 miles from E. to W. and 300 from N. to S. From the middle of April 1883, Emīn in consequence of the Mahdist rising was cut off for years from any connection with the Egyptian government. In the spring of 1884 Karām Allāh, the leader of the Mahdist army which had conquered the province of Baḥr al-Ghazāl, demanded his submission. He refused to surrender and gra-

dually his position became more difficult. He therefore left Ladó at the end of April 1885 and transferred his headquarters farther south to Wadélai. On the 2nd January 1886, Junker who had been with Emīn since January 1884, set out for the east coast of Africa, which he reached on the 14th December 1886. Another explorer, the Italian Casati remained with Emīn from January 1885 till he was relieved. Early in 1887 Ladó, where a garrison had up till then been maintained, had to be entirely abandoned. Emīn took up his quarters for a brief while in 1886 and for a long period in 1887 at Kibiro, his station on the east shore of the Albert Nyanza. Meanwhile at the instigation of the Royal Scottish Geographical Society a committee of Scottish commercial gentlemen, perhaps attracted also by the possibilities of the country had equipped an expedition to relieve Emīn. Stanley was appointed to lead it. He reached Emīn (but not the Equatorial Province proper) in the spring of 1888. Stanley's caravan had suffered so much on the route that its arrival was more of embarrassment than use to Emīn; nor was the attitude of Stanley calculated to strengthen Emīn's position. When Emīn announced to his officers the orders of the Egyptian government that they should retire with Stanley (to the east coast) they mutinied and kept Emīn a prisoner in Duflé from the middle of August to the middle of November 1888. On the 17th February 1889 Emīn, who had resolved to depart, joined Stanley on the western shore of the Albert Nyanza. Their joint expedition reached the coast at Bagamoyo in the beginning of December 1889. Here Emīn was received with the greatest honour but owing to an unfortunate accident was confined to bed for three months. On his recovery Emīn (at first provisionally) entered the foreign service of the German Empire. On the 26th April he left the east coast with two officers (Stuhlmann and Langheld), 3 sergeants, 100 soldiers and 592 bearers. His object was to secure for Germany the lands south of the Victoria Nyanza. The most important events of the expedition were the hoisting of the German flag in Tabora and the foundation of the station of Bukoba on the west coast of the Victoria Nyanza. Both these measures were contrary to the will of von Wissmann the governor of German East Africa, but approved by Karl Peters who had been sent by a German committee to relieve Emīn but did not meet him till June 1890 in Mpwapwa. Throughout this expedition Emīn showed himself a bitter enemy to the Arabs, not only in his letters to Wissmann, but also in the measures he took to suppress the slave-trade. — In the second half of March 1891 vague rumours reached Emīn of fighting between the people he had left in the equatorial province and the surrounding negroes. Although forbidden by Wissmann he now crossed the northern boundary of the German protectorate to attract his old officers and soldiers to his side and march with them wherever possible westwards via Mombutu and occupy the hinterlands of Kamerun. This plan proved quite impracticable. On the 28th September the retreat was begun from Andelabi (on the upper course of the Ituri or Aruwimi). An epidemic of smallpox reduced the expedition to a very sad state. On the 7th December, Emīn sent Stuhlmann with the sound men on to Bukoba, while he remained behind with the invalids. In the absence of any

other possible route of retreat he decided to march westwards; he began his journey on the 8th March 1892, first to Ipoto near Kilonga-longa on the Aruwimi. He next went up the Aruwimi, then in a southwesterly direction right across the primeval forest with the object of reaching Kibonge, a station on the upper Congo; but 100 miles from his goal, in Kinena, Emin was treacherously murdered on the 23rd October 1892 by command of the prince of Kibonge. The Belgian Captain Dhanis found one half of Emin's last diary on entering Nyangwe, the capital of the land of Manyema, in February 1893 and the other half after the taking of Kassongo, the capital of the notorious slave-trader Tippu Tippi, on the 22nd April 1893. Kibonge, the instigator of Emin's murder, was court-martialled and shot on the 9th January 1894.

While yet in Turkey Emin had completely adopted the externals at least of a Muslim and Turk and retained this attitude after he had entered the service of Egypt also (G. Schweitzer, *Emin Pasha*, i. 21). This is the only explanation of the fact that he was so long able to maintain his authority in the Equatorial Province. We have already seen that he was not therefore the less an enemy to the slave-traders. Although he tolerated slavery in his own province, it was only because he could do nothing without slave-labour. At a later period, when in German service, he pleaded for a complete separation of the land of the negroes from the Arab territory and for the expulsion of all Arabs without a fixed abode. He thought most highly of Roman Catholicism among Christian missionaries (although himself a Protestant!) because they alone laid out pretty stations and made the negroes useful as labourers (Schweitzer, ii. 109). Emin was on the whole rather pessimistic about the possibility of cultivating the negro mind also (Schweitzer, i. 124). As an administrator Emin was a skilful organiser but hardly a conqueror — a man who made the most of his opportunities but took no risks. In science he achieved a reputation more particularly in ornithology and ethnography; he was also a brilliant linguist.

(A. SCHAADE.)

EMİR. [See AMİR, i. 330^a.]

EMİR SULTĀN, i. e. SHAMS AL-DĪN MEHĒMED B. ALĪ AL-HUSAINĪ AL-BUKHĀRĪ, also called Saiyid Mehemmed Bukhārī, Saiyid Emir Sultān, Emīr Saiyid (Ashūkpashāzāde, p. 148, Haniwald's chronicle in Leuecl., *Hist. Mus.*, p. 541, 543, whence Μυροζιτης in Kananos), the great patron saint of Brusa, born about 770 A. H., migrated to Asia Minor from Bukhārā and settled in Brusa where he died of the plague in the odour of sanctity in 833 A. H. According to tradition Emīr Sultān was held in high esteem by Bāyazid I. Yilderim, whose daughter, Khūndī Sultān, he married; when the Sultān took the field, he had his

sword girded on by him and the saint's admonitions persuaded him to give up the drinking of wine (cf. the anecdote in Ewliyā, *Travels* etc., ii. 25 = *Tārīkhī Şāf*, i. 32 *et seq.*); when Bāyazid wished to slay Timūr's envoys, Emīr Sultān successfully opposed this breach of international law (‘Ālī, *Kūnh*, v. 83 *et seq.*). On the capture of Brusa by an advance party of Timūr's army in 805 he was taken prisoner and brought to Timūr's camp; Timūr set him free and wanted him to come to Samarqand; but Emīr Sultān preferred to return to Brusa (Sa‘d al-Dīn, i. 188 *et seq.*; Sheref al-Dīn, l. v. c. 51). Legend, however, knows nothing of this but says that the saint brought about the withdrawal of Timūr's troops from Brusa by a miracle (Sa‘d al-Dīn, ii. 427; Ewliyā, ii. 48). When Murād II. succeeded to the throne in 824 A. H., he had his sword girded on by Emīr Sultān and the saint is said to have hastened by his prayers the defeat of the false Mustafā, who challenged Murād II's claim to the throne (‘Ālī, l. c., p. 195 *et seq.*; Leuecl., *Hist.*, p. 493 *et seq.*). In the following year he took part in the siege of Constantinople with a train of 500 dervishes but the fall of the city prophesied by him did not take place. The Byzantine chronicler Kananos who was present at the siege gives us a full and vivid description of Mirsaiyid the “Patriarch of the Turks” as he calls Emīr Sultān (p. 466 *et seq.*, 477 *et seq.*, ed. Bonn), while the Ottoman historians say not a word about this mishap.

After his death a splendid mausoleum was erected over his grave which became one of the most popular places of pilgrimage of Islām (Tashköprüzāde, i. 76, 377; Sa‘d al-Dīn, i. 188; Leuecl., *Hist.*, p. 571 and 816; v. Hammer, *Umblick* etc., p. 58 *et seq.*), and legend began to tell of the miracles (*Manāqib*) of the saint.

Bibliography: Tashköprüzāde, i. 76 *et seq.*; Sa‘d al-Dīn, ii. 425—427; ‘Ālī, *Kūnh*, v. 112; *Güldestī riyāzi ‘irfān*, p. 69—79.

(J. H. MORDTMANN.)

ENIF, i. e. AL-ANF “the nose”, is the name of star ε of second to third magnitude in Pegasus, or as it is called by the Arabs the larger Horse. Qazwīnī and Ulūgh Beg call this star *Fam al-Faras* (= the horse's mouth), the latter also calls it *Dyah-fala al-Faras* (= the horse's lip). Al-Battānī has no special name for it, he calls it “the star which is in its (i. e. the horse's) mouth”. The name Enif probably passed from the works of western Arab astronomers into the Latin translations of the middle ages.

Bibliography: al-Battānī, *Opus astronomicum* (ed. Nallino), ii. 154; iii. 254; al-Qazwīnī, *Kosmographie* (ed. Wüstenfeld), i. 34—35; L. Ideler, *Untersuchungen über den Ursprung u. die Bedeutung der Sternnamen* (Berlin 1809), p. 117.

(H. SUTER.)

ENNAYER (usually **ينير** in Arabic texts, Berber *Innayer*), the name of the first month of the Julian calendar, among the natives of North Africa who reckon by solar years and have retained the Latin names of the months (cf. AWRĀS, i. 521^b), also the name of the New Year festival celebrated at the beginning of that month by Christians and Muslims in North Africa, for the Muslims there as a rule take part in different Christian feasts, for example, the feast of the summer solstie or the *Anşara* feast [see ANŞARA,

i. p. 358] which falls on the 24th June of the Julian calendar and corresponds to our feast of St. John, and the feast of the winter solstice or the *mawlid* 'Aisa (*ʿĪsā*), celebrated on the 24th December of the Julian calendar, a feast obviously closely connected with our Christmas. In the Awiās it is said to be celebrated a week before the Ennayer festival under the name of *Bu Inī* or *Bun Inī*. In Tlemcen a masked *ṭālib* makes a collection for the Ennayer feast just as at one time was done in Cairo for the Mawlid ʿĪsā; this *Ṭālib* is called *Bu Mnāni* or *Bu Bnāni*, which is undoubtedly to be derived from the Latin *bonus annus*. The ceremonies which accompany the feast of the New Year seem to have been amalgamated with those of the winter solstice; in the same way we find the Ennayer customs of one district transferred to other feasts in other districts such as the 'Ashūrā' or Spring festival or to the feasts of Ramaḍān etc.

The feast of Ennayer falls on the New Year's day of the Julian calendar (11th January of the Gregorian) and lasts two, three or four days according to the local custom.

The day preceding the feast, i. e. the last day of the year has often the character of a day of mourning. The fare for this day is therefore a special one. As a rule the housewife avoids attaching the *keskas* to the pot with a piece of cloth and is rather content with closing the space between the two vessels with some dough. The common custom is to give up *kuskus* for a day or two and replace it by the *berkūkes*, a coarse *kuskus*, cooked not with steam but in a meat juice, or by pastry (*mḥammṣa*), which is eaten with raisins, honey etc. In various places milk only is drunk or dry vegetables such as wheat, beans or chick-peas (*shwshem*; in Zwāwa: *jūzān*), cooked in water eaten. Supper, as used to be the case at the Mawlid 'Aisa feast, sometimes consists of a thick gruel of coarse meal prepared with butter or oil which is also mixed with honey (*aṣīda*). In western Tunisia starch flour is often added to this preparation and in Kabīlia roots of arum. The former mixture is called *bāzin ennsḥa*, the latter *abāzin būbaʿnū* and is a dish for women.

In Blida the natives two days before Ennayer eat a dish called *ḥikkha*, consisting of various vegetables and legumes (cock's combs, spinach, green beans, peas and parsley); the pith of the dwarf palm (*dzhemmūr*) is eaten with it. Other noteworthy dishes are: egg rolls, egg cakes, the Tlemcen *ḥarīra*, apple fritters, pancakes and all kinds of tarts.

In the towns the head of the family buys all kinds of fruits (raisins, dried figs, nuts, dates, sweet acorns, and chestnuts), which are mixed with the pith of the dwarf palm or confectionery. This mixture is called *trāz* or *kshkṣha* etc. and is divided among the members of the family. The children put a little of it in a small basket which is placed beside the hearth. In the night a fairy the "old woman of Ennayer" comes and puts a silver coin, a penholder, a piece of paper, or a piece of sheep's wool in the boys' baskets. The objects show that the small owner of the basket will, when he grows up, become rich or learned or the possessor of flocks of sheep. The fairy places pieces of silk, needles etc. in the girls' baskets.

A portion of the meal prepared the night before the Ennayer festival is kept under a dish.

In some districts it is the custom to strew green twigs on the flat roofs of the houses, on the stables and on the floors of the tents, on the day before Ennayer, so that the new year may be "green", i. e. lucky. In Laghuat and Géryville and among many Beber tribes, the ashes are swept from the hearth, new stones placed in it and sometimes a new *kanūn* is dug in another place in the room; it is further the custom to replace an old article of furniture by a new one and put it in another position.

People in disguises collect offerings, such as the "fig-ass" and the *msīh* at Nedroma, the *Bū Bennāni* at Tlemcen and the *Bū Reḡwān* in west Tunisia; a lion (*kif-ṣīd aḥsira* in western Tunisia), a camel etc. are among the disguises adopted.

The day following, the first of January, is a day of rejoicing: it is then the custom, in the towns of Morocco, to eat the *seba'a khḍāri* (seven vegetables). It is an almost universal custom to kill a fowl; rich people kill a young goat or a sheep; in Kabīlia, it is sometimes the occasion of a *tim-shoret*; in some places sheeps' heads are eaten instead of fowls.

The condition in which a man is at the Ennayer festival, decides his condition for the whole year. On this day one ought to be happy, amiable, generous and rich. People meeting wish one another good luck; parents, engaged couples, landlords and tenants, Muslims and Jews exchange presents and show little attentions to one another. Alms and presents are given and guests entertained. No borrowed articles are allowed in the house and any that have been lent are asked back so that there may be as much good fortune in the house as possible. The house is not swept throughout the whole length of the festival nor are clothes or linen changed nor the finger-nails trimmed; in Kabīlia, however, this is the day chosen for shaving off the first growth of hair on boys.

The country people examine the corn of the *berkūkes* left over at the meal or the blood of the fowls killed for the feast to find out what sort of weather will prevail during the early months of the year.

Just as used to be the custom in France at Christmas time the Kabīls at the Ennayer festival talk to their oxen and goats.

The housewife places a scorpion below the vessel in which the milk is to curdle in order to obtain as much butter as possible. To be able to see clearly they smear the edges of the eye-lids with collyrium.

During the festival all work ceases and no journeys are undertaken; mats, carpets or burnuses in process of manufacture are wound round the beams of the loom or put out of the way during the festival.

Orthodox Muslims naturally try to restrain their co-religionists from the celebration of this festival as much as possible and the teachers in the Korān schools for the same reason do not grant their pupils holidays for Ennayer. Among the Muslim population of the Senegal and Upper Niger, whose conversion to Islām is comparatively recent and who take great pride in their orthodoxy, festivals like the Ennayer and Anṣara are unknown.

1905) and my article *Ennayer* in the *Revue Africaine*, n^o. 256, 1st quarter, 1905 (Algiers). (E. DESTAING.)

ENOCH. [See IDRIS.]

ENWERİ, AL-HĀDJİ SA'DULLĀH, Efendi, a native of Trebizond, entered the higher Turkish civil service as Khodja (superintendent of a diwān) and successively filled the office of Teshrifatdji (1184—1187), Djebedjiler Kātibī (1187—1190), Teshrifatdji (1190—1196), Mewkūfatdji (1196—1199), Büyük Tezkeredji (1197) and from 1200 to his death with several breaks that of an Anadolu Muhāsebedjisi. At the end of 1182 he was also given the post of Historiographer Royal (*Wakā Nuwīs*), which he held till the end of 1197 with an interval of 18 months (4th Dhu 'l-Kāda 1188—1190), during which the post was filled by Behdjeti and Suleimān Mollā (cf. Djewdet, ii. 153); in 1202, however, when his successor Wāṣif Efendi went as ambassador to Spain, he was again given the office of official historian and attached to the army in the field during the war with Austria and Russia, while Edib Efendi remained in the capital in the same capacity (Djewdet, iii. 426, 438; iv. 2 *et seq.*), and still retained the office after his return to the capital in 1206. He died on the 11th or 13th Rabī' I 1209 (6th or 8th October 1794) when over 60 years of age.

Enweri left a history of the country in 5 parts of which he presented the first three to the sultān in 1194 (Djewdet i. 212); they cover the years 1183—1193, and the following parts cover the period to 1206. The first two volumes of Enweri's chronicle (1183—1188) were recast by Wāṣif Efendi as the second part of his history (cf. *Wāṣif Tūrikhi*, i. 315 and ii. 3, ed. Constantinople 1219 A.H.); Ismā'il Rahmī (cf. *Pertach, Verz. d. Türk. Hdschr. zu Berlin*, n^o. 208) undertook a second recension. Enweri's original work, which is considered rare, is to be found complete in the Imperial Library in Vienna (n^o. 1117—1119 of Flügel's Catalogue); the Egyptian printed edition of Enweri's chronicle referred to by Reinaud (and following him, Zenker, n^o. 940) does not exist.

ENZELI, the harbour of Resht, the capital of Gilān in Persia. Enzeli lies on a narrow tongue of land, which has been cut by a channel, between the Caspian Sea and a freshwater lake called *Murdāb*. From Enzeli one goes by boat to Pir-i Bāzār on the south side of the Murdāb, thence by land to Resht, whence the high road runs via Qazwīn to Teherān. In the Russian wars with Persia Enzeli played a considerable part. In 1722 Russian troops landed in Pir-i Bāzār. A Russian demonstration at Enzeli in 1804 failed completely on account of the impossibility of penetrating the hinterland. In spite of its unsheltered roadstead Enzeli is the most important harbour in the Caspian provinces of Persia (1908-1909: 497, 1909-1910: 620 steamships). The town only seems to have attained particular importance in the latter half of the sixth century. While it had only 300—400 houses

in the early decades of last century according to contemporary accounts, the latest English Consular reports estimate its population at 9000.

ERBIL, the ancient Arbēla, celebrated for Alexander's battle there (See Pauly-Wissowa, ii. 407 and vii. 861 *et seq.*), situated between the two Zāb on the road from Mōsul to Baghdād at the place where it is joined by two roads from the Iranian highlands (cf. Hüsing, *Der Zagros*, p. 38 *et seq.*), the capital of a Qādā in the Sandjak of Shehr-i Zōr in the Wilāyet of Mōsul. In the earlier Arab geographers the town is described as a *ṣassūdī* of the *astān* of Hulwān in the Sawād (*Bibl. Geogr. Arab.*, vi. 6 and 235). Erbil attained its greatest prosperity about 600 = 1200 as the capital of the Begtgcinids [q. v., i. 688^b *et seq.*] and is described as having a high, strong citadel below which lay an extensive town which was the great market for the surrounding country. Yākūt says that in the population of the district Kurds predominated. In the second half of the xiiith century under the Mongols we find Erbil in the possession of Kurd Emīrs of the tribe of Māzendjāni (*Notices et Extraits*, xiii. 311 *et seq.*). Even down to the most recent times the affairs of the town were more often managed by the Kurds of the adjoining mountains than by Turkish officials. Although Erbil was still able to offer considerable resistance to Nādir Shāh in 1732, it has had no importance of its own for a long time and is now a small country town with 3757 inhabitants (Cuinet).

ERDEL, Hungarian ERDÉLY, the old Turkish name for Transylvania or Siebenbürgen. After the battle of Mohács (1526) the woiwods of this country became to a certain extent vassals of Turkey until by the Peace of Carlowitz (1699), Siebenbürgen passed to Austria.

EREGLI, τὸ Ἑρακλέως Κάστρον des (Theophanes, i. 482, de Boor; ἡ τοῦ Ἑρακλέως Καμπούλις of Michael Attaliata, p. 136 (ed. Bonn); Ἑράκλειζ or Χώρα τοῦ Ἑρακλέως in the epic of Digenis Aereias; the Ilirakla of the Arabs أرکلیه ed. Houtsma, *Recueil* etc. iii. 11; iv. 5, 249, 260, Turk. ارکلی and occasionally archaïsed هراقله, هراقلیه, the

Reclēi, *Erachia* of the Crusaders (Tomasehek, *Zur histor. Topographie von Kleinasien*, p. 84, 88, 92), *Araclie* in Bertrand de la Broquière, p. 104 *et seq.*, ed. Ch. Sehefer, was a fortress on the Byzantine frontier on the road from Cilicia to Iconium and was repeatedly taken by the Arabs, notably by Hārūn in September 806 (Tabari, iii. 709 *et seq.* = Theophanes, l. c.), but remained a Byzantine possession till it was taken from them

by the Saldjüks of Kōniya (in 484 = 1091, according to Ewliyā, iii. 28). At a later period it belonged to the kingdom of the Karamanoghlu and with the rest of territory passed to the Ottomans in 1466. The population (about 5000) is almost exclusively Muslim; there is a small Armenian community. 50 years ago there were 10 large and 11 small mosques. Among the larger mosques there is one which according to the *Djihānumū* was founded by the Karamanoghlu Ibrāhimbeg (according to the *Menāsik al-Hadjj* by Kiliđi Aislān); the caravanserai built by the architect Sinān in the xviith century for Rustem Paşa is also mentioned. Legend says that the springs at Bunarbashi were miraculously produced by the Prophet, on which account the tithes of the district were a waḳf of Medina (*Djihānumū*, Ewliyā, cf. Sa'd al-Din, i. 516). Eregli was formerly a station on the route followed by pilgrims and since 1908 it has been an important station on the Baghdad railway from Kōniya; the town is the capital of a ḳaḏā in the sandjaḳ of Kōniya.

ERITREA. The population of the Italian colony of Eritrea may be divided into nomadic, semi-nomadic and settled tribes. In certain cases one section of a tribe leads a nomadic life, a second is semi-nomadic and the third settled. According to a tradition generally believed the earliest settlers in Eritrea were eight tribes who came one after the other; but any definite, reliable reference to their origin or order is quite wanting. This tradition certainly shows that the population of Eritrea has always been numerous and undergoing radical transformation, passing from a nomadic to a settled and from a pastoral to an agricultural life. This was the case in times of peace; in time of war, however, the divisions among the people which resulted thereby, lead to confusion which lasted for centuries, new centres gradually arose in other sites out of the ruins and step by step became linked up with the more or less permanent settlements.

The present population of Eritrea is for the most part of the Hamitic type, which probably showed pure features, in many parts of the area now forming the Italian colony, in the period of Egyptian civilization, but which suffered many changes for the reasons above mentioned. In any case the traditional number, eight, of the peoples in it has now been raised by its learned men to ten or fifteen, or even more. At the present day there are certainly very marked differences in language and customs among the inhabitants of Eritrea whether they are descended from a common ancestor or not.

The Abyssinians, who inhabit the plateau and are quite identical with the Tigrina on the other side of frontier in the Ethiopian kingdom preponderate. The Abyssinians of the colony number not quite 110,000 and show traces of a culture well organised on a patriarchal system. They all, herdsmen as well as agriculturists, form settled communities and live in villages, which usually adjoin one another and are therefore small; this is due to the poverty of the districts inhabited by them. The average number of people in each Abyssinian settlement is about 125. Dainelli and Mari-

nelli point out that, although small and very small villages preponderate, some have quite a considerable population, apart from those whose development is due to the Italian occupation. At the most, however, it is improbable that any one has more than 1000 inhabitants. A similar state of affairs probably exists in the Abyssinian provinces, which border on the colony of Eritrea.

Two other settled agricultural peoples, who live in villages, are the Cunama (somewhat over 13,000) and the Daria (about 7000). Tradition says that these belonged to Hamitic stocks and are among the oldest in the colony. They mix to some extent with the Sudānese. While the Abyssinians are Christians, the Cunama and Baria are heathen.

The other peoples in Eritrea are for the most part nomadic and pastoral tribes and the majority profess Islām. Among the most noteworthy are the Banī 'Amer, who have arisen through the fusion and superposition of other peoples; they live by cattle-rearing and alternate their abode between the mountains and the sea. As a rule they speak Beḏawye [cf. the art. BEḌJA] and form a community of about 40,000 souls. Next come the Habab and other allied tribes who live between the Banī 'Amer and the sea numbering about 24,000 in all; they are wandering herdsmen and speak Tigre; next come the Mensa, the Mária or Marea, the Sabderat, the Torhá, the Hasú, the Danākil, the Dahalaki, Engana etc., all very ancient peoples, originally coming from the highlands of Ethiopia but interspersed with Egyptian and Greek colonists who made their way inland from the sea. The Bilani, in the valley of Cheren, form an interesting section of this group; they are divided into Copts, Roman Catholics, and Muslims and do not lead quite such a nomadic life as the preceding.

The Bet Takué (4000), the Begina (1000) and the Mensa are neighbours of the Bilani. The Asaorta (9000), the Miniferi (5000) and the Ifasú (1500) are nomads who rear cattle and devote some attention to agriculture; they profess Islām.

The inhabitants of the Danākil district belong to the Afar type and number about 13,000 in Italian territory. In all probability they are tribes who are mixed with Greek and Egyptian colonists; the majority are nomads and practically all are Muslims.

The islands are only partially inhabited; their total population is about 2500 of various origins, who live chiefly by fishing and pearl trade. About 10,000 people of Semitic origin live on the coast of Massawa in imposing villages.

According to the census of 1905, the Italian colony of Eritrea has a total population of 274,944, of whom 152,177 are Muslims, 102,853 Copts, 12,362 pagans, 7255 Roman Catholics and 297 Protestants. These figures do not include the white population or the Danākil groups who live within the boundaries defined in 1908. If these be included, we get a total of 282,000 and not 300,000 or more as has been given in certain unofficial works compiled before the census.

The religions represented in the colony are in the order of importance and number of followers: Islām (in the four sects of the Hanafis, Shāfi'is, Mālikis, Hanbalis) Coptic Christianity, Roman Catholic, Evangelical and Greek Christianity, Judaism and Buddhism. Islām is spreading most rapidly and is the most attractive.

The authority of the government is enforced on

the natives by commissioners and residents. For this purpose the colony is divided into five commissionerships to which the central area belongs and five residencies in the border districts.

As regards the administration of justice the canon of criminal law is that established by royal decree on the 14th May 1908. Until the publication of the code of civil law, any one was considered a subject of the colony, as regards the administration of justice, who not being an Italian or citizen of a recognised foreign state, was born in the colony or belonged to a tribe or race of the colony. Any member of an African or other nation of the Red Sea, who regularly fulfils or has fulfilled his obligations to the authorities, or lastly has lived for two years continuously in the colony, is also considered a subject of the colony. A foreigner who belongs to a people that does not possess a civilization similar to the European, is regarded in the same light.

Among the natives justice is administered in the first instance by their princes, the assemblies of elders and nobles, the chiefs of provinces and tribes, the *Kādis* and the commissioners and residents, who in cases of appeal deal with the decisions of the *Kādis*, heads of provinces, tribes and the princes, with the exception of those that come within the jurisdiction of the courts. The government of the colony is always endeavouring to extend further the authority of the ordinary officials of the colony on the basis of a rational regard for the ethnic and religious distinctions among the various coloured peoples who live in the colony. Italian statutes are applied to the colony with such modifications and alterations as are rendered necessary by the economic conditions, law, everyday life, customs and requirements of the land. Italian law recognises with limitations the most important and fundamental customs of coloured people in the matter of religion also. In the case of the Muslims, as far as is compatible with the spirit of Italian legislation, they approximate to the traditional law as contained in the *Kor'ān* and expounded by the authorities recognised by each tribe. Italian law is administered in criminal cases and customary law in civil, but particularly in the case of the Muslims and more especially in matrimonial cases, in *baṭ*, *ḥaḍāna* and *ʿāda*. The exercise of the Muslim religion is freely allowed.

ERIWAN, Armenian HRASTAN, the capital of a *gouvernement* in Russian Transcaucasia, in 40° 14' N. Lat. and 44° 38' E. Long. (Greenw.), about 3000 feet above sea-level on the left bank of the Zanga, a tributary of the Araxes with a population of about (1897) 30,000, according to other authorities 15,000, has a history dating back to remote antiquity according to the Armenian sources (see St. Martin, *Mémoires sur l'Arménie*, I, 116). It is only since the begin-

ning of the Turkish period that the town, written Rewān by the authorities, has obtained any considerable importance in the history of Islām. The tradition given by Ewliyā places the foundation of Eriwan as late as the ixth = xvth century and that of the citadel about 100 years later under Shāh Ismāʿīl. In the reign of Murad III, Eriwan which at first belonged to the Ṣafawids, was won for the Turks by Ferhad Pasha and fortified. Shāh Abbās I regained it in 1604. After a series of battles with varying result it was taken by Murād IV in 1635, but soon afterwards fell again into the hands of the Persians. A brief survey of the history of the town may be gained from the article ARMENIA i. 442. In 1827 it was taken by the Russian general Paskewitch, who received the title Eriwanski in honour of its capture. Since the peace of 1828 Eriwan has belonged to Russia. The mosques, celebrated for their faience and other important buildings, date from the viiith century.

ERMENEK (ARMANĀK), the capital of a *kāḍā* in the sandjak of İc İli in the wilāyet of Adana with 6430 inhabitants (Cuinet), built at the junction of the two streams that form the Göğ-Şū (Calycadnus), is probably the ancient Germanicopolis in Isauria (cf. Pauly-Wissowa, vii. 1258). The Oriental writers of the middle ages locate Ermenek two days' journey south of Lārenda and three from the port of ʿAlāʾiya. A grotto there with a spring was particularly famous. In the viiith–viiith (xiiith–xivth) century Ermenek was one of the principal strongholds and for a time the capital of the Ḳaramān dynasty [q. v.] until it was taken by the Turks in 1472.

ERTOGHRUL. 1. Son of Sulaiman shāh and father of ʿOṯmān I, the founder of the dynasty and empire of the Ottomans. According to the oldest tradition, which is preserved in ʿAshīkpashazāde, he migrated with 400 nomadic Turkoman families from Pāsīn Owa and Sürmeli Çukur to Asia Minor where the Saldjuk ʿAlā al-Dīn allotted him the district of Sögüd between Karadjahışar and Biledjik as winter pastures (*kışla*) and the hills of Ermenibeli and Domanic as summer pastures (*yaila*). Karadjahışar and Biledjik still belonged to the Byzantines but they paid tribute to ʿAlā al-Dīn; ʿAlīshir, the father of Germian, ruled the adjoining district of Afīn Karahışar. Ertoghrul settled in Sögüd and was buried there; he never engaged in a war. He had three sons, ʿOṯmān, Gundüz, and Saruyati (also called Sarubālī or Sawdji), of whom ʿOṯmān succeeded him. According to Neshri (*Zeitschr. d. D. Morgenl. Gesellsch.* xiii, 188—196) Ertoghrul im-

migrated in the reign of 'Alā' al-Dīn Kaiḡubād I (616—634 A. H. = 1219—1236 A. D.), repeatedly fought on the latter's side against the Tatars, conquered Karađalīḡār and Kutahia and was still alive in 'Alā' al-Dīn Kaiḡubād II's reign (end of the seventh century A. H.). The later historians credit him with further conquests (cf. e. g. the chronicles transl. by Leunclavius, *Hist. Mus.*, p. 97 *et seq.*; Chalkokondyles, p. 12 *et seq.*; Phrantzes, p. 68—77, but they take their statements regarding 'Ορτογρούλης, 'Ερτογρούλης from Turkish sources). Sa'd al-Dīn (i. 15, cf. p. 65) says that he died in 610 A. H. (1281—1282) over ninety years of age, Leuncl. (*Ann.*, p. 3., *Hist.*, iii.) makes him die in 687 A. H. at the age of 93 while Phrantzes gives anno 6773 mundi = 1264—1265 A. D. and his age 77. We may consider the following elements in the traditions to be historical facts viz. that Ertoghrul had settled with his Turkoman clan (*boy*) in Sogūd as one of the frontier beys (*Üdj begleri*) of the Saldjūk Sultāns of Ḳōniya, that he took part in the wars of his overlord against the Tatars and occasionally undertook raids into Byzantine territory on his account.

2. The eldest son of Bāyazīd I, born 778 A. H. = 1376—1377 (Ismā'īl Beligh, *Güldeste*, p. 40), was appointed governor of the combined districts of Saruhan and Karasi by his father (Neshri, *Zeitschr. d. D. Morgenl. Ges.*, XV, 335); Leuncl., *Hist. Mus.*, p. 317, 336 *et seq.* cf. 337 *et seq.*, according to Sa'd al-Dīn, i. 178, of Aidineli) and died about 798 A. H. (cf. Leuncl. l. c.), certainly before the war with Timurlank; he was buried in the mosque built by him in Brusa (Sa'd al-Dīn, i. 125; *Güldeste*, l. c.). Leuncl., *op. cit.*, p. 371, cf. 347, gives a story that he fell in the war against Ḳāḡī Burhān al-Dīn of Sīwās. According to Chalkokondyles, p. 145—147 he was taken prisoner by Timur at the capture of Sīwās in 1396 and afterwards put to death. (J. H. MORITMANN).

ERZERUM, the capital of a wilāyet in Turkish Armenia, in the plateau about 6000 feet above sea-level in which rises the Ḳarā Şū or Western Euphrates, the only natural gateway to northern Asia Minor (Sīwās) from Russian Transcaucasia (Kars) and Persia (Tabriz), is at the same time connected by a good road with the Black Sea (Trebizond) in the north and Lake Van in the South. Even in ancient times there was an important town, the Theodosiopolis of the Byzantines, (see Chapot, *La Frontière de l'Euphrate*, p. 361) at this point so important strategically and commercially, the capital of the Armenian district of Karin, Karnoi Katak, which survived in the name given to the town and district by the Arabs, Ḳālīkalā (on this point cf. Andreas in M. Hartmann, *Bohtān*, p. 144 *et seq.*; Hübschmann in *Indogerm. Forsch.* xvi, 287 *et seq.* Ḳālīkalā was taken by Ḥabīb b. Maslama in 645—646, according to the Arab historians, but according to Armenian sources not till after 653 (see Ghazarian, *Armenien unter der arab. Herrschaft*, p. 19, 33 *et seq.*, 73). On the wars of the Byzantines and the Arabs with one another and the Armenians, which filled the following centuries, in the course of which Ḳālīkalā often changed hands, cf. ARMENIA i. 437^b *et seq.*

The town has only borne its modern name since the xith century. In 1049 the Saldjūks destroyed the town of Arzan, not far east of Karen, and its population moved to Theodosiopolis =

Ḳālīkalā and gave this town the name of Arzān al-Rūm "Aizan of the Romans" which became corrupted to Arz al-Rūm and Arđ al-Rūm "land of the Romans". Shortly afterwards, the Saldjūks finally destroyed Byzantine rule in Armenia. From 588—627 (1192—1230) Arzan al-Rūm formed an independent Saldjūk kingdom (cf. TOĞHRULSHĀH). In 1241 Erzerum was swept by the Mongol invasion. Mustawfī (in the first half of the xivth century) speaks of the numerous churches in the town: it must therefore have been for the most part inhabited by Armenians. On the other hand Ibn Baṡṡa found Turkoman tribes preponderating and their doings brought about the ruin of the town. The district of Erzerum from this time on was one of the strongholds of the Aḡ-Ḳuyūnlū; after the wars with the Ḳara-Ḳuyūnlū that followed Timūr's invasion, Ūzun Ḥasan, the greatest of the Aḡ-Ḳuyūnlū, built the citadel of Erzerum, but lost it before his death to the Ottoman Meḡmed II after the disastrous battle of Terđān in 878 = 1473. Erzerum then became the centre of one of the most important pashaliks in the Ottoman dominions, an outpost whose possession was often disputed by their Persian rivals, but which was always successfully retained by the Turks. In the domestic history of Turkey it is celebrated for the rebellion of Ābāza Pasha [q. v. i. 6], which was put down in 1627. Since the xixth century the fortress has had to defend, with little success it must be confessed, the Turkish frontier against Russia. After the battle of Dewe Boyūn (q. v. i. 951^b *et seq.*) in 1878 Erzerum was irretrievably lost, but was only surrendered to the Russians after the truce.

If we may believe the various estimates, the population of Erzerum has considerably declined in the last century. Although the lack of any railway or of a good system of roads militates against the importance of Erzerum, the town, which Cuinet credits with 38,906 inhabitants, is still of importance on strategic grounds as it is a border fortress with modern, if hardly strong enough forts, and on commercial grounds as the centre of trade for the wilāyet (annual exports about £ 100 000 — mainly products of cattle-rearing; imports £ 400 000 — £ 450 000) and its hinterland and as a centre for trade with Persia.

HARTMANN.)

ERZINDJAN, the capital of a sandjak, with about 23,000 inhabitants in the wilāyet of Erzerum, lying in a fertile plain on the north bank of the Ḳarā-Şū between Erzerum and Sīwās, is said by the Armenian sources to date back to pre-Christian times. We first obtain definite facts about the town in the Saldjūk period [cf. the article MANGUČAK]. According to Yāḡūt it was inhabited mainly by Armenians. In 627 (1230) the Ḳhwārizm-Shāh Djālāl al-Dīn (q. v., i. 1004) was defeated here by the Saldjūk 'Alā al-Dīn Kai-

Kubād I and the Aiyübid al-Ashraf. Mustawfi (Le Strange, *op. cit.*), says that the walls of Erzindjân were restored by Kai-Kubād. In 640 (1243) the power of the Saldjûks fell before the Mongols, who entered Asia Minor via Erzerum. In Ibn Battûta's time the majority of the population was Armenian, but he also found a number of Turkish speaking Muslims. The city, which was always a stronghold of the Turkomans, recognised Ottoman suzerainty for a brief period in the reign of Bā-yazid I. In Timūr's time it was in the hands of Karā Yūsuf of the Karā-Küyünlū, and then passed to Üzün Hasan of the Ak-Küyünlū. This period, probably that of its greatest prosperity, ended with Mehemmed II's victory over Üzün Hasan at Terdjân. Under Ottoman rule it has formed a part of the pashalik of Erzerum down to the present day. Though several times destroyed by earthquake (notably in 1784) the town has always been able to recover, thanks to the fertility of the surrounding country. Its chief exports are fruits and vegetables. As a military station it is one of the main defences of the Turkish eastern frontiers.

ES'AD EFENDI, AHMED, a Turkish official and learned jurist, son of Shaikh al-Islām Muḥammad Sāliḥ, was Kādī-askar of Anatolia in 1205 (1790-1791), of Rūmili in 1208 (1793-1794), became Shaikh al-Islām in 1218 (1803) and held this office for three years and five months. During his tenure of this office he issued a *fatwā*, sanctioning the new organisation of the army, known as *niḡām-i dīdīd*, proposed by Sultān Selim III. But the revolution of the Janissaries brought about his deposition and it was with difficulty that he escaped with his life in this troubled period. On the accession of Maḥmūd II in 1223 = 1808 he again became Shaikh al-Islām but was again driven out of his office by the revolutionaries three months later. He died in 1230 = 1815.

(CL. HUART.)

ES'AD EFENDI, MUHAMMAD, a Turkish official and poet, son of the historian Sa'd al-Dīn, born in 978 (1570), became Kādī of Adrianople, and in 1004 (1595-1596) Kādī-askar of Anatolia, in 1012 (1603-1604) of Rūmili, made the pilgrimage to Mecca in 1023 (1614) and after his return succeeded his brother Ālebi Muḥammad Efendi, who had just died, as Shaikh al-Islām. He filled this high office for seven years under Sultān Ahmad I, Muṣṭafā I and Othmān II; the latter gave him his daughter in marriage. He soon afterwards left office because of the troubles that had broken out, but in 1032 (1623) he was called upon by Murād IV to resume the post, which he retained till his death in 1034 (1625). His tomb is at Eiyüb. He left a *Diwān* of poems in Arabic, Persian and Turkish.

(CL. HUART.)

ES'AD EFENDI, MUHAMMAD, a Turkish official and historian, son of Muftī Abū Ishāk Ismā'īl, born in Dhu 'l-Ka'da 1096 (Oct. 1685), filled several judicial offices in the lifetime of his father, accompanied the Turkish army to Belgrade in 1152 (1739), became Kādī-askar of Rūmili in Muḥarram 1157 (Febr. 1744) and succeeded Muftī Ak-Maḥmūd-Zāde in office on the 24th Radjab 1161 (20th July 1748). He was the author of a *Lahdjet al-Lughā* (Arabic-Persian Dictionary, printed in Constantinople 1211 = 1795), a *Bilbūl-nāme* ("Book of the Nightingale") a *Tedhkire-i Khwānendegān* ("collection of biographies of singers"), and Arabic and Turkish poems; he also wrote a *Takhlīs* to four celebrated poems in praise of the Prophet (*Burda*, *Hamziya*, *Din-yāfiya* and *Muḍariya*) and a metrical translation of Zamakhshari's *Atwāḥ al-Dhahab*. He was a good musician and founded several schools and medreses.

After being deprived of his office for no reason on the accusation of 'Abd Allāh Pasha, Sultān Maḥmūd I's grand vizier, in Sha'bān 1162 (July 1749) he went to Gallipoli and then to İnđir-K'oi, near Constantinople, where he died on the 10th Shawwāl 1166 (22th Aug. 1753).

ES'AD EFENDI, MUHAMMED, nicknamed HINDI-MOLLĀ, a Turkish official, son of Shaikh al-Islām 'Abd Allāh Waṣṣāf, born in 1119 (1707), was imprisoned in Brusa with his father in 1168 (1754-1755), became Kādī-askar of Anatolia in 1182 (1768-1769), of Rūmili in 1186 (1772) and 1190 (1776) Shaikh al-Islām, but was deposed eight months later and died in 1192 (1778).

(CL. HUART.)

ES'AD EFENDI, SA'YID MUHAMMED, called SHĀHĪF-ZĀDE ("son of the bookseller"), a Turkish official and historian, son of al-Hādjdj Ahmad, who was Mudarris and at the same time a bookseller and later Kādī of Jerusalem and Cairo, born in Constantinople near the Āyā Sōfiya on the 18th Rabī' I 1204 (6th Dec. 1790), adopted his father's profession and received the position of a judge in Adrianople and Scutari in Albania without actually filling the offices. On the death of Shāhi-Zāde in 1241 (1825) he was appointed Historiographer Royal. He held this office for thirteen years, and in addition in 1247 (1831) was appointed editor of an official gazette, the *Takwīm-i Wakā'if*. In 1250 (1834) he was sent to Persia to congratulate Muḥammad Shāh, son of Fath 'Alī Shāh, on his accession to the throne. He died in 1263 (1847) while holding the office of President of the Upper Council of Public Instruction.

He composed numerous chronograms (*Tārīkh*) on various events and wrote a brief account of the dissolution of the corps of Janissaries by Sultān Maḥmūd II, entitled *Uss-i Zafer* ("foundation of victory") which has been translated into French by Caussin de Perceval (Paris 1833).

(CL. HUART.)

ESKI (T.) "old"; frequent in place-names like Eski Shehr "Old-town" [q. v.], Eski İḥiār "Old-citadel", a name borne by the ancient Dakibyra (see Tomaschek in *Sitz-Ber. der Wiener Akad.*, 1881, viii. 6) and Laodicea ad Lycum (see DE-NİZLİ, i. 939) amongst others. Following a very common custom the Turks usually call ancient ruined sites by the name of some adjacent large town with the prefix *Eski*, e. g. *Eski Şām* "Old Damascus", Boşrā (q. v., i. 765), *Eski Mōsul*, the ancient Balad (see Le Strange, *Eastern Caliphate*, p. 99); on Eski Baghdād, see i. 564^a and 926^b.

ESKISHEHIR, on the Pursak-çai, the capital of the k̄āzā of the same name in the sandjak of Kutahia, in the province of Brusa, with about 25,000 inhabitants, chiefly Muslims, is celebrated for its hot springs and the meerscham pits near it (see Reinhardt in *Petermanns Mitteilungen*, 1911, ii. 251 *et seq.*) and has very recently attained considerable importance as a junction on the Constantinople-Ḳōniya and Constantinople-Angora railways; of the 11 mosques one dates from the Saldjuk period, and another was built by Kara Mustafa Pasha. Eskişehir is the successor of the Byzantine Dorylaeon (the *دريلايون* of the Arabs) while the ancient town of that name was two miles to the north at the modern Shar-Üyük. In the Byzantine period the Emperor's armies assembled in the plain of Dorylaeum before the eastern campaign against the Arabs and Saldjūks (cf. Ibn Khordādhbeh, ed. de Goeje, p. 109). In 89 = 708 al-Abbās b. al-Walid conquered Dorylaeum (Ṭabari, ii. 1197; cf. Theophanes, i. 376, ed. de Boor) and Ḥasan b. Kaḥṭaba advanced as far as this town in 162 = 178 (Ṭabari, iii. 493; Theophanes, i. 452). The Emperor Manuel Komnenos in 1175 again fortified the town which had been destroyed by the Saldjūks and drove out the Yürüks who led a nomadic life in the neighbourhood (Kinna-mos, p. 294, 297; Niketas, p. 236 *et seq.*, 246), but by the next year after the unsuccessful war against Kiliċi Arslān I, he had to agree to destroy the fortifications and a short time afterwards the town must have been definitely occupied by the Saldjūks. In the xiiith century Ertogrul settled near Eskişehir in the district of Sultān üyüċi (Sultān öntü), Neshri, *Zeitschr. d. D. Morgenl. Ges.*, xiii. 198; in the apocryphal letter of investiture (*menşûr*) of 'Alā' al-Diū b. Farāmāz of the beginning of Shawwāl 688 for Othmān I (Feridūn, i. 56 of the second edition) the district of Eskişehir is granted to Othmān as a sandjak (cf. Leuncl. *Hist. Mus.*, p. 125, 126 *et seq.*); at a later period it was the residence of the Sandjakbeg of İnönü and a station on the pilgrims' route.

(J. H. MORDTMANN.)

ESNE (Egyptian Te-snet, Coptic Sne, Arabic Isna, Greek Latopolis from the fish Latos worshipped there) a town in Upper Egypt, lying on the left bank of the Nile halfway between Luxor and Edfu. It was for a time the capital of

a Mudiriye, now Markaz in the Mudiriye of Kēnē, with 19,103 inhabitants, celebrated for the ruins of the temple of the God Chnum, which dates from the Ptolemaic period, in which a number of Roman emperors are depicted in the garb of the Pharaohs. In the Muslim period Esne was a flourishing provincial town. According to Edfūwī quoted by Maḳrīzī the town had 10,000 houses, and produced annually 40,000 irdabb of dates and 10,000 irdabb of zabib.

EUPHRATES. [See AL-FURĀT.]

EUTYCHIUS, Patriarch of Alexandria 321—328 (933—939) known in Arabic as Sa'īd b. AL-BİḤRĪĸ, born at Fuṣṭāṭ in 263 (876) was the author of several medical and historical works. The best known in his Arabic chronicle, *Naẓm al-Djāwar*, published by Pococke at Oxford in 1658-1659, which was afterwards continued by Yahyā b. Sa'īd al-Anṭākī [cf. i. 359^a]. The fragment of a history of Sicily contained in a famous Cambridge manuscript (cf. Browne, *Handlist of Moham. Mss.*, p. 27, N^o. 170) used to be wrongly ascribed to Eutychius [on this point cf. Vasiliew, *Vizantia i Arabi*, ib. 79 *et seq.* and the works cited by him]. In the same library at Cambridge (Browne, *op. cit.*, p. 281, N^o. 1317) there is also a theological pamphlet against Eutychius written by Severus b. al-Muḳaffā.

EWLIYÂ ÇELEBÎ, or as he repeatedly calls himself, EWLIYÂ MEḤMED ZULY B. DERWİSH, the "globe-trotter" *Seiyāh-i 'Ālem* was born in Constantinople in 1020 (1611-1612) and died soon after 1090 (1679); in the course of forty years he made a series of long journeys within the Turkish empire and took part in the campaigns against Crete, Hungary, Austria etc. under Ibrāhīm and Meḥmed IV and published his observations and experiences in war and peace under the title *Ta'rikhi Seiyāh*, the 'Traveller's Chronicle' (Vienna Mss., Flügel, N^o. 1281; the Stambul printed edition has *Siyāhat-nāme*), an elaborate work in ten parts. For information about himself and his life we are limited to his own statements. According to them his father Derwīsh Meḥmed ZULY (i. 218; iii.

442, 443 of the Stambul ed., cf. i. 244) had gone with Sultān Suleimān I to Belgrade, Rhodes, Budapest, Stuhlweissenburg and Szeged (i. 106, iii. 444); had been present at the siege of Cyprus (iii. 443) and taken part in Meḥmed III's campaign against Erlau (iii. 444); he was also "court-jeweller" (*Zerkeri dergāhi 'ālī*, or *Kuyumdjibashi*) and had served ten Sultāns from Suleimān I to Ibrāhīm (iii. 442; i. 258); he died in 1058 A. H. (ii. 458), at the age of 117 (iii. 444). His paternal grandfather, Demirdċi Oĝlu Kara Ahmedbeg, Meḥmed II's standard-bearer, had taken part in the capture of Constantinople and attained the age of 147 (iii. 444); his maternal grand-father, Yawūz

Özbeğ had also been standard-bearer to the conqueror (i. 94); his mother was a sister of Melek Ahmed Paşa, who was Grand Vizier from Şahbân 1060 to Ramađân 1061 and died in 1073. Ewliyâ decided to devote himself to scholarship and made a beginning in Ramađân 1045 as *hâfiz* in Aya Sofia; while here he attracted the attention of Sultân Murâd IV, who gave him a post as *Muşâhib* at the palace, which he left however two years afterwards as a regular Sipâhî (ii. 244—258). Henceforth he gave himself up to his love of travel and we find him on long journeys in the provinces or on campaigns, sometimes independently sometimes in the train of some high official, notably his uncle Melek Ahmed Paşa, till he settled down about 1083 (1672-1673). Details are given in the following survey of his travels. Part I. contains the description of the capital and its environs which he explored in 1041 and the years following; Part II: Journey to Brusa (Moğarram 1050 = April—May 1640). — Excursion to Nikomedia. — Journey to Batum, Trebizond, Abkhazia (Djumađâ I. 1050—Şahbân 1054 = Aug. 1640—Oct. 1644). — Campaign against Crete (1055 = 1645). — Journey to Erzerûm, Adharbaidjân, Georgia etc. (Radjab 1056—end of Djumađâ II. 1058 = Aug. 1646—end of May 1648); Part III: Journey to Damascus, Syria, Palestine, Urumiya, Siwas, Kurdistan, Armenia etc. (Şahbân 1058—middle of Radjab 1060 = Sept. 1648—July 1650; in 1059 the author performed the pilgrimage (cf. i. 288) which he describes in a separate part). — Journey to Rumelia (Bulgaria, Dobruđja etc.) 1061-1062 (1651-1652); Part IV: Journey to Wân, Tebriz, Bağlıdâd, Başra etc. in the years 1065-1066 (1655-1656); Part V: Conclusion of the journey to Wân-Başra. — Journey to Oczakow, campaign against Rakoczy, raid into Russia, 1266—1268 (1656—1658). — Campaign against the rebels in Anatolia; return from Brusa via the Dardanelles to Adrianople, Radjab 1069—beginning of Şafar 1070 (March—October 1659). — Mission to the Moldau, in the same year. — Campaign against Transylvania, mission to Bosnia; Campaign against Dalmatia, return to Sofia, from the middle of Şahbân 1070—Rabi' I. 1071 (April—November 1660); Part VI: Campaign against Transylvania, mission to Albania, return to Constantinople, Dhu 'l-Ka'da 1071—Radjab 1072 (July 1661—Febr. 1662). — Campaign against Hungary, siege of Uiwâr (Neuhâusel), raid made by the author through Austria, Germany and Holland to the North Sea with 40,000 Tatars (!), conquest of Uiwâr and other fortresses, return to winter-quarters in Belgrade, Şahbân 1073—end of Ramađân 1074 (March 1663—March 1664). Mission to Herzegovina, journey to Ragusa, campaign against Montenegro, Kâniza, Croatia. — The contents of the other parts can only be surmised from the casual statements on p. vi. of the preface to the first volume of the new Stambul edition; according to these Part VII deals with Austria, the Crimea, the lands of the Caucasus and Astrakhân; Part VIII with the Crimea, Crete, Salonika and Rumelia, Part IX with the pilgrimage and X with Egypt. In part VII Ewliyâ presumably describes his journey to Vienna and Central Europe on which he went as far as Dunkirk (cf. *Travels*, i. 1, 42 *et seq.*); he probably accompanied Kara Mehmed Paşa, the ambassador of the Porte (in 1075 = end of 1664), and then continued his journey alone from Vienna

and after travelling for 3½ years returned to the Crimea, via Sweden, Poland and Russia (i. 300); in 1080 (1669) he accompanied the campaign against Crete and the later one against the Mainotes; part VIII deals with this. Part IX and part X deal specially with his pilgrimage in 1059 and Egypt respectively (cf. i. 288 and 507). The last date that appears in the parts of the *Târîkh-i Seyyâh* as yet known is the year 1089 (1678-1679), see i. 301.

Ewliyâ Çelebî was an imaginative writer with a decided fancy for the marvellous and adventurous; he prefers legend to dry historical facts, delights in exaggeration and does not hesitate at times to draw the long bow. Apart from this, his work is a perfect treasure-house of information on points of social life, folklore and geography, whose value is still further increased by simple and unaffected style in which they are vividly described. He rarely quotes from literary sources although a few are referred to (e. g. the chronicles of Muhyî 'l-Dîn and Djewrî); he himself has been much used by later writers; unfortunately — as e. g. by von Hammer — usually without any attempt at criticism.

Only the first six parts of Ewliyâ's works have yet been printed, Stambul 1316—1318; the *Muntakhabâtî Ewliyâ Çelebî* (Constantinople 1259 A. H. = 1843) contain extracts from Part I; v. Hammer translated Parts I—III under the title: *Narrative of Travels in Europe, Asia and Africa by Ewliya Efendi* (London 1846—1850, Vol. I and II), after giving in the second volume of his *Des Osm. Reichs Staatsverfassung etc.*, p. 455—470 a detailed account of the contents of the first four parts. The only manuscripts of the *Târîkh-i Seyyâh* in Europa are in Vienna and in the British Museum. (J. H. MORDTMANN.)

EWRENOS, the descendants of Ewrenos (اورنوس), in *Âshikpashazâde* and *Neshri* اورنوس, *Ἀρρυνέζης* in Dukas, *Βαρυνέζης* in Manuel Palaeolog., *Chron. breve* and *Chron. Epir.*, *Βαρυνέζης* in Chalkokondyles and Phrantzes, Avranes in Barletius) form with the Mihaloghlu, Malkodjoghlu and the sons of Tûrâkhân the four ancient families of the Ottoman nobility. (Ramberti, *Cose de Turchi*, Bl. 133^r f., ed. 1543; cf. Leuncl., *Pand.*, c. 27).

Tradition mentions Ghâzî Ewrenosbeg among the begs of the Karasioghlu who on the dispossession of this dynasty by Sultân Orkhân in 735 A. H. entered the service of Suleimân Paşa, son of Orkhân. He crossed the Hellespont with Suleimân Paşa (in 759? or 760?) and was installed by Murâd I as *üdjbegi* (frontier-beg) in the Rumelian territory. In this capacity he conquered Keshan, Ipsala, Gumuldjina (763) Fere (774), Pori, Naanthi, Maronea (775), Serres (784 or 787), Monastir, Yenidje Wardar and laid the foundations of Ottoman power in western Thrace and Macedonia. After making the pilgrimage he took part in the battle of Kossova (June 1389), conquered Kitros and Wodena, and repeatedly led Turkish armies against Albania (1398 and beginning of 1396) and the Morea (1391 and 1395). He then fought in the battle of Nikopolis (Sept. 1396) against the Hungarians and accompanied Bayazid I on his raid into Wallachia. Finally he fought in the battle of Angora in the war against Tîmûr. Under Mîr Suleimân he took part in the war against the Karamanoghlu and besieged the

latter in Aḡsarai. He afterwards went over to Mūsā Ćelebī (in 813 A. H.) and finally in 816 A. H. to Meḥmed I and fought on the latter's side in the battle of Ćamurlı. He seems to have died soon afterwards (according to *Sıdıllı-i Oṭtmānı* in 819 or 820 A. H.). If, as the Ottoman historians say, Ewrenos had been a beg under the last Karasioghlu, he must have been over 100 when he died; there is apparently a confusion between two different persons. Even in Murād I's reign Ewrenos was one of the richest vassals, and his estates were so large that tradition relates that the Sultān had granted him as much land as a swift steed would carry him round in 24 hours ('*Ali Kunt*, V, 75; Beaujour, *Tableau du Commerce de la Grèce*, i. 111 *et seq.*). He expended a great part of his riches in pious endowments which are still controlled by his descendants and to the present day are free from state inspection by special privilege (*Dustur*, iv. 400).

On the death of Meḥmed I in 824 A. H. the sons of Ćhāzı Ewrenos took the side of the false Muṣṭafā, who even had his headquarters for a period in Yenidje before advancing against Murād II, and remained faithful to the pretender after his other followers had forsaken him; they afterwards went over to Murād II. Among them 'Alıbeg and 'Isābeg were particularly distinguished as brave and skilful generals; they led the Rumelian sipāhıs and akındhis (irregulars) in Murād II's campaigns against Albania, the Morea, and notably against Hungary. 'Alıbeg was, according to Ducas, executed by Meḥmed II on his accession in 1451 A. D. after strangling the Sultān's younger brother by his orders; according to another story (in Beaujour, *l. c.*) he had run against Murād II in the game of *djardı* and the Sultān enraged ordered the aged Ewrenos to

put his son to death with his own hands. Of the other sons of Ćhāzı Ewrenos Baraḡbeg (*Bāranoṡ*, *Bāranyoṡ* in Chalkokondyles) and Aḡmedbeg are mentioned; the latter took part in the Wallachian campaign of 1462 A. D. and in the siege of Shkodra in 1478. The two Ewrenosoghlu, 'Isā and Suleimān, who fell in battle against the Egyptians in 1488, must have been grandsons of Ewrenos. Henceforth the Ewrenosoghlu begin to lose their important position, although we still find them from time to time acting as provincial governors for the Porte. Nevertheless they remained the most prominent family in the land chiefly on account of their extensive estates, while the descendants of the other three ancient Ćhāzı families have retained nothing of the glory of their ancestors except their name.

The celebrated firmān, which Murād I is said to have granted to Ćhāzı Ewrenos (published by v. Diez, *Denkwürdigkeiten von Asien* i. 101—132 and in Feridūn's *Munshiāti Salāṭın*, i. 87 *et seq.* in the second edition) has been doubted as apocryphal by v. Hammer, but is acknowledged by the Porte as genuine. Beaujour (*loc. cit.*) saw a manuscript history of the Ewrenosoghlu and gave several stories from it. The biographies of Ćhāzı Ewrenos and his son 'Alıbeg in the collection *Meshāhir-i Islām* (Constantinople, 1301 A. H.) contain valuable material. Von Hammer's account of the Ewrenosoghlu in his *Gesch. d. Osm. Reiches*, Vol. i. and ii., is only to be used with great caution. (J. H. MORDTMANN).

EZEKIEL. [See HIZKİL.]

EZELI. The name given to those Bābı's [q. v. i. 548 *et seq.*] who followed Mirzā Yahyā, called Şubḡ-i Ezel [q. v.], after the death of the Bāb.

EZRA. [See 'UZAIR.]

F.

FĀʾ, the twentieth letter of the Arabic alphabet (numerical value 80; cf. the article ABDJAD i. 68^b *et seq.*). On the evolution of the character see the article ARABIA, ARABIC LANGUAGE, i. 383^b. Fāʾ is pronounced at the present day as it was in old Arabic, viz. as a voiceless labio-dental aspirate. Cf. A. Schaade, *Sibawaihi's Lautlehre*, Index.

(A. SCHAADÉ.)

FADAK (Demin. FUDAİK), a town in Arabia not far from Khaibar [q. v.] and like the latter inhabited by Jews. In the year 6 = 627 Muḥammed sent 'Alı, afterwards Caliph, against Fadak as he had learned that the people of the latter town were going to support the Jews in Khaibar. When Khaibar was taken in the following year, the Jews of Fadak also submitted and agreed to give up half of their possessions. Muḥaiyiṡa b. Mas'ūd conducted the negotiations between the Prophet and the people of Fadak and was rewarded by Muḥammad for his services. On the death of the Prophet, his daughter Fāṭima demanded that Khaibar and Fadak should be given her as her father's inheritance. But Abu Bakr refused to give up these towns and referred her to the words of the Prophet: "No one shall be my heir; what I leave behind me belongs to the poor".

(J. SCHLEIFER.)

AL-FAḌĀLĪ, MUHAMMAD B. SHĀFĪ'Ī AL-SHĀFĪ'Ī, a Cairene Shaikh born at Munyat Faḍāla near Samannud in the Delta (*Khiṭaṭ al-djadida*, ix. p. 2; xvi. p. 80; Bādjuri, *Taḥḡik al-maḡām 'alā kifāyat al-'awāmm*, p. 9 of ed. of Cairo, 1315) who died in A. H. 1236 (*Cat. of Khediv. Library*, ii. p. 39) = A. D. 1821. He appears to be known only as the author of the *Kifāyat al-'awāmm min 'ilm al-kalām* and the teacher of the more fertile Bādjuri [q. v.] who added the gloss, mentioned above, to his master's work. Text and ḡāṡhiya seem always to go together in the Mss. and editions. A translation of the text is given in D. B. Macdonald's *Development of Muslim Theology etc.*, p. 315—351.

Bibliography: Brockelmann, ii. p. 489; Ahlwardt's Berlin Cat., iv. p. 459, No. 5148; Ellis, *Cat. of Ar. Printed Books in British Mu-*

seum, under *Muḥammad ibn Shāfiʿi al-Faddālī*; but the *nisba* according to the *Ḳhiṭ. dīd.* is as above. (D. B. MACDONALD.)

FADDĀN (A.), an Arabic word derived from the Aramaic (cf. Fränkel, *Die Aram. Fremdwörter*, p. 129), properly a yoke of oxen for ploughing a piece of ground, an Egyptian measure of area, varying in size with time and place. According to Lane the *faddān* a few years before his stay in Egypt (1833—1835) measured about 1.1 acres, while during his stay there it was less than an acre. It was divided into 24 *ḳirāʿ* and contained 333 $\frac{1}{3}$ square *ḳaṣaba*, the *ḳaṣaba* (rood) being first reckoned at 24 and later at 22 *ḳabḍa*. In the time of the French expedition there were three different *faddān* in use: the *faddān* in use on the banks of the Nile (1.336 arpents), that in use away from the Nile (2.375 arpents) and the *faddān* of Damietta (2.012 arpents); Upper Egypt (1670 arpents = 5724 sq. metres) and the Copts (5253 sq. metres) had each their own *faddān* besides.

Decourdemanche estimates the ancient *faddān* of 400 square *ḳaṣaba* (the *ḳaṣaba* being reckoned at the length fixed by al-Ḥākim bi-amrillāh of 6 long Ḥākimite or Babylonian ells), at 5883.5 square metres and the modern *faddān* of 333 $\frac{1}{3}$ *ḳaṣaba* at 4200.83 square metres.

In Syria *faddān* also means a single ox; as a measure of area it is 333 square *ḳaṣaba*.

HUART.)

FADHLAKA (A.) "sum, total" from *fadhālika* "and this makes", at the end of an addition.

FADIL. [See FĀZIL.]

FADJR (A.) "Daybreak", the title of Sūra LXXXIX.

AL-FADL B. **AL-RABĪʿ**, al-Amin's vizier. A descendant of a Syrian slave manumitted by the Caliph Othmān, al-Faḍl proved himself thoroughly Arab in his attitude and constantly championed the Arab spirit in opposition to the numerous Iranian elements in the ʿAbbāsīd empire. His father al-Rabīʿ b. Yūnus had played a part in history as vizier to the two Caliphs al-Manṣūr and al-Mahdī. When Hārūn on his accession gave the Barmecides preferment, al-Faḍl felt himself slighted and became filled with hatred and jealousy of them. On Ḳhaizarūn's death in 173 (789-790) he was appointed vizier by Hārūn and filled this office till 178 (794-795) when Yaḥyā b. Ḳhalīd al-Barmakī became the real ruler. Al-Faḍl then did his best to bring about the fall of the Barmecides and succeeded in once more obtaining the vizierate which he retained under Hārūn's son and successor al-Amin. Just as his namesake al-Faḍl b. Sahl ruled al-Amin's brother, afterwards Caliph al-Ma'mūn, almost absolutely, al-Faḍl exercised an extraordinary influence over al-Amin. When Hārūn died suddenly in Ḳhorāsān in Dju-mādā II. 193 (March 809), while on a campaign against the rebel Rāfiʿ b. Laith, al-Faḍl ordered the whole army destined for Ḳhorāsān back to Baghdad, by command of al-Amin but in direct violation of the dead Caliph's last wish, a proceeding which al-Ma'mūn, who was then governor of Ḳhorāsān and at once paid homage to his

brother, could not prevent. As al-Faḍl feared al-Ma'mūn's vengeance, if the latter should ever become Caliph, he exerted all his influence to incite al-Amin against his brother. As early as the year 194 (809-810) at the instigation of al-Faḍl and ʿAlī b. ʿIsā, a former governor of Ḳhorāsān, the Caliph had his son Mūsā mentioned in public prayer which was clear evidence of his intention to declare him his successor. In consequence al-Ma'mūn broke off all relations with his brother; in Raddjab 196 (March—April 812) the latter was taken prisoner and declared deposed, and, although he was soon set free and raised to the throne again, al-Faḍl thought it advisable to retire.

In 201 (816-817) he came forth again from his retirement. The troops in the capital rose against al-Ma'mūn's governor, al-Ḥasau b. Sahl. The commander there, Muḥammad b. Abī Ḳhalīd, was successful at first; but when he quarrelled with al-Ma'mūn's other generals, he went over to the rebels himself. Al-Faḍl now took Muḥammad's side; the latter attacked Ḥasan b. Sahl but was defeated and died of his wounds. Al-Faḍl then lived in retirement till his death. On the intercession of Ṭāhir b. al-Ḥusain, governor of Ḳhorāsān he was pardoned by al-Ma'mūn. He died in Rabiʿ II. or in Dhu 'l-Ḳa'da 208 (823-824).

ZETTERSTEN.)

AL-FADL B. **SAHL**, al-Ma'mūn's vizier. Al-Faḍl was a native of Persia and did not adopt Islām till 190 (805-806). His family had been strongly recommended to Hārūn by the Barmecides and al-Faḍl b. al-Rabīʿ, their implacable opponent, therefore became a personal enemy of Ibn Sahl. As the former was of Arab origin, the latter was also opposed to him as the representative of the Iranian element, and just as Ibn al-Rabīʿ controlled the one brother, al-Amin, the other, al-Ma'mūn, was simply a tool in the hands of Ibn Sahl. The struggle that arose between the two sons of Hārūn was thus also a struggle between their viziers or between Arab and Persian culture. As al-Faḍl b. al-Sahl feared that al-Amin would on Hārūn's death disregard the arrangements for the succession made by the latter, he persuaded al-Ma'mūn to try to accompany Hārūn to Ḳhorāsān in 192 (808). In the following year the Caliph died and when al-Amin recalled the army sent against Ḳhorāsān and al-Ma'mūn was thinking of hurrying after the troops and reminding them of their duty, Ibn Sahl persuaded him against this. Instead of al-Ma'mūn an envoy was sent to the army; but he could do nothing with them and was received with insults and the army continued its march to Baghdad. In the period following, al-Faḍl remained the prince's faithful friend and adviser and constantly urged him in all things to insist on his own rights against his brother. It was due to the cunning intrigues of Ibn Sahl that al-Amin allowed himself to be led into trusting the command of the army, which he was sending against al-Ma'mūn in 195 (811) to the incapable ʿAlī b. ʿIsā. ʿAlī was defeated by Ṭāhir b. al-Ḥusain; he

himself fell in the battle and his troops were scattered in flight. After this success al-Ma'mūn gave Ibn Sahl the government of the eastern provinces and at the same time gave him the title *Dhu 'l-Ri'āsatain* ("lord of the two highest offices" i. e. of vizier and commander in chief). When the aged general Harthama b. A'yan, who had rendered such services to Harūn, was appointed governor of Arabia and Syria, he decided to go to al-Ma'mūn in Merv to give him an account of the condition of various parts of the empire. The Caliph commanded him to go to Damascus; but when Harthama in spite of this appeared in Khorāsān, he was represented by Ibn Sahl as a rebel. The Caliph therefore had him thrown into prison where he was put to death a few days later by Ibn Sahl. Al-Ma'mūn, however, finally found out that the latter did not always tell him the truth and therefore had his former favourite murdered in the bath in Sarakhs in 202 (818) or 203 (819).

ZETTERSTÉEN.)

AL-FAḌL B. YAHYĀ, a Barmakid, born in *Dhu 'l-Hijja* 148 (February 766), governor of Djurdjān, Tabaristān, al-Ray etc. 176—180 (792—796-797) and of Khorāsān 178-179 (794-795—795-796). On the fall of the Barmakids in 187 (803) he was thrown into prison. He died in confinement in al-Raqqa in Ramaḍān 192 or Muḥarram 193 (808). For further details see above i. 665^a (article BARMAKIDS). (K. V. ZETTERSTÉEN.)

FAḌL ALLĀH, a family of officials in Cairo under the Mamlūks who traced their descent from the Caliph 'Omār I. so that the individual members are also known by the *nisba* al-'Omari. The founder of the family was FaḌl Allāh Djamāl al-Dīn Abu 'l-Ma'āthir b. 'Izz al-Dīn; one of his sons, Sharaf al-Dīn 'Abd al-Wahhāb (died 717 = 1317), was private secretary under Kalāwūn, another son, Muḥyi 'l-Dīn Yahyā (died 738 = 1337), was likewise private secretary under al-Nāṣir in Damascus, but moved to Cairo in 733 (1332-1333). The latter had a son, Shihāb al-Dīn Abu 'l-'Abbās Aḥmed (born 700 = 1301), who first became kādī, then secretary of state, but is best known for his literary works. He compiled a comprehensive, encyclopaedic work entitled *Masālik al-Aḥsār fi Mamālik al-Amṣār*, as well as an official letter-writer *al-Ta'rif bi 'l-Muṣṭatalāḥ al-Sharif*, which however contains much other valuable material and was printed in Cairo in 1312 (1894-1895). Other works by the same author are detailed by Brockelmann, *Gesch. d. Arab. Litt.*, ii. 141. Shihāb al-Dīn, or as he is usually called, Ibn FaḌl Allāh, died of the plague in Damascus in 748 (1348).

Bibliography: in Brockelmann, *op. cit.*, to which may be added that Tiesenhausen gives extracts from both the above works in his *Recueil de Matériaux rel. à l'histoire de la Horde d'Or*, p. 204—251. Cf. also Maḳrīzī, *Khitāt*, ii. 56 *et seq.*

FAḌL ALLĀH, surnamed HURŪFĪ, founder of the Hurūfī sect, born in Astarābād in 740 (1339), was a dervish who shared the religious opinions of the Ḳarmatians. He actually seems to

have borrowed the system, which develops a whole theology out of the calculation of the numerical value of the Arabic letters, to which he added the four additional letters of the Persian alphabet [cf. BEKTĀSH, i. 691 *et seq.*] from the Ismā'īlis. He was executed in Shirwān in 796 (1393) by Miḥān-shāh, son of Timūr. One of his pupils, 'Alī al-A'īā, went to Asia Minor, was received into a Bektāshī monastery and began to preach FaḌl Allāh's doctrines, which he gave out to be the teaching of Hādjdjī Bektāsh. FaḌl Allāh considered himself an incarnation of the Deity and impressed this belief on his pupils; [on his teaching cf. the article HURŪFĪYĀ]. He is the author of *Djāwīdān-i Kabir*, composed half in Persian and half in the dialect of Astarābād, also of a religious poem, which was probably called *Iskandar-nāma*, of another poem called *Arsh-nāma* "book of the throne" and of a treatise called *Mahabbat-nāma* "book of love".

FAḌL ALLĀH. [See RASHĪD AL-DĪN.]

FAḌLĪ (FOPLĪ, FUTHALĪ), the dynastic name of a group of tribes in South Arabia. Besides this name we also find 'Oṭhmānī ('Uṭhmānī), as the founder of the dynasty, FaḌl, is said to have been of Turkish origin. They are a branch of the Yāfi' and formerly bore their name also.

The land of the FaḌlī lies between 45° 10' and 46° 30' E. Lat. (Greenw.) and has an breadth of 20—30 miles. It is bounded on the south by the Arabian Sea, in the west by Laḥedj, in the north by Yāfi' and in the east by the land of the 'Awdhillā and Dathīna. In the west there is the large valley of Abyan, with the Wādīs Bona (Bana, Bena) and Ḥasan, both of fair size, which are filled with water during the summer rains. The Djebel Nakḥā'ī with the W. Salā' may be mentioned among the hills in the east. The soil is fertile only in the west (district of Abyan); its chief product here is cotton. The east is mainly steppe-country. The capital of the country and residence of the Sulṭān is the town of Serīya, five miles from the coast, with about 400 inhabitants, a large mosque and the fortresslike palace of the Sulṭān. The only seaport or commercial town is Shugra (Shukra), with about 100 inhabitants and a palace of the Sulṭān, who lives here two months of the year. Jews live here only during the trading season, which lasts only a few months in the year. Among the towns in Abyan we may mention: 'Aṣala, with about 500 inhabitants (a fifth of whom are Jews, who have a large synagogue here), at one time a flourishing seaport, now much declined, Ma'ṛ on the W. Ḥasan with about 300 inhabitants (including many Jews), a large mosque and a hereditary governor of the 'Uṭhmānī dynasty, and Na'ab with about 300 inhabitants (including many families of Jews) and a hereditary governor, who bears the title "Sulṭān".

The people of the FaḌlī country are Shāfi'is

and devout Muslims. They strictly observe fasting in Ramaḍān, the prescribed prayers, the prohibition of wine and other prescriptions of the Korān. The Murākisha and Ahl 'Elah are the most important of the tribes who inhabit the country. They are as a rule free and independent (*kabā'il*). The people of Abyan and the Jews are on the other hand subject to the Sulṭān (*ra'iye*); he levies taxes on them at will and administers justice. If a *ra'iye* commits a murder he is stabbed to death with the knives of the Sulṭān's soldiers at the murdered man's grave. When a thief is caught, for a first offence he is beaten before the Sulṭān and forced to give back the stolen article, on a second offence his hand is cut off; if he commits the offence again he is thrown into the sea in a loaded sack. Religious transgressions such as the breaking of a fast are punished by imprisonment in chains. Adultery is held equal to murder. If a murderer cannot be found, the so-called "test by fire" is tried (*ordeal*). This is carried out in the presence of the Sulṭān by the "fire-judge" who places a red-hot knife on the tongue of the suspect. The decision then rests with the fire-judge.

The Faḍlī at one time belonged to the Yāfi' and passed with them under the rule of the Imāms of Yemen from whom they afterwards made themselves independent. They later became enemies of the Yāfi' and in the fourth decade of last century took from them the fertile district of Abyan. They live at hereditary enmity with the 'Abadil of Laḥedj and the 'Awālik, to which latter their district of Dathīna became tributary. On the other hand they are on friendly terms with the Wāhidī, Raṣṣās, and 'Akarīb. Their relations with England down to 1865 were strained. In this year England made war on them and inflicted a severe defeat on them at 'Asala, whereupon they made peace. Since that time they have been on friendly relations with England.

The dynasty of Faḍlī is of great physiological interest because of its possession of six fingers. The Sulṭān as well as his nearest relatives have a fingerlike gristly growth beside the little finger of each hand and the little toe of each foot, which is regarded as a sign of extraordinary strength among the Southern Arabians as among the Semites generally.

(J. SCHLEIFER.)

FAGHFÜR (avestan *bagha-puthra* "son of God") an expression brought to Persia through Farḡhāna (P. Horn, *Asadī's Lughat-i Furs*, p. 56) is the designation of the Emperor of China and the translation of the chinese *tien-tso* "Son of heaven" (Ibn al-Athīr, vii. 221, ult.). The Arabs have preserved the form *baghbūr*, which is more a western form, but *faghfūr* is also found notably in the Arabic inscription in the cemetery at Zaitūn (Ts'üan-chou), of the year 723 (1323) which has been discussed by M. van Berchem; in Marco Polo (ed. Yule and Cordier, ii. 145) the name is applied to the last Sung Emperor; and as the Mongol Emperors bore the title *kū'an* (*khākān*) it is probable that the title *faghfūr* refers to Chinese sovereigns of native dynasties before the conquest of the country by foreigners.

FAHL or **FIHL**, among the Jews **PHL**, called Pella by the Greeks in allusion to the name of the Macedonian town, at the present day the ruins of Fahil on the western slopes of the land east of Jordan. It belonged to the Decapolis and is particularly celebrated because the Christians went thither on leaving Jerusalem before its destruction; it afterwards belonged to Palaestina Secunda and was the see of a bishop. About six months after the battle of Adjnādāin in Dhū 'l-Ka'da of the year 13 (January 635) the Muslims attacked the Byzantines who had assembled in the land east of Jordan, at Fahil. The Byzantines had broken the dams at Baisān and turned the plain into a marsh but the Arabs crossed the Jordan without mishap and put the enemy to flight whereupon the town surrendered. The battle is also called "the Day of the Swamps".

The geographers mention Fahil among the towns of the province of Urdunn. According to Ya'qūbī the population as usual in this part of the world was half Arab and half Greek.

FAP. By this word Muslim scholars in general understand all things which may be taken from the unbelievers "without fighting" and further very often the lands in conquered territories. The name *fai'* is explained from the peculiar expression in the Korān, lix, verses 6 and 7. "What God has allowed to return to his apostle" (*mā af'ā 'lāhu 'atā rasūlihi*). The possessions of the unbelievers which are "returned" to the Muslims form the *fai'*.

Verses lix, 6, 8 and 10 of the Korān were revealed, according to Muslim tradition, when Muḥammad had resolved not to divide the fields and orchards left by the Banu 'l-Naḍir, who had been driven out of the country, as booty of war among those who had taken part in the siege, but to give them to the Muhādjjirs exclusively. He justified this action by arguing that these were really obtained not by fighting but in a peaceful fashion, by surrender.

After the conquest of Khaibar and Fadak also the lands of the Jews there were not wholly divided among the troops as booty but in part placed at the Prophet's disposal. It was probably on this occasion that Korān lix. 7 was revealed:

"What God hath granted his apostle as *faʿ* from the people of the towns, belongs to God — to his apostle, to his family, to the orphan, to the poor and to the traveller —; what the apostle of God gives you, accept, but what he forbids you, abstain from!" What could not properly be regarded as booty, was to be managed by the Prophet himself as state property and the proceeds therefrom as well as the fifth of the *ghanima* [q. v.] were to be applied to the general good.

At a later period Umar I in consonance with the view of his advisers of the *Ṣaḥāba* thought that this principle should be applied to the newly conquered territories also. He ordered that only movable property captured should be divided among the Arab conquerors but not the land. The land was to be applied not for the advantage of the generation then living but as *faʿ* belonging for all time to the whole community for the benefit of all future generations of Muslims also. It was also feared at that time that if the Arabs devoted themselves to agriculture they would become less capable fighters. As a rule therefore, only the native population was to till the ground and deliver a certain portion of the yield as tribute to the Muslim treasury. This payment (*ḵharāj*) was to be bound up with the possession of the land for all time. It was therefore decreed that the inhabitants who cultivated *faʿ* estates, even if they adopted Islām, should continue to be bound to pay the *ḵharāj*. As the payment of *ḵharāj* was regarded as a sign of subjection, the Arabs at first felt themselves prevented from acquiring land from an estate that was *faʿ*; for they would thus have put themselves in a position where they would have to pay *ḵharāj* themselves. The only exception was those districts, whose inhabitants had voluntarily surrendered on the approach of the Arab army on condition that they were allowed to retain possession of their lands. In such districts (the so-called *Dār al-Ṣulḥ* q. v. i. 919) the land did not belong to the *faʿ*.

When in the course of the first century, the people of the conquered lands adopted Islām, they began, in spite of all measures of the Muslim authorities, to avoid the payment of *ḵharāj* and only gave the *zakāt* of the yield of their fields like the Arab Muslims. The land in the conquered provinces thus gradually ceased to be regarded as *faʿ*.

The views of later Muslim scholars on this point differ; the lands and estates in recently conquered provinces are, according to the *Shāfiʿis*, always to be divided among the conquerors as *ghanima*, according to the *Mālikis* on the other hand, they are to be considered the property of all Muslims, i. e. as *faʿ*, while the *Ḥanafis* would place them at the *imām's* disposal so that he may administer them either as *faʿ* for the common good or divide them as *ghanima* among the troops according as the cause of Islām may be best advanced.

Besides the land, the *ḵharāj*, the *ḍiyya* and all other tribute to be paid by unbelievers, as for example the duties they have to pay on their goods in order to be allowed to trade in Muslim countries, are included in *faʿ*. According to *Shāfiʿi* teaching a fifth part of the *faʿ* must be set aside and applied in five equal portions to the same five purposes as the fifth part of the *ghanima*; the other four fifths of the *faʿ* are,

according to the same school, to be used for the payment of the regular troops, the maintenance of mosques, roads and bridges and for other objects of general utility to Muslims. On the other hand the other *Fīḥ* schools hold that the *Imām* should always apply the *faʿ* in its entirety for the good of the Muslim community as circumstances require it.

Bibliography: In addition to the chapter on *ḍiḥād* in the *fīḥ*-books: the works on *ḵharāj* by Abū Yūsuf and Yahyā Ibn Ādam; Māwardī, *al-Aḥkām al-Sulṭāniya* (ed. M. Enger, Bonn 1853), p. 217 *et seq.*, 237 *et seq.*, 293 *et seq.*; Dimishqī, *Raḥmat al-Umma fī ḵhtilāf al-ʿImma* (Bulāḳ 1300), p. 151 *et seq.*; and the literature cited in the *Handbuch des Islām. Gesetze* by the author of this article (Leiden 1910), p. 344 *et seq.* (Th. W. JUYNBOLL.)

FĀʾIL. (A. properly "agent"), a technical term in Arabic grammar = the subject of the verbal sentence, but only of the active verb (like *Zaidun* in the sentence *ḍāʿa Zaidun* = Zaid came), while that of the passive (like *Zaidun* in *ḍuriba Zaidun* = Z. was beaten) is called *al-mafʿūl alladhī lam yusamma fāʾiluhu*, = the "patient" whose agent is not mentioned" (in Sibawaihi, Ch. 8 *et seq.* other expressions are also given).

The *fāʾil* can be a word only, not a sentence (this is given as a teaching of Sibawaihi's in al-Mubarrad, *Kāmil*, i. 289, 14–15). It must follow its *fīʿl* (verb) and is placed by it in the nominative.

In the older grammarians, as, for example, several times in Sibawaihi and *Kāmil* (i. 634, 7) *fāʾil* also means the active participle, which is later called *ism al-fāʾil*.

Bibliography: al-Zamakhshari, *Mufaṣṣal*, p. 10 *et seq.*; Muḥammed Aʿlā, *Dictionary of Technical Terms* (ed. Sprenger etc.), ii. 1148 *et seq.*; Fleischer, *Kleinere Schriften*, i. 80.

(A. SCHAADÉ.)

FAILASŪF, philosopher: he who studies *falsafa* [q. v. p. 48 *et seq.*]; thence frequently used as an epithet for deep thinkers. The Arab philologists know the literal meaning of this word as *muḥibb al-ḥikma* (lover of wisdom). Al-Kindī [q. v.] was preferably known as the *failasūf al-ʿArab* (philosopher of the Arabs), presumably because he was a philosopher of genuine Arab origin in contrast to most Muslim philosophers who belonged to non-Arab nations. (Cf. the correct explanation of this name given to al-Kindī by T. J. de Bocr in the *Archiv. fur Gesch. der Philos.* [1899], xiii. 154 *et seq.*) al-Djāḥiẓ in quoting a wise saying of ʿAlī b. Abī Ṭālib describes him as *Failasūf al-ʿArab* (in Māwardī, *Manṭḥūr al-Ḥikam*, ms. Landberg, now in the Yale University, fol. 45^a; Djāḥiẓ's work from which the quotation is taken is not named). This is quite in keeping with the character which his devotees give ʿAlī in philosophical (or rather *kalām*) matters (*Zeitschr. d. Deutsch. Morgenl. Ges.*, liii. 382). The accuracy of Māwardī's quotation is rendered suspicious because in it Djāḥiẓ speaks of himself as keeper of Harūn al-Rashīd's library.

In modern times the Turks have given the name *Failasūf Rızā* to the contemporary Stambul scholar Rızā Tewfīḳ who has published a study of the Hurūfī Sect (*Gibb Memorial Series*, Vol. ix.), on account of his work on philosophical literature. In popular language *failasūf* is applied in

an uncomplimentary sense to free thinkers or unbelievers. Even the Jewish king Jeroboam is called *failasūf* in this sense (*Revue des Etudes Juives*, xxx, 23 ult.). An idea of contempt is associated with the forms *failafūs*, *fulfūs* (also *falafūs*, Syr.), plur. *fatāfūs*, current in the popular language; this is applied to frivolous, imprudent people, good-for-nothings and charlatans (examples in *Zeitschr. d. Deutsch. Morgenl. Ges.*, xxxviii. 681; Vollers, (ibid. li. 300, 4) gives *fulfūs*. — The verbal form *yufalfūs* (*Bāsim le forgeron*, ed. Landberg, 38, 2) is also connected with this: "he could not wriggle out".

(I. GOLDZIEHER.)

FAISĀL. [See IBN SA'UD.]

AL-FAIYŪM. The district of Faiyūm is a depression on the eastern borders of the Libyan desert in the form of an irregular triangle with the apex to the south. It measures about 35 miles from N. to S. and about 49 from E. to W. The depression slopes from S. to N. and N. W., at first gradually to the railway line from Abuksa to Sanūres (30 feet above sea-level), then very rapidly to the Birket Kārūn (140 feet below sea-level).

This hollow was formed in the Tertiary period through collapses in the earth's crust (as did the Nile valley also). Traces of human activity in the pre-historic period, such as have been found in the diluvial strata of the Nile valley, have not been discovered in the Faiyūm, although neolithic flint workings have been unearthed on the northern margin.

In the diluvial period, when the Nile first appeared in its bed, an arm branched off from it in the neighbourhood of Asyūt, the modern Baḥr Yūsuf, which entered the Faiyūm basin after a course of 272 miles along the western border of the valley through a breach which it possibly made itself in the edge of the Libyan plateau. In course of time it filled the basin so that a great freshwater lake arose which in the north and West of the Faiyūm stretched further than the present cultivated land. Pharaoh Amenemhat and his successors of the xiith dynasty, built a dam or sluice at the place where the arm of the Nile entered the Faiyūm with a view to stopping further influx of water and gaining arable land. The shallower stretches in the S. and S. E. were laid bare through the great evaporation and secured by dykes. A small strip of land which ran out to the middle of this area, with the modern towns of Medine, 'Agamiyīn and Ebshawaih formed the "lake-province", *lēsḥe*, later *phiom* of the ancient Egyptians, whose capital was Shetet, the Crocodilopolis of the Greeks.

The dams and sluices at Illahūn, which in course of time were made more and more efficient, made it possible for the lake (Egypt. *mwēre*, whence the *Moiris* of the Greeks) to be dammed when the Nile was in flood and afterwards run off; the lake thus became of great importance for the irrigation of the Nile valley. There can be no shadow of doubt that the Lake Moiris of the Greeks must have been the lake covering the whole of the Faiyūm with the exception of the strip already mentioned. It used to be located in the southern extremity of the district where near the village of Shedmū strong walls several miles long are still standing, which can only have been the embankment of an immense reservoir.

When in later centuries the influx of water to the lake began to diminish for unknown reasons and with the increasing desiccation its shore retreated farther to the north, it had finally to cease to act as a regulator of the water-supply. When this took place has not yet been ascertained, possibly in the Persian or perhaps not till the beginning of the Ptolemaic period (Flinders Petrie, *Hawara, Biahmu and Arsinoe*). At this period the dry land had extended as far as the railway line from Abuksa to Sanūres. A further contraction in the lake took place in the Greek period under Ptolemy Philadelphus in the middle of the third century B. C. Whether it reached its present dimensions as early as this must be doubted, for in the deepest parts (140 feet below sealevel) no traces of buildings of the Greek period are found; Kaṣr Kārūn is at a depth of only 65 feet.

It is not absolutely impossible that the deepest parts at least did not emerge from the water till after the beginning of the Christian era; an investigation of the tombs on the south side of the island in the lake might possibly throw light on this point. It was not till then that the lake assumed the form and dimensions that it has at present, a length of 25 miles with a maximum breadth of about 6 miles and an area of 100 square miles. Its greatest known depth which is in the centre is barely 16 feet but there are said to be deeper places in the western part. Its transformation from a freshwater lake to a salt has likewise most probably only taken place in the last period of its formation. In spite of the strong and in recent years increased influx of water no permanent rise in the level may be noticed although there is a slight fluctuation. The great evaporation of the surface on account of its low-lying position is, however, not sufficient to explain the disappearance of such vast quantities of water. It is not improbable the water escapes by one or more subterranean passages, naturally to the N. and not to the S. into the Wādī Raiyān. The currents which are sometimes apparent in it would be thus explained. Besides, this has been suggested before: Makrīzī, *Khūṭat* i. 249, suggests that the lake was drained underground to Siwā (Santariye). The great wealth in fishes, notably in the two kinds *bulḥī* and *lefesh* with eels and large sheat-fish in smaller numbers, which the lake possessed in ancient times, still remains, although it will soon diminish with the vast amount of fishing in which some hundreds of boats are engaged.

When the channel that fed the Faiyūm ceased to act as an aqueduct when Lake Moiris ceased to be a reservoir, it was divided into a number (8) of canals at its end near the capital Crocodilopolis, which spread over the country principally to the N. W., after three had been led off to the N. and two to the S. before it reached the capital. In addition three other canals were led off from the aqueduct immediately after its entrance into the Faiyūm, probably even in ancient times, one to the S. to irrigate the basin of Ḡharak (al-Sultānī) and two to the north, that of Sāla (or Sāla, written *siyāla* or *sayala* or *sala* in Arabic) and that of al-Baṭs (originally perhaps Baṭsh); the latter, which is cut through the limestone for a considerable stretch in rising ground about 100 yards broad and 40 feet deep, shows the scientific skill of the engineers of those days.

The superfluous water not required for irrigation, from these canals flowed into the lake. It was this irrigation of the ancient lake-bed, which of course was not equally productive all over, which gained the Faiyūm the prosperity for which it was at all times celebrated, which, combined with the climate, made the district the most valuable province in Egypt.

The waterworks of the Faiyūm were at quite an early period ascribed by Muslim tradition, probably under Jewish influence, to the Joseph of the Bible but only at a later period called after him. When vizier of king Raiyān he caused the channel which brought the water to the Faiyūm to be dug; the Faiyūm which had previously been called al-Djauba, was a basin into which were drained the superfluous waters of the Nile from Upper Egypt. Throughout the whole mediaeval period the stream was called *al-Baḥr al-munḥā* (not *manḥi*); it is only in modern times (first in Djabarti?) that the name Baḥr Yūsuf appears. The sluices of Illahūn, which tradition also credits to him, were called *al-Ḥaḍjar al-Lahūnī* in the middle ages, and only towards their close do we find the name *al-Ḥaḍjar al-Yūsufī*. Smaller sluices were called *Abwāb Yūsufīya*, canals *Maḥāsīm ḥadīma Yūsufīya* (Maḥrīzī). He also dug the canals of Wardān and Ḡharaḥ and finally, founded the town of Faiyūm in which there was a Dījāmi^c Yūsufī in the viith century A. H.

A further personage in the Ḳor'ān, the fabulously wealthy Kārūn (Sūra xxviii. 76) was likewise immortalised by tradition in the Faiyūm and held to be the builder of the temple in the late Greek town of Dionysias at the western end of the lake. As early as the xiiith century these ruins were called Kaṣr Kārūn and were highly esteemed by treasure-seekers (*Kitāb al-durr al-maknūz* by Aḥmed Kamāl p. 11¹⁴—11¹⁵). The name Kārūn

was only transferred from them to the lake in recent times, for as late as the end of the middle ages it was still called simply *al-Birka* or *al-Birka al-ʿUṣmā* (Maḥrīzī, *Ḳhiṭaṭ*, i. 249).

The Faiyūm has never played any great roll in the political history of Egypt. The transition from the old Oriental rule, Egyptian or Persian, to the European of the Greeks and Romans brought the land the greatest material and intellectual prosperity that it ever attained in antiquity. The capital of the district had then over 100,000 inhabitants, the modern town has nothing like half that number. In 639 followed the Muslim invasion and a decline set in, which lasted over a thousand years and reached its lowest level under Turkish rule. The causes of this decline are on the whole the same as in other Muslim lands, notably in the very similar country of Babylonia. It is true that the Faiyūm was less afflicted by the civil wars that ruined Babylonia, but the religious fanaticism of the new rulers which increased as time went on and the oppression of the Christian populace, of which the papyri give a detailed account for the early centuries and which is testified to by the wholesale destruction of Christian churches and monasteries by the Muḥammadan mob for the later period (vith—viiith centuries A. H.) — there were still 35 monasteries in the Faiyūm in 1210 (Abū Ṣāliḥ p. 53), and only 13 in 1244 (ʿOṭmān, *Faiyūm*, p. 22) — were always worse in Egypt than in other countries. But

particularly it was the incapability of all the Muslim dynasties to manage the internal affairs of the country in an orderly fashion, notably the finance, or where attempts were made in this direction the incapability of maintaining good government for any length of time. Lastly as in Babylonia there was the immigration of Bedouin tribes, a plague which the rulers of Egypt had been striving to ward off for thousands of years, but to which the gates were now opened. The entrance and passage through of Arab, afterwards also of Berber tribes and the fighting with them lasted down to the Fātimid period (al-Kindī, *K. al-Wulāt wa 'l-Ḳuḍāt*, cd. Guest), which favoured the immigration of the Berbers. One Berber tribe, the Lawāta, settled in the Faiyūm. In the viith—xiiith century its population was predominantly Bedouin; the remnants of the ancient agricultural population had to place themselves under the protection of the immigrants. According to the account of Emīr Oṭmān (p. 12—14) these Bedouins belonged to three great tribes:

1. The largest in numbers of genuine Arab descent the "sons of the dog", Banū Kilāb, held the largest portion of the land, the north-west and centre to Taṭūn (also written Ṭaṭūn, the Greek Teptunis) in the south.

2. The Banū ʿEdjlān, likewise Arabs, inhabited the eastern part as far as Sanūres; the modern place-name Hawāret ʿEdjlān near Illahūn shows that they settled there also.

3. The Berber Lawāta in the S. E. as far as the province of Bahnasā (Maḥrīzī).

These Bedouin tribes in course of time became settled and have amalgamated with the remnants of the ancient population. But to the present day the inhabitants of many villages still call themselves Bedouins although they may have been peasants or fishermen for generations, possibly only to escape military service.

The decline of the Faiyūm in the Muslim period may be best illustrated by the rapid diminution in the yield from taxation. It seems that the land was still tolerably prosperous in the ʿUmayyad and early ʿAbbāsid period in spite of the maladministration which began in the second century A. H., although we have no definite figures at our disposal. Our earliest figures date from the ivth century A. H., in the time of Kāfūr al-lḫ-shidī (355 Abū Ṣāliḥ, 356 Maḥrīzī, following Ibn Zūlāk): Ibn Tarkḫān who was governor then was still able to raise 620,000 dinārs in taxes. Under the Fātimids, however, probably especially in the reign of al-Mustansir which unfortunately for the country lasted half a century, it must have rapidly declined. At the end of the Fātimid period the revenue had sunk to 145,162 dinārs in the year 576 (Abū Ṣāliḥ); for 585 152,703 is given (Maḥrīzī, following Kādī al-Fāḍil's *K. Mutadajjal-dadāt al-Hawādith*). Saladin's granting of the villages of the Faiyūm in fief to his Turkish and Kurdish officers scarcely contributed to the prosperity of the district. How the administration of the provinces was conducted under him may be judged from the following example: When the Emīr Ṣarīm al-Dīn Ḳhutlubogha was sent as governor to the Faiyūm in 577, he could find nothing better to do than confiscate all the harvest of the country. He was then recalled and the Faiyūm placed under the Minister of Marine [*Diwān al-Ustūl*] (Maḥrīzī, *Histoire de l'Égypte*

ed. Blochet, p. 142, 144, where *Khoutloubgha* should be read for *Khoutloubā*. Two years later Saladin granted the Faiyūm with Būsh and al-ʿAyāt (not ʿAnāt: Blochet) to his nephew Taḳī al-Dīn ʿUmar Shāhānshāh, who usually resided in Hamā. In the last quarter of this century severe famine raged several times on account of the lowness of the Nile, and in each of these there was great loss of life, one lasted for three years, 596—598.

We have a touching lament on the decline of the land in the ʿAiyūbid period in the book of Emir ʿOthmān, who was appointed governor in 641 A. H. In consequence of the silting up of the Baḥr al-Munhā water could only flow into the Faiyūm during four months of the year when the Nile was at its height. The smaller canals in the country were also neglected so that parts of it became swamps and infested with miasma. The population was indolent without any intellectual interest; even the upper classes had dubious notions of cleanliness.

But its condition was to become much worse. As long as Egypt had rulers, who lived in the country itself, they still took some interest in the maintenance of the irrigation works. Thus we are told of al-Malik al-Nāṣir in 741 that he built a *Gisr* (dam or sluices). Maḳrīzī is able even in his time (beginning of the ixth = xvth century) to give a detailed account of the canals and their work in the different months of the agricultural year. Sulṭān Ḳāit Bāi (end of this century) visited the Faiyūm no less than three times and built a mosque in the capital; in his reign the revenues even rose a trifle, to 164,050 dīnārs (Ibn Dīʿān, *Tuhfa*, p. 5) but many places had fallen into ruins or become swamps (*ibid.* p. 150—158). His successor al-Nāṣir Muḥammad in 903 built a mosque (Ibn Iyās, III, 342). Sulṭān Ṭīmān Bāi found time during the few months he reigned to take a personal interest in the restoration of a *gisr* destroyed by the flood and to complete the work in spite of the great expense (30,000 dīnārs) (*ibid.* iv. 6, 9, 13, 14, 32, 37).

But with the fall of the Mamlūks and the transition to Turkish rule the fortunes of the Faiyūm sank to their lowest ebb. As the Ottoman governors were changed on principle almost every year and their powers were very limited, they could do nothing themselves even with the best intentions; their activities were mainly confined to extorting as much as possible out of the more and more impoverished land; as a matter of fact it was no longer "much". An account of the year 1634 (*Mémoires de l'Etat d'Egypte in Revue d'Egypte*, ed. Gaillardot Bey, iii. 1896) tells us that the Faiyūm could at that time still yield 200 purses to the Sulṭān and 30 (in all about 12,000 dīnārs) to his representatives in Cairo. By the beginning of the xviiith century the whole tribute of Egypt to the Porte had sunk to 1200 purses = about 300,000 dīnārs. In September 1806 the town of Faiyūm was occupied and destroyed by the Mamlūk Bey Yāsīn and its inhabitants almost all massacred as they had taken Muḥammad ʿAlī Pasha's side; the latter was not able to regain the town till July 1810 (Djabarti).

The Faiyūm was long in sharing the revival of Egypt's prosperity in the xixth century. It is true that under Muḥammad ʿAlī the Baḥr Yūsuf, the life-giving artery of the land, was cleaned out

and the ancient sluices of Illahūn pulled down and rebuilt by French engineers. But modern means of transit did not come to open up the land until quite late for it was only in 1874 that the railway reached it. In the same year the area of the province was estimated at 235,908 feddān and the number of inhabitants at 146,588 (Muḥammad Amin Fikrī, *Geogr. von Agypten*, 1290 A. H., p. 117). It was only under English rule that a steady revival in prosperity became marked. The irrigation works were first of all put into good order and then good roads and railways were made. To the lines to Abuksa and Sanūres already in existence there have been added since 1902 a series of private light railways, which radiate from the capital across the country in all directions. It is only with the introduction of this means of transport that it has been possible to extend the cultivation of cotton, which has brought the land its present great prosperity. The modern province of Faiyūm comprises 412,982 feddān (and is the third largest in Upper-Egypt; Minye has 463,579 Asyūt 473,864) or roughly 7000 square miles, of which 800 are under cultivation (Beadnell, *The Topography... of the Fayum Province*, p. 11). In spite of the advance made by agriculture in the last 20 years, however, the area under cultivation is not yet as large as in the Greek and Roman periods. Large stretches of land in the west and notably in the north are still covered with sand but it is only a question of time till they are regained for the plough.

According to the last census (1907), not very reliable it must be confessed, the population was 371,000; the capital had 33,069 inhabitants but has probably 40,000 by now, among them the Greek element is beginning to play an important part. There were 85 towns and large villages and 1031 small villages (*kufūr* and *ʿazab*).

Very few memorials, and least of all buildings, have survived from the long history of the Faiyūm. The most celebrated work of antiquity, which however lay only on the edge of the district, the Labyrinth, has utterly disappeared. From the ancient Egyptian period there have only survived a small pyramid in the S. E., a round "obelisk" of Badjīdī (in the middle ages Babīdī) 45 feet long, and the pedestals, now also demolished, of the two colossal statues of Amenemhat at Biahum, which were still in existence with their inscriptions in the xiiith century. From the Greek period there have survived the ruins of the towns and temples on the borders of the district, Ḳaṣr Ḳārūn, Dīmē, Ḳaṣr al-Sāga etc., but nothing in the lowlying parts. Practically nothing has survived from the Arab period. The mosque of Ḳāit Bāi in Medīne which dates from the end of the middle ages has been absolutely rebuilt in the usual process of conservation. The few churches and monasteries that survive have not yet been investigated; it is hoped that valuable finds, particularly of manuscripts may be found in them; but many have unfortunately been destroyed for ever with the increase in the area under agriculture.

Manuscript records of the past have, however, come to light in much greater quantities with the finds of papyri, which were first made in the winter of 1877-1878 and next from 1884 on in the ruined mounds several miles wide of the ancient capital, and later in other parts of the country. As these cover a period of almost 3000 years

and are written in about ten different alphabets and almost as many languages, they form a handsome compensation to the study of antiquity for the monuments that have disappeared. The Arabic papyri, which have come principally to Vienna but also to Heidelberg and Cairo, are especially valuable because a considerable number of them date from the period of the Arab conquest and these, apart from their historical value, are the oldest documents of the Arabic language and alphabet. It is safe to suppose that these treasures are not yet by any means exhausted and further finds may be expected with certainty.

Bibliography: Beadnell, *The Topography and Geology of the Fayum Province*; Blanckenhorn, *Geologie Ägyptens*, IV Teile; Brown, *The Fayum and Lake Moeris*; Grenfell and Hunt, *The Disposition of the Lake Moeris in Arch. Report, Egypt. Explor. Fund*; Schweinfurth, *Reise in das Depressionsgebiet im Umkreise des Fayūm in the Zeitschr. d. Ges. f. Erdkunde zu Berlin*, 1886; of Arabic works, those quoted in the text by Abū Ṣāliḥ, Ibn Dīfān, Ibn Iyās, Ibn Duqmāḥ (where the section on the Faiyūm has not survived), Ḍjabartī, al-Kindī, Maḥrīzī, Emir 'Othmān, Taghrībardī. (B. MORITZ.)

FAIZABAD, properly FAIḌĀBĀD, the name of two modern towns in Central Asia; on Faizabad in Bukhārā cf. the article AMŪ-DARYĀ, i. 340^a, and on Faizabad in Badakhshān see this article i. 552^b *et seq.* (where it is erroneously called Faidhābād). Faizabad in Bukhārā, lying in a fertile valley with green pastures throughout the year, is now a town with about 3000 inhabitants, the residence of the tax-collector (*amlākdār*) of the Beg of Hīsar; the citadel is in ruins. Faizabad in Badakhshān lies on the right bank of the Kokča, which is here crossed by a wooden bridge; the town is a mile or two long and only a quarter of mile broad. Cf. L. Kostenko, *Turkestanskij kraj*, ii. 149, 204 *et seq.*; D. Logofet, *Bukharsko'e khaustvo*, i. 186 and 248; J. Minajew, *Swjedenija o stranakh po zerkhoojam Amu-Daryi* (St. Petersburg 1879), Index. Faizabad is also the name of a village near Bukhārā, at the tomb of Khodja Bahā' al-Dīn Naḡshband.

(W. BARTHOLD.)

FAIZĀBĀD (FYZĀBĀD), a town, division and district in Oudh (British India). The town of Faizābād lies on the left bank of the river Gogra near Ayodhyā, the ancient capital of Oudh, and with this town has a population of 75,085 of whom 17,674 are Muslims (1901). The town was founded by Sa'ādāt Khān and first received its name Faizābād in the reign of Saḍdar Ḍjang, but the early Nawwābs only rarely resided in the capital; Shudjā' al-Dawla, son of Saḍdar Ḍjang (1753—1775), was the first to make it his headquarters after his defeat by the English at Buxar in 1764 and erected a number of buildings there. His tomb still stands there as well as the larger and more beautiful one of his widow Bahū Begam. The division of Faizābād comprises the districts of Faizābād, Bahraich, Gondā, Sultānpūr Partābyarh, and Bara Banki and has an area of 12,113 square miles and a population of 6,855,991 inhabitants of whom 14% are Muhammadan.

Bibliography: Imperial Gasetteer XII, 108 *et seq.*

AL-FĀ'IZ BI NAṢR ALLĀH, a Fāṭimid Caliph. Born in 544 (1149), he was the son of the Caliph

al-Zāfir and his real name was Abu 'l-Kāsim 'Isā. After the assassination of his father (30th Muḥarram 549 = 16th April 1154) he was carried by the vizier 'Abbās out on his shoulders and placed on the throne, being then only five years old. The gruesome scenes of those days, particularly the sight of his uncles Yūsuf and Ḍjabrīl slain by the orders of 'Abbās, are said to have so worked on the mind of the unfortunate boy that he was constantly afflicted with fits till his early death. During the six years of his Caliphate the government was in the hands of Ṭalā'ī b. Ruzzīk [q. v.]. Within this period fall the death of 'Abbās and the execution of his son Naṣr, the actual assassin of al-Zāfir, and the visitation of Damiatta, Tinnīs, Rosetta and Alexandria by a Sicilian fleet (Ḍjumādā II 550 = August 1155). Al-Fā'iz died on the 17th Raddjāb 555 = 23rd July 1160 at the age of 11½.

Bibliography: Ibn al-Aṭhīr (ed. Tornberg), xi. 127 *et seq.*, 168; Maḥrīzī, *Khitaṭ*, i. 214, 357; ii. 30; Wustensfeld, *Geschichte der Fātimidenchalfen*, p. 321 *et seq.*; S. Lane-Poole, *A History of Egypt in the Middle Ages*, p. 172 *et seq.* (E. GRAEFÉ.)

FAIẒI SHAIKH. His original name was Abu 'l-Faiz, and he was the son of Mubārak Shaikh, and the elder brother of Abu 'l-Faḍl the historian. He was born at Agra in 1547, during the reign of Selīm Shāh. He was a poet, and Akbar gave him the title of "King of Poets". He was ambitious of rivalling Nizāmī, and wrote five epics in imitation of his Quintet. He appears to have known Sanskrit, as well as Arabic, and he translated the *Līlāvati*, a work on Indian arithmetic, and also the *Mahābhārata*. He likewise wrote a commentary on the *Ḳor'ān*, in which he affected to use no dotted letters. (Badā'ūnī, Lowe's translation, p. 407). In 1579 he was appointed tutor to Akbar's second son Prince Murād. In his verses inserted in the *Akbarnāma*, (*Bib. Ind.*, ed. ii. 311), Faiẓi describes himself as having been tutor to all the three princes. See translation, p. 459. In the same poem he refers to his having become one of Akbar's disciples, that is, a member of the "Divine Faith" body. In 1591 he went as ambassador to the Dakhan, and returned in the following year. He was a kind and charitable man and less set upon self-advancement than his younger brother. He however was also a flatterer, and was accused by the Muḥammadans of having seduced Akbar from the true Faith. When Badā'ūnī was ill and in disgrace, Faiẓi wrote a very kind letter about him to Akbar. This letter has been preserved by Badā'ūnī, *Bib. Ind.* ed., iii. 603, and in the same work will be found a very able, but very caustic criticism of Faiẓi's character and genius. Badā'ūnī says, Faiẓi's technique is admirable, but his poetry wants grit and of his many thousand lines, none is cherished in the memory. This criticism seems correct. His verses are full of conceits and strained expressions, and it is only occasionally, as in his elegy on his friend Faṭh Allāh that he shows real feeling. (See Blochmann's translation of the *Ā'in-i Akbarī*, p. 33, note and p. 490 and 548). According to Badā'ūnī he composed a palinode in the year before his death in which he uttered praises of Muḥammad. In the same poem, l. c. 307, he explains why he changed his pen-name from Faiẓi to Faiyāzi. He died of asthma in Agra on 5th October 1595, (Badā'ūnī,

Lowe's translation, p. 420). There is a long notice of him in the *Darbārī Akbarī*, (Lahore 1898), p. 359, and another in the *Ma'āthir-i Umarā*, ii. 584. He was a voluminous writer and is said to have written 101 books. He formed an extensive library which was taken possession of by Akbar.

Bibliography: Faizi's Letters are in MS. in the British Museum: Ricu, *Cat.*, pp. 792 and 984. His version of Bhāskara, *Līlāvati* was published at Calcutta in 1828, where also the Sanskrit original was published in 1832. An English translation of the Sanskrit was published at Bombay in 1816 by John Taylor. There is also one by Colebrooke. (One of these translations is quoted by Longfellow in his *Kavanagh*). Faizi's best known poem, the *Nal Daman*, was published at Calcutta in 1831, and there is a later edition by the Newal Kishore Press, Lucknow. For notices of Faizi's poems, see Hammer, *Redekünste*, Vienna, 1818; Ouseley, *Biograph. Notices*; Blochmann, *Āin-i Akbarī*; Āga Ahmad, *Haft Asmān* (Calcutta 1873, the Markaz Adwār only); Beale, *Or. Dict.* and the Catalogues of Rieu and Ethé. (BEVERIDGE.)

FAIZULLĀH EFENDI (AL-SAIYID MEHMEMMED), son of *Shaiikh* Mehemmed, Mufti of Erzerum, came to Constantinople on the completion of his theological studies, where he married a daughter of the celebrated *Shaiikh* al-Islām Wānī Efendi. Introduced by his father-in-law to the court of Sultān Mehemmed IV. he was appointed tutor to Prince Muṣṭafā in 1080 and to Prince Ahmed in 1089 and filled this office till 1097. On the deposition of Mehemmed IV he became *Shaiikh* al-Islām under his successor Suleimān II. on the 12th Rabī' I. 1099 (16th January 1688) but was deposed on the 28th Djumādā II. (30th April) and banished to Erzerum. When Muṣṭafā II. came to the throne he recalled his former tutor from exile and appointed him *Shaiikh* al-Islām on the 11th Shawwāl 1106 (15th May 1695); in this capacity he completely ruled the weak Sultān, and amongst other things saw to it that the offices of Naḳīb al-Ashraf and the Kāzī'asker of Rumelia and of Anatolia were given to his sons and further that the eldest of them was designated his successor. He became universally hated for his love of power and as a *ķizilbash* — he traced his descent from Shams al-Dīn Tabrizi — and finally fell a victim to the rising against the Sultān in 1115 A.H. (1703 A.D.); he was deposed on the 13th Rabī' I. (27th July) and afterwards handed over to the rebels who tortured him for several days before putting him to death (10th Rabī' II. = 23rd Aug.); his corpse was dragged through the streets of Adrianople, where these events took place, and thrown into the Tundja; a Greek priest was forced to officiate in full canonicals as part of the proceedings.

FAKHKH, the name of a wādī not far from Mecca, where Ḥusain b. 'Alī b. al-Ḥasan with many other 'Alids met their death on the 8th Dhu 'l-Hijidja 169 (11th June 786), wherefore

the day of Fakhkh, like that of Kerbelā was observed by the Shī'īs as a day of mourning and it was the custom among them to talk of the martyrs of Fakhkh. Ḥusain had homage paid to him a short time before in Medina, collected a few followers and set out for Mecca. In Fakhkh he met the 'Abbāsīd troops, who scattered his little body of followers and slew him. The place where he and his men fell and were buried, now called al-Shuhadā, is regarded as sacred by the people of Mecca, who hold an annual festival there on the 14th Šafar. Among those who escaped the massacre was the 'Alid Idrīs b. 'Abd Allāh b. Ḥasan, who fled to the Maghrib and became the ancestor of the Idrīsids.

Bibliography: Yāqūt, *Mu'djam*, iii. 854; Tabarī (ed. de Goeje), iii. 552 *et seq.*; al-Ya'qūbī (ed. Houtsma), ii. 488; Wustenfeld, *Chroniken d. Stadt Mekka*, iii. 212; Snouck Hurgronje, *Mekka*, i. 41; ii. 55 *et seq.*

FAKHR (A.) "glory", a frequent component of titles of honour: *Fakhr al-Dawla* "glory of the dynasty", the name of a Bāyid (see below) and of Ibn Dījahīr [q.v.]; *Fakhr al-Dīn* "glory of the faith", a name of al-Rāzī [q.v.] and of the Druze chief mentioned below; *Fakhr al-Mulk* "glory of the kingdom", a name of Ibn 'Ammār [q.v.], of Muḥammad b. 'Alī [q.v.] and of Tutush's vizier (see below p. 45^b).

FAKHR AL-DAWLA ABU 'L-ḤASAN 'ALĪ B. RUKN AL-DAWLA, a Būyid governor. After the death of his father in Muḥarram 366 (September 976), Fakhr al-Dawla, who was then about 25 years old, received the governorship of Media under the suzerainty of his elder brother 'Aḍud al-Dawla with the exception of Isfahān and all that went with it, which went to a third brother Mu'ayyid al-Dawla. But while the latter was following out terms of his father's will, Fakhr al-Dawla wanted to set himself up as an independent ruler and allowed himself to be tempted by his cousin Bakhtiyār b. Mu'izz to intrigue against 'Aḍud al-Dawla. Bakhtiyār was slain however and in 369 (979-980) 'Aḍud al-Dawla sent several bodies of troops against his brother. When they entered Hamadhān, the latter had to take to flight and seek help in Dīrdjān from his father-in-law Kābūs b. Washmgīr, while the whole of his province fell into the hands of Mu'ayyid al-Dawla. The latter was appointed governor of them and prosecuted the war with great success. In 371 (981-982) he defeated Kābūs at Astarābād, whereupon Kābūs and Fakhr al-Dawla fled to Ḥusām al-Dawla, the Sāmāuid governor of Khorāsān. An expedition against Dīrdjān, undertaken by the Khorāsānians under Ḥusām al-Dawla, Kābūs and Fakhr al-Dawla, was unsuccessful. Mu'ayyid al-Dawla was, it is true, surrounded; but when he had fought a way through the enemy, one section of the Khorāsān army, which he had previously won over to his side, took to flight and the allies had to return to Khorāsān without accomplishing their object. On the death of Mu'ayyid al-Dawla in 373 (983-984) Fakhr al-Dawla was recalled from Nisābur and remained in possession of the provinces of Media, Tabaristān and Dīrdjān till his death. 'Aḍud al-Dawla had died in 372 (983) and after his death hostilities broke out among his sons. From the war that ensued Bahā al-Dawla b. 'Aḍud al-Dawla emerged victorious; but when in 379 (989-990) he was recognised as Amīr al-Umarā',

his uncle Fakhr al-Dawla attempted to seize the whole of the ḥāk and with this object in view made an alliance with the Kurdish chief Badr b. Ḥasanawāh. The allies advanced on Baghdad by different routes; but when Bahā' al-Dawla sent an army against them and Fakhr al-Dawla's troops were disheartened by an inundation, the plan had to be given up. According to the usual statement Fakhr al-Dawla died in Shaḥbān 387 (August 997); according to others he died earlier, in 385 (995).

FAKHR AL-DĪN B. KORKMAS, the chief of the Druzes, called Faardin, Fekkerdin, Fechrudin, Ficardin etc., by European authors, of the tribe of Banū Ma'n [q.v.], born in 980 (1572), was recognised by the Sublime Porte as Emīr of the Druzes on the death of his father in 994 (1586). In the beginning of his reign the management of affairs was in the hands of his uncle Yūsuf and his mother, called Set neseb (Sitt Nasiba?) by Mariti, who as long as she lived — till 1633 — exercised a great influence over her son. As soon as he had taken the reins of government into his own hands, he devoted his energies to strengthening his power, collected a numerous corps of Seḡbān around him and rebuilt and fortified Bairūt, the former residence of his father, which had suffered considerably in the wars with Ibrāhīm Pasha. He particularly endeavoured to attract European merchants thither and through them to enter into alliances with the Christian rulers of Europe who could be of use to him in the struggle with the Turkish government. At first he remained quiet, paid the tribute demanded by the Porte regularly and meanwhile was gradually extending his authority over all the lands from Bairūt to Mount Carmel. But his ambition soared higher; he hoped with the support of the Christians in Syria and Palestine to found an independent dynasty and therefore made an alliance in 1017 (1608) with Ferdinand I., Grand Duke of Tuscany.

When the growing power of the Druze Emīr began to arouse the Porte's suspicions, Ahmed Pasha Ḥāfiẓ, governor of Damascus, was ordered to bring him to terms. The latter could do little in these almost inaccessible mountains with their numerous fortresses but, when in 1022 (1613) a Turkish fleet appeared off the Syrian coast, Fakhr al-Dīn escaped to Livorno in a ship and was received by the Grand Duke Cosmo II with great honour. But his hope of soon returning reinforced by Christian troops and putting an end to Turkish rule in Syria was not fulfilled. Not even his claim that the Druzes were descended from a Christian Comte de Dreux and that he himself was a descendant of Godfrey de Bouillon, moved the Christians to a new Crusade. In the meanwhile Fakhr al-Dīn's son, 'Alī, whom he had left as his representative in Syria and the other members of his family had been successfully forced by Ahmed Pasha to submit to the Porte and it was not till 1027 (1618), when Ahmed Pasha was recalled from Damascus, that Fakhr al-Dīn dared return to Syria. But he did not return as Emīr, for this rank had

passed to 'Alī, but managed the government business for the latter, notably military affairs. He fought fierce wars with the Banū Sifā (Saifā), governors of Tripolis; his followers captured Muṣṭafā Pasha, then governor of Damascus, but he was soon set free again by Fakhr al-Dīn as he did not wish to bring about an open breach with the Porte; on the contrary he endeavoured to influence the government in his favour by bribing influential Turks. He did this successfully for a period but finally the eyes of the Turkish authorities were opened and they sent Kuçuk Ahmed Pasha with numerous troops to Damascus to put an end to the power of Fakhr al-Dīn. 'Alī met his death soon after in 1043 (1633) in an encounter at Şafed and Fakhr al-Dīn after some unsuccessful fighting in the neighbourhood of Joppa had to take to flight. He went first to Şaidā, thence to Bairūt, but he could not remain there owing to the presence of a Turkish fleet. He therefore retired to the mountains, but was captured in Djezzin (Casale di Gezin), and brought to Constantinople in chains. There he died in 1635 by the hand of the executioner. His sons and his brother Yūnus were taken prisoner and put to death with the exception of a son of Fakhr al-Dīn and a son of Yūnus, who escaped by flight. The latter, named Melhem, afterwards became Emīr of the Druzes.

FAKHR AL-MULK ABU 'L-MUZAFFAR 'ALĪ B. NIZĀM AL-MULK, a vizier. Fakhr al-Mulk was the eldest son of the celebrated vizier Nizām al-Mulk who was assassinated in Ramaḍān 485 (October 1092). After the death of Sultān Malik Shāh in the same year his son Barkiyārūḳ was proclaimed Sultān but had to defend his throne and kingdom against his rebellious uncles. Fakhr al-Mulk was then in Khorāsān; but when he tried to go to Barkiyārūḳ to offer him his services, he was attacked by the followers of the latter's younger brother, Maḥmūd b. Malikshāh, who was also set up as a claimant to the throne, and had to flee to Hamadhān, which in the meanwhile was occupied by Barkiyārūḳ's uncle Tutuṣh. The latter was about to slay him but on the intercession of Yāghī Basān spared his life and even made him his vizier. After a short time Fakhr al-Mulk was thrown into prison and only released after Barkiyārūḳ's victory, in which Tutuṣh was slain, in Şafar 488 (February 1095). In the same year Barkiyārūḳ dismissed Mu'ayyid al-Mulk, Fakhr al-Mulk's brother, and appointed Fakhr al-Mulk his vizier. But Fakhr al-Mulk soon afterwards left Barkiyārūḳ and went to his brother Sandjār, who as governor of Khorāsān lived in Nisābūr, and was taken into his service. Here he was murdered in 500 (1106) at the age of 66 by an Assassin.

AL-FAKHRI, the title of an Arabic historical work, composed by Ibn al-Tiktākā [q. v.].

FAKHRI, SHAMS AL-DIN MUHAMMAD ISPAHĀNĪ, a Persian philologist. His great work the 4th part of which was published in 1887 by C. Salemann (*Shams i Fakhri Isfahanensis lexicon Persicum id est libri Miṣṣār i Gamālī pars quarta quam — edidit C. Salemann, Fasc. prior textum et indices continens*, Casani 1887) is entitled *Miṣṣār al-Djamālī*, because it was dedicated to the last ruler of the Indju dynasty [q. v.], Djamāl al-Din Abū Ishāq Muḥammad Shāh, who ruled in Fars and 'Irāk from 742—754 (1341—1353). According to Salemann he is also the author of a mystic poem *Marghūb-i Kūlūb*. Nothing else is known of him.

FAKHRI a native of Brusa, the most celebrated silhouette-cutter in Turkey. This art was brought from Persia to Turkey in the xvth century and to the west in the xviith century, where at first, as in the east, light paper on a dark ground was always used. There are specimens of Bursawī Fakhri's work — he cut principally specimens of calligraphy, flowers and gardens — in the album prepared for Murād III, now in the Vienna Hofbibliothek; for Aḥmed I he cut out a Gulistān which did not however survive his criticism; Murād IV on the other hand thought very highly of the artist. He died about 1618 and is buried in Constantinople near the Adrianople gate. Cf. Belig, *Güldeste* (Brusa 1135 H.), p. 532—534; Habīb, *Khaṭṭ u-Khaṭṭān* (Constantinople 1305), p. 261; J. von Karabacek, *Zur orientalischen Altertumskunde*, iv. p. 46 et seq., in *Sitzungsber. d. kais. Akad. d. Wiss. Wien*, Bd. 172; G. Jacob, *Die Herkunft der Silhouettenkunst aus Persien* (Berlin 1913). (G. JACOB.)

FAKĪH. A *fakih* is, in the first instance, one who possesses knowledge of or understanding about a thing (syn. *ʿālim*, *fāhim*). Then as *fiḥh* [q. v.] passed from being synonymous with *ʿilm* (as in *fiḥh al-luḡha*) and became limited to religious knowledge (*ʿilm al-dīn*) then to the religious law *al-sharʿa* and finally to the derivative details of the last (*al-furūʿ*), so *fakih* passed from meaning an intelligent, understanding person to meaning a theologian, then a canon lawyer and finally a casuist (*Lisān*, vol. xvii. p. 418). The book ascribed to Abū Ḥanifa, *al-fīḥh al-akbar* ("The Greater Fīḥh", i. e. *ʿilm al-Kalām*) is on the border line of the development, and in it (ed. Allāhābād, p. 2) *fakih* is used in a purely general sense. This restriction of meaning was gradually brought about by the employment of the word to translate the (*juris*) *prudens* of Roman law (cf. FIKH and Goldziher in *Kultur der Gegenwart*, i. 3, p. 102). On the distinction between *fakih* and *mudjtahid* see the latter and *Dict. of tech. terms*, p. 30 et seq., 198 et seq., 1157. In Egypt the word, in the corrupted form *fīḥī*, has come to mean a schoolmaster or a professional reciter of the Qurʾān, just as *khaṭīb* in Syria now means a schoolmaster (Lane, *Modern Egyptians*, chap. ii.).

Bibliography: under FIKH.

(D. B. MACDONALD.)

AL-FĀKIHĪ. 1. ABŪ ʿABD ALLĀH MUHAMMAD B. ISHĀQ B. AL-ʿABBĀS, an Arab historian, wrote at Mecca in 272 = 885 a chronicle of the city, extracts from which are given by Wustenfeld in the second volume of his *Chroniken der Stadt Mekka* (Leipzig 1859).

2. ʿABD ALLĀH B. AḤMED AL-MEKKĪ AL-SHĀFIʿĪ AL-NAḤWĪ, born in 899 = 1492, died 972 = 1564, wrote the *Ḥudūd al-Naḥw*, printed n. d. s. l. (Jos. Baer, *Bibl. As.*, Frankfurt a. M. 1907, ii. 3094). (C. BROCKELMANN.)

FAKĪR. One who is in need, either physical or spiritual. Thus opposed to *ghānī*, one who is independent, rich; and commonly contrasted with *miskīn*, one who is in a miserable state. A beggar is *sāʾil*, an asker. Thus in Qur. xxxv. 16. "Ye are the needers (*fuḳarāʾ*) of Allāh; but Allāh is the Self-sufficient (*ghānī*)". Fakīr has in consequence come to indicate need in relation to Allāh and dependence (*tawakkul*) of every kind upon Allāh, and is used in Arabic-speaking countries for a mendicant derwish (q. v.; cf. also Goldziher, *Vorlesungen*, p. 154). The saying ascribed to Muḥammad, *al-fakr fakhri*, "Poverty is my pride", has assisted this. In western languages the term has been extended to cover Indian ascetics and yogis. The coincidence with the English *fa'ker* is curious and sometimes misleading. See *New English Dictionary and Century Dictionary*.

(D. B. MACDONALD.)

FAKĪR, the *takhalluṣ* of MUHAMMAD KHĀN BAHĀDUR, an Indian scholar who composed an Urdu translation of the *Anwār-i Suhaili* (lith. Lakhnow 1261 = 1845). Cf. the article KALĪLA WA DIMNA. This translation was entitled *Bustān-i Hikmat*.

Bibliography: Garcin de Tassy, *Histoire de la Litt. Hindouie et Hindoust.*, second ed. i. 443.

FA'L (omen) is not mentioned in the Qurʾān, perhaps by accident; there the root FYL takes its place. Its derivation and original meaning are obscure, as also is its relationship to the root FYL, e. g. to *muṣāyil* in Tarafa's *Mu'allaka*, v. 5 (*Lisān* xiv. p. 51; C. J. Lyaill's *Ten Poems* (Tibriāz's commentary), p. 31; Seligsohn's *Diwān de Tarafa* (A'lam's commentary), p. v; contrast *Ṣaḥāḥ* under FA'L). But in apparently authentic traditions from Muḥammad *fa'l* and *ṭiyāra* both occur, meaning "omen", although somewhat contradictorily. It is plain that Muḥammad believed in omens and was on the watch for them. He drew one from the unsheathing of a sword on an expedition (*Aghānī*, xiv. 14, 23) and on another occasion avoided a route because of evil-omened names connected with it (Ibn Hishām, p. 434). But he naturally preferred good omens and advised his followers to pay attention to these only. The word *fa'l* he retained for such a good omen, and explained it as any good word which one hears accidentally. It should be accepted. But he rejected *ṭiyāra*, bird-augury, possibly for heathen associations. Other traditions, however, represent him as bringing *fa'l* under the genus *ṭiyāra*. This was later explained as advice to cultivate always a spirit of hope and confidence in Allāh, which may easily be a true explanation (Kastilānī's *sharḥ* on *Ṣaḥīḥ* of Bukhārī, ed. of 1305, vol. viii. p. 396—398). The result is that while bird-augury is formally denied and forbidden, all other ways of seeking and accepting omens are

open to Muslims. *Fal*, in consequence, has good associations, though it may be used of an evil omen, while *fiṭra* is always bad (*Lisān*, xiv, p. 27 *et seq.*; *Dict. of tech. terms*, p. 907). But modern usage is confused. Thus Marçais (*Vollste Fest-schrift*, i, p. 432) gives the usage in the Maghrib and Redhouse (*Turkish Lexicon*) in Turkish, as of a happy presage; but Wetstein (*Zeitschr. d. Deutsch. Morgenl. Ges.*, xlii, 154) of the Syrian Desert, and Spino (*Arabic-English Lexicon*) of Egypt, as the opposite. Further, *fa'l* has developed from meaning an omen which comes of itself unsought, to cover the custom of seeking the omen in various artificial ways. Even the most pious Muslims approve of the custom of shutting the eyes, opening the *Kur'ān*, counting seven pages back and then reading the first passage on which the eyes fall (Malcolm, *Sketches of Persia*, introduction; Lane, *Arabian Nights*, note 15 to chap. i.). Or, among Persians, a copy of the *Diwān* of Ḥāfiz may be used. There are other more elaborate devices by means of tables to which the term has come to be applied. An undated Cairene lithograph of 54 pages, *Kur'at al-ṭurūr wa-kaiṣiyat istiḥrāj al-fa'l minhā*, mixes *fair* (but not in the original sense) and *fa'l* and *ḥur'a* as synonymous. Such tables form an appendix to every calendar. Finally, al-Ghazzālī uses the word as equivalent to *tabarruk*. The last *bāb* of the *Iḥyā*, on the mercy of Allāh, he begins with a statement that he so closes his book that it may be an omen of a happy close to our lives from Allāh.

(D. B. MACDONALD.)

FALĀK (A.) „Daybreak“, the title of Sūra CXIII. **FALĀKA**. [See FELKE.]

AL-FALAKI, MAHMŪD PASHA, an Egyptian geographer, born in 1220 in the province of al-Ḡharbiya, attended school in Alexandrien, then went to the polytechnic (Muhandis Khāne) founded by Muḥammed 'Alī and was next (1851) sent to Paris, where he continued his studies for nine years. His principal work is a map of Egypt, prepared by order of the Khedive Sa'īd Pasha. Other words in Arabic and French are detailed by G. Zaidān (see *Bibl.*). He represented the Egyptian government at the Geographical Congresses in Paris and Venice. He afterwards received the office of vizier, but lost his office during the troubled times of 'Arabi Pasha; he again received office, however, as Minister of Public Instruction (*al-Ma'arif al-'Umūmiya*). Mahmūd Pasha died on the 30th Nov. 1885.

Bibliography: Brockelmann, *Geschichte der Arab. Litt.*, ii, 490 (with further bibliography); G. Zaidān, *Mashāhīr al-Sharḥ*, ii, 132 *et seq.*

FALS (pl. **FULUS**), the copper coin of early Islām. The name is derived from the late Greek *φάλλος* (which in its turn comes from the latin *foliis*), the name of the Byzantine copper coin of 40 nummia in the coinage as organised by the Emperor Anastasius I (491—518 A.D.). The Byzantine *foliis* therefore bore the mark of value **M** = 40 on its reverse. Its weight was originally to have been an ounce (about 30 grammes) but it decreased rapidly; by the time of the

conquest of Syria by the Arabs it had sunk to 6 grammes; the smaller Byzantine copper coins marked **K** (= 20), **I** (= 10) and **Є** (= 5 nummia) were in a state of absolute confusion in the viii century A.D. and were not adopted by the Arabs.

After the conquest of Syria the Arabs continued to strike the Byzantine *foliis* but with the weight considerably reduced. While before the conquest the copper money for the whole of Syria was struck in the one mint of Antioch, the Arabs established numerous mints. Baalbek, Ḥalab, Ḥims, Damascus, al-Ruhā, Ṭabariya, 'Ammān, Manbij, Iliya-Filiṣṭīn, Kinnisrīn and many others. The earliest fals were at first quite of the Byzantine type, with figures of the Emperor Heraclius I, Constans II and later they bore the figure of the Caliph on the obverse, on the reverse at first the mark of value **M**, later the cross with steps while Arab legends became more and more common.

The oldest Muhammadan copper coin which is also the oldest dated coin of Islām, is a fals of Damascus with the date Anno xvii (= 638). 'Abd al-Malik's mint reforms (completed in 77 = 696) do not seem to have been concerned with the fals but only to have made the use of the Arabic language on the copper coins also compulsory. The fals was not considered by the Arabes as a standard coin but only as a token currency; its coinage was not a prerogative of the sovereign but was left entirely to the discretion of governors and local authorities. The fals thus varies between great extremes from town to town in weight and value and also in type, and could not therefore like the *dīnār* and *dirhem* be current throughout the caliphate.

It seems that no legal relationship between silver and copper coins ever existed although there are some grounds for thinking that 48 fulūs were to be current to a legal *dirhem*; the relationship between the two metals must have been to be re-adjusted from time to time. The Egyptian glass weights for copper coins clearly show that the fals could be any conceivable size; we have glass weights of 1, 2, 3, 4 up to 30 *kharrūba* (*ḳirāt*) and above, which were used for weighing a certain number of Fulūs.

The fals underwent a peculiar development in Persia; since the beginning of the xth century A.H. the striking of copper coins has been a privilege of the larger towns; these so-called autonomous coins usually have on the obverse a figure (an animal, a plant or an astrological sign), on the reverse the name of the town but not that of the ruler. These civic coins circulated down to quite recent times in Transcaucasia, Persia, Afghānistān, Balōčistān and in the Panjāb. (Cf. R. S. Poole, *Catalogue of Coins of the Shahs of Persia in the British Museum*, London 1887; W. H. Valentine, *Copper coins of Modern Muhammadan States*, London 1911).

(E. v. ZAMBAUR.)

FALSAFA. *Falsafa* is the term applied to the Muslim philosophy as developed under Greek influence. In addition to it other tendencies have to be considered, which construct a conception of the universe according to the views on scientific methods prevailing in their time or at least concern themselves with general views of the universe and therefore must be considered as philosophical. This is primarily true of the current of speculative theology. Its aim is to raise to a higher intellectual level the dogmas of Islām (which present a naive puerile view of life), and bring them into agreement with the demands of contemporary knowledge. The latter are naturally broadminded as regards new ideas, i.e. adopt them in a liberal fashion, the former narrow-minded, rejecting them, the orthodox. The former hastily adopt at random and without thorough mental training the new i. e. Greek, Persian, Indian and even Christian and Jewish doctrines, so that they frequently throw aside their Islāmic premises almost entirely. Nazzām c. 845 (*Zeitschr. d. D. Morgenl. Ges.*, lxiii. 774 *et seq.*) constructs for himself a very mixed system which in the main recalls Anaxagoras. Mu'ammār c. 850 (*Archiv. f. Systematische Philos.*, xv. 469 *et seq.*) follows Indian ideas. Abū Hāshim, died 933 (*Zeitschr. d. D. Morgenl. Ges.*, lxiii. 303 *et seq.*) develops his theory of modes, possibly likewise after Indian ideas (cf. *Vierteljahrsschrift für wissenschaftl. Philos.*, xxxiv. 310 *et seq.*). The Sumāniya (*Arch. f. Gesch. d. Philos.*, xxiv. 141 *et seq.*) spread the knowledge of Indian speculations and of Indian scepticism in Persia. The channel of heterodox doctrines was imperceptibly followed until about 900, when the apostasy of Rāwandī (died 915) threw a glaring light on the situation, like a flash of lightning from a cloudless sky. The cry now was: "Back to Orthodoxy!" Aḥḥārī (died 935) dissociated himself from the already more prudent Ḍjubḥāfī. He again assumed real qualities in addition to being in God, and further a direct activity and creation by God in regard to all that is not God (denial of natural causation as it limits the power of God), even human action (predestination, denial of human freedom). A creature can effect nothing real (occasionalism). This tendency, still too liberal in the eyes of the old orthodox school, became in course of time identified with orthodoxy. It produced Bākīllānī (died 1012), Isfārā'īnī (died 1027), Ḍjuwainī (died 1085) and Ghazālī. Later scholars like Ḍḍī (died 1355), Ḍjurdjānī etc. considered that they belonged to it. — Baṣra defended the homogeneity of things (Horten, *Die Philosophie des Abu Rashid und Die Erkenntnistheorie des Abu Rashid* in the *Archiv f. Gesch. d. Philos.*, xxiv. 433 *et seq.*) against Baghdad, where Ka'bi taught the diversity of things, an Indian thesis. The influences of these schools were at work for a considerable time after (Goldziher in *Der Islam*, iii. 213 *et seq.*; Horten, *Die Philosophische Probleme*, 1910; do. *Die Philosophische Systeme der spekulativen Theologen im Islam*, 1912).

To appreciate the importance of Muslim philosophy we must set out from the defects of the Aristotelian system. The Stagirite is unequalled in the precision of his concepts. But he did not succeed in giving a comprehensive view of the whole universe under some monistic concept. The universe is not traced to a single origin. Matter is eternal and opposed to God in a dualistic

system. There are attempts at a critical theory of knowledge, which are, however, interpenetrated by strong realistic tendencies and put forward in a lame fashion. Whence do forms come? God is pure intelligence. He has no voluntary activity. He moves the whole universe as an object of love, not as *causa efficiens*. He further takes no notice of individual things — an unphilosophical deism. It is here that Muslim philosophy begins, following the Neo-platonic model. The great notion of contingency brings into a unity the total of the actual. It is the light that explains the individual problems and allows them to be examined under the widest points of view. In the things of the world being and existence are quite different. The two are not internally and necessarily connected. Existence must thus be imported to things by a self-existent Being and must be permanently maintained in them. The universe is a stream of being which, emanating from an inexhaustible source extends to all that is not God. This idea, which runs through the whole history of Muslim philosophy down to modern times, is again and again formulated anew more clearly and developed. Only one has not understood it: Averroes.

Another aspect of Muslim philosophy is given by the religious beliefs of its representatives. These are stubbornly convinced that Islām is the most perfect revelation of God. The Prophet in supernatural enlightenment and vision perceives divine truths unattainable by the natural intelligence (mysterie) and communicates them to man. The philosopher recognises a part of these truths with his weak natural intelligence and does so in perfect harmony with the Korānic revelation. Philosophers thus appear as apologists of Islam.

The way for Greek influence within Muslim philosophy was prepared by the translators of the original authorities in question (notably Ḥunain b. Isḥāk and his son Isḥāk b. Ḥunain c. 870—910) and a beginning was made by al-Kindī (died c. 873) and Fārābī (died 950). Both represent an encyclopaedic knowledge but are mainly celebrated as logicians. In Fārābī we already find the main lines on which Avicenna (died 1037) afterwards built up his great system. The fundamental conception which runs through the whole of Muslim philosophy and suggests the reduction of the totality of the actual under one all-embracing idea, is the notion of contingency i. e. in all things which are not God, being is substantially distinct from existence (*distinctio realis inter essentiam et existentiam*; cf. Horten, *Ringsteine Farabis*, 1906, p. 10 *et passim*). If they are thus to attain to being they must receive existence, or reality and that too from such an agent as possesses it by reason of his very being (*per se et a se*). God is thus the self-existent and necessary being, the source of being for the universe, from which the empirical world flows like a stream of being. How important this conception was may be seen from the fact that mystic intuition was developed from it. It conceives the whole reality of the world in pantheistic exaggeration as modifications of the one substantial being, God. (Horten, *Mystische Texte aus dem Islām*, Bonn 1912, p. 5). The doctrine of the momentariness of accidental being (the accidents lose their existence each moment to receive it at once again from God, the source of being) which originated under Indian influence and dominates the whole of Muslim theology

and of the "restorability" or "non-restorability" (an idea in liberal theology) of beings, is further connected with this. These form in the second case an independent magnitude, which receives existence from the source of being. Throughout the whole universe there runs a law of causation which dominates every thing and has no exceptions; it determines every potency when it becomes an actuality, including the so-called free will of man. Everything is thus necessary, the divine *a se*, the contingent or created *ab alio*. The human mind develops from a purely material to a *habitus primorum principiorum*, actually thinking and possessing knowledge (*intellectus acquisitus*), which receives notions from the *per se* active mind, which controls the spheres of the moon. In this there is already contained the doctrine of the *universale ante rem* (in the heavenly world), *in re*, (in things of sense) and *post rem* (in our mind) which Avicenna further developed. The human mind attains the level of the prophet's mind, which is unattainable by natural faculties, through a special divine inspiration and connection with the higher world of the angels and the book of fate. The prophet's mind perceives mysteries which surpass the intelligence of man and recognises them, being free from error, although he communicates them to men in the *Qur'ān* in forms intelligible to the senses. The *Qur'ān* thus contains the highest infallible wisdom in a material form. The domains of the natural are not only distinct in degree but in their essence, and according to the order of being. Faith and reason are in the most perfect harmony, while fallible human knowledge is subordinate to the divine knowledge contained in the *Qur'ān* (*philosophia est ancilla theologiae*). — The *Ikhwān al-Safā* of Bayra (c. 970) form a school of popular philosophy which deviates in many points from these lines in favour of Pythagorean speculations.

After Avicenna had placed the sum total of Greek wisdom at the disposal of the educated Muslim world in a readily intelligible fashion with his own ingenious developments of it, it was possible to go on to develop and elaborate or modify this system in details and to make it as a whole capable of being incorporated into Islām. To understand this further development we must keep in mind the faults of Avicenna's system viz.:

1. There is a lack of clearness in the most essential fundamental idea in it. The contingency of things is conceived as something substantial, distinct from being and existence. Existence is said to advance to being "from outside". But being without existence is not real and thus cannot serve as the bearer or basal principle of a real. These speculations which create clearness here and bridge over the dualism without dropping the idea of contingency must be regarded as essential developments of the system as they are concerned with the very heart of it. (Suhrawardī, *Shirāzī*, died 1640).
2. The God of Avicenna works with almost physical necessity and without freedom. The God of the *Qur'ān* on the other hand creates with unlimited freedom and indeed arbitrarily. A serious collision might thus be expected between the two systems. Averroes also took a serious step backwards. He frequently describes God as possessing free choice but without attaching to him any of the imperfections of human choice. If a philosopher could succeed in defending God's

free will in unassailable logic, he would have made an important advance in the philosophic conception of the universe. This task was reserved for Ghazālī and later theologians. 3. The theory of spheres shows many assailable points, and was probably regarded even by Avicenna himself as not proved. 4. There was a serious gap in the theory of knowledge. He did not succeed in reconciling Aristotelian abstraction with Platonic intuition and emanation. A content, which we have already obtained from the active intellect by the emanation of the form of knowledge, is to be again acquired by abstraction. The middle course, that the abstraction prepared the mind for the reception of the forms, is rather impracticable. There is still another great problem, — how properly to fit together the functions of secondary causes in the all-embracing activity of the primary (God) and so avoid the occasionalism of Ash'arī on the one hand and the excessive independence of the powers of nature in reference to God, i.e. Deism and Naturalism, on the other (as in Avicenna).

The attacks of the opponents of the system, in the first place Ghazālī (died 1111) gave the natural stimulus to the further development of the problems still to be settled. — In his youth he had gone through the school of the philosophers and adopted their teachings in the form given by Averroes. Such a view of the universe, however, could only satisfy an intellectualist. But Ghazālī was a voluntarist and sentimentalist. The struggle that was thus aroused within him gave him no rest. It drove him to attack his former friends, the philosophers, and ultimately to seek peace in mysticism. He propounded twenty theses against the philosophers: some seek to prove that the teachings of philosophy are wrong — here we have an attempt at a further development — others to show that the correct teachings belong to the domain of faith, i.e. as mysteries, which cannot penetrate the natural intelligence. The former are mainly concerned with 1. the eternal creatibility of the world, which is denied. 2. God's knowledge which cannot be called universal, otherwise the knowledge of individual things on God's part cannot be understood; 3. the description of God as a prime cause operating through necessity — God's free will must be recognised; 4. the resurrection of the body — a purely spiritual recompense in the next world does not satisfy the words in the *Qur'ān*; 5. the law of causation: this should not be understood as a combination of creative powers and acts, as internally necessary and independent of God. Such a combination cannot be proved to exist on critical investigation. Empiricism points only to the contemporaneity of a series of facts. But no essential dependence of the one on the other can be deduced (cf. Hume). Averroes gives way to Ghazālī in these points with the exception of the last, and, with regard to the fourth, goes so far as to teach that it is a very acceptable doctrine that man receives a trausfigured body after death.

The Spanish branch of philosophy became specially well known to the Christian philosophers of the middle ages and for this reason is emphasised in European works as being particularly important, although it remained without influence on the development of philosophy within Islām. Ibn Bājdja (died 1138) teaches that the gradual perfection of the human spirit to union with the

divine is the object of philosophy. Ibn Tūfāil's (died 1185) "*Philosophus autodidactus*" became a world-classic. He shows that the knowledge obtained by natural means is in the most perfect harmony with the supernatural revelation of the Korān. This conviction is formulated even more energetically by Averroes (died 1198). He had a critical mind, with an insight for details, and was therefore pre-eminently qualified to be a commentator on Aristotle. He lacked the great gift of speculation and the ability to think constructively bearing all aspects of the question in mind. His cry is "back to Aristotle", a demand as reactionary as if some one were to say at the present day "back to Kant". Averroes himself fortunately did not follow this strictly, although by reason of it he rejects the idea of an absolute contingency of things; he can only imagine a relative one (cf. Horten, *Die Hauptlehren des Averroes*, p. 67 etc.). In order to fit in with this, he maintains the idea of a creation in the sense that God transfers the world from a pure potentiality, non-being, to existence. This notion of actualisation provides Averroes with a monistic principle of the universe (cf. Horten, *Die Metaphysik des Av.*, preface). In every category of being there exists a *per se*, which actually possesses the content of that category and can therefore communicate it to all other things, which only possess it potentially and *per accidens*. — God perceives all individual things in himself. He is the totality of things *eminentiori modo*. Pantheistic ideas are more than once acquiesced in. — The substance of soul is one for all men. Recompense in the next world is not thereby made impossible. It is a spiritual recompense in that substance.

Averroes tried above all to mitigate certain crudities in Avicenna's teaching. 1. In the thesis of the eternity of the world he points out to the theologians that he is at bottom in agreement with them: God created the world out of nothing. He is the all-knowing and all-powerful lord of creation. Whether this creative activity had a beginning in time (theological thesis) or not (philosophic doctrine) is a matter of indifference for the Muslim faith. Besides there was no real time before the world. 2. God does not work with physical necessity nor with man's imperfect kind of freedom, which can also do evil. God can only do what is best (optimism, cf. Leibnitz), and this "must" is not an imperfection, for the capability of evil is not a virtue. God's action is above the designation of free or not free. 3. God perceives all individual things as the common teaching of the philosophers shows. Nevertheless His perception cannot be called universal (Avicenna); for the idea of an imperfection might be associated with this. His knowledge, which guides all worldly things in unison with the divine will in the wisest providence, is raised above the predicates of the universal and particular. 4. The philosophical principle *ex uno non fit nisi unum*, which makes untenable a direct creation of the plurality of things by God the One (doctrine of creation through the intermediary of the spirits of the spheres) is dropped by Averroes: God directly creates the plurality of things. — The exaggeration of the importance of Averroes, who was called the "most important" philosopher of Islām, and the croneous opinion that he was an enemy of religion is a fabrication of the European middle ages and is probably based in

part at least on errors in translation in the Latin versions of his works and on the circumstance that the other philosophers of Islām were not known. Averroes is of no importance for the further development of philosophic thought in the East.

The fruitful stimulus to speculation given by Ghazālī was eagerly followed up in the period following him. The great stream of philosophic activity begins after Ghazālī and is due to him, as he made philosophy palatable to Islām and the orthodox school of theologians. It was no longer possible for any one to discuss science and even speculative theology, who had not had a thorough education in Greek philosophy. The two great protagonists were Rāzī (died 1209) and Tūsī (died 1273). The former moves entirely in a world of Greek ideas, which he developed principally in his "mystic investigations" (*al-Mabāḥiṭh al-Mushrikīya*, *ishrāk* here means Platonic intuition and thus is a hit at Avicenna) with vigorous attacks on separate Aristotelian doctrines. Greek logic is developed by him in an elaborate fashion and almost becomes a model. This is particularly apparent in the technical use of objection — he was known as al-Mushakkik, the "objector". Tūsī followed up the questions posed by Rāzī, to which were added those of Ibn Kammūna (died 1277). The struggle centred round the theses (*Ishārāt*) of Avicenna and lasted down to the 14th century; Tustatī (c. 1300), Isfahānī (died 1348) and Rāzī (Kūṭb al-Dīn, died 1364) joined in it defending the doctrines of Avicenna and going more deeply into them. Tūsī victoriously warded off an unimportant attack by Shahrastānī 1153 ("the slayer of the Greek philosophers", *al-Muṣṭarī* in his "The slayer of the slayer", *Muṣṭarī al-Muṣṭarī*).

Under the invigorating influence of such attacks and discussions, philosophy was able to develop to a greater height. Ibn Malka (Abu 'l-Barakāt, died 1155) wrote his oft-quoted and highly esteemed work: "The worthy of consideration" (*al-Mu'tabar*). Zamaḥsharī (died 1143) was at the same time discussing many questions of philosophy with great acuteness. Suhrawardī (died 1191) builds up an entirely new system and forms an independent focus for later developments. His development begins where Avicenna had left off at questions of great difficulty. Being cannot advance to existence from outside, but is identical with it. The dualism, which according to Avicenna divides the innermost state of things, is thus overcome. Things are units of reality, in conscious allusion to the ancient Persian doctrine of light: different forms of the light, which on emanating from God lose their perfection and approach matter of darkness. Light is identical with spiritual substance. In the theory of knowledge also he does away with the well-known dilemma in Avicenna. Knowledge is, as Plato teaches, a perception, in which the true essences of things, which exist for themselves in the heavenly world, illuminate our understanding. He therefore called his philosophy, the philosophy of illumination (cf. Horten, *Die Philosophie der Erleuchtung nach Suhrawardī*, Halle 1912). The best known of the later philosophers were also inspired by these ideas and wrote commentaries on Suhrawardī's teaching, e. g. Shahrāzūrī (c. 1250), Shīrāzī (c. 1311), Harawī (Nizām al-Dīn, c. 1300), Ibn Kammūna (died 1277), Dawwānī (died 1501) and Shīrāzī (died 1640).

A very important work in philosophy is Āmidī's (died 1233), "First-fruits of Thoughts" (*Abkār al-Afkar*). It was an authority of the first rank in Iḍjī's circle (died 1355). After Avicenna's great works on logic men became eager to compress the total of this knowledge in compendiums, not without developing it in various directions. Zarnūdjī's handbook of logic, c. 1203, Khawindjī's (died 1248) compendium, Abhari's *Isagoge* (died 1264) — he also compiled an encyclopaedia of philosophy which became celebrated under the title "The Guide to Wisdom" — Kātībī's logic 1276 (*Shamsiya*) — it survived to see over a score of commentaries from the pens of philosophers of the first rank —, the "Rising-places of Luminaries", a work by Urmawī (died 1283), Nasafī's (died 1288) *Dialectics* and Samarkandī's (died 1291) authoritative work, which was very frequently commented on, may be mentioned here. The "Leaves" of Samarkandī and "The Philosophy of the Individual" of Kātībī and his commentary on Rāzī, the epitome *Sharḥ al-Mulakhkhaṣ* exercised a great influence.

Tūsī (died 1273) forms an important centre for further development. In his dogmatic (*Tadḥrīd*) he brought Greek philosophy into the theological speculations of Islām. The fundamental questions of philosophy were lucidly discussed by him. The problem of being and existence was further developed and acutely discussed particularly by his numerous commentators. With Ḥillī (died 1326), Iṣfahānī (died 1348) we may here give Kūshdjī (died 1474) the place of honour; he discussed the most fundamental questions of philosophy in the most thorough fashion and advanced the problems connected with Avicenna's teachings. It is clear from his exceedingly well developed terminology that the systematic study of philosophy was in a flourishing condition in his time. The scruples once raised by Ghazālī against philosophers have for him been long overcome and become negligible. He is particularly attached to Avicenna but quotes also the liberal theologians from 'Alāf (died 849) to 'Abd al-Djabbār (died 1024) and also Khayyāmī (died 1121) ("The Philosophy of Being" *Hikmat al-Kawn*), Suhrawardī, Iḍjī, etc. He attempts to utilise the most divergent views for his conception of the universe.

Apart from the works of Maḥbūbī (died 1346) and Bukhārī (c. 1350) (commentary on Kātībī), those of Iḍjī (died 1355), especially his "Stations" (*Mawāḥif*) and his Dialectic form a new and important centre of philosophical discussion. In the former work Iḍjī intended to write a speculative theology and the result was an encyclopaedia of philosophy. So thoroughly had Greek science penetrated the ideas of educated Muslims that they had imperceptibly identified it with theology. We do not mean to say that they approved all the doctrines of Avicenna. It was rather the development after Avicenna's time that was made most use of, but his teachings were universally defended against his opponents notably Rāzī. Ghazālī sank into unimportance in the background. Iḍjī's concise and acute formulations stimulated great activity among the commentators — in the same way as Tūsī's *Dogmatic*. The problems discussed range from logic to the fundamental questions of metaphysics, touching natural sciences on the way. Djurdjānī (died 1413) was the most important at this period. Besides problems of philosophy he discus-

sed the theological questions of the school of 'Ash'arī, of which he professed himself a member. In the meanwhile Taftāzānī (died 1389) had appeared and vigorously criticised Avicenna's system in his commentary on Ghazālī "The Intentions of the Philosophers". Iḍjī's circle took up the cudgels on behalf of the old master. We thus find Iḍjī's commentators thoroughly discussing Taftāzānī's objections and deriving advantage from them, e.g. Abhari (Saif al-Din, c. 1400), Fanārī (died 1481), Tūsī (died 1482) and notably the extremely well-read Siyalkūtī (died 1659). He is well acquainted with the vast philosophical literature of the Muslims, quotes from hundreds of works, is perfectly at home and gives an independent judgment in all philosophical questions.

Rāzī (Ḳuṭb al-Din, died 1364) displayed a great literary activity which considerably advanced the development of philosophy. Although he belonged to none of the above mentioned groups he is quoted by them and regarded as an authority of the first rank. The form which literary activity took was frequently that of commentaries. It must not be inferred from the form of a commentary, which was attached to some standard work, that the thoughts expressed in it are not quite original. Entirely new ideas are frequently developed in these commentaries and acute criticism exercised; this is true for example of Djurdjānī's numerous works, of which the glosses on Tūsī's *Dogmatic* at once became a centre of new development. In Logic Taftāzānī's work "The Elaboration of Logic" built up a great school with which the greatest names in philosophy are associated. We have now come down to the time of Dawwānī, the "glory of the true investigators", (died 1501); he approached this school from the most diverse directions while he wrote commentaries on the original works. His commentary on Suhrawardī, "The Temple of Light" is as highly esteemed as the numerous glosses on Tūsī in which he discusses and develops philosophical problems with the greatest acuteness. His peculiar position may be compared with that of his contemporary Cajetan among scholastics. Fārānī, the commentator on Fārābī (cf. Horten, *Das Buch der Ringsteine Farabis*, 1906) was one of his pupils. Ibn Khaldūn (died 1406) propounded questions of the theory of knowledge in a critical fashion. Sanūsī (died 1486), Shāf'rānī (1565) left their mark particularly in the field of logic, Akhdari (died 1534) attained fame through his "Stepladder" which had commentaries frequently written on it down to last century.

Shirāzī (Ṣadr al-Din, died 1523) seems to have been an outstanding thinker of this period. He is quoted by later writers as the "great scholar". Ghiyath al-Din Shirāzī (died 1542) is also mentioned along with him as an authority; like the preceding he wrote a commentary on Tūsī. Tashkoprizāde (died 1554) was a comprehensive writer on philosophical subjects. Shirāzī (Ṣadr al-Din) (died 1640) developed quite a new theory of the universe. Stimulated by Suhrawardī he explained the notion of contingency not as a dualism between being and existence but as a participation in being. Individual things are monistic individual of being, which develop step by step to more and more perfect beings. His proof of the existence of God is a combination of the proof of contingency with the Platonic from the stages

of perfection (Horten, *Die Gottesbeweise bei Šīrāzī*). Lahidjī (c. 1670) likewise is entirely under the influence of Greek thought (cf. *Der Islam*, iii. 91—131). Harawī (1605), Munāwī (died 1622), Dāmād (died c. 1659) were also regarded as great teachers. (Husaini) Bihārī, died 1705, composed the "Stepladder of the Sciences", which was frequently annotated. Fārūkī (died 1745) incorporated a vast amount of philosophical knowledge in his terminological dictionary. Sācāklizāde (died 1737) was an encyclopaedist.

Bibliography: The literature, which has now grown to an enormous extent, has been in part collected in Brockelmann, *Geschichte der Arabischen Litteratur* (Weimar-Berlin 1898—1902); Überweg-Heinze, *Grundriss der Geschichte der Philosophie*⁹ (Berlin 1905), p. 236 et seq.; *Archiv f. Geschichte der Philosophie*, iv. 519 et seq.; xix. 288 et seq., 426—446; xx. 236—272, 403—426; xxii. 267—287, 383—428, 554—563 (in continuation). Good surveys of separate periods are given in T. J. de Boer, *Geschichte der Philosophie im Islam* (Stuttgart 1901, Engl. ed., London 1903); Carra de Vaux, *Avicenne* (Paris 1900); do., *Gazālī* (Paris 1902), cf. *Archiv f. Gesch. d. Philos.*, xxii. 166—177; *Die Religion in Geschichte u. Gegenwart*, under *Islamische Philosophie*; *Die Kultur der Gegenwart*, ed. by Hinneberg, Teil I, Abteilung V, p. 45 et seq. The relations to the scholastic philosophy are discussed in Horten, *Die Metaphysik Avicennas* (Halle 1907); Santer, *Avicennas Bearbeitung der aristotelischen Metaphysik* (cf. also *Zeitschr. d. Deutsch. Morgenl. Ges.*, lxvi. 751—757). (M. HORTEN.)

FANĀ² (A.), an important technical term of Šūfism, meaning, "annihilation, dissolution". The Šūfī who attains perfection must be in a kind of state of annihilation.

The authors of treatises on Muslim mysticism have often compared the "annihilation" of Šūfism with the Buddhist nirvāna; but this comparison is not a particularly fitting one. We now know that the Muslim writers had only a very slight knowledge of Indian philosophy and could not comprehend the notion of nirvāna which presumes a fairly intimate acquaintance with that philosophy. Besides, the Buddhist idea of annihilation is independent of the idea of God and includes the idea of the transmigration of souls, to which nirvāna puts an end. To attain this, the desire for existence must be suppressed in the individual; it is only after this desire has been extinguished that one no longer has to return to the cycle of existence. In Muslim mysticism on the other hand there is no question of metempsychosis and the notion of a personal and all-present God is throughout predominant.

The origin of the Muslim conception of *fanā*² has rather to be sought in Christianity from which it seems to be borrowed. This conception simply means the annihilation of the individual human will before the will of God, an idea which forms the centre of all Christian mysticism. The conception thus belongs to the domain of ethics and not in the slightest degree to that of metaphysics like the nirvāna of the Hindū.

The oldest systematic exposition of pantheistic Šūfism, the *Kašf al-Mahdūb* ("Revelation of concealed Matters") gives all the explanation that could be desired of *fanā*².

The virtue of poverty understood in the mystic

sense consists "in averting the gaze from all created things, and, in complete annihilation, seeing only the All-One, he hastens towards the fullness of eternal life" (p. 20). — Mystic poverty, we are further told, consists in the annihilation of the human attribute (*šifāt*), which dwell in the Ego, so that one is now only rich in God and through God. — "The Šūfī is he that has nothing in his possession nor is himself possessed by anything. This denotes the essence of annihilation (*fanā*²)". — When this feeling has attained its perfection it is called *fanā*²-i *kullī* "absolute annihilation".

The expression *fanā*² is often interchanged with *ṣafā*² "purity"; this word means that the Šūfī should keep his soul pure from all attachment to any creature. *Fanā*² is further often associated with *baqa*² "subsistence": the man, who has destroyed his own will, henceforth lives in God; the human will is transitory while God's will is eternal.

The author of the *Kašf al-Mahdūb* expressly states (p. 243) that *fanā*² does not mean loss of essence and destruction of personality as some ignorant Šūfis think. It is not the essence but the human attributes, which are a danger to the perfection of being, that are destroyed (p. 28). "In India", says the author, "I had a dispute with a man who claimed to be versed in Kor'anic exegesis and theology. When I examined his pretensions, I found that he knew nothing of annihilation..." (p. 243); i. e. he had understood the word *fanā*² in a metaphysical sense.

FANAM, a South Indian coin. [See Yule and Burnell, *Hobson-Jobson*², p. 348].

FANÄR, the name of the Greek quarter of Stambul in which the Oecumenian Patriarch took up his residence after the conquest of the town by Mehmed II. Down to 1587 the patriarchate was in the ancient Byzantine church of the Pammakaristos; when this was transformed into a mosque (Fethiye) in that year, the Patriarch moved his see to the little church of St. George. At quite an early period there settled round the see, in addition to the ecclesiastical and secular officials of the patriarchate, the few old Byzantine families that had remained in Constantinople and other distinguished and prosperous members of the community (the so-called *ἄρχοντες*). In the Patriarchal school (*ἡ μεγάλη τοῦ γένους σχολή*) conducted by the clergy, which is still flourishing, the ancient classical studies were cultivated and the Fanariots exalted their claim to be in this respect also the noblest of the nation. It was from their circles that the Porte used to choose its Christian officials (Dragomans of the Sublime Porte, and of the Arsenal, Hospodars of Moldavia and Wallachia, contractors for the supply of furs and meat to the Serai, etc.). The better known families are the Kantakuzen, Skarlato, Maurogordato, Ghika, Karadja, Sutzo, Handjleri, Maurojeni, Ipsilanti, Muruzi, Kallimachi, Mussuro, Aristarchi etc. In the second half of the xviiith century many Fanariots went to Kuru-česhme on the Bosphorus. Since the beginning of the Greek War of Liberation the old Fanariot families have been gradually disappearing from public life; many of them migrated

to Greece. According to tradition Mehemmed II. granted the Fanariots a number of privileges, but the Greek noble families have never enjoyed any special privileges as such.

(J. H. MORDTMANN.)

FĀNŪS (φανός), a folding lantern, made of wire rings surrounded by waxed cloth with the upper and lower ends of tinned copper. It is carried by night in the hand to light the way for a body of men on the march, a wedding procession or a personage of high rank in the dark streets.

Bibliography: Lane, *Modern Egyptians*¹, i. 207 (picture on p. 208). (CL. HUART.)

FĀO, a telegraph station and Turkish fortress at the mouth of the Shaṭṭ al-ʿArab on the right bank. The place, which is not mentioned by Niebuhr, is the capital of a nāhiye which contains about 22 villages with 4000—5000 inhabitants.

FĀRĒ. [See FURŪʿ.]

FĀRĀB, also written BĀRĀB (e. g. in Iṣṭakhri, Muḳaddasī and most Persian authorities) and Pārāb (e. g. in the *Ḥudūd al-ʿĀlam*, cod. Tumanskij, f. 9^b); the latter seems to be the original pronunciation), a district (in Iṣṭakhri and Ibn Ḥawḳal *nāhiya*, in Muḳaddasī *rustāk*, in Yāqūt *wilāya*) in the valley of the Sir-Daryā, lying on both sides of the main stream, which here receives the waters of the Aris on its right bank. According to Ibn Ḥawḳal (p. 391) the district measured less than a day's journey in length and breadth; the soil was in places marshy and contained salt. According to Masʿūdī (*Tanbih*, p. 66) a stretch of land more than 30 farsakh broad was inundated by the Sir-Daryā in Fārāb and adjoining districts annually (in the beginning of January, *Kānūn al-thānī*; as a matter of fact the river at this season is usually covered with ice); at such times intercourse between the villages and farms all of which were on little hills was only possible by boat. The capital (*qasaba*) was called Kadar and according to Iṣṭakhri (p. 346) lay east of the Sir-Daryā half a farsakh from the river; it is therefore to be located to the west of the ruins of the later Otrār; the distance between the ruins and the river is about 7 miles on the Russian maps and according to the *Zafar-Namah* also (Indian ed., ii. 668) it was two farsakh from Otrār to the Sir-Daryā. On the western bank of the Sir-Daryā, 2 farsakh below Kadar, lay Wasīdj which Ibn Ḥawḳal says was the native town of the philosopher Abū Naṣr al-Fārābī [q. v.]. According to Muḳaddasī (p. 273) the capital bore the same name as the district; this town of Fārāb is described as a large town with a male population of about 70,000, a Friday-Mosque, a citadel and a market; only a few booths of the latter were within the walls of the town, the majority being in the suburbs (*rabād*). Muḳaddasī says that Wasīdj was a small fortified town where a "powerful Emir" lived, with a chief mosque on

the market-place, Kadar a recently founded town with an able-bodied population, where Shāfiʿis predominated; it was only after "wars" (probably after the suppression of opposition by the capital) that a minbar was erected. There is probably an error here and Fārāb, which is not mentioned by Iṣṭakhri and Ibn Ḥawḳal, is to be regarded as the new and Kadar the old town; the later Otrār also is constantly identified with the town of Fārāb (mentioned by Samʿānī also, MS. of the Asiatic Museum, 543^v, f. 314^v) and not with Kadar.

In the historians Fārāb is seldom mentioned, only once in Ṭabarī (ii. 1694 at the foot) for example: in 121 (739) the ruler of Shāsh (Tashkent) at the command of the governor Naṣr b. Saiyār had to expel Ḥāṭith b. Suraidj who had sought refuge at his court and send him to Fārāb. Islām was apparently only brought to Fārāb for the first time in the Sāmānid period, after the subjection of Asbidjāb (or Isfidjāb) by Nūh b. Asad in 225 = 839-840 (cf. Balādhuri, ed. de Goeje, p. 422; Samʿānī in Barthold, *Turkestan* etc., i. 58 below). Wasīdj is again mentioned by Samʿānī as a fortress (in Barthold, *op. cit.*, i. 69); Abū Muhammad ʿAbd al-Saiyid b. Muhammad al-Nasafi surnamed Saʿd al-Mulk died there in exile "in the land of the Turks" in Muḥarram 514 = April 1120. For the later history of the district cf. the article OTRĀR.

AL-FĀRĀBĪ, MUḤAMMAD B. MUḤAMMAD B. TARKHĀN ABŪ NAṢR, the greatest philosopher of Islām before Avicenna, was born in a Turkish family towards the end of the ixth century A. D. at Wasīdj, a small fortified town in the district of Fārāh (Otrār) in Transoxiana. His father is said to have been a general. He studied in Baghdād under the Christian physician Yohannā b. Ḥailān and also worked with Abū Bishr Mattā, a Nestorian Christian, celebrated as a translator of Greek works. He then went to Ḥalab to the court of the Ḥamdānid Saif al-Dawla, under whose protection he lived the life of a Ṣūfi. He died in 339 (950) at the age of about 80, in Damascus, whither he had accompanied his king on a campaign.

Fārābī is particularly celebrated as a commentator on Aristotle. His works on this field have won him the name *al-muʿallim al-thānī*, "the second teacher" i. e. successor to the first teacher, Aristotle. He commented on the *Categories*, *Hermeticus*, the *First* and *Second Analytics*, the *Sophistics*, *Rhetoric* and *Poetics* i. e. the whole group of treatises which form branches of logic in the widest sense. To this collection or the *Organon* he prefaced a commentary on the *Isagoge* of Porphyry.

He wrote commentaries on the following Greek works on ethics, psychology and science, the *Nicomachean Ethics*, Alexander of Aphrodisias *On the Soul*, Aristotle's *Physics*, *Meteorology* and his writings on the *Heavens* and the *Universe* and lastly on the *Almagest* of Ptolemy.

His literary activity was by no means confined to the exposition of Greek texts; on the contrary he wrote a large number of original works. Among the latter are his psychological and metaphysical treatises, on the *Intelligence* (*ʿaql*) and the *Intelligible*, on the *Soul* (*nafs*); the *Faculties* of the

Soul, the One and the Unity, Substance, Time, Empty Space, Space and Measure.

Fārābī professed the view, which now seems strange and even absurd, but which is explained by the leaning of Oriental philosophers towards syncretism, that ancient philosophy must form a unity, at least that its two great representatives Plato and Aristotle should not contradict one another; their systems ought not to be more than different forms of expressions of one truth. According to this conception the great philosophers of antiquity appear as real prophets and are given the title *imām* like religious teachers, and their teaching is a kind of revelation which ought not to contain any contradiction or error. Fārābī wrote several treatises on the basis of this view. *The Agreement between Plato and Aristotle, The Intermediary between Aristotle and Galenus (Kitāb al-ajam baina ra'yai al-hakimain Aflatūn al-ilāhi wa Aristūṭalis), The Intentions of Plato and Aristotle.* It should be noted that our philosopher believed in the authenticity of the work entitled *The Theology of Aristotle (Oḥūludjū Aristūṭalis,* an apocryphal neo-Platonic treatise based on the *Enneades* of Plotinus. This error was such as to falsify in a remarkable fashion the idea that was formed of the Peripatetic system.

Dieterici has edited nine small treatises by Fārābī of which the most celebrated is the epistle entitled *The Gems of the Sciences (Risāla fuṣūṣ al-ḥikam)*; this work, which contains many ideas in a very concise form, passed into use in all the schools of the East; there is a commentary on it by Ismā'īl al-Husaini al-Fārānī, a writer of the xvth century which has been printed at the al-ʿĀmirā press (1291 A. H.) and made the subject of a study by M. Horten.

Besides this group of treatises, Dieterici has published Fārābī's "*Model City*" (*Risāla fī arā ahl al-Madīna al-fāḍila*) an important work in 34 chapters in which the Muslim philosopher, inspired by Plato, explains his conception of the organisation of the perfect city. It should be governed by its wise men; its aim should be to imitate here below the perfection of the heavenly city and to prepare its members to obtain felicity in the latter. This theory is of little practical interest, but is of some importance for metaphysics.

Fārābī's intention like that of the other philosophers of the same school was to embrace the whole cycle of the sciences. He seems to have been quite a good mathematician and a fair physician; he wrote on occult sciences and was also a distinguished musician; it is to his pen that we owe the most important treatise on the theory of Oriental music. He was himself a virtuoso and composer; his talent excited the admiration of Saif al-Dawla and the Mawlawi dervishes still use ancient chants that are attributed to him.

Fārābī's system is that of the school of Philosophers in the proper sense of the word (*failasūf*) i. e. Muslim Neo-Platonic philosophy. It is the system which al-Kindī had begun to organise before him and which after him found the most complete expression in the works of Avicenna (*q. v. sub* IBN SĪNĀ). It is fairly probable that Fārābī differs from al-Kindī and Avicenna on some points; but it is difficult to define these points and it is better to be reserved, if not sceptical, in interpreting the details of his system. Indeed we do not possess his work in its entirety; we are only

acquainted with a small part of it; Fārābī's style also is somewhat obscure; several of the treatises that have survived are composed in the form of very brief aphorisms placed one after the other in no sort of order. Lastly it is impossible to be certain that there is no contradiction in a work so vast, in which the influence of Plato, Aristotle or Plotinus alternately predominates. The root idea of the system, which is to make a synthesis on one side of Aristotle and Plato and on the other hand of the syncretic philosophy thus obtained with the religious faith of Islām, cannot but be somewhat contradictory in itself.

T. J. de Boer believes he can see a very marked opposition between Fārābī and the other members of the school of "*Philosophers*" notably the celebrated Rāzī (Razes); Fārābī sometimes polemises against Rāzī who was his contemporary. According to de Boer this opposition consists in that, while Fārābī's system is deductive, rational and built up entirely on abstract logic, Rāzī's philosophy is experimental, inductive and is more especially concerned with the concrete. But I do not think that there are really two systems opposed to one another; they are two sides or two aspects of a more general system: Rāzī, who was a physician and distinguished naturalist, emphasises the concrete aspects of the system while Fārābī, who had a more inclination for logic, mathematics and mystic speculation, presents the abstract side of it. In Avicenna we find the two aspects reunited.

I have pointed to a difference between Fārābī and Avicenna as regards the position of Mysticism; in Avicenna mysticism appears only at the end of the system to crown his work, as it were; it is quite distinct from the other parts of it and Avicenna treats mysticism — and very artistically — as a chapter in philosophy which he would study in an objective fashion. On the contrary in Fārābī mysticism penetrates everything; the terms of Ṣūfism are scattered throughout his works and one clearly feels that with him mysticism is not a theory but rather a subjective state. This point of view further contributes to make his system somewhat obscure.

It has been said that Avicenna is clearer, better arranged and more methodical than Fārābī; Muslim scholasticism has clearly a more finished form in Avicenna. On one important point, the question of the personal immortality of the soul, this difference in lucidity between the two philosophers makes itself felt. The rational soul or reason, illuminated by the world of the mind, the world of ideas, or active intellect, is the real man; it is also what remains of man after death. But does the reason of the individual man lose itself in the active intellect or does it preserve its own consciousness and individuality? Certain passages in Fārābī are written in such a way as to make it credible that he admits the first view. There is, however, no room for doubt that Fārābī believed in the personal immortality of the soul; in his treatise on the *Model City* there is a passage, where he shows the good souls arriving in the celestial city and each of them enjoying a pleasure as great as the number of the souls. Ibn Ṭufail, who seems to have had no love for Fārābī, also says that he had doubts on the personal immortality of the soul (see S. Munk, article FĀRĀBĪ in the *Dictionnaire des Sciences Philosophiques*); this charge must refer to passages, the language of which is obscure or which are incomplete.

T. J. de Boer has also pointed out as a difference between Fārābī and the other philosophers of his school that Avicenna does not, like him, derive matter from God. According to this writer, Fārābī conceived matter as having emanated from God by passing through several spiritual intermediaries. I do not think that this statement is quite correct. It is in the treatise on "the principles of beings" of which we possess a Hebrew translation by Moses ibn Tibbon (התחלות הנמצאות), ed. by Philippowski in the annual *ספר החסד* (Leipzig 1850-1851) that Fārābī gives the chain of principles in a way which makes it resemble an emanation: the primary intelligence or first cause comes from God; from it come in their order the intelligences of the spheres; the last is the active intelligence; above it are placed the universal soul, then form and lastly matter. Avicenna's metaphysics are really quite comparable to this system.

The matter which is in question here is the substratum of the world which contains its possibility. The world is produced by coming from this matter, not created directly from nothing. The celestial spheres, animated by their respective souls, are put into motion by the prime mover; the latter is not God himself but rather the primary intelligence which emanates from him.

Fārābī attempts to reconcile Aristotle and Plato on the question of the eternity of the world. In his treatise on the *Agreement of the Philosophy of Plato and Aristotle*, he claims that Aristotle did not believe in an eternal world. The creator made it spring into existence at once without time, the prime mover then put it into motion and from the motion of the spheres time was produced. In other words time is logically posterior to the actual creation of the world. The school of the philosophers has however admitted the possibility of the infinite series retreating into the past: according to Avicenna a real infinite series is impossible but an infinite series, the terms of which do not actually exist together, is possible. It may be admitted that the celestial spheres have accomplished an infinite number of revolutions in the past and that time accordingly is eternal. One difficulty against this view arises from the fact that the souls of men who have lived in the past continue to exist in reality as they are immortal; there would thus be an infinite number of souls actually co-existing. In his treatise on the "Model City" Fārābī however speaks of the souls in the other world as if they were finite in number. We cannot really be quite certain that these philosophers do not sometimes contradict one another; they comment with equal confidence on teachers whose doctrines often disagree and there necessarily results a certain amount of hesitation and uncertainty in their systems.

FARADJ, AL-MALIK AL-NĀSIR NĀSIR AL-DĪN, was the son of Sultān Barkūk [q. v., i. 662 et seq.]. In Shawwāl 801 = June 1399 Barkūk on his death-bed had homage paid to his thirteen year old son Faradj, appointed the Emir Itmish Atabek and guardian, and the Emir Taghribardī his adviser and the father of the celebrated historian Abu 'l-Mahāsīn Yūsuf [q. v.] the chief weapon-bearer. Itmish lived with the Sultān in the citadel and thereby aroused the jealousy of the other great Emirs who incited Faradj after a few months to declare himself of age. Itmish thereupon left the citadel against Taghribardī's advice, the two then attempted to seize the citadel, were defeated and fled to Damascus where they made an alliance with Tenem, the governor there, and the other Syrian governors. The Sultān went to Syria to overthrow the rebels. Tenem declined the favourable conditions of peace offered by the Sultān but contrary to all expectation was defeated in battle. Tenem and Itmish were executed, Taghribardī pardoned on account of his relationship to the Sultān and exiled to Jerusalem without an office. The Mongol ruler Timūr was threatening great danger to the Mamlūks. He demanded that his relative Atilmish should be released from captivity and his suzerainty recognised. Various views prevailed among the Emirs but the war party gained the upper hand. Atilmish was not released; Timūr's envoy was executed by order of Sudūn, governor of Damascus, so that further negotiations for peace were out of the question. Timūr took Aleppo and gave it over to plunder by his troops for three days. Many mosques and schools were destroyed [cf. the article HALAB], and were never rebuilt. Timūr took Hama, Hims and Ba'albek. Faradj finally decided to offer resistance, set out with his army for Ghazza, and appointed Taghribardī governor of Damascus. The latter proposed to fortify Damascus, leave the army with the Sultān in Ghazza and thus shut Timūr in between two fires. The Emirs declared against this sagacious proposal out of mistrust of Taghribardī. When the Sultān approached Damascus, Timūr went into camp in the neighbourhood. After fruitless negotiations for peace, Timūr broke camp; the Egyptians attacked him and were defeated with heavy loss. When several Emirs went off to Egypt with the secret intention of choosing a new Sultān, his partisans forced Faradj to leave the army and pursue the fugitives. They were overtaken and made the best excuses they could. The Sultān, who feared trouble from their fellow-conspirators in Cairo, hurried back to Egypt. The army broke up, one section fled to Damascus, the others tried to escape through the desert to Cairo but were cut down by the Mongols or marauding Bedouins. The road to Damascus now lay open to Timūr,

the town surrendered and was given over to plunder by the soldiers; the citadel, however, only fell after a siege of a month. Timūr left Damascus in the spring of 804 = 1402 to make war on the Ottoman Sultān Bāyazid. — The remainder of Faradj's reign is occupied with the struggles of the Emirs for influence with the Sultān. The Emirs, who were overthrown in the course of these feuds, were usually imprisoned in Alexandria and executed if they did not succeed in escaping to Syria and collect new followers there. In 808 = 1405 the discontent among the Mamlūks reached such a height that Faradj abdicated the throne and went into retirement for a period. The Emirs raised his brother 'Abd al-'Azīz to the throne under the name al-Malik al-Mansūr. A few months later, however, Faradj won back the citadel of Cairo, threw his brother into prison and ascended the throne again. Although his position in Egypt was now secure, he never again exercised authority in Syria for any length of time. Djakam, the governor of Aleppo, proclaimed himself Sultān there under the name al-Malik al-'Adil, fortified Aleppo and defended Syria against foreign foes. He went to war with Karā Yelek, the chief of the white Sheep Turkomans, and fell in battle. The most faithful adherent of the Sultān was the above-mentioned Emir Taghnibardi, his bitterest opponent, Shaikh al-Mahmūdī [q. v.], who afterwards became Sultān under the name al-Malik al-Mu'ayyad. The war dragged on in Syria with varying success until in 815 A. H. Faradj went there for the seventh time. Against the advice of the dying Emir Taghnibardi, governor of Damascus, he went to meet the foe, regardless of the exhausted condition of his troops. He was defeated and retired to Damascus. As the Emirs there gave him a hostile reception, the Sultān had to submit; he was dethroned, imprisoned and put to death in prison. His lands had been terribly devastated during his reign by Timūr's invasions and the constant civil wars, while famine and plague ravaged the country. He constantly required vast sums for his extravagant and luxurious mode of life and these he extorted from his subjects in Cairo.

AL-FARĀFRA (AL-FARĀFIRA), an oasis in the Lybian desert, belonging to the Egyptian province of Minyā. It lies between the Wāhāt Bahriye and the Wāhāt Kibliye [see the article BAHRIYE, i. 586^b et seq.] and is about 8 days journey by camel from Minyā. Among the earlier Arab geographers the name al-Farfarūn appears, for example in al-Bakrī, who mentions its great wealth in date-palms and the numerous villages inhabited by Christian Copts; he also knows of the alum and vitriol found there and mentions the hot springs of the oasis. We have no other direct notices of al-Farāfra, probably because it was usually reckoned with Dākhlē [q. v., i. 899^b et seq.] as is clear from Ya'qūbī (p. 332), for example. It was not till Chaillaud and Letorze's journey in 1820 that new light was thrown on the oasis and later by G. Rohlfs' expedition in 1873-1874. Farāfra was then only very loosely connected with Egypt; the only bond was the annual tribute of 10,000 piastres. The land was exceedingly fertile and rich in palms, olives, fruits of all kinds, vegetables

and cereals; there was also some cotton, but only oil and dates were exported. Nevertheless the inhabitants were in great poverty as they lost the greater portion of their harvests, as in ancient times, through the constant raids of the Egyptian and Barā Bedouins as well as of the Arabs of the Nile valley. Besides this the finest estates were in the possession of members of the Sanūsiya, who sent the produce to Djaghābūb, which was then their headquarters. They had been acquiring a firm footing in the oasis since 1860 and it is to their influence that the great fanaticism of the population is ascribed. The number of inhabitants was still small at that date but it has been continually increasing since then; Boinet-Bey estimates the population at 542 and the latest figures at 632. The only village is Kaṣr Farāfra.

FARĀH, a town of Afghānistān in the Herāt province situated on the bank of the Farāh-rūd river which flows in a south-westerly direction into the Sistān Hāmūn. Farāh, although decayed, is still a place of some importance, and is the meeting place of several caravan routes and the centre of a fertile district. It was formerly the capital of Drangiana, and was included in the mediaeval province of Sidjistān, but is not included in modern Sistān. It has never quite recovered from its devastation by the Mongols under Čingiz Khān.

The Farāh-rūd is one of the rivers mentioned in the *Vendidad* (Fradātha) and is the 'O φραδός of Pliny, and the town is the Prophthasia of Alexander's historians and Strabo (Prophthasia being a Greek rendering of 'fradātha' or 'progress') also no doubt the Phra of Isidore of Charax. Alexander here detected the plot of Philotas, and from here, Holdich considers, he made his way up the valley of the Farāh-rūd to the Bāmiyān pass. In modern times it has been described by Ferrier and Holdich.

FARĀHĪ, ABŪ NAṢR MAS'UD E. ABĪ BAKR B. HUSAIN B. DJA'FAR, born at Farāh in Sidjistān, a Persian philologist, who flourished in the beginning of the viiith century A. H. He is the author of a versified Arabic-Persian glossary, called *Niṣāb al-Shīyān*, which was much used in the east and is found in almost every library in Europe in several copies. Commentaries have frequently been written on this little book. Cf. *Cat. Berl.* (Pertsch), No. 156, 157 (1); Rieu, *Cat. Pers. Mss. Brit. Mus.*, p. 504^a; Ethé, *Cat. Oxford*, col. 980—983.

He also versified in Arabic in 617 the celebrated compendium of law *al-Djāmi'* al-*Ṣaḡhir*, written by al-Shaibānī [q. v.]. Cf. Hādjdī Khalifa, ed. Flügel, ii. 559.

FARĀ'ID is the name given to the expressly called fixed shares in an estate ($\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$,

$\frac{2}{3}$, $\frac{1}{3}$ and $\frac{1}{6}$) in the verses dealing with the law of inheritance in the *Qur'ān* (iv. 12—15 and 175) which fall to the twelve so-called "people of fixed inheritance" (*dhawu 'l-farā'id* or *aṣṣḥab al-farā'id*). As the accurate knowledge of these fixed legacies was the most important part of the law of inheritance, the latter was called *'ilm al-farā'id*.

Although the *Qur'ān* only recognises fixed portions for the daughter, the two parents, the husband and wife, and the brothers and sisters, Muslim scholars have extended the laws applicable to the daughters of a deceased person to the daughters of his son and in the same way those applicable to his parents to the grand-parents; a distinction has further been made in sisters between full and half-sister on the father's side and on the mother's. The total number of these so-called "*Qur'ānic*" heirs has thus been raised to twelve, viz., in descending order: 1. the daughters of the deceased and those of his sons; 2. in ascending order: father, mother and grandfather on the father's side, grandmother on both sides (and further all other female relatives of the deceased, in ascending line, in so far as they are not related to him through a male relative in ascending line who is not legally qualified to inherit); 3. in the collateral line: the full sister, the half-sister on the father's side and the half-brother and half-sister on the mother's side; 4. widower and widow.

The daughter of the deceased is entitled to half his estate; if there are two or more daughters, they receive together $\frac{2}{3}$ of the estate. The son's daughters, full sisters and half-sisters on the father's side are subject to the same rules (*Qur'ān*, iv. 12 and 175). Each of the heirs in ascending line may claim $\frac{1}{6}$ of the estate; the mother, however, only receives this share if there are children, son's children, or two or more brother's and sisters of the deceased; otherwise she gets $\frac{1}{3}$ of the estate (*Qur'ān*, iv. 12). Each of the half-sisters and half-brothers on the mother's side also gets $\frac{1}{6}$ of the estate; if two or more inherit together, they receive $\frac{1}{3}$ in all (*Qur'ān*, iv. 15). The widower receives $\frac{1}{2}$ of the estate except when a child or son's child inherits with him in which case his share is only $\frac{1}{4}$ (*Qur'ān*, iv. 13). The widow has (*Qur'ān*, iv. 14) only a claim to half of what a widower would receive in the same circumstances, i.e. $\frac{1}{4}$ or $\frac{1}{8}$ of the estate, according as she inherits with children (or son's children) or not.

If there are several *dhawu 'l-farā'id* either together or with other relatives of the deceased, they are in many cases excluded from their fixed shares. They then according to circumstances either receive nothing at all or the residue of the estate, after the other heirs have received what they are entitled to. The *dhawu 'l-farā'id* can never all inherit at the same time. On the diminution of the fixed inheritances in some cases in which several *dhawu 'l-farā'id* inherit at the same time, cf. the article 'AWL [i. 517^b et seq.].

(TH. W. JUYNBOLL.)

FARĀ'IDĪ SECT. This sect was founded in Eastern Bengal about the year 1804 by Ḥadjjī Shari'at Allāh, born of obscure parents, who resided in a village, Bahādurpūr, in the district of Faridpūr. When eighteen years of age he went on a pilgrimage to Mecca, but instead of returning, as usual, he remained a disciple of al-Shaikh Tāhir al-Sunbul al-Makkī, the head of the Shafi'ī sect there in those days. About 1802, after an absence of twenty years, he came back to India, a skilful disputer, and a good Arabic scholar. On his way home he fell into the hands of Dacoits (banded robbers) who plundered him of everything, including many relics of his residence in Arabia. Finding life insupportable without books or relics, he joined the gang, and shared their many wanderings. The simplicity of his character and the sincerity of his religious convictions struck these wicked men, who ultimately became his most zealous followers. Such is the story told at the present day of the first step taken towards proselytism by this remarkable man. For several years Shari'at Allāh quietly promulgated his newly framed doctrines in the villages of his native districts, encountering much opposition and abuse, but attracting a band of devoted adherents, he by degrees acquired the reputation of a holy man.

The chief innovation introduced by him was the non-observance of the Friday prayers and of the two great 'Ids, on the ground that India under British rule was *Dār al-Iḥarab* [q. v.]. He also ordered that the titles of *ustādḥ* (teacher) and *shāgird* (pupil), terms which did not imply complete submission, should in future be used in the place of *pīr* (priest) and *murīd* (disciple), which had for ages been the respective designations of the religious preceptor and his pupil. He further prohibited the usual ceremony of joining hands, which was customary at the initiation of a disciple, but required from every one of his would-be disciples *tawba*, or repentance for past sins, and a solemn determination to lead a more righteous and godly life in future. It is a curious fact that none of these ideas excited much opposition, but on his promulgating a dogma that to allow a mid-wife to cut the navel cord of a new born babe was a deadly sin borrowed from the Hindus, and his insisting that it was the duty of the father to do this, he roused a spirit of opposition which caused many of his adherents to fall away. The zamindārs (landlords) were alarmed at the spread of the new creed, which bound the Muḥammadan peasantry together as one man. Disputes and quarrels soon arose, and Shari'at Allāh was driven away from Navābārī, in the Dhākā district, where he had settled, and was compelled to return to his birthplace. There he resumed his holy office as a minister of the faith, and in a short time enlisted the sympathies and support of a vast majority of the uneducated and the most excitable classes of the Muḥammadan population. His influence became unbounded, and no one hesitated to carry out his orders. He acted with great prudence and caution, rarely assuming any other character than that of a religious reformer. The movement set on foot by this man attracted little attention during his lifetime, and his name is rarely met with in the annals of those days. On

looking back, however, at his career there is much which amply repays an inquiry. That he came of obscure parentage amid the swamps of Eastern Bengal, and should be the first preacher to denounce the superstitious and corrupt beliefs, which long contact with Hindu polytheism had developed, is remarkable enough; but that the apathetic and careless Bengali peasant should be roused into enthusiasm is still more so. To effect this required a sincere and sympathetic preacher; and no one ever appealed more strongly to the sympathies of a people than Sharīf Allah whose blameless and exemplary life was admired by his countrymen, who venerated him as a father able to advise them in times of adversity, and give consolation in cases of affliction.

He is described as a man of middle height, of fair complexion, and with a long, shapely beard.

A very different person was his son, Muḥammad Muḥsin, better known as Dūdhū Miyān, who, though of ordinary abilities, exerted an influence far surpassing that of his father. His name is a household word throughout the districts of Farīd-pūr, Pubna, Bākirganj, Dhākā and Noakhali, and the number of his followers at the present day testifies to the thoroughness of the method with which he and his father fulfilled their mission.

Dūdhū Miyān was born in 1819, and, while still young, visited Mecca, where, as he asserted and made his followers believe, visions and revelations of a nature tending to his future greatness, were vouchsafed to him. On his return he devoted himself to the spread of his father's doctrines, as well as many more which he himself introduced afresh. For instance, he insisted upon his disciples eating the common grasshopper (*phanga*) which they detested, because the locust (*tiddi*) was used as food in Arabia, and vigorously contended that there was no greater difference between the two insects than between a goat of their villages and one from the banks of the Jumna.

The most remarkable advance made during Dūdhū Miyān's lifetime was the organisation of the society. Following the example of the *Vaiṣṇavas*, he divided Eastern Bengal into circles, and appointed a *khalifa*, or agent, to each, with power to collect contributions for the furtherance of the objects of the central association. They further kept Dūdhū Miyān, usually styled the Pīr, or simply Mawlī, acquainted with everything occurring within their jurisdiction, and whenever a zamīndār tried to enforce his legal rights against any one member of the sect, funds were provided to sue him in the court, or, if it could be safely done, men with clubs were sent to plunder his property and to thrash his servants. During his father's lifetime the sect was never opposed to, nor collided with, the law of the land; but the measures adopted by the son united the zamīndārs and the indigo planters against him. He tried to make all Muhammadan ryots join his sect, and on refusal caused them to be beaten, and excommunicated from the society of the faithful, and destroyed their crops. The zamīndārs once more endeavoured to prevent their tenants from joining, and, it is said, often punished and tortured the disobedient. A mode of torture intensely painful, which left no marks to implicate any one, is said to have been adopted on both sides. The beards of recalcitrant ryots were tied together and red chili powder given as snuff.

Coercion, however, failed, and the landholders did little to check the further spread of a similar disturbance.

It was among the cultivators and village workman that Dūdhū Miyān made the largest number of converts. He asserted the equality of mankind, and taught that the welfare of the lowly and poor was as much an object of interest as that of the high and the rich. When a brother fell in distress it was, he taught, the duty of his neighbours to assist him, and nothing, he affirmed, was criminal, or unjustifiable, which might be used as a means to that end. Their enemies, however, alleged, that witnesses were paid for out of the funds of the association.

Dūdhū Miyān and the Hājjidjis, as his followers were originally called, became objects of dread to the Hindu, old Muhammadans, and European landholders. Evidence to convict a prisoner could not be got. It was, however, against the levying of illegal cesses by landlords that Dūdhū Miyān made his most determined stand. That a Muhammadan ryot should be obliged to contribute towards the decoration of the image of Durgā, or towards the support of any of the rites of his Hindu landlord, were regarded as intolerable acts of oppression. In this he was certainly right, as the only apology for their continuance was their antiquity, and adaptation to the feelings of the people. But, he advanced a step further when he proclaimed that the earth is God's, and that no one has a right to occupy it as an inheritance, or levy taxes upon it. The peasantry were, therefore, persuaded to settle on Khāṣṣ Maḥall lands, managed directly by the Government, and thus escape the payment of any taxes, but that of the land revenue, claimed by the State. His rapid success, however excited the jealousy of the contemporary landlords and many false suits were brought against him. In 1838 he was charged with abetting the plunder of several houses; in 1841 he was committed to the sessions on a charge of murder but was acquitted; in 1844 he was tried for trespass and forming an unlawful assembly; and in 1846 for abduction and plunder. The riot of 1838 assumed at one time a very threatening aspect, and a detachment of Sepoys was sent from Dhākā to check any disturbance. It was, however, impossible to induce witnesses to give evidence, and on each occasion he was acquitted. At Bahādurpūr, where he generally resided, every Muhammadan stranger was fed, while Eastern Bengal was frequented by his spies, and the interests of the whole neighbourhood were in his keeping. He settled disputes, administered summary justice, and punished any Hindu, Muhammadan or Christian who without first referring matters to him dared to bring suits, as for recovery of debt, in the adjoining munshif's court. Emissaries carried his orders to distant villages, and his letters, signed *Aḥmad nām nā ma'lūm*, (Aḥmad of unknown name) often had the ordinary Hindu superscription to allay suspicion. He taught that there was no sin in persecuting those who refused to embrace his doctrines, or who appealed to Government courts against the orders of the society and its acknowledged leaders. Dūdhū Miyān is described as having been a tall handsome man, with a dark flowing beard, and a large turban wound round his head. He died at Bahādurpūr 24th September, 1860, and was buried there, but

the Arial Khān river has, within the last few years, washed away every trace of his house and tomb.

Three sons survive, of whom none have as yet exhibited any of the energy, or abilities, of their father and hence the sect is consequently diminishing in number.

The sect of which he was the leader is generally known as the Farā'īdī Sect; and those who profess his doctrines have been enjoined to say the Zuhr (mid-day) Farḍ (compulsory) prayer on Fridays instead of the usual Djum'a or Friday prayer, which is customary with the majority of the Muhammadans. (M. Hidayet Hosain.)

AL-FARAS, the horse, whether stallion (*fahl*) or mare; as a collective *al-khail*. The horse is considered the most beautiful and noblest creature next to man. The fine proportions of its limbs, the purity of its colour, its swiftness, its obedience to the rider, whether in battle, in pursuit or in flight, its courage and strength, its intelligence and standard of good manners are renowned. A sign of the latter is the fact that a well-bred horse discharges neither urine or excrement while its rider is on its back. It knows its rider so well that no one else is allowed to mount it. It watches beside him when he is asleep, and wakens him with its foot when danger threatens from the enemy or wild beasts. The horses used in the game of polo (*djavkāni* from the Pers. *čav-gāni*), watch the ball with the eye and follow it without the rider's needing to guide them. One of the most noteworthy habits of the horse is that it will only drink turbid water; it is afraid of its reflection in clear still water and makes it turbid and frothy with its hoofs.

The following story is told of the creation of the horse: When God wished to create the horse, he said to the south wind: I will make a living being out of thee, collect thyself! He then caused Gabriel to take a handful of wind and from this he created a reddish brown (*kumait*) horse. God said to it: I have created thee the horse and made thee for the Arabs and distinguished thee about all other beasts by swiftness for the gaining of food and booty; thou shalt be ridden on the back and may fortune be attached to thy forehead. Thereupon he dismissed it and it neighed. Then God said: Blessed be thy neighing; terrify the worshippers of idols, fill their ears and make their feet tremble. He then marked it with spots on the forehead and legs. After the creation of Adam it was led before him and preferred by him to Burāk [q. v., i. 793¹].

According to another tradition the first to ride a horse was Ismā'il, the son of Abraham. Others again say that the Arab horses are descended from those of Solomon. The latter inherited 1000 horses from David; when they were being led before him, he forgot the afternoon prayer: enraged at this omission he had them all hamstrung except a few that he spared because they had not yet been brought before him. When after this people of the tribe of 'Azd came to visit Solomon and asked for a present on taking leave of him, he gave them one of the steeds to which they gave the name *zād al-rakib*; from it are descended all the Arab horses.

The wealth of manuscript literature on the horse (cf. e. g. the Catalogues of Berlin and Vienna) has as yet hardly been touched, apart from Perron's work

cited below. Von Hammer-Purgstall gave a preliminary survey of the material in his essay, *Das Pferd bei den Arabern* (Bibliography, philology: names of horses, references in the Kor'an, hadiths, proverbs, poems, notably the description of the horse by Khalaf b. Haiyān al-Māzini). Mas'ūdī's *Murūdj al-Dhahab* contains a great deal of information about horse-racing and there are many notices in Ibn al-Mundhir [q. v.]. Valuable observations are made by the modern travellers quoted below.

The name *al-Faras al-A'zam*, the great horse, is given to constellation Pegasus, *Kifāt al-Faras* to the constellation of the foal, *al-Faras al-Tamm* or "complete horse" to a group of stars near Pegasus. "It is not quite clear how the Arab astronomers, who have elsewhere retained the Greek constellations so completely, ... have come to add a third and complete one to the two incomplete horses" (Ideler, *Sternnamen*, p. 190).

FARASĀN (FARSĀN), a group of islands in the S.W. of Cape Dījān, opposite the harbour of Abū 'Arīsh in Tihāma. The largest of these islands are Farasān Kabir with the harbour of Khōr Farasān and Farasān Ṣaghīr. Muharrak and Seyed are other places worthy of mention besides Khōr. The inhabitants fish for pearls and catch turtles, which brings them great wealth. Ehrenberg, who discovered the islands, saw many date-groves and fields growing *durra* and melons, Arab antelopes, numerous gazelles and goats there.

Hamdānī was acquainted with these islands. Their inhabitants, who take their name from the island, are, according to him descended from the great North Arabian tribe of Taghlib [q. v.]. Like the latter they were once Christians and had many churches on their islands, which had already been destroyed by Hamdānī's time. They carried on a busy trade with the Abyssinians. According to South Arabian genealogists they are Hīmyars.

Bibliography: Hamdānī, *Djazira* (ed. D. H. Müller), p. 47, 16, 52, 18, 53, 21—24, 74, 24, 75, 41, 98, 24—26, 119, 15; Ritter, *Erdkunde*, xii. 874, 1021—1025. (J. SCHLEIFER.)

AL-FARAZDAḲ (the "lump of dough": *Aghānī*, xix. 2), whose real name was Hammām b. Ḡhālīb b. Ṣaṣ'a'a, was one of the three greatest Arab satirists of the Arab period [cf. *ḌJARĪR* and *AL-AKHṬAL*]. He belonged to the Tamīmī Muḍjāshī' b. Dārim. He was probably born about the year 20 (640-641) (cf. *Naḳā'id*, ed. Bevan, p. xviii.). We know nothing certain about his early life. It may, however, be true that his father sent him to 'Alī after the "Battle of the Camel" (*Aghānī*, xix. 6, 48), although tradition gives this incident an exaggerated importance in the life of the poet (cf. *Naḳā'id*, op. cit., in opposition to Hell, *Farazdaḳ's Lobgedicht* etc., Munich dissertation, 1900, p. 7 *et seq.*). There is more foundation for the statement that he (presumably when about 30 years of age) induced the Caliph Mu'āwīya by threatening poems to deliver up the inheritance of Ḥutāt, a fellow tribesman of Farazdaḳ, which he had illegally confiscated (*Naḳā'id*, p. 608, 15-609, 29; further references are given there notably to Ṭabarī, ii. 96-108). This incident is said to have provoked the enmity of Ziyād, Mu'āwīya's extremely energetic half-brother, against him. Ziyād was governor in the 'Irāk from 45 to 53 (665-673) and spent six months of each year in Baṣra where Farazdaḳ lived. The latter made himself so unpopular with this firm ruler, that he had to fly from Baṣra about 50 (670). After many adventures he found an asylum with Sa'īd b. al-'Āṣī, who had been appointed governor of Medina in 49 (669) (*Naḳā'id*, N^o. 63, commentary on verse 46; p. 608 *et seq.*). He did not stand in such high favour with Sa'īd's successor, Marwān b. al-Ḥakam, who ultimately banished him from the city (*Aghānī*, xix. 21, 43 *et seq.*). But Ziyād's death soon allowed him to return to his native city of Baṣra as his son 'Ubaid Allāh was well disposed towards him. It is possible that Ziyād's threats against Farazdaḳ were really not to be taken very seriously (cf. *Naḳā'id*, p. 611, 617). In any case the poet was in mortal terror. This is clear not only from the numerous laudatory verses on tribes and persons who had supported him in his exile but notably also from his verses of jubilation on the death of the dreaded Ziyād (*Naḳā'id*, p. 619) and the subsequent lampoons on him.

Farazdaḳ's further life was in part occupied with his feuds with *ḌJARĪR* [q. v.] and *al-Akhṭal* [q. v.], and by his unfortunate marriage with his cousin al-Nawār, whom he won as his wife by a stratagem but had ultimately to set free again (for details see Hell, op. cit., and Brockelmann, *Gesch. d. Arab. Litt.*, i. 53 *et seq.*). The exploits of al-Farazdaḳ and *ḌJARĪR* under the Zubairid governor al-Ḥārith b. 'Abd Allāh are narrated in the article *ḌJARĪR*. The rule of the Omayyad prince Bishr b. Marwān was favourable to al-Farazdaḳ's activity but fortunately did not last long. He had to keep fairly quiet under the firm rule of al-Ḥadjdjad. Driven by necessity, he dedicated to him and his brother-in-law al-Ḥakam b. Aiyūb (*Dīwān*, ed. Boucher, N^o. 91) a number of panegyrics; he even dared to offer consolation to Ḥadjdjad when he learned of the death of his brother and his son in one day (*Kāmil*, ed. Wright, i. 291 *et seq.*). On the death of this powerful governor (in 95 = 714) he composed an official lament (Boucher, N^o. 225); but in reality he rejoiced at heart and after Sulaimān,

Ḥadjdjad's enemy, had become Caliph (96 = 715) he was able to give unrestrained expression to his joy.

Even before his acquaintance with al-Ḥadjdjad al-Farazdaḳ had begun to irritate another of the great men of the period, Muḥallab b. Abī Ṣufra [q. v.]. He jeered at the latter as an Azdite and a descendant of fire-worshippers (Boucher, N^o. 73). Muḥallab's son Yazīd had also to put up with all sorts of insults during his first governorship in *Khōiāsān* (82-85 = 701-704). But when Yazīd and his brothers escaped from Ḥadjdjad to prince Sulaimān, he began to moderate his language and after some hesitation went completely over to Yazīd's side when the latter became governor of *Khōiāsān* for the second time (end of 97 = 716). This did not, however, prevent him from again lampooning the Muḥallabids after their tragic end and singing the praises of their victors, notably Maslama b. 'Abd al-Malik, governor of 'Irāk. Maslama's successor in the 'Irāk, 'Omar b. Ilubaira imprisoned Farazdaḳ on one occasion (*Aghānī*, xviii. 141 *et seq.*; Hell, *Farazdaḳ's Lobgedicht*, p. 31 *et seq.*) and was lampooned by him as long as he remained governor. But when 'Omar was relieved of office in favour of *Khālīd* b. 'Abd Allāh al-Ḳasrī and badly treated, the poet dedicated laudatory verses to him (*Aghānī*, xix. 17). Al-Farazdaḳ is said to have already been on bad terms with *Khālīd* owing to a previous incident (*Aghānī*, xix. 60 *et seq.*). He satirised him as a South Arabian and son of a Christian woman and ridiculed also all his administrative measures. How this affected him has already been told in the article *ḌJARĪR*.

Al-Farazdaḳ's relations with the 'Umayyads were, as we have seen, not good at first. The first Caliph on whom he wrote panegyrics was 'Abd al-Malik. It was not till Sulaimān's reign (Boucher, N^o. 21), that he came to court and he seems to have been in particular favour with the latter. He also dedicated laudatory verses to the other Caliphs from 'Abd al-Malik to Yazīd II, as far as opportunity arose. This was no longer the case with 'Omar II. (for details see Hell, *Farazdaḳ's Lobgedicht*, p. 29). He hurled most bitter lampoons against Hishām b. 'Abd al-Malik, the last Caliph, whom he lived to see, and jeered at him for his avarice and also for his physical infirmities (Boucher, N^o. 63 and 113; *Naḳā'id*, p. 984, commentary on verse 20); quite a number of panegyrics on Hishām have, however, also survived from al-Farazdaḳ's pen.

Al-Farazdaḳ seems to have died in 114 (732-733) of pleurisy, and was buried in Baṣra in the cemetery of the Tamīm [*Aghānī*, xix. 44 *et seq.*; cf. the article *ḌJARĪR*].

After what has been said above there is little need to add much on the character of Farazdaḳ. His most prominent qualities were unbridled lewdness, cowardice, cruelty and ostentation. The latter seems towards the end of his life to have overcome even his cowardice; cf. his provocative attitude against *Khālīd* b. 'Abd al-Allāh al-Ḳasrī (*Aghānī*, xix. 29 *et seq.*). Apparently chivalrous actions also such as his intercession on behalf of a widow (*Aghānī*, xix. 36, 50) or the numerous cases in which he took the blood guilt of a stranger upon himself are really to be explained from his unbounded vanity. His cruelty was proved at the massacre of Greek prisoners

which Sulaimān once ordered in Meḍīna [cf. DJARĪR]. Some of the stories of his cowardice are most scathing (*Aghānī*, xix. 25 and particularly 29) as well as those of his lasciviousness. He plays a role in obscene stories in Arab literature similar to that of Abū Nuwās at a later period. *Aghānī*, xix. 35 *et seq.* is peculiarly characteristic of his lack of scruple in sexual matters. This defect in his character gave his rival Djarīr many an opportunity for well-merited scorn (*Naḡā'id*, p. 394 *et seq.*). In his favour it has been urged that he was all his life a faithful supporter of the house of 'Alī. But he really only showed this on one occasion, with regard to the then prince Hishām (for details see *Aghānī*, xiv. 78 and Brockelmann, *op. cit.*). He was usually content with showing his sympathy in a rather non-committal fashion (*Aghānī*, xix. 34, 47 *et seq.*; Ibn Khallikān, iii. 620). Nor must it be forgotten that on other occasions he shows sympathies which seem to be Khāridjī (cf. Hell in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, lix. 593), and which certainly can hardly be reconciled with real attachment to the 'Alid cause. How deeply he really was still sunk in Bedouin paganism may be seen from the fact that he hurls at Muḥallab the reproach that his ancestors had never worshipped Yaḡhūth and other Arab pagan gods but only the Persian pagan fire (*Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, lix. 600). Similarly he had little hesitation in weaving passages from the Ḳor'ān into an obscene passage (cf. Boucher, N^o. 188, p. 539 = text, p. 180, 2 from below). — The only verses that really came from his heart are those in which he expresses his terror of Ziyād. In *Aghānī*, xix. 12 *et seq.*, he gives a touching elegy on the death of one of his sons and afterwards says that the deceased was not worth his 'Abāya. That he appropriated verses by other poets (*Aghānī*, xix. 22) without hesitation may be excused from the practice of the times. — The Arabs make him die a kind of Antichrist (*Aghānī*, xix. 44), although he had fits of piety towards the end of his life and expressed lively fear of the next world in certain verses (*Kāmil*, p. 70, 6-10).

Although al-Farazdak particularly cultivated the satire and its opposite the panegyric and begging-poem, other kinds of poem are also found from his pen: *Kāmil*, p. 208 and Boucher, N^o. 119 as well as Hell (*Diwān*), N^o. 306 = (Tabarī, ii. 103, 11-20) are epic fragments while Boucher, N^o. 47 is a song on wine; the verses given in *Aghānī*, xix. 9-7 from below are simply obscene without personal reference; his laments have already been mentioned.

Al-Farazdak was particularly fond of making short poems as these were more effective and more readily preserved (*Aghānī*, xix. 33).

We may further add as regards the appreciation of Farazdak's poems by the Arabs that he was particularly esteemed by the Tamīm, while the Ḳais preferred Djarīr. His opponents do not seem to have ever seriously attempted his life, although they often treated him badly. Philologists in later times esteemed him on account of his immense vocabulary (*Aghānī*, xix. 48, 5 from below). A large number of his verses have become proverbial (*Aghānī*, xix. 15 *et seq.*).

FARD (A.; plur. *af'ūd*) = single, unique, without an equal etc. The word is a technical term in various branches of knowledge.

In theology it designates God as the One, whom there is none like. In the Ḳor'ān and in the sayings of Muḥammad that have been transmitted in tradition *al-fard* does not appear as an attribute of God. Al-Azhari on this account disapproves of the application of the word to Allāh. But it is possibly simply a paraphrase of the Ḳor'ānic (*huwa Allāhu*) *aḥad*, which has the meaning "unique" in this passage only if at all.

In poetry *fard* means an isolated verse.

In Tradition *fard* is synonymous with *gharīb muflak*. This is the term applied to a tradition, whose chain of transmitters is represented in the second link only by one of the Ṭabī'ūn (members of the first generation after Muḥammad).

In Arabic grammar *fard* (with *mufrad* and *wāhid*) is a name for singular.

Bibliography: Muḥammed A'lā, *Dictionary of Technical Terms*, ii. 1087, 1107; Lane, s. v. (A. SCHAADE.)

FARD means that which is strictly prescribed and obligatory, the omission of which will be punished while the execution will be rewarded. According to the Ḥanafī school *fard* means that which is regarded as duty on the basis of cogent arguments; *wājib* (i. e. necessary) on the other hand is that which is considered a duty by the fakihs on grounds of probability only. According to the Shāfi'is and other *Fikh*-schools *fard* and *wājib* are synonyms. The law distinguishes *fard al-'ain*, to which every one is bound and *fard al-kifāya* (or: *'adu 'l-kifāya*), in which it is only demanded that a sufficient number of Muslims should fulfil the religious duties concerned (as, for example, the performance of the common *ṣalāt* in the mosque and the waging of the holy war). Cf. also the article **FIRDE**.

FARGHĀNA, Russ. *Ferganskaya oblast'*, a territory in Russian Turkestan, in the valley of the Sir-Daryā. The name strictly is only applicable to the valley itself, bounded in the north by the Cōtkal range, in the east by the mountains of Farghāna, in the south by the Alai range; in the west the boundary is less sharply defined by the approach of the mountain chains to the river bank, which causes the river to alter its course, which in Farghāna is predominantly southwesterly, first to a western then to a north-

western direction. Between the mountains and the stream there is here, particularly on the south bank, an open space. It is only on this side that the Farghāna valley is connected by a natural road with other lands, and therefore, as Bābur notes, only accessible to hostile attacks all the year round at this point. On the sources of the river and their junction in Farghāna cf. the article SIR-DARYĀ. Under Russian rule, the mountain valleys of the north, northeast and south, inhabited almost exclusively by nomads, have been united with the Farghāna valley to form one administrative district, just as in the ivth = xth century when the Arab geographers reckoned the Čotkal valley (Arab. Djdghil) as belonging to Farghāna. The administrative district of Farghāna has an area of 40,800 square miles of which only 10,200 belong to the valley proper and of these again only 4000 belong to the land irrigated by the river. In 1897, the population was 1,525,136 (now nearly two million) of whom by far the greater number live on the land irrigated by the river. Unlike all other lands of Russian Central Asia, Farghāna suffers on this account from want of land and over-population; there are only about 1.8 acres of irrigated land to each inhabitant and about 10 acres to each landowner.

Our oldest notices of Farghāna are due to the Chinese envoy Čang-k'ien (c. 128 B.C.). In these and the other early Chinese accounts the country is usually called *Tu-yüan*; the name Farghāna (the oldest Chinese transliteration is *P'o-lo-na*, later *Pa-han-na*, *P'o-han* and *Fei-han*), only appears in the fifth century A. D. Even the Chinese found an agricultural population here; it numbered only about 60,000 families (about 300,000 people); there were 70 "towns" (apparently villages). The Chinese claim to have brought their iron industry, as well as the art of making articles of gold and silver, to Farghāna; as Hirth suggests, the *sericum ferrum* mentioned by Pliny was possibly exported from Farghāna. On the other hand the Chinese first became acquainted with the vine and the lucerne (as horse-fodder) in Farghāna. It has been suggested by several Sinologists, including Hirth, that the cultivation of the vine was first introduced into Central Asia by the Greeks and that the Chinese *p'u-l'au* is derived from the Greek *βότρυς*. The name, however, could only have reached China through the intermediary of Persia, which seems out of the question, as no similar Irānian word has yet been shown to exist and besides Strabo (Chap. 73) expressly says that the Greeks had found the vine cultivated everywhere in Central Asia from Hyrcania eastwards. Farghāna was little affected by Graeco-Bactrian culture, which is evident from the fact that the use of coins was still unknown there in the second century B.C.; whether a different state of affairs existed later and whether coins were struck at all in Farghāna in the pre-Muhammadan period as they were in Samarkand, Bukhārā and Khwārizm, is not yet definitely known. Central Asia owed to the Graeco-Roman West, apart from the undeniable influence of Greek art, its glass industry which was still fairly important in the early centuries of the Hīdjra; the progress of this industry from the west through Irān and Central Asia may also be traced in the language (Greek *βύρραλος*, Pers. *billūr* and *bulūr*, Chin. *pi-lu-li* and *po-li*); no mention is made of the development of this industry in Farghāna in the

authorities, but its products at least were common in Farghāna also at a later period as the excavations conducted in Akhsikath in 1885 have shown. Farghāna is not mentioned by the classical geographers; very little of what they tell us about the upper course of the Jaxartes can be reconciled with the later and more accurate accounts of the Arabs; the name Aristicis of the people mentioned by Ptolemy seems, for example, to correspond to the name of the river and district of Ūrat in Osh (cf. below) (W. Tomaschek, *Sogdiana*, p. 48).

As early as 104 and 101 B.C. the Chinese undertook campaigns against Farghāna but it is only the history of the centuries immediately preceding Islām that is known with some certainty from Chinese sources. According to the *Pei-shi*, the statements in which refer mainly to the vth century A. D., the capital of the country had a circumference of only 4 *li* (about a mile); the king's throne was in the shape of a golden ram; his army was several thousands strong. According to the *T'ang-shu* (which comes down to 754 A. D.) there were 6 large and about 100 small "towns" in the country; the same authority says that the same dynasty had ruled the country without interruption from the third to the viiith century A. D. The king of the country was slain between 627 and 649 in a battle with the Turks whereupon a Turkish dynasty seized Farghāna; a brother of the late king was only able to hold out in a portion of the country. The town of Kāsān (Chin. *A'o-sai*) is mentioned as the residence of the Turkish ruler; the native ruler lived in the town of Hu-Men(?). When after the collapse of the great Western Turkish empire (658) the country was organised as a Chinese province for a brief period, Kāsān was the capital of the whole country; at a later period the native dynasty seems to have been utterly uprooted by the Turks, for a Turkish ruler (Arslan Tarkhan) is mentioned in 739 as ruler of all Farghāna. The native dynasty seems to have lost its importance long before this for in 630 Huan-Čuang found no single ruler of Farghāna but several who were fighting with one another; the land had been for some decades previously in the condition in which this traveller found it. In the latest Chinese source, the *T'ang-shu*, Akhsikath (Chin. *Si-Kien*) appears as the capital of Farghāna as in Balādhuri (ed. de Goeje, p. 420); on the other hand the majority of the accounts of the Arab campaigns of conquest regard Kāsān as the capital (Ya'qubī, *Geogr.*, p. 294; do., *Hist.*, ii. 478; Ṭabarī, ii. 1257, 11). At the present day the name Kāsān is borne by two towns adjacent to one another, Yukari-Kāsān (Upper Kāsān) with about 4700 inhabitants and Karasu-Kāsān with about 8000; somewhat to the north of Yukari-Kāsān lie the ruins of an old fortress (only about 6½ acres in area) which are called Mugh-Čurghān ("the fortress of the fire-worshippers") by the natives (on these ruins cf. A. Brianow in the *Protokoli Turk. kružka Ljub. arkhologii*, iv. 142 et seq.).

The Arabs found practically the same conditions existing in Farghāna as in the other parts of Mā warā' al-Nahr. The landowners or knights (*dihkān*, Arab. plur. *dahāqin*) formed the ruling class; the king was no more than the first knight in his country and was called like them *dihkān* (*Hudūd al-'Ālam*, Cod. Tumanskij, f. 23b); he also bore the Irānian regal title *İkhshīd* (cf. particularly Ṭabarī, ii. 2142, N. k.).

The rulers of Farghāna offered a stubborn resistance to the Arab conquerors; more than a century was to pass between the first campaign under Kūtaiba b. Muslim (94 = 712-713) and the final subjection of the country. In the year 96 = 715 Kūtaiba rebelled in Farghāna against the Caliph Sulaimān and was slain by his own soldiers; according to Narshakhi (ed. Schefer, p. 57) his tomb was in the village of Kākḥ, according to Djamāl al-Korashī (in Barthold, *Turkestan* etc., i. 148) in the village of Kulidj (the two names seem to be identical and the difference to be due to corruption in the manuscripts). At the present day the tomb of the "Imām Shaikh Kūtaiba" is still pointed out in Djalāl-Kudūk, a community (*wolost*) now belonging to the circle of Andidjān, and formerly to that of Ōsh (*Protokoli Turk. Kraška* etc., iii. 4); but as far as is known it has never been described or reproduced. According to the opinion of the Arabs this district was "in China" (cf. the verses by the poet Ibn Djamāna al-Bahlī in Balādhuri, p. 204).

Kūtaiba had (probably in 94 A.H.) left 'Isām b. 'Abd Allāh al-Bahlī behind in Farghāna (Ṭabarī, ii. 1440, 7); a ravine was called after this 'Isām; it lay on the road from Farghāna to Kāshghar (Ṭabarī, ii. 1276, 2) or in the district (*rustāk*) of Isfara (Ṭabarī, ii. 1440, 12). After Kūtaiba's death the Arabs seem to have been driven out of Farghāna, for the ruler of Farghāna was able in 103 = 722 to offer the "ravine of 'Isām" to immigrants from Soghd (Ṭabarī, ii. 1440); but no mention is made in the historians of the defeat and expulsion of the Arabs. According to a later story (first given by al-Korashī, in Barthold, *Turkestan* etc., i. 148) Muhammad b. Djarir fell at the head of 2700 "companions and their followers" (*ṣaḥāba wa tābi'un*) in battle against the unbelievers at Safid-Bulān or Isfid-Bulān in Farghāna (in the neighbourhood of Kāsān) under the Caliph Ōthmān; the same story is told with some alterations in a work popular throughout Central Asia, presumably translated from the Arabic into Persian and thence into Turkish (*Protokoli Turk.* etc., iv. 149 et seq.).

Naṣr b. Saiyar was the first to be able to send a governor to Farghāna again (121 = 739, cf. Ṭabarī, ii. 1694, 2); but on this occasion again Arab rule did not last long. From Ya'qūbī (ii. 465) it may be assumed that the ruler of Farghāna had retired to Kāshghar; but even there he was defeated in the reign of Maṣṣūr (136—158 = 754—775), had to sue for peace and pay a large sum. His envoy was thrown into prison for his firm refusal to adopt Islām and only released in the reign of al-Mahdī (158—169 = 775—785). An army was sent by al-Mahdī against Farghāna under Aḥmad b. Asad; Kāsān is again mentioned in connection with this expedition as the residence of the king, who apparently had won back his country in the interval (Ya'qūbī, ii. 478). In the time of Hārūn al-Rashīd, during the governorship of Ghitrif b. 'Aṭā (175-176 = 792-793), 'Amr b. Djamāl was ordered to drive the army of the Djabghū (probably the king of the Turkish Karluk) out of Farghāna (Gardizi in Barthold, *Turkestan* etc., ii. 207). Under al-Ma'mūn (198—218 = 813—833) an army had once more to be sent against the rebellious inhabitants of Farghāna; at the command of this Caliph the administration of certain parts of Mā warā' al-Nahr, including Far-

ghāna, was entrusted by the governor Ghassān b. 'Abbād (203—205 = 819—821) to the Sāmānid family. The Sāmānid Nūḥ b. Asad (died 227 = 842) was the last governor under whom parts of Farghāna (Kāsān and Uras') had to be reconquered on account of the apostasy of their inhabitants from Islām (Balādhuri, p. 420). When the native dynasty was finally overthrown is not related. In the reign of Mu'tasim (218—227 = 833—842) there were men from Farghāna (*Farāghina*) in the Caliph's bodyguard (Balādhuri, p. 431). In 224 = 838-839 Farghāna was visited by a severe earthquake (Gardizi in Barthold, *Turkestan* etc., i. 3).

The Farghāna of the Sāmānid period is described in great detail by the Arab geographers. The focus of the industrial and commercial life of the country seems at this time to have been transferred to the lands south of the Sir-Daryā. The oldest Arab geographers, like Ibn Khurdādhbih (ed. de Goeje, p. 30), make the high road from Western Asia to the eastern boundaries of the Caliph's dominions cross the Sir-Daryā at Khodjand, thence follow the right bank as far as Akhsikath, thence on across the river to Kūbā, Ōsh and Ūzgand. On the other hand Iṣṭakhri regards the road through the lands lying south of the Sir-Daryā as the main road; on this route lay Kand (in Bābur, ed. Beveridge, f. 4^a, Kand-i Bādām, the modern Kān-i Bādām), Sōkh (the modern Sarī-Kurghān; Sōkh is now the name of a mountain village on the same river but considerably farther south); Rishṭān (still bears the same name), Zandarāmish and Kūbā (the modern Kūwā). There was only a bye-road from Sōkh via Khōkand (the later capital) to Akhsikath. Akhsikath was still considered the capital (*kaṣaba*), Kūbā only the second town (Iṣṭakhri, p. 333); but Muḥaddasī (p. 272), says that Kūbā is larger and more beautiful than Akhsikath and ought really to be considered the capital. The third town in importance was Ōsh on the frontier; there was a large *ribāṭ* (fortified military station) there, into which warriors of the faith poured from all sides (Muḥaddasī, *loc. cit.*); the movements of the Turks were watched from the hill near Ōsh. Ūzgand was about 1/3 smaller than Ōsh; it is called the "town of the Dihkān Djūr-Tegīn" (this is the proper reading) by Ibn Khurdādhbih (p. 30) and Kudāma (p. 208), so that it was probably the residence of a Turkish prince; Čūr-Tegīn is the modern name of a district east of the Yasi pass (Petrovski in *Zapiski vost. otd. Arkh. Obshch.*, viii. 357). The towns of Biskand and Salāt were also regarded as "gateways to the Turks" by which one came through the district of Miyān-Rūdḥān (between the Narin and the Kara-Daryā; the modern Iki-sū-arāsu); the district was called Haft-Dih "seven villages" and had, as Ibn Hawqal (p. 396) says, been taken from the Turks only a short time before; it is apparently the same district as was later called Yitikand (or Djitikand) (*Ta'rikh-i Rashidi*, transl. E. D. Ross, p. 180).

The land was divided into several districts (*kūra*, pl. *kuwar*); besides Miyān-Rūdḥān, Biskand and Salāt, Ibn Hawqal (p. 395 et seq.) mentions the following districts, Upper Nasyā with Sōkh, Khōkand and Rishṭān, Lower Nasyā (to the east) with Marghinān, Zandarāmish and Andukān (the modern Andidjān), Asbara (Isfara) in the plain and in the mountains, Nakād in the mountains, with the town of Miskān (7 farsakh from Kūbā),

Djīdghil (in the valley of Čotkal, with the town of Ardlānkath) and Ūrast (near Ōsh); several smaller districts are also mentioned. Muḳaddasī, who uses the word *kūra* in another sense and makes the whole of Farghāna one *kūra*, divides the country into three parts, viz., the land between the Narin and the Kara-Daryā, the land south of the Sir-Daryā and the land to the north of the latter river; it is apparently on this that the division of all the towns of Farghāna into Miyānrūdhiya, Nasā'iya (from Nasyā) and Wāghiziya is based, although some towns south of the Sir-Daryā are erroneously reckoned by Muḳaddasī among the Miyānrūdhiya (e. g. Zandarāmish) or among the Wāghiziya (e. g. Awwāl and Miskān). Khailām (in the *Hudūd al-'Ālam*, f. 9^b, Khatlām, in Muḳaddasī, Khairālām) was the chief town in Miyānrūdhiya, it lay on the Narin (the river itself is called Rūd-i Khatlām in the *Hudūd al-'Ālam*), and was the birthplace of the Sāmānid Abu 'l-Ḥasan Naṣr, the eldest son of Aḥmad b. Asad (Iṣṭakhri, p. 334); according to Muḳaddasī (p. 271) "a king" probably the same Aḥmad b. Asad built the town of Naṣrābād in this district for his son Naṣr. Of the larger towns of the present day only Marghinān (in Muḳaddasī, p. 272) is mentioned as a small town; nothing more than the names of Khōḳand and Andukān are given. According to Muḳaddasī there were in all 40 places in Farghāna with Friday mosques. As Iṣṭakhri (p. 333) notes the villages in Mā warā' al-Nahr were nowhere so large as in Farghāna; it sometimes happened that a village stretched for a whole day's journey on account of the number of its inhabitants and the extent of their fields and pastures.

The mountains of Farghāna yielded gold, silver, mercury (according to Muḳaddasī, p. 326, 10 at Kubā), petroleum, turquoises (at Khōḳand, cf. Muhammad Bakrān in Barthold, *Turkestan*, i. 81), iron, copper, lead and sal-ammoniac (at Ūzgand, cf. *ibid.*). Ibn Hawḳal (p. 398, 1) mentions tarragon as a special feature of Farghāna, the seed of which was exported to all countries and an article called *kūlkān* or *kilkān* (cf. *Bibl. Geogr. Arab.*, iv. 344; according to the passage there quoted from Vullers' *Lexicon* it was a black wood, which was used as a remedy for certain diseases, notably worms in the intestines). There were deposits of coal at Isfara; the price of coal which even in those days was used as fuel, was (Iṣṭakhri, p. 334) 1 dirhem for three assloads (*wikr*, plur *awḳār*); as an assload contained at least 60 kg., this was very cheap; at the time of the Russian conquest one pud (16,38 kg.) was being sold at 32 kopecks (about 1½ dirhems) and even today the price of coal is immeasurably higher than in the Sāmānid period. The manufacture of iron, which had been introduced by the Chinese, no longer existed; according to Muḳaddasī (p. 325, 15) Turkish slaves, white clothstuffs, cuirasses and swords, copper and iron were exported from Farghāna and Isfīdjāb; the last four articles must refer not to Isfīdjāb but to Farghāna only. Under Sāmānid rule the land developed considerably; according to Ibn Khordādhbih (p. 38, 12) the revenue from taxes in Farghāna was only 280,000 dirhems, in Ibn Hawḳal's (p. 343, 5) time it had risen to a million. Islām seems by this time to have held undisputed sway; whether there were Christians, Manichaeans and fire-worshippers here,

as in Samarḳand, at this time is not related. As everywhere in Mā warā' al-Nahr Hanafis predominated; there were also monasteries (*khawānikh*) of the Karramiya (Muḳaddasī, p. 313, 12). A few Biblical legends had been located as early as this time in Farghāna; the "tomb of Job" was shown (Muḳaddasī, p. 46, 14); this apparently refers to the medicinal spring (about 55 miles east of Andījān) still known by the name Maḍrat-Aiyūb.

No buildings of the Sāmānid period seem to have survived; N. Wesselowski however discovered an Arabic inscription of the year 329 = 940-941 at Ōsh in 1885 (*Otlet Imperatorskoi Arkheologičeskoj Kommissii za 1882—1888 godi*, p. lxxiii.).

Like all other parts of Mā warā' al-Nahr, Farghāna was conquered towards the end of the 10th = 11th century by the Turkish Ilak-Khāns or Karākhānids. Rulers of this dynasty struck coins in Ūzgand (particularly common), Akhsikath, Haftdiḥ, Kāsāu and Marghinān; the land (Farghāna) is frequently mentioned on the coins in place of the mint-town, as was also the case with the Sāmānid coins. In the historical sources of this period Ūzgand is mentioned with particular frequency, first as the residence of the king of all Mā warā' al-Nahr (cf. Barthold, *Turkestan*, ii. 282 *et seq.*) and later as the residence of a local chief. As the coins show, Farghāna during this period, when it had no king of its own, belonged sometimes to Mā warā' al-Nahr and sometimes to Kāshghar. In the years 482 = 1089 and 483 = 1090 Sulṭān Malik-Shāh penetrated to Ūzgand. After the battle of 536 = 1141 Farghāna, like the other lands of Mā warā' al-Nahr, had to submit to the Gürkhan of the Kara-Khitai; but following their usual custom these conquerors left the earlier dynasty and institutions unchanged. In the second half of the 11th = 12th century Samarḳand seems to have been conquered by a king of Ūzgand; coins of Ibrāhīm b. Ḥusain were struck in Ūzgand from 560 = 1165 but in Samarḳand only after 574 = 1178-1179. After the death of this ruler his son Ōṭmān ruled in Samarḳand only; Ūzgand belonged to another ruler Djalāl al-Dīn Qadr-Khān. Soon after 609 = 1212 the southern part of Farghāna was conquered by Muḥammad Khārizmshāh with the other parts of Mā warā' al-Nahr; the northern part with Kāsān and Akhsikath had to be left by the Khārizmshāh for his rival Küčlük, king of the Naimān. In the Chinese annals Ho-si-mai-li (probably = Ismā'il) is mentioned as the king of Akhsikath and Kāsān, who submitted to the Mongols in 1218. During Mongol supremacy Farghāna was one of the possessions of the house of Čaghatai [q. v., i. 811^b *et seq.*], but, like many other districts in Mā warā' al-Nahr, had also a local dynasty which, like its predecessors, had its capital in Ūzgand; this town had been granted by the Great Khān Möngke to Arslān-Khān, king of the Karluḳ (Djuwaini in Barthold, *Turkestan*, i. 108). Djamāl al-Kurashī (*ibid.*, p. 149) mentions Ilči-Malik as Wālī of Farghāna; the tomb of his son Kuṭb al-Dīn Satilmish Malik Shāh, who died in 665 = 1266, still stands in Ūzgand. In spite of its local dynasty Ūzgand was of some importance to the central government under the Kara-Khitai and Mongols; Djuwaini says that the treasures (*khazānahā*) of the Gürkhan were there; according to Waṣṣāf (Indian edition, p. 67 at the foot) it was there also that Burāk-Khān [q. v., i. 794^b *et seq.*] ascended the throne and

appropriated the treasures (*khazāyin*) of Alghū and Urghāna (cf. ČAGHATĀI, i. 812^b *et seq.*).

Several buildings, in addition to a considerable number of tombstones have survived in Ūzgand from the period vith—viiith = xiith—xivth centuries; among them is the gateway of a beautiful sepulchral mosque with an inscription where the date of the death of the individual buried there is given as 588 = 1192; beside it there is a second mausoleum and a minaret about 60 feet high; legends only have survived among the present day inhabitants regarding the origin of these tombs; according to some the saint Burhān al-Dīn Kīlīdj is buried here with his parents (this story is also mentioned by Djamāl al-Kurashī in Barthold, *Turkestan*, i. 149) others say these are the tombs of "two brothers", the kings Īlik-i Mādī and Sandjar-i Mādī; in reality the latter's (died 552 = 1157) tomb is in Merw; "Īlik-i Mādī" was Nār b. 'Alī (died 403 = 1012-1013) the conqueror of Mā waiā' al-Nahr who according to the historians was actually buried in Ūzgand, although his tomb has not survived.

Kubā is not mentioned after the ivth = xth century; why the prosperity of the town was of such short duration is not known; the story of the "five brothers of Kubā" and their fight with Maḥmūd of Ghazna, given by Dawlat-Shāh (ed. Browne, p. 174 *et seq.*) with reference to Naṣīr al-Dīn al-Tūsī is certainly legendary. Besides Ūzgand, Marghīnān had attained considerable importance by this time; to Yāqūt (iv. 500, from Sam'ānī) Marghīnān is "one of the most famous of cities"; Rīshṭān, which was of incomparably greater importance in the ivth = xth century, now appears as a mere village in the district of Marghīnān (Yāqūt, ii. 781); the author of the *Hidāya*, for example, (died 593 = 1197) called himself *Marghīnānī* although he really was born in Rīshṭān. Towards the end of the viith = xiiith century Farghāna was given a new capital, Andīdjān founded by Kaīdū and Duwā (cf. i. 814^a), which corresponds to the Andukān of the Arab geographers; the new form appears first in Djamāl al-Kurashī (in Barthold, *Turkestan*, i. 149 *et seq.*), although the old is still found in the *Zafar-Nāmah*, (Ind. ed., i. 263 *et seq.*); in Sulṭān 'Omar Shaikh's Uighur document of the year 873 = 1469 (published by Melioranski in the *Zapiski Vost. Otd. Arkh. Obshch.*, xvi. 01 *et seq.*) the town is called Andāgan.

An Arabic inscription of the Karākhānid period dated 29th December 1041 in three cras, the Muḥammadan, Sāsānian of Persia and the Greek (*Rūmī*), i. e. Syriac-Christian, still exists in the southern part of Farghāna in the ravine of Wārūkh (south of Isfara) (*Protokoli Turk. Kruška Ljub. Arkh.*, viii. 46 *et seq.*).

Timūr and the Timūrids had often to fight for the possession of Farghāna with the rulers of the modern Chinese Turkestan; it is evidence of the close connection between Farghāna and Chinese Turkestan that amongst other things in both countries the smallest division for purposes of taxation (which as communities corresponded roughly to the *rustāk* of the older period) was called *urūn* (*Bābar-Nāma*, ed. Beveridge, f. 131^b), while in the other parts of Mā waiā' al-Nahr the word *tūmān* was used as in Persia. 'Omar Shaikh, a descendant of Timūr, ruled Farghāna as an independent kingdom from 873—899 = 1469—1494.

On his successor and the conquest of Farghāna by the Uzbegs cf. BABER (i. 547^b *et seq.*).

In Bābur's time there were eight cities in Farghāna (exclusive of Khōdjand, which Bābur also includes in Farghāna); of these two (Akhsī — the form Akhsīkath was only known to Bābur from books — and Kāsān) north of the Sir-Daryā and six to the south of it; of the latter he describes Andīdjān, Ūsh, Marghīnān and Isfara; Khōkand is nowhere mentioned by Bābur as a town although Djamāl al-Kurashī (in Barthold, *Turkestan*, i. 148 *et seq.*) says that the tomb of a Muslim saint, the Imām 'Abd Allāh b. 'Alī, a brother of the Imām Muḥammad al-Bākīr, was there. The name itself is written Khūkhān by Bābur (l. c., f. 25^a and 103^b) as the name of a district (*urūn*); in the xviiith century (e. g. in the *Tuhfat al-Khānī* of Muḥammad Wafā'ī Kamīnegi, MS. of the Asiatic Museum c 581^b, f. 50^a) the form Kūkhān appears and in the older Russian notices Kokan; the form Khōkand, Russian Kokand was only restored in the xixth century through literary tradition. In the capital Andīdjān the Turkī language was already predominant in Bābur's time; there was no one in the city or in the market-place who did not understand it; Bābur even says that the dialect of Andīdjān was identical with the Eastern Turkī literary language created by Mīr 'Alī Shīr Nawā'i. On the other hand "Sartish" was still spoken in Marghīnān, i. e., according to the idiom of the time, Persian. Of the products of Farghāna Bābur particularly esteems various kinds of fruits; besides orchards there were flower gardens, which stretched along both sides of the river from Andīdjān up to Ūsh. The Takht-i Sulaimān mountain at Ūsh is mentioned by Djamāl al-Kurashī under the name Barāka, by Bābur (f. 2^b) as Barākūh; Bābur makes no mention of the localisation here of Solomonic legends (he only mentions that there were many *hadīths* on the advantages of Ūsh), but this localisation must have taken place by his time, for Djamāl al-Kurashī says that the tomb of the vizier Aṣaf b. Barākhyā [q. v., i. 476^b] was not far from the mountain. During the last years of the reign of 'Omar Shaikh a rock of a red and white colour was discovered on this mountain, from which knife-handles and other articles were made; a tree called *tābulghū* (*Spiraea crenata*) also grew in the mountains which Bābur (f. 5^a) thought was found nowhere else (in reality it also grows in South Russia), the wood of which was used for making bird-cages, quivers etc. As to the mines and mining we are only told that turquoises and iron are found in the mountains; no mention is now made of the manufacture of arms nor of the coal-mines. The revenue of the country "with good government" was sufficient to maintain an army of 3000—4000 men.

Farghāna from the xth = xvith century belonged to the Uzbeg kingdom. Andīdjān is sometimes mentioned as the residence of one of the many minor rulers of the Shaibānid dynasty; in the xith = xviith century the land was for the most part in the possession of Kīrghīz Sulṭāns. "Farghāna" had even been replaced by "Andīdjān" as the name of the country; in the *Bahr al-Asrār* of Maḥmūd b. Walī (Cod. India Office, 575, f. 102^b) the following note is made on the word Farghāna, *ki alyawm ba Andīdjān mashhūr ast*. Towards the end of this century, after the collapse

of the Uzbek kingdom, authority in Farghāna, as in Chinese Turkestan and at a later period in Tāshkent, passed to a number of Khōdjas who lived in Cādak north of the Sir-Daryā; this place is mentioned as early as the ivth = xth century (Muḥaddasī, p. 262, f., where Čarak must be a mistake for Cādak). The power of these Khōdjas was destroyed by Shāhrukh Bī who succeeded in founding an independent Uzbek kingdom in Farghāna with Khōkand as capital: according to Mulla Niyāz Muḥammad (*Tā'rikh-i Shāhrukhī*, ed. Pantusow, p. 21) this took place in 1121 = 1709-1710. On this kingdom, which lasted till its overthrow by the Russians in 1876, cf. the article KHŌKAND. During this period also the name "Farghāna" seems only to have been known to people with a literary education; 'Abd al-Karīm Bukhārī (ed. Schöfer, p. 43 *et seq.*) for example says that the kingdom of Khōkand in earlier times (*dar awwal*) was called "Farghāna". The same historian mentions "Farghāna and Takht-i Sulaimān" as the seventh town in the kingdom (after Khōljand, Tāshkent, Khōkand, Andidjān, Namangān and Marghīlān (Marghīnān) which shows that the name Farghāna was chiefly applied to the town of Osh.

Since the establishment of Russian rule a complete transformation in the economic conditions has been effected in Farghāna, particularly through the rapid development of the cultivation of cotton. Previously the land was only able to export a very small quantity of raw material after supplying its own wants; since the introduction of American varieties this article has become of importance for the Russian market; about 115 million kg. are annually exported, which supply one third of the amount required by the Russian cotton mills. The cultivation of cotton now brings the country an income of about 40 million roubles; this influx of money was naturally followed by a rise in all prices and a severe economic crisis, which has not been without evil results to the morale of the people; the rising in 1898 was unmistakably influenced by this crisis. The silk-trade is next in importance; it is not mentioned by the geographers of the middle ages and seems only to have developed in Farghāna in the xviiith century under the influence of China, as in Samarkand under the influence of Persia. In 1889 about 245,000 kg. of raw silk were exported, valued at 3 million roubles; the amount produced is now about 424,400 kg., but prices have sunk so that this industry now yields only about 2 million roubles. The growth of cereals has declined with the development of cotton so that the country can now only meet its requirements by imports from the district of Samarkand. Little has yet been done to develop other branches of industry or the mines and the deposits of coal. Means of communication are still very unsatisfactory, although since 1899 the country has been traversed by a railway as far as Andidjān; in 1912 a branch line from Khōkand to Namangān was also opened; there is an almost entire lack of good roads and strong bridges are particularly wanted. The former capital Khōkand still forms the focus of the industrial and commercial life of the country; it is now a city with about 113,000 inhabitants; Namangān, first mentioned as a village in the xviith century, is now the second town in the country with over 70,000 inhabitants. The town of "New Margelan" now called Skobelev, founded by the Russians, the

residence of the military governor, has a population of only 12,000. This relatively thickly populated territory is of less consideration for purposes of colonisation than the other parts of Russian Turkestan; 17 Russian villages of which six are in the Farghāna valley proper, have been founded in Farghāna.

A lecture by Prof. A. Wojejkow to the Imperial Russian Geographical Society on the 15th = 28th November and 27th November = 10th December 1912. (W. BARTHOLD.)

AL-FARGHĀNĪ is the astronomer Alfraganus of the middle ages. His full name was ABU 'L-'ABBĀS AḤMAD b. MUḤAMMAD b. KATHĪR AL-FARGHĀNĪ, i. e. born in Farghāna in Transoxania but there is no general agreement as to his name. The *Fihrist* has only Muḥammad b. Kathīr, Abū 'l-Faradī only Aḥmad b. Kathīr, Ibn al-Kifī distinguishes two persons, Muḥammad and Aḥmad b. Muḥammad, father and son, but it is very probable that all refer to one and the same individual, an astronomer who lived in the reign of the Caliph al-Ma'mūn (died 833) and was still alive at the death of al-Mutawakkil in 861, for Abū 'l-Maḥāsīn and Ibn Abi Ūsāibi'a mention an Aḥmad b. Kathīr al-Farghānī who was sent to Fusṭāt by the Caliph Mutawakkil in 247 (861) to superintend the erection of a nilometer. His *magnum opus* which exists in Arabic in Oxford, Paris, Cairo and in the library of the Princetown University, bears various titles: *Djawāmi' 'ilm al-nuǧūm wa 'l-harakāt al-samāwiya*, *Uṣūl 'ilm al-nuǧūm*, *al-Mudkhāl ilā 'ilm ha'at al-aftāk* and *Kitāb al-fuṣūl al-thāthīn*. It was translated into Latin by John Hispalensis and Gerard of Cremona. There is also a Hebrew translation by Jacob Anatoli (according to Steinschneider) which exists in Berlin, Oxford, Munich, Vienna etc. John Hispalensis's Latin translation was prin-

ted at Ferrara in 1493, Nurnberg 1537 and Paris 1546. Jakob Christmann made a Latin translation from Anatoli's Hebrew version, which was published at Frankfurt a./M. in 1590. Jacobus Golius published the Arabic text with a Latin translation and a full commentary in 1669 at Amsterdam under the title: *Muhammedis fil. Ketiri Ferganensis, qui vulgo Alfraganus dicitur, Elementa astronomica, Arabice et Latine*. Besides this work, which attained a greater circulation in the west before Regiomontanus than that of any other Arab astronomer because it was fairly short and in a form readily intelligible, al-Farghānī wrote two works on the astrolabe, *al-Kāmil fī 'Asṭurlāb* and *fī san'at al-asṭurlāb*, which still exist in Arabic in Berlin and Paris.

FARHĀD u **ŠHĪRĪN**, a celebrated pair of Persian lovers, and hence the title of a romantic poem; several poets (cf. Ethé, *Grundriss der Iran. Phil.*, ii. 246 *et seq.*) have written poems with this title. Farhād the architect was the unfortunate rival of Khusrāw — there are also several poems called *Khusrāw u Šhīrīn*; Nizāmī [q. v.] was the first to write on this latter subject —, who had almost bored through the mountain Bisutūn to win the hand of his beloved, when he fell dead on being falsely told that Šhīrīn was dead. Turkish poets, notably Mir 'Alī Šhīr have also dealt with the same subject.

Bibliography: Ethé, op. cit.; Gibb, *A History of Ottoman Poetry*, i. 321 *et seq.* and elsewhere (see Index).

FARHANG, FERHENG (Pehl. *farhang* "education, instruction") the name given by the Persians to dictionaries of their language. The four principal ones are the *Farhang-i Dīkhāngīrī* begun in 1005 (1597) by order of Akbar by Dījamāl al-Dīn Ḥusain Indjū, an 'Alid of Šhīrāz, and finished in 1017 (1608) in the reign of Dīkhāngīr, the *Farhang-i Rashīdī* of 'Abd al-Rashīd, an 'Alid of Tatta, who was still alive in 1069 (1618); the *Farhang-i Šho'ūrī*, printed at Constantinople in 1155 = 1742; the *Farhang-i Nāšīrī* (*Andjuman-ā'ūi*) of Rīdā Kulī Khān lithographed at Teherān in 1288 = 1871. — Farhang is also the name of a recent Persian poet, Mirzā-i Farhang (Abu 'l-Kāsim) who lived at Šhīrāz and died about 1892; he was the fourth son of Wišāl (Mirzā Kūčak) and was 31 years old in 1295 (1878). He was made poet-laureate to Mu'ayyid al-Dawla Tahmāsp Mirzā, governor of Fars.

FARĪD AL-DĪN, an epithet of 'Aṭṭār [q. v., i. 513^b *et seq.*] and of Šhakar Gandj [q. v.]

FARĪDA (A.), Plur. FARĀ'ID, q. v., p. 56^b *et seq.* and also the article FIRDE.

FARĪDKŌT. A town and state in the Pandjāb surrounded almost entirely by the British district of Fērōzpūr. The town was founded about 600 years ago and is named after the saint Bābā Farid Šhakargandj, whose shrine is at Pākpattan near by. He died in 664 (1265). A state was founded here by a Sidhū Djaṭ family in Akbar's time, and the Rādjas adopted the Sikh religion, which is now predominant among the cultivating classes. The Muhammadan population mainly Rādjpūts, Djaṭs and Arains, is about one fourth of the whole. Area 642 sq. m. Population 124,912 in 1901. The state was saved from absorption by Kandjit Singh through the advance of the British power in the early sixteenth century, and it has since been maintained as a feudatory area. The present Rādja is a minor.

(M. LONGWORTH DAMES.)

FARĪDPŪR district of India in Eastern Bengal, lying in the delta of the Ganges. Pop. (1911), 2,121,914, of whom 62% are Muhammadans. Here was the birthplace of Ḥādjdjī Šharī'at Allāh, the founder of the reforming sect of Farā'īdiya [q. v.] or Farāzī and of his son Dudū Miyān, who caused some trouble to the British Government in the middle of the 19th cent. The sect is still numerous in Farīdpūr. The town (pop. 11, 649) takes its name from a saint, Farīd Šhāh, who is buried there.

Bibliography: Wise, The Muhammadans of Eastern Bengal, in *Journ. As. Soc. Beng.* vol. 63, Part iii. (1894). (J. S. CORTON.)

FARĪK, in Arabic, a "large body of men" also a "section of a caravan"; thence in Turkish, since the reforms (*Tanzīmāt*), the general of a division in the army and vice-admiral in the fleet. This rank corresponds to that of *Istanbul-kādisi* in the hierarchy of the 'Ulemā, *Rutbe-i ūlā* (*Šinfi-i ewvelī*) in the civil service and beylerbey of Rūmlī in the ancient administrative organisation; there are also *Biringdji Farīk* (of the first class), whose rank is equal to that of the *Bālā* (civil). The latter have the right to be called *‘Oṭfet-li* (gracious) while the former have to be content with the title *Se'adet-li* (fortunate); both titles are followed by the expression *Ḥazretleri* which is translated "His Excellency" in the Turkish diplomatic service. (CL. HUART.)

FĀRIS AL-SHIDYĀK AHMAD B. YUSUF, an Arabic journalist and author, born in Bairūt of Maronite parents, was educated at a Maronite school in Cairo and then for some time collaborated with Šhīhāb al-Dīn on the Egyptian official gazette *al-Wakā'if al-Miṣriya*. He next settled in Malta where he worked as a teacher of Arabic. While here he composed a *Qaṣida* in praise of the Bey of Tunis (see *Zeitschr. d. Deutsch. Morgenl. Ges.*, v. 249 *et seq.*; Goldziher, *Abh. Zur Arab. Phil.*, i. 172 *et seq.*) and wrote his *Kitāb al-Muḥāwara*, Arabic and English grammatical exercises and familiar Dialogues (Malta 1840). He gave an account of his experiences in Malta and his first contact with the results of European civilisation there in his *Kitāb al-Riḥla al-Mawṣūma bi 'l-Wāsiṭa ilā Ma'rifat Malta wa Kashf al-Mukhabba' 'an Funūn Ūrūbā*, which was first published in Tunis in 1283 = 1866 and in a second edition at Stambul 1299 = 1881. In the beginning of the fifties he made a journey to

Paris where he composed his *Grammaire Française à l'Usage des Arabes de l'Algérie, de l'Égypte et de la Syrie* (Paris 1854) with G. Dugat, and to London. He gave an account of his journey, which suggested to him many critical observations on the Arabs and other peoples, in his *Kitāb al-Suk'ala 'l-Suk' fima huwa 'l-Faryūk 'an Aiyām wa Shukūr wa A'wām fi 'Udjm al-'Arab wa 'l-'A'jam*, Paris 1855. His *Practical Arabic Grammar* (2nd ed. by H. G. Williams, London 1866) appeared at the same time. From London he went to Stambul and there became a convert to Islām. At the end of July 1860 he founded the Arabic weekly *al-Djāwā'id* there, which, subsidised by the Turkish government, took up the cause of Islām but also gave Muslims a knowledge of Europe. At the beginning of the eighties his paper enjoyed the greatest prestige throughout the whole Muslim world, but his son Salim, who undertook the editorship on the death of his father in 1305 = 1884, was unable to maintain the same level. He published selections from this newspaper in seven volumes (Stambul 1288—1298) entitled *Kanz al-Raghib fi Muntakhabāt al-Djāwā'id*, containing essays on literary subjects, a history of the Franco-German war, poems by and panegyrics on himself and in the last three volumes a history of the Ottoman Empire to 1298. He also found time for serious philological studies. Besides an Arabic primer he published studies in Arabic etymology entitled, *Sirr al-Layāl fi 'l-Kalb wa 'l-'Abdal*, Stambul 1284; a grammar, *Ghuṣyat al-Tālib wa Muṣyat al-Raghib fi 'l-Nahw wa 'l-Sarf wa Huṣf al-Ma'āni*, Stambul 1288, 1306; a Pers.-Turk.-Arab. Dictionary, *Kanz al-Lughāt*, Bairūt 1876 and critical contributions to Arabic lexicography *al-Djāsūs 'ala 'l-Kānīs*, Stambul 1299.

Bibliography: Zeitschr. d. Deutsch. Morg. Ges., v. 249 et seq.; Brockelmann, *Gesch. d. Arab. Lit.*, ii. 505; see also i. p. 1063^a.

(C. BROCKELMANN.)

FĀRIS B. MUHAMMAD HUSĀM AL-DAWLĀ, ABU 'L-SHAWK, as he is usually called, lord of Ḥolwān and other places in the neighbourhood 401—437 (1010—1046). He inherited his power from his father, Abu 'l-Fath Muḥammad b. 'Annāz, who had held sway for about twenty years in Daḳūkā, Ḥolwān, etc. Abu 'l-Shawk was at war during almost the whole period of his rule with neighbouring rulers and with his own family. His first fight was with al-Mazyadi of al-Ḥilla, but it ended in peace by a marriage between Dubais son of al-Mazyadi and a sister (or daughter) of Abu 'l-Shawk. His next quarrel, with Ṭāhir b. Ḥilāl, a descendant of Badr b. Ḥasanwaih [q. v.] was at first less auspicious, as his brother Su'di was slain by Ṭāhir and he himself had to take to flight in spite of the help given him by al-Mazyadi, who was now his ally, but it also ended with a marriage. When peace had actually been concluded, Abu 'l-Shawk killed Ṭāhir to revenge his brother (406 = 1015-1016). In 421 (1030) he regained possession of Daḳūkā which had been held in the interval by the 'Uḳailid Mālik b. Badrān; he won Karmisīn and Khulandjān in 430 = 1039. In the following year, however, a war broke out between his son Abu 'l-Fath, who governed Dīnawar for him, and his brother Muḥalhil, to whom he had ceded Shahzrūr. The uncle was victorious and took his nephew prisoner and gave him a sound thrashing. Abu 'l-Shawk felt himself

thereby forced to besiege his brother in Shahzrūr but did not attain his object because Muḥalhil incited 'Alā al-Dawlā b. Kakūya (see the article MUHAMMAD B. DUŠMANZIYĀK) against him and another brother called Suḳḥāb also seized the opportunity to take the field against Abu 'l-Shawk. Although he succeeded in forcing 'Alā al-Dawlā to retreat, he had to cede Dīnawar to him. He did not dispose of his brother so readily; it was only when a much more dangerous enemy, the Saldjūk Ibrāhim Ināl, appeared against him, soon deprived him of a considerable portion of his territory and even plundered and burned the capital Ḥolwān in 437 (1046), that he made peace with his brother, the more readily as his son had in the meanwhile died in prison. But his day was done, for he died a few weeks later. His brother Muḥalhil took possession of Karmisīn and Dīnawar and his son Su'di, whom the Kurds treacherously left in the lurch, sought and found refuge with Ibrāhim Ināl. The conflict with Muḥalhil thereupon broke out again but, although even the measures of the Saldjūk Toghrulbeg (442 = 1050) brought no lasting peace, the further course of this family feud is not of sufficient historical interest to be detailed here.

Bibliography: Ibn al-Athīr (ed. Tornberg), ix. 158 et seq.

AL-FARQADĀNI (dual of *farqad*) "the two calves", is the name given by the Arabs to the two brighter stars β and γ in the quadrilateral of the Little Bear (cf. the article AL-DUBB, i. 1078^a); β is called *Anwar al-Farqadain* (the brighter of the two calves) and γ = *Aḥl-fā al-Farqadain* (the darker of the two calves).

(II. SUTER.)

FARKĪN. [See MAIYĀFĀRIKĪN.]

FARMĀN. [See FERMĀN.]

FARMŪL a mountainous district in Afghānistān lying to the west of Kābul, inhabited by a race of Tādjik origin known as Farmūli.

(M. LONGWORTH DAMES.)

FARRUKHĀBĀD. The name of a district and town in the United Provinces of British India. It is one of the districts of the Allāhābād division and is situated in the Eastern part of the Dōāb between the Ganges and Djamnā between 26° 46' and 27° 43' N. and 78° 8' and 80° 1' E. The area is 1685 sq. m. and the population (in 1901) 925,812. The proportion of Muḥammadans is larger than in most of the neighbouring districts, chiefly owing to the extensive Afghān immigration in the xiith and xviiith centuries. The principal town is Farrukhābād which is joined as a municipality with the civil and military station at Fatḡarh close by. Pop. 67,338. Another important town is Kanaudj. Pop. 18,552.

There are several ancient sites of importance in the district the principal of which are Sankisa, which is mentioned by the Chinese pilgrim Hiouen Tshang, Kampila the capital of the kingdom of Pañcāla, and Kanaudj which plays a great part in early Indian history. It was Harsha Vardhana's capital in the viith cent. A. D., and afterwards the centre of the powerful empire of the Pratihāra Rājapūts. It was plundered by Maḥmūd Ghaznawī, but endured till Muḥammad b. Sām's invasion

in 589 (1193). The conqueror himself struck coins there in the Indian style, and it was afterwards a temporary capital of Muhammad III b. Tughlaq. In the xviiith century a semi-independent state was founded by Muhammad Khān Bangash, a member of the Afghān colony which had settled in the neighbourhood during the reign of Awrangzēb. He founded a new town on the banks of the Ganges which he named Farrukhābād after the Emperor Farrukh-siyar in 1126 (1714), and it soon attained great prosperity, and became an Imperial mint. Muhammad Khān died in 1156 (1743) and was succeeded by his son Kā'im Khān who was killed in 1161 (1748) in a battle against the Rohēlas. A large part of the territories of the Nawwābs of Farrukhābād was lost, and the state seemed to have come to an end, the Emperor (Aḥmad Shāh) being hostile to the Bangash family. But its fortunes were revived by Aḥmad Khān, a younger brother of Kā'im Khān, who defeated the Wazīr Safdar Djang and recovered Farrukhābād 1163 (1750). From him the town derived its second name of Aḥmadnagar Farrukhābād, which appears on the coins of 'Ālamgīr II., Shāh Dījāhān III. and Shāh 'Ālam II. the earliest being dated 1170. After many vicissitudes and the temporary loss of his dominions Aḥmad Khān finally succeeded in recovering a great part of them and lived till 1185 (1771); the state however remained subordinate to Oudh. The first British occupation of Farrukhābād took place in 1777 when a body of troops and a Resident were posted there by Warren Hastings, but the Nawwābs continued to hold it till 1802 when it was incorporated in the British Dominions, Nāsir Djang being then Nawwāb. In 1804 the Mahrattās were defeated close to Farrukhābād in 1804 by Lord Lake. The Nawwābs retained their private estates, but the last of them, Tafazzul Husain, joined the mutinous Bengal army in 1857 and obtained possession of Farrukhābād which he held till Jan. 1858. He was exiled and went to Mecca in 1859.

After the British occupation Farrukhābād, which had been one of Shāh 'Ālam's principal mints, became a mint of the East India Company who continued to issue coins bearing the name of Shāh 'Ālam and the regnal year 45 up to 1835, although Shāh 'Ālam had died in 1221 (1806). These rupees were in Persian and followed Shāh 'Ālam's inscriptions. They were known as the Farrukhābādi Sicca rupee, from the word 'sikka' with which the Persian legend commences.

(M. LONGWORTH DAMES.)

FARRUKHĀN GILĀN-SHĀH, an Ispehbed of Tabaristān (709—722) called the Great (*buzurg*) and the Virtuous (*dhu 'l-manāḩib*), son of Dābūya, conquered Māzandarān and restored peace to the frontiers of his kingdom. Defeated by the rebel Dailamites he fled to Āmul, entrenched himself in Firūzābād and finally rid himself of the besiegers by causing them to believe that

he had enormous supplies of bread. He gave asylum to the Khāridjīs persecuted by al-Hajjāj, but afterwards made war on them and executed their chiefs, when Šufyān b. Abi 'l-Abraḍ al-Kalbī advanced against him with an army. Yazid b. al-Muhalab, governor of Khōrāsān under Sulaimān b. 'Abd al-Malik (96—99 = 715—717), unsuccessfully attempted to conquer Tabaristān but deemed himself lucky to be able to get out of the country on payment of compensation for the devastation he had wrought. Farrukhān died in 722; he was the maternal grandfather of al-Manšūr, son of the Caliph al-Mahdī. His capital was Šārī, which he had rebuilt and improved; he was succeeded by his son Dād-burz-mīhr.

Bibliography: Ibn Isfandiyyār, *History of Tabaristān* (transl. by Browne), p. 99 *et seq.*; Zahr al-Dīn, *Ta'rikh Tabaristān* (ed. by Dorn), p. 45 *et seq.*; Mordtmann in the *Zeitschr. der Deutschen Morgenl. Ges.*, xxx. 494; P. Horn in the *Grundr. der iran. Philol.*, ii. 548 and note 2. (CL. HUART.)

FARRUKHĪ, ABU 'L-ĪJĀSAN 'ALĪ B. DJULUGH, a Persian poet born in Sistān, a pupil of 'Unsurī. Rashid Waṭwāt has compared him with the Arabic poet Mutanabbī, on account of the simplicity of his style combined with the originality of his genius. He was the panegyrist of Sultān Maḥmūd of Ghazna and of the Emīr Abu 'l-Muẓaffar Tāhir b. Naṣr Čaghānī, governor of Balkh. He wrote a treatise on the art of poetry entitled *Tarjūmān al-Balāgha*. The *Diwān* of his poems enjoyed a certain fame in Transoxiana but he was forgotten in Khōrāsān. He died in 429 (1038). His *Diwān* was lithographed in Teheran in 1301-1302.

FARRUKHSIYAR, MUḩAMMAD, fourteenth emperor of Dihli of the house of Timūr, was born in 1686-1687. and was the second son of Muḩammad 'Azīm ('Azīm al-Shā'n), third son of Shāh 'Ālam Bahādūr Shāh. His early life was spent in Bengal, where his father was governor, but when Dījāhāndār ascended the throne he was summoned to Dihli, doubtless in order that he might share the fate of his father and elder brother. He fled from Dhākā and took refuge in Patna and owing to the general disgust excited by Dījāhāndār's misconduct, found little difficulty in persuading the two Saiyid brothers of Bārha, Husain 'Alī Khān, governor of Bihār, and 'Abd-allah Khān, governor of Ilāhābād, to espouse his cause. Having proclaimed Farrukhsiyar emperor they marched with him towards Dihli, defeating Dījāhāndār at Samūgārah, near Āgra. Dījāhāndār was strangled and his son was blinded, and on Febr. 10, 1713, Farrukhsiyar ascended the throne in Dihli. Quarrels broke out almost at once between the emperor and the two Saiyids. There were faults on both sides. The Saiyids were ambitious grasping, and overhearing, and Farrukhsiyar was weak, treacherous, and cowardly, and the history

of his reign is largely a record of his abortive plots against the brothers. In 1719 Ḥusain 'Alī Khān hastened from the Dakhan, his vicerealty, to support his brother at court and on March 1 the emperor was dragged from the womens' apartments of his palace, where he had taken refuge, and thrown into prison, the Saiyids raising to the throne, under the title of Rafī' al-Daradjāt, a puppet prince, cousin to Farrukhsiyar who was murdered or committed suicide in prison two months later. His reign is memorable in the annals of British India for the famous *farmān*, exempting the English Company, on payment of a fixed sum annually, from customs duties throughout the empire. This was obtained by the influence of a Scottish surgeon named Hamilton, who had accompanied a mission to Dihli and earned Farrukhsiyar's gratitude by curing him of an obstinate disease.

FĀRS (arabised from the Old Persian *Pārça* [Achaemenid inscriptions]), the ancient Persis or Persia in the narrowest sense, the ancestral home of the Persians, a province of Persia in the S.E. of the modern Irān with its capital Shīrāz, bounded in the N. by 'Irāk 'Adjamī, in the S. by the Persian Gulf, in the E. by Kirmān and in the W. by Khūzistān. It was divided into five districts in the middle ages; Isfakhr, Ardāshir-khurra, Dārābdjird, Sābūr and Fennā-Khusraw besides five *ramm* or camps of Kurds. — In the caliphate of 'Omar, al-'Alā b. al-Ḥaḍramī, governor of Bahraïn, made an attempt to conquer the land by sending 'Arfadjā b. Harthama al-Bārīkī thither by water; but the latter was recalled soon after his arrival. On the death of al-'Alā his successor 'Othmān b. Abi l-'Ās renewed the attempt by sending to Fārs his brother al-Ḥakam, who seized two islands and the town of Tawwadj. It was only under 'Othmān that the complete subjection of the province was attained; the Marzbān Shahrak conducted the defence against the Muslim invaders but he was defeated and slain in the sanguinary conflict at Rēshahr near Tawwadj (664; Balādhuri, p. 386). Abū Mūsā al-Ash'ari, who had set out with an army from Baṣra, invaded Fārs from the west at the same time. After joining forces 'Othmān and Abū Mūsā captured Shīrāz and Sīniz; 'Othmān alone took Dārābdjird, Fasā and Sābūr. Soon afterwards 'Abd Allāh b. 'Āmir, who had been appointed commander-in-chief by the Caliph 'Othmān forced Isfakhr, which was defended by Māhek to surrender (28 = 648) and in the following year he took Djūr (Firūz-ābād). — The *Kharābī* was fixed at 33 million dirhams and raised to 35 millions under Mutawakkil; the *Djizya* yielded 18 millions. — The country was covered with fortresses; the best known are the three citadels, which were built on the three peaks above Isfakhr and notably that of Ushkunwān, the castle of al-Djiss, where a knowledge of Iranian tradition and its archives was preserved (Inostrancev, *Études Sassanides*, p. 8; Isfakhrī, p. 118, 2—4).

FARSĀKH, an Arabic loanword derived from a North Iranian form (proved by the Armen. *hrasakh* and the Syr. *prasakhā*), modern Persian *farsang* (Pehl. *frasang*, Old Persian in Herodotos and Xenophon *παρσάγγης*), a Persian measure of length, equivalent to the distance covered in an hour by a horse walking. This *farsakh* contains 6000 trade-ells (*dhīrā'* or *dhār-i rasmi*) of 1.0387 metres each = 6232.2 metres. The Arab *farsakh* was three Arab miles or 12000 ells = 5762.8 metres.

FĀRSISTĀN. [See PERSIA.]

AL-FĀRŪKĪ. [See 'OMAR B. AL-KHATTĀB.]

AL-FĀRŪKĪ 'ABD AL-RĀKĪ, an Arab poet, born at al-Mawṣil in 1204 (1790), took pride in being a descendant of the Caliph 'Omar I. and therefore bore the *nisba* 'al-Fārūkī and al-'Omari. Little is known of his life; we only know that he accompanied his cousin, Kāsim Pasha, when the latter was sent by the Sublime Porte to Baghdad to destroy the power of the Mamlūks there, and when this expedition was unsuccessful he went with the next expedition for the same purpose under 'Alī Rīzā Pasha. The latter succeeded in putting an end to the rule of Dāūd Pasha and the Mamlūks, and al-Fārūkī remained with him in Baghdad as *ketkhoda* of the wilāyet till his death in 1278 (1862). 'Othmān al-Mawṣilī published in Cairo in 1316 (1896) *al-Tiryūkh al-Fārūkī min Munshā'āt al-Fārūkī* of his poetry. Besides this *Diwān* he composed another entitled *Ahīllat al-Afkār fī Maghānī l-lbtikār* and a biographical work *Nuzhat al-Dahr fī Tarādjīm Fuḍalā' al-Aṣr*.

AL-FARŪKĪ, MULLĀ MAḤMŪD B. MUḤAMMAD was born 993 = 1585 at Djawnpūr. He received his early education from his grandfather and Ustādī al-Mulk Muhammad Afdal al-Djawnpūrī and after completing his course at the age of 17, began to deliver lectures to the students who then thronged in Djawnpūr from all parts of India. His literary fame and scholarly attainments soon became known to the Emperor Shāh Djahān who asked the Mullā to adorn his court. He accepted the invitation. When he came near Dihli, Šā'd Allāh Khān, the minister, was sent to receive him and he was brought into Dihli with all the honours due to him. The Emperor gave him an appointment in the *Manṣab* (office) of *Sih Šadi* (three hundred per month) and showered royal favours upon him. He was one of the most eminent 'ulamā, not only in India, but in the whole Islamic world of his time. When he went with the Emperor to Lāhore and visited Shāh Mir Lāhori, the saint reproached him for being too much engaged in worldly affairs and advised him to abandon the Emperor's

service. Accordingly he resigned the royal service and went to his native land where he passed his last days in delivering lectures to Muslim students and writing books. As a scholar in philosophy and rhetoric, it may be said that Maḥmūd was one of the most distinguished scholars in the Islamic world and his works on these two subjects have been adopted in the final courses in all the Indian Universities, and certificates of competency are awarded only to those students who are found proficient in his works. He died 1062 = 1651.

He is the author of the following works:

I. *Ḥāshiyā 'ala 'l-Ādāb al-Bākiya*, a super-commentary on 'Abd al-Bāki al-Ḥiddīkī's Commentary on the treatise on Dialectics entitled *al-Risāla al-Sharifiya fi 'Ilm al-Ādāb al-Munāzara* by Saiyid Sharif al-Djurdjānī (D. 816 = 1413). *Farangi Mahall Library*, f. 37.

II. *Al-Farā'id fi Sharḥ al-Farā'id*, a commentary on 'Abd al-Rahmān b. Aḥmad al-Djī's work on rhetoric entitled *al-Farā'id al-Ghiyāthiyya*, Printed, Cawnpore.

III. *Risāla fi Ithbāt al-Hayūlā*, a treatise on the first matter (Hayūlā); *Ind. Off.* 561.

IV. *Al-Shams al-Bāzigha*, a work on philosophy, being a commentary on his own work entitled *al-Ḥikmat al-Bāligha*, lithographed at 'Alawī Press A. H. 1278, Ludhiana 1280 and Lucknow 1288. Glosses: (a) By Mullā Niẓām al-Dīn (d. 1161 = 1748), *Farangi Mahall Library*, f. 26. (b) By Ḥamd Allāh b. Shukr Allāh al-Sandilī (d. 1160 = 1747), *Ind. Off.*, 562. (c) By Mullā Ḥasan b. Kāḍī Ghulām Muṣṭafā al-Laknawī, *Rampur Library*, 386; *Farangi Mahall Library*, p. 26.

Bibliography: Azād al-Bilgīrāmī, *Subḥat al-Mardjān*, p. 53; Zaidī, *Shiḡraf Bayān*, p. 48; Faḳīr Muḥammad al-Lāhorī, *Ḥadḍīk al-Ḥanafiya*, p. 413; Ḥiddīk Ḥasan al-Kannūdjī, *Abjad al-'Ulūm*, p. 901; and Brockelmann, *Gesch. d. Arab. Litter.*, Vol. ii. p. 420.

(M. Hidayet Hosain.)

FĀRŪKĪ DYNASTY. This dynasty was founded by Malik Rādja, son of Khāndjahān Fārūkī, who claimed descent from the second *Khālifa*, 'Umar al-Fārūk ('the Discriminator') and was one of the *amirs* of 'Alā al-Dīn Khildjī and Muḥammad b. Taghḥlak. Firūz Taghḥlak gave Malik Rādja a *djāgir* in Khāndesh and afterwards made him governor of that province. On the disruption of the empire after the death of Firūz in 1388 he became virtually independent and his eldest son Naṣīr Khān, who succeeded him on his death (April 9, 1399), formally proclaimed his independence. Having established his authority throughout his small principality by capturing Asīrghān from a Hindū chieftain he gave to his dominions the name of Khāndesh, derived from his own title of Khān, and founded, as his capital, the city of Burhānpūr. In 1436-1437 Naṣīr Khān invaded the dominions of his son-in-law, 'Alā al-Dīn Aḥmad II (Bahmanī) of the Dakhan, but was defeated, and Khāndesh was laid waste. He died on Oct. 1, 1437, and was succeeded by his eldest son, Mirān 'Ādil Khān I. who was murdered on April 30, 1441, and was succeeded by his son Mirān Mubārak Khān I. who died, after a peaceful reign, on June 5, 1457. His son, Malik 'Ainā (or Ghani) entitled 'Ādil II., was one of the most powerful of the Fārūkī princes and attempted to free his state from its condition of semi-dependence on Guḍjarāt, but was compelled by Maḥmūd I to

purchase peace by payment of arrears of tribute. He died on Jan. 15, 1492, and was succeeded by his brother, Dā'ūd Khān, who died on Aug. 28, 1508. After a civil war Dā'ūd's cousin, 'Ādil Khān III. was placed on the throne (April 1, 1509) by his maternal grandfather, Maḥmūd I. of Guḍjarāt. 'Ādil Khān III. died on Aug. 24, 1520, and was succeeded by Mirān Muḥammad Shāh, his son by a princess of Guḍjarāt. After an eventful reign in Khāndesh Nūrān Muḥammad was raised to the throne of Guḍjarāt on the death of his maternal uncle, Bahādūr Shāh, but died (May 4, 1536) before he could reach Aḥmadābād, and was succeeded in Khāndesh by his brother, Mirān Mubārak Shāh. On Dec. 19, 1566, Mubārak died and was succeeded by his elder son Mirān Muḥammad II. on whose death in 1576 his infant son Ḥasan was proclaimed Shāh, but Muḥammad's younger brother Rādja 'Alī, who had entered Akbar's service, hastened from Āgra to Khāndesh, deposed his nephew, and ascended the throne as Akbar's vassal, eschewing the title of Shāh, which had been in use since the elevation of Muḥammad I to the throne of Guḍjarāt. His policy of preventing, by means of conciliation, imperial intervention in the Dakhan was frustrated by the dissensions in Aḥmadnagar, and the appeal of one party to Dihli. He resisted Akbar's first act of aggression but was compelled to support the emperor in the campaign which ended in the annexation of Berar and lost his life in the battle of Sonpat (1596) fighting on the imperial side against the eunuch Suhail Khān, who was attempting to recover Berar for Aḥmadnagar. His son and successor Bahādūr Khān, a dissolute and feeble ruler, reversed his father's wise policy and measured his strength with that of the emperor. Asīrghān fell (1599-1600) after a siege of ten months, Khāndesh was annexed and Bahādūr died, a state prisoner in Lāhor, in 1623-1624.

Khāndesh never enjoyed complete independence under the Fārūkī dynasty but was always tributary either to Guḍjarāt or Mālwa, usually to the former, and owed its existence as a separate state to the mutual jealousy of these two Kingdoms and their common fear of the Kingdom of the Dakhan.

FARWĀN or PARWĀN, a small town on the Pandjshīr River north of Kābul and south of a pass bearing the same name which crosses the Hindū-Kush range into Afghān Turkistān at a height of 12,300 ft.

Farwān was a mint of the Ghaznawids, coins having been struck there by Alptigin, Subuktigin, Ismā'il and Maḥmūd. It seems to have been in Alptigin's possession as early as 365 when he struck coins in the name of Maṣ'nūr b. Nūh his Sāmānī suzerain. It is mentioned also by Idrīsī (as Karwān), Iṣṭakhārī and Abu 'l-Fidā. Bābur calls it by its modern name of Parwān, which is used by all recent travellers such as Lord, Masson and Holdich. In 618 Djalāl al-Dīn Mangbarni Khwārizm Shāh inflicted a defeat at Barwān or Farwān on the Mongol forces.

(M. LONGWORTH DAMES.)

FARWARDĪN (F.) the first month of the Persian solar year, also the name of the 19th day of each month which was observed as a feast.

FĀS (Fez from the old Spanish spelling) a town in Morocco and one of the residences of the Sulṭān, situated in 4° 54' 30" Long W. of Greenwich and 34° 6' 20" N. Lat.; it has about 100,000 inhabitants (Ereckmann 50,000, Gaillard 90,000, Lamartinière 100,000, Budgett Meakin 120,000).

Fās lies at a height of 1155 feet above sea level in the centre of the plain of Sais, in part on a plateau which lies in front of the outer spurs of the Djebel Zelagha and in part in the hollow through which the waters of the Wādī Fās run to the Sebū which flows about 5 miles to the east of the city. The latter is about 130 miles S. E. of Tangier, 40 N. E. of Meknes, 105 E. of Rbat, 250 N. E. of Marrākush. Its geographical situation is a most fortunate one; "Fez" writes A. Bernard "lies almost in the centre of the depression which separates the mountains of the coast from the Atlas and is on the natural road which runs along the base of the Atlas so that the two great and historical roads in Morocco cross one another there. It commands the road from Morocco and Tafilalet by the Innawen the road from the Atlantic by the Sebū, the largest river of Barbary" (A. Bernard, *Les Capitales de la Berbérie, Recueil de Mémoires et de Textes publié par l'École des Lettres d'Alger*, Algiers 1905, p. 137). We may add that the development of the city has been facilitated by the abundant supplies of water and by the existence in its neighbourhood of building materials (lime and stone, clay etc.).

Fās really consists of two towns differing considerably in situation and population: *Fās al-Djadid*, the new town and *Fās al-Bāli*, the old town.

Fās al-Djadid is built on the east on a spur of the plateau which bounds the plain of Sais and dominates the old town. It is surrounded by walls flanked on the south by two small forts called Burdj Twil and Burdj Sidi bū Nafa, which command the valley, at the bottom of which runs the southern arm of the Wādī Fās. In the north rises the Kaṣba of the Sherarda, a broad rectangular enclosure the interior of which is covered by huts of clay and reeds, the silos containing the grain supplies of the Makhzen or the enclosures for the sheep. The suburb of Bū Djelūd lies in the northeast: it is waste land where the troops and caravans encamp. The walls built in the reign of Mūlāy Ḥasan have transformed it into a kind of passage connecting the old town with the new. It includes the palace and grounds of Bū Djelūd as well as the Kaṣba of the same name. In the northeast, at some distance from the walls, is the *mṣallā* where on feast-days the Sulṭān says prayer in the presence of representatives of the tribes.

Fās al-Djadid is a city of government offices. The Dar al-Makhzen alone occupies more than half of it. This is an assemblage of buildings and courtyards where the government of Morocco has its headquarters. It includes the old Meshwar, the Dar al-Makhzen in the narrower sense, including the beniḳa [q. v., i. 697:] or offices of

the viziers, a pavilion for the Sulṭān etc., the palaces which form the Sulṭān's private residence recognisable by their roofs of green tiles, the pavilion reserved for the reception of foreign envoys, the imperial menagerie, the Arsenal, the new Meshwar, the gardens of Lalla Amina and Aguedal. The town itself which is traversed from N. to S. by a street of shops, is rather wretched in appearance. The houses often half in ruins are, as a rule, only of one story and their interiors lack the luxurious adornment which characterises the houses of Fās al-Bāli. Several mosques rise from among the hovels; the most notable are the "Great Mosque", the "Red Mosque" and the "Green Mosque" so called from the colour of their minarets, all three built by the Marinids, and lastly the mosque of Mūlāy 'Abd Allāh built in the xviiith century by the ruler of this name which is used as a mausoleum for the *Shorfa'* of the ruling family. The population (numbering 6000—7000) consists for the most part of soldiers who live in the town with their families in the intervals of military expeditions so that Fās al-Djadid is half empty when the Sulṭān and the Makhzen are absent. Finally, separated from the Muslim town and adjoining the palace there is the Jewish quarter or "Mellāh" the population of which, numbering perhaps a third more than that of the Muslim town, is crowded together in narrow streets with houses several stories high and forms a striking contrast by its animation to the quiet of the Moorish quarters.

Fās al-Djadid is really only an annexe of Fās al-Bāli, which the inhabitants call "Medina" ("the city"). Its site is much more irregular and picturesque than that of the new town. The difference in level between highest and lowest points is 600 feet. The town lies along the narrow valley of the Wādī Fās; its houses, mosques and gardens rise up the steep slopes of the hills that enclose the Wādī from its bed to the walls that crown the ridges. A wall, of which the oldest parts date from the Almohad period, completely surrounds the town; it is flanked at some distance to the north and south by two stone bastions, called Burdj al-Gīsa and Burdj Futūḥ from the names of the adjoining gates. Built in 990 (1581) by Aḥmad al-Mansūr on the model of European fortifications by Christian slaves, these forts command the whole town. In spite of the dilapidated condition of these defences they suffice to protect the inhabitants from the attacks of the Berbers of the neighbourhood, of which they live in constant fear; they have even on many occasions enabled them to resist the Sulṭān himself. Access to the town is obtained through the gates let into the massive walls. These are in the north, Bāb al-Gīsa, in the N. E., Bāb al-Mahrūk (the "Gate of the Burnt Man") so called in memory of a Berber chief whose body was burned there when the building was completed, and where since then the heads of rebels slain in course of the Sulṭān's expeditions are exposed; in the S. E. Bāb al-Futūḥ, in the S. Bāb al-Djadid below which runs the main arm of the river, in the S. E. Bāb al-Ḥadid.

The space marked out by the walls is divided into three quarters (*kesma* or *ferḳa*): al-Lemṭiyin, al-Andalus and 'Adwa. The quarter of the Lemṭiyin takes its name from the Lemṭa Berber tribe of the neighbourhood who peopled it originally.

It occupies the southern part of Fās and corresponds to the *ʿAdwat al-Ḳarawīyīn* of the Idrisid period. In it is the Ḳaṣba of the Filala, a fortress built by the Almohad Amīr Muḥammad al-Nāṣir and allotted by Mūlay al-Raṣḥīd in the xviiith century to his compatriots from Tafilalet as a residence. The whole of this quarter, which is principally inhabited by members of tribes who have settled in Fās, is well provided with gardens. The Andalus quarter comprises the part of the town that adjoins the river and a zone of gardens stretching between Bāb al-Djadīd and Bāb al-Ḥadīd. It is the heart of the city and contains the principal mosques (Ḳarawīyīn, Mūlay Idrīs); it includes the network of alleys of the Ḳaisariya bazaar, occupied by all kinds of merchants and tradesmen, noisy and animated during the day but deserted and silent at night and the *funduqs* or warehouses of the merchants. Lastly the *ʿAdwat al-Andalus* of the Idrisids lies all along the right bank of the Wādī Fās. It is a quiet and thinly populated district. "Marabouts, Zāwīyas and old and peaceful mosques abound" writes Gaillard. "Its quiet and picturesque streets are sought at by 'tolba' and pious believers who give themselves up to their devout meditations sheltered from the bustle of the age". The streets of the different quarters are as a rule very narrow and shut in by houses which almost meet overhead and shut out the sun. The majority are on slopes and, as they are not paved, after rain become regular sewers. Still narrower alleys branch off from each street.

The abundance of running water is one of the features of Fās. The Wādī Fās never dries up even in summer and the situation of the city enables its water to be used for all domestic purposes. The Wādī, which rises half a day's journey to the west, flows undiminished into Fās al-Djadīd; it then sends off on the right a number of arms which fall in cascades into the Wādī al-Zitūn to reunite again, flow into Fās al-Bālī under the name Wādī al-Kabīr and feed an artificial channel called the Maṣmūda. The Wādī Fās itself, on leaving Fās al-Djadīd, divides into two streams which in their turn break up into an infinite number of brooks which after flowing through the various quarters reunite beyond the walls. Special conduits supply the inhabitants with drinking water; others irrigate the gardens, drive the mills, flush the sewers and clean the streets. This last is a very ancient practice for it is mentioned by Ibn Ḥawḳal: "In summer water from the river is allowed to run through the city to clean the ground and refresh the air" (*Description de l'Afrique*, transl. de Slane, *Journal Asiatique*, 1842, p. 286). The richness of Fās in running water is one of the themes on which the Arab authors delight to dwell; they even claim that the water of the Wādī has marvellous properties. According to the author of the *Ḳirfās* it cures of stone in the bladder and dispels foul odours; it softens the skin and destroys insects; it makes the pleasures of the senses more agreeable, etc.

Fās is celebrated throughout the Maghrib not only for the beauty of its site but also for the number and importance of its religious monuments. The various dynasties that have succeeded one another there, have devoted great attention to enriching it with monuments of this kind so that there are no less than 850 religious edifices of all

orders and of all sizes in the city, mosques, madrasas, oratories, and zāwīyas or chapels built on the tomb of some holy person. The mosques all present the same general arrangement; an outer court with a fountain for ablutions, opening on to a central court surrounded by arcades forming one or more naves. They differ in size, in the form of the minarets which flank them and in the details of the ornamentation. The type of minaret, for example, has sensibly changed in the course of centuries. At first squat and without ornament, such as may be seen in the mosque of the Ḳarawīyīn, it becomes more elegant in the Almoravid period. In imitation of the Moorish minarets of Spain, it affects a quadrangular form and terminates in a lantern. The sides have majolica borders and the panels are decorated with designs in relief forming trellises. This type was retained under the Almohads and Marinids. From the xviiith century on, the trellises in relief disappear; the borders of faience of many colours give place to others in green faience; sometimes even the panels are inlaid entirely with enamelled bricks of one colour. At the same time the porches of carved wood which sheltered the doors were abandoned and replaced by plaster mouldings which could be more easily worked. Nevertheless the main principles of architecture (arcades, arches etc.), the processes of construction and decoration which were handed down from generation to generation remained the same as in the middle ages.

The chief mosques in Fās al-Bālī are the mosque of the Madrasa Bū Aīnāniya, the mosque of the Ḳaṣba of the Filala, those of Sīdī Aḥmad al-Shāwī, Sīdī Aḥmad al-Faḳīh, of Bāb al-Gīsa and lastly in the Keddān quarter, the *Djāmiʿ al-Nuwār*, the most ancient sanctuary in Fās, also called the mosque of the Sharīfs and built near the well where tradition says that Mūlay Idrīs used to come and sit with his *Shāikh*s to watch the building of the city. Three mosques are much more celebrated than any of the others, viz. the mosques of the Andalusians, of Ḳarawīyīn and the greatest of all that of Mūlay Idrīs. At first a simple oratory in the time of the Idrisids the mosque of the Andalusians was made a *Ḳuṭba* mosque in 321 A. H. (933 A. D.) by the Zenāta Amīr Aḥmad al-Iḥāmānī, provided with a minaret by the Emir Aḥmad b. Bū Bakr, then enlarged by the Almohad al-Nāṣir to its present dimensions. The Mosque of al-Ḳarawīyīn (of the people of Ḳarawān) dates like the preceding from the Idrisid period. Begun in 248 A. H. (861-862) it was enlarged by the Emir Aḥmad b. Bū Bakr, who built its minaret and finally greatly altered in the reign of Yūsuf b. Tāshfīn. The author of the *Ḳirfās* says that at that time it covered a whole quarter of the city and contained 270 pillars forming 16 naves. Al-Ḳarawīyīn is the largest mosque in the whole of the Maghrib. It is also the official mosque, in which the people are summoned to hear the Sulṭān's proclamations. But if al-Ḳarawīyīn is the most important mosque in Fās, the Zāwīya of Mūlay Idrīs is certainly the most venerated, for it is built on the tomb of the founder of Fās. As the original sanctuary had fallen into ruins, it was rebuilt in 1308 A. D. on the same site and restored in 1720 by Mūlay Ismāʿīl. Finally in 1820 Mūlay ʿAbd al-Raḥmān built a new mosque beside the old one. The Zāwīya of Mūlay Idrīs thus comprises the *Ḳuṭba* or tomb of the saint, two mosques, with various

buildings attached to them among them one to lodge persons who seek refuge within the bounds of the Zāwiya. Like the majority of the religious edifices of Fās, the Zāwiya of Mūlay Idris and even the quarter surrounding it are *horm* or sacred and access to them is forbidden to unbelievers. The Zāwiya is besides an inviolable sanctuary where individuals pursued by the Makhzen, debtors fleeing from their creditors find a safe asylum. Mūlay Idris has a position apart, among all the saints of Fās. As the patron saint of the city, *mawla al-bilād*, he is the object of a veritable cult on the part of its inhabitants. "He is" says Michaux-Bellaire "the very genius of Fās, the supernatural power which makes it a city unique in the world and its inhabitants superior to all other men". This cult is relatively modern; it hardly dates from the Marinid period and seems to have been particularly developed by the descendants of the Jews who became converts to Islām at that time. The reputation of the tomb of Idris attracts pilgrims thither from all parts of Morocco and enriches the Idrisid *Shorfa'* who share amongst themselves the gifts in money and kind brought by the faithful. The Zāwiya possesses in addition considerable *hubus*, the revenues from which are exclusively used for the up-keep of the sanctuary. Other saints also invite the piety of the faithful, who come to visit their sanctuaries on fixed days and often purchase very dearly the privilege of being interred near their tombs. Their Zāwiyas are scattered up and down the city or in the cemeteries of Bāb al-Mahrūk, Bāb Futūh and Bāb al-Gisa. These saints or "Saiyid" are the glory of Fās. Their number is so considerable that entire works like the *Djādhwat al-Iktibās* of Ibn al-Kādi (xvth century A. D.) and in our days the *Salwat al-Anfās* of Sharif Muhammad al-Kattāni are consecrated to recording their names and virtues. Among the most celebrated may be mentioned, Abū Bakr al-ʿArabī al-Maʿānirī (died 543 A. H.), Sidi Masʿūd al-Filali, Sidi ʿAbd Allāh al-Tawdī, Sidi Muhammad b. al-Ḥasan (died 395 A. H.), Sidi Bughaleim (Bū al-Ḥalīb), a native of Andalusia (died 518 A. H.) whose tomb is visited by women and sick persons; Sidi Harazam (Herzihim), a famous professor in his day whose "*baraka*" drives evil spirits away; Sidi Aḥmad al-Shāwī, Sidi Bū Djida, Sidi Aḥmad al-Barnūsī etc. etc., whose tombs are a valuable asset to the Sharifi families.

The population of Fās forms, as regards its natives, a typical *ḥaḍariya*, i. e. a settled city-population, comprising merchants, scholars, officials, which has long ago attained a fairly advanced level of civilisation. It is composed of various elements which in the long run have mingled with one another to form a new type, the Fāsi. In the first place from its geographical situation and secondly by its fame as a city of culture and sanctity, Fās has at all times been a centre of attraction for the Muslims of Morocco and the adjoining countries. "Since its foundation" says the *Ḥirṭās*, "Fās has always been kindly to the strangers who have settled in it". The companions of its founder were joined by the Berbers of the neighbourhood (Guerāwa, Luwāta, Awraba and Maḥmūda) whose descendants in time have mingled with those of families who came originally from Cordova and Kairawān. For centuries political, economic and intellectual relations were maintained between the north of Morocco and Spain and

contributed to introduce and maintain the civilisation of Andalus at Fās. After the fall of Grenada numbers of Muslims came to settle in the Moroccan capital where they soon attained a prominent position. It was the same with the Jews, who were converted in the time of Yaʿqūb b. ʿAbd al-Makk, whose descendants, the Benū Shakraun, the Cohens, the Bessis etc. are numbered among the richest citizens at the present day. In the sixteenth century the outrages by the Turks followed by the French occupation forced numbers of Algerians to move to Fās. The Tlemcenians, for example, form a body of 2500 in Fās at the present day. To these diverse elements must still be added isolated individuals who have come from all parts of Morocco, Filala, Brāber, Djebala etc., who form the population of certain suburbs. Finally in a class by themselves are the *Shorfa'*; some belong to various branches of the Idrisid family, others came with the present dynasty from Taflelt (ʿAlawī *Shorfa'*) and others again came from other countries long ago, like the Skallī and the ʿIrākī, the former hailing from Sicily originally and the latter from Mesopotamia. These *Shorfa'* are organised in corporations each of which is governed by a chief or *mezwar*. There is nothing to distinguish them from the other inhabitants except the appellation Sidi or Mūlay that is usually given them. They may practice all manner of trades but not fill any public offices except those of *ʿadl* (notaries) or secretaries to the makhzen. In addition to the gifts which they are assured of from the piety of the faithful or the generosity of the Sultān, they enjoy certain privileges of which the chief is exemption from all taxation — even from the market dues on the produce of their lands — when they possess property or estates.

The Fāsi are celebrated throughout the Maghrib for their piety and also for their fondness for a life of elegance and self-indulgence. Their religious feelings express themselves not only in the rigorous observance of the ordinances of the Korʾān but also in countless acts such as visiting the tombs of saints and joining religious orders. Ordinary people prefer to join the ʿAisāwa or Ḥamadsha; the comfortable middle classes rather adopt the rule of the Derkāwā, Ṭaiḥiyin, Tījāniya or Kādriya. These religious pre-occupations do not, however, make them neglect more worldly pleasures. The Fāsi are fond of luxury in dress and at table, receptions or *nzaha* enlivened by recitations of poetry or songs by celebrated artists, known as *shaiḥ* or *shaiḥa*. The houses of rich citizens are remarkable for the sumptuousness of their interior decorations, their pavements of enamelled bricks, their panels of plaster moulded in arabesques, their ceilings of carved and gilded wood, their marble fountains sometimes inlaid with mosaics. The houses of merchant princes or of certain officials of the makhzen have thus, the appearance of veritable palaces. A much appreciated luxury is that of gardens, planted with orange, citron or banana trees. These gardens are very numerous in the higher parts of the city and sometimes enclose pavilions in which the owner takes up his abode for the summer. In politics the people of Fās frequently show themselves rebels and hostile to authority: the history of their city since the xvth century is a series of rebellions. Public opinion, very often inspired by the *Shorfa'* or the ʿUlamā,

is a power with which the Sultāns have had to learn to reckon, often at their cost.

The administration of Fās al-Bālī is distinct from that of Fās al-Djadid. It differs in certain respects also from that of other towns in Morocco. The Sultāns, perhaps to propitiate the inhabitants, have left the Fāsi a semi-autonomy. The three *ḥiṣṣa* which we have already mentioned are themselves subdivided into 18 *ḥūmāt* or quarters, each administered by a chief of a quarter (*muḥaddam al-ḥūma*), elected by the inhabitants and approved by the *makhzen*. This personage has numerous functions; he sees to the maintenance of order, the opening and closing of the gates which close the streets, controls the water-supply, has jurisdiction over women of loose living and finally presides, with four prominent citizens, at recruiting and the levying of taxes. The Sultān's authority is represented by a pasha or governor; two *kādis*, supreme officers of justice, and a *muḥtasib* whose duty is to supervise the markets, fix the market price of food and be the final judge in commercial suits. The multiplicity of his duties enables him to interfere at any moment in the lives of those under him, whence the name *al-fuḍūlī*, the intruder, given him by the people. He is all the more feared as he possesses the right of imprisoning those in his jurisdiction and because, as he receives no salary, he is naturally tempted to enrich himself by his exactions. As to the administrative authority in Fās al-Djadid, it consists of two pashas (of Fās al-Djadid and of *Sharāḩa*), a *muḥtasib* and a *kādi*.

The Jews form quite a considerable body beside the Muslim population (8000 according to Aubin, 10,000 according to the statistics of the Alliance Israélite), but less important than those of Mogador and Marrākush. The origin of this colony of Jews dates back to the foundation of Fās. It was diminished in numbers under the Marinids by the conversion of a large number of its members to Islām but was reinforced in the xvth and xviith centuries by the arrival of Jews fleeing or expelled from Spain, whose descendants form at the present day so great a majority of the Jewish population that there is no longer a synagogue of the native ritual in the city. As in all the towns of Morocco, the Jews live in a particular quarter or *mellāḩ*, which has now become too small for them and is periodically ravaged by epidemics. They are obliged to wear a distinctive dress and are subject to various restrictions from which their co-religionists on the coast are beginning to free themselves. The majority are merchants or artisans but, although a number of well-to-do people are to be found among them, large fortunes are rare. They are under the authority of the Pasha of *Sharāḩa*; but the effective authority is in the hands of the *Shāikh al-Yahūd* appointed by the *Ma'amad* or assembly of prominent citizens. This council also possesses the right to fix the taxes imposed on the Jews, in particular the abattoir tax, the proceeds of which are devoted to public purposes and the maintenance of schools. Justice, as far as personal statutes are concerned, is administered by the rabbis. The people are on the whole ignorant and fanatical. The instruction given in the *Talmūd Thora* is exclusively religious and the efforts made by the Alliance Israélite to introduce a modern system of education into the Mellāḩ have been received with the greatest suspicion.

There are two schools, however, founded by this association which have about 300 pupils.

As to Europeans, they have long been banished from Fās by the fanaticism of the Muslim populace. According to Chenier (*Recherches sur les Maures*, Vol. iii. p. 61), it still required in his time the express permission of the Sultān before they were allowed to enter the city. In the course of the last fifty years several Europeans, diplomats or merchants have made stays of some length in Fās. Some even took up their abode there. American and English religious missions were established there in 1887 and in 1896 but without exercising any influence on the inhabitants. Vice-consulships filled by Europeans were created there by England in 1892, France in 1893, and by Germany in 1902; French and English military instructors were placed at the disposal of the *makhzen* and a number of Italians commissioned to organise an arsenal. In the reign of 'Abd al-'Azīz, the European colony comprised about thirty individuals (officers, diplomats, doctors and merchants). The establishment of the French protectorate will probably soon alter this state of affairs.

Fās is not only a holy city, it is also a commercial city where trade is held in no less honour than piety. Goods manufactured in Europe or in Fās itself are here exchanged for the products of the south notably the hides and dates of Taflelt. The trade with Europe is carried on via Tangier and the harbours of the Atlantic coast, with Algeria by the road through Tāzā and Ujdja, at least when communication is not cut off by rebel tribes. This traffic is in the hands of Muslims and not of Jews as is the case in the towns of the coast. The merchants of Fās are energetic, prudent and enterprising men; they have put themselves in direct communication with Europe; they have offices in Manchester for the purchase of cotton goods; others have founded establishments at Genoa and Marseilles. They are to be found in Orania, Algiers, Tunisia and even on the Senegal. Some are bankers as well as merchants, like the Christian merchants of the middle ages. Some of them make large fortunes and as soon as they do this, hasten to build themselves luxurious houses. This commercial middle class enjoys great influence and forms with the 'Ulamā' the controlling class in the state. Local industries also are quite prosperous; besides the articles of every day requirements they furnish several things famous throughout Morocco, which are even exported beyond the limits of the Sharifi empire. The most flourishing industries are the manufacture of pottery, of the enamelled squares used in the interior decoration of houses, the weaving of silk and wool, dying, leather-working (dressing of skins, tanning and shoemaking), which occupies over 2800 work people and lastly the mills, which use the waters of the Wādī Fās and its various branches as motive power. The mills which belong to the *hubus* but are let to private individuals number 160. This industry is very old and Gailard is wrong in attributing its introduction to the Almoravid Yūsuf b. Tāshfīn; as a matter of fact it is already mentioned in Ibn Hawḩal's description of the city in the xth century A. D.

A city of sanctity and commerce, Fās is also a city of learning. Its reputation on this score is very old. "Since its foundation" we read in the *Kirfās*, "Fās has been a great centre where sages,

jurists, literary men, physicians and other scholars meet in large numbers". Although scholars of repute had taught in Fās under the Almohads, it was only under the Marinids that the university was constituted, which still exists, although it has fallen from the splendid position it once occupied. It retains the organisation which it had in the middle ages but the instruction given in it, instead of embracing all human knowledge as it did then, is now reduced to strictly religious subjects (*ilm*). Out of the 20 chairs in the university 10 only are filled at the present day (ḥadīth, jurisprudence, law, theology, grammar, rhetoric, logic, prosody, practice of law and belles-lettres). No attempt has been made, as has been done in Egypt, either to introduce modern sciences alongside of the ancient studies or to bring the latter themselves up to date. Sidi Khālil's treatise and the works of his commentators still form the basis of the teaching of law, as in the past, and the *Adjurrūmiya* and *Alfiya* in literature. Their aids to study are also defective. The libraries were, however, at one time famous. That of the Madrasa al-Ṣaffārīn once included the Arabic works sent as tribute to the Marinid Ya'qūb b. 'Abd al-Ḥaḥḥ by Sancho, king of Castile. These afterwards went to swell the library of the Mosque of al-Ḳarawiyīn. In the xvth century A. D. European scholars used to come to Fās in the hope of finding ancient works there. But even in the beginning of the xixth century, 'Ali Bey (*Voyages*, Vol. i. Ch. viii.) mentions the confusion in which this library was and now it hardly seems to contain more than 2000 volumes. Some scholars, it is true, possess quite well equipped libraries. A certain number of works, on the other hand, have been lithographed in Fās itself and thus made accessible to European scholars. The lectures of the professors still form the main elements in the instruction. They succeed one another daily from morning till evening in the arcades of the al-Ḳarawiyīn mosque. The students (*ṭalabā'*) begin to attend them on the completion of their elementary studies, i. e. after having obtained the title *ḥāfiẓ*, showing that they can read, write and recite the whole of the *Qur'ān*. After several years' study, a number of *ṭalabā'* succeed in gathering hearers around them and thus acquire the title *faqīh* or savant. It is from the latter that the professors (*muḍarris*) are chosen. The latter were at one time exclusively appointed by the *kādis*, but, since the reign of Mūlay Ḥasan, their nomination is subject to the approval of the *Makhzen*. They are divided into five classes and receive fixed salaries paid out of the revenues of the *ḥubus* as well as presents in money or kind given on certain occasions by the *Makhzen*. The professors of the first class are the only ones who actually have chairs.

Scholars, whether professors or simple *faqīh*, *imām*, preachers in the mosques and *Zāwiyas* play a preponderating part in the life of Fās in spite of their scanty means. The majority of the secretaries to the *Makhzen* and officers of justice have studied under them and are under their influence. They also form a kind of religious council of the empire. "It is to them," says Gaillard "that the *Makhzen* applies to know if such and such a government measure or manner of levying taxes is contrary to religion or the good of the Muslim community.... It is they who after the death of the sovereign ratify the choice of his successor....

They should not hesitate, if occasion demands it, to give their views or just protestations". The moral influence of this small body of some seven or eight hundred scholars, for the most part members of Moorish families in Fās, is thus considerable and sufficient to form a check on the Sultān's authority.

The students live in "madrasas", buildings erected to house the *ṭalabā'*, somewhat analogous to the colleges of the mediaeval universities. Originally certain courses of instruction were sometimes given in them but this practice has almost entirely disappeared. The poor *ṭalabā'* receive a daily allowance of bread furnished by the *ḥubus* and also benefit from presents sent by persons of importance or pious individuals; if necessary they solicit the charity of the public. The period of their stay in the madrasas, which was at one time ten years, is now reduced to three. The oldest madrasas were built by the Maīnids; others were built by Sharīfī rulers. The madrasas which are still inhabited number 9, viz., al-Ṣaffārīn (built in 723 = 1323), by Abū Sa'īd 'Oḥmān, al-ʿAttārīn built by the same ruler, al-Miṣbāḥiyya, built by Abū 'l-Ḥasan (731 = 752 A. H.) for a professor called Abū 'l-Diyā' Miṣbāḥ, al-Shārīdī (built in 721 = 1321), Bū 'Aināniyya (built by Abū 'Ainān in 752 = 1351 A. D.), al-Saba'īn; Mūlay 'Abd Allāh, built in Fās al-Djādīd in the reign of Muḥammad al-Ḥādīdī al-Dilālī (1051 = 1070 A. H.), al-Sharrāṭīn, built by Mūlay al-Raṣhīd (1081 A. H.) and Bāb al-Gisa, built by Mūlay Muḥammad (1171 = 1205 = 1757 = 1790). According to the most recent reports they house 350—400 students (Budgett Meakin's figure of 1500 *ṭalabā'* seems therefore too high). Boisterous distractions break the monotony of study. Every year in the spring the students celebrate a festival in the course of which one of them is proclaimed "Sultān of the *ṭalabā'*" and for a week enjoys the honours due to a sovereign. This custom dates back to the reign of Mūlay Raṣhīd. It commemorates, we are told, the capture of Tāza, which was taken from its possessor, the Jew Ibn Masha'al, by 40 *ṭalabā'*, partisans of the Sharīf. They succeeded in smuggling themselves into the fortress, hidden in chests, slew Masha'al and handed the place over to Mūlay al-Raṣhīd who, as a reward for this service, resolved that they should have a sultān of the *ṭalabā'* once a year.

The foundation of Fās coincided with the establishment of the Idrīsīd dynasty in Morocco. Abandoning the Berber town of Walili, situated on the S. W. flank of the Djebel Zarhūn, where his father Idrīs I. had settled, Idrīs II. resolved to build a capital. After having examined several sites in the neighbourhood of the Wādī Sebū with the help of his vizier 'Omair, he finally settled on a valley watered by abundant streams and overhung on the north by the Djebel Zelāgh. This territory belonged to two Berber tribes, the Zuwāgha and Banū Yarghish, from whom Idrīs purchased the land on which the city was to be built. According to tradition, 3500 dirhams were paid to the former and 1500 to the latter. According to the *Ḳirtās*, on the first Thursday of Rabī' I. 192 (3rd Febr. 808 A. D.) Idrīs himself, it is said, traced out the line of the city walls and decided on the position of the gates. He built the Mosque of the *Shāikh*s in the high part and the Mosque of the *Shorfa'* nearer the Wādī

at a spot called Karmūda; he was buried in the latter. The new town received the name of Fās, the origin of which is still very uncertain, in spite of the explanations which Arab writers have attempted to give. Some say the word is derived from *fās*, a pick, in allusion to the instrument used by Idris to trace the line of the walls; others say that it is the name of an older town Sāf inverted, the ruins of which then existed in the neighbourhood. Another story is that the city took its name from the first person met by Idris. He was called *Faras*, a word which, in consequence of a defect in his speech, was understood as *Fās*.

In any case, Fās was peopled rapidly. The Arab companions of Idris were joined by Berbers from the neighbouring tribes, Awraba, Huwāra and Lwāta and immigrants came from Spain and Ifrīqiya. For example, 300 families from Cordova settled there, as a result of the suppression of a revolt against the Caliph al-Hakam b. Iḥshām. Three hundred families of Kairawān who had left their native land for similar reasons also settled there. The first of these groups took up its abode on the right bank of the Wādī Fās, which then took the name of *ʿAdwat al-Andalus* (bank, or district of the Andalusians) and the second on the left bank which was henceforth called *ʿAdwat al-Ḳarawiyyin*. Each of these quarters was endowed with a mosque by Yahyā b. Muḥammad, grandson of Idris II.

The history of Fās during the early centuries of its existence was a very troubled one. On the death of Idris, Fās fell to Muḥammad his eldest son; then its possession was disputed among the descendants of this prince and the representatives of other Idrisid families. At the beginning of the third century A. H. we find the inhabitants of the quarter of the Andalusians expelling Yahyā II. and placing ʿAlī b. Idris b. ʿOmar, ruler of the Rif, in his stead, while the people of ʿAdwat al-Ḳarawiyyin proclaimed Yahyā b. Ḳāsim b. Idris who in the end was victorious. In the next century Fās suffered much from the rivalry of the Idrisids and Fātimids. In 308 = 920 Yahyā b. Idris b. ʿOmar, successor of Yahyā b. al-Ḳāsim, besieged by Meṣāla, chief of the Miknāsa, found himself forced to recognise the suzerainty of ʿUbad Allāh al-Mahdi; in 309 = 921, Fās was definitely occupied by the Fātimid army, Yahyā exiled to Arzila and a Kitāmi governor placed on his throne. The people of the Andalusian quarter, however, remained faithful to the Idrisids. One of them, al-Ḥasan, regained (313 = 925) possession of this part of the town for a period and remained there till 314 = 926, when an ally of the Fātimids, Mūsā b. Abī l-ʿĀḍiya, succeeded in taking it. Mūsā's revolt in favour of the Omayyads brought the Kitāmi armies to Fās once more; Mūsā was expelled and authority in the city again passed to an Idrisid; this ruler having then recognised the suzerainty of the Omayyad Caliph, a Spanish governor was set over the city (338 = 949). Ten years later the Fātimids took the offensive; their general Djawhar seized Fās (347 = 958) and sent the Omayyad governor prisoner to Kairawān. The triumph of the Fātimids was not of long duration, for in 362 = 973, Fās was replaced under Omayyad rule by Ghālīb b. ʿAbd al-Raḥmān the Caliph al-Hakam's II general. Two Spanish officers were appointed to rule the town, one to each quarter.

The rivalry between the Omayyads and Fātimids

was followed by a struggle between the Omayyads and the Zenāta. Ziri b. ʿĀṭiya, chief of the Maghāwā, governor of Fās on behalf of the Omayyads (since 381 = 991) rose against the regent al-Manṣūr but was defeated at Tangier by the latter's son, ʿAbd al-Malik, in 388 (998) and driven from Fās; Ziri's son al-Muʿizz was however given the governorship of Fās by ʿAbd al-Malik in 397 (1006) and bequeathed it to his son Ḥammamā in 416 (1025). Soon afterwards the Maghāwā had to defend themselves against another Berber tribe, the Banū Ifren, whose chief Tamim seized Fās (1033 A. D.). He plundered the town and wrought particular devastation in the Jewish quarter. He was expelled in turn by Ḥammamā (1038). Ziri b. ʿĀṭiya's descendants held out in Fās till the Almoravid invasion, in spite of the brief occupation of the town by the Ḥammādid Bulukkin (1063). After a first attempt in 445 = 1053, which failed, Yūsuf b. Tāshfin succeeded in taking Fās in 462 (1069-1070). The city was sacked by the conquerors. The Maghāwā, Banū Ifran and Zenāta were massacred; 3000 persons were, we are told, slaughtered in the mosque of the Andalusians and in that of al-Ḳarawiyyin.

In spite of these troubled times, Fās developed rapidly under the Idrisids and Zenāta. At the end of the ivth (xth) century Ibn Ḥawkal says that "in the abundance of its fruits, vegetables and provisions . . . in the quantity of merchandise and other articles to be found there and in the considerable revenue, which it yields to the sovereign, Fās surpasses all other towns of the land of al-Ḥabaṭ". Al-Bakī, a century later, mentions that it contains 300 mills, which presupposes a considerable population. "The Jews", he adds, "are more numerous there than in any town of the Maghrib". The two quarters of the Andalusians and the Kairawānis formed at that time two separate towns each surrounded by a wall: their inhabitants were often at daggers drawn with one another. On the death of the Zenāta prince Dunas we find, for example, the Andalusians proclaiming one of his sons, al-Fatūh, Sulṭān, while another son al-ʿAdjisa reigned over ʿAdwat al-Ḳarawiyyin. The people of the two towns moreover had different customs and occupations. The people of ʿAdwat al-Andalus, writes the author of the *Ḳirrās*, were very brave and for the most part engaged in various trades and agriculture, those of ʿAdwat al-Ḳarawiyyin, on the contrary, loved luxury and ostentation in their houses, in their dress and at table; they were occupied only with commerce and the arts.

Under the Almoravids, the aspect of Fās began to be modified. Yūsuf b. Tāshfin built the walls which separate the two ʿAdwa (462 = 1070) and the space between gradually became filled up with buildings. The mosque al-Ḳarawiyyin was enlarged and a fortress built on the site of the present ḳaṣba of Bū Djelūd. This transformation continued under the Almohads whose leader ʿAbd al-Muʾmin had captured Fās after a very arduous siege (540 = 1145-1146). To overcome the resistance of the inhabitants he was forced to build a dam across the Wādī Fās which enabled him to deflect the waters and flood the town. When master of the town, ʿAbd al-Muʾmin's first task was to destroy the ḳaṣba of the Almoravids as well as a portion of the ramparts. Fās could not, however, remain without defences; Yaʿqūb al-Manṣūr ordered the walls which his grandfather had destroyed to be

rebuilt, a work which was finished in the reign of his son al-Nāṣir b. al-Manṣūr in 600 = 1204. Al-Nāṣir also rebuilt the citadel. The period of the Almohads seems on the whole to have been a prosperous one for Fās. According to the *Ḳirfās* there were at that time 785 mosques or chapels, 93 public baths and 472 mills in the city. In the reign of al-Nāṣir there were 99,236 houses, 9032 shops, 2 bazaars and 3064 workshops. Houses covered a portion of the streams and gardens disappeared to make room for buildings. Industries flourished, copper and leather were the chief manufactures, and paper was also made. The population probably numbered more than it does at the present day.

The succession of the Marinids to the Almohads made no alteration in this state of affairs. It was in 646 = 1248 that the Marinid Abū Yahyā took possession of Fās and received the oath of fealty from its inhabitants. The latter, however, were not long in rising against him and were so successful that he had to lay siege to the town for seven months before he could enter it again. The execution of six *Shāikh*s who had been the instigators of this rebellion cured the people of Fās of any desire to offer further resistance to their new master. For the three centuries that the Marinid dynasty lasted, Fās had a less troubled history than in the previous period. Fās was for a few days in 1309 however in the power of the Christian militia whose chief Gonzalves rose against the Sultān; in 1316 Abū 'Alī won it for a time from his father Abū Sa'īd. Later, after the death of Abū Ainān, the pretender al-Manṣūr succeeded in taking Fās al-Bālī and shut al-Sa'īd b. Abū Ainān and the regent al-Ḥasan closely up in Fās al-Djadīd. They were able to hold out long enough for Abū Salīm, brother of the late Sultān, to come and relieve them. In 1374 the pretender Abū 'l-Abbās Aḥmad with the help of the king of Granada occupied Fās. He was driven out of it in 1384 by another pretender, Mūsā, but entered into permanent possession of it again in 1387.

The period of the Marinids is none the less the most brilliant in history of Fās. The city then regained the position of capital, which it had lost under the Almohads and Almoravids in favour of Marrākush. It was further embellished with new buildings of all kinds, which have perpetuated among the people the memory of the rulers who built them. They built a new town, Fās al-Djadīd to house their soldiers and government officials. The first stone was laid on the 3rd Shawwāl 674 = 1276 by Ya'qūb b. 'Abd al-Ḥaqq. He built a mosque there, a palace, mint and an aqueduct; he allotted a special quarter to the Jews who were forced to leave the ancient city where they had hitherto lived unless they would become Muslims. The new town, was first called Madiyat al-Baiḍā, the "white city", because of the colour of its buildings, but afterwards received the name of Fās al-Djadīd in opposition to Fās al-Bālī. The ancient town was not, however, neglected by the Marinids, who delighted in endowing it with religious buildings. Six of the madrasas at present existing date from this period and five of them are in Fās al-Bālī. The immigration of Andalusian Moors also helped to increase the prosperity of Fās.

We may obtain a good idea of it from the description given in the beginning of the xviiith

century by Leo Africanus. According to him the population was 125,000 including 10,000 Jews. Among the sights of the city were "700 temples or churches, of which 50 were very beautifully built, ornamented with columns of marble and fountains in mosaic", 600 public fountains, 100 baths, 200 schools for children, 200 hostels, of which many were disorderly houses, an asylum for lunatics which is still carried on practically as Leo describes it. Private houses attracted attention by their decoration of "mosaics and bricks of ancient type diapered and variegated in colours". Commerce and industry flourished if we may judge by the interminable lists of workshops and shops which filled the fifteen sections of the *Ḳaisariya* and the environs of the mosque of al-Ḳarawiyin. Industry on a large scale was represented by the textile factories, employing 10,000 hands, the tanneries, bleaching works for the spun wool, mills etc. Among the merchants frequenting the city of Fās, there must certainly have been Christians: Marmol says a special quarter was reserved for them in Fās al-Djadīd. Around the city were suburbs that have now disappeared, such as al-Muristān, not far from the Bab al-Gisa, near grottoes in which lepers used to be interned by order of 'Abd al-Ḥaqq; such were in the west the suburb of Bū Djalūd, of Mars 'l-Ḳdim and of al-Qutān, peopled by potters. In the north, on the spur now called *Ḳolla*, rose the *Ḳṣar* or castle of the Banū Merīn, of which traces still remain with the tombs of four princes of this dynasty, 'Abd al-'Azīz b. Abi 'l-Ḥasan (died 794 = 1392), Abū 'l-Abbās b. Abi Salīm (796 = 1394), 'Abd al-'Azīz b. Abi 'l-Abbās (799 = 1397) and 'Abd al-Ḥaqq b. Abi Sa'īd. Gardens, where the rich people spent the summer from April to September, occupied large areas in the south of the town and beyond the walls stretched other orchards which formed a public park for the citizens. Whatever Leo Africanus may have exaggerated, Fās none the less appears to have been in the xviiith century the metropolis of western Islām and the heir to the civilisation of the Moors of Spain.

Decadence set in with the coming of the Sa'īdī *Sharifs*. In 1550 Muḥammad al-Mahdī took Fās from the Marinids. The city had been valiantly defended by Bū Ḥassūn, brother of Sultān Aḥmad; but a section of the *Shāikh*s were won over by the *Sharif* by bribery and persuaded the inhabitants to capitulate. Bū Ḥassūn having succeeded in interesting the Turks of Algeria in his cause, attempted to regain Fās. Ṣālah Ra'īs's army defeated Muḥammad al-Mahdī at Tāzā on the banks of the Sebū and again under the very walls of Fās. On the 6th January 1554 Bū Ḥassūn re-entered Fās which the *Sharif* did not even attempt to defend. The Turks sacked the city and then withdrew leaving Bū Ḥassūn with his own troops only. The Marinid restoration was thus of short duration. On the 25th August 1554, Muḥammad al-Mahdī regained possession of Fās after a battle in which the Marinid prince was slain. The *Sharif* rid himself of the partisans of Bū Ḥassūn by wholesale executions, then abandoned the city, contenting himself with leaving his son Mūlāy 'Abd Allāh as governor there.

The people of Fās bore this change of government with a bad grace and their discontent found vent in their participation in the disorders which in the first half of the xviiith century ruined the

Sa'dī power. We find them alternately proclaiming and disowning Zidān, next recognising him, then fighting against his son al-Ma'mūn. Two competitors Slimān and Shaikh al-Marbūh disputed the power until Slimān was assassinated by his rival. In the meanwhile 'Abd Allāh b. al-Ma'mūn had entrenched himself in Fās al-Djadid and was blockading Fās al-Bālī. In the end the Fāsi opened their gates to 'Abd Allāh. Al-Marbūh, who with the help of his fellow tribesmen, the Lemṭa, had tried to foment renewed disorder, was put to death. 'Abd Allāh, however, could not long hold out in Fās al-Bālī: he was driven from it but held Fās al-Djadid till his death in 1624. In the same year, 'Abd al-Malik, another son of Zidān, set himself up in Fās al-Bālī but was dislodged by his brother Abu 'l-'Abbās Aḥmad.

Soon Fās itself passed completely from the Sa'dis. Muḥammad al-Ḥādīdī, the marabout of Dila', succeeded in making himself master of it and placed a governor in it in his name. Humiliated by this situation, the Fāsi revolted (1649) and called in the help of Mūlāy Muḥammad, Sharif of Sūs. But the latter was defeated by Muḥammad al-Ḥādīdī and had to evacuate Fās, the inhabitants of which found themselves again forced to recognise the authority of Dila'. On re-entering Fās, Muḥammad ordered his soldiers to sack the Zāwiya of Mūlāy Idris and scatter the remains of the Sa'dī Sharifs who were buried in the tombs of the Idrisids. He remained master of the town undisturbed till 1662, when a certain Dreidi succeeded in taking it for a time. Victorious over this rival, Muḥammad was however forced soon after to retire to Fās al-Djadid, while Fās al-Bālī acknowledged B. Ṣalah, chief of the Andalusian quarter and B. Ṣaghīr, chief of the Lemṭa quarter.

The occupation of Fās by Mūlāy al-Raṣhīd put an end to these disorders. He had previously tried in 1666 to gain the city, but it was not till 1667 that after two months' siege he took Fās al-Djadid. The two chiefs of Fās al-Bālī fled; the people opened the gates to the Sharif and swore fealty to him. Al-Raṣhīd built the ḥaṣba of Khemis (now the Ḥaṣba al-Sherrarda) for his troops. To him also the city owes the Madrasa al-Sherrāṭīn and the bridge over the Sebū, which facilitates access to Fās to caravans coming from the Tāzā district. The inhabitants did not yet resign themselves to submit to the rule of the 'Alawī Sharifs and never missed an opportunity to show their discontent. Thus, on the death of al-Raṣhīd, they refused to recognise Mūlāy Ismā'il as his successor and proclaimed his nephew Aḥmad b. Mahrez. Ismā'il was forced to undertake a regular siege. The operations, conducted by the Spanish renegade Pinto, lasted a year. At the end of their resources, the Fāsi opened their gates while the pretender fled to the south. Mūlāy Ismā'il retained a grudge to the end of his life against the Fāsi for their hostile attitude and, while adorning his favourite residence Meknes with magnificent buildings, all that he did in Fās was to restore the Zāwiya of Mūlāy Idris. Restrained in the path of duty by the energy of the Sultān, the Fāsi lost no time after his death in satisfying their instincts for independence and opposition. They refused obedience to Aḥmad al-Dhahabī and recognised as chief another son of the late Sultān, 'Abd al-Malik, as their sovereign. Aḥmad was only able to force an entrance to Fās after five months'

bombardment (1728). Aḥmad's successor, Mūlāy 'Abd Allāh, was not more fortunate and had to entrust Ripperda with the task of besieging Fās from May to October 1729. While these operations were going on, he established his camp at a place called Dār Dubaibigh ('the house of the little tanner'). He afterwards built a palace surrounded by gardens here and made it his usual residence till his death there in 1757. The rebellion of Fās was severely punished; the fortifications were dismantled and the citizens suffered a great deal from the extortions and cruelties of the governors appointed by the Sultān. Many of them emigrated to Algeria, Tunisia, Egypt and even to the Sūdān. It is therefore not surprising that they rose again in 1735 and that in 1736 they proclaimed a brother of the Sultān, Muḥammad b. Arība, at the tomb of Idris but soon dropped him in favour of another son of Mūlāy Ismā'il al-Mustaḍī. Tired of the latter they drove him out and restored Mūlāy 'Abd Allāh. Al-Mustaḍī in revenge laid siege to Fās at the head of an army furnished by the Berber tribes of the neighbourhood and was repulsed in 1746. As to 'Abd Allāh, the people of Fās al-Bālī refused to receive him and even supported his son, Mūlāy Muḥammad against him, who had rebelled against his father with the support of the 'Abid. The reconciliation of father and son brought peace to Fās again. Mūlāy Muḥammad restored order by expelling the Udāya, who had made themselves notorious by their turbulence and replaced them by the 'Abid.

Mūlāy Muḥammad's reign was peaceful but renewed troubles broke out in the reign of Mūlāy Slimān. In 1234 A. H., the people rose in rebellion to obtain the dismissal of the governor; in 1235 the Udāya took advantage of the absence of the Sultān in Marrākush to rise and sack the Mellāḥ; in 1236, dissatisfied with the recall of the Mufti, the Fāsi took up arms once more and proclaimed two pretenders in succession. Mūlāy Slimān was forced to besiege Fās al-Bālī for ten months before he could reduce them. The beginning of the reign of 'Abd al-Raḥmān (cf. this article i. 54^b *et seq.*) was marked by the rebellion of the Udāya who held Fās al-Djadid for ten months (1247 = 1831). In the second half of the sixteenth century a rebellion not less serious broke out on the accession of Mūlāy Ḥasan (1290 = 1873). The people of Fās al-Bālī led by the 'Ulamā' and the prophecies of a blind Sharif refused to take the oath of obedience to the new Sultān and closed the city gates against him. Old Fās was once more besieged but Mūlāy Ḥasan did not dare to proceed to bombard the capital for fear of injuring the mosque of Mūlāy Idris and thus rousing the fanaticism of the citizens to boiling-point. The blockade dragged on till the imperial troops succeeded in making a breach in the Ḥaṣba of the Filala and thus entering the town. After Mūlāy Ḥasan had regained his capital he carried out considerable improvements there (erection of the palaces of Bū Djelud and Lalla Amina and the new Meshwār, connection of New with Old Fās etc.; cf. ii. p. 72).

The improvements attempted by Mūlāy Ḥasan's successor, 'Abd al-'Azīz, aroused great excitement among the people of Fās. In December 1907 troubles again broke out while the Sultān was away to Rabāt on a journey. As Mūlāy Ḥafīz

had risen in rebellion against his brother soon afterwards, the Fāsī at once decided to take his side. On the 4th January 1908 the 'Ulamā and notables declared that 'Abd al-Azīz had forfeited his authority by selling himself to the unbelievers who had led him astray; they then proclaimed Mūlay Ḥafīz who, after the defeat of 'Abd al-Azīz at Sīdī Rahāl on the 19th August 1908, became undisputed ruler of the kingdom. But the triumph of Ḥafīz was to have quite unforeseen results. The extortions of the ministers and agents of the new Sultān provoked a general rising of the tribes around Fās in February 1911. The Berbers of the neighbourhood (Bani Mtūr, Ait Yūsī, Bani Warāin etc.) laid siege to the town in March and the Sharifī Maḥalla was unable to raise it. At the end of his resources the Sultān called in the help of France, whose troops had occupied the Shāwīya district since 1907 [cf. DĀK AL-BEḌĀ, i. 915]. A column under General Moiney reached Fās on 21st May 1911 after two fierce encounters on the 5th and 11th May and scattered the rebels. Thus the holy city of Mūlay Idrīs was entered by Christian troops for the first time.

FAṢĀ, known in earlier times as BASĀ-SIR, a town in Fārs, 4 days' journey S. E. of Shirāz, was the most important town in the district of Darābdjird (Iṣṭakhrī, p. 97, 127); it was a well built town, with houses of clay and cypress wood, surrounded by a wall outside which lay a suburb in which the markets were. In the centre of the town was a mound formed of the ruins of an ancient tower of unbaked bricks, the moat of which still exists. It had at one time flourishing industries (the manufacture of various clothstuffs which were exported in large quantities, notably brocades, *firās al-washy* and *al-sha'ar* and *sūsan-djird* for the use of kings, Iṣṭakhrī, p. 153, Muḥaddasī, p. 442). In Muḥaddasī's time it was attached to Shirāz (p. 52) and had a chief mosque of brick built after the plan of that in Baghdād (p. 431). It was taken by Oḥmān b. Abī l-'Ā, under the same circumstances as Darābdjird in 23 (644). It was laid waste by the Shabānkāra and rebuilt by the Atābeg Khāuli.

FAṢĀḤA (A.), properly "clarity, purity", abstract noun from *faṣīḥ*, clear, pure. In Arabic rhetoric *faṣīḥ* means: 1. a single word, when it is not difficult to pronounce, is not a foreign or rare word and its form is not an exception to the usual; 2. a whole sentence, when it does not contain an objectionable construction, a discord, an obscurity (through a confusion in the arrangement of the words) or a metaphor too far fetched and therefore incomprehensible. The first kind of *faṣāḥa* is called *faṣāḥat al-mufrad*, the latter *faṣāḥat al-kalām*. There is also a *faṣāḥat al-mutakallim*. This is peculiar to a person whose style conforms to the above conditions.

The adjective *faṣīḥ* denotes a word or a sentence only when free from objection in itself and is distinguished from *balīgh*, which also implies

that expression is relevant in the passage in question.

FĀSHŌDA, the former name of a large province and its capital on the west bank of the White Nile in the Anglo-Egyptian Sūdān, in 32° 30' E. Long and 10° N. Lat., 469 miles from Khartūm.

The district of Fāshōda had been reached as early as the third decade of last century by Sūdān expeditions of the Khedive Muḥammad 'Alī Pasha but it is only since the period of the great explorers of the Nile, from about 1860 onwards, that our more accurate knowledge of it dates.

Fāshōda was then, as it still is, the centre of the great Shilluk people, who inhabit the banks of the White Nile for a stretch of 200 miles from Kaka in the N. to the mouth of the Baḥr al-Ghazāl and Sobat in the S.; their territory measures 5–6 hours' journey in breadth. Their subjection to Egyptian rule took place in the "sixties" but although it cost no battles of importance could hardly be said to be completed till 1871. The number of their villages was estimated at 3000 with a population of 1,200,000. To secure the possession of the conquered territory the fortified station of Fāshōda was built at the time of Th. v. Heuglin's visit in March 1864 and made the administrative centre of the newly constituted province (*mudiriye*). The name Fāshōda is believed to have been given by the Arabs while the Shilluk called the new town Denāb after their last king. The new province was divided into four large districts 1. Dūdāi, N. of Fāshōda with 14 nāḥiyes, 2. Fāshōda itself with 31, 3. Biādūr, in the south on both banks of the Nile, with 15, 4. al-Danika on the east bank of the river with 5 nāḥiyes.

After the expansion of Egyptian power southwards, the importance of Fāshōda lay mainly in its position, as it formed the only connecting link between the Sūdān proper and its capital Khartūm with the Equatorial Province and Baḥr al-Ghazāl. When Fāshōda fell into the hands of the Mahdists in 1884 these two provinces were cut off from Egypt and lost. In the Mahdist period Fāshōda was of great importance for the provisioning of Omdurman (Ummḍirmān) as the agricultural population was almost entirely exterminated in other parts of the Sūdān; it was, however, only in 1891 that the Mahdists succeeded in completely subjugating the Shilluk.

After Egypt had officially and formally given up all claim to the Sūdān provinces, Fāshōda was occupied as *res nullius* on the 10th July 1898 by a French expedition which had reached it from the west under Major Marchand; a number of attempts by the Mahdists to dislodge them were easily repulsed. On the 19th September Kitchener appeared before Fāshōda after his victory over the Mahdists. The ultimate possession of the place was only decided after long diplomatic negotiations in Europe; on the 11th December 1898 the French had to vacate Fāshōda which now became a province again, this time of the new Anglo-Egyptian Sūdān. After Kitchener had left the Sūdān and the *entente* had been concluded between England and France, the name of the town of Fāshōda was changed to Kodak which had previously been

the name of a group of Shilluk villages in the north. Since 1904 the name Fāshōda, officially at least, has ceased to exist.

The modern town lies about 100 yards from the Nile; its chief building is the Mudiriya. A bazaar has been built in the Egyptian fortress, which was restored by Major Marchand. The town is hardly destined to a great future, on account of its low situation within the area of high water. On the other hand, when agriculture has been further developed, the province may attain considerable prosperity, if the Shilluk can be persuaded to work regularly; but this has not been brought about by the order to wear clothes.

AL-FĀSĪ. [Sec IBN ABĪ ZAR^c.]

AL-FĀSĪ, MUHAMMAD B. AḤMAD B. 'ALĪ ABŪ 'L-TAIVIB TAḤĪ AL-DĪN AL-MAKKĪ AL-MĀLIKĪ AL-ḤADRAWĪ, an Arab historian born on the 10th Rabi' I 775 = 31st August 1373 at Mecca, where his early life, with the exception of six years in Madina, was spent. In 797 = 1395, he began to travel for purposes of study and visited Cairo, Damascus, Jerusalem, Alexandria and Yemen. In 807 = 1405 he became qāḍī of Mecca and in 814 = 1412 received a Maliki chair in addition. He was twice deprived of these offices for brief periods in 817 = 1414 and 819 = 1417 and had to resign the judicial office in 828 = 1425 through blindness, but the Maliki Mufti in Cairo at his personal request granted him a certificate that he was capable of exercising his judicial duties. Nevertheless, two years later he was deposed and died on Wednesday 3rd Shawwāl 832 = 7th July 1429. His literary activity was almost entirely devoted to the history of his native city. His first work on this subject was the *Kitāb al-'Iqd al-Ṭamīn fī Ta'rīkh al-Balad al-Amin* with special reference to topography and biography, printed Mecca, 1314 A.H.; on the margin is his *Kitāb al-Riḡā wa 'l-Ḥabūl fī Faḍā'il al-Madīna wa Ziyārat al-Rasūl*. He made two epitomes of it. Of the second edition of the second epitome entitled *Shifā' al-Gharām bi Akhbār al-Balad al-Ḥarām* several chapters are given by Wüstenfeld in his *Chroniken der Stadt Mekka*, ii. 55 *et seq.* He made five further abridgments of the *Shifā'*.

Bibliography: al-No'māni, *Kitāb al-Rawḍ al-Ātir*, cod. Wetzstein I, Nr. 289 (Ahlwardt, *Verz.*, Nr. 9886), fol. 215^r; Suyūṭī, *Ṭabaqāt al-Huffāz*, xxiv. 6; Wüstenfeld, *Geschichtsschreiber der Araber*, p. 473; Brockelmann, *Gesch. d. Ar. Lit.*, ii. 172. (C. BROCKELMANN.)

FĀSIḤ (i.e. sinner) means not only one who has committed a great sin but also one who has been guilty of everyday trifling offences against the law. In the latter respect, in the unanimous opinion of the *faḳīhs* almost every Muslim is to be considered a *fāsiḥ*.

The testimony of a *fāsiḥ* has no legal weight; only the irreproachable Muslim (*ʿadl*) is a credible witness. This is the origin of the custom of having certain persons of good reputation to act as professional witnesses at the conclusion of all contracts (of marriage also). Such persons are often called *ʿadl* or *shāhid*; cf. the literature quoted by

Dozy, *Supplément aux Dict. Arab.*, s. v. 'adl; E. W. Lane, *The Manners and Customs of the Modern Egyptians*, Chap. IV (government); Ph. Vassel, *Über Marokkanische Prozesspraxis (Mittelteil der Seminars für Orient. Sprachen, v., part 2, p. 170 et seq.)*.

Marriage is also invalid, according to the Shāfi'is (and some Hanbalis), if the nearest relative (*walī*), who gives the bride in marriage, is *fāsiḳ* at the conclusion of the marriage contract; it is therefore the custom in some Shāfi'ī districts to precede the conclusion of the contract by the "conversion" of a *walī*; for one who is converted from his sins to a better way of life is again considered 'adl. Cf. C. Snouck Hurgronje in *De Indische Gids*, 1884, i. 779. (TH. W. JUYNBOLL.)

FĀSILA (A.), "interval", a term in prosody, applied to a group of three or four vocalised consonants followed by a quiescent consonant. There are two kinds of *fāсила*, the *kubrā*, the greater and *ṣuḡhrā*, the lesser. The former is composed of five consonants, four of which are vocalised and the fifth quiescent e.g. *ṣamakatun* (a fish), *bīḳalamun* (with a quill), *ḵharajja Ahmādu min baladīhi* (Ahmad went out of his town). The latter consists of four consonants, of which the three first are vocalised and the fourth is quiescent, e.g. *Kurātun* | *ṭurīḥat* | *biṣawālidjātun* (a ball was thrown with bent sticks).

(MOH. BEN CHENEB.)

FASKH means in general the annulling of a contract, e.g. of sale on the ground of hidden defects which the buyer discovers in the article, after he has bought it, or of a political treaty which is declared void by one or both parties. In the first case one speaks of *faskh*, in the second of *mufāsakhā*. Cf. Ibn Faḍl Allāh al-'Omari, *al-Ta'rif bi 'l-Muṣṭalah al-Sharīf*, p. 170 et seq. A marriage contract in particular can be declared null and void, if after the completion of the ceremony it transpires that one or other of the parties does not fulfil certain conditions. Legal grounds for *faskh* in the latter case are, e.g. by Shāfi'ī law the inability of the man to keep his wife in fitting fashion or to pay her the *maḥr*; according to most *madhāhib* certain diseases and physical defects also are valid grounds. The views of the *fiqh* schools on various questions of detail of *faskh* differ in many respects.

As a rule the grounds which justify the annulling of a marriage are not numerous and are besides mostly difficult of proof. A married woman can thus seldom obtain a dissolution of her marriage by *faskh* and therewith the possibility of entering into a new marriage if she is neglected or ill-treated by her husband. Thence arises the custom in some countries (notably in a large part of the Dutch East Indies) which makes the man pronounce a certain *ṭalāḳ* (repudiation) over his wife immediately after the marriage contract is signed. He must, for example, say: "If I do not maintain my wife" (or: "if I beat her" etc.) "she is repudiated by me".

Ishāḳ, trad. de l'Arabe (*Exploration scientif. de l'Algérie*, Paris 1849), xi. 404 et seq. (*de l'option en fait de mariage*); C. Snouck Hurgronje, *De Atjehers* (Batavia, 1893), i. 381 et seq., 403 et seq. (= *The Achehnese*, i. 349 et seq., 367) and the *Handbuch des islamischen Gesetzes* by the author of this article (Leiden, 1910), p. 226 et seq., 233 et seq. (TH. W. JUYNBOLL.)

FATH (A.), literally "opening", a term in Arabic grammar for the pronunciation of a consonant with the vowel *a*; the sign is therefore called *fatha*. In Sibawaihi (e.g. ed. Derenbourg, ii. 281, c) *fath* is still occasionally applied to the pronunciation of the *fatha* without "Umlaut", i. e. the opposite of *imāla* [q.v.] — In Arithmetic *fath* means the square of a number — There are other technical uses of the word for which see Muḥammad A'lā, *Dict. of Techn. Terms*, ed. Sprenger etc., ii. 1104 et seq. s. v. (A. SCHAADE.)

AL-FATH (A.), "victory", title of Sūra xlviii. and one of the titles of Sūra cx. usually called *al-Naṣr*.

AL-FATH, ABŪ NAṢR B. MUḤAMMAD B. 'UBAID ALLĀH B. **ḴHĀḲĀN** B. MUḤAMMAD B. 'ABD ALLĀH AL-ḲAISĪ, better known as **AL-FATH** IBN **ḴHĀḲĀN**, for the biographers do not agree as to his genealogy, was born at Sakhrat al-Walad, a village near Alcalá la Real (Ḳal'at Yaḥṣub), a district in Granada.

Among his teachers are mentioned Abū 'l-Ḥasan 'Alī b. al-Sarrādj, Abū 'l-Taiyib b. Zarḳun, Abū 'Abd Allāh Muḥammad b. 'Abdūn, Ibn Duraid al-Ḳātib, the celebrated scholar Abū Muḥammad 'Abd Allāh b. Muḥammad b. al-Sid al-Baṭalyawsi, etc.

In his youth he was a shameless vagabond, almost always half tipsy till he obtained a position as secretary to the governor of Granada, Abū Yūsuf Tāshifin b. 'Alī. He went to Marrākush and was assassinated there in a funduḳ on the 29th Ramaḍān 528 (24th July 1134) or Sunday 22nd Moḥarram 529 = 13th November 1134 or according to others again, in 535 (17th August 1140—11th August 1141) by order, it seems, of Sulṭān Abū 'l-Ḥasan 'Alī b. Yūsuf b. Tāshifin, brother of Abū Ishāḳ Ibrāhīm b. Yūsuf b. Tāshifin, to whom he had dedicated his "*Necklaces*". He was buried in the cemetery of Bāb al-Dabbāghīn. He composed the following works: 1. *Ḳalā'id al-'Iḵyān wa* (or *fi*) *Maḥāsīn al-'A'yān*, a kind of biographical anthology of those who had lived some time before him and particularly of his contemporaries who had sheltered him or who had quarrelled with him (notably Ibn Bādja whom he placed at the end of the work), divided into four parts: *a.* kings and princes, *b.* viziers, *c.* ḳādis and scholars, *d.* men of letters and poets (publ. at Paris in 1277 by Sulaimān al-Harā'irī in the journal *al-Birdjīs*, at Bulāḳ in 1283, 1284. A commentary was written on the *Ḳalā'id* by Muḥammad b. Ḳāsim Ibn Zākūr (died 20th Muḥarram 1120) entitled *Taṣyīn Ḳalā'id al-'Iḵyān bi Far'id al-Tibyān* (there is a copy in a private library in Algiers; the French translation announced by l'Abbé E. Bourgade in 1865 has never appeared, in spite of the statements by Drenbourg, Brockelmann and Huart. — 2. *Maṭmah al-Anfus wa Masrah al-Ta'annus fi Mulaḳ Ahl al-Andalus*, a kind of appendix to the preceding work; there were, it seems, two or three editions or rather recensions of it, a large and a small or a large, a medium and a small, of which the

small was published at Constantinople in 1305 (*al-Djawāʾib* press) and at Cairo in 1325. — 3. A biography of his teacher, ʿAbd Allāh b. Muḥammad b. al-Sid al-Baṭalyawī (different from that dedicated to him in the third part of his *Ḳalāʾid*) preserved in the Escorial (Derenbourg, *Les Mss. ar. de l'Escorial*, 448¹); this biography is followed by a kind of anthology containing letters and poems by Ibn al-Sid and other scholars, the majority his contemporaries. — 4. *Makāma* on Ibn al-Sid al-Baṭalyawī, preserved in the Escorial (Derenbourg, *Les Mss. ar. de l'Escorial*, 538²). — 5. *Bidāyat al-Maḥāsin wa Ghāyat al-Muḥsin*, thought to be lost. — 6. *Madjmaʿ Rasāʾilihī*, also thought lost.

Al-Fath Ibn Khākān more often wrote in rhymed prose, in which he is usually excellent, and also in verse which is mediocre. He seems to have plagiarised his contemporaries or even appropriated their works bodily; they did not dare accuse the thief for fear of lies cynicism, which showed itself as much in his everyday life as in his literary doings. In any case, we need not look in his *Ḳalāʾid* or *Maṭmah* for historical facts; the value of the work lies rather in the elegance of its style.

(MOH. BEN CHENEH.)

AL-FATH E. KHĀKĀN, a favourite of al-Mutawakkil. Al-Fath and the vizier ʿUbayd Allāh b. Yahyā, exercised an extraordinary influence over this cruel and frivolous Caliph, particularly in the last years of his reign. Both were ardent supporters of his second son al-Muʿtazz, and exerted all their efforts to exclude the Caliph's eldest son, al-Muntaṣir, from the succession. The latter was publicly insulted and had to put up with all sorts of nicknames like al-Mustaʿdijl (the "premature"), al-Muntaṣir (the anxious one, i. e. for the throne). On one occasion he was even ill-treated by al-Fath by his father's orders. Other influential men were also thrust aside by al-Fath till the Caliph himself by his lack of foresight prepared his fall. When he ordered al-Fath to have the property of the Turkish general Waṣif in Ispahān and Media confiscated, the latter learned of the Caliph's intention and allied himself with al-Muntaṣir and several others to get rid of the Commander of the Faithful. Al-Mutawakkil was assassinated in Shawwāl 247 (December 861); al-Fath attempted to defend him but was defeated by superior forces and shared his master's fate.

(K. V. ZETTERSTÉEN.)

FATH-ʿALĪ AKHUNZĀDE (Russ. AKHUNDOV), an Āzarī-Turkī dramatist, was the son of a village schoolmaster, took service in the Russian army and attained the rank of captain. When the governor-general, Waransoff, of the Caucasian territory built a theatre in Tiflis 1266 = 1850, the Turkī officer wrote 6 comedies for it, besides a historical dialogue in the Turkī dialect of Ādhar-baidjān, which he dedicated to Field-Marshal Prince Bariatinski and which were printed in 1276 = 1859 at Tiflis under the title *Tamthilāt*. They have been translated into Persian by Muḥammad Djaʿfar Munshī.

The following is a list of them:

1. *Mollā Ibrāhīm Khālil Kīmīyā-ger* (1267), transl. into French by Barbier de Meynard (*l'Alchimiste*, *Journ. As.*, Janv. 1886);

2. *Monsieur Jourdan, Hekim-i nibātāt* (1267); transl. into German from the Persian version by A. Wahrmond, Vienna 1889, and into French from the Turkī text by L. Bouvat, Paris 1906 (*Bibl. Orient. Elzévirienne* de Leroux, t. 81).

3. *Khirs-i Ḳulḍār-bāsān*, transl. into French by Barbier de Meynard (*l'Ours et le Volcur*, extract from the *Recueil de textes et de Traductions*, Paris 1889);

4. *Wazīr-i Khān-i Sīrāb* (presented at Tiflis, for the first time on the 13th November 1903);

5. *Merd-i khasis* (1269), transl. into French by L. Bouvat (*l'Azare*, *Journ. As.* 1904).

6. *Murāfaʿa wekil-ler* (1272), *Les Procureurs*, transl. into French from the Persian by M. Cillière;

7. *L'histoire de Yūsuf-shāh* (1273), published and translated in French by L. Bouvat (*Journ. As.*, 1903).

Bibliography: W. H. D. Haggard and G. Le Strange, *The Vizir of Lankurān*, p. x. *et seq.*, from the Pers. transl. of n^o. 4; C. Barbier de Meynard and S. Guyard, *Trois Comédies*, p. iv. *et seq.*; A. Cillière, *Deux Comédies Turques*, Paris, 1888. (CL. HUART.)

FATH-ʿALĪ-ŠĀH, a Persian Shāh of the Ḳādjār dynasty, was born in 1185 (1771), succeeded his uncle Ākā Muḥammad-Šāh in 1212 (1797) on the throne and died in 1250 (1834) after a reign of 38 years and five months (which won him the title *Šāhib-ḳirān*) and was buried in Ḳumm. He was at first known as Bāhā-Khān. The murder of Ākā Muḥammad had thrown the army into the greatest confusion; Mirzā Muḥammad-Khān Ḳādjār closed the gates of Teherān till the arrival of Bāhā-Khān who was then in Shirāz; he was at once proclaimed king but only enthroned at the beginning of the following year. After his victory over his brother Ḥusain-Ḳulī-Khān, Muḥammad-Khān Zand and Šadīḳ-Khān Šakāḳī, he succeeded in winning recognition from the chiefs of Khorāsān. After a long war with the Russians he lost Georgia, which was finally ceded by the peace of Gulistān in Oct. 1813. He had sought the support of Napoleon I. who sent Romieux and Jaubert on a mission to him and later General Gardane with the title Ambassador (1806); but thinking that France could not be of any help to him at that time he sought the friendship of England, who sent Sir John Malcolm, Sir Harford Jones Bridges and Sir Gore Ouseley to his court. The rebellion in Khorāsān, fomented by Maḥmūd-Šāh of Afghānistān, gave Fath ʿAlī an opportunity to seize Herāt (1813), but he could not keep it. A war with the Porte (1821—1823)

was ended by a treaty advantageous to Persia. In 1826, seeking to take advantage of the death of Alexander I. to reconquer Georgia and incited by his eldest son 'Abbās-Mirzā, Fath-^ḥAli Shāh declared war on Russia: his son was defeated near Gandja by General Paskiwitch (25th Sept.), and again before 'Abbās-ābād (July 1827), the Shāh was forced to abandon Armenia (treaty of Turkman-čai, 22nd February 1828), Eriwān and Nakhčewān. He died at Ispahān a few months after the death of his son 'Abbās-Mirzā and left the throne to his grandson Muḥammad Shāh. His keen and deeply sunk eyes were overhung by very thick bushy eyebrows; he wore a long, bushy beard dyed with hinnā³.

FATHPŪR-SIKRĪ, a deserted city, 23 miles from Agra, situated in 27° 5' N. and 77° 40' E., on a ridge of sandstone rocks near the ancient village of Sikrī. In 1569 when Akbar visited Shaikh Salim Čishtī, who was living in a cave on the Sikrī ridge, the saint foretold the birth of a son to the childless monarch, and in 1570 Sulṭān Salim, afterwards known as the Emperor Djahāngir (q. v.), was born there. Akbar then commenced building a city, covering an area of about 1¾ sq. m. and enclosed by a wall (still standing) 3¾ m. long. On his return from his campaign in Guḡjarāt in 1574, he found his new capital ready for occupation and named it Fathpūr (the City of Victory); he resided here until 1586, when he abandoned it as a capital, probably on account of the brackish nature of the water obtainable there, and shortly after his death, it began to fall into ruin. Many of the buildings, however, still remain in an excellent state of preservation; among these may be mentioned the official buildings, such as the mint, the treasury, the record office, and the hall of public audience, and the royal palace, including the private apartments of the Emperor and the residences of several of his wives. The house of the Turkī Sulṭāna is remarkable for the elaborate carving with which it is covered, both within and without; the interior is decorated with a dado, 4 ft. high, divided into eight oblong panels, richly decorated with carvings representing forest and garden scenes. The two-storeyed building, known as Birbal's house, (though it was undoubtedly the palace of one of Akbar's queens), is similarly covered with carving exhibiting a profuse variety of patterns executed in minute detail. In close proximity to the royal apartments are some curious buildings, of a unique design, e. g. the Pānc Mahall, a five-storeyed pavilion, each storey of which is smaller than the one on which it rests, and the so-called Diwān-i Khāṣṣ (or private audience hall), a building consisting of one room only, in the centre of which rises an octagonal column surmounted by an enormous circular capital, from the top of which radiate four narrow causeways, each about 10 ft.

long, to the corners of the building: the top of this capital is thus connected with a gallery, running round the upper part of the room and communicating by staircases (made in the thickness of the wall) both with the roof and the courtyard below. It is not possible to enumerate here the many other buildings connected with the emperor and his court, but special mention must be made of the great mosque, which is one of the finest monuments of Mughal architecture. It covers an area of 438 ft. by 542 ft., having a central court (360 ft. by 439 ft.) enclosed by cloisters, except at the three gateways, of which the Baland Darwāza (facing the South), erected by Akbar in 1602 to commemorate his victories in the Dakkan, ranks as one of the noblest gateways in India. In the court of the mosque stands the tomb of Shaikh Salim Čishtī, a single-storeyed building, encased in white marble and surmounted by a dome; the marble lattice screens which enclose the veranda of this building are of extraordinary delicacy and intricacy of geometrical pattern; over the cenotaph is a wooden canopy inlaid with mother-of-pearl arranged in beautiful geometrical designs.

Among the noteworthy features of the buildings at Fathpūr-Sikrī are the evidences of the influence of Hindu architecture, in construction and decoration, and the frescoes painted on the walls of the Khwābghāh and the Sūnahrā Makān, and the colour decoration of the Hammām and other buildings.

Bibliography: *Tūzūk-i Djahāngīrī*, p. 2. (Allypūrh, 1864); E. W. Smith, *The Moghul Architecture of Fathpur-Sikri*. (*Archaeological Survey of India*, Allahabad, 1894—1898); *Keene's Handbook for visitors to Agra and its neighbourhood*, re-written by E. A. Duncan, pp. 222—257 (7th ed. Calcutta, 1909).

FĀṬĪḤA, the first and most popular Sūra in the Korān. Its name means the "opener" (i. e. of the Korān). This short Sūra which only contains seven verses has a certain number of peculiar features; it is at the beginning of the book, while all the other short Sūras are at the end; it is in the form of a prayer while the others are in the form of a sermon or lecture; in reciting it the word *amin* (amen) is added to it, which is not done in any of the others.

In Sūra xv. 87 there is an allusion to the *Fāṭiḥa* under the name of the seven (i. e. verses) which ought to be constantly repeated (= *Salāṭ min al-Maḥānī*); and these seven verses occupy a special position with reference to the portion of the Korān revealed at that time. "We have already given thee the seven verses which ought to be constantly repeated as well as the great Korān". At the period then, when Sūra xv., which is Meccan, was revealed, the *Fāṭiḥa* was already the favourite prayer of the little community of believers.

It has been said that this Sūra is the oldest or one of the oldest in the Korān. Nöldeke has urged against this view that it contains expressions which are not found in the Sūras of the first period; notably certain epithets of Allāh, "the merciful, the compassionate, *al-Raḥmān, al-Raḥīm*" appear there for the first time. Nevertheless the *Fāṭiḥa* is relatively old and should be placed at the end of the first Meccan period. It is, as we have just mentioned, quoted in Sūra xv. which belongs to the second period; and its first verse "glory be to God, the lord of the worlds"

is repeated at the end of Sūra xxxvii. (verse 182) which also belongs to the second period.

The words *al-Maghḍūb ʿalaihī* "those against whom God is enraged", and *al-Dāllīn*, those who err, in verse 7 of the *Fāṭiḥa*, refer respectively to the Jews and Christians.

The *Fāṭiḥa* forms part of the daily prayer (*Namāz*) of the Muslim; its recitation is a divine order according to *Shāfiʿī*, while Abū Ḥanīfa says it is only obligatory by canon. Various pious scholars have written on the virtues of this Sūra.

AL-FĀṬIK, the name of three rulers of the NAḌJĀH dynasty [q. v.].

FĀṬĪMA, the daughter of Muḥammad and the aged Khadīdja, born in Mecca. Unlike the other children of the Prophet, we have solid grounds for believing in her existence, not so much in reliable documents as in her descendants. She possesses a biographical literature of her own, in which however historical facts are rather scarce, a slight but appreciable advantage over her sisters, notably Ruḳayya and Umm Kulthūm, always associated as sisters and confused even in the most trifling incidents of their lives. The poetry of the first century A. H., however, entirely omits to mention her. The date of her birth still remains to be settled. This question implies another, also still unsolved, — the place in order among the four daughters of the Prophet occupied by Fāṭima? All except Umm Kulthūm have been claimed to be the eldest. In this controversy the compilers of the *Sīra* and of Tradition thought that the advanced age of Khadīdja ought to be taken into account. On the other hand, they wished to avoid too great an age for Fāṭima at the time of her marriage with ʿAlī. According to the degree of importance accorded to these two considerations, so difficult to reconcile, the various writers have sometimes brought forward and sometimes set back the date of her birth. It is principally among the Shīʿites, who endow Fāṭima with all physical graces and all mental gifts and virtues, that it has been found more suitable to make her the youngest. Her sisters are supposed by the *Sīra* to have been married before Fāṭima, for "as a good pater familias", so they reason "the Prophet must have settled the elder daughters first". This insistence on the youth of Fāṭima is quite natural; otherwise it would have to be admitted that Muḥammad was indifferent to his daughter, that the companions showed a shocking lack of enthusiasm to enter the Prophet's family and finally that Fāṭima was a nonentity if she remained unmarried for a period far beyond the ordinary period of celibacy, so dreaded by Arab women.

In this chronological discussion, in the absence of any direct information — it is useless to suppose with Sprenger that traditions have been lost — the starting-point is furnished by the death of Fāṭima, which all agree in placing in the year 11 A. H. To the 11 years thus obtained are added the three separating the Hidjra from the death of Khadīdja. Above this figure 14 there is no agreement among our authors. If some of them have represented Fāṭima as the eldest or one of the eldest of her sisters, it is because they wished to

avoid the objection arising from the advanced years of her mother. Others, thinking only of the lateness of her marriage to ʿAlī, have sought to place the birth of Fāṭima about the period of the "prophetic calling" of her father, shortly before or shortly after. The boldest supporters of this view are the writers devoted to the house of ʿAlī. Masʿūdī places the birth of Fāṭima "eight years before the Hidjra" i. e. at a date when her mother must have been at least 60 years of age. This isolated view, which is inspired by the statement in the *Sīra* that ʿĀʾisha was married at the age of nine, is an attempt to give Fāṭima the same advantage. In more than one respect Fāṭima is the Shīʿite counterpart of the very prominent figure of ʿĀʾisha.

The oldest historians and the early *Sīras* such as that of Ibn Hishām devote relatively little attention to Fāṭima. In Ibn Ḥanbal's compilation, the *Musnad* of Fāṭima only occupies a page against the 250 devoted to ʿĀʾisha. The *Ṭabaḳāt* of Ibn Saʿd manage to give an account of ʿAlī without ever even mentioning the name of his wife. She hardly appears in the *Kitāb al-Aghnī* in spite of the pronounced ʿAlid tendencies of this collection. We know nothing of Fāṭima for the pre-Hidjra period except her *kunya* "Umm Abihā" and her grief at the death of Khadīdja. No one among the persons in the *Sīra* weeps as much as Fāṭima except perhaps Abū Bakr: tears are a manifestation of physical pain in the daughter of the Prophet and of religious fervour, a veritable *χαρισμα*, in the rough *Qurashi* trader. Fāṭima seems to have had a melancholy temperament always wrapped as it were in gloom. Physically she was no better endowed; her weak constitution, her thinness, her frequent illnesses made her unfit for the hard tasks allotted to Arab women. Unlike her sister Ruḳayya, there is rarely any allusion to Fāṭima's beauty and nowhere does Muḥammad declare, as he does for Zainab, that she is "the most capable (*afḍal*) of his daughters". All this explains why she waited so long before finding a husband. One asks, without being able to explain, why this heiress of "the wealthy merchant Khadīdja" had no dowry. Tradition would attribute all the delay not to the absence but to the number and exceptional qualities of her suitors, Abū Bakr, ʿOmar etc. Muḥammad, in expectation of a divine command, decided on ʿAlī. She is usually said to have been 15 years of age then; others speak of "18 years or more". As a matter of fact this last figure must have been exceeded if she was about thirty at her death, but it is a very probable mean. As a rule writers avoid dwelling on this point, for girls in Arabia usually married between 9 and 12. Here again there is an allusion to ʿĀʾisha who was married at the age of nine.

After the Hidjra, ʿAlī or rather Zaid b. Ḥarīṭha undertook to bring her to Medīna, while her sister Zainab remained in Mecca. As to her marriage, it is as rule not placed before the battle of Badr; others place it after Uḥud. If Abū ʿl-Kāsim settled his daughters in the order of seniority. Fāṭima, supposed to be the youngest, could not marry before her sister Umm Kulthūm who was married to ʿOmar in the period between the two battles. Other authors claim to reconcile all discrepancies by distinguishing, as in the case of ʿĀʾisha, between the conclusion of the marriage before Badr and its consummation after Uḥud but this is again

an artifice to tone down the lack of eagerness for the marriage on both sides. 'Alī at first declined the match on the ground of his poverty. Muḥammad had to remind him of the beautiful cuirass, won at Badr; this has been made an argument for placing the marriage immediately after this victory. Fāṭima on her side showed no more enthusiasm. Although a brave soldier 'Alī was poor and was even said not to be particularly intelligent.

A union concluded under such auspices could hardly promise to be a happy one. Discord soon found a place beside poverty in the home. Muḥammad settled the newly married pair near him. Her quarrels with 'Alī caused him a great deal of pain. Muḥammad had continually to intervene without succeeding in restoring peace. The birth of Ḥasan and Ḥusain, one born a year after the other, probably in 4 and 5 A. H., did not mark any turn for the better. Their mother did not feel strong enough to nourish her children herself and Tradition has turned this fact to the advantage of the Caliphs of Baghdād, by saying they were nursed by one of the wives of 'Abbās, who had remained in Mecca with all his family till the surrender of the town. The existence of a third son, Muḥassin, who died young, is problematical; it is affirmed principally by the Shī'ites. There were also two daughters; Zainab and Umm Kulthūm, the latter born in the last year of Fāṭima's life.

No outstanding event interrupts the course of this monotonous and obscure life. Fāṭima had little influence with her father and was thrown into the background far behind the enterprising and formidable 'Ā'isha and even the other female members of the Prophet's household. Her relations with the former were particularly strained. For the sake of peace, Muḥammad found himself forced to close up the door leading to the adjoining house of Fāṭima. After Uḥud she is depicted to us tending her father's wounds. On the deaths of Ḥaniza and Dja'far she resumes her lachrymose role. She tried to intervene, but without success, in the intrigues that divided the "mothers of the believers" and had to retire before 'Ā'isha. Tired of monogamy and the trying temperament of Fāṭima, 'Alī meditated doing her the grave wrong of marrying a Makhzūmite and a daughter of Abū Lahab. Muḥammad was very indignant and offered his son-in-law the choice between Fāṭima or divorce; "she is", he added "a portion of my flesh". Other details given by Tradition and obviously biased show us the poverty and weak health of Fāṭima, forced to do the hardest tasks without her father or husband offering to assist her. Cruel and harsh to his wife and exasperated by her constant recriminations, 'Alī is said to have so far forgotten himself as to maltreat his invalid wife, forcing her to take refuge with her father. On his part he began to avoid the conjugal domicile preferring to sleep in the mosque.

The period of the greatest foreign activity in the Prophet, now head of the state, begins with the fifth year A. H., in the interval between the defeat at Uḥud and the siege of Medina by the Arab confederates or *Aḥzāb*. The period coincides with the married life of Fāṭima. Absorbed in his wars, and his great schemes of political organisation, he began to neglect his daughter, so poorly endowed by nature and constantly worrying him with her

troubles and appeals to his generosity. Notwithstanding the help expected from her husband, a brave soldier, but undistinguished for intelligence, he turned to the circle of Abū Bakr and Omar; this was to put himself completely under 'Ā'isha's influence, openly hostile to 'Alī and Fāṭima. The *Ṣaḥīḥ* and the *Musnad* do their best to clear away this unfavourable impression. Thus we are told that the Prophet when he rose used to go to announce the hour of prayer at Fāṭima's door. These collections are fond of insisting on the affection shown by him to his grandsons. A whole cycle of traditions of the Prophet's family life has thus arisen, in which Muḥammad in *Jeshabille* plays even at prayer with the "two Ḥasans". The *Sunna* on the other hand emphasises the marks of tenderness lavished by Abū Ṭ-Kaṣim on the children of his daughter Zainab, on those of Zaid b. Ḥāritha, of Dja'far and even of Zubair ibn al-'Awwām, not to mention the little 'Abbasids; orthodox tactics to neutralise the dangerous exaggerations of the Shī'a. The sons of Fāṭima do seem nevertheless to have won back their grandfather's affection, particularly when he saw all his children taken from him one by one. These repeated blows may well have extracted from him the disconsolate words "Alī shall perpetuate my line".

A passage in the *Qur'ān* (iii. 60) has furnished the framework of an anecdote which has been cleverly exploited; it is Muḥammad's interview with the Christian envoys from Nadrān. Wishing to test the effect of his imprecations (*mubāhala*) against them, he arrived, surrounded by Fāṭima and her family. This scene has inspired another, still more celebrated in Shī'ite literature, that of the *Aḥzāb al-Kisā* ("privileged ones of the cloak"). He is said to have called out one day while covering 'Alī and Fāṭima and the "two Ḥasans" under his cloak: "These are the members of my family". Since then that group of five persons has been known to Tradition as the "people of the cloak". We can see the object of this, to associate the 'Alids with the Prophet, vindicate for them the privilege of forming, to the exclusion of all others, the "people of the house" (*ahl al-bayt*), and the sole possession of the special purity, as announced in the *Qur'ān* (xxxiii. 33): "Allāh will cleanse you, people of the house, and purify you", a verse that is directly addressed to the wives of Muḥammad, and not to the 'Alids and Fāṭima who are nowhere mentioned in the *Qur'ān*.

When he became owner of the rich oases of the northern Ḥidjāz, Muḥammad decided to allot to Fāṭima an annual allowance of 85 loads of wheat, as he had done for his wives. Abū Sufyān arrived in Mecca to renew the treaty of Hudaibiya. Fāṭima is mentioned among the people whom the Omayyad chief sought to interest in the conclusion of this treaty: the first act of a comedy which was to end in the *fath*, the surrender of Mecca. She accompanied her father on the military outing, in which, without striking a blow, he became master of the *Kurashi* capital. She is also said to have been present at the farewell pilgrimage. Towards the end of 11 A. H. the Prophet was overtaken by his last illness. Fāṭima made her way to the bedside of her dying father over whom 'Ā'isha was jealously watching, to hear the prediction that she would be the first of the family to rejoin him.

New trials were to mark the last months of Fāṭima's life. Furious at being set aside by the triumvirate, 'Alī shut himself up in his house with his partisans. Their adversaries led by 'Omair came to use force against them. Fāṭima came out, threatening to uncover her hair, the greatest sign of distress among Arab women. A dispute followed regarding the division of her father's estate, who had, it appears, died intestate. Among the numerous estates of the Prophet, she laid particular claim to the oasis of Fadak, which had been her father's private property in the strictest sense of the word. All this landed property had been declared state land, by Abū Bakr. He answered Fāṭima's request with the words of the Prophet: "Prophets do not leave heirs". To this decided refusal Fāṭima, after quoting *Kōfī* xlvii. 16: "Solomon received David's inheritance", is said to have added this obvious distinction: "Prophecy and the exalted gifts, attached to this dignity are not heritable, agreed! But the estate remains". Overruled by Abū Bakr, she swore never again to speak to him and refused even to see him on her deathbed.

Her death is unanimously placed in the year 11 A. H., "one, two, six or eight months" after that of her father, a variation that ought to be noted. Not knowing the exact date, the ancient annalists adopted that of the year 11 in conformity to the prophecy quoted above. They must also have argued from the impossibility of granting that Fāṭima could have survived beyond the year 11, after the behaviour of 'Alī, who hastened to make peace with Abū Bakr and to collect a complete harem for himself: these were gratuitous insults to the memory of Fāṭima and could not (they thought) be decently laid to her husband's charge. We always find the same *a priori* reasoning: the whole chronology of Fāṭima's life has been obtained by this method. Fāṭima died of exhaustion, perhaps of consumption; this disease was later to carry off her eldest son Ḥasan, whom some allege to have been poisoned by Mu'āwiyā. By a strange coincidence, 'Alī, who was away from home, was not present at her deathbed, but he was summoned back to prepare for the funeral which was carried out at night and with the greatest haste. The estimates of her age vary between 23 and 35 years; it depends on the *terminus a quo*, the date of her birth. The lowest figures owe their origin to authorities chiefly concerned with making her as young as possible at her marriage. The exact site of her tomb was soon forgotten as was to be the fate of those of her husband and the martyrs of Uḥud also.

In the eyes of Shī'ites, Fāṭima represents "the embodiment of all that is divine in womanhood,—the noblest ideal of human conception." (Syed Ameer Ali). Her birth was miraculous; her union with 'Alī decided by a divine decree. After having been the person most dear to the Prophet, she could not survive the grief caused by his death. Without going as far as this, the Sunnis do not reject the *ḥadīths*, in which she is declared "the queen of the women of Paradise next Maryam, the daughter of 'Imrān"; they give her the enigmatical title of *batūl*, virgin. The ancient orthodox school was inclined to accord the pre-eminence to 'Ā'ishā when choosing between her and Fāṭima. But the farther we come down the series of collections of Tradition, the larger becomes the list of her *faḍā'il* (virtues) and *khaṣā'is* (privileges).

The number of her devotees increases as Islām begins to feel the need of a hagiology for the use of the weaker sex. Her story, being vaguer, lent itself much better to edifying amplification than the too well-known story of the romantic daughter of Abū Bakr. On the day of the resurrection Fāṭima will be on the same level as her father and the two will form a group. When she passes, an angel will cry: "Lower your eyes, ye mortals!". The Mahdī will be born from her posterity. The above is a modest glimpse into the *florilegium* of the specifically Fāṭimid literature, cultivated by later orthodox writers; it will give an idea of the rest. The real and only importance of Fāṭima consists entirely in the fact that through her Muḥammad's line has been perpetuated. She participates in the reverence accorded by Islām to its founder. Veneration for Fāṭima cannot be earlier than the tragedy at Karbālā (61 = 680). This cult developed laboriously. Ancient orthodoxy rightly detected in it a danger to the unity of Islām and the Arab empire; the Caliphs of Baghdad, after having exploited it, endeavoured to turn the veneration for the family of the Prophet aside to the descendants of 'Abbās. It is difficult to explain why the descendants of Muḥammad's other daughters did not participate in this veneration to the same degree as the Fāṭimids, a name frequently given to the descendants of Fāṭima.

Fāṭima is a name that covers a real personality but one that eludes the investigations of the critic. Around this inconstant figure the struggle between Shī'is and Sunnis has centred; it has been an irregular battle with underhand stratagems and parallel tactics, in which the details conceal and distort our view of the whole conflict. This strife, lacking in sincerity and grandeur, a regular guerilla warfare of partisans, a war fertile in surprises, utterly distracts the eye of the historian, who desires to fix his attention on this fleeting figure, the lightly painted portrait of the heroine, the cause of and the stake in the struggle. When the two great Muslim parties had taken the field, the dispute was further complicated by the quarrels of the schools, or by particular tendencies, each claiming to be authorised by the example of this daughter of the Prophet, to make a doctrine, a rule of conduct, or moral or ritual prescriptions prevail. Under pressure of the Shī'a, the school of Kūfa, the rival to that of Medina, developed the exaltation of Fāṭima, in opposition to the glorification of 'Ā'ishā, elaborated in the Hīdžāz, just as it transformed the brief history of her husband 'Alī into an answer to the Medina legend of Abū Bakr. Relying on the precautions, which it believed itself to be secured by, orthodoxy seems to have set its mind at rest by thinking of the honour which would be reflected from the cult on the Prophet and his family. While filling up a lacuna in the *Sīra*, they at the same time freed him from the reproach of indifference to his family. Even the 'Abbāsids found it opportune to abandon their hostile neutrality; this was not a disinterested change of attitude but one in which their crafty policy is quite apparent. They must henceforth have tolerated the glorification of 'Alī and Fāṭima among the authors, who worked under their supervision, but on condition that they emphasised the obligations of the 'Alids to their powerful Hāshimī cousins, and depicted them as

having always lived under their protection on the crumbs that fell from their tables. Posterity thought that this edifying anthology should be taken seriously, in which the personality of Fātima is used as a pretext, a basis for further developments, a pious make-believe, destined to further recognition of the cult. From these elements has arisen a vast biographical literature, a heterogeneous mixture of elements, for the most part apocryphal and frequently contradictory. Fātima was not the ideal woman depicted by 'Alid writers; perhaps she did not play such a humble part: she may have been a less insignificant individual than her adversaries make out. This last impression is the one obtained from an impartial study of the ancient documents, which are more sober and contain less fabulous additions. One can understand why the piety of later ages has sought to embellish the figure of the Prophet's daughter, but it is less easy to understand why Tradition should have deliberately sought to misrepresent it, if it did not believe that in doing so it was casting off the fabrications of partisans.

FĀTIMIDS. The origin of the Fātimid movement is to be sought among the Ismā'īlis, whose centre was from about the middle of the third century A. H. the small town of Salamiya between Ḥamāt and Ḥims. Among the *dā'īs* [q. v., i. 895^b *et seq.*], who went forth from here to the various Muslim countries, particularly to Mesopotamia, Persia and the Yemen, to engage in very successful missionary work, Abū 'Abd Allāh [q. v., i. 74], who became famous under the name al-Shī'ī was the first to gain a firm footing in the

Maghrib among the Berber tribe of Kutāma (from the end of 272 = 895) and gradually undermined the power of the Aghlabids. This induced the then head of the Ismā'īlī sect, 'Uбайдallah (who seems originally to have been called Sa'īd) to go first to Egypt about 289 = 902, and thence to the west when he found himself subject to constant persecution instigated by the 'Abbāsids; here, however, he was thrown into prison in Sidjilmāsa by order of Ziyādat Allāh. Al-Shī'ī's brilliant and victorious campaign which, after the capture of Tāhert and Raḳḳāda, made an end of Aghlabid rule, led to his release and, on the 29th Rabi' II. 297 (15th January 910), he was able to make his ceremonious entry into Raḳḳāda and to take the name al-Mahdī and the title Amīr al-Mu'minīn. They at once set to work in the most earnest fashion with the introduction of the Shī'ī creed but they never succeeded in overcoming the Malikitism of the natives for more than a brief period. Al-Mahdiyya (on the coast not far from Raḳḳāda), which received its name from that of the Caliph, was made the capital in 308 = 920. The next two successors of 'Uбайдallah also built residences of their own — Abū 'l-Kāsim (Muhammad) al-Kā'im, while still a prince, built al-Muhammadiya, while al-Manṣūr built al-Manṣūriya — but these never attained any particular importance.

Such was the origin of the Fātimids. Their name refers to the descent, which they claimed from 'Alī and Fātima, a claim the justice of which cannot even now be decided with certainty, although there are undoubtedly grave reasons against it, so that 'Uбайдallah's descent from Maimūn, a Persian oculist, which is upheld by the other side, is not improbable. In any case, it appears that suspicion of the dynasty only appears at a comparatively late period in literature: the unreliability of certain important authorities like Akḥū Muḥassin (see C. H. Becker, *Beitrag zur Geschichte Agyptens*, p. 4 *et seq.*) is likewise demonstrable: it is obvious also that any means must have seemed legitimate to the 'Abbāsids to overthrow their dangerous and superior rivals but, if it is urged by the defenders of the legitimacy of the Fātimids, among whom Maḳrizī and Ibn Khaldūn are pre-eminent, that 'Uбайдallah would never have had to suffer from the plots and persecution of the Caliph of Baghdad already referred to, if the latter had not feared him as an 'Alid, it can be said in reply to this argument that 'Uбайдallah was at that time no obscure or utterly unknown personality, but well known as the grand-master of the Ismā'īlis and that this might be the reason why he was suspected. Nor is the objection quite convincing that, with the great number and wide dissemination of the 'Alids at this time, it would have been impossible for their adherents to attach themselves to the descendants of a Magian (the oculist Maimūn) or Jew. This latter assertion, that 'Uбайдallah was of Jewish descent, is certainly to be traced to the hatred of his enemies (cf. I. Goldziher, *Muhammedanische Studien*, i. 205), but it must not be forgotten that the 'Alids themselves have repeatedly attacked the genuineness of the Fātimid pedigree with great vigour and have also taken up a directly hostile attitude to them. What is particularly surprising, however, is the absolute uncertainty of tradition everywhere regarding the genealogy of the Fātimids (cf. Wustensfeld, p. 12 *et seq.*). August Müller (i. 597) has already shown

how their genuineness is shaken by the contradictions with the view of the Druses, who simply make Maimūn an 'Alid.

The energies of the new ruling house were for the next two generations constantly occupied with an unending series of domestic troubles. Ubaidallāh's treacherous murder only a year after his accession of the strongest supporter of his rule, al-Shī'ī, who was threatening to obtain by force the recognition hitherto denied him, was severely avenged. The principal trouble was the rebellion of the Zenāta and of the Kitāma with them. The wars with the former were only brought to an end with the conquest of their city Tāhert by Maṣāla in 299 = 911; the latter then conquered the Idrisids but Fās was left to a prince of this house; soon afterwards he conquered Sidjilmāsa also. His power thus formed a bulwark of the Fātimid interests in the west till his death in 312 = 924. But his successor, Ibn Abī l-'Āfiya, although at first able to win even more brilliant successes by subduing the whole of the Maghrib as far as Ceuta where a few Idrisids still held out, thought it better to submit to 'Abd al-Rahmān III., who had occupied Ceuta, in view of his threatening proximity. It was only in the reign of 'Ubaidallāh's son al-Kā'im (322—334 = 934—946) that the deserter was conquered, his territory restored to the Idrisids and rebellion in Tāhert put down. But all these troubles paled into insignificance before the rebellion of Abū Yazīd [q. v., i. 113^b *et seq.*], which broke out in 332 = 943-944 and threatened to be the greatest danger to which Fātimid power had yet been exposed. He was able to win considerable support, particularly among the Khāridjī elements in the Awrās and the greatest cities of the empire fell one by one before the onrush of his Berber hordes. He was so successful that he laid siege to the Caliph in al-Mahdiya. Although he was forced to raise the siege after blockading the city for a year, al-Kā'im was again besieged soon afterwards in Sīsa where he succumbed to the hardships he had endured. His son al-Manṣūr (334—341 = 946—953) finally succeeded in putting an end to the civil war after severe fighting in which Abū Yazīd was slain. The always uncertain attitude of the Idrisids and Zenāta in the West also became rather more settled about this time so that for once the empire could find a breathing space after a long period of internal convulsions.

These decades of unrest, to which were added earthquake, plague and famine, naturally impeded to a considerable degree the efforts of the early Fātimids to expand their power. From the beginning they devoted most of their energies to advancing eastwards against Egypt, but the attempts to conquer the country in this period all ended in failure. In the reign of 'Ubaidallāh his son Abū l-Kāsim twice (301-302 = 913—915 and 307—309 = 919—921) invaded the Nile valley; in both cases initial successes were followed by severe defeats, in the second campaign at sea also. Barḳa alone was retained as a permanent conquest. When he became Caliph, Abū l-Kāsim sent a third expedition against Egypt in 323 = 935, but this was unable to break down the vigorous resistance of the Ikhshid. Much less attention was devoted to Sicily [q. v.] where a Fātimid governor had been installed immediately after the overthrow of the Aghlabids. Although after his expulsion

the island made itself independent under Ibn Kūhub the Caliph did nothing to regain it and it was only when the rebel was delivered up to him by his own people (304 = 916), that he again came into possession of Sicily. The corsair raids from Sicily on the coasts of Southern Italy and France, the capture of Genoa (323 = 935) and the devastation of Sardinia and Corsica had no permanent results. From the end of 336 or beginning of 337 = 948 Sicily won practical independence through the skill of the Kalbī Ḥasan b. 'Alī. For the further vicissitudes of this western outpost of the empire to its conquest by the Normans in 459—484 = 1061—1091, the reader may be referred to the article SICILY, as they do not concern Fātimid history.

It was only under al-Manṣūr's successor al-Mu'izz (341—365 = 953—975) that the empire found the internal peace and security, which allowed it to make a fresh start with a powerful policy of conquest, through the sober diplomacy of this Caliph and the great military skill of his general Djawhar [q. v., i. 1028], who succeeded in definitely conquering the far west, after an aggressive war in 344-345 = 955-956 by 'Abd al-Rahmān III., which threatened to be dangerous, had not been continued. The goal of this policy was naturally Egypt which had hitherto been attacked in vain. The country, utterly disorganised, could not resist a Djawhar and on the 17th Sha'bān 358 = 6th July 969 the Fātimid general made his victorious entry into Fuṣṭāṭ. Egypt, formally at least, thus became a Shī'ite country for two centuries. The conqueror at once set about with great prudence the introduction of measures to alleviate the famine raging among the people and personally saw to the restoration of law and order. At the same time he began the building of a new quarter, the modern Cairo [q. v., i. 821^b *et seq.*], and the foundation of the Azhar Mosque also dates from his time. He also endeavoured to extend Fātimid power beyond the frontiers of the land of the Nile. Mecca and Medina, where the way had been cleverly prepared for the change, submitted without delay to Mu'izz, and Fātimid suzerainty over the holy cities lasted till the end of the dynasty in spite of frequent interruptions — for the recognition of a suzerain was largely a question of money with the covetous Sharīfs (for details cf. Snouck Hurgronje, *Mekka*, i. 53 *et seq.*). It was more difficult to gain a firm footing in Syria. The Ḳarmāṭians [q. v.] proved the chief obstacles, although they originally sprang from the same movement as the Ismā'īlis. Djawhar's second-in-command, Dja'far b. Fallāh, who had occupied Damascus for a brief period, soon fell before them, readily supported by the Būyids of Baghdad. But when they appeared before the gates of Cairo they could not resist the military genius of Djawhar nor to a certain extent his gold. Jaffa also was now recaptured; but further progress remained impossible. Mu'izz himself, who had entrusted the affairs of the west, which had been pacified by Bulukkīn's [q. v., i. 792] strong arm, to this devoted Ṣanhādja chief, and moved his residence to Egypt in 362 = 973, had to ward off a new invasion by the tenacious Ḳarmāṭians in the following year. Following up his victory, which was won by bribery, he succeeded in again taking Damascus through dissensions among the Ḳarmāṭians, but it was soon lost to the Turk Afṭakīn in the troubled times that followed. In 367 =

977 the new Caliph al-ʿAzīz (365—386 = 976—996) defeated him, but the city still remained Egyptian in name only. It was only in 378 = 988 that it was finally won for the Fāṭimids by the eunuch Munīr. Tripolis then remained the most northern point in their Syrian possessions. Repeated attempts to capture Aleppo failed however, as it was energetically supported in its defence by the Byzantines; in the great siege of 383-384 = 993-994 it was relieved by the Emperor Basil II in person. It may be said that the empire attained its greatest extent towards the end of the reign of ʿAzīz. In 382 = 992 even the ʿUḡailid Abu ʿl-Dhawād b. al-Musaiyib had prayers said in the name of ʿAzīz, although for but a brief period. But in North Africa even with Bulukkin's successor the bonds that bound the empire began to loosen till in 437 = 1045-1046 Muʿizz b. Bādīs finally broke off from the Fāṭimids and had prayers pronounced in name of the Caliphs of Baghdād. The Egyptian authorities thereupon induced the tribe of the Banū Hilāl to invade the Maghrib and although they advanced victoriously as far as Kairawān, the land remained irrevocably lost to the Fāṭimids. — Nor did further developments of affairs in Syria ever lead to the land becoming a secure possession of the Egyptian Caliph; on the contrary we have a long series of great and small risings, sometimes of the Syrians themselves, sometimes also of the governors and generals sent from Cairo besides wars against foreign powers; the cause was the lack of one powerful controlling will at the head of the central government. The Byzantines were at first disposed of with comparative ease; after they had suffered two defeats at Tyre by sea, and at Apamea by land, a ten years' truce was entered into in the early years of the Caliph Hākim (386—411 = 996—1021). Temporary successes were marked by the homage of the ʿUḡailid Kīrwāsh b. Muḡallad in 401 = 1010-1011 and the transitory occupation of Aleppo (402 = 1011). On the other hand the rising of the Banū Djarrah, who set up an anti-Caliph in the person of the Sharif of Mecca, Abu ʿl-Futūh, into whose hands the greater part of Syria soon fell, caused a good deal of anxiety. The Egyptian troops were defeated and it was only by bribery that the trouble was finally settled and the Sharif allowed to resume his position in Mecca. The utter weakness of Egyptian rule came to light under Hākim's successor al-Zāhir (411—427 = 1021—1036). Three enemies threatened it at the same time: Ḥassān b. Daḡfal, one of the main figures in the above mentioned rebellion, rose in Palestine, Sinān besieged Damascus while the Mirdāsīd Šālīh captured Aleppo from the Egyptians, which they had held for the last few years: (definitely probably since the end of 417 = 1027, cf. Becker, *Beiträge*, p. 45 *et seq.*). Then an officer of exceptional ability, al-Dizbiri, took command and his vigorous measures were crowned with success. Ḥassān and Šālīh were defeated by him at Uḡhuwāna (420 = 1029) and the latter fell in the battle; he regained Damascus and by a further victory over the Banū Mirdās on the Orontes (429 = 1038) entered into possession of Aleppo. He devoted himself to the restoration of law and order. A ten years' peace was again concluded with the Byzantines and al-Dizbiri even succeeded in having the Fāṭimid Caliph recognised in Harrān, Sarūdj and Raḡḡa. This distinguished soldier fell all too soon a victim to the intrigues

of the vizier al-Djardjarāʾi and the rapid downfall of Fāṭimid power could no longer be averted. Palestine rebelled again under Ḥassān. Aleppo at once fell to the Mirdāsīd Muʿizz. The Egyptians twice, in 440 = 1048 and 441 = 1049, sought in vain to regain it; although the prince above mentioned submitted again in 449 = 1057, the town was lost to Fāṭimids, — this time for ever, — in 452 = 1060. The apparent successes, which will be recorded elsewhere, such as the submission of Basāsiri in Baghdād (450 = 1058), the surrender of al-Šulaihi, who was able to enforce the recognition of their Caliphate in the Hīdžāz and Yemen from Mecca to Ḥaḍramawt, went but a little way to balance the loss of their power in Syria; for a new danger was already steadily advancing from the east in the rising might of the Salḡjuqs. In 463 = 1071 Jerusalem fell to them, in 468 = 1076 Damascus, and after this date it is impossible to speak of Fāṭimid power in Syria, although there was no lack of attempts to restore it and numerous battles on Syrian soil, of which more will be said below.

Egypt was therefore the only land left of which the Fāṭimids could really maintain a permanent hold, in which they impressed the stamp of their characteristics. The history of their rule in the Nile valley will only be dealt with in its main outlines here; for the details the reader is referred to the separate articles and to the article EGYPT [ii. 4^b *et seq.*]. Their power was placed on a sound basis by the cautious and deliberate policy of the two first Egyptian Caliphs al-Muʿizz and al-ʿAzīz as well as by the careful organisation of the mechanism of administration and finance in which they found a most valuable adviser in Ibn Killis in spite of many faults. Under the second of these rulers he received the rank of vizier, an office which in course of further developments became of the highest importance. He was a Jew by descent, although a convert to Islām; one of his immediate successors, Iṣā b. Nestorius, was a Christian; the Jew Manasseh was appointed to govern Syria, so that as early as this we find that remarkable favouring of the *Ahl al-Kitāb*, particularly the Christians, which is characteristic of the Fāṭimids. By the time of ʿAzīz, however, we find a rather strong reaction from the Muslim side, but even under his successor al-Hākim, the son of a Christian mother, whose tyrannical moods repeatedly found expression in rigorous oppression of Christians and Jews, we find Christians in the highest offices. The reign of this Caliph forms in other points also a marked contrast to those of his two predecessors. Although many meritorious institutions and important foundations such as the "House of Sciences" are due to him, his cruel despotism was on the whole a great misfortune for the land and led to the utter disintegration in the country. This showed itself in the rebellion of the Spanish Umayyad Abu Raḡwa, which was only suppressed with difficulty. The danger formed by the mercenary troops of Turks and negroes now became visible; they had first been employed in addition to the Berber troops by al-ʿAzīz, and their insubordination and constant quarrelling among themselves became the chief reason for the gradual collapse of the kingdom. After the ruler, following up the extreme development of the Ismāʿilī system had claimed to be a deity, and conditions in the capital had become unbearable, he disappeared in the night of the 27th Shawwāl 411

(13th February 1021) in a mysterious fashion. Henceforth it became almost without exception the rule, for children and unripe youths to be placed on the throne while viziers and generals held the actual reins of government in their hands. At first, however, it was a clever and energetic woman, Ḥākim's sister, the so-called *Sitt al-Mulk*, who took over the regency for her sixteen-year old nephew al-Ẓāhir and soon brought order out of chaos. But she cannot long have remained at the helm of state, for her name is no longer mentioned during the severe famine of 415 = 1025, which led to countless riots in Cairo and threw a lurid light on the lack of discipline among the mercenaries. The following year saw the expulsion of the Malikis from Egypt, in which on the whole great toleration had been shown. The Caliph moreover, like the majority of his successors, preferred a luxurious life to devoting himself to the affairs of state. Egypt came to the verge of ruin in the second half of the reign of his son al-Mustanṣir (427—487 = 1036—1094), as powerless as it was long; he was at first under the regency of his mother, a negro slave, and then at the mercy of the vizier for the time being. While in the early decades of his reign he could still display the whole princely splendour of the court that had been usual under his predecessors, the lack of control over the army, within which bloody battles were constantly being fought between the negroes on the one side and the Turks and Berbers on the other, and the utter helplessness of Mustanṣir, whose rich treasures were ruthlessly plundered by the barbarous soldiery, gradually led to events, which revealed the lowest abasement of the Fāṭimid Caliphate and the political and economic fortunes of the land at their lowest level. The land was severely ravaged for seven years by a terrible famine, which was in the first place the result of the low level of the Nile in 457 = 1065 and secondly of the devastation of the Delta and the prevention of any importation of provisions by the rebellious commander-in-chief Nāṣir al-Dawla. In this period of the cruellest suffering, learning suffered an irreparable loss by the brutal destruction of the unique library of the Caliph by the Turkish mercenaries. It was not till 465 = 1072-1073 that there was at last a good harvest and at the same time the country found a saviour in Badr al-Djāmālī [q. v., i. 560 *et seq.*], a general of Armenian descent, who had hitherto been employed in Syria and was raised to the highest military and civil offices in 466 = 1073 by the vacillating Caliph. He restored order throughout the country with a strong arm, the power of the Turkish emirs was broken, and prestige of the Fāṭimids once more assured as far as Assuan. Under his twenty years' régime, Egypt on the whole enjoyed peace and order, but he was no longer able to save Syria. In 468 = 1076 Damascus, as above mentioned, had fallen and all attempts to regain it were in vain. In the end only a few towns in the south remained in Egyptian hands. When the great vizier died in 487 = 1094, his son Shāhān-shāh took over administration of the country with equal energy, and was likewise able to assure its material prosperity. The name al-Malik al-Afdal given him clearly shows the powerful position he held. After al-Mustanṣir's death in the same year he had appointed his youngest son, al-Musta'fi, Caliph, who during the few years of his Caliphate (he died in 495 = 1001) remained a powerless

puppet in the hands of the all-powerful vizier. The rebellion of his elder brother, Nizār, was suppressed. Al-Afdal resumed his father's attempts to regain Syria, but now there was a further enemy to be faced, the Crusaders, whose importance he does not seem to have recognised in time, till the capture of Jerusalem (492 = 1099), which he had won from the Urtukids only a short time before, by the Christian knights opened his eyes to this new danger. The next two decades were filled with battles with varying results between the Egyptians and the Crusaders, but finally only Tyre and Ascalon remained in the hands of the Fāṭimids, when the vizier was murdered in 515 = 1121 at the instigation of the Caliph al-Āmir (495—524 = 1101—1130) who wished to escape from his tutelage. His by no means incapable successor, Ibn al-Baṭā'ihī, was not able to replace him; al-Āmir, a malignant despot, then sought to govern alone, to the country's misfortune till he perished at the hands of the Assassins in 524 = 1130. After a brief interregnum by a son of al-Afdal, who had prayers said in name of the "expected Imām", his cousin al-Ḥāfiz, a man of mature years, ascended the throne, for the first time by a break in the direct line of succession, as the murdered Caliph had left no son. He also attempted to govern independently for a period after poisoning his brilliant vizier Yānis. Revolts of the troops and constant humiliations of the powerless ruler mark the beginning of the end and the atrocities, which history relates of the brief reign of his young son al-Zāfir (544—548 = 1149—1154), make it clear how far the degeneration and decline of the dynasty had proceeded by this time. Once more, however, a strong personality took over the reins of government in the courtly Ṭalā'ī b. Ruz-zik, whom the panic-stricken women of the palace called upon after al-Zāfir's tragic end. The country had need of such a man. Al-Fā'iz, a sickly child of five, chosen Caliph by his father's murderers, sat on the throne; in Palestine Ascalon, the last bulwark against the Franks, had fallen in 548 = 1153; the Egyptian coast-towns were burned in 550 = 1155 by a Sicilian fleet. The new dictator first of all saw that law and order were successfully restored in the land and his general Dirghām [q. v., i. 978] won a great victory over the Franks at Ghazza in 553 = 1158. Shortly after the accession of the last Fāṭimid, al-ʿĀdid, Ṭalā'ī^c also was all too soon treacherously murdered, his son and successor soon afterwards met the same fate and Egypt now became a pawn in the game between the two great Syrian powers, Damascus, where the Zangid Nūr al-Dīn now ruled, and Jerusalem, with whose policy of aggression the quarrel developing between the two most capable brains in the declining state, Shāwar and Dirghām, coincided. The young Caliph, one of the few figures among the later Fāṭimids that awaken sympathy, was too weak to avert the approaching downfall of his house and the appointment of the Damascus general Shirkūh as vizier, with which the independence of the dynasty practically ceased, put an end to all these protracted wars and turmoils. Shirkūh's successor, Saladin, formally put an end to the dynasty when, in the beginning of 567 = September 1171, he reintroduced the prayer for the ʿAbbāsids. A few days later the unfortunate al-ʿĀdid died and with him the Fāṭimid family disappears from history.

ʿUbadallāh's successors, although not very successful in their foreign policy after their conquest of Egypt, nevertheless were able for long to maintain a position of splendour and power. This they owed not, as Lane-Poole supposes, to their foreign guards, who on the contrary very soon showed themselves a source of danger, but to the administrative ability of the two first great Caliphs in Cairo, to the mild rule of most of their successors, as well as to the energy of great viziers and generals, of whom more than one raised the kingdom to a new prosperity after grave periods of depression. Traces of the Shiʿite fanaticism of the early decades are only rarely noticed in the Egyptian period. The great endeavour of the dynasty, whose legitimacy was always disputed, was, after it settled in Cairo, to create a punctiliously regulated ceremonial and carefully graduated categories of officers and officials, as well as to develop an unwontedly luxurious way of living and an extraordinary splendour at court. In this respect, as William of Tyre's accounts even in the days of al-ʿĀdīd show, they have been equalled by few Muslim rulers, and to this day the Azhar, Ḥakīm, Akmar and Djuḡūshī Mosques, as well as the great gates, Bāb al-Naṣr, Bāb al-Futūḥ and Bāb Zuwailla testify to the grandeur of the buildings erected by them.

FATĪN EFENDI, a minor official (*kātib*) at the sublime Porte, died at the end of the "fifties" of last century, wrote the biographies of Ottoman poets and versifiers from 1135 to his own time under the title *Tezkere-i Khātimat ul-ashkār* as a continuation of the *Tezkere* of Muṣṭafā Ṣafāʾī (ends at 1132 A. H.) and of Mirzāzāde Sālim (ends at 1134 A. H.) at the request of several patrons of high rank. The work, which the author completed in 1269, was lithographed in 1271 (1854-1855) in Constantinople and deserves notice for its biographical data concerning contemporary writers.

FATRA (A.) lassitude, feebleness or lukewarmness; the interval of time between the disappearance of a prophet and the appearance of another; also the period between Jesus and Muḥam-

mad; and more generally, a relapse in religious feeling. In the life of Muḥammad it signifies the interval between the revelation of Sūras 96 and 74 of the Korʾān. Feeling that inspiration had forsaken him, the Prophet suffered great mental depression. He began to wonder whether, after all he was not "possessed" (*maḡnūn*), and meditated suicide by casting himself from mount Hiraʾ. But a mysterious power is said to have restrained him and the suspense at length was ended by the revelation of the Sūra entitled "The Enwrapped". This period of "intermission" lasted 2½ or 3 years.

(A. S. FULTON.)

AL-FATTĀH (A.), the "Opener", one of the names of God [cf. i. 304^a].

FATTAHĪ, YAHYĀ SIBAK, a Persian poet of Nīshāpūr, died 852 (1448-1449) or 853 (1449-1450), had at first the name *Tuffāhī* (in allusion to *Sibak* a "little apple"); he also took the names *Khumārī* and *Asrārī*. He wrote a prose work entitled *Husn u Dil* "Beauty and Heart", a romance full of mystic allegories and symbolical expressions, transl. into English by A. Browne (Dublin 1801) and W. Price (London 1828), into German by R. Dvofák (Vienna 1889), and imitated in Turkish by Lāmiʿī, Aḥī and Wālī; his *Shabistan-i Khayāl* (in the London and Paris Mss.: *Nikāt*) "Abode of Fancy", is a collection of tales, stories and jeux d'esprit in rhyme and prose, of which the first chapter has been published and translated by H. Ethé (Leipzig 1868).

(CL. HUART.)

FATWĀ. A *fatwā* is a formal legal opinion given by a *muftī* or canon lawyer of standing, in answer to a question submitted to him either by a judge or by a private individual. On the basis of such an "opinion" a judge may decide a case, or an individual may regulate his personal life. It must be rendered in precise accordance with fixed precedent; a *muftī* cannot now follow his own judgment. But inasmuch as these opinions deal with actual cases, as opposed to the abstractions of text-books of canon law, published collections of them, which are numerous, are valuable as exhibitions of real situations. In the ideal Muslim state, where canon law would rule absolutely, all these decisions would be equally backed by state authority, and would be the law of the land. But as the case is, in practically all Muslim states, a distinction has entered and the canon law, expressed in these *fatwā*'s, rules only in such matters as marriage, inheritance and divorce. All other legal questions are decided by other codes or by the will of the sovereign. And *fatwā*'s on the side of canon law, which regulates the details of the personal religious life, have validity only for the pious. Further, there is a tendency in some Muslim states to favour some one or other of the four legal schools. Thus Turkey everywhere upholds the Ḥanafite school and appoints Ḥanafite judges only. It may appoint *muftis* of all four schools; but only the *fatwā*s of Ḥanafite *muftis* are admitted in the law courts. The others are purely for the private convenience of the followers of the other schools.

FAWDJ (A.) "troop" is the name given since the reorganisation of the Persian army to the tactical unit of infantry, the battalion, which is commanded by a colonel (*sarkār*) and sometimes by a brigadier-general of the third class *sartip-i thālith*. Each battalion should contain 800 men but in practice is much below this figure. It is not denoted by a number but by the name of the city or tribe of its origin.

(CL. HUART.)

FAWDJĀR was the title of the chief military and police officer of a *sarkār* (revenue district) under Muḥammadan rule in India. His duties were the maintenance of order, the punishment of rebels and rioters, and, frequently, the collection of the revenue. Though subordinate to the provincial authorities, the *fawdj-dār* enjoyed the privilege of direct correspondence with the imperial court and the appointment was often a stepping-stone to the highest offices.

The title of *fawdj-dār* was also given, under the house of Tīmūr, to subordinate officers in the elephant stables. (T. W. HAIG.)

FAZĀRA, a tribe in North Arabia. Their genealogy is: Fazāra b. Dhubyān b. Baghīz b. Ghāth b. Ghatafān. They dwelled on the Wādī 'l-Rumma in Najd. In the time of the Djāhiliya they worshipped the idol Halāl.

Among places which belonged to the Fazāra, there are mentioned: 'Adama, al-Akādir, Azfār, Baldaḥ, Bark, Djushsh A'yār, al-Dil, Djanafā, al-Djināb (between Medina and Faid), Dāra Dāthir, Yara'a, Kunaib, al-Lukāṭa, Kinn, Šubḥ (on Mount 'Urfā, a place of some size), Šu'abā, Urul and 'Uraina. Among mountains: Abān al-Aswad and Abān al-Abyad (between them the Wādī 'l-Rumma), al-Aḥḍab, al-Akwām, Dhū Urul (in Wustenfeld, *Register*, p. 167 wrongly *Dhu Waral*), al-Gharid (in common with the B. Muḥārib), al-Mudjaimir and 'Urfā 'l-Adjbal with the hill of Dhāt al-'Alunda; among watering-places: 'Abākīr, Arwā, Wādī Baṭn al-Liwā (only the lower part), Dāthir, al-Duthaina, Dighn, al-Hisā, Kharza, al-Rīma, Rā'is, Šardj, 'Uwāra, Uraitnāt and al-'Uraim.

History: — The Fazāra under Hudhaifa b. Badr and his son Ḥiṣn played a prominent part in the war which lasted for decades between the 'Abs and the Dhubyān, the so-called Dāḥis war. They took part in the battles of Dhū 'l-Muraikib, Yām'ariya, Habā'a, Rakm etc. In the early years of Islām they gave a good deal of trouble to the Prophet, who according to tradition bought his first horse, which he rode at Uḥud, from one of the Fazāra. In the year 5 (= 626) under 'Uyaina b. Ḥiṣn they besieged Medina in alliance with other tribes of the Ghatafān and the Jews of Khaibar (the so-called "Battle of the Ditch"). In the following year a number of the Fazāra raided a herd of camels belonging to the Prophet at al-Ghābā, a few miles from Medina, plundered a caravan from Medina and wounded its leader Zaid

b. Hāritha, whereupon the latter in revenge took prisoner Mālik b. Hudhaifa's widow, Umm Kirfa Fāṭima, and put her to a cruel death. In 8 (629) they were about to help the Jews of Khaibar against the Prophet but were prevented by the latter. In the so-called "Year of the Deputations" (9 = 630) they appeared before Muḥammad under Kharidja b. Ḥiṣn to tender their submission. After the Prophet's death they, like the 'Abs and other tribes, renounced Islām, but were conquered by Abū Bakr.

(J. SCHLEIFER.)

FĀZIL HÜSEIN BEY, a Turkish poet, celebrated for his erotic works, also called ENDE-RÜNİ FĀZIL, was a grandson of Tāhīr 'Omar Paṣha of 'Akkā, who rebelled against the Porte in the seventies of the xviiith century; after his grandfather in 1775 and his father Tāhīr 'Alī in 1776 had been slain in battle against the Kapudanpaṣha Ghāzī Ḥasan, he was taken to the capital by the latter and brought up in the royal serai (*enderun*). On leaving the serai, he filled various posts in the Treasury, and in 1214 = 1799-1800 was banished to Rhodes. There he became blind; he afterwards returned to Constantinople, where he died at the end of Dhū 'l-Hijda 1225 (beginning of 1811). His poems *Zenānnāme* (Book of Women) and *Khābānnāme* (Book of Beauties) were lithographed at Constantinople in 1838 [v. Hammer, *Osm. Dichtkunst*, iv. 603; Zenker, p. 596; Flügel, *Handschr. d. Hofbibl. zu Wien*, i. 423 *et seq.*; Fazil-Bey, *Le Livre des Femmes* (Zenān-Namich), trad. du turc par J. Decourdemanche etc. (Paris 1879)]; but Muṣṭafā Raṣīd, the Minister of the Exterior of the day, had the whole edition confiscated on account of the offensive subject-matter, so that only a few copies got into circulation. A new edition with various other similar works of the author was published in 1286.

FAZLĪ (FADLĪ), MUḤAMMAD, known as *Ḳara Fazlī* (Fazlī the Black) or *Fazlī Čelebi*, an

Ottoman poet. The son of a saddler, born in Constantinople, he devoted himself to the study of mysticism as a pupil of Zarîfî and, according to 'Ahdî, entered the Khalwâtî order. He soon showed himself a poet of talent. His teacher, Zâtî, himself celebrated as a poet, succeeded in drawing Sultân Sulaimân's attention to him in 1530, at the festival on the circumcision of Princes Mehmed, Mustafa and Selim. The Sultân liked him and appointed him secretary of the diwân to his son Mehmed who was going off as governor of Magnesia. He remained in this office after Mehmed's death, with Prince Mustafa till the latter's execution in 1552, when prince Selim, afterwards Sultân, took him into his service as secretary of the diwân. Fazlî died in 970 (1562-1563). Unpretentious and ascetic in his life, he displayed a glowing passion as a poet. Fazlî is one of the more important poets of the reign of Sultân Sulaimân, not unjustly called the golden age of Ottoman poetry. He wrote a *Diwân*, as seems to be the unwritten law with all Ottoman poets, with ghazals, *kaşidas* and quatrains (*rubâî*) and a *nakhlîstân* (palm-grove), a mixture of prose and verse, closely modelled on Sa'dî's *Gulîstân*. But his great importance as a poet lies in his *Mesnevî*'s: the history of love-affairs in 5000 verses entitled, *Hümâî u Humâjân*, in the style of *Khusraw u Shirin*, is probably an imitation or reproduction of the poem of the same name by the Persian poet, Khwâdjâ of Kirmân. Fazlî's most celebrated work is the romantic allegorical *Mesnevî*, *Gül u Bülbül* (the Rose and the Nightingale), in the style of the *Gül u Nevvâr*, the allegorical story of the love of the nightingale for the rose. Written in 960 (1552-1553) the poem is dedicated to Prince Mustafa. The work is one of the most beautiful of its kind, although Fazlî cannot entirely be credited with originality in the subject. It is ingeniously treated and its language is particularly brilliant. It has become known in Europe also through Hammer's text and translation. But he no longer suits the modern taste with his fondness for subtle allegory.

Hofbibliothek zu Wien* (1865-1867), i. 639; Gibb, *A History of Ottoman Poetry*, iii. 108. (TH. MENZEL.)

FAZLULLAH, Turkish pronunciation of FADL ALĀH.

FĀZŌGHĪ, a mountainous district in the Anglo-Egyptian Sūdān situated between lat. 10 and 11 N. and extending from the Blue Nile to the Abyssinian frontier and beyond. The chief places are Fāzōghlî and Fāmaka on the Blue Nile. The district is inhabited by backward Negroid tribes among whom Islām and the Arabic language have spread to a certain extent since the time of the Fung conquest; their ethnological position has not yet been determined, the principal tribes are Burîn, Barta, Hamadj (Hameg) and Djebelāwis. The Fung who once ruled the country have now almost completely died out. There are also a certain number of Arabs who immigrated into the district from other parts of the Sūdān.

Since an early period Fāzōghlî was famous for

its export of slaves and gold. A certain quantity of the latter is still obtained, but the principal gold-producing district, that of Banî Shanḳūl (Shanḳūl) is in Abyssinian territory.

In the time prior to the Egyptian conquest Fāzōghlî was a vassal state of the Fung kingdom of Sennār. The Fung are stated to have conquered it under their king Unsa, the son of Nāṣir who reigned at the close of the 17th century. The traveller Bruce who visited Sennār and Abyssinia in the 18th century states that the Fung left the old ruling family in possession, only forcing them to acknowledge their sovereignty and to pay tribute. This is contradicted by the French traveller Cailliaud (quoted by Shukair) according to whom the kings of Fāzōghlî belonged to a branch of the royal family of the Fung. A list of the kings extending over 215 years prior to the Egyptian conquest is given by Cailliaud (quoted by Na'um Shukair).

Fāzōghlî was occupied by the Egyptians under Ismā'îl Pāshā in 1822. Ismā'îl visited the gold district of Banū Shanḳūl, which disappointed his expectations. Since then the district shared in the history of the Egyptian Sūdān, but during the time of the Mahdî and his successor Fāzōghlî was independent of the Omdurman government and part of it became subject to Abyssinia.

Under the present administration the greater part of Fāzōghlî belongs to the Sennār province of the Anglo-Egyptian Sūdān.

(S. HILLELSON.)

FEDŪ. [See FIDYA.]

FEHİM, an Ottoman poet and scholar; his full name was FEHİM SULAIMÂN EFENDI and he is also known as KHODJA FEHİM. Born in 1203 (1787-1788) in Constantinople, he first of all became an official in the Diwân, then in the Mint and Customs service, and ultimately a *kā'immaḳām* in Rumelia. He retired from office and obtained a reputation as a teacher of Persian in Constantinople. He died in 1262 (1845-1846). Fehim principally composed ghazals and his *Diwân* has been printed. He wrote a commentary (*Sa'ib Sharḥi*) on selected ghazals of the Persian poet Sa'ib of Isfahān and translated the 'Biographies of Poets' (*Tezkere*) of Dawlat-Shāh under the title *Safinat al-Shu'arā* into Turkish (also printed).

Bibliography: M. Nādjî, *Medjma'i-Mu'allim* (Constantinople 1304), No. 40; Mehmed Thureiya, *Sidjill-i 'Othmânî* (1308-1315), iv. 30; Sāmî, *Kāmiūs al-A'lām* (1306-1316), v. 3456. (TH. MENZEL.)

FEHİM UNDJÎ-ZADE MUṢTAFĀ ÇELEBÎ, known in literature as Fehim of Constantinople, an Ottoman poet of the late classical period (under Murād IV. and Ibrāhîm 1623-1648), and one of the few more important representatives of

the period. A simple scholar, without any proper calling, he attached himself to men of note. He came to Cairo in the train of Eiyûb Pasha who had been appointed governor of Egypt. But he could not accustom himself to life here, as the bitter verses, veritable *Tristia*, which he wrote there against Egypt, show. When he lost the favour of the Pasha, absolutely penniless, he had to appeal to a prominent citizen of Cairo who sent him home with the annual caravan bearing the Egyptian tribute. But he was doomed never to see it again, for he died at Ilghun near Kōniya of the plague, it is said, in 1054 (1644) or 1058 (1648); the statements on this point vary.

Fehîm's works are throughout lyrical. He compiled his *Divân* at the early age of 18. The spirit of the new school is already active in Fehîm, who lived at the beginning of the struggle between the Persian and Turkish schools. He sought the subjects of his ghazals in the trivial events of everyday life. His influence down to the most recent times is undisputed. Kemâl, for example, begun his career as a poet with verses in imitation of Fehîm's.

Bibliography: M. Thureiya, *Sidjill-i Othmânî*, iv. 30 (here unusually called *Undji-Zâde Fehmî*); Hammer, *Gesch. d. osman. Dichtk.*, iii. 370; Flügel, *Die arab. u. s. w. Handschr. d. k. Hofbibl. zu Wien* (1865—1867), i. 659; Gibb, *A History of Ottoman Poetry*, iii. 290.

(TH. MENZEL.)

FELEKE, properly *fulaka*, an instrument of torture, consisting of a wooden pole to the two extremities of which a cord is attached to form a bow; the legs of the victim are passed between the pole and the cord; the instrument is then turned round several times to bind them tightly and make criminal motionless. In this position he is beaten with a stick on the soles of the feet. Schoolmasters and heads of workshops use it to punish children and apprentices. In Turkey, when the Agha of Janissaries used to make his tour of inspection in the capital, he was always accompanied by soldiers carrying the *falaça*, called *falaçî*; every week, one of the latter was at the service of the Porte in the retinue of the grand vizier. He had to see to the execution of the punishments ordered by this minister.

FELLANI. [See PUL.]

FELLATA. [See PUL.]

FERHÂD U ŞHİRÎN. [See FARHÂD U ŞHİRÎN.]

FERİDÛN AHMED BEY, Nishândjî (Keeper of the Great Seal) and Keeper of the State Archives. We know nothing of his birthplace or his ancestors. He was educated in the house of the Desterdâr Cîwizâde 'Abd Allâh Çelebî and entered the service of Mehemmed Sokolli Pasha as Secretary in 960 = 1552-1553. He afterwards became Secretary to the Privy Council (*Divân Kâtibi*), took part in the campaign against Nakhdjewân (1554) and particularly distinguished himself at the siege of Sziget (1566). On the 8th Muharram 978 (12th June 1570) he became Ra'is al-Kuttâb, and Nishândjî on the 3rd Ramađân 981 (27th Dec.

1573). When, after Selîm II's death, his successor Murâd III. was hastening from Manissa to the capital, he crossed from Mudania to Constantinople on a galley belonging to Feridûn, which happened to be lying ready to sail in Mudania. (7th Ramađân 982 = 21st Dec. 1574). A month later on the 9th Shawwâl (22nd Jan. 1575) Feridûn laid his life's work, the *Munsha'ât al-Salâfin* before the Sultân.

Only a year later he lost the Sultân's favour and was dismissed on the 10th April 1576 (Gerlach, *Tagebuch*, p. 175). In August 1577 he went as sandjakbeg to Semendria where he arrived at the end of the year (Gerlach, p. 375; Schweigger, *Reisebeschr.*, p. 39); from there he was transferred to Kostendil (about 1580, see von Hammer, *Gesch. des Osm. Reiches*, iv. 82 note c). In Moharram 989 (February 1581) the Sultân recalled him to the capital and restored him the office of Nishândjî. On the 12th Rabî' 1. 990 (6th April 1582), he married 'Â'ishe Sultân, daughter of Rustem Pasha and the princess Mihrimâh; he died on the 21st Şafar 991 (16th March 1583).

The *Munsha'ât al-Salâfin* (chronogram for the year of its completion, 982 A. H.), according to Selânikî (p. 137), contained 1880 historical documents in 11 volumes from the foundation of the Ottoman Empire to the accession of Murâd III. The work has been twice printed in Constantinople. In 1264 (1848-1849; cf. *Zeitschr. d. Deutsch. Morgenl. Ges.*, vii. 460) and 1274-1275 (1858). The first edition contains 735 documents, including 41 from the beginnings of Islâm, the second a number of translations of Arabic and Persian documents, 100 more than the first edition. If Selânikî's figures are correct, the two editions contain much less than the original work; on the other hand they contain a large number of documents of a later period, which have apparently been added by later writers in continuation of the work. The book is prefaced by an ethical treatise *Miftâhî Dînnel* (chronogram for the year 982 A. H.); as an appendix there is a long essay on agrarian affairs in Egypt, written in the reign of Murâd III. Feridûn mentions a historical essay, *Nuzhat al-Akhbâr*, in his preface; the translation of a work on the history of France, which Feridûn ordered to be prepared while Ra'is al-Kuttâb, exists in manuscript in Dresden.

Bibliography: Our chief authorities are Feridûn himself in the preface to the *Munsha'ât* and Selânikî; they are the authorities used by the bibliographers 'Aṭā'î, ii. 336 *et seq.* and Ahmed Resmî, *Sefinet al-Ru'usâ*, p. 12 *et seq.*; v. Hammer, *Gesch. d. Osm. Reiches*, iv. passim; on the *Munsha'ât-i Salâfin* and its MSS. cf. Langlès in *Not. et Extraits* etc., v. 668 *et seq.*; v. Hammer, *op. cit.*, i., xli. 586 *et seq.*; iii., viii. iv. 16; ix. 197 *et seq.*; Flügel, *Handschr. Hofbibl.*, i. 282 *et seq.*; 293 *et seq.*; Kraft, *Or. Ac.*, no. 83; Rieu, *Cat. Brit. Mus.*, p. 80 *et seq.*

(J. H. MORDTMANN.)

FERMÂN (p.; Old Pers. *framān*, Pahl. *framān*), properly a command thence "written order", "letters patent" or "diploma"; the word has passed from Turkish into French and English with the pronunciation *firman*. Such documents were always written in the chancelleries in a special hand and to this day the *nasta'liq* is used in Persia for this purpose and the *divânî* in Turkey.

Several princes of the Persian Royal Family,

e. g. Fath 'Ali Shāh's eldest son who was governor of Fārs for 40 years, beautified Shirāz with the garden Bāgh-i Naw and wrote several works, have borne the title *Fermān-fermā* ("issuing orders").

FERŌZ. [See FİRŪZ.]

FERŌZKŌH. [See FİRŪZKŌH.]

FERŌZPUR. [See FİRŪZPUR.]

FERŌZSHĀH. [See FİRŪZSHĀH.]

FES (written FEZ in Spain), a red cap worn by the Turks, taking its name from the city of Fes (Fās) where it was first manufactured. The introduction of reforms (*tanẓīmāt*) in Turkey was marked in dress by the abolition of the turban, which was only retained by the 'Ulamā. All civil and military officers and private individuals in the capital now wear the fes; in the provinces, however, the turban has to a great extent survived, so that a distinction is made between *fesli* (wearer of a fes) and *şarıklı* (wearer of a turban). In 1247 (1832) a decree of Sultān Maḥmūd II. declared the fes to be the Turkish national head-dress, which was to be worn by all religious communities alike to abolish all external distinction between Muslims and non-Muslims. These caps came from Tunis and France, although Austria carried on the greater part of the import trade. To put a stop to this foreign competition Maḥmūd II. founded a factory, called *fes-khāne*, which still exists in combination with a cotton-mill, and with the latter is under the supervision of the Minister of War.

FETWĀ. [See FATWĀ.]

FEZ. [See FĀS and FES.]

FEZZĀN is the name of the largest group of oases in the Central Sahara. While Tripoli is the name given to the country that slopes from the Sahara to the Gulf of Syrtes, Fezzān is a part of the Sahara plateau itself; it has an average height of 600—1500 feet above sea-level. It is bounded on the north by the tablelands of Djebel al-Sōdā, Djebel Sharḳīya and Hārūdī al-Aswad, in the south by the eastern arm of the Tasili of the Adjer Tuāreg and by the Tūmmo or War mountains. The eastern and western frontiers are undefined, but may be said to be approximately delineated by the Acacus range in the southwest, in the northwest by the source of the Wādi 'l-Shāṭi, and the east by Wau 'l-Sāghir (area 186,000 sq. miles). The country consists almost entirely of horizontal deposits of palaeozoic sandstone and limestone, which are in part bare stony deserts (*ḥammāda*), but in other districts (south and northwest of Murzūk) covered by extensive areas of sandhills. In many places there are deep fissures or cauldronlike hollows in the ground, which form ditches and depressions in which the surface water can collect and form soft crumbly earth (*ḥeṣha*, saliferous alluvial sand). It is here that agriculture is pursued as in these places alone is there any possibility of a permanent settlement being made. But Fezzān is almost entirely (c. 95% of the area) bare desert which does not even yield enough vegetation for the inhabitants who have to send their cattle to Tripoli to pasture there. — The climate is only known in its main outlines, for meteorological observations have not yet been systematically made. On

account of its central position in the midst of the Sahara its cool winters are followed by long hot summers, the nights in which are sometimes quite cold however. Great drought characterises both seasons (there are no fleas or bugs) and the annual rainfall must be under four inches. There is therefore practically no wild vegetation. At the same time the wild fauna is exceedingly scanty and is limited to a few lizards, snakes, scorpions and the *varanus niloticus*.

The inhabitants of Fezzān first appear under the name *Garamantes* and the land as *Phazania* with the capital *Garama* (the modern Djerma in the Wādi 'l-Gharbī), which Cornelius Balbus won for Rome in 19 B.C. About 100 A. D. Fezzān utterly disappears from our knowledge and does not re-appear till 643 A. D., when 'Uḳba Ibn Nāfi' al-Fihri won it for Islām on an expedition from Barḳa, so that Arab blood was thus introduced among the *Garamantes*. In the beginning of the xth century the power of the al-Ḳhaṭṭāb family of the tribe of Huwāra was in the ascendant, they made Zawila (east of Murzūk) their capital and reigned till the end of the xiith century, when the Turkish adventurer Sharaf al-Dīn Ḳaraḳosh came from Egypt and overthrew the dynasty. Only a few decades later the kings of Kānam extended their sway over Fezzān, which was governed for them by a governor who lived in Traghan and afterwards became very independent. It is probably since then that there has been a large infusion of negro blood. The family of Ḳaramān, who also chose Zawila as their capital, next (when is unknown) ruled Fezzān. In the beginning of the xvth century they were followed by the Awlād Muḥammad dynasty, whose capital was Murzūk and in the seventies of the xvth century history sheds a brighter light on Fezzān, for it sought to defend its independence in battle with the rulers of Tripoli. Peace reigned after the first invasion from Tripoli (1576-1577) as long as the rulers of Fezzān paid their tribute regularly, but invasion always followed their refusal which happened regularly every few years. It was not till 1744 that the suzerainty of Tripoli was definitely recognised and peace reigned for half a century. But in 1804 the rule of the Awlād Muḥammad came to a violent end at the hands of al-Muknī. During his rule he led many campaigns against the lands of Tubu and as far as Bagirmi [q. v., i. 570^b *et seq.*] and also destroyed the prosperity of the Arab Bedouin tribe of Awlād Solīmān. A member of the latter, 'Abd al-Djalīl, seized Fezzān about 1831 and fought bitterly against the Turks who had occupied Tripoli and were trying to conquer Fezzān also. In 1842, he, the last ruler of Fezzān fell in the disastrous battle of al-Baghla. Henceforth till 1912, Fezzān was a Turkish Mutesarriflik until it was ceded to the Italians at the end of that year. — These events have strongly influenced the constitution of the present population of Fezzān. In the south there are pure black Tedda, in the west light coloured Tuāreg and pure Libu Berbers in the north and east with negroes from the central Sūdān. In the larger oases it is almost only these readily recognisable races that are to be seen side by side with types which are the results of intermarriage among them. In consequence of its situation which commands the caravan route from Tripoli to Lake Chad so important only twenty years ago, the population of

Fezzân is readily exposed to modification by immigrants and people passing through the country. Nevertheless, remnants of the ancient Garamantes seem to have survived in the more remote oases (e.g. of Wādī 'l-Shāṭi), the inhabitants of which are large-boned, black-brown and fairly honest (cf. the similar Barābra of Nubia). Their mother-tongue is Arabic, they call themselves *Fezzāna* (sing. *Fezzānī*). The population of Fezzân is about 40,000 of whom about a fifth are nomads. The average density of population is thus about 1 per square mile.

The scarcity of soil (only 2% the whole surface) and of pasture (3%), as well as its remoteness in desert wastes, prevents any considerable development of agriculture. Cultivation is still carried on entirely by the spade (without the plough), is limited to the oases and is only possible by artificial irrigation. The chief wealth of Fezzân is in date-palms among which grow wheat, barley, *durra*, *duḥḥn*, vegetables, lucerne, clover and fig-trees. The only domestic animals are the indigenous camel, poultry and pigeons, while cattle and a few horses have been imported from Tripolitania and sheep from the Tūāreg and Tedda countries. Industries are very few, in keeping with lamentably low level of civilization generally. Trade with the Mediterranean lands and the Sūdān gave Fezzân quite an important position from ancient times to the beginning of the last decade of the xixth century, while the traffic in goatskins, ostrich feathers, ivory, cotton goods, indigo, civet, tamarinds, horn and negro-slaves passed through it from the Sūdān to the north. Since the opening of new waterways and railroads in the Sūdān, however, by far the greater part of this trade has been diverted to the Guinea coast and the roads across the Sahara, always very insecure, are now deserted. — None of the settlements has attained to any size on account of the way in which the small patches of arable land are scattered. Murzūk [q.v.] in the centre of a series of oases running from east to west has become the capital with a population of 8000—10,000 as it lies at the intersection of the roads from Tripoli to Lake Chad and to Ghāt and Cyrenaica. The only villages with 1500 inhabitants are Semnu and Djādid in the north and Kaṭrūn in the south, which all lie on the main line of traffic from north to south.

(EWALD BANSE.)

FIDĀ' (A.), "ransom". — According to Lane, *Manners and Customs* i, i. 110 *et seq.*, the sacrifice offered at Minā is called *al-fida*, "as it is performed in commemoration of the ransom (cf. Ku'rān, xxxvii. 107) of Ismā'il by the sacrifice of a ram".

FIDĀ'Ī (in vulgar Arabic *fidāwī*), he who offers up his life, a name given to the Ismā'ilis, particularly to the assassins appointed to murder their victims (Ibn Baṭūṭa, i. 167; v. Hammer, *Fundgruben des Orients*, iii. 204; do., *Assassinen*, p. 88); but the word has frequently also a good sense, "paladin, knightly, courageous, brave, undaunted" (Quatremère, *Mongols*, 124¹; cf. v. Oppenheim, *Vom Mittelmeer zum Persischen Golf*, ii. 100). In Algeria *fidāwī* means a narrator of heroic deeds and *fidāwīya*, a tale or song of heroic deeds. During the Persian revolution *fidāwī* was applied in the first place to the adherents of the republican party and then to the defenders of liberal ideas and the constitution.

Fidā'ī was also the pen-name of Shaikhzāde Lāhīdī, who was sent by the Safawī Shāh Ismā'il as ambassador to Muḥammad Khān Shaibāni and afterwards retired to Shīrāz, where he died (Riḍā Kūli Khān, *Maḍīna' al-Fuṣṣṣā*, ii. 27). — It was also the pen-name of Saiyid Mirzā Sa'īd of Ardīstān, who lived at Isfahān and was the favourite poet of Muḥammad Shāh Qājār (Riḍā Kūli Khān, ii. 383).

Bibliography: Ibn Khaldūn, *Prolegomenes*, transl. of de Slane, i. 122, 5; Lane, *Modern Egyptians*, ii. 147; H. d'Allemagne, *Du Khorrassan au pays des Backhtiaris* (Paris 1911), iv. 304 (photogr., p. 294, 299); E. G. Browne, *Literary Hist. of Persia*, ii. 206 *et seq.*; do., *Persian Revolution*, p. 127, 151; *Revue du Monde Musulman*, i. 49; iv. 176; v. 361; xii. 217. (CL. HUART.)

AL-FIDḌA, silver. It is nearest to gold in composition and would have become gold, if it had not been affected by cold during its formation in the interior of the earth; it is cold and dry in equal proportions. It cannot be alloyed with copper and *raṣṣ* (lead or tin) but is easily separated from them. It is consumed by fire if long exposed to its action and is also decomposed in the earth in course of time. If it is affected by quick-silver vapour, it becomes brittle and breaks under the hammer. Sulphur vapour blackens it and if sulphur is thrown on molten silver, it is consumed, becomes black and breaks like glass. But if some borax is put on it, it returns to its former condition, only its mass is at the same time diminished. Borax also facilitates the smelting of silver.

These are practically the statements of the Ikh-wān al-Ṣafā, they are more or less expanded or corrupted in the "*Petrology* of Aristotle", and are also found in Ḳazwīnī. Ḳazwīnī erroneously talks of lead and quicksilver vapours; lead and tin do not make silver invisible, as is stated in Wüstenfeld's text, but "destroy" or "alter" it (read *'ayyaba* or *ghayyara* for *ghayyaba*). That

dirt and verdigris are contained in silver seems to be a late addition to Aristotle's *Petrology*.

Mas'ūdī, on the authority of a Copt, says that in consequence of the heat and drought in Ḥabesh the silver in the land is transformed into gold. Numerous silver-mines are mentioned by the geographers and cosmographers. The medical application of silver in the form of filings, which are mixed with drugs, is based on the belief that it dries up the viscous humours; it is also said to be of use against palpitation of the heart.

Bibliography: Ikhwān al-Safā' (ed. Bom-bay), ii. 79; *Steinbuch des Aristoteles* (ed. Ruska), p. 58; Kazwini (ed. Wüstenfeld), i. 206; Mas'ūdī, *Murūdj al-Dhahab*, ii. 378 etc.; Dimishkī, *Cosmographie* (ed. Mehren), cf. the Index s. v.

(J. RUSKA.)

FIDJĀR. The Fidjār days, which are said to be so called because they fell in the holy months during which war could not be waged (wherefore the participants said *faḍjarnā*, "we have sinned"), are discussed in the literature of the *ʿAiyām al-ʿArab* [see above i. 218^a *et seq.*]. There were 4 fidjār days in all, so that the plural *afḍjira* is also used. The last of these days was fought between the Koraishis (and their allies, the Kināna) and the Hawāzin [q. v.]. Tradition varies as to the date; according to some Muḥammad, who is said to have been present, was 14, according to others, 20 years of age at the time. Cf. Ibn Saʿd, *Ṭabaḡāt*, ed. Mittwoch, i. 80 *et seq.*; Yāḡūt, *Muʿdjam*, iii. 579.

Bibliography: See under the article *AIYĀM AL-ʿARAB* and also Caussin de Perceval, i. 296—318.

FIDYA (A.), "ransom". Sūra ii. 180, 192, demands a *fidya* on the omission of certain religious duties (fast, pilgrimage). The same passage indicates of what it should consist and further details are given in the commentaries. Cf. Juynboll, *Handbuch des Islām. Gesetze*, p. 122; on the *padya* (= *fidya*) in Java and Sumatra, for ṣalāts omitted in a lifetime, cf. Snouck Hurgronje, *The Achenese*, i. 435 *et seq.* — See also the article *KAFFĀRA*.

The people of Syria and the country east of Jordan give the name *fidye* or *fedā* to a bloody sacrifice, by which it is hoped to protect children or property (house or cattle) from misfortune or destruction, or which is offered for (to) the dead, cf. S. I. Curtis, *Ursemitische Religion*, Index s. v. *fedu*, *fidye*; Jaussen, *Contumes des Arabes*, p. 357 *et seq.* and 361 *et seq.*; *Mission arch. en Arabie*, i. 472.

In Morocco *fedya* is the name of a peculiar ceremony, also performed in several parts of Algeria under the name *fedwa*, at which a man, in the hope of securing freedom from punishment in the next world, has all the preparations for his burial made, after which a number of *ḥabāʾ* recite the sections of the Qurʾān used at burials, cf. W. Marçais, *Textes arabes de Tanger (Bibl. de l'École des Langues Orient. Viv.)*, Vol. iv.), p. 409 (glossary).

FIGHĀNĪ (BĀBĀ), a Persian poet, the son of a cutler in Shirāz, whence his first pen-name *Sakkākī*, the creator of a new style, which was imitated by his successors, but did not meet the taste of his contemporaries. He left Herāt and the court of Sultān Ḥusain to go to Tabriz, to enter the service of Sultān Yaʿqūb of the Ak-Kuyunlū dynasty (883—896 = 1478—1491), who

gave him the title *Bābā-i Shuʿarāʾ*, "father of poets". After the death of the Sultān he went to Ābiward in Khorāsān and died in 922 (1516) or 925 (1519) at Meshhed. His *Dīwān* contains *ghazals* of which ten have been published by Bland in his *Century* (p. 34—37), *rubāʾī* and *fardiyāt* (quatrains and distiches).

Figḥānī is also the pen-name of a Turkish poet Ramaḍān of Trebizond, who began by studying medicine and then devoted himself to literature. An epigram composed by him on the grand vizier Ibrāhīm Paṣha on the transporting of three statues from Buda-Pest brought about his execution by the bowstring (933 = 1526). Cf. von Karabaček, *Zur Orient. Altertumskunde*, iv. 98 (*Sitzber. d. K. Akad. d. Wiss. zu Wien*, Vol. 172). He left *ghazals* and *qaṣidas*.

Figḥānī was further the pen-name of an older poet, Figḥānī of Karamān, secretary to prince ʿAbd-Allāh, son of Bāyazīd II., who composed an *Iskandar-Name* amongst other works.

(CL. HUART.)

FIGUIG (FIGIG), an oasis in Morocco, 76 miles S. of ʿAin Sefra and 3 miles W. of the French station of Benī Unif (32° 18' 54" N. Lat. and 1° 26' 54" W. Long., Greenwich). For long closed to Europeans, it was visited only by the two travellers, Rohlfes and Schaudt; the district was practically only known from information collected by the Service des Affaires Indigènes and remained somewhat mysterious down to the beginning of the 20th century. Since then the progress of the French occupation of the Sahara, the conclusion of the Moroccan agreements and lastly the building of a railway have dissipated this mystery and rendered access to Figuig possible even to tourists.

The group of oases known by the general name of Figuig, lies at a height of about 3000 feet in a mountainous hollow surrounded by serrated peaks separated from one another by rather narrow passes. On the north rise the Djebel Gruz, the Djebel Haimer and the Djebel Djermān Taḥṭānī. On the south the hollow is bounded by the Djebel Melias and the Djebel Muḍjahidīn, between which runs the Teniyet (pass) Muḍjahidīn, then, above the Pass of the Jewess, the Djebel Zenāga (3490 feet), the Djebel Taghla (3730 feet), cut off from the preceding by the Pass of Zenāga and lastly above the Pass of Mazzura, the Djebel Sidī Yūsuf. All this region is, as it were, surrounded by a natural rampart which protects it from the incursions of the tribes of the Sahara or of the high plateaus of Morocco. The bottom of the hollow thus marked out is, with the exception of a denuded zone called the plain of Baghdād (a name given throughout South Morocco in general to flat areas devoid of vegetation), covered with palm-groves which cover a space of about 4 miles by 2 and enclose about 300,000 palms. Their irrigation is secured by two rivers, the Wādī Sheggaret al-ʿAbīd and the Wādī al-Ardja and also by a subterranean sheet of water which gives rise to numerous springs. The water is led through the palm-groves by a system of canals, some above ground (*sākiya*, *seguia*) and some subterranean (*foggāra*, plur. *fegāgīr*). They also fill reservoirs, the contents of which are used in

the dry season (July to October). As in all the oases the water-supply is administered after an ancient and complicated system of laws. The *khar-rība* or perpetual right of disposing of two-thirds of the water furnished by a spring, twice a month for one hour, costs about £24. Disputes over the water supply have on several occasions provoked bloody conflicts between the inhabitants of different oases, who had sought to divert the course of the water to monopolise it to the detriment of their neighbours. The gardens thus watered are planted with fruit trees and vegetables; a few poor patches of barley and wheat are scattered over the plain of Baghdād. The gardens are worked either by the owners with the help of labourers or *khammes*, who receive one-fourteenth of the produce, or by *khammes* alone, who in this case receive a seventh of the yield.

The population is distributed among seven villages or *kṣūr* forming five groups: 1. Udāghīr and al-ʿAbīd in the N. W. — 2. al-Maʿīz. — 3. ʿUlād Slimān in the N. — 4. al-Ḥammām al-Fūkānī and al-Ḥammām al-Taḥṭānī in the N. E. — 5. Zenāga in the S. All these *kṣūr* are built around springs, except Zenāga whose inhabitants have recourse to the waters of ʿAin Taddert, which springs up between their village and that of Udāghīr; its ownership has been the cause of frequent quarrels between the two *kṣūr*. Each of these townships is surrounded by walls, within which the houses of unbaked brick are huddled together, sometimes several stories high and forming a labyrinth of narrow, tortuous streets often vaulted over by the houses. The most important of these *kṣūr* is that of Zenāga, which is divided into five quarters, Benī Dārīt, ʿUlād Mūsā or Tidīr, ʿUlād Slimān or Muḥammad, Atsāmna and ʿUlād Saʿīd. Udāghīr is the next in importance to Zenāga. The others are much smaller, that of al-ʿAbīd being almost entirely in ruins. It may be added that the inhabitants of Figuig, notably those of Zenāga, possess a certain number of small oases in the neighbourhood, such as al-Ardja, Taghla, Meghrūr, Tasra, Meslu, Takrūmet, Melias, al-Khēneg and Benī Unif.

The total population of Figuig is about 15,000, the great majority of Berber origin, of whom the Fenāzza, a section of the ʿUlād Slimān or Muḥammad, according to tradition, represent the oldest established element in the country. Among the inhabitants we find many *ḥarrātīn* (cf. the art. DRĀ, i. 1074^b *et seq.*) reduced, as in all the Berber regions of Morocco, to a condition of social inferiority. They are particularly numerous at Zenāga, where they live in a separate quarter, called *al-ḥdāḥda*. The slaves owned by the people of the *kṣūr* used at one time to come from Twāt but since the occupation of this country by French troops, they are now bought in Taflelt.

Finally may be mentioned various nomadic tribes who come regularly to encamp in the neighbourhood of the *kṣūr*; such are the ʿAmūr, the ʿUlād ʿAbdallāh, the Benī Guil and the ʿUlād Sīdī Shaikh Gharāba.

The Jews number about 5000 and live in separate quarters or *mellāḥ* at Udāghīr and Zenāga. They each have a master to whom they pay tribute but their lot is, however, not such a hard one as that of their co-religionists in Southern Morocco. They are for the most part engaged in various industries, particularly goldsmith's work in which

they have a practical monopoly. The other industries practised by the people of the *kṣūr*, the weaving of burnuses and carpets ornamented with geometrical designs, the manufacture of pottery, and embroidery on leather, are dying out. On the other hand, from its geographical situation at the intersection of the routes from the High Plateaus to the Sahara oases on the one side and from Taflelt to the central Maghrib on the other, and also on account of its proximity to the railway, which facilitates the importation of European goods, Figuig is still a commercial centre of considerable importance.

Although the mosque of Udāghīr contains the ashes of three rather celebrated saints, Sīdī ʿAisā (ʿIsā), Sīdī Muḥammad or Brāhīm, Sīdī ʿAbd al-Wāfi and although the instruction given in the mosque of al-Maʿīz attracts a certain number of *ṭalibū*, the religious influences that predominate in Figuig are foreign.

Marabouts calling themselves Sharīfs, but readily marrying the daughters of the *kṣūr*ians and others less numerous but more exclusive, attached to the ʿUlād Sīdī Shaikh Gharāba, form a religious aristocracy. The brotherhoods of the Taibiya governed by the *Shorfaʿ* of Wazzān, of the Kerzāziya, which is under the marabout of Kerzāz, of the Ziyāniya attached to the Zāwiya of Kenāḍsa, and lastly of the Nāsirīya, attached to the Zāwiya of Sīdī Aḥmad al-Nāsir in Tamagrūt, number among their members the great majority of the people of the *kṣūr*. The other brotherhoods, Tidjāniya, Qādiriya, Derkāwa and Aisāwa only find a very few adherents.

The languages in use at Figuig are Berber and Arabic. Besides the learned men, a certain number of men have some knowledge of the latter but practically all the women are ignorant of it. The language in common use is a dialect of Shelha mixed with Zenāta elements and with Arabic, sufficiently allied to the dialect of ʿAin Sefra and of Moroccan Sūs for the natives of these regions to understand the people of Figuig without difficulty, but on the other hand quite unintelligible to the Berāber. "This language" says Mr. Basset "is very poor. It seems to be a kind of patois strongly mixed with Arabic, but, nevertheless, is one of the most interesting, as under this seeming primitiveness it is the sole relic of the dialect spoken on the high plateaus and in the Sahara of Algeria, Oran and Morocco before the invasion of the Benī Hilāl and the emigration of the ʿIbāḍīs, which was spoken for a time also at Tlemcen at the court of Yaghmurāsēn and the Benī Ziyān, who originally belonged to the Wāsinian tribe of ʿAbd al-Wād".

The history of Figuig is very uncertain. For ancient times, the only evidence we have of the existence in these regions of a settled population is contained in rock inscriptions. The country was perhaps peopled by Berbers of the Ṣanhādja family. At the time of the Arab conquest, all the land between the Mzāb, the Djebel ʿAmūr and Figuig, was occupied by the Benī Badīn, a branch of the Benī Wāsin. The name Figuig itself only appears in the xivth century A. D., when this district seems to have inherited the commercial prosperity of Sidjilmāsa. It was then governed by the Benī Sid al-Mulūk, of the Matghara family, a section of the Benī Fāten. "Figuig" says Ibn Khaldūn, to whom we owe this information "consists of several town-

ships quite close to one another and forming a large town into which flow the products of the desert and, owing to its distance from the Tell, it enjoys complete independence (*Histoire des Berbères*, transl. de Slane, Vol. i. 240). In the xviith century, Leo Africanus mentions "the three castles of Figuig built in the desert" (Leo Africanus, ed. Schefer, Vol. iii. 240). In the xviiith century the pilgrim al-'Aiyāshī, who visited Figuig in 1074 (1663 A.D.), describes the district as prosperous and possessing celebrated libraries (Berbrugger, *Voyages dans le Sud de l'Algérie et des États Barbaresques*, Paris, 1846, p. 159). About this time, Figuig fell into the hands of the Sultāns of Morocco, who were seeking to extend their power over the oases of the Sahara. According to the *Tarjūmān* (transl. Houdas, p. 32), Mūlāy Ismā'īl conquered Figuig in 1679 A.D. and established a negro garrison there. The name al-'Abid borne by one of the kṣūr to this day is perhaps connected with this event. Moroccan rule, in any case, was established in the oasis in the beginning of the xviiith century A.D., for a Sharīfī kā'id, named Muḥammad al-Ṣaghīr al-Djazzā'iri, was in command there in 1121 A.H. and in the following year another kā'id was in conflict with those under his rule. The kṣūrians succeeded in recovering their independence, however, no doubt favoured by the troubles that followed the death of Mūlāy Ismā'īl. They retained it throughout the whole of the xviiith century. A second expedition was sent against them in 1806 by Mūlāy Sīlmān, who had taken up the plans and policy of his ancestors. A third expedition was perhaps sent in 1839. These various attempts had no effect on the country however and Figuig remained independent. Each of the kṣūr was ruled by a *djamā'a* or assembly of notables elected for life. This assembly decided matters of general interest, notably the levying of the necessary provisions to constitute the *makhzen* or storehouse, to supply food in time of war and provide for the expenses of hospitality, etc. The various *djamā'a* were independent of one another; they could unite however in case of a common danger, but did not elect a chief.

The agreement of Lalla Maghnia (18th March 1845) which divided the kṣūr of South Orania between France and Morocco granted Figuig, without any real reason, to Morocco. The suzerainty of the Sharīfs, however, remained purely nominal. The Makhzen could not instal a permanent representative in the oasis: it did not succeed in obtaining regular payment of tribute; it proved utterly incapable of repressing the excesses of the kṣūrians. The latter, indeed, on every opportunity lent their aid to Algerian malcontents (Ulād Sīdī Shaikh, Bū Amāma) and encouraged the incursions of the Zegdū or marauding bands who, after being organised in Figuig, raided the Algerian tribes and returned to get rid of their booty in the kṣūr. The French government, although the treaty of Lalla Maghnia conferred on it the right of pursuit on Moroccan territory, declined on grounds of international policy to punish the people of the kṣūr. Napoleon III. in 1867 refused to authorise General Deligny to conquer Figuig and, in 1870 at the time of the Haut-Guir expedition, forbade General de Wimpfen to go near the oasis. Demonstrations alone were tried but without effect. In 1866, for example, Colonel de Colomb's troops advanced as far as al-Ardja, in 1868, Colonel

Colonieu's encamped at Taghla, a mile from Zenāga. Encouraged by their impunity the kṣūrians continued their misdeeds, until the French government and the Sharīfī Makhzen decided to come to an agreement to put an end to the state of affairs. By the protocol of Paris of the 20th July 1901, the two governments resolved to take the necessary measures to "establish peace and security on a more solid basis and initiate a commercial scheme destined to render the border regions of Algeria and Morocco richer and more populous. Two commissions, one French and the other Moroccan were appointed to find the practical means of obtaining this result. Their labours ended in the agreement of the 20th April 1902 which decided on the installation in Figuig of a Moroccan *'amil* supported by a Sharīfī garrison and of a French commissioner in Benī Onnif, the establishment of outposts to guard the different passes and the method of collecting the customs dues etc. Difficulties still continued however. The *'amil* did not succeed in enforcing his authority and remained blockaded with his garrison in the kṣba of Udāghir. Finally on the 30th May 1903, the governor-general of Algeria, M. Jonnart having come to examine the situation on the spot and confer with the *'amil*, was attacked by the kṣūrians near the Zenāga pass and lost several of his escort. This attack was severely punished. A French column under General O'Connor appeared before the walls of Zenāga, the kṣar was bombarded in June 1903 and the *djamā'a* sued for peace. They had to hand over to the French the culprits who had taken refuge in the kṣūr, to deliver hostages and pay an indemnity of £ 2,400. The memory of this punishment, above all the progress and consolidation of the French occupation in the whole region, and the advantages which the kṣūrians themselves have reaped in being able to trade freely with the French established in their neighbourhood, have since then assured perfect tranquillity to Figuig.

FIHL. [See FAHL.]

AL-FIHRI, ABŪ IṢHĀK IBRĀHĪM B. ABĪ 'L-ḤASAN 'ALĪ B. AḤMAD, compiled in 632 = 1234 a selection from the works of Spanish poets and stylists of the vith and viith century A.H. entitled *Kanz al-Kutūb wa Muntakhab al-Adāb* (s. H. Krafft, *Die Ar., Pers. und Türk. Hdss. der k. k. Orient. Akademie zu Wien*, Vienna 1842, No. 147). (C. BROCKELMANN.)

FIIHRIST (v.) "list", particularly a catalogue of books; hence the title of several bibliographical works, s. AL-NAHĪM, TUSĪ.

FIKĦ ("intelligence, knowledge") is the name given to jurisprudence in Islām. It is, like the *jurisprudentia* of the Romans, *rerum divinarum atque humanarum notitia* and in its widest sense covers all aspects of religious, political and civil life. In addition to the laws regulating ritual and religious observances (*ʿibādāt*), as far as concerns performance and abstinence, it includes the whole field of family law, the law of inheritance, of property and of contract, in a word provisions for all the legal questions that arise in social life (*muʿāmalāt*); it also includes criminal law and procedure and finally constitutional law and laws regulating the administration of the state and the conduct of war.

All aspects of public and private life and business should be regulated by laws recognised by religion; the science of these laws is *Fikĥ*.

In older theological language the word had not this comprehensive meaning; it was rather used in opposition to *ʿilm*. While the latter denotes, besides the Korān and its exposition, the accurate knowledge of the legal decisions handed down from the Prophet and his companions (Ibn Saʿd, II. ii. 127, 16: *al-riwāyāt wa 'l-ʿilm*, synonymously), the term *fikĥ* is applied to the independent exercise of the intelligence, the decision of legal points by one's own judgment in the absence or ignorance of tradition bearing on the case in question. The result of such independent consideration is *ra'y* (opinion, *opinio prudentium*), with which it is also sometimes used synonymously. In this sense *ʿilm* and *Fikĥ* are regarded as distinct qualities of the theologian (in Nawawī, *Tahdhīb*, ed. Wüstenfeld, 703, 8); *fikĥ wa-riwāya* (Ibn Saʿd, v. 327, 10). The sum total of all wisdom is defined by Muḍjahid (in explanation of Sūra, ii. 272, *man yuʿta 'l-ḥikma*) as composed of the following elements: *al-ḥurūf wa 'l-ʿilm wa 'l-fikĥ* (Tabarī, *Tafsīr*, iii. 56, 2). [Even the Jewish Karaitic expositor of the Bible, Jepheth b. ʿAlī (910–980 A. D.) has adopted this distinction for he translates *lišfāyē* in Daniel, iii. 2 (ed. D. S. Margoliouth, *Anecdota Oxoniensia*, 1889, p. 33, 7) by: *ʿaḥ al-ʿilm wa 'l-fikĥ*. Hārūn al-Raḥīd instructs his governor Harthama to consult the *ulī al-fikĥ fi dīn Allāh* and the *ulī al-ʿilm bi-kitāb Allāh* in doubtful cases (Tabarī, *Annales*, iii. 717, 10). Further passages are quoted in *Muh. Stud.*, ii. 176, note 6.

In this sense the *ʿālim* (plur. *ʿulamāʾ*) is distinguished from the *faḳīh* (plur. *fuḳahāʾ*) or the combination of both sciences in one individual is expressed by the combination of these two epithets or their synonyms. Ibn ʿUmar was *djāyid al-ḥadīth* but not *djāyid al-fikĥ* (Ibn Saʿd, II. ii. 125, 5); on the other hand Ibn ʿAbbās was *ʿālim* with reference to decisions handed down by Tradition and at the same time *afḳahu* (or *Aḥḳafu ra'yih*) in new cases that arose, for which no precedent could be found in Tradition and in which it was necessary to use one's own judgment (*ibid.* 122, 4; 124, 8); the same is true of Zaid b. Thābit (*ibid.* 116, 25). Vgl. *faḳīh fi 'l-dīn ʿālim fi 'l-sunna* (*ibid.* iii. 1, 110, 22). Saʿid b. al-Musayyab is *faḳīh al-fuḳahāʾ* on the one hand and *ʿālim al-ʿulamāʾ* (*ibid.* II. ii. 129, 2; 130, 4, 7, 10; v. 90, 9) on the other. Among the *Tabīʿūn* there were *fuḳahāʾ wa-ʿulamāʾ* i. e. those who were authorities on

the chain of evidence of *ḥadīth* and *āḥār* as well as on *fikĥ* and were competent to give (independent) decisions, *fatāwā* (*ibid.* II. ii. 128, 11). Abū Thawr was *aḥad ʿimma al-dunyā fikĥan wa-ʿilmān* (in Ḥabābī, *Tabaḥ. al-Ḥuff*, viii. 106).

In the oldest period of the development of Islām the authorities, entrusted with the administration of justice and the conduct of the religious life had in most cases, to fall back on the exercise of their own *ra'y* owing to the scarcity of legislative material in the Korān and the dearth of ancient precedents. This was regarded as a matter of course by every one, although they were naturally very pleased, if the verdict could as far as possible be based on *ʿilm*. When ʿAtāʾ b. Abī Rabāh (died 114 = 732) was giving a judgment, he was asked: "Is this *ʿilm* or *ra'y*?" If it was founded on a precedent (*aḥad*), he said it was *ʿilm* (Ibn Saʿd, v. 345, 26). The *ra'y* was not, however, thereby discredited. It was considered an equally legitimate factor in the decision of a point of law and was destined in the near future to be regarded as the undoubted opinion of old authorities and in later times, to be actually considered an element of the *ʿilm*. From the very beginning one could have recourse to it as soon as *ʿilm* failed. According to an old story which certainly reflects the conditions of the ʿOmāyad period, although it does not actually date from the time in which its scene is laid, Muʿāwiya finally applied to Zaid b. Thābit on a legal question, on which neither he nor other companions to whom he propounded it, could quote any ancient evidence (*ṣalam yūḥad indahu* — or *ʿindahum . . . fiḥā 'ilmān*); the latter gave a verdict based on his own independent *ra'y* (Tabarī, *Tafsīr*, ii. 250 *ult.* on 2, 228). The *kāḍī* of Egypt asked the advice of the Caliph ʿOmar II. on a point not provided for in Tradition; the latter wrote to him: Nothing has reached me on this matter, therefore I leave the verdict to you to be given according to your opinion (*bi-ra'yika*) (Kindī, *Governors and Judges of Egypt*, ed. Guest, 334, 8 = Gottheil's ed., 29, 12) [cf. the article *WJTIHĀD*].

Corresponding to this recognition of *ra'y* as an approved source of law are the instructions ascribed to the Prophet and the early Caliphs, which they gave to the officials sent to administer justice in the conquered provinces; the principles to which they gave their approval, in so far as they were actually proposed by the judges sent (*Zāhiriten*, 8 *et seq.*, cf. *'l-sa al-Qḥūba*, i. 314, 13; Mubarrad, *Kāmil*, p. 9, 10 *et seq.*; Ibn Kutaiba, *ʿUyūn al-Aḥbār* p. 87). In the digests which were developed from these simple origins we find deduction from decisions in allied cases expressly mentioned (*al-ashbāh, al-naẓāʾir*, cf. *ʿUyūn al-Aḥbār*, p. 72, 9) i. e. the application of analogy (*ḥiyās*) as a methodical adjustment of *ra'y* (equity). In the investigation or the *ʿIllat al-Sharʿ*, the motive of law (*ratio legis*) and the resulting reduction of doubtful cases to a rational point of view, we find this principle given systematic validity. — We thus have — there is evidence of it at a very early period — a kind of popular element adopted among the constitutive sources for the deduction of laws: The conception of *idjmāʾ* (consensus) i. e. the general usage of the community which has been established by agreement in the larger circles of believers independent of the written, traditional or inferred law. As in Roman law, the principle was applied,

that: *consuetudinem aut rerum perpetuo similiter iudicatarum auctoritatem vim legis obtineri deberi*; also: *nam diuturni mores consensu utentium comprobati legem imitantur*.

It was quite natural from the changed conditions after the conquests that the formation of the law, not only in its special provisions, but particularly in the point of view they adopted in their method of deductive operation (*Muh. Stud.*, ii. 75) as laid down in Fikĥ, was greatly influenced by what the authorities on the development of law in Syria and Mesopotamia were able to learn of Roman law, sometimes of the special laws for the particular provinces. It was obvious that a quite uncultured people coming from a land in a primitive stage of social development into countries with an ancient civilisation, where they established themselves as rulers, would adopt from among their new surroundings as much of the customary law of the conquered lands as could be fitted in with the conditions created by the conquest and be compatible with the demands of new religious ideas. The detailed investigation of this fact in the history of law, which, although emphasised and established in its main outlines long ago, has only been sporadically investigated within a limited field, is one of the most attractive problems of this branch of the study of Islām. Santillana has collected much material for the investigation of this subject in his plan for a *Code Civil et Commercial Tunisien* (Tunis 1899). The comparative study of one chapter of private law has yielded the most conclusive proofs of the thoroughgoing adoption of Roman law by the jurists of Islām (Franz Frederik Schmidt, *Die Occupatio im Islamischen Recht* [reprint from *Der Islam*, I], Strassburg 1910). The present writer had previously in this connection made the suggestion that even the names of legal speculation (*fiĥh* = intelligence) and of its students *fuĥahā* (intelligent) have been influenced by the Latin terms (*juris*) *prudentia* and (*juris*) *prudentes* in their special application to the study of law and teachers of law. An analogous example in support of the influence of Roman Law is the use of the words *chokhmā* and *chakhūmīm* among the Jews of Palestine (*Kultur d. Gegenwart*, Vol. i. Part iii. 1st half, p. 103, *Zeitschr. d. Deutsch. Morgenl. Ges.*, li. 318).

Roman Law, however, does not exhaust the sources drawn upon in the development of Muslim Law. The receptive character that marks the formation and development of Islām also found expression, naturally first of all in matters of ritual (Wensinck in *Der Islam*, i. 101) in borrowings from Jewish Law (cf. *Revue des Études Juives*, xxviii. 78: xliii. 4; E. Mittwoch, *Zur Entstehungsgeschichte des islamischen Gebets u. Kultus* [*Abhandl. der Kon. Preuss. Akad. der Wissenschaften*], Berlin 1913). According to Kremer (*Culturgesch. d. Orients*, i. 535) even many of the provisions of Roman Law that have been adopted by Islām only found a place in Fikĥ through the intermediary of the Jews. — It still remains to be investigated, however, if and in what degree Persian influence can be traced in the development of many details of Muslim Law.

We thus have four "roots" in operation for the deduction of laws, as methodical principles from which legal prescriptions may be legitimately laid down, viz.: 1. *Korān*, 2. *Sunna*, 3. *Āyās*, 4. *Ajma*. With the gradual recognition of the sources

of legal knowledge the terms *fiĥh* and *fuĥahā* gradually lost their original limitation to deductions not based on tradition. *Fiĥh* next became the science which co-ordinated and included all the branches of knowledge derived from the four roots; similarly those who are masters of this science were called *fuĥahā* i. e. jurists. — *Fiĥh* was also used as the result of deduction from the positive sources of law, the sum total of the deductions derived from them, e. g. *wa fi hādha 'l-Hādith dūrūb min al-Fiĥh* (Mubarrad, *Kāmil*, 529, 5, cf. *Wiener Zeitschr. für die Kunde des Morgenl.*, iii. 84). In a still wider generalisation *fiĥh* was used for religious science in general (*al-Kurān wa 'l-Fiĥh* in opposition to the study of poetry, *Aghānī*, vii. 55, 22; *laisa biĥim ragħbat^{un} fi 'l-dīn wa lā ragħbat^{un} fi 'l-fiĥh*, *Musnad Aĥmad*, i. 155), *fuĥahā* likewise was applied to students of religion, theologians (not only students of law) e. g. Ṭabari, *Tafsīr*, xii. 73, 13: *fuĥahāunā wa-mashāyikhunā*; *ibid.*, 112, 8, where Abū 'Ubaid al-Ķāsim b. Sallām says with reference to an explanation by Abū 'Ubaida Ma'mar of a word in the *Qurān* contradictory to the traditional explanation: *al-fuĥahā 'alam bi 'l-ta'wīl minhu*, "the *fuĥahā* are more conversant with exegesis than he" (who is not a theologian but only a philologist); cf. also *Zāhiriten*, p. 19. In eastern and western dialects of spoken Arabic the word *fiĥi*, *fĥi*, *fĥi* (all from *fuĥĥ*) has come to mean an elementary school-teacher of the lowest rank (W. Marçais, *Textes Arabes de Tanger* [Paris 1911], p. 415, where further references are given).

The sporadic attempts that were made during the 'Omāyad period in the field of Law did not lead to a systematic codification of the material in existence. It was only with the rise of the 'Abbāsīd caliphate that this attempt was made, favoured and indeed even furthered by the pronounced religious character of the government. From the very beginning of this process of codification it was always these four "roots" that were recognised as authoritative by the theologians who made the first endeavour in the beginning of the second century A. H. in Medina, Syria and the 'Irāq, to evolve a finished system of Muslim law. According as they made a limited or free use of one or other of the "roots" or selected one in preference to another of the contradictory traditions, they attained different results on particular points of law. Only names have survived to us from the literature created by these early efforts. We learn a good deal in the Arabic sources about theologians who arranged the *ilm* or *sunan* in chapters and thence deduced the *fiĥh* inferences (*Muh. Stud.*, ii. 211, cf. also 'Abd Allāh b. al-Mubārak: *Dawwana al-'ilm fi 'l-abwāb wa 'l-fiĥh* [Dhahabī, *Tadhkirat al-Huffāg*, i. 250, 12], Abū Thaur: *Sannafa al-kutub wa-farrā'a 'ala 'l-sunan* [*ibid.*, ii. 95, 13]). Little value can be attached to the statement ascribed to Hishām b. 'Urwa that many *kutub fiĥh* of his father's perished in the flames on the day of Ḥarra (*Biographien*, ed. Aug. Fischer, p. 41). At that ancient period ('Urwa died in 94 = 712, the so-called *Fuĥahā* year — the year of the death of many *fuĥahā* — *Ibn Sa'd*, vi. 135, 1.) there could be no real *kutub* in existence; the reference must therefore be to rough notes only. We might also mention the statement that Zuhri's *Fatāwī* were collected in three, Ḥasan Baṣri's in seven books

(*asfār*) arranged in the order of the *awwāb al-fikh* (Ibn Ka'ayim al-Djawziya, *I'tām* [Cairo 1325], i. 26). E. Griffini has recently discovered among the South Arabian treasures of the Ambrosian library in Milan a compendium of Fikh attributed to the founder of the Shi'ite sect of the Zaidiya entitled the *Maḡniṭa of Zaid b. 'Alī* (died 122 = 740) [*La più antica codificazione della giurisprudenza islamica in Rendiconti del R. Ist. Lomb. di Sc. e Lett.*, Ser. ii. Vol. xlv. (Milan 1911), 260 *et seq.*] This would be the oldest attempt at a codification of Muslim law in existence; in any case it is to be reckoned with in the literature of the older Fikh. If it should be a direct product of the circle of Zaid b. 'Alī himself, we should have to recognise the priority of the Shi'ite (Zaidi) branch of Islām in Fikh literature among the works that have survived. It has not yet, however, been fully investigated what position this collection holds in the history of Fikh literature.

The oldest *corpus juris* of the Sunni branch of Islām that has survived from the early period of Fikh is the *Muwatta'* ("paved path") of the Medina teacher Mālik b. Anas (97—179 = 715—795), who easily surpassed all his contemporaries with this work (*Muh. Stud.*, ii. 213 *et seq.*) and created an organic synthesis of the four roots of jurisprudence in the chapters on private law. His work represents a codification of the Fikh as it developed in the Hīdjāz in its theological centre Medina. Almost at the same time the Fikh was being methodically systematised in other lands of the Muslim empire also. In Syria Abd al-Raḥmān al-Awzā'ī (died 157 = 774; v. i. 524^b) was teaching a system of Fikh which remained in force, even among the Muslims of Spain (al-Dabbī, ed. Codera, N^o. 751) till the Medina system was introduced there by disciples of Mālik and became supreme. The most vigorous efforts to create a code of law were made in the 'Irāk, where about the same time studies in other branches (philology, philosophy, exact sciences and dogmatics) were being industriously pursued. Although the Hīdjāz school recognised the validity of *ra'y* without restriction and made free use of it in establishing legal principles, the 'Irāk school excelled them in many ways in their use of this source of law. Hammād b. 'Abī Sulaimān (died c. 120 = 738) may here be mentioned as the pioneer who was the first to gather a circle of scholars around him, to whom he taught a system of Fikh in which *ra'y* had a predominant influence. To his school belonged Abū Ḥanifa [q. v., i. 90^b *et seq.*] who is regarded as the patriarch of the 'Irāk school of Fikh, which was placed in a firmer footing by his two great pupils Abū Yūsuf (died 182 = 795) and Muḥammad b. al-Ḥasan al-Shaibānī (died 189 = 804), who also distinguished themselves by monographs on important chapters of constitutional law (C. Brockelmann, *Gesch. d. Arab. Litt.*, i. 171 *et seq.*). The name of the former of these scholars is also associated with the recognition of canon law in the government of the state. At the request of the Caliph Ḥārūn al-Rashīd, Abū Yūsuf compiled his *Kitāb al-Kharāj*, which, however, covers much wider ground than is indicated in its title, for it includes the whole field of administration in consonance with canon law, and was imitated by writers in later reigns. The Caliph al-Muhtadī (869-870 A. D.) entrusted the jurist al-Khaṣṣāf with the compilation of a similar work. The administration of

the state was, theoretically at least, to be brought into absolute harmony with canon law. The starting-point was naturally always the *sunna*; but in spite of a most generous recognition of apocryphal traditions there was of necessity ample scope left for the use of *ra'y*. The school of Abū Ḥanifa laid no restraint on the use of *ra'y*. A certain amount of freedom was even allowed to individual opinion in face of methodical analogy (*kiyās*) by allowing practical considerations also to be taken into account. This is expressed in the term *istiḥsān* (holding for better). The legal authority is justified in deviating from a ruling suggested by the *kiyās*, if due consideration showed him that another procedure was more suitable to the conditions in question. (Early examples of *istiḥsān* are given in Abū Yūsuf, *Kitāb al-Kharāj* [Bulāq 1302], p. 109, 112, 5 from below, 117, 5: *wa 'l-kiyās kāna... illā innī istahsantu...*; Shaibānī, *al-Djāmi' al-Ṣaḡīr* [printed on the margin of the *Kharāj*], p. 17, 6 from below: *Adjiz'ahum ji 'l-kiyās walā yudjiz'uhum ji 'l-istiḥsān*, 72, 2; Bukhārī, *Kitāb al-Ikrāh*, N^o. 7, cd. Juynboll, 338, 9). In the school of Mālik also a similar subjective element in *ra'y* has been recognised as legitimate; it is called *istiṭlāḥ* (consideration of what is beneficial or expedient — *maṣlaḥa*) — *muwā'at al-aṣlaḥ*. This right to set aside the ruling based on methodical analogy in favour of the judgment of a competent jurist, when considerations of expediency justify it reminds one of the Roman *corrigere ius propter utilitatem publicam* (in the Talmudic law: *nippenē tikḥān hā-ṭōlām*).

The 'Irāk school of Fikh had another important teacher in the Baṣrī theologian Sufyān al-Thawrī (died 161 = 778), whose system remained for long authoritative even among the Muslims of the Maghrib (Abū 'l-Mahāsīn, ed. Popper, p. 120, 12); his system has, however, like that of the above mentioned Awzā'ī, not survived in its entirety but is only known in its application to isolated cases, particularly in points where it differed from other schools (*ikhtilāfāt*).

Although the foundations of Muslim jurisprudence as outlined above met with the approval of authoritative circles in the Muslim world, from the very beginning of its development it had to contest with a hostile minority who refused to recognise *ra'y* as a proper basis for the deduction of laws. This opposition was largely due to the subtle casuistries (*Ta'annut Abi Yūsuf wa-Muḥammad*, Kazwīnī, ed. Wüstenfeld, ii. 151—153; 211 at the foot) which the 'Irāk jurists exercised in a most sophistical fashion in their use of *ra'y* (cf. the author's *Vorlesungen über den Islām*, p. 67 *et seq.*). *Ara'aita*... "what do you think (i. e. of a case propounded in a sophistical fashion)"? is the formula with which such tests of ingenuity were introduced (early examples in the *Kitāb al-Kharāj*, 36; *Muwatta'*, ii. 37, 330; iii. 19) and therefore the wrath of those, who regarded this legal skill as idle abuse of the law, was vented against this formula (v. *Zāhiriten*, p. 17; cf. Ibn Sa'd, vi 68, 11. [*lā tukā'id aṣḥāb ara'aita ara'aita*] and a host of traditions on the point in the *Sunan al-Darīmī*, p. 37, Abū Dāwūd, i. 17). Although the Hīdjāz school did not entirely decline the use of *ra'y*, it made a moderate use of it in comparison with the 'Irāk school, from which it differs in many ways in its results, and the Hīdjāz school had many objections to the application of Ḥadīth by

the jurists of 'Irāk (cf. *Muh. Studien*, ii. 78—83). This distinction is antedated to a time when it did not yet exist to the prejudice of the 'Irāk school; even the Caliph 'Abd al-Malik is made to fulminate against the eastern school in favour of Medina (Ibn Sa'd, v. 160, 6; 173 *et seq.*).

There were also individuals who would not agree to recognise the opinion of any mortal (unless of the Prophet himself) as a deciding factor in legislation. It was not conceivable, they said, that God and his Prophet had not provided legislation for all contingencies that might arise. "We have omitted nothing in the scripture" (Sūra, vi. 38) and if a point is not expressly provided for in the Kor'an, Muḥammad has certainly expounded it in a *ḥadīth* by God's command. They quoted in this connection the combination *al-kitāb wa 'l-ḥikma* (cf. *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, xi. 869 *et seq.*), which appear in so many passages in the Kor'an, which the adherents to this view explained as referring to the Kor'an and Sunna (in Ṭabarī, *Tafsīr*, ii. 275, xxii. 7). With the vast number of *ḥadīths*, that had been forged, it was quite easy to quote a *ḥadīth* on any point and thus readily to dispense with *ra'y* and *ḥiyās*. To be able to give a ruling from *ḥadīths* on all cases that arose, one had, however, to refrain from the exercise of strict criticism and be ready to use badly authenticated, interrupted and isolated traditions. To be correct, in form at least, an opinion, which was honestly admitted to be *ra'y*, was clothed in the form of a *ḥadīth*, given a pompous *isnād* and traced back to the Prophet.

Thus arose the distinction between *Aḥḥāb al-Ḥadīth* and *Aḥḥāb al-Ra'y*; a mediator between the two extremes now appeared in the person of Muḥammad b. Idris al-Shāfi'ī (died 204 = 820). His great claim to fame is that he systematised the method for the deduction of laws from the sources of law (*Uṣūl al-Fiḥh*) and laid down the exact limits within which each might be used. In his *Risāla* (two editions, Cairo, ed. Ḳabbānī, 1310; Maṭba'a 'Ilmiyya, 1312) he created the science of the use, which could be made of speculative deduction without lessening the undisputed prerogatives of Scripture and Tradition; he regulated their application and limited their arbitrary use by strict rules. For example, he did not approve the subjective *istiḥṣān* (2nd ed., p. 134); on the other hand, with the principle of *istiḥṣāb* [q. v.] he opened up a fruitful source for juristic presumption. His school might be said to belong to the *Aḥḥāb al-Ra'y* as readily as to the *Aḥḥāb al-Ḥadīth*, but out of it, through preponderating attachment to the latter, there again developed a tendency to overemphasise *fiḥh* which was based on traditional sources, first of all in the school of Aḥmad b. Ḥanbal (died 241 = 855; v. i. 188 *et seq.*); and this tendency was even more marked in the Zāhiriyya school founded by Dāwūd b. 'Alī al-Lajāḥānī (died 270 = 883; v. i. 928^b), which set aside speculative elements and carried the limitations for the deduction of law traditional sources to extremes, but had soon to confess that it would soon be at a standstill without a moderate use of *ḥiyās*.

Among the opponents of *ḥiyās* at this time is mentioned Yaḥyā b. Akṭham (died 242 = 856), an older contemporary of Dāwūd and celebrated Shāfi'ī and Ḳāḍī of Baghdad under Ma'mūn; he wrote a work (*Kitāb al-Tanbīh*), which is wholly

devoted to an attack on the 'Irāk school; he constantly exchanged ideas with Dāwūd b. 'Alī (Ibn Khallikān, N^o. 803, ed. Wüstenfeld, x. 24). Such attacks, however, were only of theoretical importance; they were quite without influence on the practical administration of law.

Down to the beginning of the third century then, the historical development of the study of law had produced two divisions of the science of Fikh, viz.: 1. the science of the *Uṣūl al-Fiḥh*, i. e. the doctrine of the "roots", the sources of law and the methodology of their application; 2. that of the *Furū' al-Fiḥh*, the doctrine of the branches, i. e. applied Fikh, the systematic elaboration of positive law under its separate heads. The latter can show authoritative works even from the period of the founders of the schools; its important Furū' works were published by immediate pupils or edited and handed down by them as lectures of their teachers (see the separate articles).

At the present day Fikh has developed in four directions within orthodox Sunni Islām, each of which goes back to codifications of the law, differing in little details, by the independently developing schools of the above mentioned founders of the second and third centuries A. H., and which in course of time were considerably developed along these lines. These four schools (*madhāhib*, sing. *madhhab*; only utter ignorance can call them sects) which have survived to the present day and prevail in different parts of the Muhammadan world are called after the Imāms on whose teachings they are founded: 1. the Ḥanafī, which is followed in by far the greater part of the Muslim world (the Turkish empire, Central Asia and the Indian mainland); 2. the Shāfi'ī (Egypt, South Arabia, the Indian Archipelago, East Africa and Syria after it had supplanted the Awzā'ī *madhhab* there in 284 = 897; cf. Subḳī, *Ṭabaḳāt al-Shāfi'īya*, ii. 174 at the foot; 214, 1 and the extremely important data given *ibid.*, v. 134 *et seq.*); 3. the Maliki (the Maghrib, to a great extent in Upper Egypt also, German and English West Africa) and the 4. Ḥanbali, strongly represented (down to the viiith = xivth century) in the 'Irāk, Egypt, Syria and Palestine (cf. the article AḤMAD B. ḤANBAL), now limited to Arabia (Nadjd) (cf. the article WAHHĀBIS). The Ḥanafī *madhhab* has become the only authoritative code of law in the public life and official administration of justice in all the provinces of the Ottoman empire. All the other once prominent schools of fikh have disappeared from the field after a brief existence; for example, at a very early period the school of Awzā'ī (see above), that of Sufyān al-Thawrī (in 405 = 1014 the last mufti taught according to this *madhhab*, cf. Abu 'l-Maḥāsīn, ed. Popper, p. 120, 10), that of the Zāhirites already mentioned and the school founded by the celebrated historian Ṭabarī [q. v.] called Djaririya, which this scholar expounded in numerous works which no longer exist (*Wien. Zeitschr. f. d. Kunde des Morgenl.*, ix. 364). The teachings of these obsolete schools are not taken account of in the *Idjma'* of Sunni Islām: the four *madhāhib* above mentioned are considered equally orthodox elements of it; they differ from one another only in details of *furū'* which according to the orthodox conception do not form fundamental differences. In the Azhar mosque [q. v., i. 532 *et seq.*], the most impor-

tant Muslim university of the present day, all four schools are still represented by teachers and pupils just as before the coming of Ottoman supremacy, whereby the Ḥanafī *madhhab* became supreme, all four systems were represented in the great centres of Islām by judicial functionaries, who gave their decisions in important cases at a joint conference. Each of these four *madhāhib* has produced an enormous literature of codices, compendiums and commentaries in the schools of the lands in which its adherents are found.

Cases not provided for in such codices, as well as new points of law that crop up, are decided by professional jurists in *fatwā's* (decisions) of which considerable collections have been and are still being made. Since various European countries have extended their authority over Muslims, in their possessions and protectorates in the east, handbooks of Fikh of the *madhāhib* prevailing in the respective countries have been published in western languages also, and in this connection editions and translations of the best known works on fikh have been prepared by European scholars.

The dissenting sects of the Khāridjīs and Shī'ahs have also developed the legal system along lines parallel to the Fikh of the Sunnis. The most fundamental differences between these systems and that of the Sunnis are naturally to be found in questions of constitutional law (Khalīfate). The Shī'is also show differences in their law of marriage (*mufa*; marriage with women of the *Ahl al-Kitāb*) and are more rigid in their laws regulating intercourse with unbelievers. In their liturgy (*adhān*) trifling deviations from the usage of the Sunnis may also be noted; in their calendar of feasts also there are certain feast days peculiar to them. Otherwise the differences in law between these sects and the Sunnis are scarcely more considerable than those of the different orthodox *madhāhib* within Sunnī Islām from one another (cf. *Vorlesungen über den Islām*, p. 237—239). Among the Shī'ahs, besides the Imāmī "Twelvers" the sect of Zaidīs (particularly strong in South Arabia) has developed a very rich Fikh literature, of which R. Strothmann has lately given a very thorough account (*Der Islām*, i. 354—368; ii. 49—78; *Das Staatsrecht der Zaiditen* (Strassburg 1912); *Der Kultus der Zaiditen* (ibid. 1912).

In giving an appreciation of Fikh one must not forget to mention the fact that the codifications from a very early period for the most part represent an academic code of law, a system given ideal validity, a doctrine of duties, as Snouck Hurgronje, the creator of the historical criticism of Fikh, so admirably described it, which the theologians represent as alone corresponding to the ideal demands of religion. History teaches us that, as is the case at the present day, even so in the oldest period of Islām, the actual practice assumed in many instances a different form from that required by the demands of canon law (*Shar'ā*). Certain parts of Fikh have been quite obsolete for centuries; on the other hand in many districts customary law (*urf*, *ada*), which for the most part can be traced back to pre-Muhammadan times, has retained its validity [cf. the article *ADA*, i. 121^b *et seq.*]. Modern conditions have also produced many reforms of legal practice in Muslim countries and have produced a system of civil law different from the

religious law (*Shar'ā*) alongside of the latter. This dualism in the administration of justice can be traced back to an earlier period in which it also existed. (*Zāhiriten*, p. 205, note 4, an example from Egypt, 11th century A. H.; Ibn Ka'ayim al-Djawziya, *al-Turuk al-hikmiya fi 'l-Siyasa al-Shar'iya* [Cairo 1317], p. 218, dual system of law in Syria; Massignon, *Mission en Mésopotamie*, ii. [Cairo 1912], p. 30, the *Kadāyā yarghūdīya* were in operation in the 'Irāk under Mongol rule alongside of the *Kadāyā shar'iya*; Ibn Baṭṭūṭa, (Paris), iii. 11, from Khawārizm).

Quite recently the French government in Tunisia and Algeria has begun to attempt a codification of Muslim Law after modern legal methods; thereon cf. Snouck Hurgronje, *Nederland en de Islam* (Leiden 1911), p. 42 *et seq.* = *Politique musulmane de la Hollande*, p. 61 *et seq.*; C. H. Becker in the *Archiv für Religionswiss.*, xv. (1912), p. 549; H. Bruno, *Le Régime des Eaux en Droit musulman* (Paris 1913), p. 183 *et seq.*

Islāmic literature on Fikh according to the different *Madhāhib* and the European editions see Juynboll, l. c., p. 350—363 and the pertinent sections in Brockelmann, *Geschichte der arab. Litteratur*. (I. GOLDZIH.)

FIKRĪ, 'ABD ALLĀH PASHA, Egyptian statesman and man of letters, born in Mecca in 1250 (1834), where his father, Muḥammad Efendi Baligh, who had chosen the profession of arms and reached the rank of *saghkol agasi*, was stationed at the time of his son's birth. His grandfather, 'Abd Allāh b. Muḥammad, however, was professor at the Azhar university at the time of the French occupation and the grandson followed in his steps. As he lost his father in 1261 (1845), when only eleven years of age, he was brought up by a relative, studied at the Azhariya and at the same time studied Turkish industriously to qualify for a place in the Dīwān. In 1267 (1851) he entered the civil service, held positions in various diwāns and accompanied Ismā'il Pasha to Sambiil in 1279 (1861) when the latter went

there to receive his investiture from the Sultān. He often returned there and in 1284 (1866) was appointed tutor to the princes Mehemmed Tewfik, Iḥsan and Husain. In 1286 he was transferred to the Ministry of Finance and commissioned to organise the Khedival Library. In 1288 (1870) he was appointed wakīl to the Ministry of Public Instruction under 'Alī Pasha Mubārak [q. v.] and finally became Minister, although for a brief period only on account of the political turmoils of the time [cf. the article 'ARĀBĪ PASHA, i. 416 *et seq.*]. He was even imprisoned after the rebellion had been put down, but finally released. He then lived the life of a private scholar, made the pilgrimage to Mecca in 1302 (1885), travelled through Syria in the following year and visited Stockholm in 1306 (1889) as delegate of the Egyptian government to the Oriental Congress. On his return to Egypt he occupied himself with an account of this journey but death overtook him on the 11th Dhū 'l-Hiǧǧa 1307 (27th July 1890) when he had only finished the opening chapters.

'Abd Allāh Pasha Fikrī was a good stylist and wrote several works, some of which were only printed after his death by his son AMĪN PASHA FIKRĪ, who had accompanied him to Stockholm. This son, born in Cairo 1272 = 1856, also wrote a *Geography of Egypt and the Sūdān* (Cairo 1296), and died young (January 1899). He published a collection of his father's poems, letters etc. entitled: *al-Āthār al-Fikriya* (Cairo 1315), and the above mentioned account of his journey: *Irshād al-Ālibbā' ilā Maḥāsin 'Urūḥā*, Cairo 1892. Other works by his father: *al-Fuṣūl al-Fikriya li 'l-Makātib al-Miṣriya*, Cairo 1304 (Elementary grammar for schools); *Naẓm al-Lu'āl fi 'l-Ḥikam wa 'l-Amthāl*, Cairo 1308; *al-Maḥāma al-Fikriya fi 'l-Mamlakat al-Baṣiniya*, Cairo 1289 and often reprinted.

AL-FĪL, the elephant, also called *al-Zandabil*, which latter name is applied to the smaller animals or according to some writers the females. In spite of its bulk and heavy figure it is one of the swiftest and most mobile of animals. As its neck is very short it has a long trunk of cartilage, flesh and sinew, which is of the same use to it as hands to man. With it it carries food and water to its mouth; it can move it round its whole body and fights with it. Its two ears are like shields: it flaps them constantly to drive away flies and mosquitoes from its mouth, which is always open. Its powerful tusks attain a weight of 200 or even 300 *mann*. Its tongue is reversed, that is, it is attached to the front of the mouth, if this were not so, according to the view of the Indians, it would learn to speak like a man. Its cry is like that of a boy and is weak in comparison to its size. It only has joints in the shoulders and in the thighs: it therefore sleeps standing or leaning against a tree. When it falls on its side it cannot get on its feet again; the other elephants help it up, while a large elephant shoves its trunk under the side of the fallen one and the others help till it is up again. When it wants to tear up a tree, it twists its trunk around it and uproots it with ease.

The elephant becomes reproductive in its fifth year. Its testicles are inside its body near the kidneys. When the animal has conceived she is no longer covered by the male. After two years the young one is born and one every seven years afterwards. As the female brings forth in a standing position and has no joints, it goes into a river with an abundant flow of water; it drops the young one into it to avoid letting it fall on the hard ground. The male elephant watches by it and protects it and the young one from snakes, which it tramples upon with its feet. It also eats snakes when it is ill. The elephants exported to 'Irāq do not increase their numbers there and soon die out; in India they may live to be several hundred years old.

The elephant cannot bear the rhinoceros and flees from its neighbourhood; when they fight with one another, both are often killed. But its most deadly enemy is the *zabraḳ*, an animal smaller than the lynx, of reddish-yellow colour with fiery eyes, exceedingly agile in jumping; it squirts its urine on elephants and men so that they fall dead if it touches them. The elephant is also afraid of the cat; it is said that the kings of Persia when fighting with the Indians used to let cats loose on the elephants to put them to flight; a similar stratagem is related by the poet and freedman Hārūn b. Mūsā.

Dimishkī tells us how wild elephants are caught; a long pit with steep sides is dug, which slopes gradually downwards to a depth equal to the height of the elephant and so narrow that, though it can easily go in, it cannot turn round or come out. Rice and other fodder is then scattered round this pit, most thickly around the entrance and in the pit itself. When a young elephant comes along, it follows the fodder in its greed until it reaches the deep end of the pit and then does not know what to do. The hunters then come dressed in dazzling colours red, blue and yellow and beat it with clubs; the elephant tries to trample those who attack it with its fore feet but cannot get out of the narrow pit. A man dressed in white then comes to its help, drives away its tormentors, brings food and water and remains near it to accustom the elephant to him. After a time he goes away and the others return and beat the elephant still more unmercifully whereupon the man in white appears for the second time and repeats the process of driving off the tormentors and feeding the elephant. This alternation is continued till the elephant has such confidence in the watcher that it allows him to touch it and mount it. When the elephant has become sufficiently used to him, the earth in front of the elephant is dug out so that it can come out of the pit. The elephant-driver (*fayyāl*) sits on the elephant's back and has a crooked stick (*mihǧǧan*) in his hand, with which he touches the elephant's head when he wants it to do anything.

Numerous stories are told of the vindictiveness of elephants; it is said to be as great as that of the camel. For example, a *fayyāl* had beaten an elephant severely; the latter waited till on one occasion he was bound to a tree while the driver lay down to sleep a little distance off. The elephant broke a branch off, twisted it through the driver's bushy hair till it was quite entangled, then pulled him towards itself and crushed him.

Its docility, patience and tractability are, however,

quite as great as its vindictiveness, when it is well treated. In its native country it is a most valuable beast of burden and labourer.

War-elephants are of special importance and the kings of India possessed an astounding number of them. It is related of king *Khusraw Parwēz* that he had 1000 white elephants, each 12 ells high. The elephants knelt before him, as soon as they became aware of his presence in the midst of countless troops of cavalry. A war-elephant is a moving fortress; it carries men on its back and its body is protected by a cuirass of iron and horn; a bent sword is fastened to its trunk and with this it cuts horses and camels in two. Around it are 500 men, who protect its rear and on its back are valiant soldiers who break through the ranks of the enemy; one of these elephants is a match for 5000 horsemen. Ibn Baṭṭūṭa gives his experiences as an eyewitness of elephants trained to act as executioners.

African elephants are not tamed but are all wild and only hunted for their ivory. They are particularly numerous in the land of Zandj. When the people go to hunt them they throw the leaves, bark and branches of a certain tree into the water and conceal themselves near. The elephants are intoxicated by the water, fall down and are slain with a long spear. The tusks are exported to 'Omān and thence to India and China. Ivory is used most extensively in China, for example for sedan-chairs and for burning before altars; in India it is made into sword and dagger handles, chessmen and draughtsmen. Shields are made of its skin in India and Africa. *Ḳazwīnī* and Ibn al-Baiṭār discuss the uses in medicine of parts of the elephant.

FİL (A.; literally "action"), a technical term in Arabic grammar: the verb. According to al-Zamakhsharī, *Mufaṣṣal*, p. 108 (§ 402) it is "that which indicates the association of a *ḥadath* (event) with a time". Muḥammad Aḥa adds the "reference to the agent" in his *Dictionary of Technical Terms* (ed. Sprenger etc., ii. 1142 *et seq.*). But this addition is only correct for the active verb. On the other hand the emphasis laid on the notion of time, which is found as early as *Sibawaihi* (chap. 1), shows that the Arabic verb had for long been not so tenseless to the linguistic feeling of these old grammarians as the original Semitic verb perhaps was. — Among the characteristics of the verb are that *ḳad*, *sawfa* and similar particles may be placed before it, that one can affix the allied pronouns etc. The pertinent grammars teach the division of the verb into *fīl munṣarif* and *djūmid*, *ṭhulāṭhī* and *rub'ī*, *muta'addī* and *ghair muta'addī*.

Among the scholastics (*mutakallamūn*) *fīl* practically means "realisation, actuality"; among philosophers (*ḥukamā*) it also means "effect".

(A. SCHAADL.)

FILALĪ, a line of *SHERİFS* [q. v.] in Morocco.
FILASTĪN, i. e. PALESTINE, is the name given

by the Arabs to the Roman Province of Palestina Prima, practically Judaea and Samaria with Caesarea ad Mare as capital. De Goeje, Wellhausen and Caetani have brought order into the confused accounts of the conquest of this district by the Muslims, notably by disputing and correcting Saif's account, although various details still remain uncertain; for example, the date of the outbreak of hostilities. While the Arab historians do not make Abū Bakr send an army to Western Palestine via Aila under 'Amr b. al-ʿĀṣī till the year 13 (began 7th March 634), according to a Syriac authority published by Land, the first conflict between Greek and Muslim arms took place as early as February 634 at a place about three hours east of Ghazza [q. v.]. Although this source is not very reliable otherwise, in favour of its accuracy on this point it may be urged that it gives more time for the operations of the Arabs before the battle of Adjnādāin [q. v. i. 141^b] and that Khālīd, who had been summoned from Syria to assist, could thus have actually arrived during Easter in April in Mardj Rāhiṭ as Ṭabarī, *Annales*, i. 2109, 11 (although in contradiction of l. 2) says. The Greeks were defeated in this battle and their leader slain while retreating. 'Amr was now able to take Ghazza and then advanced on Caesarea with his troops and began to besiege it in July 634 (*Djumādā* 1, 13). He was, however, forced to retire to 'Araba by the approach of a larger Greek force; here he was joined by the troops coming from the district east of the Jordan and thereupon advanced against the Greeks who were utterly defeated at Adjnādāin at the end of July or in August. It was probably immediately after this victory that 'Amr conquered the towns in Filastīn, detailed by Balādhurī, Samaria, Sichem, Lydda, Jabne, 'Amwās, Bait Djabrīn and Raphia. After joining the main army and taking part in the deciding battles, he was able to return in August 636 after the battle of Yarmūk and proceed to the siege of Jerusalem which finally surrendered in 16 or 17 (637 or 638). Caesarea, which was strongly fortified, now alone remained. 'Amr began the siege anew, but was called to Egypt in 640 and had to leave the conduct of the siege in the hands of Yazīd b. Abī Sufyān the commander-in-chief in Syria; but it was only after the latter's death that his brother Mu'āwiya succeeded in taking the town with the help of a traitor (according to Wākīdī and others in 19, according to Ibn Ishāq not till 20). The conquest of Filastīn was finally completed by Mu'āwiya's capture of Asḳalān.

The Arabs, as they usually did elsewhere, here retained the organisation they found there and Palaestina Prima remained a separate province under the name *Djund* (military district) *Filastīn*, although its centre was shifted from Caesarea to Lydda. At a later period the place of Lydda was taken by the new foundation of Ramla which Sulaimān b. 'Abd al-Malik had built while governor of Filastīn and where he was fond of living even after he became Caliph.

As to the extent of the conquered province, Ṭabarī (i. 2146, 1) mentions Baisān as the north-eastern limit, and at 2108, 10 'Araba is described as a part of Filastīn. *Iṣṭakhri* defines its length by the frontier towns of Raphia and Ladjdjūn and the breadth by Yāfa and Jericho; Idrīsī and, at a later period *Khālil al-Zahīrī*, give similar state-

ments, although the latter, like the author of the *Muthir* (middle of the xivth century), gives al-Arīsh as the extreme southwestern point. Iṣṭakhri gives the following dependencies of Filastīn, the southern part of al-Ghawr [q. v.], al-Djibāl and al-Sharāt as far as Aila. In Muḳaddasī on the other hand al-Sharāt is given as an independent *kūra* alongside of Filastīn with Zughar as its capital, while in compensation, as it were, he reckons 'Ammān, the capital of al-Balkā, to Filastīn. Iṣṭakhri says that Ramla is the largest town in the province, with Jerusalem second, which in Yāqūt is the capital.

Iṣṭakhri describes Filastīn as one of the most fertile parts of Syria and emphasises the fact that it depends for its irrigation entirely on the rainfall; there is running water only at Sichem. Yāqūt remarks on the generally mountainous character of the land. Muḳaddasī knows the following exports of Filastīn: olive oil, small figs, raisins, carobs, different sorts of textiles, and soap; of Jerusalem especially: cheese, fine sorts of raisins, apples, pine apples, looking-glasses, lamps and needles, from Jericho indigo (cf. AL-GHAWR). He also mentions the quarries of white stone and the marble quarries at Bait Djibrin.

The statements on the public revenues of this province in the 'Abbāsīd period are of special interest. Ibn Khaldūn gives a list from the second half of the viiith century A.D., according to which the annual revenue of Filastīn was 310,000 dinārs besides a payment in kind, of 300,000 raṭl of olive oil. In Hārūn al-Rashīd's time, 310,000 dinārs with a payment in kind of raisins. In 820, according to Ḳudāma's *Kitāb al-Kharāj*, 195,000 (in another passage 259,000) dinārs. According to Ibn Khurdādhbih in 864, 500,000 dinārs and the same figure is given by Ibn al-Faḳīh for 903, while Ya'qūbī who flourished in the interval only gives 300,000 dinārs.

The old provincial division was abolished during the Crusades and from the Aiyūbid period onwards replaced by a division into *mamlakāt* which we find in Dimishḳī and Khaliṭ al-Zāhiri. The mamlaka of Ghazza practically corresponded to the ancient Filastīn.

FIRĀRĪ (from the Arabic *fīr* "flight") (T.) "deserter". This word has been recently applied by the partisans of the government to Young

Turks who have taken refuge abroad to escape the vigilance of the police. (CL. HUART.)

FIRĀSA is apparently an Aramaic loanword. The lexicons quote no old evidence for it; *fāris* in this sense in *Ḥamāsa*, p. 564, v. 5, need not be old (Wellhausen, *Reste*, p. 152), nor does it occur in the *Qur'an* but it is used by the commentators (in the form *tafarassa*) to explain *ta-wassama* in *Kur.* xv. 75. The general meaning is "insight" and it occurs quite normally in this sense of judges and rulers as to cases before them (Ibn Ḳaiyim al-Djauziya, *al-turuḳ al-ḥukmiya*, p. 24 *et seq.* of ed. of Cairo, 1317). (ii) More narrowly of physiognomy as a science (Doutté, *Magie et Religion*, p. 370) for which the older Arabic is *ḳiyāfa* [q. v.]. (iii) As a Ṣūfī expression for the divinely given intuition of saints. The basis is the tradition, *Ittaḳū firāsāt al-mu'min fa'innahu yanẓur binūri'llāh*. "Beware of the intuition of the believer for he beholds in the light of Allāh". To this some forms of the tradition add, *Innahu sha'ṭun yaḳḏihufuhu'llāhu fi ḳulūbi-him wa'alā 'alsinatihim*, "It is a thing which Allāh casts into their minds and upon their tongues". For the different forms of this tradition, see the *Iḥyā* of al-Ghazzālī with the *sharḥ* of the Saiyid Murtaḏā, ed. Cairo, vol. vi. p. 544-545; and on Ṣūfī *firāsa* in general see the *Risāla* of Ḳushairi, ed. of Balāḳ, 1290, with *sharḥ* of Zakariyā al-Anṣārī, vol. iii. p. 174—185. Ibn al-Aṭhīr (*Lisān*, viii. p. 40, ll. 7—10) says that the above tradition was understood in two ways: — the first, the literal (*ḡāhir*) meaning, that it was something which Allāh put into the minds of his saints and so they knew the condition of certain people by a *ḡarāma* and by rightly using opinion and conjecture; and the second, that *firāsa* is something learned from indications and experiments and make (*ḳhalḳ*) and character [evidently physiognomy]; further, that in the addition to the tradition quoted above there is drawn a distinction between the *firāsa* which the saints consciously exercise and a *firāsa* which appears in automatic speech, the saint not knowing, or at least not understanding what he says. An example of the latter is the story of the elephant cub, told in Damīri's *Hayawān*, vol. ii. p. 188 of ed. of Cairo, 1313; for the same phenomenon in Muḥammad himself, see Macdonald, *Religious Attitude in Islam*, p. 47 and 99.

Bibliography: is given above.

(D. B. MACDONALD.)

FIR'AWN (Plur. FARĀ'INA), Pharaoh. The word is explained by the commentaries on *Sūra* ii. 46 of the *Qur'an* as a *laḳab* or *'alam* of the Amalakite kings, like Kisrā and Kaisar of the Kings of the Persians and Romans. The verb *tafar'ana* means "to be arrogant and tyrannous", hence the *Qur'anic* Fir'awn is called al-Djabbār "the tyrant" by al-Ya'qūbī (ed. Houtsma), i. 31. A number of Fir'awns are mentioned in Arabic literature; their number is very differently given. In the *Qur'an*, however, Fir'awn is always the king with whom Mūsā and Hārūn had to deal; the word is here clearly understood as a proper name.

The *Qur'anic* data concerning Fir'awn are on some points fuller than the Biblical. The most important are the following. In place of his daughter his wife, Āsiya [q. v. i. 487^b], is mentioned; a certain Hāmān is also mentioned who (*Sūra* xxviii, 38, xl. 38) is commissioned to build a tower (*ṣarḥ*),

which shall reach to heaven, by which Fir'awn will ascend to Mūsā's God. There are obviously several confusions here; Hāmān is an echo of the vizier of this name in the Book of Esther; the tower and its description recall the Tower of Babel. It is probably the Biblical account of the building of the "treasure cities, Raamses and Pitom", that has given rise to the confusion last mentioned.

Another member of Fir'awn's suite who appears in the *Qur'ān* is not mentioned by name. When Fir'awn wanted to slay Mūsā, "then a believer among Fir'awn's people, who had concealed his faith said: Will ye slay a man because he says: My Lord is Allāh, when he has come to you with manifest signs from your Lord? If he be a liar, against him is his lie; but if he speaks the truth, there will befall you something of that with which he threatens you" etc. (*Sūra* xl. 29 *et seq.*).

Fir'awn is twice called "he of the pegs" in the *Qur'ān* (*Dhu 'l-Awḥād*, *Sūra* xxxviii. 11, lxxxix. 9). This expression is variously explained by the commentators; some say that it means, that his dynasty is firmly established as by tent pegs, while others say that his armies are meant by the pegs. Others again say that he bound people to be punished hand and foot to pegs driven into the ground.

A further addition to the Biblical narrative is the statement that the magicians were threatened with dreadful punishment by Fir'awn when they became converts (*Sūra* vii. 111 *et seq.*; xxvi. 45 *et seq.*). Finally Fir'awn himself is said to have become converted the moment he was being drowned; but God did not accept his conversion and caused his body to be cast upon land as an example for others (*Sūra* x. 90 *et seq.*).

It is said of him that he had himself worshipped as a God (*Sūra* xxviii. 38). On the day of the resurrection he will go into Hell at the head of his people (*Sūra* xi. 100). The *Qur'ān* makes no distinction between the Pharaoh of the Bondage and of the Exodus. This is clear from the fact that when Mūsā and Hārūn come to him Fir'awn recognises the former (*Sūra* xxvi. 17).

Muslim Tradition gives the following account of the Fir'awns. In contrast to the *Qur'ānic* account, Fir'awns are mentioned as early as the stories of Abraham and Joseph and some even tell us that Joseph's first Fir'awn was called al-Raiyān b. al-Walid and his successor Kābūs b. Muṣ'ab. According to others Joseph was the vizier of al-Walid (or Dārim) h. al-Raiyān. Tradition is not unanimous with regard to the Fir'awns between Joseph and Mūsā. The sources which are less directly influenced by the Bible say that the above mentioned Kābūs b. Muṣ'ab was the first husband of Āsiya and Mūsā's foster-father. When Mūsā received the divine mission, Kābūs was already dead and his successor was his brother Walid b. Muṣ'ab (*Ṭabarī's Taḥṣīr* and Baiḍāwī on *Sūra* ii. 46; *Ṭabarī* [ed. de Goeje], i. 443 *et seq.*).

Ibn Ishāq in *Ṭabarī* (ed. de Goeje), i. 444 *et seq.*, closely follows Exodus, i. 8; when Joseph and his Pharaoh, al-Raiyān b. al-Walid, had died, the throne was occupied by Amalekite Fir'awns to the time when al-Walid b. Muṣ'ab ascended it; Mūsā was sent to him; he was the most arrogant and cruel of all and reigned for the longest period. — Is there perhaps a reminiscence here of the reign of Rameses II. which covered three quarters of the xiiith century? — According to Ya'qūbī (i. 211) and Mas'ūdī (ii. 397) there were two kings be-

tween Joseph's Pharaoh and Mūsā's foster-father. Zamakhsharī (*Kaṣṣhāf* on *Sūra* vii. 103) says that 400 years passed between Joseph's arrival in Egypt and Mūsā's return from Midian; this agrees very well with Exodus xii. 40.

The other Egyptian kings who are mentioned in connection with the history of the kings of Israel, are also called Fir'awn in Tradition, often with an attribute like *al-A'raḍj* etc.

The *Qur'ānic* accounts of Fir'awn assume the following form in Tradition. Fir'awn had enslaved the Israelites and instituted forced labour. When his astrologers or priests one day told him or, as others say, when he had dreamed that an Israelite would be born who was destined to rob him of his power, he commanded that every new-born Israelite boy should henceforth be slain. When a want of servants thus began to be felt, he altered the edict so that they were preserved in alternate years. This explains how Hārūn, who was older than Mūsā, was saved.

Concerning the member of his suite who, according to the *Qur'ān*, was a convert, we are told that he was called Khirkīl, Shīm'ān or Hābīb. According to some he was a nephew of Fir'awn, according to others his treasurer, or an Israelite carpenter who had made the box for Mūsā's mother in which the child was exposed. He is said to have been slain by Fir'awn with the magicians, along with his wife, the princesses' maid, who shared the beliefs of her husband; but it is also said that he was present at the passage of the Red Sea.

Tradition also gives further details of the building of the tower. The object of building it was to strengthen Fir'awn's position because he feared that his subjects would follow Mūsā. He also wished to reach the God of Mūsā. The tower was the highest that had ever been built. When the sun was rising its shadow darkened the west and when it was setting, the east. When it was finished Fir'awn climbed up and shot an arrow upwards to strike Mūsā's God. Then God tested him; he caused the arrow to fall down blood-red. Fir'awn then thought he had achieved his purpose. But Gabriel came and broke the tower into three pieces with his wings; one of them fell in India, one into the Ocean and a third in the Maghrib, so high was the tower. According to Zamakhsharī on *Sūra* xxviii. 38, a piece fell on Fir'awn's army and slew many of his soldiers.

At the passage of the Red Sea Hāmān commanded Fir'awn's vanguard. When no one dared enter the sea, Gabriel rode in front on a mare; attracted by the mare the stallions of the Egyptians could not be restrained and the whole host rode in and was drowned. When Fir'awn uttered the words professing conversion given in the *Qur'ān*, Gabriel descended and closed his mouth with a piece of mud so that he might not be able to obtain the mercy of God by repeating the words. God then caused Fir'awn's body to be cast up so that the Israelites might believe that he was really dead. — Fantastic details of Fir'awn's person and reign are further given by Wüstenfeld in *Orient und Occident*, i. 338 *et seq.* In Maḳrīzī also many data are given which are not in agreement with the *Qur'ān* and Muslim Tradition as such. Cf. also the article MŪSĀ.

Fleischer), p. 98 *et seq.*; Maḳrīzī, *Khiṭaṭ*, i. 142, 30 *et seq.*; ii. 465, 466; Grünbaum, *Neue Beiträge z. sem. Sagenkunde*, p. 152 *et seq.*; G. Weil, *Bibl. Legenden der Muselmänner*, p. 126 *et seq.*; Wüstenfeld, *Die älteste aeg. Gesch. nach den Zaubrer- u. Wundererzähl. d. Araber, Orient u. Occident*, i. (1862), p. 336 *et seq.* (A. J. WENSINCK.)

FIRDAWS is an artificially formed singular to *farādīs* which was taken by the Arabs from *παράδεισος* and understood by them as a plural (G. Hoffmann in *Zeitschr. d. Deutsch. Morgenl. Ges.*, xxxii. p. 761). The rare measure *fī'lau* (Lumsden, *Arabic Grammar*, p. 365, 368) was probably chosen to distinguish it from a form (perhaps *furdūs*) derived from the genuinely Arabic root *fardasa* (*Lisān*, viii. p. 45; Lane, s. v.). *Firdaws* occurs in old Arabian poetry in the sense of a fertile hollow of land (Bekrī, *Geogr. Wörterb.*, ed. Wüstenfeld, p. 514; Yāqūt, iii. p. 870 *et seq.*, and twice in the *Qur'ān* (xviii. 107; xxiii. 11) and was evidently for Muḥammad a synonym for *djanna* in the ordinary sense, "garden". *Farādīs* occurs as a proper name at Damascus and Aleppo (Yāqūt, iii. p. 862 *et seq.*). It is curious that the fundamental sense of the Zend *pairidaēza*, "a place walled in" survives even in the remotely derivative Arabic, and a *firdaws* is defined by the lexicons more narrowly as *ḥadiqa*. It also suggests grape-vines and palm trees (Baid. on *Qur.* xviii. 107). In *Ṭabarī* (xvi. p. 25—27) are given the guesses of the earliest expositors, only two points having any basis — that it is a *rūmī* word and indicates a vineyard. Otherwise they say that it is the lordliest, finest, widest and loftiest part of the Garden, the abode of those who in life commanded kindness and forbade disliked actions. To Muḥammad himself tales are traced back that it is the uppermost story of the Garden, that from it the four rivers of Paradise divide, etc. On this last see more details in the abbreviation by al-Sha'rānī of the *Tadhkira* of al-Kurṭubī (Cairo ed. 1324), p. 83, and on *al-Firdaws* generally on p. 84 and 86. But the Saiyid Murtaḍā in his commentary on the *Ihyā'* (vol. x. p. 525) says that it is the second story of Paradise below the *arṣh* of Allāh, and that above it comes *Djannat 'Adn*. Others, again, held that 'Ilīyūn was the loftiest; see a long discussion, involving the doctrine of the vision of Allāh and the presence of Muḥammad with his people in the Garden, in the *Ibriz* of Aḥmad b. al-Mubārak, p. 277 *et seq.*, ed. of Cairo, 1316.

Bibliography: is given above.

(D. B. MACDONALD.)

FIRDAWSI (ABC 'L-KĀSIM), a Persian poet, whose proper is uncertain (Mansūr, or Aḥmad, or Ḥasan), probably born in 320 (932) at Ṭabarān, one of the quarters of the town of Tūs (Khorāsān). His father had left him a small estate on which he lived in a modest way. He received his education from his compatriot Asadī. A *dihkān* or landed proprietor, who was a friend of his, gave

him a Book of Kings to put into verse; it was this that set him to compose the *Shāhnāmāh* (book of kings), an epic of about 60,000 lines in which he incorporated the portion already versified by Daḳīqī [q. v., i. 900^a]. The composition of this gigantic work lasted thirty-five years and was completed on the 25th February 1010 (400 A. H.) when the poet was nearly eighty years of age; it must therefore have been begun when he had reached a fairly mature age. The poem was dedicated to Sulṭān Maḥmūd of Ghazna, who had conquered Khorāsān in 389 (999), and presented to him by his minister Ḥasan b. Aḥmad; the Sulṭān ordered a present of twenty thousand dirhams to be given to the poet but the latter, who expected a much more munificent reward, gave half of it to a bath attendant and the other half to a seller of fuḳā' (a kind of beer). Threatened with being trampled to death by elephants, Firdawsī in revenge composed a scathing satire and took refuge with the Ispahbadh Shahrīyār b. Sharwīn, ruler of Ṭabaristān, after remaining six months in concealment in Herāt. This prince purchased the satire from him for 100,000 dirhams, at the rate of 1000 for each line, and had it destroyed; nevertheless, the text has survived and is usually published with editions of the *Shāhnāmāh*.

After writing the poem *Yūsuf u Zalikhā* (publ. by Ethé, *Anecdota Oxoniensia, Aryan Series II*; German transl. by O. Schlechta-Wssehrd, Vienna 1889) for the Bāyid Bahā' al-Dawla or his son Sulṭān al-Dawla, he returned to his native town where he died; he was buried near Tūs in a piece of ground that belonged to him; as he was looked upon as a heretic, he could not rest in the Muslim cemetery. It is said that, while his funeral cortege was passing through the gate of Razān (the name of a neighbouring village) a caravan entered by that of Rūdbār bringing the 60,000 dīnārs that the poet had hoped for. His daughter refused to accept this sum and the Sulṭān devoted it to pious works (the *ribāṭ* of Čāha). Dawlat-Shāh gives the date of his death as 411 (1020-1021).

The *Shāhnāmāh*, which comprises the whole mythical and legendary history of Persia down to the Arab conquest, is a national epic which has rendered its author immortal. Firdawsī possessed the epic sense in a high degree; his descriptions of battle show an extraordinary vigour and movement; he felt the heart of his native land beating within him. The poem *Yūsuf u Zalikhā* written to show suspicious Muslims that ancient Persia was not his only love, is no whit inferior to its predecessor in spite of the advanced age at which it was written by the author.

The *Shāhnāmāh* has been several times published; Lumsden's edition, *The Shah Namu* (Calcutta 1811) only contains the first volume; Turner Macan's (Calcutta 1829) and Mohl's (Paris 1878) are complete while that of Vullers (Leiden 1877—1884) lacks the fourth volume. There have also been lithographed editions published in the East.

Translations: *Arabic* (cf. the art. AL-BONDĀRĪ); *East Turk.*, published at Tasbkent 1326; *Gudjarānī* by J. J. Modi, Bombay 1897—1904; *French* by J. Mohl opposite his text and separately at Paris in 1876—1878; *Italian* by Pizzi, Turin 1886—1888; *English* by Atkinson opposite his edition of the text and separately, London 1832 (several times reprinted), by Warner, London 1905—1910,

and Rogers, London 1907: *German* by Von Schack, Berlin 1851—1865 and by F. Ruckert, Berlin 1890—1895. For further bibliography we may refer the reader to the works quoted below.

FIRDAWSĪ (FIRDEWSĪ), an Ottoman poet of Brusa in the time of Sulṭān Bāyazid II. (1481—1512), to distinguish him from the great Persian poet Firdawsi, called Firdewsi-i Rūmī or more frequently Uzun Firdewsi or Firdewsi-i Ṭawil ("Long" Firdewsi), probably in allusion to the length of his chief work. His chronograms (*ta'rīkh*) were celebrated. His masterpiece is the *Sulaimān-Nāme*, composed for Sulṭān Bāyazid by his command, in 360 or 380 volumes, in prose and poetry, a complete encyclopaedia in which he included all the knowledge of his time in philosophy, astrology, genealogy, history etc. The Sulṭān, however, only chose 80, or, according to others, 99 volumes and had the others burned. Firdewsi was deeply hurt, and like his Persian namesake, is said to have revenged himself by lampoons and went to Persia, where he died.

FIRDE (from *faraḍa* "to impose"), so pronounced in the Egyptian dialect, while in the middle ages *fard* and more usually *farīda* was used) is an extraordinary imposition usually levied for some special purpose. Lane in his *Manners and Customs* (see below) says that Muḥammad 'Alī Pasha [q. v.] in the first half of the xixth century levied a *firde* of one twelfth of the income of each subject, without distinction of religion, up to a maximum of 500 piastres to meet the expense of increasing the army and navy. When this expenditure diminished, the tax was abolished. A similar *firde* was at the same time levied on prostitutes. As already mentioned *farīda* (plur. *farā'id*) is almost always used with the sense of *firde* in the historians and inscriptions of the middle ages.

FIRISHTA. [See MAL'AK.]

FIRISHTA, MUḤAMMAD KĀSIM HINDŪ SHĀH, known as FIRISHTA (born 960 = 1552, died after 1033 = 1623), of Astarābād in northern Persia, was brought to Aḥmadnagar as a child in

the reign of Ḥusain Nizām Shāh I and, while yet a youth, entered the service of Murtaḍā Nizām Shāh I. The persecution of foreigners which followed the murder of Ḥusain II drove him to Bidjāpūr where, in January 1590, he entered the service of Ibrāhīm 'Adil Shāh II. Shortly afterwards he wrote *Iḥtiyārāt-i Kāsimī*, a work on medicine, and Ibrāhīm, pleased with its style and aware of Firishṭa's devotion to historical studies, urged him to undertake a comprehensive history of Muḥammadan rule in India. Firishṭa at first declined the task as being beyond his powers, but eventually offered to submit for approval a few chapters of such a work as he could undertake. Among the specimen passages thus presented was an account of the disgraceful circumstances of the death of 'Alī 'Adil Shāh I, Ibrāhīm's father. Ibrāhīm correctly interpreted the selection of this subject as a hint that the historian demanded unfettered liberty in the relation of facts, and gave him permission to proceed with his work.

Firishṭa, who was an industrious compiler, mentions in the preface to his history no less than thirty-two books which he had collected and consulted, and adverts to some others in the body of his work. The *ipsissima verba* of his authorities are so often found in his pages that he has been stigmatised, with scant justice, as a mere copyist. He was, however, utterly devoid of the critical faculty and has made several glaring errors even in the annals of the Dakhan, which were his own peculiar province. The value of his work is further impaired by his gross ignorance of geography, and it is unsafe to follow the example of Briggs, his best known translator, in accepting it as a thoroughly satisfactory account of the rise and progress of the Muḥammadan power in India. The history, which was begun in 1606 and finished in 1611, consists of an introduction, twelve sections dealing with the Ghaznawid kings of Lāhor, the emperors of Dihlī, the independent Muḥammadan dynasties of the Dakhan, Guḍjarāt, Mālwa, Khāndesh, Bangāl (including Džawnpūr), Multān, Sind, Kashmīr and Malabār, and the saints of India, and a conclusion, and embraces the whole history of Muḥammadan rule in India, excepting that of the 'Arab conquerors of Sind, to the beginning of the seventeenth century. Firishṭa complained with truth that until his time the only work which pretended to deal comprehensively with the subject was Nizām al-Din Aḥmad's *Ṭabaqāt-i Akbarī*, which was too brief and condensed to be of much value to the student of history, and boasted with justice that he had produced a work the like of which had not previously appeared in India. His *History* (ed. Bombay, 1831; Lucknow, 1281 = 1865); despite its many defects, is valuable not only as a summary of known authorities, but also because it embodies fragments of works of which the originals have been lost. A critical translation (those existant in English are enumerated Morley, *Catal. R. As. Soc.*, p. 67; the best is that of Briggs, London 1829), or, at least, a careful and intelligent edition of the text is much to be desired.

FIRISHTE-ZÂDE, 'ABD AL-MADJID 'IZZ AL-DÎN, in Turkish also called *Firishte-oghlu* and in Arabic *Ibn Firishita*, one of the principal disciples of Faḍl Allāh [q. v., p. 37] the founder of the Hurūfī [q. v.] sect, died in 874 (1469). In 833 (1430) he wrote a book on the doctrines of the sect in Turkish, entitled *‘Ishk-nāme* (Book of mystic Love), which is placed by the adepts on a level with Faḍl Allāh's *Djāwidān*, so that this name is also given to it. There also exists from his pen a *Hidāyet-nāme* (Book of Conduct) in Turkish and an *Akhiret-nāme* (Book of Future Life). The *Ishk-nāme* has been lithographed at Constantinople (1288 = 1871).

FİRŪZA, Arab. *al-firūzadj*, the turquoise, a well-known precious stone of a bright green or "mountain green" to skyblue colour with a gloss like wax; in composition it is a hydrated clay phosphate with a small but essential proportion of copper and iron. The colour is not permanent in all stones, and is said to be particularly affected by perspiration. It is almost always cut as an ornament en cabochon i. e. with a convex upper surface; only stones with an inscription are given a flat upper surface. The provenance of serviceable stones is limited to a few places whose history may be traced back for thousands of years. Turquoise mines were worked by the kings of Egypt in the peninsula of Sinai. Major Macdonald discovered them again in 1845 in the Wādī Maghāra and its neighbourhood and worked them again for a number of years. The hieroglyphic inscriptions at the mines date, according to H. Brugsch, from King Snefru of the third dynasty to Rameses II. Brugsch takes the word *mafkat* to be the name of the mineral. No mention of the stone or the mines has survived from the Hellenistic period; on the other hand in addition to wonderful details of the method of procuring the pale green *callais* in Carmania, Pliny knows a good deal about its properties, which can only refer to our turquoise; for the statement that the *callais* loses its colour when affected by oil or ointment is found in al-Kindī on the *firūzadj* and in all later mineralogical works. It can hardly be doubted that the turquoise was obtained in the Sāsānid period and even earlier in the mines around Nishāpūr. Tifāshī says of the kings of Persia that they adorned their hands and necks with turquoises, because they averted danger of death by land or water; but we often meet with the assertion that the turquoise detracts from the majesty of kings. It was considered to contain copper and to be formed in the vicinity of copper mines. Different kinds are distinguished according to the different colours (sky-blue, milk-blue, green, spotted); the best kind is considered to be the *būshāki* (i. e. *Abū Ishākī*) and the finest variety of this is the sky-blue *az-hari*. Large pieces are very rare and are correspondingly costly, small pieces on the other hand are very common. The best specimens retain their colour, apart from the influences detailed below; after 10—12 years many lose their colour entire-

ly and the stone is then said to be dead. All stones, however, show a certain variation in colour. They are brilliant in a clear sky and dim when the sky is clouded; they alter their colour with the state of health of the wearer, and when affected by sweat, oil or musk; fat restores the colour again.

Taken internally it is a poison, but in collyrium it is useful for clearing the sight, also if it is stared at for some time. Gold takes away its beauty (unlike lapis lazuli), i. e. probably, the greenish blue colour does not harmonise as well with the yellow of the gold as the dark blue of the lapis lazuli.

Akfānī explains the name *firūzah* as "stone of victory"; whence it is also called *hadjar al-ghalaba*. The word *firūzadj* is found in many corrupt forms in the Latin translations of the middle ages (*farasquin*, *febrognug*, *peruzegi* etc.), but none of these can be considered the original of the word turquoise; for as early as the xiiith century we find the form *turcoys*, *turquesa* and *turquesia*, and it may safely be assumed, that this was a new name given to the stone from the land of its origin, the ancient home of the Turks; cf. Arnoldus Saxo: "*Turcoys dictus a regione Turkyia in qua nascitur*". Certainly the name did not first appear in connection with the trade between Venice and Turkey.

General (now Sir) A. Houtum-Schindler who was governor of the mining area and director of operations at the mines in the "eighties" of last century has given a detailed account of the Persian turquoise mines at Meshhed in Khorāsān, which is quoted in Bauer's *Edelsteinkunde* (2nd ed., p. 490 *et seq.*). The stones procured are usually roughly cut *en cabochon* on the spot and brought to Meshhed by the village elders. Thence the turquoise, fastened to pieces of reed with black wax, which are tied in bundles, travels to Nijni Novgorod or Moscow, usually through the intermediary of Bukhārā traders, whence it is distributed all over the world. Many of the "lucky stones" are sold to pilgrims in Meshhed. In Nishāpūr the stone is seldom to be seen. Many are also exported via Yezd to Baghdād and Constantinople. The value of the exports varies from £10,000—£15,000 annually, which is believed to be about a third of the total yield.

H. Brugsch states, that, according to present day belief, the alteration in the colour of a stone presented indicates increase or decrease in the friendship of the donor. The large, quadrilateral turquoises polished flat, which were at one time engraved with inscriptions and arabesques in gold and worn on the upper arm, are no longer held in such estimation. Stones for rings are always mounted in silver or tin, never in gold; Brugsch connects this with the Muslim prohibition of the wearing of the most precious metal or with a very ancient notion of the demonic meaning of gold. I am rather inclined to believe that the real reason is good taste, as has been mentioned above, for religious prohibitions are not mentioned by any writer; besides diamonds also are only mounted in silver.

FĪRŪZ-ĀBĀD (earlier Pīrūz-ābād, "city of victory", Muḥaddasi, p. 432), a name given to the town of Gūr (arabised *Djūr*) in Fārs, by the Būyid 'Aḍud al-Dawla to avoid the evil omen suggested by the Persian name of the town (*gūr*, *gūr*, "tomb"). It was founded by Ardashīr I. on the site of a marsh that had been drained (Yāqūt, iii. p. 146) and remained the capital of the province of Ardashīr-Khurra, although not so large as Shirāz or Sīrāf (Iṣṭakhri, p. 97); it was fortified by a wall with a ditch but not surrounded by suburbs (ibid. p. 116, 124). In the Sāsānian period there was a fire-temple there, built beside a reservoir and called *Bārīn*; it was there that Muṭahhar b. Ṭāhīr al-Makdīst heard the *patēt* of the Mazdeans recited (*Livre de la Création*, i. 56, where *djūr* should be read for *khūz*, an emendation suggested by Seybold). It had four gates, called Mihr (Mithra or the Sun), Bahrām (Mars), Hormuz (Jupiter) and Ardashīr. In the centre of the town was a building like a platform, called *tirbāl* (temple) by the Muslims, and *iwān-zwakiyākhurra* by the Persians, the erection of which was attributed to the founder of the city; it was of sufficient height to command the surrounding country and on it there was a fountain fed from a spring in a mountain near. It was probably the remains of an Assyrian *zikurrat* (M. Dieulafoy). In Iṣṭakhri's time it was almost entirely in ruins. Otto of roses was manufactured there and exported throughout the East. *Djūr* and Iṣṭakhri were the last cities in Fārs to capitulate before the conquest (Balādhuri, p. 315, 389); it was occupied, then after it had rebelled, taken by 'Abd Allāh b. 'Āmir b. Kuraiz, governor of Baṣra in 29 (650).

Bibliography: Barbier de Meynard, *Dictionnaire de la Perse*, p. 174—176; Noldeke, *Araber und Perser*, p. 11, note 3; Le Strange, *Eastern Caliphate*, p. 255; P. Schwarz, *Iran im Mittelalter*, ii. 56 et seq. (CL. HUART.)

FĪRŪZĀBĀD, is also common in other parts of the world as a place-name, cf. the article DIHLI [i. 972^a *infra*]. For other places of this name cf. Yāqūt s. v. and Le Strange, *Eastern Caliphate*, Index.

AL-FĪRŪZĀBĀDĪ, ABU 'L-ṬĀHĪR MUḤAMMAD B. YĀ'QŪB B. MUḤAMMAD B. IBRĀHĪM NADJID AL-DĪN AL-SHĪRĀZĪ AL-SHĀFĪ'Ī, Arabic lexicographer, was born in Rabi' II or Djumādā II 729 (Febr. or April 1329) at Kāzarūn near Shirāz, on which account he was in later life fond of calling himself a descendant of the celebrated Shāfī'ī Abū Ishāq al-Shīrāzī, although the latter died childless. From his eighth year he studied in Shirāz and afterwards in Wāsiṭ and in 745 (1344) in Baghdād.

In 750 (1349) he studied under Ṭaqī al-Dīn al-Subkī in Damascus and accompanied him to Jerusalem. There he acted for ten years as professor and then undertook a series of journeys which took him to Asia Minor and Cairo. The accounts of his travels given by his biographers vary a great deal. According to the best authenticated statements, those of al-Nu'mānī, he moved to Mecca in 770 (1368) and remained here about 14 years, which were interrupted by a journey to India and a five years' stay in Dihli. About 794 (1392) he accepted an invitation from Sulṭān Aḥmad b. Uways to Baghdād. From there he went to Persia, and was honourably received by Timūr when the latter took Shirāz in 795 (1393). But as his native district had been devastated by the Mongols he could not stay here but took ship in Hormuz to South Arabia, which, owing to its remoteness from the scenes of the great events in history, afforded him the peaceful resting-place required by for a scholar's activity. After his arrival there in Rabi' I 796 (Jan. 1394), the Sulṭān al-Malik al-Ashraf invited him to Ta'izz, where he remained for 14 months. On the 1st Dhū 'l-Hijja 797 (12th Sept. 1395) he was appointed Chief Kādī of al-Yaman and given a daughter of the Sulṭān in marriage; after this he claimed to be a descendant of the Caliph Abū Bakr. In 802 (1400) he again made the pilgrimage and constituted his house in Mecca a Mālikī Madrasa with three lectureships. During his stay in Mecca, his father-in-law died in 803 (1401). He made a second journey to Mecca in 805 (April 1403), but soon returned to Zabīd where he died on Tuesday the 12th (according to others the 20th) Shawwāl 817 (26th Dec. 1414). His great work, the dictionary *al-Kāmūs*, which he had extracted from his (now lost) *al-Lām' al-Mu'lam al-'Uḍḍāb al-Djāmi' bain al-Muḥkam* (of Ibn Sīda) *wa 'l-'Uḍḍāb* (of Ṣaghānī) in 60, according to others in 100, volumes, in which however, as Graf Landberg suggests, he perhaps included many words from South Arabian dialects, became a classic throughout the whole Muslim world, in spite of the fact that, although it contains a very large number of words, the material has not been critically examined and the explanations are very brief. It has been printed at Calcutta 1817, 1270, Bombay 1884, 1272, Lucknow 1885, Bülāk 1274, 1289, 1301—1303, Cairo 1281, 1319. A Persian version by 'Abd al-Rahīm *Muntaha 'l-'Arab fī Lughat al-'Arab* appeared at Calcutta 1841 (another *al-Kābūs* by Muḥammad Ḥabīb Allāh, s. *Catalogue of the Pers. Mss. in the Brit. Mus.*, No. 1016-1017). A Turkish translation by 'Āsim Effendi *al-Ūḫyānūs al-Basīṭ fī Tarjamat al-Kāmūs al-Muḥīṭ* was printed with the Arab. text, Stambul 1272 and alone at Bülāk 1250, Stambul several times, last in 1305. Among the commentaries the fullest is the *Tādj al-'Arūs* of Saiyid Murtaḍā al-Zabīdī, died 1205 (1791), 10 Vols., Bülāk 1307-1308. Fāris al-Shidyāk [q. v.] published a critique entitled *al-Djāsūs 'ala 'l-Kāmūs*, Stambul 1299. Of his other works, of which *al-Bulgha fī Tarīkh al-Immat al-Lughā* (s. Ahlwardt, *Verzeichnis der ar. Hds. der Kgl. Bibliothek zu Berlin*, No. 10060) is probably the most important, there have been printed the *Kitāb Ṭahīr al-Muwaghshīn fīmā yukūl bi 'l-Sin wa 'l-Shīn*, Vocabulaire des mots arabes s'écrivant indifféremment avec un *s* ou *ch*, Alger 1909, and the stories from the life of the Prophet, *Sifr al-Safāda*, which he

originally wrote in Persian (s. Pertsch, *Die pers. Hass. der herz. Bibliothek zu Gotha*, N^o. 33) and which was translated into Arabic in 804 (1401) by Abu 'l-Djūd Muḥammad b. Maḥmūd al-Makh-zūmī al-Miṣrī, Cairo n. d. (*Catalogue de Goetz*, N^o. 2827) with the *al-Fawz al-Kabīr ma'a Faḥ al-Khabīr fī Uṣūl al-Tafsīr* of Walī Allāh b. 'Abd al-Rahīm on the margin.

Bibliography: al-Nu'mānī, *al-Rawḍ al-Āṭir*, cod. Wetzstein, ii. 289 (Ahlwardt, *op. cit.*, N^o. 9886), fol. 218 v; Tāshkoprīzāde, *al-Shakā'ik al-Nu'māniya* (on the margin of Ibn Khallikān, Būlāk 1299), i. 92; Suyūṭī, *Bughyat al-Wu'at*, Cairo 1326, 117; Wüstenfeld, *Geschichtsschreiber der Araber*, N^o. 464; Brockelmann, *Gesch. d. arab. Literatur*, ii. 181.

(C. BROCKELMANN.)

FĪRŪZKŌH (FERŪZKŌH), a mountain fortress in the Country of Ghōr, now the Hazāra highlands of Afghanistan. It was founded by Kuṭb al-Dīn Muḥammad (known as the Malik al-djibāl or mountain-king), in a territory known as Warṣhādah, and continued by his brother Bahā al-Dīn Sām who succeeded in 544. It remained the capital of Ghōr as long as that kingdom lasted, and was much embellished during the victorious reign of Mu'izz al-Dīn Muḥammad b. Sām from the spoils of India. The Citadel or Kaṣr is described as of great magnificence. It was taken by 'Alā al-Dīn Khwārizm Shāh in 607, and finally destroyed during the Mongol invasions under Ogotaī son of Čingiz Khān in 619-620. The exact position of Fīrūzkōh is doubtful. It was on the bank of a river which may have been the upper Murghāb or the upper Hari-rūd or one of its tributaries. Raverty favours the latter view, but Holdich, who surveyed the country in 1884-1885, could find no site corresponding with it in these valleys, and identifies it with the extensive ruins of Taiwāra on an affluent of the Farāh-rūd, still locally known by the name of Ghōr. The tribe bearing the name of Fīrūzkōhī now inhabits the Murghāb valley, but it is nomadic, and it is not therefore necessary to suppose that Fīrūzkōh was in that valley. Taiwāra is in the country of the kindred Taimanī tribe, and has easy communications with Herāt, Farāh and the upper Hari-rūd valley. It may therefore with some confidence be accepted as the actual site of Fīrūzkōh.

(M. LONGWORTH DAMES.)

FĪRŪZPŪR (FERŪZPŪR). A district in the Pandjāb which takes its name from the principal town. It forms part of the Djalandhar division, lying between 29° 55" and 31° 9' N. and 73° 52' and 75° 26' E. Area 4302 sq. m. Population 958 072 of which 447 615 are Muḥammadan. The principal Muḥammadan tribes are Rādjipūts, Aṛāins, Dogars and Wattus; there is also an ascetic tribe known as Bodla, who are believed to possess powers of incantation. The ancient site of Djanūr, supposed to be the Hadj-nūr of Baihaki, was the capital of the Punwar Rādjipūts. Soon after the Muḥammadan invasion the Bhaṭṭī Rādjipūts adopted Islām and invaded the district from the south. The Gil, Dhālīwāl and other Djaṭ tribes entered it later. The Dogars, a wild and predatory tribe, are more recent immigrants. The town of Fīrūzpūr was founded in

the time of Sultān Fīrūz Shāh III of Dihlī and named after him. In Akbar's time it was part of the Sūbah of Multān and not of Sirhind, and probably lay on the right bank of the river Satlādī, and not on the left as at present. The Sidhū Djaṭs appear towards the end of Akbar's reign and soon adopted the Sikh religion. It was in this tract that Guru Govind was defeated after a three days fight by Awrangzēb's army; the site is now held sacred and the tank (Mukat-sar = Tank of Salvation) has become a place of pilgrimage, where a 3 days' festival is held in January. Round it the important town of Mukatsar has grown up. The Sikhs got possession of the country after the retirement of Aḥmad Shāh Durrānī; the Bhangī Misl under Gūdjār Singh took the principal part in the conquest. Randjīt Singh threatened this country with the minor Sikh states, and this move (1808) led to British intervention. Fīrūzpūr was occupied, and annexed in 1835, thus interposing between Randjīt Singh's kingdom and the minor states, which have been preserved to the present day. The Musulmān Nawwābs of Kasūr also found a refuge at their estate of Mamdōt near Fīrūzpūr in 1807, and were recognized as ruling chiefs. Their territory was annexed owing to mismanagement in 1855, but was afterwards restored and is still held by the Nawwābs. It is a large and wealthy estate. The present Nawwāb Ghulām Kuṭb al-Dīn Khān is a minor.

The first Sikh war between the British and the Khālsa army was fought in this tract. The Sikh army crossed the Satlādī in Dec. 1845. The battles of Mudki and Pherū-shahr (often wrongly called Fīrūz-shahr or Fīrūz-shāh) were fought soon after. The Sikh army was repulsed but not crushed, and recrossed the Satlādī, only to invade British territory again higher up the river near Ludhiāna. The decisive battle of Alīwāl was fought outside the district of Fīrūzpūr, but the desperate struggle of Subrāwān (Sobraon) which ended the war, was fought within its limits.

In more recent times the district was enlarged by the addition of the Tahsil of Fazilka in the south from the former district of Sirsa (1884). The sandy tracts to the east and south of the district have been rendered fertile by the irrigation from the Sirhind canal, and the inundation-canals constructed by Col. Grey in the riverain tract have also added greatly to its productivity. The Sikh Djaṭs are excellent farmers and take full advantage of these conditions; the Muḥammadan tribes in this part are inferior cultivators. There is at present a large export of wheat from the Fīrūzpūr district.

(M. LONGWORTH DAMES.)

FĪRŪZ SHĀH KĪLDJĪ (DIALĀL AL-DĪN), the twelfth Muḥammadan emperor of Dihlī, was an Afghān of the Kīldjī or Ghīldjī tribe who first rose to eminence in Balban's reign and later became governor of Sāmāna. When Mu'izz al-Dīn Kaikubād fell sick, he was summoned to Dihlī to assume the direction of affairs, but encountered much opposition from the Turki amirs, who, as the emperor grew feebler, proclaimed his infant son, Shams al-Dīn Kayūmarth.

Firūz acknowledged the child but removed him from the custody of the Turks and seized the palace of Kilūghari where, with his connivance, Kaikubād was assassinated. The child disappeared shortly afterwards and, on June 13, 1290, Firūz ascended the throne. His chief difficulties were the disaffection of the people of Dihli, who resented the rule of an Afghān, and a rebellion headed by Malik Chādju, a nephew of Balban, who claimed his uncle's throne. The prejudices of the citizens were conciliated by mildness and the rebellion was crushed, but the old emperor's culpable leniency both to rebels and robbers was much resented by his *amirs*, who refused to accept his plea of conscientious objection to bloodshed. A conspiracy of the disaffected *amirs* was detected and pardoned, but more severity was shown towards Sidi Mawla, an influential *darwish* suspected of plotting the emperor's assassination, who was put to death. Firūz had appointed his nephew and son-in-law, 'Alā' al-Dīn, governor of Karra, and this adventurous prince, hearing of the great wealth of Devagiri in the Dakhan, led a daring raid into that kingdom and returned laden with plunder, but declined to visit his uncle at Dihli, feigning apprehension of punishment for having undertaken such an enterprise without permission. The doting old emperor was at length persuaded, against the advice of his counsellors, to visit his nephew in Karra, and on July 19, 1296, was stabbed to death on the bank of the Ganges before the eyes and under the orders of 'Alā' al-Dīn, who immediately caused himself to be proclaimed emperor.

Bibliography: *Tārīkh-i Firūzshāh*, ed. Briggs (Bombay 1831), i. 154 *et seq.*; transl. Briggs (London 1829), i. 285 *et seq.*; Diyā al-Dīn Baranī, *Tārīkh-i Firūz Shāhī* (Bibl. Ind.) p. 174 *et seq.*; Niẓām al-Dīn Aḥmad, *Ṭabaqāt-i Akbarī*. (T. W. HAIG.)

FĪRŪZ SHĀH TAGHLAK, son of Malik Radjab, brother of Chiyāth al-Dīn Taghlak, and the daughter of Rānā Mal Bhaṭṭī of Abohar, was educated and advanced to high rank by his cousin, Muḥammad Ibn Taghlak, on whose death near Ṭaṭha on March 20, 1351, he was induced to ascend the throne. He extricated the army then employed in Sind from its difficulties and led it back to Dihli, where in the meantime Aḥmad Ayāz Khvādja-yi Djahān, whom Muḥammad had left in charge of the capital, too hastily crediting a report that Firūz had been slain in an encounter with the Moghuls, had placed on the throne a supposititious son of Muḥammad. Firūz would have pardoned and reinstated Aḥmad, but was overruled by his advisers, who caused the aged minister to be put to death. The wars of Firūz Shāh's reign were two expeditions into Bangāl in 1353 and 1359, one into Uṛisa in the latter year, one against Nagarkoṭ in 1361, and one to Ṭaṭha in 1362. A certain measure of success attended all these campaigns, but Firūz's generalship in each was beneath contempt, and after the submission of the Djam of Ṭaṭha he wisely abandoned the quest of military glory. The rest of his long reign was passed, if the suppression of one or two unimportant rebellions be excepted, in the indulgence of his passion for architecture and the chase. His public works included cities, palaces, tombs, irrigation works, mosques and colleges, but he compounded for his activity in this direction by neglect of all other public business and tolerance

of corruption and inefficiency in others. He had so little of the jealousy which is a usual attribute of sovereignty that at different times he associated two of his sons to himself in the imperial dignity. He was endeared to his people by his abolition of many vexatious imposts and by the general lenity of his rule, which contrasted strongly with that of his predecessor. He died, at the age of more than 80 years, in the latter half of September, 1388, and was succeeded by Taghlak II, the son of his deceased eldest son, Faṭh Khān. The proximate cause of the ruin of his empire was Timur's invasion but the inefficiency of his own administration contributed largely to its disruption.

FİSK. [See FĀSIK.]

FİṬNET, a Turkish poetess, whose real name was Zubaida, the daughter of the Shaikh al-Islām Meḥammed Es'ad Efendi, died 1194 (1780). Of her life we only know that she made an unfortunate marriage with Derwish Efendi, Kādī'askar of Rumelia under Selim III. Her *Divān* (printed Stambul 1286=1869 and often since) consists chiefly of lyric poems, ghazals, sharkis and a few riddles; some poems show a philosophic strain, which according to Gibb, is due to the influence of her friend Rāghib Paṣha [q. v.]. Her total writings were of small bulk.

Bibliography: Gibb, *A History of Ottoman Poetry*, iv. 151 *et seq.* (the Turkish sources are also given there).

FİṬR. [See 'ID AL-FİṬR.]

FİṬRA is a "noun of kind" (*Wright*³ i. 123^d) to the infinitive *faṭr* and means (an Ethiopic loan-meaning, Schwally in *Zeitschr. d. Deutsch. Morgenl. Ges.*, liii. 199 *et seq.*; Nöldeke, *Neue Beiträge*, p. 49), "a kind or way of creating or of being created". It occurs in Qur. xxx. 29 (*khilqa*, Baid.) and other forms of its verb in the same meaning occur 14 times. But though Muḥammad uses derived forms freely, it was obscure to his hearers. Ibn 'Abbās did not understand it until he heard a Bedawī use it of digging a well, and then the Bedawī probably meant the genuinely Arab sense of *shakka* (*Lisān*, vi. p. 362, l. 20). Its theologically important usage is in the saying of Muḥammad, "Every infant is born according to the *fiṭra* ('ala 'l-fiṭra; i. e. Allāh's kind or way of creating; "on God's plan", cf. Macdonald, *Religious Attitude in Islam*, p. 243); then his parents make him a Jew or a Christian or a Magian". This is one of several contradictory traditions on the salvability of the infants of unbelievers. On the whole question the theologians were uncertain and in disagreement. This text evidently means that every child is born naturally a Muslim; but is perverted after birth by his environment. But in this interpretation — that of the Mu'tazilites (cf. *Kashshūf*, ed. Lees, ii. p. 1094) — there were found serious theological and legal difficulties. (i.) It interferes with the sovereign will (*mashī'a*) and guidance (*hidāya*) of Allāh. Orthodox Islām, therefore, holds that the parents could be only a secondary cause (*sabab*) and that the guiding aright and leading astray must come from Allāh himself. (ii.) This view, and indeed

almost any view of the tradition, would involve that such an infant, if his parents died before he reached years of discretion, could not inherit from them, and that if he died before years of discretion, his parents could not inherit from him. For this presupposes that he is a Muslim up to years of discretion, and canon law lays down that a Muslim cannot inherit from a non-Muslim or vice versa (*Hāshiya* of al-Bādījūrī on the *sharh* of Ibn Kāsim on the *matn* of Abū Shudjā, ed. Cairo 1307, vol. ii, p. 74 *et seq.* and Sachau, *Muhammedanisches Recht*, p. 186, 204, 206 — a favorite subject for hair-splitting). Two attempts have been made to escape this. (i.) This statement of Muḥammad is to be regarded as a decision (*ḥukm*) and was abrogated by the later decision as to inheritance. But it is pointed out that it is not really a decision, but a narrative (*ḥabār*) and that narratives are not abrogated. (ii.) The being made a Jew, Christian or Magian is to be regarded as not actual, but figurative, and takes place in this figurative sense from the point of birth; the legal religion of the infant is automatically that of his parents, although he comes actually to embrace that religion only with maturity of mind. Another view was that being created according to the *fiṭra* meant only being created in a healthy condition, like a sound animal, with a capacity of either belief or unbelief when the time should come. Another was that *fiṭra* meant only "beginning" (*ba'd'a*). Still another was that it referred to Allāh's creating man with a capacity of either belief or unbelief and then laying on them the covenant of the "Day of Alastu" (Kur., vii. 171). Finally that it was that to which Allāh turns round the hearts of men.

FOMALHAUT (also *fomalthot* and *famohot*) = *fam al-ḥūt* ("the fish's mouth") is the star α of first second magnitude in the Southern Piscis. Ptolemy and following him al-Battānī, however, reckon it to Aquarius, but add that it also lies in the mouth of the Southern Piscis. According to Ḳazwīnī and Ulūgh Beg it was called *al-Dafda'* *al-awwal* = the first frog, according to Arab nomenclature, to distinguish it from a second in the Whale. It is also called *al-Zalim* = the ostrich by Ḳazwīnī.

(H. SUTER.)

FU'AD PASHA (MUḤAMMAD KEČEPI-ZADE), an Ottoman statesman, born in 1230 = 1815

in Constantinople, the son of the poet 'Izzet Molla [q. v.], who mentions him in his *Mihnet-keṣhān*, studied medicine after leaving the school of Galata-Serāi and entered the army medical service with the rank of *yuzbāshi* (captain) and was sent to Tripoli in North Africa. Returning in 1253 = 1837 to Constantinople, he entered the service of the Porte as interpreter, was sent to London in 1256 = 1840 as first secretary to the Embassy and in 1261 = 1845 attended the coronation of Queen Isabella of Spain as Envoy Extraordinary. In 1263 = 1847 he became Dragoman of the Imperial Diwān, in 1265 = 1849 referendary, then was sent on a special mission to Wallachia and Moldavia and finally appointed ambassador in St. Petersburg. In 1266 = 1850 he was under-secretary of state to the Grand Vizier, in 1268 = 1852 he went on a mission to Egypt and on his return from there became Minister of Foreign affairs, but in the following year resigned in consequence of the intrigues of Mentchikoff. In 1270 = 1854 he was entrusted with the task of suppressing the unrest provoked by Greek bandits in Janina and Yeñi-Shehr, and succeeded in restoring order. As a member of the Grand Council for Reforms he drew up a series of laws and regulations and on his appointment for the second time to the Ministry of Foreign affairs, became at the same time President of this body. He was deprived of both offices in 1273 = 1856, but was given them again in the following year. He attended the Paris congress as the delegate of Turkey and after the massacres of Christians in Lebanon (1276 = 1860) he was sent to Syria as commissioner extraordinary with civil and military powers. In this capacity he had Müshir Ahmed Pasha shot to remove any pretext for General Beaufort d'Hautpoul to march on Damascus with the troops under his command.

After the accession of Sulṭān 'Abd al-'Azīz (1278 = 1861) he became President of the High Court of Justice (*medjlis-i aḥkām-i 'adliye*), Minister of Foreign Affairs for the fourth time and Grand Vizier in the same year. After filling this office for fourteen months he was dismissed in 1279 = 1862, but soon afterwards appointed Seraskier and Adjutant-general and, retaining this title, Grand Vizier for the second time 1283 (= 1867). He retained this position for nearly three years and introduced reforms during his tenure of office. On his dismissal he retired to his palace on the Bosphorus (*yālī*). He accompanied the Sulṭān on his journey to the Paris Exhibition of (1867 = 1284), remained in Europe for his health and died at Nice in Shawwāl 1285 (Febr. 1869) at the age of 55. His remains were interred in Constantinople in a mausoleum beside the small mosque built by him in the Gedik-Pasha quarter. Fu'ad played an important part in the history of modern Turkey; with 'Alī Pasha he is to be numbered among those who were earnest for reform. With Djewdet Efendi (afterwards Pasha) he compiled the first grammar of Ottoman Turkish that was ever printed (*Ḳawā'id-i oṭhmāniya*, 1851; transl. into German by H. Kellgren, Helsingfors, 1855). The political testament (*waṣīyet nāme-i siyāsi*), addressed to Sulṭān 'Abd al-'Azīz, ascribed to him is a literary skit probably from the pen of the Persian envoy Malcom-Khān.

(CL. HUART.)

AL-FUDAIL B. IYĀD ABŪ 'ALĪ AL-FUNDĪNĪ AL-TĀLAKĀNĪ, one of the most celebrated Sūfis of the older period, a contemporary of Hārūn al-Rashīd, died 187 = 803. His *nisba* shows that he was born in Khorāsān, which agrees with the story that he began his career as a member of a robber band which rendered the roads between Abīward and Sarakhs insecure. He happened on one occasion to hear some one reciting Sūra lvii. 15: "Is it not time for those that believe, to humble their hearts before God's warning" and in consequence became converted. He then went to Kūfa, where he studied Tradition, and afterwards to Mecca, where he remained till his death. From the anecdotes related of him, it is clear that he was one of those pious ascetics to whom worldly greatness and pleasures are as nothing; no original opinions and views ascribed to him have been handed down, but he is considered one of the most reliable and prolific transmitters of Tradition.

FUDULĪ. [See FUZULĪ.]

FULBE. [See FUL.]

FULK, the usual name for ship in the Kor'an (*safina* is only found four times). Navigation seems to have made a profound impression on Muḥammad's mind; in numerous passages in the Kor'an (xiv. 37; xvi. 14; xvii. 68; xxxi. 30; xxxv. 13; xxxvi. 41 etc.) the fact that God has given man power over the waters (*sakḥḥhara*), so that they bear ships, is quoted by Muḥammad as a special proof of God's grace.

Fulk is more particularly Noah's Ark. The Kor'an does to some extent but it is rather the histories of the Prophets that give all sorts of interesting details of the building and equipment of the ark. By God's command Nūḥ had first of all to plant the trees necessary for the building of the ark and he planted plane-trees (*sādī*). During the forty years that these were growing no children were born on earth. Being asked what form the ark was to assume, God answered that the upper part and the back were to be like that of a cock and the hull also to be like the body of a bird, and that it was to have three stories (*ṭabaḳāt*). The dimensions are variously given; according to the "possessors of a scripture" it was 80 (sic) ells long, 50 broad and 30 high; according to other statements the dimensions were 660, 330 and 33 ells. The ark was nailed in the ordinary way (*dhātu dusurīn*, Sūra liv. 13) and covered with pitch internally and externally; God caused a spring of pitch to well forth for this special purpose. — On one occasion the disciples of Jesus asked their master to raise a man from the dead who would tell them what the ark was like. Jesus raised up Sām (according to Ṭabarī, i. 107 it was Khām), the son of Nūḥ, from a piece of earth, and he told them that the ark was 1200 ells long, 600 broad and had three stories, one for quadrupeds, one for birds and the third for human beings. When the accumulation of excre-

ment became a nuisance, Nūḥ seized the tail of an elephant and from it was produced a pair of swine which devoured the excrement; the mice became a plague, so he struck the lion on the forehead and a pair of cats came forth from its nose and destroyed the mice. — According to the Kor'an (Sūra xl. 46), the landing place of the Ark was the mountain ʾUDĪ. [Cf. this article i. 1059^b *et seq.*].

FUMANĪ. [See 'ABD AL-FATTĀH.]

FUNDUK, "hazel-nut". "The *funduk* is the fruit of a tree, round like a nut, enclosing a kernel like the pistachio-nut" (*Lisān*). Also (in the dialect of Syria and Marocco) a house at which travellers alight, by the way side or in a town; an inn or hostel, corresponding to the Persian *khān*. The derivation is probably from the Greek *πυλῶν*. (A. S. FULTON.)

FUNDUKLY or FYN DYKLY, the name of the old gold coin of Turkey, said to be derived from the pearl border, which was likened to grains of corn (*funduk*) (Ismā'il Ghālib, *Taḳwīm*, p. 274). This name only came into general use when two different gold coins began to be struck. The Turkish gold coin that had been in use till then, usually called simply *altyn* based its weight on that of the ducat. Down to the conquest of Constantinople, European ducats, usually of Venetian origin and later Hungarian and Dutch ducats, circulated almost exclusively in the Ottoman dominions. To make them pass current in Turkey they were countermarked *ṣaḥḥ* by the authorities. The oldest native gold coin dates from 883 (1478) and was struck in Constantinople. These gold coins were to be of the same value as European ducats and are therefore of about 23½ carat fine, and weigh 3.49 grammes (Hungarian ducat 3.491 grammes, Dutch, 3.494), but well preserved specimens run from 3.43 downwards. This coin bore the most different names: *Altyn*, *Zekīn* (Zecchino), *Flūrin* or *Pilūri* (Florenus), *Shāhī* (in the provinces bordering on Persia), *Ashrafī* (in Ägypten), *Sultānī* (in the Barbary States), *Tughraly*, *Zendjirli*, from the ornamentation etc.

A second gold coin was introduced alongside of the ducat in the reign of Sultān Aḥmad III. (1115—1143 = 1703—1730), of the weight of 2.6 grammes, and was called *zer-maḥbūb* [q. v.], and the old gold coin received the name *fundukly*. The latter has not been struck since the reign of Maḥmūd II.

(E. V. ZAMBAUR.)

FUNG (FUNDJ), a tribe or mixture of tribes in the Anglo-Egyptian Sūdān. The name is said to be derived from a Shilluk word denoting "stranger" and is originally applied to a negroid race related to or identical with the Shilluks on the White Nile. They became prominent at the end of the 15th century A. D. by conquering an extensive portion of the eastern Sūdān where they founded the famous kingdom of Sennār. At the time of the conquest and subsequently to it their kings and notables intermarried with Sūdān Arabs and ultimately claimed Arab descent which they or their court genealogists traced back to the Banī Umayi. It is noteworthy that of the names borne by their kings a considerable proportion are non-Arabic and non-Muslim.

The Fung dynasty of Sennār was founded by 'Amāra Dunkas (= 'Amāra, the son of Dunkas) who reigned from A. D. 1505 to 1534. In alliance with 'Abd Allāh Djamā, the chief of the 'Abdalāt tribe, he conquered the country between the White and Blue Niles and established himself at Sennār, while 'Abd Allāh founded a semi-independent dynasty at Kerri, north of Kharitūm. The Fung dynasty lasted down to 1789 in which year the throne was usurped by the Hamadj tribe who held possession until the time of the Egyptian conquest. Lists of the Fung kings are given by Shukair (see below) and the French traveller Cailliaud. The two differ in details while agreeing on the main features. During its most flourishing period in the 18th century the Fung kingdom extended from the third Cataract in the north to Fazoghli on the Blue Nile in the south, and from the Red Sea on the east to the White Nile and Kordofān in the west. Only the country between the White and Blue Niles was directly governed by the Sennār kings, while Fazoghli and the Northern Sūdān had their own tribal rulers who were tributary to the Fung.

The Fung seem to have embraced Islām at the time of their rise to power, but, even in the days of Bruce (see below), many pagan practices survived among them. The use of Arabic was general only among the upper classes.

The present Fung are a Negro people in the Sennār province. Their district, called Dār Fung, extends south of North Lat. 12, from the Abyssinian frontier to the White Nile. Their head (shaiikh) is a direct descendant of the old Fung dynasty, but the tribe is small in numbers and unimportant.

Even at their most flourishing period they seem to have made little advance in civilization, and their kings cultivated Muslim sciences only to the extent of occasionally attracting Arab scholars to their court.

Bibliography: There are several Mss. histories of the Fung Kingdom, e. g. the Br. Mus. Ms. Or. 2345; others were used by Na'ūm Shukair, but their mutual relationship has not been studied.

AL-FURĀT is the Arabic name of the Euphrates, called in Sumerian BU-RA-NU-NU, Assyr. *Pur-rātu*, Hebrew פֶּרַת, Syriac ܦܪܬܐ. On the name

and the notices by authors in antiquity cf. Weissbach's article *Euphrates* in Pauly-Wissowa, vi. 1195 *et seq.*; we need only note here that, according to modern travellers, it does not seem absolutely certain that the names Karā-Sū and Murād-Sū are applied respectively to the northern arm, the "Western Euphrates" and the southern, the "Eastern Euphrates"; Murād-Sū, like Frāt, is rather applied to both tributary streams (cf. *Geogr. Journ.*, viii. 1896, p. 333 note), and perhaps Belek's (*Beiträge zur Alten Geographie*, i. 45) supposition, that Murād is only a popular etymology for *Purāt* [cf. also the name Djebel Marad in Pseudo-Wāḳidī (see Tomaschek, *Sasūn*, p. 17), which is to be located in the district in which the "Eastern" Euphrates rises], is not to be dismissed off hand.

The Arab geographers, to whose notices this article is limited, regard the northern tributary arm as the true upper course of the river. It rises in the district of Kālīkalā [cf. ERZERÜM, ii. p. 31] in a mountain called ʔRDKHS or some such name, in which we may probably recognise the Παρπαδρής ὄρος of Ptolemy, and the *Mons Parnerdes* of the Tabula Peutingeriana. For the upper course of the river we have the very important description by Ibn Serapion, whose text has been published with translation by G. Le Strange in the *Journ. R. As. Soc.*, 1895 and more recently his statements have been discussed by Tomaschek in a valuable paper in the *Festschrift für H. Kiepert* (1898), p. 137—149.

The Euphrates receives from the west below Kamkh the waters of the Nahr Lūkīya (probably the modern Armudan-Çai), the Nahr Abrik (the Çalta-Irmak flowing from Abrik = Diwrigi) and the Nahr Andjā (the modern Angu-Çai, the lower course of the river system of 'Arabkir). Below (Ibn Serapion wrongly says above) the mouth of the last named river the Western joins the Eastern Euphrates, the Nahr Arsanās rising in Tarūn (Taraunitis), which not far from Shimshāt (Arsamosata, cf. R. Kiepert, *Formae orbis antiqui*, text to sheet 5, p. 8a) is augmented by the Nahr al-Dhi'b and the Nahr Salkit (according to Tomaschek, the rivers Peri-Sū and Süngüt). The united stream now flows past Hiṣn al-Minshār (the modern Musher-Dagh; Khalil al-Zahrī, *Zubda*, p. 52: *Mushār*), receives on the west bank the Nahr Djardjāriya (probably the Kuru-Çai) which flows from the neighbourhood of Kharshana, further the Nahr Kubākib i. e. the Tokhma-Sū. The latter, into

which flow the Nahr Kūrāḳis = Sulṭān-Šū and the Nahr al-Zarnūḳ, which irrigates by a branch Malatya, is crossed by the celebrated Kaṇṭarat Kūbāḳib, the modern Kırkgözköprü (see Yorke in the *Geogr. Journ.*, viii. 1896, p. 328 *et seq.*; Lehmann-Haupt, *Armenien*, i. 486). On the east bank the Euphrates receives the Nahr Henzīt (Boyük-Çai) which still preserves the name of the capital of the old district of Anzizene and then enters the cataract district, which it does not leave till it reaches Gerger (see von Moltke, *Briefe über Zustände in der Türkei*⁶, p. 305—310; E. Huntington in *Zeitschr. für Ethnol.*, 1901, p. 183—204).

Leaving the mountainous country the Euphrates divides the flat tableland into two, and forms the boundary between Syria and al-Djazīra below Sumaisāt. At first the river continues as before to receive important tributaries from the west only. Of these the most important is the Nahr Sandja or Nahr al-Azrak crossed by the famous Kaṇṭarat Sandja, which, like the Singas of the ancients (cf. R. Kiepert, *Formae Orbis Antiqui*, text to sheet 5, p. 1^b), is certainly to be identified with the Gök-Sū and not with the Bölam-Sū, on account of the Roman bridge that still survives in the latter (see Humann and Puchstein, *Reisen*, p. 393 *et seq.*). Below the rocky citadel of Kaḷ'at al-Rūm and the crossing of al-Bīra, of particular importance since the Crusading period [cf. BİREDJİK, i. 723^b *et seq.*], there is still the Nahr Sādjūr to be mentioned. In the early middle ages Djīs Manbidj, the later Kaḷ'at al-Naḍim, and al-Rakka were the main places where the Euphrates could be crossed. Below the last named place the al-Balikh, rising in the neighbourhood of Harrān, joins the mainstream at al-Rakka al-Sawdā², the modern ruins of al-Samrā² (see Sarre and Herzfeld, *Archäol. Reise im Euphrat- und Tigris-Gebiet*, i. 160). It is true that the modern very important crossing at Dēr al-Zōr [q. v., i. 936^b] seems to have had a predecessor in an ancient Bīrtha [see above i. 724^a *infra seq.*] and is probably mentioned by Yāḳūt, ii. 662 as Dair Rummān, but it has only become of any considerable importance in modern times. The place of Dēr al-Zōr at the present day was held in ancient times by Circesium, the Karkisiyā of the Arabs at the mouth of the Khābūr, which flowing from Ra's al-ʿAin, according to the repeated statements of the Arab authors, formed with its tributary the Hirmās from Tūr ʿAbdūn, a navigable connection between the Euphrates and the Tigris in the Nahr al-Tharthār, but, according to the recent investigations of Sarre and Herzfeld, *op. cit.*, i. 193, this must be regarded as more than doubtful. The place of the ancient Circesium, the modern Dēr al-Zōr, was filled, particularly in the later middle ages, by the double village of Raḥba, or the Dāliya of Malik b. Ṭawḳ, a little south of the former, the lands of which were watered by the Nahr Saʿīd canal, which began before Karkisiyā, and was called after Saʿīd b. ʿAbd al-Malik b. Marwān (see Peters, *Nippur*, i. 127 and 129 *et seq.*; A. Musil, *In Nordwestarabien und Südmesopotamien*, p. 10 of the reprint from the *Anzeiger der phil.-hist. Kl. der Wiener Akad.*, 1913, I).

While modern geographers make Southern Mesopotamia begin at ʿAna [q. v., i. 344^b *et seq.*], already celebrated in the middle ages for its palms, where the cultivation of the datepalm in the Euphrates valley begins, the writers of the middle ages as a rule place the boundary between al-Djazīra and al-

Irāk much farther south on the Euphrates. The Čeri Saʿde, which was led out of the Euphrates downwards from Hit, the course of which can be traced almost as far as Nedjef (see Peters, *Nippur*, i. 166 and 313; ii. 327; Meissner, *Von Babylon nach den Ruinen von Hira und Hvarnuq*, p. 15), has unfortunately not yet been sufficiently explored for its real importance and relation to Khandaḳ Sābūr (see Noldeke, *Sasaniden*, p. 57; G. Le Strange, *Eastern Caliphate*, p. 65) and to the Wādi ʿAin al-Tamr (see Musil, *op. cit.*, p. 11), which, according to Ibn Serapion, flowed into the Euphrates at Hit. According to Ibn Serapion a canal, called Nahr Dudjail, flowed from the Euphrates at al-Rabb (7 farsakh from al-Anbār, 12 from Hit; possibly the Umm al-Ruʿūs in Peters, *Nippur*, ii. 45) to the Tigris near ʿUkbarā (see Streck, *Die alte Landschaft Babylonien*, p. 24), but it seems soon to have been silted up, as the later geographers give this name only to a Tigris-canal perhaps originally connected with the ancient Dudjail (see Streck, *op. cit.*, p. 33 and 220 *et seq.*).

Only a little farther down, at al-Anbār [q. v., i. 348], begins the great network of the Babylonian canal system which dates back into remote antiquity, although only the remains survive today. The usual identification of the four main canals, Nahr ʿIsā, Nahr Šaršar, Nahr al-Malik and Nahr Kūthā, led from the Euphrates, is given in the article DİJLA, i. 969 *et seq.* (for details see Streck, *op. cit.*, p. 25 *et seq.*), but in the present state of our knowledge of the country it can only be regarded as highly hypothetical. Shortly after they branch off, the Euphrates divides into two arms. The western arm, according to the Arabs, the river proper, which flows past Kūfa and is finally lost in the Baṭiḥa [q. v., i. 675 *et seq.*] west of Wāsiṭ, is also called al-ʿAlkamī, which Musil (*op. cit.*, p. 13) has found E. N. E. of Kerbelā as the name of an ancient canal, perhaps forming the northern continuation of the modern Hindiye arm. The eastern arm of the Euphrates, which even in Ibn Serapion's time held a greater stream of water, for the first part of it corresponded to the bed of the modern Euphrates proper, until since about 1889 the river began to pour the greater part of its waters into the Hindiye arm (see Peters, *Nippur*, ii. 335; Sachau, *Am Euphrat und Tigris*, p. 38 and 57), again divides near Bābil. Its eastern arm, which flows to the Tigris under the name Nahr Sūrā al-Aʿlā, Sarāt al-Kabira, Nahr al-Nil, or Nahr Sābūs via the town of al-Nil, the modern Niliye, has been thoroughly explored by Sarre and Herzfeld (*Arch. Reise*, i. 234—247) except for its eastern extremity. How far the western branch, the Nahr Sūrā al-Asfal, corresponds to the modern course of the Euphrates or the canals Shaṭṭ al-Nil, Shaṭṭ al-Kār which flow to the southeast, cannot yet be exactly determined. This arm likewise ends in the great swampy area of the Baṭiḥa, the outflow from which, Nahr Abi ʿI-Asad, which runs into the Dīdjal al-ʿAwra², may in a way be described as the lower course of the Euphrates.

This is in its main outlines the picture drawn by the Arab geographers, particularly Ibn Serapion. That the details, which they give us, are not always intelligible, is not remarkable considering the deficiencies in our knowledge of the country; that contradictions seem to be found in them, need not cause surprise, when we consider how much the river has changed its course, of which the

shifting to the south in quite recent times of its confluence with the Tigris is a striking example (see *Geogr. Journ.*, xxxv. 11 with map). The Arabs themselves knew of considerable changes in the course of the Euphrates; for example, Mas'ūdī (*Murūdī*, i. 216), says, that in the period of Hīra's prosperity sea-going ships came up as far as Nedjef in the old riverbed (*al-Atīf*). A detailed account has already been given [i. 675 *et seq.*] of the Arabs' knowledge of the history of the Batiha. It is perhaps evidence of the gradual alteration in this area of swamps that, according to certain authors (see *Bibl. Geogr. Ar.*, iii. 20, note 1; cf. also Yāqūt, iii. 860 *et seq.*), an arm of the Euphrates — it can probably only be the Nahr Sūrā al-Asfal — entered the Tigris at Wāsīt. Not only is the history of the Euphrates in antiquity and the middle ages still very obscure, but we have only very meagre information regarding the changes in its course in recent times. For what is known on this subject we can only here refer the reader to the general textbooks on geography and the encyclopaedias as well as for the economic importance of the river.

Bibliography: The Arab geographers and the more important western works are given under DJALLA; we may here mention as a cartographical aid R. Kiepert's excellent *Karte von Kleinasien* (1:400,000). Important monographs are mentioned in the text. For further details cf. the separate articles. (R. HARTMANN.)

FURKĀN (A.), Discrimination, revelation, salvation. The word is found in Arabic literature as an original Arabic word and also as one borrowed from the Aramaic. The meaning of the word in various passages in the Korān cannot always be exactly determined; Muḥammad made a wide use of it; he was fond of words with a long vowel in the last syllable on account of their solemn sound.

1. The Arabic word means separation, distinction, proof. Probably, however, this meaning is not found in the Korān, although the commentators constantly expound it as having the theological shade of meaning of "discrimination between true and false". It is not impossible that Muḥammad came by this means to use it in the meaning of

2. Revelation, as this meaning of the word is not found in Aramaic. Thus it is applied in the Korān to pre-Muhammadan revelations, e.g. Sūra xvi. 49, iii. 2. where, according to Zamakhsharī, it is a name for the whole class of heavenly books. But it is used of the Korān in Sūra xxv. 1, where it is said: "Blessed is he that hath sent down the *furkān* to his servant, that he might be a warner to the creatures"; and among later writers it has become a synonym for Korān.

3. In the meaning "salvation" the word is certainly an Aramaic loanword. Thus in Sūra viii. 42 ".... and what we have revealed to our servant on the day of the *Furkān*, on the day when the two hosts met". Here the battle of Badr is called the "day of the *Furkān*". Some of the commentators on this passage give the meaning *al-naṣr* "victory". But this is the Aramaic *furkānā*, synonymous with the Hebrew *yēsha'* "salvation".

FURŪ. [See the art. FĪḤ, ii. 104^b.]

FURŪD. [See FARD and FIRDE, ii. 61^b and 111^a.]

FURŪGH (ABU 'L-KĀSIM KHĀN), a Persian poet, born in Kāshān, descendant of Fath 'Alī Khān, the prince of poets, lived for long in Khōrāsān, then settled in Teherān, where he lived a retired life only associating with mystics. He lived in the sixteenth century; we do not know the dates of his birth or death. Among his poems he wrote verses on the death of Muḥammad Shāh and the accession of Naṣir al-Dīn.

Bibliography: Riḍā Kulī Khān, *Madjma' al-Fuṣṣṭāḥ*, Vol. ii. p. 370—382.

(CL. HUART.)

FURŪGH AL-DĪN (MUHAMMAD MAHDĪ), a Persian poet, born in Tabriz in 1223 (1808); an ardent student from the age of seven, he entered the service of various individuals of high rank, among them Feridūn Mirzā, a prince of the royal family, who had written poems under the name Farrukh (a name of the hero Feridūn in Firdawsī's *Shāhnāmah*), from whom he took the name Furūgh-i Farrukhi. In Teherān he held a high position in the offices of the chancellery. He collected his Arabic and Persian poems in his *Tadhkirat al-Shabāh* ("Memoirs of Youth"), which forms a kind of autobiography.

Bibliography: Riḍā Kulī Khān, *Madjma' al-Fuṣṣṭāḥ*, Vol. ii. p. 396—400.

(CL. HUART.)

FURŪGHĪ, 1. Surname of the Persian poet Muḥammad of Isfahān, who had studied the *Almagesta* of Ptolemy and became poet laureate to Timūr Shāh Durrānī after spending his youth in travel.

2. The surname of a janissary of Awlona in the time of Sulṭān Sulaimān, skilled in music and the composition of riddles.

3. The surname of Mirzā Muḥammad Husain Isfahānī Zakā' al-Mulk, a Persian poet and editor of the *Tarbiya*, who died in 1908.

Bibliography: Riḍā Kulī Khān, *Madjma' al-Fuṣṣṭāḥ*, Vol. ii. p. 382; Hammer, *Geschichte des osman. Dichtkunst*, ii. 491; Browne, *The Persian Revolution*, p. 404. (CL. HUART.)

FUSTĀT. [See CAIRO, i. 816^a *et seq.*]

FUTĀ DJALLON, a district in West Africa, in the N.W. of French Guinea, to which it is politically attached. It consists of a mountainous area, the most important in West Africa with an average height of 3000, 3500 feet. These highlands border in the E. on the mountains of the Mandingo territory; in the S. they slope in a series of shelving spurs to the level of the Atlantic Ocean, while in the N. they gradually slope down to Bondu. The geographical and orographical conditions of the land are only slightly known at present. The most recent journeys of exploration have merely established, that the south and west borders are formed of sandstone plateaus, while the older kinds of stone, granite and gneiss, occupy the centre. The structure of the mountains is rather irregular; the general picture is of a plateau from which rise peaks 600 to 1000 feet high, bordered by a sandstone range deeply cut by erosion.

The average elevation of Futā assures the land a more moderate and healthy climate than the coast lands. The temperature is lower than on the coast and the thermometer shows considerable variations at all seasons of the year. During the dry season (December to June) differences of 25, 30 and 32° C. may be noticed in the course of a single day; during the winter or rainy season (May to November) the nights are always fresh. Nor does rain ever entirely stop during the dry season, but falls very heavily in winter, and reaches its maximum in spring when the south winds laden with moisture from the Atlantic Ocean set in. Although Futā Djallon has a smaller rainfall than the coast, it has a better supply than the neighbouring lands on the Upper Senegal and the Upper Niger.

Futā Djallon is one of the most important hydrographic centres of Africa. We may distinguish two great watersheds, one in the S. in the district of Timbo, where the Baleio (Bafing), the Tenc, the Kinkisso, a tributary of the Niger, and the Konkure, which flows into the Atlantic Ocean, rise, and another in the N., in the neighbourhood of Labe, from which flow the Gambia, the Salla (Kakrima) and the Komba (Rio Grande). To get beyond the boundaries of Futā the rivers with a S. or S.W. course have to cross the mountain wall, which they do in numerous falls, rapids and deep ravines, usually running from N.E. to S.W. Although the slope of the country is much more gradual to the N., the valleys here are quite as narrow and often overhung by steep cliffs.

Futā has long been regarded as a country with a rich and luxurious vegetation, but it does not seem to deserve this reputation, at least not everywhere. The most frequent feature in the structure of the country is the "bowal", a rocky plateau covered with feriferous boulders, sometimes overgrown with thin scrub, but sometimes so bare and stony that some travellers compare it with the hammādas of the Sahara. During the rainy season the ground is covered with a kind of grassy vegetation which varies in thickness with the nature of the country and lasts for longer or shorter periods. Trees are lacking except in the immediate neighbourhood of the water-courses; nevertheless, the valleys are very well wooded; on the slopes and in the cavities which collect the necessary soil, little wooded islands (*dantares*) are formed which, where they are found in large numbers, seem to form an extensive continuous forest. The villages are surrounded by orchards of orange, melon, kola and mango trees. The *karite* or butter tree and various kinds of bamboo are widely diffused, but the palms are small and few in number. Finally in some granite districts we find meadows, cultivated fields and plantations beside one another which give the country a certain similarity to parts of Switzerland and the Auvergne. But this is the exception.

The fauna is not so rich as in the Sūdān; it is represented by antelopes, gazelles and especially monkeys, the latter being so numerous that the inhabitants have to institute "drives" to protect their crops from being ruined by them. The scarcity of large carnivora has favoured the development of cattle-rearing so that at the present day there are three kinds of sheep and four of cattle in Futā, of which one, the buffalo, used as a beast of burden, was introduced into the country by the pastoral Fulbe.

The number of inhabitants is unknown; it is tentatively estimated at 600,000–700,000. The principal settlements are Timbo, the residence of the *Almany* (9000 inhabitants?), Labe (5000?), Medina, Kade and Fugumba (10,000), the holy city, where the rulers are consecrated. The population is composed of various elements, among which the Mande predominate. We find representatives of the different branches of this race here, Diallonke, Susu, Soninke and half breeds like the *Khassonke* and notably the Fula, who are the result of a mixture of the Mande and Fulbe and during the last 150 years have become supreme over the other groups. There are also Peuhl or Fulbe, but they are less numerous in Futā proper than in the neighbouring territories and follow the pastoral life of their forefathers, although there is a marked tendency among them to exchange a nomadic for a settled life.

The social divisions of the people correspond to some extent to this diversity of origin. The highest class consists of an ecclesiastical and military aristocracy, the former composed of marabouts, the latter of prominent Fula, the descendants of Muslim immigrants or native chiefs who have become converts to Islām. These nobles who have special titles (*alpha*, *sheikh* etc.) are grouped in families like the Roman "*gentes*" and take an active part in the political life of the country; they have seats in the assemblies and supply the *Almamys* with their civil and military officers. Next to them are the negroes and the Muslim Fulbe; they attend the assemblies as vassals of the nobles but as a rule take no part in their deliberations; they live in villages which are called *gor*. A third class comprises the non-Muslim freemen. These are usually artisans (weavers, carpenters, shoemakers) and live in separate groups in the *gor* or near them. They are endogamous and are excluded from any share in political life. Lastly slaves are very numerous, because the conquerors of the Sūdān, e.g. al-Ḥāḍijj 'Omar and Samory used to exchange their prisoners for the cattle of Futā. These slaves fall into two classes: domestics, whose position is fairly comfortable and who enjoy a relative independence, and agricultural labourers, whose lot is a much harder one. The latter are settled in special villages (*runde*), are supervised by overseers and severely punished if they attempt to escape. Since the establishment of the French protectorate, however, slavery is no longer legal.

As to religion the population of Futā is divided into Muslims and fetish worshippers. A few negro tribes have remained idolaters, for example, a section of the Fulbe which has retained its original beliefs. The predominant religion, however, is Islām which the Fulbe brought into the land and whose progress coincided with the political victory of this race. The Islām of Futā Djallon is fairly orthodox and less penetrated by heathen customs than among the Mande. Hecquard describes it as *Māliki*; according to Lechâtelier, it is a "kind of national church formed from the mixture of *Kādiriya* and *Tidjāniya* doctrines". Although Futā was and still is a centre of proselytising activity, the inhabitants are not at all fanatical. This lukewarmness is attributed to the predominance of the *Kādiriya*s whom the *Tidjāniya*, the representatives of Muslim intolerance in the Sūdān, have not been able to supplant in spite of all their efforts. The marabouts hold a very im-

portant social position. They form a kind of hierarchy; at the top are the *fodie* who have often studied among the Moors of Tagant, next come the *tamsir* or heads of mosques, then the *serim* and the *tabc* who have charge of the schools.

The government is a kind of "aristocratic republic" with an elected sovereign. The executive power is in the hands of an *almamy* (*al-imām*) who is at once head of the army, judge and high priest. Before the establishment of the protectorate the almamy was chosen by the Council of Elders, acclaimed by the assembly of freemen, and received the turban of investiture in the town of Fugumba. He was chosen from among the descendants of the two founders of the Futā state, the Alfayas (descendants of Karomoko Alfa) and the Soryas (descendants of Ibrahim Sory). In principle the elected sovereign ruled for two years, after which he retired for two years in favour of a representative of the rival family. Devised to prevent rivalry and civil war, this rule of alternation was not always regularly observed. The Council of the Elders which chose the sovereign, could also on occasion depose him; in normal times it decided, under the presidency of the almamy, all questions of any importance of politics, law and religion.

Futā was divided into provinces or *diwal* (9 in the xviiith century, 13 in 1881, 11 in 1887), to which tributary regions were attached, whose number varied with the success or failure of Fula arms. Each *diwal* was administered by a governor (*lambo*), appointed by the almamy and assisted by a council of notables. The villages obeyed the authority of chiefs who likewise were assisted by a council. In this organisation, which some European travellers have compared to that of the Carolingian Empire, the central power was very weak. Some governors, those of Labé for example, were masters of territory more extensive than that of the sovereign and had at their disposal resources greater than his. Ruined by the largesse necessary to secure his election, impoverished by the necessity of keeping open table for his adherents, the almamy was very often incapable of making his authority respected.

The history of Futā Djallon down to the xviiith century is obscure. About this time we find the Djallonke in the land, who had driven out the original inhabitants, besides them a body of Fulbe attracted by the extensive pastures, and finally the Fula already in such numbers that their name was applied by Europeans to this part of Africa (the name "Fouta Guialon, land of the Fula", is found in a map by d'Anville of the year 1717). Among the Fula were many Muhammadans, who undertook the conversion of the fetish-worshipping tribes to Islam under the leadership of marabouts. They overcame and formed small communities of them, whose chiefs recognised the authority of the Djallonke. In the second half of the xviiith century the Fula succeeded in liberating themselves and founding an independent state. This transformation was the work of two men, the marabout Ibrahim Sambego, who claimed to be of Arab and Sherifi origin, and his cousin Sory celebrated for his energy and bravery. A holy war was proclaimed against the infidels and the lands to be conquered promised as spoil to all the chiefs who took part. The Fulbe adopted Islam *en masse*, but the Djallonke resisted and were conquered. Their lives were

respected, but a third of their lands and cattle divided among the conquerors. An assembly at Timbo then chose Ibrahim as almamy, and he took the name Karomoko Alfa. The new sovereign received the turban of investiture at Fugumba from the hands of Alfa Othmān Serianke, governor of the town; he made the Fula chiefs swear fealty to him and gave Sory command of the army. The conquered country was divided into provinces or *diwal* to the number of 9 in memory of the companions of the Prophet.

Karomoko became insane in 1791 and was replaced by Sory as almamy. But the victories and riches of the new ruler aroused the fears and jealousies of the chiefs, who deposed him and appointed in his stead Alfa Salifu, son of Karomoko (1801). This youth of fifteen proved incapable of securing order in the interior and could not prevent the invasion of Futā by the Wassulonke. Sory had to be recalled; he drove out the enemy and ruled the country without opposition till his death (1814). Power passed to his son Sadu but Alfa Salifu protested and was supported by a party of nobles. Two rival *soffs* were thus formed, the Alfayas and the Soryas, whose rivalry steeped Futā in blood for fifteen years. An agreement was finally reached between Abdulaye Bademba, chief of the Alfayas and Abdu 'l-Gaderi (*'Abd al-Kādir*), chief of the Soryas, it was decided that each of the two chiefs should govern alternately for periods of two years each. This arrangement was violated almost as soon as it was concluded. Abdulgaderi had his colleague assassinated and remained sole master of Futā for 15 years.

On his death (1847) disorder again broke out. The Soryas and Alfayas each chose an almamy and flew to arms. Al-Hājjī Omar attempted without great success to bring about a truce between the two parties and it was only after 1856 that peace was finally established in the country. For 26 years, Alfayas and Soryas lived on good terms and furnished almamys by turns. This was the most brilliant epoch in the history of Futā. The almamys succeeded in restraining the turbulent spirits of the nobles and subjected the lands adjoining Futā to their authority. The people of Dinguiray, the fetishworshippers of the upper Casamance, the Gambia and the Rio Nuñez had to become tributary to Futā.

Europeans had for long been trying to enter into relations with Futā. During the first half of the xixth century French and English travellers setting out from the "factories" of Gambia and Sierra Leone penetrated into the interior. Such were the Frenchmen Mollien (1819) and René Caillié (1827), and the Englishman Cooper Thomson as well as various missionaries. In 1850 Hecquard spent a year there and collected valuable information on the history and civilisation of the country. Lambert explored it in 1859. From 1880 on French missions began to increase in number. Olivier de Sanderval, Gaboriaud and Ansaldi endeavoured to find accessible routes to Futā, entered into commercial relations with the natives and made preliminary surveys for the building of a railway into the interior. In 1881 Doctor Bayol signed a treaty with the almamy giving the French the exclusive right of establishing commercial depots in Futā and its dependencies.

The disorders that again broke out about this time facilitated the task of the French agents.

The almamy Ibrahim Sory, having to give up his powers after his two years of office, was abandoned by every one, but, arming his slaves, he overcame his adversaries and reigned alone till 1887. On his death two Sorya rivals, Alfa Mamadu Paté and Bokar Biro disputed the title of almamy. Bokar won and, feeling the need of support against his enemies, fell back on the French. He therefore gave a good reception to the mission under Plat and Fras and concluded with them a treaty which placed Futā Djallon under the protection of France. For several years he remained faithful to his agreement, but then adopted a hostile attitude and tried to impede the passage of caravans through his country. Wishing to get rid of the Council of Elders, he aroused the discontent of the nobles, who deposed him and proclaimed his brother Abdulaye in his stead. Bokar triumphed over the rebels, took Abdulaye prisoner and put him to death; but some of the partisans of this claimant appealed to the French who, having already cause to complain of Bokar's misdeeds, invaded Futā. Bokar tried without success to offer resistance; he was conquered and slain (November 1896). The French chose a new almamy, the provinces of Timbo, Buria and Kalen were left to him while the other "diwal" were declared independent. A French resident was installed in Timbo. Since then the geographical and economic survey of the country has been pursued by several expeditions of which the most important have been those of Dr. Maclaud (1898-1899), while a railway, which has now reached Timbo, was begun to connect the Upper Niger and French Guinea through Futā.

FUTŪWA (A.). In ordinary usage this word means all the honourable qualities that distinguish a noble youth (*fatā*), particularly generosity (*karam*, *sakhū*).

The members of the family of the Prophet regarded themselves as the true representatives of *futūwa*, which they inherited from their ancestor and in course of time received the meaning of chivalry, knightly rank; they based this claim on an alleged saying of the Prophet's "*lā fatā illā 'Alī (wa lā saif illā Dhū 'l-Faḳār)*"; cf. *Chronique de Tabari*, trad. Zotenberg, iii. 27: according to another tradition it was called from heaven by an angel on the day of Badr, Muḥibb al-Dīn al-Tabari, *al-Riyād al-naḍira* [Cairo 1327], ii. 190 *infra*. — On the use of this saying cf. Reinaud, *Monumens*, ii. 153, 307; *Tijdschrift voor Nederlandsch Indie*, 1873, ii. 333 *et seq.* It is related of the Caliph al-Nāṣir li-dīnillāh (575—662 = 1180—1225), who according to the *Kit. al-Fakhri* was an Imāmī, that he granted several princes and nobles the rank of *futūwa*, with which he associated the privilege of *ramy al-bunduḳ*. Installation consisted in the ceremonial putting on of a pair of trousers, called *sarāwīl al-futūwa* or *libās al-futūwa*, and drinking the knight's cup (*ka's al-futūwa*). The knight, whose rank was hereditary, had the right to depict the cup or trousers or both on his arms. — According to the *Kitāb 'Umdat al-Tālib*, the 'Alid family of the Āl Mu'āyia had from the time of al-Nāṣir the right to grant *futūwa*. The Naḳīb Tādj al-Dīn Muḥammad, who belonged to this family, also granted the *khirḳat al-taḳawunf*.

Ibn Dībair (2nd ed., p. 280, where on l. 11 the reading جزمونه of the Ms. is to be retained)

mentions a brotherhood in Syria who proved their *futūwa* by ruthlessly attacking the Rāfiḍis; an oath sworn by them at the *futūwa* was kept in all circumstances.

In Asia Minor Ibn Baṭṭūta found brotherhoods whose members (*fityān*) had for the most part the same trade and lived together in a monastery (*zāwiya*) under a superior called *akhī* on the earnings of the work which they did outside. After dining together they spent the evening in song and dance. Their dress consisted of a cloak (*ḳabā*), a white woollen cap (*ḳalansuwa*), to the upper of which was fastened a strip of cloth an ell long, and shoes (*akhfāf*); in the girdle they wore a knife two ells long. They were hospitable to strangers and were ruthless in their opposition to tyrannical governors and their followers (ed. Paris, ii. 260 *et seq.*). — In Ḳōniya the same traveller stayed in the *zāwiya* of the ḳāḍī Ibn Ḳalam Shāh, whose inmates (*fityān*) wore *sarāwīl* and traced their *futūwa* rule to 'Alī. They were distinguished for their hospitality (ed. Paris, ii. 281 *et seq.*). — During his travels Ibn Baṭṭūta frequently found hospitality in such *fityān* monasteries [cf. *ibid.*, 270—368 *passim*].

In the language of the Ṣūfis *futūwa* is the expression for a disposition which is manifested in dif-

ferent ways and therefore cannot be expressed by a single word. In general *futūwa* is described as "placing others above himself" *ihlū' alā nafsihī*, which, according to al-Ghazālī, *Ihyā'* iii. 213 (Cairo 1282), is the highest stage of *sakhā'*. This finds expression in liberality, unselfishness, self-denial, self-effacement, superiority to disappointment, indulgence to the faults of others etc. Al-Kūshairī gives some idea of the scope of the notion in a series of illustrations and anecdotes.

For further information on *futūwa* and its relation to the guild-system the reader may be referred to H. Thorning's work in the xviith volume of the *Türkische Bibliothek*.

FUZŪLĪ, MUHAMMAD B. SULAIMĀN, a Turkish poet of Kurdish origin, born in Baghdad (date unknown), died 963 (1556) or 970 (1562). After the capture of Baghdad by Ibrāhīm Pasha, Sultān Sulaimān's grand vizier (941 = 1534), he offered the vizier and the Sultān his congratulations, whereupon the latter granted him an annual

allowance at the expense of the town. His *Dīwān* is written in *Adharbaidjāni* Turki; the style is original and lacks the artificiality which characterises Turkish literature of the period in imitation of Persian, although in passages the influence of Persian rhetoric cannot be mistaken; the expression is passionate. Among his contemporaries he found little favour; it is only modern Turks that have begun to appreciate his merits. He also wrote a Persian *Dīwān* (lith. Tabriz). His Turkish *Dīwān* was printed in Bülāk (1254 = 1838), and his *Laila u Majnūn* in Constantinople (1264 = 1848): a collected edition of his works also appeared in the latter town in 1291 = 1874. He also composed a *Sākināmāh* in Persian and a *Beng u bāde* (Hemp and Wine) in Turkish, which is dedicated to Ismā'il Shāh and must therefore have been composed between 907 (1501) and 930 (1524). Under the title *Ḥadiqat al-Su'ādā'* ("Garden of the Blessed") he translated from the Persian Ḥusain b. 'Alī al-Wā'iz al-Kāshifī's legendary description of the martyrdom of 'Alī and his family (*Rawḍat al-Shuhadā'*, "Garden of Martyrs"). We also possess from his pen a Turkish work in prose entitled *Shi-kāyet-nāme*, which contains a complaint addressed to the Porte on the holding back of his year's allowance by the civic authorities. A well at Kerbelā bears a metrical inscription composed by him.

G.

GABAN, properly GABNOPERT (cf. Abu 'l-Faradj, *Chron. Syr.*, ed. Bruns, p. 329 and *Κατωλερπετι φρουριον*, Cinnamus, i. 8), an Armenian mountain stronghold on the Tekir-Su, a tributary of the Djaiḥān, now called Geben and belonging to the kazā of Anderin in the sandjak of Marāsh. Here the kings of Armenia kept their treasures and retired hither in case of need; the last king Leon VI. of Lusignan entrenched himself here in 1374, for example, but had to surrender after a siege of nine months to the Mamlūk Sultān al-Malik al-Ashraf Shāḥbān.

GABES (KĀNIS), a town in Southern Tunisia, in 33° 52' 58" N. Lat., 10° 4' 6" E. Long. (Greenw.), 80 miles south of Sfax and 250 south of Tunis, on the west coast of the Gulf of Gabes or Lesser Syrtis, on the side of a rocky isthmus, which separates the sea from Shott al-Fedjedj. It is the capital of the district of Arad.

Gabes includes three settlements; the town of Gabes, a European suburb with 1200 inhabitants of whom 500 are French, and the native villages of Djara (4000 inh.), Chenini (1000) and Menzel (3500). The European town lies on the right bank of the Wādī Gabes about half a mile from the sea. The mouth of the river has been made into a harbour which ships of small draught can enter. Larger ships have to anchor in the open sea in an insecure roadstead, full of shallows where the

tide rises 9 feet. The traffic in the harbour is not very considerable as the total exports and imports scarcely exceed 25,000 tons. The native settlements lie in groups up the river along the Wādī Gabes. This stream, which rises about 8 miles from the sea, sustains the vegetation of a beautiful oasis the verdure of which forms a striking contrast to the barrenness of the surrounding country. The gardens which contain 130,000 palms and about 200,000 other trees, cover an area of 7000 acres of which 3000 are watered by the Wādī itself. This area is about 4 miles long by ½ to 1 broad. The distribution of the water is regulated by mechanical means, some ancient and some modern. The palms are of very fine quality but the dates are only mediocre. Fruit-trees on the other hand grow in a marvellous fashion, whence the oasis of Gabes has always been the admiration of visitors. "It has been said with reason", writes the Shāikh al-Tidjānī in the xivth centry, "that Gabes is an earthly paradise and a little Damascus". The oasis, it is true, is extremely unhealthy and the dwellinghouses have had to be built outside the gardens in which only a few negroes live regularly. Beyond the palm-groves lie areas which are at present practically desert but might be fertilised by irrigation works. Gabes deserves the description "a town which is both maritime and Saharan" given it by al-Tidjānī, from its geographical situation and appearance.

In ancient times the town of Tacape stood on the site of Gabes. Founded by the Phoenicians this town was one of the most flourishing *emporia*

of the "Syrtēs". It passed to the Carthaginians, then to the Romans and under the empire was raised to the status of a colony. Nothing else is known of the town however; some of its ruins were still standing in Shaw's time (*Travels*, Ch. iv.), and were used in the building of Gabes. We are equally ignorant of the circumstances under which Gabes fell into the power of the Arabs. After the triumph of the Fātimids the town was placed under the governorship of the Ketāmi Loḡmān, whose descendants still exercised their authority in al-Bakrī's time. Under the rule of the Fātimids and Zirids Gabes seems to have enjoyed great prosperity. Ibn Ḥawḳal extols the fertility of the oasis, the excellence of the silk and wool manufactured in it, the activity of its trade and the number of the merchants who frequented the port. A century later al-Bakrī adds a few details to this picture, the main outlines of which are unchanged. "The town", he says, "surrounded by a wall of large stone's from ancient débris, possesses a magnificent mosque, and numerous bazaars and caravanserais". The gardens included, besides innumerable fruit-trees, mulberries and also plantations of sugar-cane which is no longer found there. The population was composed of Arabs and Afāriḳ, i. e. the descendants of Latinised Berbers. The environs of the town were occupied by sections of the great Berber tribes of Lwāta, Lemāya, Nefūsa, Zughā etc. These natives, who were rude and uncultured, had most probably retained Abādī doctrines. Ibn Ḥawḳal indeed describes them as "people, inclined to evil and professing a religion which is corrupted by an admixture of heresy".

The Hilālī invasion introduced new Arab elements to Gabes and its neighbourhood. According to Ibn Khaldūn (*Berbères*, transl. de Slane, i. 33, 34 and ii. 21) the Caliph al-Mustansir granted the district of Gabes to the tribe of Zoghba when he sent the Hilālīs against the Zirid Sultān. Whatever be the truth of this statement, it is a fact that the Zoghba, after inflicting a severe defeat with the help of the Riyāh, 'Adī and Djušem on the Zirid al-Mu'izz on the plateau of Haiderān, settled in Gabes. One of their chiefs, Ibn Djamī, organised a little state there, which remained independent down to the middle of the xiith century A. D. After the capture of Mahdiya by the Sicilian fleet Gabes recognised the authority of the king of Sicily for several years (1148—1159 A. D.) until in 553 (1159-1160) it was taken by 'Abd al-Mu'min, who exiled the last representative of the Beni Djamī to Morocco.

The Almohads, however, had great difficulty in enforcing their sovereignty on the people of Gabes. From the end of the xiith century they constantly tried to throw off the yoke and took an active part in the struggle of the Banū Ghāniya against 'Abd al-Mu'min's successors. 'Alī b. Ghāniya and his ally Karaḳūsh became masters of the town (581 = 1185 A. D.). The defeat of this adventurer and the Almoravid pretender at al-Hamma enabled the Almohad Caliph al-Manṣūr to regain possession of Gabes (584 = 1187 A. D.), but Karaḳūsh was not long in re-entering it again. He was again driven out in 591 (1195); but Yahyā b. Ghāniya installed himself there in his turn and it was only in 601 (1204-1205) that the Almohad al-Nāṣir definitely recovered the town. The allegiance of the people of Gabes nevertheless remained very uncertain: throughout the xiiith and xivth centuries they

showed themselves as independent of the Ḥafṣids, as they had been of the Almohads. From 1282—1344 the Beni Mekki who ruled at Gabes freed themselves of their allegiance to the sovereign of Tunis. Ḥafṣid authority had hardly been re-established when the Marinid expeditions into Ifriḳiya gave the people of Gabes an opportunity to rebel once more. Revolts again broke out in 1379 and 1387, stirred up by a certain 'Abd al-Wahhāb, a descendant of the Beni Mekki. To put an end to this state of affairs Abu 'l-Abbās had to lay waste the oasis and cut down the palm-trees, but a century later in 1469 a rebellion once more gave evidence of the turbulent spirit of the inhabitants.

The constant turmoils seriously affected the prosperity of Gabes without however destroying it. The Hilālī invasion does not seem, however, to have produced in Gabes the disastrous results that it did in the rest of Tunisia. Idrisi is still able to describe Gabes as a considerable town with a large quantity of merchandise in its bazaars. He notes, however, the disappearance of the silk industry; but trade by sea was still active and remained so throughout the middle ages. It attracted to Gabes merchants from all parts of the Muslim world and even Christians such as the Pisans were allowed to trade there. The tomb of one of the companions of the Prophet, Abu 'l-Bābā al-Anṣārī, was also a much frequented place of pilgrimage. Nevertheless, from the beginning of the xivth century A. D. manifest signs of decline may be noted in Sheikh al-Tidjānī's account. A number of buildings had fallen into ruins, for example the palace al-'Arūsain, built in the Ḳaṣba by Rashīd b. Djamī, and the al-Menāra tower mentioned by al-Bakrī. In the xvith century it was still worse. "This city", writes Leo Africanus, "has much diminished in honesty and good manners since it was sacked by the Arabs.... The inhabitants are negroes, poor labourers and fishermen who are much oppressed by the kings of Tunis and of the Arabs".

The lot of Gabes hardly changed under Turkish rule, although the harbour continued to export the products of the Sūdān which were brought thither in caravans.

Gabes was occupied by the French in 1881. After the conclusion of the treaty of Ḳaṣr Sa'īd, great unrest was manifested in the south of Tunisia. Immediately after the bombardment of Sfax, therefore, French troops were sent to Gabes, the inhabitants of which had taken of arms. Djara and Menzel surrendered almost without resistance on the 23rd July. A camp was pitched at Rās al-Wād to command the river on whose waters the existence of the oasis depended. When peace was established a European town arose between the oasis and the sea. Since then Gabes has become the headquarters of a military command which extends over the whole of Southern Tunisia and is the residence of a civil comptroller. But the attempts made to bring back to this part the caravans which, since the French occupation, have been deflected to Tripoli and thus to restore the town its former economic importance have as yet only produced insignificant results.

(G. YVER.)

GAFSA (KAFSA), a town in Tunisia, 146 miles S. of Kairawān, 26 miles from Tunis and 130 from Sfax, with which it is connected by a railroad built to serve the phosphate deposits of Metlawi, 26 miles E. of Gafsa; it lies in 36° 24' 32" N. Lat. and 8° 40' E. Long (Greenw.). It has a population of about 5000 including 360 Europeans and 379 Jews.

Gafsa occupies a remarkable geographical and strategic position. The town, built on a rounded eminence 1150 feet high, commands the ravine of the Wādī Bā'ish between the mountainous massif of the Djebel Orbata in the S.E., the Djebel 'Assala and Djebel Yūnes in the N.E., and therefore the route between the steppes of Central Tunisia and the Djerid and Shott country. An oasis watered by the canals drawn from the Wādī lies at the foot of the town covering an area of about 2500 acres. This oasis includes 75,000 palm-trees, numerous fruit-trees notably apricots and figs as well as a number of fields of cereals. The town itself offers little of interest. The only notable buildings are the *kašba* built in the middle ages on Byzantine foundations, the Chief Mosque with pillars crowned by ancient capitals and finally the baths or *fermidh*, watered by hot springs used even by the Romans. The native population speaks Arabic only. The Berber language has almost entirely disappeared and is only represented by the dialect of Sened, a village 32 miles E. of Gafsa. (Cf. Provotelle, *Étude sur la Tamazir't ou Zenatia de Qalaat es-Sened* (Paris, 1911, *Publications de la Faculté des Lettres d'Alger*, T. xlv.).

Gafsa occupies the site of the ancient town of Capsa. The latter was one of the strongest places in the kingdom of Numidia and was destroyed by Marius in the course of the war against Jugurtha (106 A.D.). Rebuilt under the empire it became a *municipium*, then a *colonia*. The Byzantines made it one of their strongholds to protect Byzacene from the inroads of the nomads. The Arabs ravaged its surroundings after the defeat of the Patricius Gregory, and took it at the time of 'Oqba's invasion in 49 = 669 A.D. Down to the Hilālī invasion, Gafsa passed through the same vicissitudes as the rest of Ifrikiya. Al-Bakri describes it as a prosperous town, still retaining remarkable relics of an earlier epoch. It was surrounded by a wall, certainly built by the Byzantines, but which legend attributed to "Shentiyan, slave of Nimrud"; the houses were built over marble porticoes, the intervals between the pillars of which were filled with light masonry. The oasis produced pistachios in abundance which were exported to Egypt and Sidjilmāsa, and fruits of all kinds which served

to provision Kairawān. The surrounding country was dotted with equally prosperous villages. Over 200 could be counted which were called the "Qsar of Gafsa". The general wealth was attested by the amount of taxation which annually reached 50,000 dinārs (£25,000). Idrisi confirms al-Bakri's account. "The inhabitants" he adds "have become Berbers, the majority of them speak African Latin". Many of them had still remained faithful to Abādi doctrines. Al-Bakri in fact mentions their custom of fattening dogs for food, as was the custom in various regions, particularly Sidjilmāsa. Cynophagy is still practised by the Abādis of Djerba.

The Hilālī invasion introduced a new element into the population of the country round Gafsa. The Athbadj tribe settled near the town. With the help of these nomads, who after devastating the country remained and entered the service of local chiefs to be enabled to live, a certain 'Abd Allāh b. Muḥammad b. al-Rend founded a kingdom in 449 (1053-1054) which comprised in addition to Gafsa the greater part of Qasṭiliya and lasted for over a century. The dynasty of the Banū Rend, although overthrown by 'Abd al-Mu'min in 554 = 1159 and restored on his death, did not finally disappear till 576 (1180). The rule of the Almohads and Hafsids was, however, never solidly established in Gafsa. The inhabitants of the town, like those of the Djerid, were distinguished for their turbulence and their rebellions. In the course of the wars between the Banū Ghāniya and the Almohads Qarakūsh installed a garrison there under the Kurd Karyatin. The Almohad Caliph after retaking the town destroyed its walls, but they soon rose again. In 1282 Gafsa fell into the power of the pretender Ibn Abū Amara; in 1338 a new rebellion broke out under Abū Bekr b. Yemlhl. During al-Hasan's invasion of Ifrikiya, the people of Gafsa hastened to recognise the authority of the Marinid sovereign. At a later period the Hafsīd Abu 'l-'Abbās had to suppress several rebellions but he only put an end to them by cutting down the palm-trees. During the second half of the xvth century Gafsa finally made itself independent under princes of the Banū Khalef family. The town suffered considerably from these disorders. "The town", says Leo Africanus at the beginning of the xvth century, "is for the moment inhabited but the buildings are ugly except the temple and some other small mosques.... The inhabitants are courteous but very poor because they are much oppressed by the king of Tunis". Turkish rule was not of such a nature as to restore Gafsa its former prosperity; it was a very wretched little town when it was occupied by French troops under the command of General Forgemol on the 20th November 1881.

GAGAUZES, a people of Turkish origin speaking a pure Turkish language but professing the orthodox faith; their numbers are small. They live in isolated colonies and at the present day are found chiefly scattered over Bessarabia (mainly within the triangle formed by lines joining Ismail-Bolgrad-Kagul, in the district of Trajan's wall and also at Bender and Akkerman), on the west coast of the Black Sea from the mouth of the Danube and Silistria to Cape Emine, in the Dobrudja in Roumania (Niolitel and Taita) and in Bulgaria, also in the wilâyet of Adrianople particularly in the kaza of Ilavsa, in the sandjak of Seres (Sihna and Selhovo) and in kazâ Karaferie. In the Balkan Peninsula they seem to call themselves *Surkuc* or *Sorkuc* in preference to "Gagauzes" which is, however, also used there.

The origin and early history of the Gagauzes are somewhat obscure. As in the East it is not linguistic or ethnological features that are considered essential but religion alone, they were classed by the Ottomans as Christians with the Christian Bulgars. It seems remarkable that in Russia also, even in Bessarabia, where the great mass of the Gagauzes now reside, their proper name is little known and it is only at a comparatively late period that the name Gagauzes appears in Russian authors. They were officially and usually still are simply identified with the Bulgars and in all statistics classed with them. In consequence of this confusion accurate figures cannot be obtained. In popular language on the other hand they are correctly called *pravoslavniye Turki* (Orthodox Turks).

The Gagauzes are certainly Turks and probably the descendants of the so-called Kara Kalpak and therefore, like the Ottomans, descended from the Oghuzes or Uzes, as is already suggested by their name *Gagauz*, in which *auz* is a contraction for *oghuz* while *gag* (probably equal to *gāk* or *gōk*) is a distinguishing mark of the clan. The Oghuz hordes while still heathen separated on their westward migration. While one section, the Saldjuks and later after them the Kangly, the present Ottomans, went through Persia to Asia Minor and adopted Islām, other sections went to the steppes of South Russia where they led a nomadic life: first the Pečenegs who were next pressed westwards by the Uzes or Torks, who were related to them, till finally the Kumans or Polowzes, who came last in the middle of the xith century, forced the main body of the Pečenegs and Uzes over the Danube, where they settled in Byzantine territory, the majority in the Balkan Peninsula. One section, however, which settled in Russian territory, was conquered by the Russians and at the same time, it seems, converted to Christianity, and served like the Cossacks as frontier guards against the Pečenegs, Torks, Kuyer and Berendeyer under the collective name of *Kara Kalpak* (*Černije Klobuki* "Black-caps"). But before the Slavifying process which began with the conversion to Christianity had been completed, the great Mongol invasion took place in the xiiith century, which forced the tribes already Christian to migrate to the Balkan

Peninsula, Hungary, the Caucasus and even to Asia Minor (Phrygia) and Egypt. The remnants that settled in the Balkans retained their language and religion even under Ottoman rule, while their relatives who had settled there as pagans in the xith century became Muslims and were merged in the Ottomans; the other branches that had broken off also lost their identity.

From 1750 to 1846 an interesting migration took place of the Gagauzes of the Balkans — along with a similar movement among the Bulgars — back to Russia over the Danube (till 1769 into the New Russian district, 1787—1791 and in largest numbers in 1801—1812 to Bessarabia), this seems to have taken place without the co-operation of the Russian government, which did not till a later period begin to allot lands and provide for their administration systematically. The reason for this emigration was presumably the persecutions, still commemorated in Gagauz songs by the robber bands (the Dagly and Kyr-djaly) of Pazwandoghlu (Pasban oghlu 'Othman) the notorious Pasha of Widdin and Kara Feizi.

In the sixth decade of last century there were 24 Gagauz colonies in Bessarabia numbering over 26,000 souls (34% of the total population), which has now grown to over 70,000 according to Moshkoff's estimate, but this is certainly exaggerated. Roumania contains about 3600 Gagauz to which may be now added 3 377 Gagauzes in the recently ceded district of Silistria. The figures for Bulgaria and Turkey are unknown to me. In any case the total number of Gagauzes including the *Surkuc* does not exceed 100,000. As they live in isolated groups and have no common intellectual bond they are destined to be slowly but certainly merged in the peoples amongst whom they dwell.

The administration of the Gagauzes of Bessarabia still enjoys certain colonial privileges (according to the colonial statute of 1819) and certain liberal institutions which date from the period of Roumanian rule in Bessarabia.

On the whole they are comparatively poor and are almost entirely engaged in cultivating vegetables and the vine. At an earlier period they were also shepherds and cattle-rearers. They are no longer distinguished in dress or manner of life from their neighbours. The position of women among them is a relatively low one.

The most striking features in the character of the Gagauzes are frugality, an extraordinary avarice and want of hospitality. To these are added cunning and a certain pride and independence of spirit, which prevents even the poorest from entering a position of servitude among the neighbouring peoples. They seem to have displayed very little intellectual activity. They are scorned as stupid and among the Roumanians "Gagauz" is used as a synonym for "blockhead" and it is said to be used as an epithet of contempt among the Albanians, like *turk* among the Ottomans. The Russian Gagauzes therefore are fond of calling themselves Bulgars after the official example. The Gagauzes have a great contempt for the Ottomans. Numerous popular etymologies attempt to explain the remarkable phenomenon of the combination of the Christian religion and Turkish language by former despotic measures on the part of the Ottomans.

The language employed in the home is exclusively Turkish. The women as a rule under-

stand no other language, while the men are forced to know several languages. The divine service of the Gagauzes who live in Turkey is after the Greek rite and that of those in Russia Slavonic. The priest often can only communicate with his congregation through the medium of Russian which is unintelligible to the majority of them. The Russifying process has, however, made great progress by the foundation of the school in Ismail, the compulsory use of Russian as the language to be used in all church and country schools and above all by military service.

The language of the Bessarabian Gagauzes as well as that of those across the Danube is, apart from Christian elements, practically identical with primitive Ottoman Turkish, which is explained by their common origin. The vowel harmony is very strictly carried out except in loanwords. One peculiarity is the tendency to weakening. With weak vowels all consonants are weakened, even when the latter are weak already. The numerous peculiarities of pronunciation in the different colonies are explained by their isolation from one another. The language is not a rich one: a certain laconicism and a certain poverty, particularly in synonyms, is noticeable in it. There appears to be no written literature, although there is no lack of tales and songs handed down by oral tradition.

GAIKHĀTŪ, a Mongol prince (*ilkhān*) of Persia (690—694 = 1291—1295), brother and successor of Arghūn (q.v., i. 430^b et seq.); he received the name Irāndjīn Dūrđjī (in Waṣṣāf Tūrđjī) "most precious jewel", which he bears on his coins, after his accession from his Buddhist priests (according to Waṣṣāf from Chinese); the same name was, according to Waṣṣāf, also placed on the currency notes issued in Gaiḵhātū's reign. Before his accession he was governor of Asia Minor. Muslims were particularly favoured in his reign unlike that of his predecessor; Ṣadr al-Dīn Aḥmad al-Khālidi (also called al-Zandjāni from his birthplace, and al-Āwī after his unfortunate experiment with paper money), who was appointed minister (*Ṣaḥīb-Diwān*) on the 6th Dhū l-Hiǧǧja 691 = 18th November 1292, received the title *Ṣadr-Djihān* and the military rank of a commander of 10,000. His brother Kuṭb al-Dīn Aḥmad as chief Kādi bore the title *Kuṭb-Djihān*. The Mongol Emirs were completely excluded from any share in the administration of

the empire by Ṣadr-Djihān; no distinction was made between the revenues of the royal estates (*indjū*) and the state revenues proper (*datū*). All attempts of the Emirs to overthrow the minister failed; the malcontents were delivered into the hands of the minister by Gaiḵhātū's orders but pardoned by him; it was strictly forbidden to bring such complaints in future. Unlike all other rulers of this dynasty, particularly his predecessor Arghūn, Gaiḵhātū did not stain his brief reign by any atrocities; on the other hand he plunged the land into a critical condition by his extravagances and excesses; matters were made worse by a severe murrain (*yūt*); the treasury had to borrow large sums to meet the expenses of the court and was not in a position to repay them. In these circumstances the first and last attempt in Western Asia was made to force a paper currency (*ḡw*) after the Chinese model into circulation (693 = 1294); but the crisis was only intensified by this measure and the prestige of the ruler and his minister undermined. After only two months the notes had to be withdrawn; as Dorn (*Grundr. d. Iran. Phil.*, ii. 575) has pointed out not even the word *ḡw* has survived in Persian; European paper-money is always known by the Arabic name *ḡāḡima*; but *ḡw* is still found in Persian literature of Central Asia in the xiith = xviiith century with the meaning "debased coin" (F. Teufel, *Quellenstudien zur neueren Geschichte der Chānate*, p. 74).

On the deposition and murder of Gaiḵhātū cf. RĀIDŪ, i. 591.

(W. BARTHOLD.)

GAKHAR. The Gakhar tribe occupies parts of the districts of Rāwālpindi, Aṭak and Djehlam in the Panǧjāb and of Hazāra in the North-west Frontier Province of India, also in Džammū Territory, West of the Čināb. They are all Muḥammadans and have a high social position among the agricultural tribes of North-west India in the mountainous and sub-montane tract, and are generally considered to stand apart from the tribes of Rādj-pūt descent. Some of them call themselves Mughals but the late Rādjā Džahāndād Khān (Chief of the Gakhars of Hazāra) claimed descent from Naushirwān and Yazdigird and claimed the title of Kāyāni, stating that after being driven from Persia they ruled Tibet under the Chinese, adopted Islām and returned to Kābul, ultimately entering India with Maḥmūd Ghaznavi. This account is evidently unhistorical, but points to a tradition among the Gakhars of Central-Asian origin. It is most probable that the Gakhars represent one of the invading races from the period of the Kushāns to that of the Ephthalites, but evidence is not forthcoming for any exact identification. Cunningham held them to be Kushāns. In later times they have been supposed by most historians to be the tribe called Gukkurs in Briggs's translation of Firishṭa's history i. 46 and 182, who joined the Indian confederacy against Maḥmūd Ghaznawī in 399 (1008) and fought against Maḥmūd b. Sām in 602 (1205) and were charged by Firishṭa with his assassination. There is good reason however for reading the name of the tribe in question Kōkar (for Khōkhar) instead of Gakhar; the whole ques-

tion as regards the events of 602 is discussed fully by Raverty (*Ṭabaḳūt-i Nāṣirī* trans., Vol. I. p. 485 and notes). As regards the events of 399 in Maḥmūd's time, however, it seems possible that the brave band who stormed his camp near Peshāwar were Gakhars rather than Khōkhars as the locality is close to Gakhar territory and the Khōkhars belong rather to the central Panḍjāb. There is, however, no mention of the tribe in the early historians such as the *Ṭaṛikh-i Yamīni* or the *Ṭabaḳūt-i Nāṣirī*, the only authority is Firishṭa who spells the name Khakar (کیکر). Balban's

expedition against the tribes of the Džūd Mts. may have been directed against them. The Gakhars again emerge from obscurity in the time of the Emperor Bābur who in 925 (1519) intervened in a dispute between two Gakhar chiefs in the Salt-range (Koh-i Džūd). Bābur took their fort Parhālā, and Hātī Khān Gakhar submitted to him, but afterwards again revolted. The chiefship seems to have remained in the family of the rival chief Tātār Khān who was supported by Bābur, as in Akbar's time we find from the *Ā'in-i Akbarī* that his sons Sulṭān Sārang and Sulṭān Ādam ruled the tribe, and Nazar Khān, grandson of Sārang Khān, was a commander of five hundred (afterwards one thousand in the year 1001). Džahāngir in his memoirs describes his journey through the Gakhar country in 1016, and was himself married to a daughter of Saiyid Khān father of Nazar Khān. Džahāngir described the territory of the Gakhars as ending at the Margalāh pass between Rāwalpindī and Ḥasan Abdāl, and alludes to them as a troublesome and turbulent race. Under later Mughal sovereigns several Gakhars attained distinction. They suffered a good deal under the rule of the Sikhs, but have since recovered, and now hold a good position. They are especially given to military service under the British Government.

The Gakhar mainly belong to the Shī'a sect. They are divided into five clans, the Bugiāl, Iskandrāl, Firūzāl, Ādamāl and Sārangāl; these are patronymics, the last two being derived from Ādam and Sārang the chiefs in Akbar's time. The Sārangāls are found in Hazāra and Aṭāk, the Ādamāts in Rāwalpindī and Džehlam. The chiefs formerly bore the title of Sulṭān, but since Sikh rule that of Rādžā. The late Rādžā Džahāndād Khān C. I. E. was one of the leading men of his day, and has been succeeded (in 1906) as chief of the Hazāra Gakhars by his son Rādžā 'Alī Ḥaidar Khān.

GANDĀPUR, the name of an Afghān tribe living in the Dāmān of the Dēra Ismā'īl Khān District [see Art. DĀMĀN]. The tribe is said to be of Saiyid descent, and like the Bakhtyārī who also claim the same origin, was originally attached to the Ustarāna tribe. In the time of the Durrānī kings they descended into the plains and settled in the Dāmān. Their country extends from Drāban in the south to Pahāpur in the north. Kulāci is the principal town, and the residence of the Chief. The country is barren but receives some irrigation from mountain torrents, especially from branches of the Gumal River. The name Gandāpur is accounted for by a legend that Tarai son of Storai (eponymic founder of the Ustarāna tribe) married without his father's consent a girl of the Shērānī tribe, and hence was called by him *Ganda pūr* or 'evil son'. This story no doubt points to the fact that the tribe is of mixed descent. The Gandāpur, though formerly turbulent, are now a peaceable tribe living entirely in British territory. Their language is the Kandahārī variety of Pashto.

(M. LONGWORTH DAMES.)

GANDJA, Arab. *DJANZA*, Russian *JELISAWETPOL*, since 1804, (the old name alone is still used by the native population), a town in the Caucasus. The town was first founded under Arab rule, according to the Armenian Moses Kalankatuāci (transl. by Patkanian, p. 270; cf. J. Marquart, *Osteuropäische und ostasiatische Streifzüge*, p. 462) about 845, according to Ḥamd Allāh Ḳazwīnī (in Schefer, *Siasset Namēh*, supplément, p. 227) in the year 39 (probably for 239 = 853-854). It is not mentioned by the oldest Arab geographers like Ibn Khordādbehīh and Yaḳūbī; it seems to have taken its name from the pre-Muhammadan capital of Adharbaidjān (now the ruins of Takht-i Sulaimān, cf. i. 134^b *infra seq.*). Iṣṭakhri (ed. de Goeje), p. 187 and 193, only mentions Gandja as a small town on the road from Bardha'a to Tiflis; according to him the distance between Bardha'a and Gandja was 9 farsakh, according to Yāḳūt (ii. 132) 16 farsakh. After the decline of Bardha'a (cf. i. 461 and 656) Gandja became the capital of Arrān; the Shaddādīd dynasty ruled here from about 340 = 951-952; after it had been overthrown by Sulṭān Malik Shāh (465—485 = 1072—1092) Muḥammad, son of the Sulṭān, was granted Gandja in fief. In 533 = 1138-1139 [so correctly in 'Imād al-Dīn al-Isfahānī, *Recueil des Textes* etc., ed. Houtsma, ii. 190; according to Ibn al-Aṭhīr (ed. Tornb.), xi. 51, in 534 = 1139-1140] the town was destroyed by an earthquake in which, according to 'Imād al-Dīn, about 300,000 people, to Ibn al-Aṭhīr about 130,000, perished including the wife and children of Ḳarā-Sonkor, Emir of Adharbaidjān and Arrān, who was absent at the time;

Demetrius, king of Georgia, sacked the ruined town and carried off one of its gates. Imād al-Dīn says that the Georgians built a new town in their country, gave it the name Djanza and set up the gate they had carried off there; soon afterwards Karā-Sonkor destroyed the new town and brought the gate back to Gandja. The latter statement does not agree with the facts; the gate that was carried off still exists in the Gelathi monastery in Kutais; a Georgian inscription gives an account of its removal; and there has also survived on the gate itself an Arabic inscription of the year 455 = 1063 (the year of its erection) which has been deciphered by Frähn (*Mém. de l'Acad.*, viii Ser., *Sciences politiques*, iii., 1836, p. 531 *et seq.*).

Karā-Sonkor died in 535 = 1140-1141, his successor Djalāl in Djumādā I, 541 (9th Oct.—7th Nov. 1146); Rawādī is next mentioned as ruler of Arrān (*Recueil etc.*, ii. 232); but a few years later we find Arrān again united with Ādharbaidjān under the rule of the Pahlawānids. The town of Gandja is said to have been rebuilt by Karā-Sonkor "in all its splendour" (*ilā ahsan hālātihā*); in the viiith = xiiith century it was considered one of the most beautiful cities of Western Asia (cf. the verses in Hamd Allāh Kazwīnī (*l.c.*); the poet Nizāmī Gandjāwī belongs to this period; Ibn al-Athīr (xii. 251) calls Gandja "mother of the cities of Arrān" (*umm bilād Arrān*). When the Mongols appeared before Gandja in 618 = 1221, they dared not attack the strongly fortified town, the inhabitants of which had proved their courage in frequent battles with the Georgians; but the retreat of the enemy had to be purchased with money and clothsuffs. In 622 = 1225 Gandja, whither the last Pahlawānid, Uzbek, had fled from Tabriz, was taken by Djalāl al-Dīn Khwārizmshāh; a few years later all the Khwārizmis were massacred in a rebellion of the inhabitants; nevertheless, after suppressing this rising Djalāl al-Dīn refused to allow his troops to sack the town and only had the ringleaders, 30 in all, executed (628 = 1231). Four years later (1235) the town was captured and burned by the Mongols. On this occasion again the town was soon rebuilt but does not seem to have ever attained great importance again. After the foundation of a Mongol empire in Persia, Arrān with Gandja as capital became one of the provinces in it; the land afterwards usually shared the lot of Ādharbaidjān and from Ismā'il Shāh Safawī's reign formed a portion of the Persian kingdom: under Persian rule the governor of Gandja bore the title Khān. In 1583 Khān Imām Kuli was defeated by the Turks, the town itself taken in 1588 by them; invested in Shawwāl 1014 (9th Febr.—9th March 1606) by Shāh 'Abbās I. it was won for the Persians again after a six month's siege. Shāh 'Abbās transferred the town to another site about 1 farsakh "higher", i.e. to the southwest. The new Gandja had to surrender to the Turks in 1723, was taken by Nādir Shāh in 1735, remained after his death under the rule of Khāns who were practically independent, passed into the power of the Qājārs towards the end of the xixth century, was stormed on the 3rd (15th) January 1804 by the Russians under Prince Cicianow and definitely ceded to Russia by the Peace of Gulistan [q.v.]. On the 13th (25th) Sept. 1826 Paskewić defeated a Persian army under 'Abbās Mirzā in the neighbourhood of Gandja (about 5 miles from it). As

a Russian town Jelisawetpol had, according to Ritter's *Geographisch-statistisches Lexicon* (5th ed. 1864), only 13,169 inhabitants, in 1891 20,794, while, according to the census of 1897, the number had risen to 33,190.

The modern town (the writer visited it in 1908) lies on both banks of the Gandja Čai, a tributary of the Kura (called by the Russians Gandjinka), which are connected by a bridge. The western part of the town is inhabited by "Tatars" (Ādharbaidjānis) and Persians, the eastern mainly by Russians and Armenians; the government offices and the gymnasium are in the latter; in the former remains of fortifications (illustrated in Jackson, *Persia Past and Present*, p. 3) and the so-called "Tatar" mosque have survived from the time of Shāh 'Abbās; the "Persian" mosque belongs to a later period. Only the ruins remain (2-3 miles east of the town; illustrated in Zaf. *Post. Old. Arkh. Obšč.*, xxi. 034 *et seq.*) of the mausoleum (*turbat*) of the poet Nizāmī, mentioned by Iskandar Munshi (*Tārīkh-i 'Ālam Ārā-i 'Ab-bāsi*, Pers. ed., p. 498 *et seq.*). South of the town (5-6 miles) on the right bank of the Gandja-Čai lies the flourishing German colony of Helenendorf. The climate of Jelisawetpol is regarded as unhealthy and malarial; on the other hand the climatic conditions favour the development of vegetation, particularly the horticulture; the town garden (near the ancient fortress) is one of the best in South Russia: wine, tobacco and silk are also produced. (W. BARTHOLD.)

GANDO, the kingdom of the Fulbe in the Western Sūdān (cf. the article *PUL*).

GAO. [See *GOGO*.]

GARDĪZĪ, ABŪ SA'ĪD 'ABD AL-ĪYẒY B. AL-DAHĤAK B. MAHMUD, a Persian historian. Nothing is known of his life. As his *nisha* shows he was born in Gardiz (usually written Kardiz in Arabic, e.g. Yāqūt, iv. 258, but sometimes also Djardiz as throughout al-Uṭbī's *Tārīkh Yamīnī* which confirms the spelling with g), a day's journey from Ghazna on the road to India (Mukaddasī, ed. de Goeje, p. 349). His work (*Zain al-Akhbār*) was written in the reign of 'Abd al-Rashīd the Ghaznawid (440—444 = 1049—1053). It contains a history of the kings of Persia, of Muḥammad and the Caliphs to the year 423 = 1032 a detailed history of Khorāsān from the Arab conquest to 432 = 1041; included are essays on Greek sciences (*Dar Ma'ārif-i Rūmīyān*), on chronology and the religious festivals of various peoples. The final chapters deal with genealogy (*ansāb*) and sciences (*ma'ārif*); it also includes a chapter on the Turks of great value for the geography of Central Asia and one on India. No historical sources are quoted by Gardizī; in the chapter on the Turks he relies on Ibn Khurdādhbih, Djaīhānī and Ibn Mukaffā'. He says he received information about Indian festivals from Albirūnī, so that he is regarded as a pupil of the latter. Gardizī exercised little influence on historical tradition in the east and is seldom quoted (cf. Rieu, *Catalogue*, p. 220^b); the manuscript in the Bodleian (Ouseley 240) of the year 1196 = 1782 is the one that has been generally used by European scholars and is frequently (even in the *Grundr. d. Iran. Phil.*, ii. 356) described as unique; from this MS. the chapter on the Turks has twice been edited (W. Barthold, *Oket o poudke v Srednyuyu Aziyu*, St. Petersburg 1897, p. 78 *et seq.*; Gēza Kun, *Keleti Kúfsök*,

1898, p. 5 *et seq.* and *Kileti Szemle*, 1903, p. 17 *et seq.*) and translated (into Russian and Hungarian). There is another MS. in Cambridge (King's Coll. Library, N^o. 213), to which attention was called by Morley as long ago as 1868 (*Journ. R. As. Soc.*, N. S., iii. p. 120). The author of this article has shown (*Turkestan v epokhu mongolskogo nashestiya*, ii. 520) that Ouseley 240 must be a transcript of King's College. N^o. 213. It is not known what MS. Raverty used (*Tabakat-i Nāsirī*, p. 901). The contents of the *Zain al-Akhbār* have been most fully analysed by Sachau and Ethé (*Catalogue*, p. 9 *et seq.*). Cf. the excerpts from the historical chapters in Barthold, *Turkestan*, i. 1 *et seq.* and the corrections given in ii. 513; see also Sachau, *Alberuni's India*, Engl. transl., ii. 360 and 397 on the passages borrowed by Gardīzī from this work and W. Barthold in *Orientalische Studien*, Th. Noldeke dargebracht, i. 174 *et seq.* on the relation of Gardīzī to Sallāmī. (W. BARTHOLD.)

GARĒBĒG, a Javanese name for the Muslim festivals: *garĒbĒg besar* = *ʿĪd al-Adḥā* [q. v.], *garĒbĒg furasa* or *ḡiyam* = *ʿĪd al-Fiṭr* [q. v.] and *garĒbĒg mawlud* on the 12th Rabiʿ I.

GAUR. The old capital of Bengal, situated in the district of Mālda, Eastern Bengal and Assam, Lat. 24° 54' N. Long. 88° 8' E. It lies east of the Ganges, on a narrow and deserted channel of that river, and is twelve miles from the town of Mālda. The name Gaur is old, and according to Firishta it was founded many centuries ago by a Hindu named Shankal. In later times it was known by the name of Lakhnawī, an abridgement of Lakshmapavati, a name derived from the Hindu king of Bengal. It was captured by the Muhammadans in 1197 or 1198. In 1243-1244 it was visited by Minhādī ud-dīn who gives a short description of it in his *Tabakat-i Nāsirī* (Raverty's translation i. 584). It was from time to time the capital of the Muhammadan kings of Bengal, though they also resided at the town of Pandua about 20 m. to the N. E. of Gaur. In 1538 Humāyūn resided at Gaur and changed its name to Jinnatābād, as he regarded the name Gaur as unpropitious on account of its resemblance to the Persian *gūr*, a sculpchre. Akbar's general Mun'im Khān occupied it, but had to abandon it in 1575 on account of the outbreak of a pestilence. It was last inhabited by a prince when Sulṭān Shudjāʿ was there in the middle of the 17th century. It is now in utter ruin, but possesses a magnificent tank, the Sāgor Dighi. The remains of the mosques etc. are preserved by Government. There is a good account of Gaur in the *Imperial Gazetteer of India*, vol. XII. It was visited by the Portuguese in the xvth century, and in 1683 Sir William Hedges was there and gave an account of it in his *Diary* (Hakluyt Society, 1887—1889). The earliest detailed account of it is in Henry Creighton's *Ruins of Gaur described*, London, 1817. But J. H. Ravenshaw's *Gaur*, edited by his widow, is more accurate (London, 1878). It is also described in the *Archaeological Reports of India*, vol. xv. See also Dr Buchanan's *Eastern India*, and a *Note on Major Francklin's art. Description of Gaur*, *Journ. As. Soc. Beng.*, Vol. IXiii. Part i. p. 85 *c. seq.*, and the review of Ilāhī Bakhsh's *Khurshid Dihānnumā* in the same *Journal*, Vol. IXiv. Part i. p. 194.

The history of the Muhammadan kings of Bengal, and some account of Gaur will be found in Ghulām Husain Salmī's *Riyāz-i Salāṭīn*, translated, by Abd us-Salam, Calcutta, 1902, and in Stewart's *History of Bengal*.

(H. BEVERIDGE.)

GAYOS, a tribe in Atjeh [q. v., i. 506^a].

GAZA. [See GHAZA.]

GAZULĪ. [See DJAZULĪ.]

GEBER. [See DJĀMR, i. 987^b *et seq.*]

GEBER (P.), the name of the Persian Zoroastrians, the origin of which is not quite certain. The word is usually considered to be the Arabic *kāfir* (unbeliever; Turk. *gāur*). For other etymologies see the *Grundr. d. Iran. Phil.*, ii. 697. Cf. art. PARSIS.

GEGA, an Albanian tribe, i. p. 453^b.

GEORGIA (Russ. GRUZĬYA, Pers.-Turk. GURDUSTAN, GÜRDJISTAN, Georg. SAKHARTHVELLO), in the wider sense an area in Western and Central Transcaucasia, inhabited by people who speak Kharthvelian languages, stretching from the Black Sea to somewhat over 60 miles N. E. of Tiflis, in the narrower sense practically the government of Tiflis. From the point of view of historical geography, which is still to some extent valid, it comprises the provinces and districts of Kakhethia with the mountain districts of Thusethia, Pshawia and Khewsuria, Karthlia, Imerethia, Swanethia, Guria, Mingrelia and Meskhia. The Kharthvelian languages include the Georgian, Mingrel, Lasian (the latter only spoken in the extreme southwest corner on the Turkish frontier while the majority of the Lases, also called Ts'ans, live in Turkey) and Swanian; the latter spoken in Swanethia and Mingrel in Mingrelia. Georgian is spoken in all the other provinces. The greater proportion of the Kharthwel peoples profess Christianity in the Greek Orthodox form, only in a few places have they adopted Islām, namely in the extreme east, in the district of Sakathal, the Engiloes (Georgian language), also entirely in the southwest, in the Batum circle, the Adjars (the Lases are likewise Muslims). Georgian has lost a considerable number of adherents in the Čoroch district and on the upper course of the Kura, i. e. in the Ardagan district and in the districts of Akhalcikhi (q. v., i. 230^c) and Akhalkhalakhi, where Georgian was still spoken two hundred years ago and has now been supplanted by Turkish. The people have forgotten their language and origin and call themselves Turks.

The beginnings of Georgian history are wrapped in obscurity. Karthlia and Kakhethia formed the nucleus for the formation of a new state. The western Kharthwel country had at an early period passed under Byzantine rule and from it Christianity in its Eastern Roman form spread over the Western Transcaucasia. Saint Nino is regarded as the bringer of Christianity. She is said to have converted King Mirian in the beginning of the fourth century (the dates given vary). The Georgian church was granted its independence at the sixth council in 680 at Constantinople.

As Georgia lay in the centre of a circle on the circumference of which powerful states had grown up, it suffered terrible vicissitudes till it became Russian territory in 1801. Down to the seventh century Byzantium and Persia were fighting for its possession; soon after 627 (Heraclius's victory over the Sāsānian) the Arabs advanced on Georgia. From the end of the viiith century

the power of the Bagratids began to increase (with Byzantine help) in South Georgia. In the xth century the Saldjûks conquered the land. It was only after the Crusaders had entered Jerusalem that David the Renovator drove out the Turks in 1100. Under this king (1089—1125) a period of prosperity for Georgia began which lasted till after the death of Tamar (1184—1212). A great decline in the fortunes of the land set in from the xiith—xviith centuries, the Mongol invasions (Timûr alone was six times in the country between 1387 and 1403) had most disastrous consequences. Scarcely had the country been united under the Bagratids, when it broke up in the xvth century into three kingdoms, Karthlia, Kakhethia, Imerethia and five principalities and henceforth its history is not that of a single country. After the fall of the Byzantine empire Georgia was left without a protector and the inroads of the Tatars, Turks, Persians and Lesghians became more frequent. Persian influence in particular became very strong and in the xviiith century the king of Karthlia and Kakhethia became a mere governor for the Shâh of Persia.

Russia was the only hope and to it Georgia had turned at quite an early period. In 1558 Lewan II. of Kakhethia besought the Czar Iwan IV. Wassiljewitch for help against the Persians; in the time of the terrible Shâh 'Abbâs Alexander turned to Boris Feodorowitch Godunow, in 1619 Teimuraz sent an embassy to the first Czar of the house of Romanow, Michail Feodorowitch. But Georgia was not yet within the sphere of Russian interests and the old state of affairs continued. It was only in the xviiith century that Georgia regained strength once more under King Wakh-tang VI. Heraclius II. (1762—1798) was once more able to stem the tide of Persian-Turkish-Lesghian invasion, temporarily at least, but when he died the country had been so weakened by domestic troubles, the plague (1770), the destruction of Tiflis by Agha Muḥammad Khân of Persia (1795) and other causes, that George XII., the successor of Heraclius resolved to place his kingdom under Russian protection (1801). A few years later (1804) Imerethia also became a Russian province: a year previously Mingrelia had also become a Russian possession and after the last Russo-Turkish war, the Muslim southwestern districts of the Kharthwels, Kaghizman, Ardagan, Olty, Artwin, Batum (and Kars) also passed under Russian rule. [Cf. ARMENIA, i. 442].

GERMESÎR (P.). *Garmesir* is the name given to the hot coast region of Fârs and Kirmân in opposition to the cooler highlands (*Sarâsir*). These words have been arabised by the Arab geographers in the forms *Dyrum* and *Sarûd* or *Surûd*.

GERMIÂNUGHU, the name of a Turkoman dynasty, which made itself independent on the fall of the Saldjûk empire in Asia Minor and made Kutahia, the ancient Cotyaeum, its capital; Germiân was originally the name of a tribe and afterwards was applied to the dynasty

(cf. Houtsma, *Reueil*, iv. 229, 232, 326 *et seq.*, 332 *et seq.*; and the expression Ἀλυσούρας πύον Καρχαζονίς in Pachymeres, ii. 421. as well as the title: *Sulṭān al-Germiāniye* in Suleimān-shāh's inscription). The pronunciation — Germiān or Keimian — is doubtful: the Byzantines write *Κερμιάν*, *Κερμιανός*, or *Καρχαζωνός* (through confusion with *Ḳaramān*): Schiltberger (ed. Langmautell), 54: *Kermian*; on the other hand Ahmed Wefîk, I. ch. 1046, writes *Germiān*, جرمیان, and Leunclavius (xvi. Jahrh.) transcribes *German* throughout; the form جرمیان given by Ibn Baṭūṭa, ii. 271, also seems to be in favour of Germiān. At the end of the xiiith century or the beginning of the xivth 'Alishîr (written Ἀλυσούρας, Ἀλυσούριος, Ἀλυσέρις by the Byzantines), "the satrap of Cotyaeum" (Kantakuzenos, ii. 82), is mentioned with Osmân, Şaruḥān, Mentesh etc. as one of the invaders of Byzantine lands in Asia Minor; amongst other places he had seized Kula and Tripolis on the Maeander and attempted to take Philadelphia (Alashehir) but was severely defeated in battle with the Katalans and Almugavars (1304; 1306 according to Murali) (see Pachymeres, ii. 421 *et seq.*; Muntaner, c. 205). According to Turkish sources, in the time of Ertoghul "Alishîr, father of Germiān" was reigning over Afîun Karaḥîşâr (Neshri and his copyists). Shihâb al-Din, a contemporary of Ibn Baṭūṭa's, knew of Germiān, son of 'Alishîr, as lord of Kutahia, and Ibn es-Sâ'ib, the son-in-law and vassal of Germiān, as lord of Karaḥîşâr. This agrees with a coin of Germiān Khân of the year 707 (1307), struck at Shahrî Germiān (unique, described by Ismâ'il Ghâlib in the Catalogue of his collection of Saldjûk coins, No. 175).

Our knowledge of the history of the dynasty of Germiān to the end of the xivth century is lamentably small. Munedjdjimbashi, iii. 34 *et seq.* gives the following list of rulers: Germiānbeg, 'Alishîrbeg, 'Alemsâh, 'Alî, Ya'qûb; this cannot be reconciled with other statements of contemporary historians and monuments. We learn from an inscription in Kutahia of the year 779 (1377) that Suleimānshâh, son of Mehemmed, grandson of Ya'qûb, ruled over Germiān about this time. According to Halil Edhem this Ya'qûb is identical with the "great Emir" Ya'qûb b. 'Alishîr, who is mentioned in an inscription of Angora of the year 699 = 1299. Ya'qûb's father, 'Alishîr, might thus be the lord of Germiān of this name mentioned by the Byzantine and Ottoman historians but can hardly be identified with Karim al-Din 'Alishîr (Houtsma, *Reueil*, iv. 299) who was slain in the reign of Kiliĉi Arslân IV (655—663). According to the waḳf document of his grandson Ya'qûb II, Mehemmed conquered Kutahia and Simav; in his reign or that of his successor Suleimānshâh the districts of Karaḥîşâr and Deñizli were incorporated in the kingdom of Germiān. Suleimānshâh (in the Turkish historians simply called Germiānoğlu) married his daughter Khâtûn Sulṭan in 783 (1381) to prince Bâyezid, son of Murâd I., and granted her as dowry the most important towns in his land, including the capital. His son, Ya'qûb (II), who succeeded him about 790 (1388), was taken prisoner by Bâyezid in 793 (1391), interned in Ipsala in Roumelia, and his lands confiscated in 795 (1393). Ya'qûb escaped from Ipsala to Timûr and after the battle

of Angora was restored by Timūr like the other petty rulers who had been dispossessed by Bāyazid. When Timūr left Anatolia, he gave Ya'kūb the task of guarding the corpse of Bāyazid I. and his captive son, Mūsā Celebi; Ya'kūb then handed both over to Mehmed Celebi. He was on friendly terms with the latter and with Murād II. and remained in undisturbed possession of his lands till his death. When he died without male heirs in 832 (1428-1429) the land of Germian was confiscated by Murād II. A pretender, who rose in rebellion in 1453 on the accession of Mehmed II. supported by the Karamanoglu, was quickly disposed of. The Germian country has since then been divided into two sandjaks, Germian and Karahisari Sahib; Kutahia in 1453 became the seat of the Beglerbeg of Anadolu. The following dynasty table is based on the material available:

‘Alishir (about 700 A. H.)

Germian Khān (about 707—730 A. H.) = Ya'kūb (I)

Mehmed

Suleimānshāh (about 779 A. H.)

Ya'kūb II. (790?—793; 805—832 A. H.).

The chief critical authority is Halil Edhem in the *Revue Historique publiée par l'Institut d'Histoire Ottomane* I., p. 112 et seq.: the exceeding rare coins of Suleimānshāh and Ya'kūb II. are described by Ahmed Tewhīd in the fourth part of the *Catalogue of the Moh. Coins in the Ottoman Museum*, p. 294 et seq., 529. (J. H. MORDTMANN.)

GHADĀMES, a town and oasis in the Sahara, 300 miles S.W. of Tripoli and 280 miles S.S.W. of Gahes, in 30° 7' 48" N. Lat. and 8° 28' E. Long. (Greenw.), with 5000—6000 inhabitants.

The town occupies the southwestern part of the oasis. It forms a kṣar of about 1300 houses surrounded by a dilapidated wall and intersected by narrow streets which are vaulted over almost their whole length. The only architectural monuments are the mosques (14 in number) of unpretending exteriors. According to al-Hashā'ishī the tombs of two companions of the Prophet, Sidī al-Badrī and Sidī 'Ukba b. 'Amr are honoured there. The oasis, which is protected by a wall around it with only one gate, is about 4 miles in circumference, $\frac{3}{4}$ —1 mile broad and has an area of 400 acres of which not more than 190 are planted with palms. Water procured from an artesian well and two warm and seven or eight ordinary springs assure the irrigation of the gardens, each of which contains five or six palms. The total number of trees estimated by Duveyrier in 1860 at 63,000 seems in reality not to exceed 25,000.

The free inhabitants fall into four groups: *a.* the Berber Beni Wazit and Beni Ulid, who consider themselves the descendants of the founders of the town; *b.* the Arab Ulād Bellil; *c.* the Atriya, i. e. negroes or mulattoes descended from manumitted slaves; *d.* Tuāreg Ifoghas, who are permanently encamped round the town as caravan leaders or bandits and "protectors" of the traders.

The predominant languages in Ghadāmes are first, Arabic as the language of commerce, second Hausa spoken by a number of slaves and lastly a Berber dialect, the language of everyday life, which is between the dialect of the Djebel Nefusa

and the Tamāshek, but is more closely connected with the former. The women only know the last of these.

The indigenous industries are of little importance although Ghadāmes has always been celebrated for its leather work (Spanish *guadameci*). The situation of the town however between the sandhills of the Eastern Erg (cf. AREG, i. 428) and those of Edeyen has made it a great centre of exchange for the traffic of the Sahara; but its importance from this point of view has considerably decreased since the abolition of the slave trade and the estimates of Duveyrier and Largeau, who put the annual value of the business done in Ghadāmes at 12 million francs (£ 48,000), are much exaggerated. According to more recent investigations the annual value of the goods sold in the city hardly reaches £ 4000. The inhabitants nevertheless are very busy and clever tradesmen. We find them not only in Tripoli and Tunis, where the young men serve their apprenticeship, but in all the trading centres of the Sūdān from the shores of Lake Chad to the banks of the Niger.

Ghadāmes is the Cydamus of the ancients. Native legends ascribe its foundation sometimes to Nimrūd and sometimes to Dhu 'l-Karnain (Alexander). According to Pliny (*Hist. Nat.*, v. 5) Cydamus was inhabited by Egyptians from Libya. Possibly it is to these original inhabitants that we owe the buildings called *al-aṣṇām* (the idols) by the natives, which Duveyrier regards as evidence of a civilisation which he calls Garamantine. In the year 19 B. C. Cydamus was occupied by Cornelius Balbus, under the empire it was garrisoned by a detachment of the *Legio Augusta*, stationed in Lambaesis, and under the Byzantines it was the see of a bishop. Ibn Khaldūn is therefore wrong when (*Hist. des Berbères*, transl. de Slane, iii. p. 303) he ascribes the foundation of the town to the Banū Wāṭṭās, a branch of the Beni Merin, who built Ghadāmes in the early days of Islām.

In the year 46 (666-667) 'Ukba b. Nāfi' sent a detachment from his army to occupy Ghadāmes. In the following century, however, the inhabitants eagerly adopted the Abādī doctrines introduced by their countrymen Abu 'l-Manib Ismā'īl b. Darar. This Ismā'īl was one of the five "transmitters of knowledge" who spread heretical doctrines in Africa. When Ghadāmes returned to orthodoxy is not known, but the Abādī heresy seems to have disappeared by al-Bakrī's time as this author describes the inhabitants of Ghadāmes as Muslim Berbers (*Descr. de l'Afrique Septentr.*, trans. de Slane, p. 397).

During the centuries that followed, Ghadāmes seems to have retained its independence, as the few historical statements that we possess of this period concerning the town refer to attempts made by the rulers of Ifrikiya to take the town. For example in 609 (1212-1213) Abu 'l-'Ulā Idris occupied Ghadāmes for a brief period and in 809 (1406-1407) the Ḥafṣid Abū Fāris forced the inhabitants to pay him tribute. The latter seem soon to have freed themselves of this burden, as in the second half of the xvth century we find the princes of Tunis undertaking three campaigns against Ghadāmes. Leo Africanus (ed. Schefer, Vol. iii. p. 265) in the beginning of the xvith century mentions that the people of Ghadāmes were independent. The Turks of Tunis in spite of several campaigns undertaken by Derwish Bey

(1592) and Ramaḍān Bey (1609) were, like the Ḥafṣids before them, not able to enforce their authority on Ghadāmes. During the xviiith and early xixth centuries Ghadāmes was an independent republic, but in 1830 the inhabitants had to recognise the suzerainty of Yūsuf the last Karamanli Bey of Tripoli. After the expulsion of the Karamanli Ghadāmes passed into the possession of the Turks and a *mudir* who was afterwards (1862) replaced by a *kā'immaḥkam* was appointed to govern it and a small garrison was stationed there.

The commercial importance of the place attracted the attention of Europeans to it in the sixteenth century. The following travellers visited it, Laing (1825), Richardson (1845), Dickson (1852), Capitaine de Bonnemain (1856) and Duveyrier; in 1862, a French mission (Mircher, Vatonne and Polignac) concluded a commercial treaty with the Tuāregs; they were followed by the travellers Rohlf (1864-1865), Dournaux-Duperré, Joubert, Largeau (1876) and Pater Richard (1878); since then, however, Ghadāmes has remained closed to Europeans owing to the jealousy of the Turks. The French have vigorously disputed their claim to the town since the establishment of the protectorate in Tunisia. The Anglo-French treaty of 1899 decided that Ghadāmes must be considered outside French territory and the Franco-Turkish agreement of 19th May 1910 regarding the delimitation of the frontier between Tunisia and Tripolitania laid it down that the frontier should pass 10 miles west of Ghadāmes. The cession of Tripolitania to Italy, made Ghadāmes an Italian possession.

AL-GHADANFAR ('the lion'), a name of the Ḥamdānid 'UDDAT AL-DAWLA ABU TAGHLIB FAḤL ALLAH B. NĀSIR AL-DAWLA, ruler of al-Maw-

ṣil 358—369 (968—979). Abū Taghlib, who was born in 328 (939-940), quarrelled with his father and afterwards with his brothers, when on the death of the Bāyid Mu'izz al-Dawla in 356 (967) they attempted to attack Mu'izz al-Dawla's successor Bakhtiyār [q. v. i. 602] against their father's wish and therefore threw their father into prison. On the latter's death in 358 (969) two of the brothers, Ḥamdān and Ibrāhīm, took Bakhtiyār's side while a third, al-Ḥusain, stood by Abū Taghlib. The latter conquered Ḥamān in 359 and made peace with Bakhtiyār, whose daughter he married; he also took Mardīn from his brother Ḥamdān. Unfortunately for him, a powerful enemy of his father-in-law entered the field in the Bāyid 'Aḍud al-Dawla, who took Baghdād in 364 (975) and finally, on the death of his father Rukn al-Dawla, forced Bakhtiyār to surrender the 'Irāq. Ḥamdān thought he would seize the opportunity to drive his brother Abū Taghlib out of al-Mawṣil with Bakhtiyār's help but only succeeded in getting himself imprisoned by Bakhtiyār as soon as Abū Taghlib had promised him his help in recovering Baghdād. In the war with 'Aḍud al-Dawla that followed, Bakhtiyār was taken prisoner and put to death while Abū Taghlib had to take refuge in flight. The victor soon appeared before al-Mawṣil and the Ḥamdānid sought in vain to treat with him: he was not inclined to restore this important city to the Ḥamdānids so that Abū Taghlib, pursued by Bāyid troops, sought refuge with Bardas Skleros, to whom he was related by marriage and bound by ties of friendship. But just then the latter was engaged in a struggle with the Byzantine general Bardas Phocas, in which he came off second in 368 (979), so that Abū Taghlib, who was awaiting the result of the war in Ḥiṣn Ziyād (Khartbart), as in the meanwhile 'Aḍud al-Dawla had occupied Maiyāfariḳin and Amid, went to Damascus and sought the help of the Fātimid al-'Azīz billāh. The latter pretended to take his part and made him the most gorgeous promises through his general al-Faḍl b. Ṣāliḥ. But while Abū Taghlib was looking in vain to Egypt for troops to help him, he fell out with Mufarridj b. Dagfal b. al-Djarrāh, who ruled over Ramla and South Palestine while nominally recognising the suzerainty of the Fātimids and was seeking to drive out the Banū 'Uḳail who were settled there. The latter thereupon turned to Abū Taghlib, who was taken prisoner in a battle near Ramla by his rival and put to death in 369 (979).

Bibliography: Besides the sources mentioned in the article ḤAMDĀNIDS the following deal particularly with Ghadanfar: Yahyā b. Sa'īd al-Antākī in von Rosen *Imperator Vasilii Bolgarabortsza*, p. 10 et seq. and Ibn Khallikān, *Wafayāt* at the end of the article NĀSIR AL-DAWLA.

GHADIR AL-KHUMM, a pond or marsh formed by a spring in a wādī on the left of the road from Medina to Mecca, three (according to others one or two) Arab miles from Djuhfa. The Arab geographers mention the thick trees that surround it and the mosque of the Prophet lying between it and the spring; the few inhabitants belonged in Yaḳūt's time to the Khuḏā'a and Kināna. Near it was al-Kharār, to which Sa'd b. Abi Waḳḳās was sent in the year 1 A. H. with a few followers by the Prophet.

The place has become famous through a tradition which had its origin among the Shī'is but

is also found among Sunnīs, viz., the Prophet on journey back from Hudaibiya (according to others from the farewell pilgrimage) he said of 'Alī: Whomsoever I am lord of, his lord is 'Alī also! In memory of this in later times a feast was observed by the Shī'īs.

GHAFFĀR (A.), "Pardoning", one of the beautiful names of Allāh, cf. i. 304.

GHAFFĀRĪ (AHMAD B. MUHAMMAD), a Persian man of letters, a descendant of the Shāfi'ī jurist Imām Najm al-Dīn 'Abd al-Ghaffār al-Kazwīnī, who died in 666 = 1268. His father, who was Kādī of Raiy, wrote poetry under the pseudonym Wiṣālī and died in 933 = 1527. Ahmad al-Ghaffārī was likewise a Kādī and died in 975 = 1567 at Daibul (Sind) on the return journey from the pilgrimage to Mecca. He dedicated his *Nigāristān* ("picture-gallery"), completed in 959 = 1552, to Tahmāsp I: it is a collection of anecdotes collected from works of different periods (lith. Bombay 1245 and 1275 and also Calcutta); he also wrote a history of the world in two books entitled *Nusakh-i Dīkhān-Ārā* (972 = 1564).

AL-GHĀFIR (A.). One of the titles of xl. Sūra.

GHAḤŪR (A.), "Pardoning", one of the beautiful names of Allāh, cf. **GHAFFĀR**.

GHAIB is used generally with the same sense as *ghā'ib*, what is absent or hidden, and *al-ghāib* has come to mean the unseen spiritual world; thus *ʿālam al-ghāib* is opposed to *ʿālam al-shahāda*, the world perceived by the senses. This sense is normal in the Korān (*Mufradāt* of al-Rāghib, ed. of Cairo, 1324, pp. 372 *et seq.*) and it is explained by the commentators (e. g. Baiḥāwī on Kor. ii. 2, ed. Fleischer, p. 16, ll. 6 *et seq.*) that *al-ghāib* is what is not reached by the senses or required by intuition; it is of two kinds, one made known to man by the prophets and one known only to Allāh "with whom are its treasures" or "its keys", according as Kor. vi. 59 is read. It thus came to be used in the broadest way as "the Unseen" by occultists among us. Al-Rāzī found the Korānic phrase *Mafātīḥ al-ghāib* a possible name for a commentary on the Korān, Ibn al-'Arabī for a Sūfi work and Ahmad al-Zarkāwī, a modern Egyptian writer, for a collection of treatises on magic and divination (Cairo, 1327). *Ridjāl al-ghāib* means the saintly hierarchy presided over by the Kuṭb (Lanc. *Arabian Nights*, chap. xxx. note 17) and *ibn al-ghāib* can mean a youth conceived without father and gifted with mysterious powers of insight (C. Wells, *Mehemet the Kurd etc.*, p. 129). In

Sūfiism *ghaib al-huwiya* and *ghaib al-muṭlaq* mean the essence of the real *qua* unconditioned (*al-lāz al-aiyān*).

Bibliography: To the references above add *Taṣrifāt* of al-Iḥdijānī, ed. Cairo, 1321, pp. 109, 177; *Dict. of techn. terms*, pp. 1053 *et seq.* (sub *ʿālam*), 1090, 1539 *et seq.* (sub *huwiya*); Horten, *Theologie des Islam*, pp. 219 *et seq.* (D. B. MACDONALD.)

GHAIBA is used as infinitive in its root, *ghāib* having come to equal *ghā'ib*. It thus means "absence", often "absence of mind". This latter force was developed by Sūfis into absence of the heart from all except Allāh, expressed, on the other side, by *ḥuḍūr*, "presence" with Allāh. It is a stage on the passage to *fanā*, complete "ceasing" or passing away of the self. For details of the development of this idea see Nicholson's translation of the *Kashf al-Mahjūb* of al-Hudjwiri, pp. 248 *et seq.*, and index. Also the *Risāla* of al-Kushairī with the commentaries of Zakariyā al-Anṣārī and al-'Arūṣī, ed. Būlāḳ 1290, vol. i, pp. 66 *et seq.*, and the Saiyid al-Murtadā's commentary on the *Iḥyā* of al-Ghazzālī, vol. vii, p. 248 and Macdonald, *Religious Attitude and Life in Islam*, pp. 260, 262.

Another common use of the word is to describe the condition of any one who has been withdrawn by Allāh from the eyes of men and whose life during that period (called his *ghaiba*) has been miraculously prolonged. Of this the outstanding example is the Hidden Imām, or Mahdī, of the Shī'ite Twelvers. He, though thus kept generally invisible, still lives on earth (cf. al-Khaḍir), has from time to time been seen by some and been in correspondence with others and maintains a control over the fortunes of his people (Goldziher, *Vorlesungen*, pp. 232 *et seq.*, 269 *et seq.*; *Arabische Philologie*, ii. pp. lxii, *et seq.*). (D. B. MACDONALD.)

GHAILĀN B. UKNA, see DHU 'L-RUMMA.

GHAİN, the nineteenth letter of the Arabic alphabet (numerical value 1000; cf. the article ABJAD); the character *ghain* is a variant of 'ain. In most modern dialects it is pronounced as a voiced velar aspirate. The old Arab writers on phonetics describe it as a guttural; but it seems very doubtful if it ever really was pronounced as a post-uvular. *Ghain* has become 'ain in many modern dialects (for details see the article ARABIA, ARABIC DIALECTS, i. p. 396^b). Cf. A. Schaade, *Sibawaihi's Lautlehre*, particularly p. 19, N^o. 3 and note 48; and the index. (A. SCHAADÉ.)

GHAṬA (GHĀṬA, GHĪṬA), an Arab musical instrument, very popular in North Africa and some districts of Southern Europe, a kind of cylindrical bagpipe with a movable wooden mouthpiece (*kaṣba*) and rather wide bell-mouth. The cylindrical portion has seven holes on the upper side. The first hole below the mouthpiece is called *yka sū'ida*, the second *shashka*, the third *bandjka*, the fourth *djaharka*, the fifth *sika*, the sixth *dūka* and the seventh *yka*. On the lower side about midway between the *yka sū'ida* and the *shashka* is an eighth hole called *keftakā*. The names of these holes are used by native musicians to denote the finger required in playing the instrument and also to denote the key of a piece or a scale. In playing, the player puts the mouthpiece in his mouth as far as a kind of a catch (*'arrāq*) in the form of a disc $\frac{3}{4}$ inches across. The compass of the instrument is about an octave.

The *ghaiṭa* is used by the Arabs particularly as a military musical instrument. It is almost always accompanied by the *ṭbal*, a kind of drum, which is beaten with two sticks and the *ṭannbar*, a kind of large drum, which is beaten with the bone of an animal.

The *ghaiṭa* is often called *zammāra*; in the south of Tunisia and the province of Constantine it is also called *zorna*, whence the Turkish word *zornadzi*, *ghaiṭa*-player. Ibn Khaldūn describes it under the name *zallāma*, perhaps a metathesis of *zammāra* (*Proleg.*, ii. 353; ed. Quatremère, Paris 1834). But the name *ghaiṭa* was well known to the writers of the middle ages, as well as to those of Muslim Spain (cf. Dozy, *Suppl. aux Dict. Arabes*, ii. 235; Simonet, *Glosario de voces lbericas*, Madrid 1888, p. 239).

This instrument still exists in modern Spain under the name *gaita* or *raica*. In lands where Turkish is spoken it is fairly common and is called *ghaidā* (cf. Barbier de Meynard, *Diction. Turc-français*, ii. 392).

(A. COUR.)

GHALĀFIKA (Ghalcfka, Alafaka, the Ditio Sabaeorum of Pliny), at one time a flourishing seaport in Yemen, near Bait al-Fakih [q. v., i. 597 *et seq.*]. It was an important emporium and was known as the harbour of Zebīd. About a century before Niebuhr's journey in Yemen the harbour of Ghalāfika became inaccessible through coral reefs, whereupon the rich traders of this coast-town moved to Bait al-Fakih, which rapidly became a flourishing commercial town. During his stay in Yemen, Niebuhr saw only a few walls, a mosque and several tombstones remaining of this once prosperous town.

GHALÇA. The name Ghalça is applied by the Turki-speaking population to the group of tribes of Iranian origin inhabiting the country near the sources of the Oxus, the Pamir, and even (in the case of the Sarikōli) the upper Yarkand, and (in the case of the Yudghāh) the southern scope of the Hindū-Kush. These races belong to a type differing from that of the ordinary Tadjiks of Badakhshān etc.: they are classed by anthropologists as a branch of the brachycephalic Alpine race and known as Highland Tadjiks (cf. AFGHANISTAN, i. 154). The word Ghalça is

Persian, and according to Vullers means a nomad or uncivilized peasant, and the form Gharça suggests a possible connection with the old form of the name Ghardjistan. Geiger suggests that the original meaning may be 'mountaineer' from the word *ghar* 'mountain' used in these languages and also in Pashto. They are Shī'ah by creed and therefore sharply separated from their orthodox neighbours, and speak a number of distinct dialects of an Iranian language, each valley having its own speech. These districts are as follows: Wakhān on the upper Pandj river, under Afghān rule. The language and people are called Wakhī. A distinct dialect of Wakhī is that spoken in Ishkāshim lower down the Pandj river, known as Ishkāshimi.

The valleys of the Warōdj and its tributary the Kōkā are occupied by the people of Sanglī, speaking Sanglīti and of Mindjān speaking Mindjāni. These territories like Wakhān are under Afghān rule. The upper Warōdj valley leads to the Dōrah Pass the principal route through the Hindū-Kush into Cītrāl, and on the southern side of this pass dwells the Yūdakh tribe, speaking the Yudghāh language which comes within the British sphere. Where the Pandj joins with the main stream of the Oxus are the territories of Shighnān and Roshān (in the Russian sphere) in which the Shighni language is spoken, and nearly related to it is the Sarikōli spoken by the Sarikōli people on the Eastern slope of the Pāmīr. Still further north, lies the valley of Yaghnōb on one of the upper affluents of the Zarafshān, where the Yaghnōbi language is spoken [cf. AFGHANISTAN, i. 156^b].

Little is known of the history of this inaccessible region or its inhabitants. It is probable that they formerly extended farther into Badakhshān, and gradually retreated from the open country at the time of the Muslim conquest. Islām spread among them in its Shī'ah form at a later date. Idrisi mentions Wakhān as the country which supplied Badakhshān with musk. Lapis lazuli was also found in the neighbourhood, and this no doubt refers to the mines still worked at Djarm in Mindjān [cf. BADAKHSHAN, i. 554^a]. Wakhān also produced gold and silver and slaves. In modern times the travels of Wood, Forsyth, Gordon, Bonvalot and Sven Hedin and the visits of English and Russian officers, especially Holdich, employed in boundary demarcation have thrown much light upon it, and the researches of Shaw, Ujfalvy, Biddulph, Tomaschek and Geiger have elucidated the ethnology and languages of the whole Pāmīr tract.

bibliography on the Ghālka languages see Geiger, *supra*.) (M. LONGWORTH DAMES.)

GHĀLĪ (A.), plur. *ghulāt*, "one who exaggerates or goes beyond all bounds", particularly in reverence for certain individuals, notably 'Alī and the 'Alids, and considers them incarnations of the Deity. What heads of sects are to be called *ghulāt* depends on the point of the view of the writer, but as a rule those who have adopted such notions, originally foreign to Islām as incarnation (*hulūt*), metempsychosis (*tanāsukh*) etc., are considered to be *ghulāt*. Cf. Friedlander in the *Journ. of the Amer. Orient. Soc.*, xxix, 12.

GHĀLIB, the poetical name of NAJIM AL-DAWLĀ DĀMĪR AL-MULK MĪRZĀ ASAD ALLĀH KHĀN, a distinguished Persian and Urdu scholar and poet, famous for his excellent and polished style of composition. In his Persian Diwān he has occasionally taken the *takhalluṣ* Asad, and is also called Mīrzā Noshā.

Ghālib was of Turanian descent. His grandfather left his ancestral home and came to Dihli during the reign of Shāh 'Ālam. His father, 'Abd Allāh Beg Khān, lived for some time at Lucknow, and went thence to Hyderabad in the service of Nawwāb Nizām 'Alī Khān. After a time he went to Alwar and served under Rājā Bakhtawar Singh, where he was killed in battle. His son, Asad Allāh Khān, then only 5 years of age, was adopted by his uncle Naṣī Allāh Beg Khān, Subedar of Agra. In A. D. 1806, when the district of Agra was made into a Commissionership under General Lake, his uncle was pensioned off, and, on his death, Ghālib, then 9 years old, received an allowance of Rs. 50 a month from the Emperor of Dihli. After the accession to the throne of Wāḥid 'Alī Shāh in A. D. 1847, Ghālib received a yearly allowance of Rs. 500 in recognition of his poetical abilities. The Nawwāb of Rampur, hearing of his fame as a poet, sent his own poetical compositions to Ghālib for correction, and in A. D. 1859 assigned him an allowance of Rs. 100 a month. After living some time at Rampur, Ghālib returned to Dihli, where he died in A. D. 1869, at the age of 73.

(J. F. BLUMHARDT.)

GHĀLIB DEDE, after Fuzūlī, Neṣ'ī and Nedīm, the last of the four great poets of the old school of Ottoman literature; his real name was SHAIKH MUHAMMAD ES'AD, but he is best known by his pen-name SHAIKH GHĀLIB or GHĀLIB DEDE. Born in 1171 = 1757-1758 he was the son of the secretary, Muṣṭafā Reshid Efendi in Constantinople and early became connected with the Mewlewī order in whose monastery, in Yeṇi Kapı, his father is also said to have acted as kettle-drummer. Following his father's example he first entered the service of the state but soon left it to devote himself wholly to the order. He began his novitiate in the parent monastery of the order in Kōniya. Homesickness drove him back, however, to Constantinople, where he remained in the Yeṇi Kapı monastery till in 1205 (1790-1791) he was appointed Shaikh of the Mewlewī monastery in Galata, which is probably the best known to Europeans of all the monasteries of the "dancing dervishes". The favour in which he was held by Sulṭān Selim III., the Sulṭāna-Mother and other high personages, greatly benefitted this monastery, which was entirely rebuilt at his request in 1210

(1796). Ghālib died at the early age of 42 on the 26th Rājab 1213 (3rd Jan. 1799). He is buried in the Galata monastery in a separate *turba*.

Ghālib who numbered among the excellent scholars, who were his tutors, Khodja Neṣ'et, who was himself not unknown as a poet, composed the work which has given him an abiding place among the poets of first rank in his nation, at the early age of 26 (in 1197) — the figure 21 seems to be wrong : this is the romantic and allegorical Mesnewī, *Husu u 'Ashk* (the pronunciation 'ishk is foreign to Turkish). "Beauty and Love". It was written as a kind of protest against Nābi's Mesnewī *Khāirābād* which was extravagantly Persian in style, and stands alone on a level never attained before or after in an Ottoman Mesnewī through its originality of thought so rare in Ottoman poets, its inspiration which recalls the *Divina Commedia* and the loftiness of its fancy, the beauty and relative simplicity of its language. In the struggle between the Persian and the Nationalist schools Ghālib unhesitatingly took the side of the latter and developed a simple yet dignified language more fitting the Ottoman spirit in the happiest way than the artificial language which was then so much in vogue. The influence of this Mesnewī on Turkish literature to the present day has been enormous; the number of Ghālib's admirers is still large; according to them the *Husu u 'Ashk* is the noblest work not only of the romantic school but of all that Ottoman poetry which draws its inspiration from Asia.

Ghālib's *Diwān* which contains a large number of ghazels, *kaşidas* and *rubā'is* is on the other hand relatively unimportant, that is to say, it is no better and no worse than the numerous *diwāns* of his time; it has, however, a certain historical value on account of its *vers d'occasion*.

Prose writings also exist from Ghālib's pen: he translated and wrote a commentary on Shaikh Kose Ahmed Dede's (who is buried in Kōniya) work, *al-Tuhfa al-bahiya fi'l-Tarika al-Mawlawiya*, entitled *al-Shuhba al-Safiya*. He also wrote a commentary on the *Djāzīn al-Mathnawī* of Yūsuf Sine-Čāk, and a collection of biographies (*Tezkere*) of Mewlewī poets, which was continued by al-Saiyid. His *Diwān* with the *kaşidas*, *terdjibends* and *sharkis* and the *Husu u 'Ashk* was printed at Bulāk in three parts in 1252; the *Mesnewī* has often been printed in Constantinople e.g. in 1304, the greater part of it is also given in Ziyā Pasha's anthology of *Mesnewis*, *Kharābāt Turki-Mesnewiyyāt*, 1292. A biography of Ghālib is given by his contemporary Khālid Nūrī Bey, the poet and historian, in his history.

Raif, *Mir'at-i Istanbul*, p. 400 and 408; 'Abdül-Halim Memduh, *Tarikh-i Edebiyat-i Othmaniye*, p. 60; Hammer, *Gesch. d. Osman. Reichs*, iv, 378; Gibb, *A History of Ottoman Poetry*, iv, 175; *Turk. Bibl.*, x, 14. (TH. MENZEL.)

GHĀLIB, ISMĀ'IL, son of the celebrated Ottoman statesman Edhem Pasha, born at Constantinople on the 2^d Dhu'l-Hidjja 1263 (11th November 1847); entered the service of the Sublime Porte early in his career, became a member of the Privy Council and ultimately became *mushavvir* (councillor) for the province of Crete; he died in Constantinople on the 15th December 1895. Ghālib

Bey was the founder of the scientific study of numismatics among the Ottomans and enormously advanced this science by his standard works on the coins of the Ottomans (*Takvimi Meskükâtî Osmaniye*, Constantinople 1307) and of the Seljuks (*Takvimi Meskükâtî Selçukîye*, *ibid.* 1309; also in French under the title *Essai de Numismatique Selçoukide*, Constantinople 1892). Of equal importance are his catalogues of the Urtukid coins and coins of the Caliphate in the Ottoman Museum (*Meskükâtî Türkmanîye Kataloğhî*, Constantinople 1311, also in French, *Catalogue des monnaies Turcomanes*, Constantinople 1894, and *Meskükâtî Kadimî-i Islamiye*, *ibid.* 1312); finally several smaller treatises may be mentioned (*Quelques mots sur les monnaies musulmanes à monogrammes humariques*, Constantinople 1894; *Sur une monnaie Mengoudschide*, Constantinople 1894; *Une monnaie d'Ala eddin Qutubad III* in the *Revue numism. belge*, 1895) Ghālib Bey's collections were purchased by the government after his death for the Imperial Mint Collection (*arshanz-i 'amir*). (J. H. MOEDTMANN.)

GHĀLIB PASHA, MUHAMMAD SA'ID, the son of Ahmed Efendi, Grand Vizier of Turkey under Mahmūd II., 13th Dec. 1823—16th Sept. 1824. Ghālib was born in Constantinople in 1177 (1763-1764) and entered the service of the state in 1202 (1787-1788). In 1216 (1801) he went to Paris to conduct the peace negotiations with France; he also conducted the negotiations with Russia which ended in the Peace of Bucharest, 28th May 1812. Soon afterwards he was disgraced and banished to Asia. He met the same fate some years later when he was deprived of the grand viziership, but he afterwards acted as governor of Erzerum and commander of the eastern troops. In 1244 (1828-1829) Ghālib died at Balikesir.

GHALZAI, a large and important Afghān tribe with numerous subdivisions which occupies the country near Ghazni and eastward as far as Khost and Wazīristān, also the upper valleys of the Tarnak, Arghandāb and Arghasān [cf. *AFGHANISTAN*, i. 153]. They are largely nomadic, and migrate in enormous numbers annually at the commencement of the cold weather mainly via the Gomal Pass. There they camp in the plains of the Indus valley while their traders spread throughout India. At the commencement of the hot weather they march back to their upland homes. These nomadic trading communities are known by the name of Powindahs. The most numerous section is the Sulamān Khel. The origin of the Ghalzais is doubtful. They are at the present day one of the most important elements in the Afghān race, and speak the Pashto language, but there is good ground for believing that they are of mixed blood, and have absorbed both Tadjik and Turkish elements. Attempts have been made to identify them with the Khaldj Turks who entered Afghanistan and took service with the Ghaznavid monarchs: this rests solely on the similarity of the name Khaldj (sometimes written Khildji) with Ghalzai (sometimes written Ghilzai or Ghildji). But there is no evidence of this, though the appearance of the Ghalzais favours the idea that there is a Turkish element in the race, which is historically probable, considering the large bodies of Ghuzz, Khaldj and other tribes which entered

their country from the 11th to the 14th centuries, many of whom fought as mercenaries under the Ghaznavid and Ghōrid kings. According to the legends in the *Makhsan-i Afghānī* the Ghalzais are descended from Mato daughter of Batan who had an illicit connection, afterwards legalized by marriage, with Shāh Husain a refugee prince of Ghōr. Owing to the clandestine nature of his birth the son who was born was called Ghal-zoe 'the thief's son', whence the name Ghalzai. The great Lōdī tribe (including the Sūri and Lohānī) was of the same descent [cf. *AFGHANISTAN*, i. 152]. This legend no doubt conceals the mixed Afghān and Tadjik origin of these tribes. The Ghalzais proper do not emerge from obscurity until after the Lōdis and Sūris who founded dynasties in India in the 15th and 16th centuries. They come into notice during the 17th century when their power and influence in Zamīndāwar increased owing to the transportation of a large section of the Abdālī to the Herāt province by Shāh 'Abbās I, and at the commencement of the 18th century under their chief Mir Wais they began to intrigue with Shāh 'Ālam I, the Emperor of Dillī. Mir Wais was arrested and taken prisoner to Isfahān, while the Ghalzais were very severely treated by the Georgian governor Gurgin Khān. Mir Wais, however, obtained the confidence of Shāh Husain, and was allowed to go on a pilgrimage to Mecca. On his return he obtained permission to return to Kandahār. Gurgin Khān, to humiliate him, demanded his daughter from him. Mir Wais pretended to submit and substituted another woman for his daughter, but murdered Gurgin Khān and his followers at a banquet to which he had invited him. The Ghalzais now openly rebelled, drove out the Persian garrison and took possession of Kandahār. Mir Wais became master of the province, but died shortly in 1127 (1715). His brother 'Abd al-'Aziz succeeded but was soon murdered by Mahmūd eldest son of Mir Wais, who became ruler himself, and gathered strength during the next few years. He was encouraged by the weakness of the Persian government and the success of the Abdālīs of Ilazāra who rebelled successfully in 1129 (1717). In 1132 (1720) Mahmūd ventured to invade Persia itself, and occupied Karmān almost without opposition, but was soon expelled by Lutf 'Alī Khān, and retired to Kandahār. Next year, however, he again invaded Persia, assisted by large bodies of Abdālīs and Balōchīs, took Karmān and Yazd and arrived before Isfahān in 1134 (March 1722) and overthrew the Persian army at the battle of Gulnābād. He did not obtain possession of Isfahān, however, till October, when Shāh Husain abdicated and Mahmūd became Shāh of Persia being invested by Shāh Husain himself in 1135 (1722). The Ghalzai rule in Persia lasted for seven years, 1135 to 1142, (1722 to 1729). Tahmāsp II. maintained his claims to the throne throughout this period, and was ultimately restored through Nadir Shāh's help. Mahmūd began his rule well, but soon showed himself a sanguinary tyrant. The invasions of the Turks and Russians apparently deprived him of all self-control, and wholesale massacres in Isfahān followed. He seems to have lost his reason and died (or was killed) while insane. He was succeeded by Ashraf, son of his uncle 'Abd Allāh, during whose reign the wars with Turkey and Russia continued, Persia losing many provinces. Ashraf made peace with the Turks by appealing

to their sympathies as a Sunni who was restoring the true faith among the Persian *Shāhs*. Kāndahār had meanwhile fallen into the possession of Mahmūd's brother, which caused a division among the *Ghalzais* in their own country and weakened them in Persia. Nādir's victory at Dāmghān in 1135 (1729) and at Murcā-khūrt the same year put an end to the *Ghalzai* rule. Ashraf fled; his army melted away and was attacked everywhere by the local tribes, and finally Ashraf himself was slain by 'Abd Allah Khān Balūc. He was a brave warrior but unfitted by nature for the rule of a great country. Very few of the *Ghalzais* ever found their way back to their native land. The tribe relapsed into obscurity and has never since produced a ruler with the exception of Āzād Khān, a Sulaimān Khēl *Ghalzai* who obtained ephemeral power at Tabriz between 1166 and 1169 (1753 to 1756) and disputed the supremacy with Karīm Khān Zand, by whom he was defeated and captured, but well treated. In Afghanistan, after the time of Nādir Shāh, the power fell into the hands of the Durrānis and the *Ghalzais* have been obliged to submit to their rule from the time of Ahmad Shāh to the present day. Nādir Shāh took the Durrānis into favour and expelled the *Ghalzais* from the lands which they had occupied near Kāndahār. They were nominally banished to the Herāt country, but seem in reality to have returned to their old homes near Ghaynun, and many settled in the Kābul province, still part of the Mughal Empire of India. It was this settlement which led to Nādir Shāh's invasion of Kābul, which was followed by that of India itself. In the disputes which took place between the members of the Saddōzai family after Timūr Shāh's death the *Ghalzais* took the side of Shāh Shudjā against Mahmūd and assisted him to take Kābul in 1218 (1803). The celebrated Bārakzai chief Pāinda Khān, father of Dōst Muḥammad, married a *Ghalzai* wife among others, and her sons Kohandil, Purdil, Shērdil and Mihrdil long held possession of Kāndahār and had great influence with the *Ghalzai* tribe. In more modern times the principal incidents in their history are the battle of Ahmad Khēl (1880) when a *Ghalzai* force attacked and was defeated by the British force under Stewart which was marching from Kāndahār to Kābul, and the rebellion against the Emir 'Abd al-Rahmān in 1886 (see Art. 'ABD AL-RAHMĀN KHĀN, i. 60).

The *Ghalzais* have a very democratic constitution and pay little obedience to their nominal chiefs. They are divided into two main sections known as Turān and Burhān (or Ibrāhimzai). (Possibly some allusion to a Turkish origin is implied by the name Turān). Each of these sections comprises several important clans: among the Turān the principal are Hōtak (from which the Persian invaders sprang) and the Tōkhī. The Nāsirs and Kharōti are sometimes included, but they are generally considered not to be *Ghalzais* at all. Among the Burhān the principal are the Sulaimānkhēl (now the most important of all *Ghalzai* clans) the Tarakkī, the Andar, the Ishāk, and others of minor importance.

(M. LONGWORTH DAMLS.)

GHĀNA, an ancient town in the Western Sūdān which has now disappeared. According to Barth it lay in 18° N. Lat. and 7° S' W. Long. (Greenw.) not far from Walāta. M. Delafosse however, relying on certain statements by Arab geographers, notably al-Bakī, places Ghāna in the Awkār district within the triangle Walāta, Nema, Bassikūnū, i.e. about 240 miles north of the Niger on the meridian of Sansanding. Martin Hartmann (and this is also Desborough-Cooley's opinion) thinks that Ghāna must have been nearer the Niger, not far from Timbuktu. [Cf. in addition J. Marquart, *Die Benin-Sammlung des Niederl. Reichsmus. f. Völkerkunde* (Leiden 1912), where this question is fully discussed, particularly pp. cxxx *et seq.* and cxlix *et seq.*: Editors].

Barth and Delafosse agree in placing the foundation of Ghāna about 300 A.D. and ascribe it to men of some white race, Barth suggests that Fulbe. Delafosse on the other hand makes the bold suggestion that immigrant Jewish-Syrian tribes from Cyrenaka were founders. One of the leaders of these immigrants named Kara settled in Awkār and founded a state there which remained under the rule of his descendants till about the end of the viith century. This dynasty was succeeded by another of Soninke negroes whose first ruler was called Kaya-Maghan. His successors, the Sisse-Tankara extended their kingdom in the east as far as the Niger, in the west to the Atlantic Ocean, in the south to Tekiūr and in the north to the Sahara. In the xth century these king had to wage long wars with the Perbers who had settled in Tagant, notably the Lemtūna, the lords of Awdaghast [q.v., i. 516⁷]. But they finally won the upper hand, took the town of Awdaghast in 990 A.D. and installed a negro as governor there. During the next fifty years the kingdom of Ghāna was the most powerful state in the Sūdān.

According to al-Bakī's description (written in 460 = 1067-1068) Ghāna consisted of two towns lying in a plain. One of these was inhabited by Muslims, contained twelve mosques and numbered jurists and other scholars among its inhabitants. The other town six miles distant was the royal residence. The king's abode consisted of a palace and a number of huts with round roofs; a wall enclosed the whole. Near the royal court of justice was a mosque allotted to Muslims who appeared on special missions before the king. The houses were built of stone, probably the only ones of their kind in the Sūdān, or of the wood of the gum tree. The royal residence had received the name *ghāba* (the wood) from the woods around it. In these woods were the dwellings of the magicians and priests, whose duty it was to guard the idols. There also were the royal tombs and the prisons. The people like their rulers were fetich-worshippers, but the latter thought highly of Muslims and therefore chose his interpreters, his treasurer, and the majority of his ministers from among them.

Its situation between the Sūdān and Sahara made Ghāna an important trading centre at an early period. Copper and clothstuffs were imported from

the Maghrib, while caravans laden with salt came from the Sahara. The most important article of commerce however was the gold obtained in the mines of Wangara (the area drained by the Upper Senegal and the Faleme), which the merchants obtained in Ghayārō, eighteen days' journey from Ghāna.

In spite of its wealth and power and although al-Bakrī says that the king commanded 200,000 soldiers, including 40,000 archers, Ghāna could not resist the attacks of the Almoravids. 'Abd Allāh b. Yāsīn [q. v., i. 32^b et seq.] seized the town of Awdaghost in 446 (1054-1055). While one section of the Almoravids were conquering the Maghrib, other troops invaded the Sūdān under Abū Bakr. After fifteen years of war Abū Bakr finally succeeded in taking Ghāna in 1076. The inhabitants in part were forced to adopt Islām and in part massacred. The king had to pay tribute.

The death of Abū Bakr gained the kings of Ghāna their independence once more but did not restore their former power. The tributary lands regained their independence one by one, so that at the end of the xiiith century A.D. the state of Ghāna only consisted of Awkār and Bassikūnū. It led a bare existence for a century more until, in the year 1203, Sumangūrū-Kannte, chief of the Sūsū conquered Ghāna and incorporated it in his dominions. Soon afterwards a number of the inhabitants, led by a Shaikh named Ismā'īl, left the town and founded Wālatā at some distance to the northwest. Finally in the year 1240 the Malinke chief Sundiata overthrew the kingdom of the Sūsū and levelled Ghāna to the ground.

(G. VERE.)

GHANĪ (v.). 'the self-sufficing', one of the beautiful names of God. Cf. ALLĀH, i. 303¹.

GHANĪ B. AṢṢUR, a tribe in North Arabia, a branch of the Kais b. 'Ailān and related to the Ghatafan [q. v., p. 144^b et seq.]. They lived around Hīmā Dārīya in Naǧd and were neighbours of the Tayi with whom they were constantly at feud. In the time of the Džahiliya they worshipped the idols al-Lāt, Manāt and al-'Uzzā, all of whom are mentioned in the Korān (Sūra liii. 1, 2). The great pre-Islamic poet Ṭufail b. 'Awf, called Ṭufail al-Khail (on account of his skill in depicting the horse) belonged to the Ghani.

Among the settlements of the Ghani were: Aḥḥab, Aw'āl, Aḥḥurāt. Baṭn Dhī-'Adj, 'Amūd Ghiryaḥ. Džurayir. Ghama. Ḥaziz (a fairly large tract in the W. of Hīmā Dārīya). Kinās, Ma'dīn al-'Awdaj, Minā, Mutālī. Sharāj, al-Shibak (between Abrah al-'Azzaf and Medina), Tīār. Among the mountains, that belonged to them, are mentioned: Uḏākḥ (a large mountain), Kabīd, Kabsha La-

ḥita(?), Kunbu', Naǧād al-Nīr (in common with the Ghādira b. Ṣaṣ'a'a), Rābigha, Suwādī (a large mountain), Suwādīma (with the stream of the same name), Thahmad (red hill); among Wādīs and waters: Abātīr (W.) 'Akīl (W., only the upper part), al-Akhsā, al-'Anāk, al-Baṭḥa, al-Djathdžasa. Dhū Bihār, al-Djānūka, Ghām, Ghuzaiya (near Djabala, the largest water of the Ghani), al-Ḥabandj. al-Ḥinbidj, al-Hunaibidj (al-Ḥanābidj), Ḥulaiya, Ḥars, Khad'a, Immara, Midḥ'a, Muḥallala, Sulmanān (two Wādīs on Mount Suwādī), Tabnān, al-'Udiya, al-Uṭāta, Urainiba, Zaḥā.

GHANĪMA, spoils of war. By Ghaniṃa Muslim scholars mean the weapons, horses and all other movable possessions taken in battle from conquered unbelievers (cf. FAR. ii. 38^b et seq.). Four-fifths of the booty were to be divided among the troops, who were present at the battle whether they actually fought in it or not. Horsemen could claim a share three times as large (according to Abū Ḥanīfa's view only twice) as that of a foot-soldier; one who had slain an enemy in battle also received his equipment (*Salab*).

The remaining fifth belongs to Allāh: "Know that a fifth of what ye have won belongs to Allāh — to his apostle, his family, to the orphan, the needy, and the traveller — if ye believe in Allāh". This verse in the Korān (Sūra, viii. 42), was revealed shortly after the battle of Badr. From ancient times Arab chiefs had been accustomed to receive a certain portion of the booty and it was thus nothing new when the Prophet had one fifth of the *ghanima* granted him in God's name in this verse of the Korān to defray the expenses of the state.

After Muḥammad's death the Imām was at first considered qualified to apply the fifth of the spoils in the way that seemed to him best to further the general interest of the Muslims. This was also the teaching of Mālik Ibn Anas. But most of the later Muslim scholars have interpreted Korān viii. 42 literally. In their view the fifth allotted to Allāh must be divided into five equal portions among the five categories expressly mentioned (in Abū Ḥanīfa's view however only among three of the categories mentioned in Korān viii. 42: the orphan, the needy and the traveller); the portion originally allotted to the Prophet himself is, according to the Shāfi' school, to be applied to the general good of the Muslim community.

Prisoners of war are also included in the *ghanima*.

Unbelievers, who are taken prisoners of war by Muslim's — women and children as well as men — are divided as slaves among the troops who are entitled to the booty. The Imām may, however, dispose of freeborn, male, adult prisoners of war in other ways. He can, as the good of the Muslims demands it, also set them free on payment of a ransom (or even without such payment), exchange them for captured Muslims or on the other hand he may put them to death; according to Abū Ḥanīfa, however, he may not set them free.

The rules regulating the division of *ghanīma*, in the view of most Muslim scholars, do not apply to the division of lands in the conquered countries (cf. FAI', ii. 39').

Enger, Bonn 1853), p. 217, 226 *et seq.*; F. F. Schmidt, *Die Occupation im Islamischen Recht (Der Islām, i. 300 *et seq.*); and the bibliography given in p. 345 and 336 of T. W. Juynboll's Handbuch des Islām. Gesetzes (Leiden 1910).*

(TH. W. JUYNBOLL.)

GHANĪMAT, MUHAMMAD AKRAM, a Persian poet, who was governor of Lahore from 1106—1108 (1695—1697). He is the author of a Mathnawī, very popular in India called *Nairang-i 'Ishk* or *Shāhid-u 'Aziz* (lithographed at Lucknow).

Bibliography: Ethé in the *Grundriss der Iran. Philol.*, ii. 251.

GĦARB and Maghrīb [q. v.] are synonymous, and the opposites of "Sharḥ" and "Mashriḥ". *GĦarb* is a *maṣḍar* of *gharaba*, *Maghrīb* being derived from the same verb in the sense of 'to set', used of the sun or of a star. Then both come to mean the place of setting, the West. The dual, as used in the Korān, 45, 11, 17 in the expression "Lord of the two Mashriḥs and Lord of the two Maghrīb's" means the two extreme points at which the sun appears to set, the most northern in summer (26° N. in Central Arabia) and the most southern in winter (26° S. in Central Arabia). The plural, on the other hand, as used in the Korān, 70, 40, "Lord of the Mashriḥs and Maghrīb's", denotes the daily points of setting of the sun between these extreme points. There are, therefore, one hundred and eighty of these.

Geographically *GĦarb* is used as a name of Morocco or of the northern part thereof. It survives in the name of the southern province of Portugal *Algarve*, which occurs also in the plur. *Algarves* for the province just named together with the north-western part of Morocco.

The district south of Bairūt in Syria is also named al-Gharb. (T. H. WEIR.)

GĦARBĪYA, a province in the Delta of Egypt, lying between the Rosetta and Damietta arms of the Nile, bounded on the north by the sea, in the south by the *Menūfiya* [q. v.]. It has existed since the division of Egypt into *a'māl* (cf. Becker in the article EGYPT, section 2 *et seq.*). According to Abū Ṣāliḥ it was divided into 149 districts, included 165 villages and yielded a revenue of 470,955 dinārs. When the administrative units were increased in size, the *Kūsaniya*, *Samanūdiya* and *Dandjāwiya* were incorporated in the *GĦarbiya* province, so that Ibn Dīr'ān about 250 years later mentions 471 villages and a revenue of 1,844,080 dinārs. Kalkashandī praises

the great fertility and flourishing condition of the province. At the present day (according to Boinet Bey, 1899) it has 1,297,656 inhabitants, 515 towns and villages and is divided into the following 11 circles (*marāḥiz*): 1. Burullus; 2. Sherbīn; 3. Dessūḥ; 4. Fūwa; 5. Kafr al-Shēkh; 6. Kafr al-Zaiyāt; 7. Maḥalla al-Kubrā; 8. Sanja; 9. Talkha; 10. Tanja; 11. Ziftā. The capital is Tanja.

(E. GRAEFE.)

GĦARDAYA, a town in Algeria, s. Art. MZAB.

GĦARĪB (A.), "strange, rare, foreign", whence a technical term in lexicography for rare words in the Korān and Hadīth; in the science of Tradition for such traditions as are isolated, do not date from one of the companions of the Prophet, but only from a later generation; in prosody, for the rare metre *al-mutadārīḥ*. Cf. the dictionaries.

GĦARĪM or *GĦARĪM*, i. e. debtor. The *ghārim* can legally claim a share of the yield of the zakāt if he has brought the debt upon himself for a legitimate purpose and especially if he has voluntarily taken upon himself to pay it off "for God's sake". Cf. Korān ix, 60.

In some districts of Sumatra people who leave their homes to study law, are regarded as *ghārim*; they receive something from the zakāt. See Snouck Hurgronje, *The Achehnese*, i. 269.

(TH. W. JUYNBOLL.)

GĦARDJISTĀN (*GĦARSHISTĀN*, *GĦARISHTĀN*) a tract on the upper valley of the Murghāb in Afghān Turkistān. It seems to have corresponded with the country now occupied by the Firōzkōhis, although a passage in the *Masālik wa Mamālik* speaks of the town of Bāmiyān being on a mountain beneath which flows the river which passes through *GĦardjistān*, which if correct would locate *GĦardjistān* on the Surkhāb River; Bāmiyān however seems to have been rather the name of a country than a town, and *GĦardjistān* was undoubtedly further west, north of Ghōr and close to the Ghōri capital Firōzkōh, from which the modern Firōzkōhis probably derive their name. When Khusraw Malik the last of the Ghaznavids was taken prisoner, he was taken to Firōzkōh and imprisoned in the fort of Balarwan in *GĦardjistān*, and we learn that Firōz son of Yezdijird fled from Sidjistān to Tukhārīstan by way of *GĦardjistān*.

GĦardjistān was a separate state under its own rulers who bore the title of Shār i. e. king (from Old-Iranian *kshathrīya*, cf. Marquart, *o. c.* and see BĀMIYĀN i. 634^b). They were under the suzerainty of the Sāmānis, and afterwards of the Ghaznavides. Maḥmūd received the submission of the Shār in 389 H. and was again at war there in 401 when his son Mas'ūd took part in the expedition. The Tadjik leader Warmesh or Warmesh-bat (apparently not yet converted to Islām) had to surrender the castles he had taken in *GĦardjistān*. The Shār is stated to have sold his rights to Maḥmūd and died in imprisonment in 406. The dynasty however seems to have continued, for Bahā' al-Dīn Sām. who

began to reign at Firōzkūh in 544, made an alliance with the Shārs of Ghardjistān; he built the forts of Bindār and Fiwār in that country, and it afterwards formed part of the Ghūrī kingdom. When 'Alā' al-Dīn Djahān-sūz attacked Ghaznīn he assembled the forces of Ghūr and Ghardjistān. He afterwards made over the kingdom of Tukhāristān including Ghardjistān to his half-brother Fakhr al-Dīn, and it remained separate from Ghūr until the invasion of 'Alā al-Dīn Khwārizmī. After the disappearance of the Ghōris, Ghardjistān no longer formed a separate province, and its name does not appear to be known to modern travellers.

Raverty, Vol. I. pp. 80, 113, 341, 423, 431. Elliot-Dowson, *History of India*, II, 286; *Bibl. Geogr. Arab.* (ed. de Goeje), i.—iii. s. Index; Vākūt (ed. Wustenfeld), iii. 785 f. (s. v. *Ghardjistān*) and Index; J. Marquart, *Iranšahr*, p. 79; I.e. Strange, *The Lands of the Eastern Caliphate*, p. 415 et seq.

(M. LONGWORTH DAMES.)

GHASB, i.e. usurpation. By this term the law in general understands the illegal taking possession and illegitimate exercise of the rights of another (e.g. when some one rides on a horse without the owner's permission). The purloining of a thing in secret is not called *ghasb* but *sarika* (theft).

In learned discussions (*ādāb al-baḥṭh*) *ghasb* means to seize suddenly upon some one's words and contest his opinion without giving him time to explain himself fully.

(TIT. W. JUVENOLI.)

GHĀSHIYA (A.), "the covering", particularly a "covering for a saddle". Among the Saldjūks, Manlūks etc., the royal *ghāshiya* was one of the insignia of royal rank and was carried before the ruler in public processions. Cf. C. H. Becker, *La Ghāshiya comme emblème de la royauté* in the *Centenaire de M. Amari*, ii. 148 et seq. — (*Ghāshiya* is also used metaphorically of a great misfortune that overwhelms some one: in this sense it is found in Sūra lxxxviii. 1 for the day of the last judgment or for the fires of hell and from this the Sūra has received the name *Ghāshiya*).

GHASSĀN (GHASSĀNIDS), an Arab dynasty in Syria, of Yamanī origin. They were monophysite Christians and were under the suzerainty of the Byzantine Emperors, whose frontiers they had to defend against the Persians and their vassals, the Lakhmids of Hīra. Their rule extended approximately over the province of Arabia (roughly the Ḥawrān district and Bakkā'), Phoenicia ad Libanum, Palestina Prima and Secunda. In contrast to their relatives and natural enemies, the Lakhmids, to whom they were far superior in culture from their contact with Greek civilization, the Ghassānids had no fixed residence. Djawlān [q. v., i. 1029^b et seq.] with the town of Djābiya [q. v., i. 988 et seq.] in Palestina Secunda is sometimes mentioned by the Arab poets as their capital, and sometimes Djillik [q. v., i. 1043^b et seq.] near Damascus.

The history of this dynasty is one of the most obscure portions of Arab history. The statements of the Arab historians Ḥamza Ispahānī, Ibn Kūtaiba, Ibn al-Kalbī, Mas'ūdī, Abū 'l-Fidā (Ṭabari hardly mentions them) concerning them are limited

to a few lists of rulers and brief accounts which are full of contradictions; e.g. Ḥamza and Abū 'l-Fidā give thirty-one rulers of this dynasty, while Ibn Kūtaiba and Mas'ūdī only give ten of them: Ḥamza makes king Ḥārith b. Djābala [q. v.] about whom we are fairly well informed by the contemporary Byzantine chroniclers Malalas, Procopius, Theophanes etc., reign only ten years, while as a matter of fact he reigned forty years. According to the usual Arab tradition the Ghassān were descended from the South Arabian tribe of Azd. The latter is said to have left the Yaman after the breaking of the dam at Ma'rib and to have gone to Mecca (Baṭn Marr near Mecca). At a later period one section of the Azd led by 'Amr b. 'Amir Muzaḳkiya' went to Syria; they are said to have received the name Ghassān from a stay of some considerable time at the pond of Ghassān in the Syrian desert (this name however had already been borne by Māzid son of Azd). According to Ḥamza and Ibn Kūtaiba, it was Ṭha'labā b. 'Amr, a great grandson of 'Amr b. 'Amir, who led them to Syria. Djafna (Greek Γεούφανς, a corruption of Γεούφανς), a son of 'Amr, was considered the founder of the dynasty. In Syria they had to pay an annual tribute to the Roman phylarchs there, the Dadjā'ima of the tribe of Salih, probably descendants of the Christian phylarch Ζωκωμος, mentioned by the ecclesiastical historian Sozomenus. Ultimately they refused to pay this, conquered the Dadjā'ima and took their place, in which they were recognised by the Byzantine emperor Anastasius (probably about the end of the fifth century A.D.), who made use of them as frontier guards against the Lakhmids of Hīra.

The most important and the first ruler of this dynasty, whose existence is certain, was al-Ḥārith b. Djābala (Greek Ἀρέθης τοῦ Γαβέλλα), an enthusiastic patron and protector of the monophysite church. His genealogy is al-Ḥārith b. Djābala b. al-Ḥārith b. Ṭha'labā b. 'Amr b. Djafna. His father Djābala may be identified with the Γαβέλλας mentioned by the chronicler Theophanes as making raids into Palestine about the end of the fifth century A.D. In 529 A.H. he was appointed lord over all the Arab tribes in Syria by the Emperor Justinian and received the titles Phylarch and Patricius, the highest rank next to the Emperor in Byzantium at that time. In the same year he took part in the suppression of the rebellion of the Samaritans on the side of the Byzantines. The greater part of his reign was occupied with wars with al-Mundhir III. of Hīra. In 528 he was victorious over his opponent. About ten years later he again quarrelled with al-Mundhir over the so-called "Strata", the land on both sides of the military road from Damascus to Palmyra as far as Sergiopolis, to which both laid claim. In 541 al-Ḥārith fought in the Byzantine army under Belisarius in Mesopotamia. But when he returned home to Syria by a different route from the Byzantine army without having won any successes worthy of mention, he was accused of treachery to the imperial cause. In a later war between al-Ḥārith and al-Mundhir (about 544) the latter took prisoner a son of the former and sacrificed him to the goddess al-'Uzza, the Arab Aphrodite. In June 554 al-Ḥārith won a decisive victory over al-Mundhir, who fell in battle in the district of Kinnesrin (Chaleis), probably at al-Hiyār. This battle is perhaps identical with that celebrated by the Arabs

as the "Day of Ḥalīmā" (according to the common Arab tradition, so called because Ḥalīmā, daughter of al-Ḥārith, anointed the warriors with her own hands with *ḥalūk*, a perfume containing saffron; but it is very probably a place-name). His son and successor afterwards sought to avenge al-Mundhir's death and made a raid into Syria. In 563 al-Ḥārith went to Constantinople to give an account of these doings to the Emperor and to advise what measures should be taken. He also took advantage of his stay there to discuss the appointment of his successor with the Emperor. He died in 569 or 570. We may here mention the Arab tradition according to which al-Ḥārith besieged the Jew al-Samaw'al b. 'Adiyā in his citadel of Ablak in Taimā and slew his son because al-Samaw'al would hand not over the cuirasses left with him by the poet Imra'u l-Kais [q. v.] before his journey to Constantinople.

Al-Ḥārith was succeeded by his son al-Mundhir (Greek Ἀλαμούνδρος). Soon after his accession the Persian Arabs invaded the Ghassān territory. Al-Mundhir defeated their king Kābūs, apparently in the battle of 'Ain Ubāgh so often celebrated by Arab poets. The Emperor Justinus was not well disposed to al-Mundhir, who, like his father, was an ardent protector of the Monophysites, and tried to have him assassinated by underhand means. After the attempt on him had failed, al-Mundhir rebelled and refused allegiance to the Emperor for three years. On account of the renewed inroads of Persian Arabs into Byzantine territory, the Byzantines were forced to make peace with al-Mundhir and a treaty was concluded after several unsuccessful overtures at the tomb of St. Servius in Ruṣāfa (Sergiopolis) by a special envoy from Constantinople. Two years after Justin's death (580) al-Mundhir came with two of his sons to Constantinople and was received with great honour by Tiberius from whom he received the actual crown (*ṣūgā*) in place of the previous diadem (*ḥilā*). In Constantinople he also held an assembly of his co-religionists and endeavoured to smooth over the disputes among them. In the same year al-Mundhir raided Hira, burnt the town and brought back rich booty. This success did not serve to dissipate the general mistrust of him or the suspicion that he had had a treacherous understanding with the enemy on a raid into Persian territory undertaken with Mauricius, Comes of Anatolia, and the Syrian Magnus was commissioned to make him prisoner. Magnus was early able to attain his end at the dedication of a church in the village of Ḥuwwārīn (between Damascus and Palmyra), to which al-Mundhir had come as a guest, and he was taken prisoner to Constantinople (581). The incarceration of al-Mundhir and the suspension of the payment of subsidies (*annona*) at the same time to his family provoked his four sons under the leadership of the eldest, al-Nu'mān (Greek Νουμάν), to raid Byzantine territory which they laid waste in a terrible fashion. The Emperor Tiberius therefore equipped an expedition against them under the leadership of the above mentioned Syrian Magnus. The latter succeeded in capturing al-Nu'mān who was likewise brought to Constantinople.

After the capture of al-Mundhir and al-Nu'mān anarchy broke out in the Syrian desert, the various tribes chose their own chiefs and some went over to the Persians. With the capture of Jerusalem and Damascus (613-614) by the Sassanian Khns-

raw Parwiz, the power of the Ghassānids seems also to have collapsed. Whether the phylarchate was restored on the reconquest of Syria by the Byzantines (629) is uncertain. According to the usual Arab tradition Ḍjabala b. Aḥḥam was the last king of the house of Ghassān. In the battle on the Varmūk (635-636) he fought on the side of the emperor Heraclius against the Muslims. When the defeated Emperor then retired to Constantinople, Ḍjabala is said to have submitted to the Caliph 'Umar and adopted Islām but to have afterwards taken refuge with the Byzantines in Constantinople and adopted Christianity again.

(J. SCHLEIFER).

GHĀT, a town in the Sahara of Tripolitania, belonging to the sandjak of Fezzān, 400 miles S.S.E. of Ghadāmes and 280 W.S.W. of Murzūk in 24° 57' N. lat. and 10° 17' 30" E. Long. (Greenw.), at the intersection of the caravan routes which lead to the Sūdān via Fezzān and Ghadāmes. This exceptional position at the intersection of important commercial routes has caused it to become one of the busiest trade centres in the Sahara. It is one of the starting points for trade with Central Africa.

Its topography is known fairly accurately from the accounts of the European explorers who have visited it, notably Duveyrier and Erwin von Bary. There is nothing remarkable in it. Like all towns in the Sahara it is surrounded by a wall with six gates which winds around it; three of these bear the name Tamelghat in common, a fourth is the gate of Tafelghat, a fifth Bāb Kelala and the sixth is Bāb al-Khair. The streets are narrow,

tortuous and full of sand. The houses are very primitive. Among the public buildings are a school and a mosque with a minaret. In the centre of the town is a little square called *Ishli*, from which radiate six streets to the six gates, cutting the town into six sections.

Ghāt owes its importance entirely to the caravan traffic. The town itself has barely 600 houses and 4000 inhabitants. Its suburbs are the two little villages al-Tadaram and Tūin, about half a mile beyond the town wall.

The ground between these villages and Ghāt is a scene of great animation when the caravans arrive from the Sūdān. Dates, skins, cotton-stuffs, salt and natron are the principal articles traded here. Industry is limited to local needs. The chief manufactures are furs, wooden vessels, trappings and cases for weapons.

The population of Ghāt consists of about equal elements of Berbers, Arabs and Sūdānese. It includes: *a.* The Kil Ghāt or Ghātians proper, grouped into 8 sections: Imekammazen, Kil Khēfsa, Yadjenen, Kil Talak, Kil Yanan, Kil Tamedghat, Kil Tūirt, Kil Tarat; *b.* Colonies of foreign traders, chiefly from Ghādāmes; *c.* Transitory bodies of Tuāreg, who are caravan leaders and lastly; *d.* *Iharrātin*, negroes who till the soil.

The Ghātians speak Arabic and Hausa in their business transactions with foreigners. Among themselves they use a peculiar Berber dialect called *Tamadjeck*, which is not connected with the groups of Tuāreg dialects.

For the history of Ghāt there is an absolute dearth of documents. Its origins are obscure. Duveyrier (*Touaregs du Nord*, p. 267) proposes to identify it with the oppidum of Rapsa mentioned by Pliny the Elder among the centres conquered by the Roman general Cornelius Balbus about the year 19 A.D., but his hypothesis, which is not based on any certain facts, has still to be verified. Nor can any more be made of the local legends which attribute the foundation of the town to the Berber tribe of Yadjenen with the help of the Kil Khēfsa, the Kil Tarat, the Kil Talak and the Imekammazen. There are no historical texts to support this tradition.

Ghāt in fact only began to play a part in the history of the Sahara about the middle of the sixteenth century, at the time of the great expeditions of exploration in the Sahara. The majority of the travellers who have attempted to reach Central Africa from Tripoli have chosen it as the centre of their negotiations with the Tuāreg, from whom it was necessary to obtain permission to traverse the Sūdān.

From 1845 to 1876 it was successively visited by Richardson (1845), Barth, Richardson and Overweg (1850), Ibn al-Bū Derba (1858), Duveyrier (1860) and Erwin von Bary (1876-1877). Before it was ceded by the Turks to Italy, it was ruled by a Berber chief whose power was hereditary, according to the Tuāreg custom.

In 1875 the Turks took advantage of a war which broke out between the Azdjer and Hoggar, two Tuāreg tribes, to instal their authority in Ghāt. It passed from them for a brief period in 1886 as a result of a rebellion of the Azdjer, fomented by a *sherif* named Sī Bū Bakr. Ghāt fell into the hands of the Tuāreg and a portion of the garrison was massacred. In the end the Azdjer made peace with the Turks and the town

was again occupied by Ottoman troops. It was governed by a *Kā'immaḥam* for civil matters and by a *Yuzbashi* for military affairs.

(NEHLIL.)

GHATAFĀN, thought by Reiske to denote a kind of bird, apparently in error (Lane), the name of two Arabian tribes, Ghatafān b. Sa'd b. Malik b. Harām b. Djudhām, a south Arabian tribe, and Ghatafān b. Sa'd b. Kais 'Ailān. The latter alone is important. The pasturing-grounds of the Kaisite Ghatafān extended eastwards from Khaibar and the borders of the Hūdūd to Adjā and Salmā the mountains of the Banū Tay'. (For their camping-places see Wustefeld, *Genealog. Tabellen, Register*, p. 171). Ghatafān was divided into two large branches, Ashdja', which inhabited the country in the neighbourhood of Yathrib, and Baghid, subdivided into 'Abs and Dhubyān, whose territory lay round about Sharabba and Rabadha. Their neighbours were branches of Khaṣāfa b. Kais 'Ailān, the most important being Sulaim on their south border, and further south Hawāzin, brother-tribe to Sulaim.

History: The history of the tribes of Khaṣāfa and Ghatafān commences from the middle of the sixth century, when the dominion of the Yemen over the Ma'add tribes came to an end. The chief of all Ghatafān at this time was Zuhair b. Djadhūma of 'Abs [q. v., i. 73]. He held the title of king (malik), and received tribute from Hawāzin also. He was assassinated by a Hawāzini, who became independent chief of that tribe. Zuhair was succeeded by his son Kais, as chief of 'Abs only, Dhubyān choosing Hudhaifa b. Badr of Fazāra, who was much the more powerful and influential of the two. The endeavours of Kais to avenge the death of his father were interrupted by the famous war of the Horse-race between the tribes of 'Abs and Dhubyān (see art. DĀHIS). During the war Khālid who had killed

Zuhair was himself slain by Ḥārith b. Zālim al-Dhubyānī, whilst both of them were guests of the Lakhmid prince. Ḥārith took refuge with Ghatafān who refused him protection, but after some wanderings he returned secretly to them, but brought upon them the vengeance of Nu'mān, whose son he had unwittingly killed. Owing to the slaughter of Huḍhaifa and other chiefs by 'Abs, all the remaining clans of Ghatafān became united against 'Abs, who migrated and after many wanderings became guests of 'Āmir b. Ṣaṣ'a who were at war with Tamīm. Dhubyān joined Tamīm. Thus two tribal wars became merged in one and the situation may have been further complicated by the outbreak of a third war between Hawāzin and Kināna (see art. FUDJĀR). 'Abs having quarrelled with each of their hosts in turn became reconciled to the rest of Ghatafān.

No sooner had Ghatafān become re-united than they were involved in a war with Khāsāfa (Hawāzin and Sulaim), which consisted largely of skirmishes and assassinations rather than pitched battles and ended only with the rise of the power of Muḥammad. A principal figure in the early stages of this war is that of Duraid b. al-Ṣimma [q. v., i. 1082] of Hawāzin [q. v.]. At that time the opponents of Ghatafān were chiefly Hawāzin, but in the later stages, Duraid growing old, Sulaim took the lead under Mu'āwiya and Ṣakhr, the brothers of the poetess al-Khansā' [q. v.].

When this war had burned itself out Ghatafān joined with Sulaim against the rising power of Muḥammad. Year after year mutual raiding took place between these two opposing powers. In the second year of the Hījra Ghatafān and Sulaim joined in an attack upon Madīna, but Muḥammad marching out to Kaḥkarat al-Kudr, dispersed them. In the following year occurred the expedition to Dhū Amarr which had a similar result, Ghatafān again retiring into their mountains. And again in the fourth or beginning of the fifth year the raid of Dhāt al-Rikā' produced the same result. In the fifth year also Ghatafān was amongst the tribes which took part in the investment of Madīna known as the battle of the Trench. In the following year 'Uyaina, the chieftain of Fazāra, raided the camels of Muḥammad close to the city. Muḥammad pursued the robbers as far as Dhū Kaḥad. In the seventh year Ghatafān set out to the relief of Khaibar but finding Muḥammad stationed between them and the town they fell back. Muḥammad's guide in this expedition was an Ashdja'ī who also divulged the whereabouts of a party of Ghatafān against whom Bashir b. Sa'd was sent. At last in the year viii. Sulaim threw in their lot with the Muslims and was followed by Ghatafān, and the wisdom of their action was shown by the conquest of Mecca shortly afterwards.

That their faith was not very deep is also shown by the celerity with which they fell away upon the death of Muḥammad, and the leading part played by 'Uyaina b. Hiṣn, the Fazāra chief, together with 'Abs and Dhubyān in threatening Madīna, the Ashdja' branch alone holding back. Their attack on the city was twice repulsed by Abū Bakr. In retaliation they put to death those of their number who were Muslims. As soon as reinforcements had reached Abū Bakr (through the return of Usāma from Syria), he again attacked them and drove them out of the district of Rabdhā, in which they had congregated. They be-

took themselves to Tulaiḥa, the prophet of the Asad tribe, and, when the latter was defeated by Khālid b. al-Walid in the battle of Buzākha, Ghatafān, and especially Fazāra under 'Uyaina, bore the brunt of the fighting. Ghatafān then once more became Muslim and, those who had put to death the faithful believers of their tribe having been executed, were pardoned.

In the year 14 A. H. we find the tribesmen of Ghatafān swelling the forces of Sa'd b. Abi Waḥkāṣ. They took part in the battle of the Camel in the year 36, and sided with the Umayyads as against the 'Abbāsids, being present at the battle of the Zāb in 132.

(T. H. WEIR.)

GHAWĀZĪ (A.), Plur. of *Ghawāziya* [q. v.].

AL-GHAWR, AL-GHŪR, "depression", "low lying ground among hills", is often found as an Arab geographical term.

1. The best known is Ghawr in Palestine, the *Αβλῶν* of the Greeks, i.e. the deep hollow through which the Jordan flows, the south end of which forms the Dead Sea. The Arab geographers define its boundaries as Tiberias in the north and Zughar in the south. The portion north of Baisān belonged to the province of al-Urdunn, the remainder to Filastīn (q. v., ii. 107 *et seq.*)

It is described as a very hot, unhealthy district with bad water, but there were a number of springs, rivers, palm-groves and villages in it. Yāḳūt says that its principal product was sugar-cane, Idrīsī indigo. Besides Jericho, the capital, the following towns are mentioned, Tiberias, Baisān, 'Amātā and Zughar. Al-'Arabāt in the Ghawr of Filastīn, where, according to Ibn Ishāq (Tabarī, i. 2125, 6; on the other hand 2107, 10, Ghawr al-'Arabāt), 'Amr b. al-'Āsi joined the army which came from east of Jordan before the battle of Adjnādain, is probably to be sought for at the south end of the Dead Sea.

2. Another Ghawr is Ghawr Tihāma al-Yaman or Ghawr Tihāma (Farazdaq, ed. Boucher, p. 20, 12), also as a dual: Ghawrā Tihāmat (Tabarī, ii. 210, 11). The statements by the geographers regarding it are very vague, for it is sometimes identified with Tihāma and sometimes described as a district adjoining it; for example, according to Qudām b. Dja'far it stretched from Nadjd to the extreme borders of Tihāma; according to a passage in al-Bakrī it lay between Tihāma (the district from Dhāt 'Irak to two days' journey beyond Mecca) and al-Sarāt.

Wüstenfeld), iii. 822. — 2. *Bibl. Geogr. Arab.*, vi. 248; Hamdānī, *Djazīra*, p. 46, 24, 48, 6, 210, 1, 233, 16; Bekrī, *Geogr. Wörterb.* (ed. Wüstenfeld), p. 7, 11, 36, 818; Yāḳūt, *al-Mu'djam* (ed. Wüstenfeld), iii. 821. (FR. BUHL.)

GHAWTH ("succour", "deliverance") is an epithet of the *Ḳuṭb* [q. v.], the head of the Sūfī hierarchy of saints. It is used of him only when he is thought of as one whose help is sought; but that, from the nature of the *Ḳuṭb*, is practically always. Thus it is a normal sequent to *Ḳuṭb*. Others say that the Ghawth is immediately below the *Ḳuṭb* in the hierarchy.

(D. B. MACDONALD.)

GHAZAL (A.), a short poem of more than four but less than fifteen lines. The first two have the same rhyme, which is repeated at the end of the fourth, sixth etc. lines; the poet usually mentions his own name (*takhallus*) in the last line. The matter is usually erotic, but other subjects, wine, spring, fate etc. are not excluded. The form should be the most perfect possible, especially from the point of view of language; vulgar and kakophonous words are to be most rigidly avoided. The ghazal is the kind of poem most favoured in Persian and the Indian and Turkish literature influenced by it.

AL-GHAZĀLĪ. (For the evidence at present available on this name see the *Journ. of the Royal As. Soc.*, 1902, pp. 18—22. Apparently Ibn al-Sam'āni preferred the double Z). ABŪ ḤAMĪD MUḤAMMAD IBN MUḤAMMAD AL-TŪSĪ AL-ŠHĀFĪ'Ī was the most original thinker that Islām has produced and its greatest theologian.

1. Life. He was born at Tūs in A. H. 450 (A. D. 1058) and was educated there and at Naisābūr, especially under the Imām al-Ḥaramain with whom he remained until the Imām's death in 478. A sceptical attitude showed itself in him from the first. Although in a Šūfī environment and practicing the Šūfī exercises, no impression was made on him by these, and he preferred rather to investigate theological and legal subtleties. This began when he was under twenty; with *taklīd* (acceptance or religious dogma on authority) he had broken from his earliest youth. From Naisābūr he went to the court of Nizām al-Mulk, the Seldjūk wazīr, and formed part of his retinue of canonists and theologians until 484 when he was appointed to teach in the Nizāmīte madrasa at Baghdād. During this time he became an absolute sceptic, not only as to religion but also as to the possibility of any certain knowledge. This scepticism he never overcame so far as philosophy was concerned. At Baghdād he taught and wrote on canon law; he wrote also controversial books against the *Ta'limites* (Bāṭiniya, Imāniya, Ismā'iliya) Nizām al-Mulk and Malik Šhāh were assassinated by them in 485. For himself he laboured to recover a possible intellectual and theological position and from 483 to 487 studied diligently the different schools of thought around him, especially philosophy. Finally he turned seriously to Šūfiism. Intellectualism had failed him; what of religious experience? He had returned to belief in God, prophecy and the last judgment — or, as he put it, God had restored to him these beliefs — and fear of that Day of Wrath seized him. From Raddjāb to Dhu 'l-Ḳa'da 488, he was in the throes of a conversion wrought by terror, and under it he collapsed physically and mentally. Finally, in Dhu 'l-Ḳa'da he put behind him his brilliant position and worldly ambitions and fled from Baghdād as a wandering derwish. By giving himself to the ascetic and contemplative life he sought

peace for his soul and certainty for his mind. And these he gained. From that time his position was pragmatic and he taught that the intellect should only be used to destroy trust in itself and that the only trustworthy knowledge was that gained through experience. A purely philosophical structure could have no base. On that his dialectic was as inexorable as that of Hume. Even the systems of the speculative theologians had no intellectual certainty, although their doctrines were correct. By speculative methods they could not be proved; but only by the direct knowledge with which God floods the heart of the believer. By that personal experience (*ma'rifa*) the fact of prophetic revelation is established and the truth of the theological structure assured. Yet there can be no question that his thinking had been indefinitely clarified by his philosophical studies and that with him the forms of Greek dialectic made their final entry into Muslim thought. What al-Ash'ari half consciously began, al-Ghazzālī wittingly finished. Further, that he used the forms of Greek dialectic to found a pragmatic system is his originality and distinction. The later theologians did not always understand or follow him in this, but modern Islām seems to be recovering his method. That the account which he himself gives of all this in the *Munqidh min al-dalāl* is true cannot be doubted; the philosophical necessity, both for al-Ghazzālī as an individual and for the development of Muslim thought, both of which had got into a *cul-de-sac*, is plain. As in al-Ash'ari's case only a great emotional experience could break the fetters of tradition and give the personal force needed to turn the current of the age. Political complications may have helped to bring on his nervous breakdown. Barkiyārūk became Great Seldjūk and killed his uncle Tutuṣh immediately before the flight of al-Ghazzālī, and the *khālifa* at whose court al-Ghazzālī held important place declared for Tutuṣh. Similarly his return to active life in 499 followed the death of Barkiyārūk in 498. About two years he passed in strict retirement in Syria, finally pilgrimaging at the end of 490. Then came nine years of retreat in different places, with, from time to time, periods of return to his family and the world. The *Ihyā* and other books were written, and he preached at Baghdād and taught the *Ihyā* there and at Damascus. Finally "the Sultān of the time" (*Munqidh*, ed. of 1303, p. 42) compelled him to become a teacher in the Nizāmīte madrasa at Naisābūr, and he consented in Dhu 'l-Ḳa'da 499. The times called for some strong reforming influence. That he had himself recognized and also that there was need of a powerful and religious-minded ruler who would crush heresy and unbelief. Such a ruler was apparently found in Muḥammad, the brother of Barkiyārūk, who became Great Seldjūk in 498, and to whom he addressed the original Persian form of his *Tiḥr al-masbūk*, a manual of ethical guidance for kings. The immediate influence in his recall was, however, Fakhr al-Mulk, the son of his old patron, Nizām al-Mulk, who was wazīr at Naisābūr to Sandjar, the governor of Ḳhurasān. But he did not long stay in public life. His yearnings to quiet and contemplation continually drew him and there are stories, too, of friction. He returned to Tūs and lived there in retirement with some personal disciples, having charge of a madrasa and a *khānqāh* or Šūfī monastery.

There he died on the 14th of Djumādā II 505 (Dec. 19th 1111).

2. Doctrine and influence. Although a formative canon lawyer of a rank short only of the first, he yet deposed Fikḥ from the position it had usurped, lashed its casuistry and refused it a place as a part of religion. He dealt similarly with the intellectual subtleties of *Kalām* and especially denounced the tendency to make the faith of the masses a structure of logically demonstrated articles (*ʿaḳā'id*). In this he followed the founder of his *madhhab*, al-Shāfiʿī. He opposed the Mutakallims also in the intolerance which they had developed. All, he taught, who agreed in the broad principles of Islām were believers. This he lays down in his *Tafriqa*; but he taught also in the *Itdām* (ed. of 1303, pp. 31, 32, 51, 62) and the *Munkidh* (ed. of 1303, p. 42) that the religion of the unlearned should be protected by the secular arm of the state. These reforms his high rank as a scholar and popularity as a preacher carried through. They have been accepted by the Agreement of the Muslim people (*al-idmāʿ*) and he himself is reckoned as not only the *mudjaddid* (renewer) of his century, but as the great restorer of the faith. Of course both canon lawyers and speculative theologians continued and still continue to spin their systems and to try to enforce them. He also brought philosophy into the open and dissipated the glamour of mystery which had surrounded it. It was simply "thinking", and the philosophers and their systems could be understood by any intelligent man. Further, by philosophy the ultimate and unconditioned could not be reached; there could be no metaphysics on a basis of pure thought. This agnosticism was a development into more perfect form of the system of the later Ashʿarites. On the positive side he continued the work of al-Kushairī and gave Sūfism a firm standing in Muslim orthodoxy. In this al-Ghazzālī marked the second great epoch of development as al-Ashʿarī with his applying of logical argument to the defence of orthodoxy had marked the first. Thus for al-Ghazzālī the basis of all religious certainty was ecstatic experience. By it he and all *ʿarifs* (those who have direct experiential knowledge, perhaps a translation of "gnostic", v. Bauer, *Dogmatik al-Ghazzālī's*, p. 35) learn that the theological positions of the Fathers (*al-salaf*) are true, and how these should be interpreted. To that age of simple faith he looked back with longing. This led him to what might be called a Biblical theology-study of the Qurʾān and of the record of the teachings of Muḥammad. Practically he endeavoured to arouse men to religion and lead them back to the old ways by preaching the Wrath to come at the Judgment. His own conversion had been under the pressure of fear. Strongly contrasted and forming the paradox of his position is the emphasis which he laid on the love of Allāh. It is part of the contrast between the emotional life of the saints with Allāh which he had known and the inhuman dogmatism of the theological system which he felt compelled to accept. In spite of the curiously intolerant passage as to the faith of the masses referred to above, his influence has been and is for charity, the stimulation of free enquiry and intellectual life. His indirect influence on European thought, even the most modern, has also been marked. It flowed through the *Pugio Fidei* of Ramón Martí and affected, first, Thomas

Aquinas and, later, Pascal. For his alleged relationship to the *ʿAlids* and to the book *Djafr*, see *DJAFR* above (vol. i. p. 995^a) and references there and for his real relationship to magic, see *BUDŪH* above (vol. i. p. 770^b) and *Deser. of Ar. and Turk. MSS. in Newberry Library, Chicago*, pp. 6 *et seq.*

3. Sincerity. Even by his contemporaries the reality of his conversion was doubted; the change, it was felt, was so great from the pugnacious, sceptical canonist to the ecstatic saint with his sermons on the fear of God. Later, the philosophers, hard hit by his dialectic, and unable to believe that a man who knew philosophy so well should not be, at least secretly, a philosopher, sought in his writings proofs of an esoteric teaching. Two things aided them in that. 1. He had openly preached an economy of teaching and had written a book with that publicly as its title, *al-Madnūn bihi ʿalā ghairi ʾahlīhi* — "That which is to be concealed from those who are not worthy of it" — a book, however, in which there is no heretical doctrine. In his *Imlāʾ*, an answer to attacks on his *Ihyāʾ*, he formally defends, with the example of the Prophet and the Companions, the practice of keeping certain theological reasonings and developments secret from those who are not in a position to understand them and who might thereby be led astray either in faith or in practice (ed. on margin of *Iḥyāʾ al-sāda*, Cairo 1311, pp. 45, 159—164, 225 *et seq.*, 247 *et seq.*). There are other references to the same practice in the *Arbaʿīn* (ed. of 1328, pp. 25 *et seq.*); the *Djawāhir* (ed. of 1329, pp. 25 *et seq.*, esp. 30 *et seq.*) all very important passages on the order in which his books were written; the *Mishkāṭ* (ed. of 1322, pp. 54 *et seq.*) and the *Mizān al-ʿamal* (ed. of 1328, pp. 212 *et seq.*) on *madhhab's* and what a man has a right to keep to himself. And this had really been the practice of Islām from the beginning. Even al-Shāfiʿī, while denouncing *kalām*, had admitted that some should study it for the defence of the faith. The position of Ibn Khaldūn, at the extreme end of the development, was similar, only in his day the need had passed (ed. Quatr., iii. 43; de Slane, iii. 63). It was always a *fard kifāya* and not a *fard ʿain* and had a similar origin with the *biṭā kufa* of al-Ashʿarī. Thus the advanced doctrine did not contradict, but only developed, based and deepened the simpler faith, and knowledge of it was open to all who would fit themselves for it. In the end, this led most ironically to the Averroistic doctrine of the two-fold truth. That was only a special case of the multiform truth which Islām has always admitted. 2. Those direct perceptions of religious truths which al-Ghazzālī had reached in ecstasy he was compelled to express in language by means of metaphor and symbol. He teaches consistently that there are ideas which language cannot render in exact terms and the content of which can be suggested only by pictures. When, then, such expressions were examined and held to account as intellectually exact statements, misunderstanding was certain to follow. Thus Ibn Rushd was led by the metaphor of the sun in the *Mishkāṭ* (p. 55) to believe that al-Ghazzālī was there teaching the Neoplatonic doctrine of emanation (*sudūr*). But the context is in the teeth of such an explanation, and the metaphor is one frequently used by al-Ghazzālī to suggest the relationship

between God and the world. On this point and on the *M. shukūt* generally I would refer to a paper by W. H. T. Gairdner of Cairo, shortly to be published. I am indebted to him also for several chronological and bibliographical suggestions.

4. Works. Our knowledge of al-Ghazālī's works is still incomplete both as to extent and relative order, not to speak of dating. For lists approximately complete reference can be made to the introduction by the Saiyid al-Murtaḍā (based on al-Subkī) prefixed to his *Ithāf al-sūda*, a commentary on the *Ihyā* (ed. Cairo 1311, vol. i. pp. 41—44) and to Brockelmann, *Gesch. d. arab. Lit.*, i. pp. 421—426. The following is an attempt at a classified list of the works which have been printed and are accessible. The *Ihyā 'ulūm al-dīn* (the title expresses al-Ghazālī's consciousness of the part the book was to play, cf. Bauer in *Der Islam*, iv. 159 *et seq.*) as a compendium of his whole system stands by itself, although it does not go into the ultimate details, either on philosophy, kalām or Sūfism. On its date see above. It divides into two parts, each consisting of two quarters (*rub'*); the first is on external acts of devotion and religious usage, the second upon the inner side of life, the heart and its workings, good and evil. The four quarters are *Rub' al-ibādāt* (Acts of a creature towards his Lord); *Rub' al-ādāt* (usages of life); *Rub' al-mukhlūkāt* (Destructive matters in life); *Rub' al-munjiyāt* (Saving matters). Each contains ten Books; the first of the forty is on 'ilm, the second on kalām and the last on eschatology. Otherwise all is experiential, traditional and practical. The present writer has translated Book viii. in *Rub'* ii. on the relation of music and singing (*sanī'at*) to the Sūfī ecstasy, in the *Journ. of the Royal As. Soc. for 1901-1902*; he has analyzed with extracts Book ii. *Rub'* iii. on the marvels of the human heart, in *Lectures viii.*—x. of his *Religious Attitude*, and Book vi. of *Rub'* iv. on the love of Allāh, in *Hastings' Dict. of Religions*, vol. ii. pp. 677—680. A great part of the *Ihyā* is also analyzed by Miguel Asín in his *Algazel*; a translation of the whole work is being prepared by H. Bauer. Another compend of introduction on 'ilm in general is his *Fatḥat al-'ulūm*; it resembles the first book of the *Ihyā*. His remaining printed works may be classified as follows. 1. Canon law: *Kitāb al-waḍ'iz*, the smallest of his general treatises on fiqh; *al-Mustasfā min 'ilm al-nuṣūl*, written after his return (ed. of 1322, i. pp. 3 *et seq.*). 2. Logic and books against the philosophers: *Mīyār al-'ilm*, an elaborate treatise on logic; *Mihakk al-naẓar*, a smaller book; *Maḳāṣid al-falāsifa*, statement of their teachings on all subjects save the absolutely demonstrable, professes to be a *hikāya* only partly ed. by G. Beer, diss. 1888; *Tahāfut al-falāsifa*, demonstration that they could not by reason prove their system (cf. de Boer, *Widersprüche der Philosophie*; there are translations also in Asín's *Algazel*, pp. 735—880; also a translation begun by Carra de Vaux in *Muséon*, vol. xviii). 3. Contra Bāṭiniyya: *al-Kināsūs al-mustakim*. 4. Speculative theology: *Risāla al-kudsiya*, incorporated in *Ihyā* as *Kawā'id al-aḳwā'id*, an abridged translation of it in H. Bauer, *Die Dogmatik al-Ghazālī's*, Halle a. S., 1912; *al-Iḥtiṣād fi 'l-fīṭḳūd*, an expansion of the preceding and his most elaborate treatment of kalām. 5. Books to be kept from those unfitted for them: *al-Maḍnūn bihi 'alā*

ghairi 'ahlihi, on Allāh and his creation — on angels, djinn etc. — on prophets and miracles — on eschatology; *al-Maḍnūn al-ṣāḥib*, otherwise called *al-Adjwaba al-ghazālīya fi 'l-masā'il al-ukhrā'iya* (Analyses and translations from these in Asín's *Algazel*, pp. 609—733); *Mishkāt al-anwār*, on the mystical meaning of Allāh as Light and on the guidance of the Inner Light to Allāh — a book of the end of his life. 6. Expositions of the Faith of the Fathers on the basis of the *Qur'ān* and tradition: *Diyawāhir al-Kur'ān*; *Kitāb al-arba'in*, a second part of preceding; *al-Maḳṣad al-asnū fi 'asnā' Allāh al-husnā* (exhortation to imitation of the divine qualities); *al-Ilkima fi makhḷūkāt Allāh*, evidence of creation for the wisdom of Allāh; *al-Durra al-fākhira*, eschatology (text and transl. by L. Gautier); *al-Kaṣf wal-taḥyīn fi ghurūr al-khalq adma'in*, how all mankind have strayed from obedience; *Idḡām al-'arwām 'an 'ilm al-kalām*, see above; *Risāla fi 'l-waḳ' wal-fīṭḳūd*, another *Idḡām*. 7. Books of religious experience and edification, personal and systematized; *Al-risāla al-taduniya*, on knowledge which is gained immediately from Allāh; *Kimiyā al-sāda*, original in Persian, an abbreviation of the *Ihyā* (trans. by H. A. Holmes); *Ayyuha 'l-walad*, on the need of works besides knowledge (text and trans. by Von Hammer); *Mukāshafat al-kulūb*, the ed. of Būlāḳ 1300 is a *mukhtaṣar*; *Budāyat al-hidāya*; *Mizān al-'amal* (Hebr. transl. of Abraham bar Chasdai, ed. J. Goldenthal, Lipsiae, 1839), on saving works; *Khulāṣat al-taṣawwuf* fi 'l-taṣawwuf, what is worth while in religion — from the Persian and, if genuine, of the very end of his life; *Minhād al-'ābidin*, his last book, dictated (the prologue is translated by Asín in his *Algazel*, pp. 881—899). 8. Defences of himself: *al-Imlā' 'an ishkālāt al-ihyā'*, margin of *Ithāf al-sūda*, vol. i. pp. 41—252; *al-Taṣṛīḥ bain al-Islām wal-zandāqa*; *al-Munkidh min al-ḡalāl*, written after 500 (trans. by Barbier de Meynard in *Journal As.*, vii. vol. ix.). 9. Miscellaneous: *al-Tibr al-masbūk*, an ethical Mirror for Princes, see above; *Sirr al-'ulamain wa-kashf mā fi 'l-darain*, a manual for kings to worldly success, assertedly after his return, but almost certainly apocryphal; *Antworten auf Fragen die an ihn gerichtet wurden*, ed. from Hebrew version in 1896 by Heinrich Malter, but certainly apocryphal; *al-Taḥbir fi 'ilm al-ta'bir*, on principles of dream interpretation; on a ḳasida of al-Ghazālī v. Mart. Schreiner in *Zeitschr. der Deutsch. Morgenl. Gesellsch.*, xlviii. 43 *et seq.*, also Steinschneider, *Die hebr. Übers.*, i. 347.

Bibliography: It is very large and the following is a selection only of the more recent books. The period of Schmoelders and Gosche is past, and the popular articles, based upon these, in encyclopædias and histories of philosophy are untrustworthy. The principal sources for the life are the *Munkidh* and the materials in the introduction of the Saiyid Murtaḍā to his *Ithāf*, vol. pp. 2—53. These can be controlled by al-Subkī, *Tabaḳāt*, iv. pp. 101—182 and by the extracts from Ibn 'Asākir in Mehren's *Exposé*, *Trans.* of iii. *Congress of Orientalists*, vol. ii. For the order and dating of the works there are numerous references scattered through them (see above for some), but these are not yet sufficiently collected and examined. Formal biographies, in order of date, are: 1). B. Mac-

donald, *Life of al-Ghazzālī with special reference to his religious experiences and opinions*. *Journ. of Am. Or. Soc.* for 1899, vol. xv. pp. 71—132 (cf. also Chap. iv. of the same writer's *Development of Muslim Theology*, 1903); Miguel Asín Palacios, *Algazel. dogmática, moral, ascética*, Zaragoza, 1901; Carra de Vaux. *Gazali*. Paris, 1902. Goldziher has a luminous treatment in his *Vorlesungen über den Islam*, by index, and especially, pp. 117 *et seq.* Al-Ghazzālī's place in the history of philosophy De Boer has treated in his *Geschichte der Philosophie im Islam*, pp. 138—150 and by index (English trans., pp. 154—168). Cf. also Goldziher in *Kultur der Gegenwart*, i. 5. pp. 62 *et seq.* and, for his logic, Prantl. *Geschichte der Logik*, ii. pp. 361 *et seq.* (based on a mediæval Latin translation of the *Maqāṣid*). On his place in history cf. Nicholson, *Literary History of the Arabs*, pp. 338 *et seq.*, 380 *et seq.* and by index; Brown, *A Literary History of Persia*, by index; Jewish Enc., V. 649 *et seq.* Horten has not yet treated him systematically; but see (by index) many suggestive remarks in his *Philos. Systeme d. Specul. Theologen im Islam*; cf. also *Die Hauptlehren des Averroes nach seiner Schrift: die Wiederlegung des Ghazālī*, p. 323—328 of the same author. For Muslim criticism of al-Ghazzālī see Asín, *Un Faqih Siciliano, contradictor de al-Gazzālī*, in *Centenario di Michele Amari*, vol. ii. pp. 216—244. (D. B. MACDONALD.)

GHĀZĀLĪ, MUHAMMAD ʿELEBĪ, called GHĀZĀLĪ (probably after the gazelle-skin rug, peculiar to the *Shāikh*s of many orders), usually quoted as *Delī Bīrāder* (erazy brother), an Ottoman poet of the early Sulaimānīan age. Born in Brusa he became a professor (*müderris*) in a Madrasa there, on the completion of his studies. But his bright nature, full of the joy of life, his love of pleasure, his skill as a conversationalist, a ready wit, his extraordinary imperturbability, an inexhaustible fund of anecdote and a great readiness in versifying marked him out for a life at court as an entertainer and companion to a prince almost without a rival. He therefore soon gave up his academic position and went to Magnesia, the residence of Bāyazīd II's ill-fated son Korkud. He soon succeeded in becoming the prince's secretary and inseparable companion which he remained till Korkud's execution. After the death of his patron he retired deeply affected to Brusa to the monastery (*zāwīya*) of Geikli Baba (also called Ahuly Baba). But he did not long adhere to a life of meditation. He became *müderris* in a number of Anatolian towns, till he finally had the good fortune to receive a pension (of 1000 aspers monthly) from the Sultān. He now settled in *Beshiktash* on the Bosphorus where with the help of several patrons he built a mosque, which still exists, a hermitage and a bath with a marble basin and laid out a garden. The bath soon became the rendezvous of all the dissolute youth, so that finally the grand vizier İbrāhīm Pasha had it levelled to the ground by ʿAdjemi-Oghlans. Ghazālī then found it advisable to go to Mecca in 938 (1434-1435). There also he laid out a garden and built a mosque. He died over 70 years of age in 941 (1437-1438), according to others in 942 (1438-1439) and was buried beside his masājīd.

Ghazālī enjoyed a not unusual fame as a poet in his lifetime but it was for the most part due

rather to his winning personality than to his verses. His chronograms (*tārīkh*) were particularly celebrated. He wrote a book called *Dāʾir al-Ghumūm wa-Rāʾ al-Humūm* (Dispeller of sorrows and dissipator of troubles), also known as *Manāḥib-i Ghazālī* (Anecdotes of Ghazālī), and *Hikāyāt-i Delī Bīrāder* (Tales of the crazy brother), according to Latīfī a version of Azrakī's *Alfiya wa-Shalfiya* with additions of his own, in which all sexual pleasures and excesses are discussed in the greatest detail. Later prudish biographers say that Korkud therefore would not accept the dedication and dismissed Ghazālī from his court, but this is rather improbable. Ghazālī's poems were not collected till after his death by his friends into a *Divān*, which is rather rare.

MENZEL.)

GHĀZĀN MAHMŪD, a Mongol ruler (*Ilkhān*) of Persia (694—703 = 1295—1304) born in the year 670 = 1271. On the accession of his father Arghūn (q. v., i. 430) he was appointed governor of Khorāsān, Māzandarān and Ray; he administered these provinces in the reign of Gai-khātū also (cf. above p. 128). Ghāzān had been brought up as a Buddhist and, while governor, ordered a Buddhist temple to be built in the town of Kūcān; shortly before his accession, during the war with Baidu (q. v., i. 591), his general Naw-rūz persuaded him to adopt Islām. In his reign Islām was recognised as the State religion, the Mongol empire organised on a basis of Muslim culture, splendid buildings erected in and around the new capital Tabriz, notably charitable endowments, mosques, theological schools etc., the descendants of the Prophet sometimes mentioned in the first place in the state records before the princes and princesses of the ruling house, and lastly the turban introduced as the court headgear. But Ghāzān was more a Mongol than a Muslim; as a ruler and law-giver he displayed great activity entirely free from biased pietism, of which his physieian and actual minister Rashīd al-Dīn (the vizier Saʿd al-Dīn al-Sāwī filled this office in name only and had in reality no say in the government) gives a detailed account. Particular attention was devoted to the finances of the country, the currency etc.; Ghāzān no longer appears on his coins (the inscriptions on which are in three languages Arabic, Mongol and Tibetan), like his predecessors, as representative of the Great Khān who lived in Pekin, but as ruler "by the grace of God" (Mong. *Tengrin Kulundur* = by the power of heaven). Ghāzān carried out his plans with vigour and bloodshed in the teeth of the opposition of the Mongol Emirs and even against the princes of the ruling house; every one whom he believed to be dangerous to the peace of the country or to his autoeratic rule, was dis-

posed of with ruthless cruelty; among these was the Emīr Nawrūz himself, to whom he owed his throne. On the other hand Ghāzān's measures increased the prosperity of the country and in particular protected the country people from oppression and extortion. The revenues of the state rose and in Ghāzān's reign amounted to 2100 tūmāns (before only 1700), i. e. about £ 2,500,000. Like other Mongol rulers Ghāzān particularly esteemed those arts and sciences which might be useful to the State; he is himself said to have been conversant with natural history, medicine, astronomy, chemistry and even with several trades; an observatory was built by his orders in Tabriz with a school for secular sciences (*hikmiyāt*) in connection with it. Ghāzān is said to have known several languages in addition to Mongol, his mother-tongue, and to have been acquainted with the history of many lands and peoples. He devoted particular attention to the history of his own people and had all that could be learned about it collected by Rashīd al-Dīn in a great work to which the name *Tārīkh-i Ghāzānī* was given; the author says that he received much of the information embodied in the work from his royal master. Ghāzān's activity abroad was less successful; he did not succeed in effectively defending the eastern frontier from invasion from Central Asia nor in conquering Syria.

Bibliography: D'Ohsson, *Histoire des Mongols*, iv. 143 *et seq.*; Hammer-Purgstall, *Geschichte der Ilchane*, ii. 1 *et seq.*; Howorth, *History of the Mongols*, iii. 393 *et seq.* The section of the *Tārīkh-i Ghāzānī* dealing with Ghāzān's activities as a ruler and law-giver has not yet been published in the original; in the *Grundris der Iranischen Philologie*, ii. 576, Ghāzān's legal code is quoted according to the extract from Khondemir translated by G. Kirkpatrick (*New Asiatic Miscell.*, i. p. 149 *et seq.*, Calcutta 1789). On Persia under Ghāzān Khān cf. also W. Barthold, *Persidskaya nadpis na stēnie Aniys-koi meleti Manuči*, St. Petersburg 1911 (*Aniys-kaya seriya*, N^o. 5) and do. in *Mir Islama*, i. 76 *et seq.* (W. BARTHOLD.)

GHĀZĀT or **GHĀZWA** (A.). Razzia against unbelievers.

GHĀZĪ (A.), plur. *ghuzāt*, one who undertakes a *ghazwa*, particularly the leader of one; hence an honorary title for one who distinguishes himself in war against the unbelievers. For other meanings of the word cf. Dozy, *Supplément*, s. v.

GHĀZĪ, SAIF AL-DĪN, son of Zangī, born 500 (1106-1107), an Atabeg of Mōṣul (al-Mawṣil) 541—544 (1146—1149). When the Atabeg Zangī was murdered by his own men in 541 (1146), the most prominent of his followers, including the vizier al-Djawād al-Iṣfahānī [q. v., i. 1025^b], attempted to persuade the troops to recognise the authority of the Salḡūḡ Alp Arslān b. Maḥmūd. But they were only successful with a section of them; another section went to Syria with Nūr al-Dīn [q. v.] the son of Zangī, afterwards so famous. Those who paid homage to Alp Arslān took the road to al-Mawṣil where Zain al-Dīn 'Alī Kučuk was in command as Zangī's representative. But because

and henceforth ruled over this town and Diyār Rabfā. There is not much to be told of his short reign — he died in 544 (1149) —. The inhabitants of Damascus besieged by the Crusaders called him to their help and he went thither with his brother Nūr al-Dīn, but no fighting resulted as in the meanwhile the people of Damascus had succeeded in forcing the Crusaders to retire. Ghāzī is further celebrated because he was a friend to learning and founded a madrasa in al-Mawṣil, which was called al-*Atiqa* and became his last resting-place. Among his panegyrists was the poet Ḥaiṣa-Baiṣa. He was succeeded as Atabeg of al-Mawṣil not by his son, who was brought up by his uncle Nūr al-Dīn and died young, but by his brother Kuṭb al-Dīn Mawḍūd [q. v.]

Bibliography: Ibn al-Athīr, *Hist. des Atabecs de Mosul in Recueil des historiens des croisades, Historiens orientaux*, T. ii. 2^e partie, 116, 152—168; do., *al-Kāmil* (ed. Tornberg), xi. 74 *et seq.*; Ibn Khallikān, *Wafayāt*, s. v. Ghāzī; Abū Shāma, *Kitāb al-Rawḍatain* (ed. Cairo), i. 46 *et seq.*; Weil, *Geschichte der Chalfen*, iii. 290 *et seq.*

GHĀZĪ, SAIF AL-DĪN, son of Kuṭb al-Dīn Mawḍūd [q. v.], Atabeg of al-Mawṣil 565—576 (1170—1180). On Mawḍūd's death it was not his eldest son 'Imād al-Dīn that was recognised as his successor, but Ghāzī, through the influence of his mother, a daughter of Timurtash, who had the powerful support of Fakhr al-Dīn 'Abd al-Masīḡ who held the reins of government in Mawḍūd's reign. 'Imād al-Dīn had spent almost all his life with his uncle Nūr al-Dīn and married the latter's daughter and for this very reason was hated by 'Abd al-Masīḡ, apparently a Christian by birth. But 'Imād al-Dīn appealed to the powerful Nūr al-Dīn and the latter at once marched against al-Mawṣil, conquered Raḡḡa, Niṣībīn and Sindjar, but made peace with Ghāzī, when he reached al-Mawṣil, by the terms of which Ghāzī was left in power and Sindjar alone given to 'Imād al-Dīn. When Nūr al-Dīn died in 569 (1174), Ghāzī seized the towns of Harrān, Niṣībīn, Raḡḡa, Edessa, Khābūr and Sarūḡī, but had to come into conflict with Ṣalāḡ al-Dīn as a result. The latter came to Syria in the following year and as soon as he had dealt with the Syrians and the Christians, he put the Mōṣulans to flight near Ḥamāt (19th Ramaḡān 570 = 13th April 1175). Ghāzī had in the meanwhile besieged his brother 'Imād al-Dīn, who naturally had not taken part in the campaign against Ṣalāḡ al-Dīn, in Sindjar, but, when he heard of the defeat at Ḥamāt, he raised the siege and retired to al-Mawṣil. In the following year (571) he again set out against Niṣībīn to fight Ṣalāḡ al-Dīn again in company with the Syrian rulers who were his allies, but he had again to take refuge in al-Mawṣil after the battle of Tell al-Sulṡān (between Ḥamāt and Ḥalab). He held out here till his death on the 3rd Ṣafar 572 = 11th Aug. 1176. His brother 'Izz al-Dīn Mas'ūd [q. v.] succeeded him.

GHĀZĪ GIRĀY, name of three Khāns of the Crimea. Ghāzī Girāy I. reigned only about six months in the year 929 = 1523. Ghāzī Girāy II. twenty years (996—1016 = 1588—1607-1608), Ghāzī Girāy III. three years (1116—1119 = 1704—1707). Only the reign of the Ghāzī Girāy II. is of importance; he was known as *Bora* = storm from his impetuous bravery and was the son of Dewlet Girāy I. and reigned after his brothers Muḥammad Girāy and Islām Girāy. Before his accession he had taken part with the Turkish army in the campaigns against Persia and spent seven years as a prisoner in the Persian fortress of Kaḥkaha; he afterwards came to Constantinople and enjoyed the favour of Sultān Murād III. (982—1003 = 1574—1595). As Khān he undertook a campaign in 1591 against Moscow, was defeated and wounded; in the following year he sent his brother, the heir-apparent (*Kulgha*) Faṭḥ Girāy, to lay waste the Russian frontiers and on this occasion a larger number of prisoners were taken than had even been taken before. At a later period Ghāzī Girāy took part in the campaigns against Hungary. About 1005 = 1596-1597 he lost the favour of Sultān Meḥammed III. (1003—1012 = 1595—1603) for a short time, was deposed in favour of Faṭḥ Girāy, went to Sinope, while there received a grant of confirmation from the Sultān, returned to the Crimea and was recognised as Khān again without opposition; his brother had to pay for his brief rule with his life. Ghāzī Girāy took advantage of the decline of the Turkish empire under Meḥammed III. to adopt a more independent attitude to the Porte than before; he is said to have meditated founding an independent kingdom and introducing transmission of the throne from father to son into the Crimea. He was actually succeeded by his son Toḡtamish, but the latter was not confirmed by the Porte and could hold out against his uncle Salāmat Girāy. In Ghāzī Girāy II's reign Gozlew (the modern Eupatoria) was made capital for a short time in place of Bāghche-Serāi [q. v., i. 562^a et seq.]. Cf. V. Smirnow, *Krimskoie Khanstvo*, St.-Petersburg 1887, p. 444 et seq.; O. Retowski, *Die Münzen der Girei*, Moscow 1905, p. 100 et seq. (W. BARTHOLD.)

GHĀZĪ AL-DĪN HAIDAR was second son of Nawwāb Sa'ādāt 'Alī, nominally Wazir of the Mughal Empire, in reality ruler of Audh. Sa'ādāt 'Alī died in 1229 (1814) and the children of his eldest son were set aside as *maḥdūb al-irṭh*. In 1234 (1819) he took the title of Pādshāh or king of Audh with the consent of the Governor General of British India, the East India Company having now become de facto suzerains of Northern India. His government was not successful. The king, although a man of ability and culture, was dissipated and very much under the influence of unscrupulous ministers, especially Aghā Mir (Mu'tamad al-Dawla), and the administration of the land-revenue led to much discontent. He died in 1244 (1827), and was succeeded by his son Nāṣir al-dīn Haidar. His coinage, struck at Lakhnau, commences in 1235 and continues till 1242. Lakhnau is alluded to as *Dār al-saltanat* or *Dār al-imārat*, and the coins are stated to have been struck in the *Ṣūba* of Audh. They bear a coat of arms in imitation of European heraldry; two fishes (the badge of Lakhnau) supported by tigers bearing banners. A fine silver medal (weighing 1125 grains, 72.9 grammes), bearing the king's

portrait crowned, full faced, wearing a moustache but no beard, was issued also in the first year of his reign.

Ghāzī al-dīn Haidar was a man of considerable literary attainments and learning. He was the author of a valuable Persian Dictionary and Grammar called the *Haft Kulzum* or "Seven Seas", published at Lakhnau in 1822; cf. Pertsch, *Grammatik, Poetik und Rhetorik der Perser*. According to H. Ethé, *Grundr. d. iran. Philol.*, ii. 265, 348 *infra*, the real author is Kaḥlūl Aḥmad.

(M. LONGWORTH DAMES.)

GHĀZĪ 'L-DĪN KHĀN was the title bestowed by Awrangzib on Mir Shihāb al-Dīn, elder son of 'Abid Khān, entitled Kīlīdj Khān, who rose to the rank of commander of 5,000 horse and held more than one provincial government under Shāhājahān. Shihāb al-Dīn came from Turkistān to Awrangzib's court in 1669, and was appointed commander of 300 horse. During Awrangzib's reign he served with distinction in the suppression of Prince Akbar's rebellion and in the long campaign in the Dakhan, especially at the sieges of Bidjāpur, Golkonda, and Adhwani. He received the title of Ghāzī 'L-Dīn Khān in 1679 and that of Firūz Djang in 1685, and died in 1709, in the reign of Bahādur Shāh, being, at the time of his death, governor of the province of Guḍjarāt. He left a son, Mir Kamar al-Dīn, entitled Cin Kīlīdj Khān and, later, Nizām al-Mulk and Āsaf Dījāh, who became, in the reign of Farrukhsiyar, viceroy of the Dakhan, and founded the line of the Nizāms of Haidarābād.

Bibliography: *Ma'āthir-i-'Ālamgiri*; *Muntakhab al-Lubāb*. (T. W. HAIG.)

GHĀZĪ KHĀN was one of the sons of Malik Suhrāb Khān Dōdāi Balōḥ who emigrated from Mckrān to Multān in the time of Shāh Ḥusain Langāh, King of Multān from 874 to 908 = 1502 [cf. BALŪCISTĀN, i. 628^b, 636^a]. They obtained dījāgirs [q. v. i. 996^a] in exchange for military service in the country below the junction of the Indus and the Čināb, although owing to a change in the course of the Indus a large part of this tract, formerly west of the Indus, now lies between that river and the Čināb. Another Balōḥ leader Mir Čākūr Rind, who also came with his followers to Multān, was on bad terms with Suhrāb and his sons, who perhaps were forced to move further north. Bābar met Balōḥes as far north as Bhēra in 925 (1519) and twenty seven years later Shēr Shāh in his pursuit of Humayūn was met at Khushāb by Ismā'īl Khān, Faṭḥ Khān and Ghāzī Khān, sons of Suhrāb who were confirmed by him in their possessions along the Indus. The towns of Dēra Ismā'īl Khān, Dēra Faṭḥ Khān and Dēra Ghāzī Khān were founded by these three sons, and Ghāzī Khān became founder of a line of Nawwābs of the Mirfāni branch of the Dōdāis, who ruled there till the middle of the 18th century. They bore the names of Ghāzī Khān and Hādīdjī Khān [cf. BALŪCISTĀN, i. 629, 636^b] alternately. Ghāzī Khān was buried at Čurattā near Dēra Ghāzī Khān where his tomb still exists bearing an inscription of Akbar's time but undated. The tomb is octagonal with towers at the angles and is decorated with fine glazed tiles. Ghāzī Khān II built a tomb in memory of the

saint Pīr ʿĀdil which still exists a few miles north of Dera Ghāzī Khān and is a place of pilgrimage. His own tomb is near it.

(M. LONGWORTH DAMES.)

GHĀZĪ MIYĀN. This celebrated personage is venerated by both Hindus and Muḥammadans, and his *shādī*, or wedding, is a popular institution among the unlettered masses throughout Hindustan. In the northwestern parts of India he is identified with Sālār Masʿūd, the nephew of Maḥmūd of Ghaznī, who was born at Adjmīr A. H. 405 (1014) and after performing prodigies of valour in battle against the infidels, and capturing Dihlī and Ayodhya, settled at Bahraīc in Oudh. Here he was attacked by the Hindus under Rāi Sahar Deo and Har Deo, and in the battle that ensued he was killed and his army destroyed. This occurred on the 14th Rājāb, A. H. 424 (1033). Around this warrior's name strange and incredible stories have accumulated. It is believed in Oudh that only the bones of the hero were discovered in the 14th century, and that, whilst being exhumed, many miraculous events occurred; but a native historian informs us that Sikandar Lōdī in the 15th century abolished throughout his dominions the annual procession of the banner of Sālār Masʿūd because of its being contrary to orthodox belief. No legislation, however, could stop such a popular festival as this has always been.

It is perhaps impossible to explain the meaning of the ritual performed by persons while celebrating the *shādī* of Ghāzī Miyān.

At Gasyari in the Banda district, a fair is annually held in the month of Baisakh (April—May) in honour of Ghāzī Miyān, at which "Daffālī fakīrs" (mendicant beggars who sing and dance to the accompaniment of a drum) tie coloured rags and horsehair about the top of a long hamboo, round which they sing and often burn incense.

In some parts of India Ghāzī Miyān is described as the son of a famous general who served under the King of Dihlī, and subsequently adopted the garb of a fakīr (mendicant), retired from the world, and shortly afterwards died, whereupon the son, Madār, joined the troops of a Pathān leader, and distinguished himself by his bravery and hatred for the Hindus. Hence his name has come to be regarded as a symbol of warlike prowess, and is used up to present times as a battle-cry by Hindustānī soldiers. While his nuptial ceremonies were being celebrated, the enemy appeared, and in his attempt to drive them back he was himself slain. The present day celebrations in honour of Ghāzī Miyān are hence supposed to represent the incident of his untimely death and the capture of his nuptial banners and emblems by the enemy.

On the first Sunday of Djaith (May—June), a great fair is held at the tomb of Sālār Masʿūd, at Bahraīc when crowds of pilgrims make liberal offerings at the shrine; at Monir also, near the junction of the Sone and the Ganges, the anniversary of the death of Ghāzī Miyān is celebrated. The history of this fair is interesting as showing how

legends about one holy man come to be ascribed to another quite different from him.

Van Graaf, sailing up the Ganges in 1669, stopped at "Monir". The inhabitants were poor cultivators, and the country was formerly a desert until a very holy man, "Hia Monera" (Yahyā Munairī, a famous ṣūfī who is the author of the *Sharaf Nāma* and died A. H. 782, see Rieu, *Cat. of Persian Mss. Br. Mus.*, p. 492) struck by the general features of the place, fixed his abode there, and after having exterminated the wild beasts, erected a small chapel where he performed many miracles. At his death he left much money, with which, "his valet" built a mosque and a tank, frequented by fakīrs, who pretended to work miracles. The mosque still stands, but the fakīrs, finding the worship of Ghāzī Miyān more profitable, established a fair in his honour instead.

The festival of Ghāzī Miyān is not popular in Eastern Bengal, but few villages are without a shrine dedicated to Ghāzī Shāhib. This spot is usually a diminutive *Dargāh* (shrine), with a raised mound of earth in the middle, before which every Muḥammadan and Hindu makes obeisance as he passes, and, whenever his family is attacked with any malady, the villager makes votive offerings of flowers, milk, and sweetmeats. Along the banks of the Lakhya, on the outskirts of villages, a mound of earth, stands beneath a grass thatch. This mound has generally two knobs on the tops, said to represent the tombs of Ghāzī Miyān and his younger brother Kālā. On the 22nd day after a cow has calved, the first milk drawn is poured over the mound as a libation, and in time of sickness rice, plantains, and sweetmeats are offered.

GHĀZĪ MUḤAMMAD, called KAZI-MULLA by the Russians, a Muslim leader in the war of liberation in the Caucasus. [See the article DAGHESTAN, i. 891a].

GHĀZĪPŪR, district of India in the United Provinces, lying on both sides of the Ganges below Benares. Pop. (1911), 839,725, of whom 10% are Muslims. It includes the site of the battle field where Shēr Shāh decisively defeated Humāyūn in 1539. The city of Ghāzīpūr stands on the N. bank of the Ganges. Pop. (1901), 39,429. Before the opening of railways, it was a considerable centre for river traffic. It contains the Government opium factory for all the poppy products of the United Provinces, and is also famous for rose water and otto of roses, made from roses grown in the neighbourhood. The name is traditionally derived from a Saiyid named Masʿūd Malik al-Sadāt Ghāzī, who is said to have defeated the Hindu Rājā and founded the city about 1330. The only notable buildings are the tomb and tank of Pahār Khān, governor in 1580; and the Čihil Sutūn, or "Hall of forty pillars", the palace of ʿAbd Allāh Khān, governor in the 18th cent., which is still owned by his descendants.

(J. S. COTTON.)

GHĀZIYA (A.), plur. *ghawāzī*, a name given to the caste of dancing-girls in Egypt, who call themselves Baramika. The origin of these two names is not quite certain; cf. *Revue du Monde Mus.*, Vol. xx. 110, 125. According to Lane, the *ghawāzī* mostly keep themselves distinct from other classes and marry only within their tribe; the men are household servants or sometimes also follow a trade when they do not accompany the women as musicians; one of the latter is called *ghawawīlī*. They used to perform in the public streets, but this was prohibited in 1834 because they were notorious as prostitutes.

GHĀZNA (otherwise known as **GHĀZNĪN**, **GHĀZNĪ**) is an ancient town in Afghānistān situated in lat. 68° 18' E. long. 33° 44' N. on lofty ground 7280 ft. above sea-level on the watershed of the Arghandāb and Tarnak rivers. It is now an insignificant town, its place as the northern capital of the country having been taken by Kābul, but has some importance still as a centre of the *ghalzai* traders who proceed annually to British India by the Tōcī and Gumal routes. It is still fortified and the ruins and mounds to the north-east testify to its former extent.

Its early history is obscure. Suggestions have been made of its identity with Ptolemy's Gazaca and with the Greek Gazos, but there is little to support these conjectures. On the other hand the *Hsi-na* of Hiuen Tshwang (which V. de St. Martin first identified with *Ghazna*), seems to correspond with it accurately. He approached it from India either by the Gumal via Wāno or by the Tōcī via Banū. Either of these names might represent Varana, which is designated by the Chinese Fa-la-na. According to the Buddhist pilgrim it was the capital of the kingdom of Tsao-kin-to and of great extent. Buddhism still flourished there at that period (the 7th cent. A. D.). It is not however till the rise of the *Ghaznavid* dynasty which took its name from the town that *Ghazna* became famous. It is doubtful whether *Ghazna* was included in the *Sāmānī* dominions. It was certainly not one of their mint-towns. Alp-tigin conquered it from a certain Lawik whose position is uncertain. After his death his son Ishāk was driven out of *Ghazna* by Lawik, but recovered it with the aid of Maṣūr b. Nūh *Sāmānī*. Balkatigin his slave succeeded him in *Ghazna*, and was himself succeeded by Piri who allied himself with Lawik and the Hindū *Shāh* of Kābul, but Subuktigin another servant of Alp-tigin attacked them and became master of *Ghazna* in 366 (976). It was the head quarters of Subuktigin in his Indian expeditions and here in 380 (990) he imprisoned his son Maḥmūd for some time. After Maḥmūd had become an independant sovereign in 389 (998), *Ghazna* rose in importance owing to its commanding position towards India, although the actual capital of his empire was Balkh. It was to *Ghazna* he brought the idol from the Somnāth temple, part of it being thrown in front of the great mosque and part in front of his palace. It was one of his mints, although the coinages of Nishāpūr, Herāt and Balkh are more important. Farwān, his father's only mint, was quite given up. Maṣūd I does not seem to have coined at *Ghazna*, but after his time the *Ghaznavids* were confined by

the rise of the *Saldjūk* monarchy and the growing strength of the *Ghōrī* Chiefs to the eastern part of Afghānistān, and *Ghazna* became the actual capital and the principal mint-town. During the reigns of the later kings of this dynasty the town underwent a series of misfortunes. In the time of Arslān there was a destructive fire said to have been caused by lightning, and in the same reign it was taken by Sulṭān Sandjar *Saldjūk* and made over to Bahrām *Shāh*. In the wars between Bahrām *Shāh* and the *Ghōrī* chiefs it was more than once taken, and in 544 (1149) 'Alā al-Dīn Ḥusain sacked and destroyed the town, thereby earning the name of *Djāhān-sūz*. It is stated by chroniclers to have been utterly destroyed, nevertheless it continued to be an important capital under the *Ghōrīs*. Mu'izz al-Dīn Muḥammad b. Sām became governor here under his brother in 569 (1173), and began his expeditions into India. It was to *Ghazna* he brought the last *Ghaznavid* king Khusrāw Malik before sending him to Firūz-kōh, and here in later years he accumulated the treasure obtained from his Indian conquests of which fabulous accounts are given. After Muḥammad b. Sām's death in 602 (1205) *Ghazna* again became an object of dispute. Yalduz held it for several years and after his death in 612 it fell into the hands of 'Alā al-Dīn Khwārizm *Shāh*, who in his turn was driven out by the Mongols. All these events are marked in the coinage of the *Ghōrīs*, Yalduz and 'Alā al-Dīn at the *Ghazna* mint, but after their time it relapses into obscurity. *Djalāl* al-Dīn Mangubartī held it till driven out by Čingiz Khān. The great conqueror sent his son Ogotai who took the city, massacred the greater part of its inhabitants and carried the remainder away as prisoners, and from this calamity *Ghazna* never recovered. This occurred in 618 (1221). Ibn Baṭṭa who visited *Ghazna* more than a hundred years after found it still a heap of ruins, 733 (1332). In the succeeding period we hear little of *Ghazna*. In Ibn Baṭṭa's time it had been taken by the Amīr Ḥusain Kurt after his defeat of Tarmashīrīn, 727 (1226), and in 804 (1401) Timūr granted it to his grandson Pir Muḥammad. Bābar obtained possession of it in 910 (1504) and in his autobiography gives an interesting description. He found it a poor place, and expressed his astonishment that former kings should have made it their capital in preference to Khorāsān. He also mentions the tomb of Sulṭān Maḥmūd (Rawza) and those of Maṣūd and Ibrāhīm as existing in *Ghazna*. The Minārs or columns of victory erected by Maḥmūd and Maṣūd III are still standing. Maḥmūd's tomb also exists and was described by Vigne. The outer gates supposed to be those of the shrine at Somnāth in Gūdjārāt plundered by Maḥmūd and brought to India by the Governor General Lord Ellenborough in 1842, are now considered to be the original gates of the tomb, as they show no sign of Indian style. Under the rule of the Mughal Emperors of India, and afterwards under the Durrānīs and Bārakzais, *Ghazna*, or rather *Ghaznī* as it is now called, played no important part. It was however a strong fortress, and had the popular reputation of impregnability. At the commencement of the war of 1839—42 it was stormed by a British force under Keane. Rattray at that time described it as still possessing signs of former greatness with some fine houses. It had perhaps recovered to some extent

since Forster in 1783 described it as maintained only by a few traders. Vigne's description in 1836 was more favourable. It was garrisoned by a small force of sepoys under British officers and was besieged from Nov. 1841 to March 1842 when it was taken by a Bārakzai force. Nott re-took it in September the same year, and in returning to India brought away, by Lord Ellenborough's orders, the supposed gates of Sōmnāth. In more recent times Ghazna was the scene of the imprisonment of Afḡal Khan by Shēr 'Alī and his rescue by 'Abd al-Rahmān after defeating Shēr 'Alī at Saidābād close by. In 1868 however Ghazni was again the scene of fighting when 'Azam and 'Abd al-Rahmān were defeated by Shēr 'Alī's forces. In 1880-1881 Ghazni was traversed by Stewart's force marching from Kandahār to Kābul and by Roberts from Kābul to Kandahār.

The name Ghazna is found on coins and in Arabic chronicles. The form Ghaznīn is used in the *Ṭabaḳāt-i Nāṣiri* and other Persian chronicles such as Firishṭa up to modern times. The final *n* has been dropped and the form Ghazni is now generally used.

(M. LONGWORTH DAMES.)

GHAZNAVIDS. The rise of the dynasty known as Ghaznavid or Ghaznawī (from the capital Ghazna) is connected with the struggle between the Iranian and Turkish races for the mastery of the borderland of Islām in the 4th cent. The Sāmānids, an Iranian or Tadjik stock from Sughd, had risen to power at the commencement of the 3rd century, becoming practically independent of the authority of the khalīfas. After the year 300, however, Turkish names begin to appear among their governors and generals; these were the so-called Turkish slaves, who distinguished themselves in war, and, gradually rising to positions of importance, paved the way for the Turkish and Mongolian invasions which swept away the independence of the Iranian races of Persia, Mā warā' al-Nahr, Tukhārīstān and the regions now included in Afghānistān. The most important of these was Alp-tigin [q. v., i. 321^a], who became *Hādji* or chamberlain, and in 344 (955) governor of Herāt. At the accession of Maṇṣūr b. Nūḥ he fell out of favour and betook himself to the eastern border of the kingdom, where he not only resisted all attempts to subdue him but himself conquered Ghazna, where he died in 352 (963). There is no evidence that Ghazna had previously formed part of the Sāmānid kingdom. It had been overrun, with the whole of Zābulistān and Kābul, by the Ṣaffāris by 260 (873), but it is doubtful how far their power was permanent, and even when the Sāmānides became paramount there is no evidence that Kābul and Ghazna were under them. The ruler of Ghazna is described as *Pādshāh* and was allied to the Hindū Shāhis of Kābul. These titles were not as yet used by Muhammadan rulers. The Pādshāh Lawik was probably a Hindū Chief, even though some Mss. of the *Ṭabaḳāt-i Nāṣiri* give him the name of Abū Bakr or Abū 'Alī. Alp-tigin was succeeded by

his son Iṣhāk, but the power fell into the hands of other Turkish slaves Balkā-tigin and Subuktigin. Balkā-tigin was the first to obtain the power. He was an old servant of the Sāmānids, and had struck coins in his own name under their suzerainty at Balkh as far back as 324 = 935 (very much as Alptigin had done at Andarāba), but his coinage of 359 (969) at Ghazna is that town's first appearance as a mint-town. The mountain-fort of Farwān in the Hindukush was also used as a mint by Alptigin and Balkā-tigin. Balkā-tigin was succeeded by Piri, who was perhaps a local man, as he allied himself with Lawik, the former ruler of Ghazna, and with the Hindū Shāhis. Subuktigin, who had perhaps remained at Farwān, attacked the allies and routed them, obtaining possession of Ghazna in 367 (977). He continued to issue coins (which are still abundant) at Farwān in his own name with that of Nūḥ b. Maṇṣūr. Subuktigin rapidly spread his power through Tukhārīstān, Zābulistān, Zamindāwar and Ghōr, and even Kuṣḍār (now in Balochistān), and then turned his arms against the Hindū Shāhi Djaipāl who is described as Pādshāh of Hind. This title may be due to confusion of Hind (India) with his capital Ohind or Waihind on the Indus, still locally known as Hind or Hund. This expedition against Djaipāl marks the commencement of the wars which ended in the destruction of the powerful Hindū kingdom of the Shāhis, commonly spoken of as the Hindū kings of Kābul. Kābul, however, had at this time passed out of their possession, though they still held the lower Kābul valley and the territory between the Indus and Džehlām. Their dominions in India extended far beyond these bounds to the east, along the line of the Himālaya as far as Kāngra, and through the northern and central Panjāb to Bhaṭinda on the Hākṛā river (now dry owing to the diversion of the Satlaj to join the Biās). It has been held by some writers (see Raverty *Notes on Afghānistān*, p. 370, followed by V. Smith, *Early Hist. of India*, 2nd Ed., p. 353) that the kingdom of the Central Panjāb, with its capital at Bhaṭinda, was distinct from that of the Shāhis, and that Elliot and Dowson were mistaken in treating them as one. Nevertheless there seems to be no good evidence in support of this theory, which involves the supposition that there were two Djaipāls reigning side by side, both of whom were simultaneously at war with the Ghaznavids, and both of whom were succeeded by sons named Anandpāl. Raverty himself says that Djaipāl of Bhaṭinda lost both Lamghān and Nangniḥār to Subuktigin, yet these territories were an integral part of the Shāhi kingdom, the last part of the Kābul valley held by them after the loss of Kābul itself. It seems most probable that the first Hindū kingdom of Kābul was distinct from that of the central Panjāb, but that the earlier kings whose names end in *dēva* had been replaced (by succession or conquest) by the Rādjput dynasty of the central Panjāb who adopted the ancient Kushan title of Shāhi. Their names all end in *pāl* like those of other Rādjput sovereigns of the time. Djaipāl appears to have succeeded to Bhima Dēva and to have been allied to the kings of Kashmīr who had married into Bhima Dēva's family and afterwards assisted Triloḥan Pāl (Djaipāl's grandson) in his war with Maḥmūd. It is evident therefore that the wars of Subuktigin and Maḥmūd with Djaipāl

and his successors were directed against the most powerful kingdom of northwestern India. In 369 (979) Subuktigīn defeated Djaipāl and plundered Lamghān, and there was war again in 378 (988) when Djaipāl seems to have been the aggressor. He was defeated, probably in the Kuṛam valley, and forced to surrender some forts in the neighbourhood of Ghazna. Maḥmūd first came prominently forward during these wars, and was more inclined to extreme measures than his father. There was some disagreement between them, and Maḥmūd was imprisoned for some time in 350 (990) in the fort of Ghazna. During this period Subuktigīn, although practically independent, admitted the suzerainty of the Sāmānid kings and fought their battles for them, especially in 382 (992) and 385 (995) against Abū 'Alī Simdjūr. He was made governor of Khorāsān with the title of *Nāṣir al-Dīn*, and Maḥmūd was at the same time given the military command with the title of *Saif al-Dawla*, which is commemorated in a coin struck by him at Nishāpūr in 385 (995). Subuktigīn died in 387 (997) having by his conquests and firm character laid the foundation for the wider empire of his son Maḥmūd.

Ismā'īl. Subuktigīn was succeeded by his younger son Isma'īl who, however, was speedily put aside by his energetic brother.

Maḥmūd. Maḥmūd succeeded in 389 (999) at the time when the Sāmānid king had been dethroned by a rebellion. Maḥmūd ostensibly sided with his suzerain, but utilized the opportunity to assume the title of *Amīr* and to obtain investiture from the Khalifa al-Kādir billāh as *Yamīn al-dawla* and *Amīn al-milla*, and these titles henceforth appear on his coins.

Maḥmūd finding himself now an independent ruler, and the once powerful Sāmānid monarchy having vanished, proceeded to consolidate his authority over the greater part of the dominions of that monarchy, and in addition to carry out a systematic series of invasions of India which had been beyond its scope. The position of his new and rising capital of Ghazna on the crest of the high plateau overlooking the plains of Northern India with which it possessed easy communications by the valleys of the Kabul, Kuṛam, Toḥi and Gomal rivers, gave him peculiar advantages for such expeditions. Nevertheless he did not at first make Ghazna his capital. He chose rather the ancient centre of Tukharistān, Balkh, and issued his coinage there, as well as at Walwālīz in the same province, and Herāt and Nishāpūr in Khorāsān. Expeditions against Ilak Khān in Turkistān, who had captured the last Sāmānid prince, and also against the Malik of Sijistān and Ghōr consolidated his home power and left him free for his almost annual cold weather raids into India. For further details of these expeditions which occupied the greater part of his reign see art. MAḤMŪD.

At the end of his life a danger which was soon to threaten the security of his successors made its first appearance. The Saldjūks crossed the Oxus and invaded Tukharistān. Maḥmūd hastened northwards and defeated them, and then turned westwards to Irāk where also his arms were triumphant over the Buyids, till then the dominant family and masters of the caliphate, and Shī'ahs by creed. After annexing Persian Irāk Maḥmūd re-established the Sunnī faith and made his son Mas'ūd governor over Isfahān and Rayy. He returned to Balkh and

afterwards to Ghazna but was attacked by a severe illness and died soon after his arrival in 421 (1030).

Maḥmūd's dominions at the end of his reign comprised the whole of Khorāsān and Persian Irāk in the west, Tukharistān and part of Māwarā' al-Nahr in the north, Sijistān, Zamīndāwar and Kuṣdār in the south, and the Pandjāb, Multān and part of Sindh in the east, with an admitted suzerainty over the Hindu kingdoms of the Ganges valley and the south coast. His authority was admitted too by the chiefs of Ghōr and Ghardjistan and the mountain Afghans. From the time of his accession he had recognized the nominal authority of the Khalifa al-Kādir billāh instead of the deposed Khalifa al-Tā'ī billāh whom the Sāmānids and Subuktigīn had acknowledged. The only part of his Indian conquests which was permanent was the establishment of a strong kingdom with its capital at Lahore, which now first becomes known in history as a centre of government. The Ghaznavid rule in the Pandjāb outlasted that in the northern and western provinces of the empire, which fell into the hands of the Khāns of Turkistān or the Great Saldjūks of Persia, or in the centre, where the growing power of the Chiefs of Ghōr gradually overshadowed that of Maḥmūd's descendants; and Lahore was the last refuge of the kings of the dynasty. Maḥmūd's fame is mainly based on his Indian conquests, and beyond the actual realization of his projects they had the effect of showing that, in spite of the bravery of the Rāḍjputs, India lay open to a resolute invader from the northwest, who, himself screened by an impenetrable mountain barrier, was able to strike the disunited tribes of the plains when weather and opportunity served; and thus they led to the final overthrow of the Hindū states of northern India by Mu'izz al-Dīn two hundred years later. The weakness of the Ghaznavid monarchs was the want of a strong central body of supporters of their own race. They were themselves intruders, and were obliged to recruit their armies from various sources, wild Ghōrī and Afghān tribesmen, Khaldj Turks, and even Indians from the new Pandjāb dominions. Such a rule could only be held together by strong personal influence, and no king after Maḥmūd was able to exercise such influence. In religion Maḥmūd was a strong Sunnī. He admitted the authority and sought the recognition of the Khalifa al-Kādir billāh, even when he was a powerless tool in the hands of the Shī'ah Buyids, and when he himself occupied the Bayid territory in Persian Irāk he put down the Shī'ah creed with severity. In the same way he acted towards the Karāmiṭa, whom he found still powerful in Multān and Manṣūra. In the eyes of his contemporaries his greatest glory was the spreading of the light of Islām in pagan India and the destruction and plunder of celebrated shrines like Mathurā and Sōmnāth. His name is a household word in the east to the present day, and innumerable tales of a folklore type are told about him and his faithful servant Ayāz, some of which began to find their way at an early period into chronicles like the *Djāmī al-Hikāyat*. His ill-treatment of the poet Firdausi is not mentioned by early writers, but some probability is lent to the story by Firdausi's fierce denunciation of Maḥmūd in his ode.

Muḥammad. On Maḥmūd's death the process of disintegration soon began. Muḥammad was ab-

sent in his government of *Djūzdjān* and *Mas'ūd* (his twin brother) in his government of *Iṣfahān*. The supporters of the former called him to *Ghazna* and he was declared *Amīr*, but he was rejected by the army, with whom *Mas'ūd* as a bold leader was popular. *Mas'ūd* on receiving an invitation to return proceeded towards *Ghazna*; a deputation went to meet him and *Muḥammad* sent a force to stop them headed by a *Hindū* commander named *Siwīnad* (*Shēo Nand?*) but he failed to do so. The deputation met *Mas'ūd* at *Herāt* and offered him the crown. *Muḥammad* was soon dethroned, blinded and imprisoned.

Mas'ūd I. *Mas'ūd* was declared king in *Shawwāl* 421 (1030). His history is related in considerable detail by *al-Baihaḳī*. He was of a bold and generous but rash disposition, a brave warrior but given to excess in drinking. He attempted to rival his father's fame both to the east and west, but was more successful in India than in *Mā warā' al-Nahr* where he was opposed by the rising power of the *Saldjūks* under *Tuḡhril Beg*. For details of his Indian wars see art. *MAS'ŪD*. *Mas'ūd* engaged in various warlike adventures in the west in the intervals of his Indian expeditions. He took *Karmān* from the *Būyids* in 424 (1032) but lost it again soon afterwards. In 428 (1036) he had visited *Mā warā' al-Nahr* with a force containing a large Indian element, but without effecting much. Now the *Saldjūk* invasion was in greater force and *Mas'ūd* made a desperate effort to arrest it. He met *Tuḡhril Beg* at *Dandānākān* 431 (1040) and, after a hard-fought battle which lasted three days, met with a disastrous defeat. He retired on *Ghazna* through the hill country of *Ghardjīstān*, and immediately collecting his family and treasures marched into India, leaving his son *Mawdūd* to defend *Balkh*, while *Maḍjūd* was sent to *Lahore*. His blinded brother *Muḥammad* accompanied the march, and a conspiracy was formed to dethrone *Mas'ūd* in favour of *Muḥammad*. On reaching the *Mārgala* Pass between the *Indus* and the *Djehlam* *Mas'ūd* was seized and bound. [See art. *MAS'ŪD*.]

Muḥammad (2nd reign). *Muḥammad* became *Amīr* a second time, and his son *Aḥmad* killed *Mas'ūd* in prison at *Girī* in 433 (1041). *Mawdūd* on hearing the news marched from *Balkh* to *Ghazna* and thence by the *Kābul* valley where he met *Muḥammad's* army and defeated it at *Nagrahār* in 434 (1042), and afterwards took vengeance on all his father's murderers, "both Turk and Tadjik". *Fathābād*, near *Djalālābād*, was founded by *Mawdūd* in honour of this victory.

Mawdūd. 433—441 (1041—1048). *Mawdūd* now succeeded to the throne, but displayed no qualities calculated to delay the disruption of his kingdom. His brother *Maḍjūd* immediately rebelled and seized on the *Sawālak* province, lately annexed by *Mas'ūd*, but he died suddenly not without suspicion of poison. The *Hindūs* were not slow to take advantage of the discord, and the *Rādjā* of *Dihli* (a town recently founded) took not only *Hānsī* and *Thānēsar*, but recovered the strong fortress of *Nagarkōt* or *Kāngrā*, and then advanced on *Lahore*, which was saved with difficulty. Three *Rādjās* are said to have joined in this attack. *Mawdūd* made no move to assist his harassed servants. On the western side the *Seldjūk* invasions continued. *Mawdūd* sent one general after another against them, but did not take the field himself. In 434 (1042) *Tukhāristān*

was invaded and the *Iḥādijb Artigin* who was sent against the enemy failed to save *Balkh*, and was disgraced and beheaded. In 436 (1044) we hear of the *Saldjūks* as far south as *Bust*, and the next year they plundered both *Bust* and *Rubāt-i Amīr* in *Zamīndāwar*, and advanced towards *Ghazna*. The general sent against them was named *Tuḡhril Beg*. He inflicted a defeat upon them, but himself joined in traitorous plots and fled. The *Ghōrī* *Maliks* now took advantage of the *Seldjūk* invasion to throw off the *Ghaznevide* yoke. The general who succeeded *Tuḡhril Beg* was named *Bāsi-tigin*. He obtained the alliance of one of the *Ghōrī* *Maliks* named *Yahyā* and attacked the other, 'Abū *Alī*, who possessed a strong mountain fort. After this fort was taken *Yahyā* was executed as well as Abū 'Alī. The *Saldjūks* under *Bahrām Niyāl* were defeated by *Bāsi-tigin* near *Bust*, and he also put down a rising in *Ḳuṣḍār*. The check to the *Saldjūks* was only temporary and *Mawdūd* at length marched against them in person, but was taken ill after starting and returned to *Ghazna* where he died in 441 (1049).

Mas'ūd II. An infant son of *Mawdūd* named *Mas'ūd* was enthroned through a palace intrigue, but quickly deposed by 'Alī, a son of *Mas'ūd I.*

'Alī. 'Alī only reigned for two years, during which the process of decay continued, and the mountain *Afghāns*, regarding whom we hear nothing since their punishment by *Maḥmūd*, now began to take part in the internal discord. In 443 (1051) a successful rebellion was headed by 'Abd al-Rashīd.

'Abd al-Rashīd. He was a son of *Maḥmūd* and was with *Mas'ūd I* at the battle of *Dandānākān*. He was declared *Amīr* with the assistance of *Nōsh-tigin Karkhī* who became one of his generals and recovered the fort of *Nagarkōt* from the *Hindūs* who had taken it in *Mawdūd's* reign. *Tuḡhril Beg* in spite of his treacherous conduct under *Mawdūd* is found still in command of the western army. As on the former occasion he inflicted a fruitless defeat on the *Saldjūks* and put down a rebellion in *Sidjīstān*, but immediately put his treacherous plot into execution, took possession of *Ghazna*, murdered 'Abd al-Rashīd and declared himself *Amīr*.

Usurpation of *Tuḡhril*. *Nōsh-tigin* on hearing of these events marched from India towards *Ghazna*. *Tuḡhril* was killed before his arrival, and he installed *Farrukh-zād*, a son of *Mas'ūd I*, who with his brother *Ibrāhīm* had long been imprisoned.

Farrukh-zād. This prince relied mainly on *Nōsh-tigin* who successfully repelled an invasion of *Čaghri Beg* (*Dāwūd*) *Saldjūk* and his son *Alp-Arslān*. (The *Ṭabaḳāt-i Nāṣiri* says nothing of this invasion which is recorded by *Firīšta*). *Farrukh-zād* is also said to have earned popularity by remitting the taxes of *Zābulistān* ruined by frequent invasions. *Farrukh-zād* died in 451 (1059), like *Mawdūd* from a disease which seems to have been cholera.

Ibrāhīm. *Ibrāhīm*, his brother, succeeded to the throne peacefully. About the same time *Alp-Arslān* succeeded his father *Čaghri Beg* (*Dāwūd*) as governor of *Khorāsān*, and, in 455 (1063), he succeeded *Tuḡhril* as sultān of the whole *Saldjūk* empire. *Khorāsān* and *Tukhāristān* were now permanently lost to the *Ghaznavid* kingdom, which seemed on the point of extinction. *Ibrāhīm's* long reign however restored some measure of prosperity. He

made peace with the Saldjūks, and married his son Mas'ūd (afterwards Mas'ūd III) to a daughter of Malik Shāh who succeeded Alp-Arslān in 465 (1072). This marriage had a great influence on subsequent history. He pursued the arts of peace with success and also strengthened his position in the Panjāb. He took the fort of Adjūdhan on the Biyās, now known as Pak-pattan and celebrated for the shrine of Bābā Farīd (Shakargandj). Firishṭa mentions two other strong places which he took, Rōdpāl and Dēra. The latter was situated in a mountainous country, and may be Dēra Dūn. Ibrāhīm was the first Ghaznavid monarch to use the title Sultān on his coins in imitation of Tugh-ril Saldjūk. He died in 492 (1099) after a reign of forty-one years.

Mas'ūd III. His son Mas'ūd succeeded and reigned for sixteen years. The conditions of his reign were similar to those of the preceding one. He enjoyed peace at home, and sent expeditions into India, one of which under Tughā-tigīn Ḥādījib of Lahore penetrated beyond the Ganges and brought back great spoil. The rise of the Ghōri Malik becomes noticeable in this reign. 'Izz al-Dīn Ḥusain received the government of Ghōr in 499 (1099). Mas'ūd III died in 508 (1115).

Shēr-zād. His son Shēr-zād who succeeded him was killed next year by his brother Arslān.

Arslān. Arslān assumed the crown in the Garm-sēr of Zamīndāwar in 509 (1116) and the remaining brother Bahrām Shāh fled to the court of the Saldjūk monarch Sandjar who took up his cause. Arslān insulted his father's widow, the sister of Sandjar, the alliance with the Saldjūks was broken, and the temporary prosperity of the Ghaznavids came to an end. Sandjar invaded Zabulistān and advanced on Ghazna. Arslān was defeated and retired on his Indian dominions. Bahrām Shāh was set up in Ghazna, but Arslān returned and drove him out as soon as the Saldjūks had departed. Sandjar returned and again took Ghazna. This time Arslān was captured, and appears to have been put to death. Cf. i. 463^a.

Bahrām Shāh. [q. v., i. 586^a] Bahrām Shāh's reign began in 511 (1117) and lasted till 547 (1153) but the independent monarchy of Ghazna was now at an end. Sandjar was his suzerain, and his name was placed on Bahrām Shāh's coins below that of the Khalifa (except on the coins of Indian type struck at Lahore). The Indian dominions were in fact the only part of the monarchy free from the Saldjūk power. Bahrām Shāh's downfall was however due not to his Saldjūk suzerain but to the rapid rise of the chiefs of Ghōr. In the beginning of his reign he had to deal with the rebellion of Muḥammad Bahlīm who had been governor of the Indian province. He attempted to assert his independence and built a fort at Nāgōr in the most remote part of Sawālāk, a province which had been conquered by Mas'ūd I, lost by Mawdūd, and apparently reoccupied afterwards, although of this there is no record. (For the importance of Nāgōr see Cunningham, *Epithalites*, in *Transactions 9th Oriental Congress*, p. 241 and Thomas, *Chronicles of Pathān Kings of Dehli*, p. 47). Bahrām Shāh encountered Bahlīm near Multān and defeated him, returning to Ghazna in 523 (1128). The rebellion of the Ghōri Chiefs was due to the murder of Kutb al-Dīn who was a refugee at Ghazna by Bahrām Khān's orders. His brother Sūrī, the principal malik, after driving Bahrām Shāh out of

Ghazna for a time, was himself driven out by the latter who collected a force of Afghāns and Khaldj Turks in the Kuṛam valley. Sūrī was himself captured and executed with great ignominy, 543 (1148). Then Sūrī's successor Sām with his brother Ḥusain advanced towards Ghazna, and Sām having died, Ḥusain ('Alā' al-Dīn Ḥusain, nicknamed Djāhān-sōz) took Ghazna and ravaged it in a merciless manner, hence earning his nickname. Bahrām Shāh probably recovered possession of Ghazna for a short time after his departure, but accounts are contradictory. Ḥusain, on his return march through Zamīndāwar, destroyed the celebrated city of Bust, capital of that province. It has lain in ruins ever since, and Kandahār soon took its place as the capital. Bahrām Shāh died in 547 (1151).

Khusraw Shāh. His son Khusraw Shāh succeeded and would no doubt have received the support of his suzerain Sandjar who had been at war with Ḥusain, had not Sandjar himself been defeated and taken prisoner by the Ghuzz hordes in 548 (1153). He died soon after his release four years later. The Ghuzz rapidly overran the whole country, the Ghōris in their mountains alone being untouched. Khusraw Shāh was not in a position to resist them. He abandoned Ghazna for the last time and the Ghaznavid kings henceforward held only the Indian territory. Khusraw Shāh died at Lahore in 555 (1160).

Khusraw Malik. He was succeeded by his son Khusraw Malik. (There is a good deal of discrepancy as to dates in the chronicles but the date 555 is fixed as being the year of the death of the Khalifa al-Muktafi whose name appears on the coins of both Khusraw Shāh and Khusraw Malik). He was the last of the Ghaznavid Sultāns, and ruled the Panjāb till 583 (1187). The Ghōri Sultān Mu'izz al-Dīn b. Sām, who recovered Ghazna from the Ghuzz in 569 (1173), almost immediately began his invasions of India, but did not attack the Lahore kingdom till after his expeditions to the south. After the campaigns of Multān, Nahr-wāla and Dēbal he made his first attack on Peshāwar which belonged to Khusraw Malik, and threatened Lahore. He occupied and strengthened the fort of Syālkōt in the country of the Khōkhars, a powerful tribe, and made it an outpost of his rule. Khusraw Malik tried to retake it with the help of the Khōkhars, and the Rādja of Djamūn, who considered the Khōkhars his own subjects, turned against Khusraw Malik and took the side of Mu'izz al-Dīn. The latter finally entrapped Khusraw Malik by pretended negotiations, surrounded him and took him prisoner. Lahore and the Panjāb fell into the hands of the conqueror. The unfortunate Ghaznavid king was sent first to Ghazna, then to Ghiyāth al-Dīn at Firūzkōh and lastly to the fort of Bafarwān in Ghardjistān, where he and his son Bahrām Shāh were put to death in 587 (1191).

Thus the great Ghaznavid empire came to an inglorious end. Had it not perished when it did, it must inevitably have been swept away, like its successors, by the Mughal flood, for it had no stability. It was a purely military rule with no national force behind it, and in such a case weakness and domestic feuds must be fatal. Its fame is due to its having commenced the Muḥammadan conquest of Northern India, and established a firm foothold in the Panjāb which made Mu'izz al-Dīn's later conquests possible.

The coinage of the Ghaznavids is full, and affords a numismatic record of the principal events from Alp-tigin's rise to Khusrav Malik's fall. Particularly noteworthy are the small issues of Subuk-tigin at Farwān, imitating in size and weight the coinage of the Hindū Shāhis, followed later by Muḥammad and Mas'ūd I who adopted the horseman type used by the same kings, with their own names above the horseman in Kūfic letters. Later kings adopted the bull of Siva from the same coinage and even borrowed the title *Srī Samanta Deva* in Nāgarī letters from the Shāhi coinage. Very remarkable also is Maḥmūd's bilingual *ṭanka* in Arabic and Sanskrit struck at Maḥmūdpur (Lahore). Side by side with these Indian coins the regular issue of dinārs and dirhams, following the models of the 'Abbāsī Caliphs, went on. Maḥmūd's early assumption (during his father's life) of the title of *Saif al-Dawla* under the Sāmānids is illustrated by a dirham struck at Nishāpūr in 385, which bears the figure of a sword and the title Saif al-Dawla Maḥmūd b. Sabuk-tigin. The extensive coinage of Khorāsān and Tukhārīstān issued from the mints of Herāt, Nishāpūr, Balkh and Walwaliz comes to an end in the reign of Mas'ūd I, as these places fell into the hands of the Saljuqs. The title *Amir* was the only one used at first. The chroniclers give Maḥmūd and his immediate successors the title of *Sulṭān*, but it does not appear on the coins till Ibrāhīm's reign.

(M. LONGWORTH DAMES.)

GHAZZA, the ancient 'Azza, Greek Γάζα, an important commercial town in south-western Judaea, near the coast at the intersection of the chief route to Egypt and several caravan routes from Arabia. The town belonged to the Philistines and was not taken by the Jews till the time of Alexander Jannaeus who had it destroyed. It was rebuilt by Gabinus somewhat farther south than the ancient town the ruins of which were still visible in the fifth century. The harbour of Maiumas (cf. *Mitteilungen u. Nachrichten des Deutsch. Pal. Vereins*, 1901, p. 62) was 2-3 miles away. Under Roman rule it belonged to the province of Syria Palestina and later to Palestina Prima. In Muḥammad's time it is described by Antoninus Martyr as a splendid and luxurious city, whose inhabitants gave a kindly welcome to foreign visitors. The town was of very great importance to the merchants of Mecca who sent their great caravan to Syria every year. According to Tradition the Prophet's great grandfather Ilāshim [q. v.] died in Ghazza and is buried

there, which gave "Hāshim's Ghazza", as it was called, a particular sanctity in the eyes of Muslims; 'Omar also is said to have won his wealth there. When Abū Bakr sent a section of the Arabian troops to Palestine, the Patricius of Ghazza was defeated at Dāḥin (Balādhuri, p. 109; cf. Tabari, *Annales*, where this battle is confused with one in al-'Araba) or Tādūn (Eutychius, *Annales*, ed. Pococke, ii. 258), about three hours east of Ghazza (cf. the article FILASTIN), which was soon afterwards taken by 'Amr b. al-'Āṣī. Whether Saif's account of the siege of Ghazza by 'Alqama b. Mudjazzir has any historical value, remains to be proved; at any rate its details are a repetition of what is related of 'Amr himself. In 767 the celebrated jurist al-Shāfi'ī was born in Ghazza. Towards the end of the viiith century the town, like several others in the neighbourhood, was devastated by the bloody feuds of several Arab tribes. It recovered, however, for in the xth century Ibn Hawkal and Muḥaddasī describe it as a large and wealthy city with a beautiful chief mosque. It must, however, have been laid waste again for, when the Crusaders came there, it was in ruins. In 1152 it was rebuilt by the Christians and a fortress built in it, which was granted to the Templars and garrisoned by them. It is from this period that Idrīsī's brief mention of the city dates. The unfortified part of the town had been sacked with great cruelty by Salāḥ al-Dīn in 1170 but it was only after the battle of Ḥaṭṭin in 1187 that the citadel fell into his hands. Richard I. Coeur de Lion succeeded for a while in holding it again, but it was finally taken by the Muslims again who held it henceforth. On the division of country into *mamlakāt* Ghazza became the capital of one of them. In the xivth century Abu 'l-Fidā describes it as a town of medium size with a small fort and flourishing orchards which were separated by sandhills from the sea; Ibn Baṭūṭa on the other hand calls it a large, thickly populated town without walls and with many mosques, including one newly built by Amīr Dījāwālī, which had taken the place of the old chief mosque (perhaps the modern chief mosque, which, it may be added, was originally a Johannite church of the xiiith century). In the xvth century Khaliḥ al-Zāhiri speaks of Ghazza as the capital of an extensive mamlaka and calls it a beautiful town in a flat country, rich in fruits and having mosques, schools and other fine buildings worthy of admiration.

At the present day Ghazza is very prosperous (about 40,000 inhabitants); the surrounding orchards yield a rich harvest and the market is a very busy one. Many pieces of marble from the ancient buildings are built into the houses but otherwise the town is not rich in relics of antiquity.

The above mentioned harbour of Maiumas is certainly mentioned by Muḥaddasī, al-Bakrī and Idrīsī as "Maimās" or some such name. The last named, however, says that the harbour of Ghazza is Tēda, which al-Bakrī merely mentions along with Maimās; it is the ancient Anthedon, the site of which Gatt has discovered an hour's journey N.W. of the town.

(FR. BUHL.)

GHEBA. A Musalmān tribe of Rāḍipūt origin associated with the Dīḍrā tribe, and occupying a considerable part of the Pindī Ghēb Taḥṣīl of the Aṭak District, Panḍjāb. Though not a large tribe they have a good social position. They are a branch of the Pūiwar Rāḍipūts and related to the Tiwāna and Syāl tribes. Legend provides them with three founders, sons of Rāī Shānkar Pūiwar, named Tēo, Sēo and Ghēo, the first the ancestor of the Tiwānas, the second of the Syāls and the third of the Ghēbas. The Ghēbas were nearly independent till subdued by Randjīt Singh. The period of their conversion to Islām is not known.

Bibliography: *Imp. Gazetteer of India*, Panḍjāb Sect., 1908.

(M. LONGWORTH DAMES.)

GHIFĀR, an Arab tribe, belonging to the Ma'addī (Ismā'īlī) group. Their genealogy is: Ghīfār b. Mulaik b. Damra b. Bakr b. 'Abd Manāt b. Kināna; they were closely allied to the Hudhail.

They lived in the Hīdžāz. The following places belonged to them: Aḍā'a (near Mecca), Ba'al (near 'Uṣfān, also given as a hill), Shadakh (in common with the Uṣlum), Ghaika, Waddān (both the latter between Mecca and Medina), al-Tanādīb and the hill of Muslīh.

In the year 8 (629) the Ghīfār adopted Islām. In the same year they took part in the conquest of Mecca along with the Muzaina, Djuhaina, Sulaim, Asad, Kais and other tribes under Khālīd b. al-Walīd. After the death of the Prophet, they recognised the Caliph Abū Bakr and fought for his party against the rebel tribes.

GHALZAI. [See GHALZAI.]**GHIRSH.** [See GHRUSH.]

GHIYĀR (A.), a distinctive mark or strip of cloth which the Dhimmis (Christians, Jews, Magians etc.) fasten on their shoulders, the colour of which is different from that of their clothes. The obligation to wear such a badge as well as that prescribing the wearing of the *zunnār* and forbidding riding on horseback, is said to date from 'Omar I, but no such edict was expressly proclaimed till the reign of Hārūn al-Rashīd in 191 (807) (Tabarī, ed. de Goeje, iii. 712 *et seq.*). The edict in question was repeated by following caliphs from time to time and made more strict, namely by al-Mutawakkil in 235 (849-850), cf. Tabarī, iii. 1389 *et seq.*, al-Muḳtadir (Ibn Taghribardī, ed. Juynboll, ii. 175), al-Muḳtadī (cf. Ibn al-Athīr, ed. Tornberg, x. 123). The same is related of the Fāṭimid caliph al-Ḥākim in 395 (1005), cf. de Sacy, *Exposé de la religion des Druzes*, *Introd.*, cccviii. *et seq.* and of the Mamlūk Sulṭān al-Nāṣir in 700 (1301), cf. Lane-Poole, *A History of Egypt*, p. 301. These laws were enforced with particular rigour in the Maghrib, especially with reference to the Jews. The term used there is ('amala) *al-shakla*; cf. Fagnan in *Revue des Etudes Juives*, 1894, p. 294 *et seq.* As is well-known, this example was followed in various Christian countries.

As to the colour of the *ghiyār*, we read in the Fikh books that it should be blue for Christians, yellow for Jews, and black or red for a Magian, but in the regulations of the various caliphs and Muslim rulers mentioned above we meet with arbitrary deviations from this rule. A honey-coloured piece of cloth, for example, is almost always prescribed, so that 'asālī is used for *ghiyār* without further qualification. It is clear that the regulations were usually allowed to be forgotten, or exemption from them could be obtained on payment of a certain sum, so that they had repeatedly to be enforced anew till finally they fell utterly into desuetude. Nevertheless, Muslims still hesitate to wear a European hat and tie, because they regard these to some extent as *zunnār* and *ghiyār*.

GHIYĀTH AL-DĪN BALBAN etc. [See BALBAN, i. 616^b, KAIKHUSRAW, MUHAMMAD etc.]

GHIYĀTH AL-DĪN TAGHLAK, eighteenth Muhammadan emperor of Dīhli, was by birth a Ḳarawniya Turk, but of Indian descent through his mother. He began his career as a private soldier under the brother of 'Alā' al-Dīn Khaldjī but early in the reign of Kuṭb al-Dīn Mubārak Khaldjī was in command of the frontier district of Dēbālpūr. Here, by his services against the Mughals, whom he encountered no less than twenty-nine times, he earned the title of Ghāzī Malik, and when Mubārak's vile favourite, Khusrāw Khān, slew his master and usurped his throne Taghlak's eldest son, Fakhr al-Dīn Djamā, fled

from Dihli and persuaded his father to take up arms against the outcast. *Khusraw* was defeated on Sept. 5th 1320, and on the following day *Tagh-lak* was proclaimed emperor. The restoration of order in the capital occupied him but one week, and, after modifying the harsh laws of the *Khildji* and founding his new capital of *Tagh-lakābād*, he dispatched his son, now styled *Ulugh Khān*, into the *Dakhan*. Details of *Ulugh Khān*'s campaigns cannot be given here but he carried his arms to the extreme south of the Indian Peninsula. The defeat of an expedition against *Warangal* has been variously attributed by historians to a military mutiny and to the failure of *Ulugh Khān* to persuade the whole army to join him in a rebellion against his father, but he had no difficulty in convincing *Tagh-lak* of his innocence, and in 1324 was summoned from *Telingāna* to act as regent during the absence of *Tagh-lak*, who had resolved to lead an expedition into *Bangāl*, where two brothers, *Shihāb al-Dīn Bughrā* and *Ghiyāth al-Dīn Bahādūr*, were contending for sovereignty. The former submitted and the latter was captured, and on his return towards *Dihli* *Tagh-lak* was received with great pomp in a temporary pavilion which had been erected by his son at *Afghānpūr*, six miles from *Tagh-lakābād*. The building fell and crushed its occupants, and *Ulugh Khān* has been accused by some historians of having contrived the disaster, but many circumstances, besides the clumsiness of the artifice, combine to render his guilt doubtful. *Tagh-lak* died in February or March 1325.

(T. W. HAIG.)

GHIYĀTH AL-DĪN TAGHLAK II, fourth emperor of *Dihli* of the *Tagh-lak* dynasty, was the son of *Faṭh Khān*, eldest son of *Firūz Shāh Tagh-lak*. On the death of *Firūz* in Sept. 1388, his second son, *Muhammad*, was in rebellion, and *Tagh-lak* was placed on the throne in accordance with his grandfather's will. He attempted, without success, to crush his uncle's rebellion, and, after he had reigned five months, he and his minister *Malik Firūz Khāndjahān* were put to death (Feb. 19th 1389) by *Malik Rukn al-Dīn Candā*, and his cousin *Abū Bakr* was raised to the throne.

(T. W. HAIG.)

GHOMĀRA (*Gumera* in *Leo Africanus*), a Berber tribe in the western *Maghrib*. *Ibn Khaldūn* numbers it among the *Maṣmūdī* tribes and traces it back to *Ghomār*, a son of *Maṣmūd*, or, according to another tradition, son of *Mesṭāf b. Melil b. Maṣmūd*. The *Ghomāra* are divided into a large number of clans (*Benī Hamīd*, *Metiwa*, *Benī Nāl*, *Aghsāwa*, *Benī Wazarwāl*, *Medjkasa* etc.), names which are still to be found at the present day among a number of *Rif* tribes. It is rather difficult to define exactly the territory occupied by the *Ghomāra*. According to *Ibn Khaldūn*, it was five days' journey in length (from the "plains of *Maghrib*" to *Tangier*) and about the same in breadth (from *Qṣar Ketāna* to the *Wādī Wergha*). It ran down to the Atlantic coast between *Aṣīlā* and *Anfā* and here adjoined the lands of the *Berghawāṭa*. *Al-Bakrī* no longer reckons the dis-

trict of *Tangier* and *Ceuta* to the *Ghomāra* and gives *Nukūr* in the east and *Karūshat* in the west as their boundaries.

The *Ghomāra* were settled in this part of the *Maghrib* long before *Islām* was introduced into these regions. Conquered by *Mūsā b. Nuṣair*, they became converts to the new religion, but in the second century A. H. they adopted *Khāridjī* doctrines and took part in the rebellion of the *Maisara*. Even after the defeat of the *Khāridjīs* they still showed themselves disposed to heretical doctrines however. "Their rudeness and lack of culture", writes *Ibn Khaldūn*, "prevent them recognising the truth in matters of religion". It therefore followed that they attached themselves in great numbers to the false prophet *Hāmīm*, known as *al-Muftarī* "the forger" (cf. the art. *HĀMĪM*). He belonged to the tribe of the *Medjkasa*, appeared in the district of *Tetuān* in 313 (915) and fell in 315 (927-928) in a battle against the *Maṣmūda*. *Hāmīm* gave his followers civil and religious laws, limited the fast of *Ramaḍān* to three days, abolished the command to make the pilgrimage and composed a *Qur'ān* in the Berber language, from which *al-Bakrī* and *Ibn Khaldūn* quote a few passages. At a later period another prophet named *Āsim b. Djemil al-Yazdadjūmī* appeared; in 625 (1288) a rebellion broke out instigated by a certain *Abū l-Tawādjīn*, who claimed to be a prophet and magician. The *Ghomāra* have always had a particular fondness for magic. *Al-Bakrī* makes a number of references to it and *Ibn Khaldūn* says that the black art was particularly practised by young women.

As to the political history of the *Ghomāra*, they have undergone many changes. From the 11th—12th (11th—12th) centuries the eastern part of their lands belonged to the kingdom of *Nukūr*. One of their chiefs named *Ṣoggen* attempted in 144 (761) to seize the reins of government then held by the *Benī Ṣāliḥ*, the descendants of the founder of the *Nukūr* kingdom, but failed. On the division of the *Idrisid* kingdom, the eastern tribes passed under *ʿOmar b. Idris* and his descendants. They remained loyal to them even after the *Idrisids* had been driven from *Fās* by the *Fātimids* and stood by them to the last in their wars with the Spanish *Umayyads*. After the disappearance of the *Idrisids* from the scene (264 = 974) the *Ghomāra* first recognised the suzerainty of the *Umayyads*, then that of the *Ḥammādids* of *Ceuta* until the coming of the *Almoravids*. On the rise of the *Almohads* the *Ghomāra* hastened to adopt the new teaching and assisted *ʿAbd al-Mu'min* in his expedition against *Ceuta* (541 = 1146). But this loyalty, which had won them the particular favour of the Caliph, did not last long. *Abū Ya'qūb* in 562 (1166-1167) had to take the field in person to suppress a rising led by a *Ghomāra* chief named *Seba' b. Menaghfād*. The rebel was defeated and slain and *Abū Ya'qūb* appointed his brother to govern *Ceuta* and watch the *Rif*.

The *Marinids* also found it difficult to conquer the unruly *Ghomāra*. They only succeeded in subduing them by taking advantage of the feuds between the various *ṣoff*. But this conquest was by no means permanent. "At the present day", writes *Ibn Khaldūn* (trans. de Slane, ii. 157 *et seq.*), "the *Ghomāra* have become powerful and numerous; they pay homage and tribute however to the *Marinid* government as far as the latter

can extort it from them; but as soon as the government once shows itself weak, . . . it has to order troops from the capital to bring the tribes back to their allegiance. Protected by inaccessible mountains, they do not hesitate to offer an asylum to members of the royal family and to all rebels who seek refuge with them". From the xvth century onwards details of the history of the Ghomāra are entirely lacking; their name is still mentioned by Leo Africanus, however, in the xvith century and it is still borne by a powerful tribe of Djebala.

YVER.)

GHÖR a mountainous country now included in Afghānistān [q. v. i. 149^a] occupying the block between the Helmand valley and Herāt, and corresponding roughly with the modern Hazāristān, occupied by the Hazāra and Čahār Aimāk tribes. The country gave its name to the Ghōrids [q. v.] who succeeded the Ghaznavids in power. Ghōr formed part of the kingdoms of the Sāmānids and Ghaznavids. The Ghōrids themselves were conquered by the Shāhs of Khwārizm and shortly afterwards, in the early part of the viith = xiiith century, the country came under Mongol rule, and Firūz-kōh the capital was destroyed. The population, formerly Irānian, became from that time largely Mongolian, as it still remains, [see under art. AFGHĀNISTĀN i. 151^a, 154^b]. The name Ghōr gradually disappears from history, and has not been in use in modern times.

Bibliography: For authorities see under art. FIRŪZKŌH, p. 114^a and GHÖRIDS.

(M. LONGWORTH DAMES.)

GHÖRIDS. The family of the Malikis of Ghōr claimed an illustrious Iranian descent, and took the name of Shānsabānī from Shansab a supposed descendant of Zuhāk, but nothing is known of their actual history before the time of the Šaffārids, when Ya'qūb b. Laith invaded Zamīndāwar and Bust. At that time the mountain region of Ghōr (sometimes called Mandēsh) was under a Malik named Sūrī, and the population were not yet converted to Islām. His son Muḥammad who was attacked by Maḥmūd Ghaznawī is also stated in the *Rauzat al-Šafā* to have been still a pagan, in spite of his name, and al-'Otbi calls him a Hindū. Maḥmūd took his stronghold in the year 400 (1009) and carried the chief into captivity, where he is said to have poisoned himself. His son Abū 'Alī, who was put in his place by Maḥmūd, no doubt had embraced Islām, and is said to have built masjids. Nevertheless he was seized and imprisoned by his nephew 'Abbas after Mas'ūd had succeeded to the throne of Ghazna. 'Abbās seems to have been a powerful ruler and built himself a strong castle in the mountains of Mandēsh. Mas'ūd himself is stated by Baihaqi to have conducted warlike operations in the Ghōr country against chieftains named Abn 'l-Ḥasan and Warmēsh, but no allusion is made to Muḥammad, Abū 'Alī or 'Abbās. It is probably that there were at that period several tribes in Ghōr under separate chiefs, and that there was no cen-

tral government. 'Abbās seems to have continued in power under Ghazna suzerainty until he was dethroned by Sulṭān Ibrāhīm who put his son Muḥammad in his place. Through this comparatively peaceful period, when the raids of the Saldjūks were suspended, the power of the Ghaznavid monarchy was evidently sufficient to exact obedience from the hill chiefs. The maliks who succeeded Muḥammad were Kuṭb al-Dīn Ḥasan and 'Izz al-Dīn Ḥusain. The latter came into collision with Sulṭān Sandjar the Saldjūk ruler in 501 (1007), and was taken prisoner but released after two years (strange to say a similar story is told of 'Alā' al-Dīn Ḥusain Djahānsōz, and as both were called Ḥusain it is probable there has been some confusion). After this his allegiance appears to have been divided between the Saldjūks on the west and the Ghaznavids on the east. Mas'ūd III confirmed him as chief in 493 (1099). After his time the family divided into the two branches of Ghōr and Bāmiyān. 'Izz' al-Dīn is said by Faṣīḥī to have died in 545 (1150), but this is evidently too late a date. His son, Saif al-Dīn Sūrī, succeeded as principal chief, being the eldest of the sons by a mother of high status. They had an elder brother, however, named Fakhr al-Dīn Mas'ūd, the son of a Turkish woman, and another, the son of a serving woman, named Kuṭb al-Dīn Muḥammad. Sūrī made a division of his father's dominions awarding a part of the mountain tract of Ghōr called Warshāda (perhaps corresponding to the Taimani country of to-day) to Kuṭb al-Dīn, who founded there the fortress of Firūzkōh and was known as Malik al-Djibāl. Fakhr al-Dīn received the northern territory of Bāmiyān with Tukhāristān and, according to the *Tabaqāt-i Naṣiri*, even Shagh-nān and the country up to the boundary of Wakhs and Badakhshān, but it is clear that his authority over the more remote parts of this region must have been very slight. The later history of the Malikis of Bāmiyān may be here briefly given before continuing that of the main Ghōrid family. Fakhr al-Dīn was succeeded by Shams al-Dīn Muḥammad who is said to have extended his power to Balkh and Badakhshān, and to have subdued Tukhāristān, which evidently had not been really subdued before. He took the title of Sulṭān with the consent of his uncles of Ghazna who had by this time risen to great power as will be seen. His son Bahā' al-Dīn Sām succeeded him in 588 (1192) and reigned till 602 (1205) when he died (soon after the murder of Mu'izz al-Dīn Muḥammad b. Sām). His son Djālāl al-Dīn 'Alī who held power after him, assisted his brother 'Alā' al-Dīn to seize the throne of Ghazna, and himself obtained great booty. 'Alā' al-Dīn having been expelled from Ghazna by Yalduz, Djālāl al-Dīn again assembled a force said to consist of Ghōri, Ghuzz and Beghū (or Eastern Turks), but met with no success. He was himself taken prisoner by Yalduz, but was released and recovered possession of Bāmiyān which had meanwhile been usurped by his uncle 'Alā' al-Dīn Mas'ūd. Djālāl al-Dīn continued to reign till the invasion of 'Alā' al-Dīn Khwārizm-Shāh, when he was defeated and put to death 612 (1215). Bahā' al-Dīn and Djālāl al-Dīn were rulers of great importance and the last of the Shānsabānī race to enjoy real power. Coins of both of them are known. It is necessary now to return to Saif al-Dīn Sūrī and carry on the story of the main line.

The origin of the insurrection of the Ghōri

Maliks is not very clear, but apparently the Malik al-Djibāl quarrelled with his half-brothers and took refuge with Bahrām Shāh in Ghazna. It is probable that this was connected with the enmity between Bahrām Shāh and Sultān Sandjar who had been making overtures to the Ghōri Malik. Whatever the cause, Bahrām Shāh became suspicious of the Malik al-Djibāl and put him to death by poison 541 (1146). Sūrī, on hearing this news, marched on Ghazna which he took. Bahrām Shāh retired into Kuṣam and there assembled an army of Afghāns and Khaldj. Meanwhile Sūrī had declared himself Sultān at Ghazna and made over Ghōr to his brother Bahā' al-Dīn Sām, but on the approach of Bahrām Shāh the leading men of Ghazna rose against him. He attempted to retreat to Ghōr, but was surrounded, captured and executed.

His brother Bahā' al-Dīn Sām who succeeded him in 544 (1149) had already taken charge of Ghōr in his absence and completed the unfinished town and fort of Firūzkōh abandoned by the Malik al-Djibāl when he went to Ghazna. On learning of the death of Sūrī he collected an army and marched towards Ghazna, but died at Kidān on the way in the year of his accession. His brother 'Alā' al-Dīn Ḥusain succeeded him, and took up the work of avenging his brothers. Bahrām Shāh's army met him near Tiginābād in the plain country of Zamīndāwar but was defeated, Dawlat Shāh, son of Bahrām Shāh, being killed. The chroniclers enlarge upon the valiant deeds of two champions in 'Alā' al-Dīn's army both named Kharmil, who fought with Bahrām Shāh's war-elephants. Nearer to Ghazna Bahrām Shāh's troops twice attempted resistance, but 'Alā' al-Dīn defeated them and took Ghazna by storm. His revenge was terrible. The city was laid waste and its inhabitants slaughtered; and the remains of the later Ghaznavi monarchs were dug up and burned. The name of Djahān-soz was given to 'Alā' al-Dīn on account of this terrible event. He did not attempt to hold Ghazna, being threatened on the west of his kingdom by Sultān Sandjar Scldjūk. Some chroniclers assert that Bahrām Shāh was dead and had been succeeded by Khusrāw Shāh before the fall of Ghazna but this is improbable. The author of the *Ṭabaḳāt-i Nāṣiri* states that he recovered Ghazna after 'Alā' al-Dīn's departure. The latter, after leaving Ghazna, marched by way of Bust, which he utterly destroyed so that it has been a ruin ever since, and then spent some time in his capital Firūzkōh till roused by Sandjar's advance. The armies met at Nāb in the valley of the Ilarī-rūd. 'Alā' al-Dīn was deserted by his Turkish, Khaldj and Ghuzz troops. The Ghōris were defeated and 'Alā' al-Dīn taken prisoner. After a time he found favour with Sandjar who restored him to the throne of Ghōr. He re-established his power and extended it northwards, getting possession of the Murghāb valley (Ghardjistan) and the strong fort of Iūlak. The defeat and capture of Sandjar by the Ghuzz probably made this development possible, and 'Alā' al-Dīn was himself at Herāt at the time of his death in 551 (1156). His son Saif al-Dīn Muḥammad succeeded at Firūzkōh. The two sons of Sām, Ghiyāth al-Dīn and Mu'izz al-Dīn, who had been imprisoned by his father he set at liberty, and also began a persecution of the Malāhida who had obtained influence in 'Alā' al-Dīn's time. He was soon recalled by the incursions of the Ghuzz who were

rapidly increasing in power, and was defeated and killed in a battle with them near Marv in 558 (1162). It is said his death was due to the treachery of his general Abu 'l-'Abbās in revenge for his brother Warmūsh whom Saif al-Dīn had killed through jealousy. Ghiyāth al-Dīn b. Sām was with him at the time, and was brought back and raised to the throne by the army at Firūzkōh. Mu'izz al-Dīn who had been at Bāmiyān with Fakhr al-Dīn joined his brother and became his principal support. They soon killed Abu 'l-'Abbās, and then had to meet an attack from their uncle Fakhr al-Dīn assisted by Tādj al-Dīn Yalduz of Herāt. Fakhr al-Dīn considered that the Ghōr territories should belong to him and not to his nephew, and obtained the support of the rulers of Herāt (Yalduz) and Balkh (Kimādj), no doubt Turkish chiefs. The Ghōri chiefs met their army at Rāgh-i Zariz in the Harī-rūd valley and defeated them. Both Yalduz and Kimādj were killed and the latter's head was sent to Fakhr al-Dīn. The defeated uncle was received with ironical courtesy by his nephews, who however released him and restored him to his own territory of Bāmiyān 559 (1163). Ghiyāth al-Dīn then proceeded to liberate other parts of his territory from the intruding Ghuzz, who had taken possession of Ghazna after the death of Saif al-Dīn Muḥammad the year before, and retained it till 569 (1173) when Mu'izz al-Dīn conquered them and got possession of the old Ghaznevide capital. The last Ghaznevide kings had abandoned it and made Lahore their capital. Ghiyāth al-Dīn then installed his brother Mu'izz al-Dīn as Sultān at Ghazna, himself retaining the suzerainty over that kingdom and the actual rule over Ghōr, as may be seen from the coins, on which Ghiyāth al-Dīn appears as *al-Sultān al-a'zam* and Mu'izz al-Dīn as *al-Sultān al-mu'azzam*. Ghiyāth al-Dīn himself operated against Herāt which had fallen into the possession of one of Sultān Sandjar's Turkish slaves named Tughril, and obtained possession of the city in 571 (1175), but no doubt it was recovered by Tughril who was not finally disposed of till 588 (1192). Ghiyāth al-Dīn also received the adhesion of Tādj al-Dīn Harb, Malik of Sidjistan, who accepted his suzerainty, though it is not the case as stated by Raverty in a note on p. 192 of his translation of the *Ṭabaḳāt-i Nāṣiri* that the name of Sultān Ghiyāth al-Dīn was put on the coins (see *B. M. Cat. Oriental Coins. Additions*, vols. i. to iv. p. 268). Mu'izz al-Dīn after consolidating his authority at Ghazna began to conduct expeditions into India where the Ghaznavi king Khusrāw Malik was still reigning at Lahore, while Multān had fallen back into the hands of the Karmāṭians who had been expelled by Maḥmūd. He took Multān in 570 (1174) and Uēh soon after. The latter place was held by a Rādjā of the Bhaṭṭi tribe, and according to Firishṭa Mu'izz al-Dīn obtained possession of it through an intrigue with the Rādjā's wife. In 574 he marched to attack Bhīm Dēv king of Nahrwāla (Anhilwāra on the Gujjarāt coast), but was defeated and forced to retreat. In 575 (1179) he took Peshāwar and threatened Khusrāw Malik at Lahore, and in 578 (1182) he turned south again and took Dēbul on the sea-coast of Sind. In 582 (1186) or perhaps the following year he defeated Khusrāw Malik and obtained possession of Lahore (see under Ghaznavids), and from that time onwards the Ghōri kings,

having destroyed the last remnants of the dynasty of Maḥmūd, considered themselves heirs to all his conquests. In 588 (1192) Mu'izz al-Dīn joined his brother in repelling an attack of Sulṭān Shāh, a son of the Khwārizm-Shāh, who was finally defeated at Rūdbār on the Murghāb River. Tughril of Herāt who had joined Sulṭān Shāh was killed in this battle, and the unfortunate Khusrāw Malik was put to death the same year. Nishāpur was taken from the Khwārizm Shāhis in 596 (1199) or perhaps the year after, but was not held for long, and the rising power of 'Alā' al-Dīn b. Takash, the Khwārizm-Shāh, soon became predominant in Khōrāsān, although Ghiyāth al-Dīn and Mu'izz al-Dīn were able to hold him at bay as long as they lived, and Mu'izz al-Dīn was able to prosecute his Indian conquests.

Ghiyāth al-Dīn died in 599 (1202) at Herāt leaving a very wide-spread empire. His brother Mu'izz al-Dīn was at that time in Khōrāsān. On succeeding to the throne he bestowed the government of Ghōr on his cousin Ziyā' al-Dīn, who took the name of 'Alā' al-Dīn Muḥammad. Mu'izz al-Dīn during his brother's life had been pursuing his schemes of Indian empire since his conquest of the last of the Ghaznavids. Immediately after his occupation of Lāhore, in 587 (1191), he took the strong fort of Bhaṭinda on the Hākrā, and leaving Ziyā' al-Dīn in charge advanced towards the Djamnā to attack the Rājā of Dihlī. (It may be noted that in many histories of this period Mu'izz al-Dīn is alluded to by his earlier name Shihāb al-Dīn).

Since Maḥmūd's invasions the great kingdom of Kānauj had recovered some of its former prosperity under the Gahaṭwār dynasty which had succeeded to the Pratihāras. Dihlī, a recent foundation, had been taken a short time before from the Tomara or Tuwar tribe by the Čauhāns whose capital was at Adjmer. The Čauhān Rājā at the time of Mu'izz al-Dīn's invasion was Prithvī Rāj, popularly called Rai Pithorā, who was married to the daughter of the Rājā of Kānauj with whom he had eloped. He was a bold and successful warrior, and is still famous in folklore. The kingdom of Adjmer and Dihlī stood in the way of a conqueror from the northwest, and must first be subdued before the more eastern regions could be attacked. It was therefore against this kingdom that Mu'izz al-Dīn's efforts were directed, and in Prithvi-Rāj he met a worthy antagonist. Prithvī Rāj met him at Tirāorī, accompanied by his brother Gōbind Rāi (or Khāndī Rāi), governor of Dihlī. A desperate battle ensued in which Mu'izz al-Dīn was wounded by Gōbind Rāi, and saved with difficulty by one of his Khaldj followers. His army met with a defeat and was forced to retire on Lāhore. Prithvī Rāj advanced on Bhaṭinda to which he laid siege, but Mu'izz al-Dīn appeared in the field again in 588 (1192); Prithvī Rāj who had just gained possession of Bhaṭinda thereupon fell back to his former position at Tirāorī. (The name is given as Tarāin by some chroniclers and Talāwarī by others, but Tirāorī is the actual name and was so in Firishṭa's time. It is situated between Karnāl and Thānēsar). Here he was again attacked by Mu'izz al-Dīn, this time with complete success. Gōbind Rāi was killed in the battle and Prithvī Rāj in the pursuit. This battle destroyed all power of resistance. The whole territory of Sawaḷakh southwards to Adjmer, including Hānsī

and Saisuti (now Sirsa) fell into the conqueror's hands. The Sulṭān returned to Ghazna leaving his general Kuṭb al-Dīn Aibak to prosecute his conquests. Mirāth was soon taken by this commander and Dihlī the next year. In 590 (1193) Mu'izz al-Dīn again took the field and advanced against Kānauj. He was met by the Rājā Djaicand at Čandwār near Itāwa not far from Kānauj and on the banks of the Djamnā. Djaicand was killed in the battle and over 300 elephants taken. Next year he took Thankir (now Bhiāna); and Gwāliyar soon followed. Kuṭb al-Dīn carried on the conquests south of the Adjmer kingdom into Udjdjain and Anhilwāra (Nahrwāla) where Bhīm Dēv who had once repulsed Mu'izz al-Dīn was now defeated. Another general Ikhtiyār al-Dīn, Khaldj carried the war into Bihār, which he subdued, destroying Hindū and Buddhist shrines in great numbers. He also took Nūdia (Nadia) and drove out its king Rāi Lakhmania, who took refuge in Bang (Bengāl). Lakhnauti now became the Muhammadan seat of government. Kālandjar was also taken by Kuṭb al-Dīn in 599 (1202).

In these later conquests Mu'izz al-Dīn does not seem to have taken part personally. He was in fact occupied jointly with his brother Ghiyāth al-Dīn in the affairs of Khōrāsān and in resisting the growing power of the Khwārizm-Shāhs. He was in Khōrāsān when his brother died in 599 (1202) and succeeded to the supreme government. In 601 (1204) he organized a powerful army to invade Khwārizm and put an end to Alā' al-Dīn Muḥammad's depredations, but was unsuccessful and had to retire followed by the enemy. He was deserted by 'Izz al-Dīn Ḥusain, one of his principal maliks, and was for a time in great danger. He escaped to Ghazna with the wreck of his army. An outbreak then took place among some of the Pandjāb tribes, especially the Khokhars near Lāhore; the same tribe that had turned against Khusrāw Malik in favour of Mu'izz al-Dīn. The Sulṭān marched into the Pandjāb and punished this tribe. On his return march while encamped at Damyak on the bank of the Indus he was assassinated by a fanatic of the Malāhida, whom he had persecuted at an earlier period. The Khokhars have also been accused of the act, and by confusion of names its responsibility has been placed on the Gakhars; but the *Ṭabaqāt-i Nāsiri*, by far the best authority, supports the account here given.

The death of Mu'izz al-Dīn broke up the Ghōride empire. The power in India passed to the Turkish slaves and generals. Kuṭb al-Dīn remained at Dihlī and Tādj al-Dīn Yalduz who was in Kuṣamān (the Kuṣam valley) took possession of Ghazna, defeating the Ghōride maliks of Bāmiyān. Ghiyāth al-Dīn Maḥmūd, son of Ghiyāth al-Dīn Muḥammad, succeeded to the chieftainship of Ghōr, now reduced to something like its original importance, and deposed and imprisoned 'Alā' al-Dīn Muḥammad who had been installed by Mu'izz al-Dīn. Sulṭān Maḥmūd continued to rule at Firūzkōh, and at the request of the Khwārizm-Shāh imprisoned there the latter's brother 'Alī Shāh. He was assassinated by 'Alī Shāh's followers in 609 (1212). His son Bahā' al-Dīn succeeded and 'Alī Shāh was set at liberty, apparently as a defiance to the Khwārizmī monarch. The latter thereupon attacked and took Firūzkōh and added the whole of Ghōr to his kingdoms. 'Alā' al-Dīn Utuz, a son of Djahān-sōz, became nominal Sulṭān under Khwārizmī suzer-

ainty; he was attacked by the Ghazna forces by order of Yalduz in 611 (1214) and killed. Alā' al-Dīn Muḥammad who had been imprisoned in 602 was again made nominal sultān by Yalduz, but after the latter's death next year he surrendered to the Khwārizm-Shāh and was taken in 612 (1215) to Khwārizm where he died some time after. The same year, as already related, the last of the Bāmiyān branch of the Ghōrid family were swept away by the Khwārizm-Shāh, and the dynasty was now extinct.

The territories in Ghōr, Ghazna and Khorāsān now formed part of the Khwārizmī kingdom, soon to disappear before the advancing Mughals. The Indian conquests although they passed away from the family were more permanent. The Turkish slave generals continued its traditions, and took from Mu'izz al-Dīn their title of Mu'izzī Sultāns. The most faithful of these slaves Tādī al-Dīn Yalduz who reigned in Ghazna, Kuḥmān and Baniyān (Banū) till 612 (1215) continued to put Mu'izz al-Dīn's name on his coins as suzerain, and called himself 'his servant' (عبد). Kuṭb al-Dīn never even struck coins in his own name, but called himself "Mu'izzī" as did Naṣīr al-Dīn Kabāchāh who obtained possession of Sindh. Ikhtiyār al-Dīn Muḥammad Khaldī founded a semi-independent rule in Lakhnauti deriving from Mu'izz al-Dīn. The most important of the slave generals was Shāms al-Dīn Iltutmish who founded a royal family which continued to rule at Dihlī for some generations.

(M. LONGWORTH DAMES.)

GHORĪ DYNASTY, the, of Mālva, was founded by Husain, entitled Dilāwar Khān, an amīr of Firūz Shāh Taghlaq of Dihlī claiming descent from Shihāb al-Dīn Muḥammad b. Sām. Dilāwar Khān, having been appointed governor of Mālva by Muḥammad Shāh, son of Firūz, became independent in 1401, after the overthrow of the empire of Dihlī by Timūr. He died in A. D. 1405-1406, and was succeeded by his son Hūshang, who was suspected of having poisoned him. Hūshang, who built the fortress of Māndū, was chiefly occupied during his reign in unsuccessful warfare with Guḍjarāt. In 1420 he reduced the Gond kingdom of Kherla to the condition of a tributary state, and in 1422 led a raid into the distant Hindū kingdom of Dīādīnagar and returned with much plunder. In 1423 he besieged Gwāliyār without result, and in 1428, having forced Aḥmad Shāh Bahmanī I to raise the siege of Kherla, pursued him, but was defeated. In 1433 he captured Kālpī. The last years of his reign were embittered by disputes between his sons, the eldest of whom, Ghaznīn Khān, was, not without opposition, raised to the throne under the title of

Muḥammad Shāh on Hūshang's death in July 1435. Muḥammad Shāh's debauchery and his cruelty towards his brothers and their sons alienated the affections of his subjects, and he foolishly quarrelled with his powerful cousin and brother-in-law, Maḥmūd Khān Khaldī, to whom he owed his throne. Maḥmūd Khān caused him to be poisoned and the amīr's proclaimed Muḥammad's elder son, Mas'ūd, a boy of thirteen years of age, king; but Mas'ūd and his brother Umar Khān fled and the throne, after having been declined by Malik Muḥith, Maḥmūd's father, was usurped by Maḥmūd, and the kingdom of the Ghōrīs passed, in A. D. 1436, to the Khaldīs.

Bibliography: Firishṭa; *Ṭabaqāt-i Akbarī*. (T. W. HAIG.)

GHRŪSH (T.), *ghirsh* or *kirsh* (A.), the name of the heavy silver coin of Turkey, translated by piastre in European languages. The Oriental nations borrowed this name from the Slavonic-German form of the word *grossus* (*gros*, *grosso*, *groat*, *groß*, *Groschen*). The national coin of the early Ottoman empire was the *aḳḳa*, a small silver piece, which had evolved from the half and third dirhem of Western Asia and weighted about 15 grains at the time of the foundation of the Ottoman empire but fell in weight very rapidly. The last *aḳḳa*'s, which were struck at the end of the xviiith century, weighed only 2 grains. So small a coin, the only piece intermediate in value between the gold and copper coins, could not serve the purposes of commerce, so that silver coins of all the countries of Europe also circulated in Turkey. Soon after the appearance of the groat in Europe (the earliest was the *gros tournois* of Louis IX., struck in 1250, weighing 60 grains = 12 deniers) it must have found its way to Turkey also, for we find the word *ghrŭsh* officially mentioned as early as a *berāt* of Sulṭān Bāyazīd I. of the year 795 (1392). The same must have been the case with the taler, but it has not yet been clearly explained why the Ottomans now gave the same name *ghrŭsh* to the taler as they had formerly given to the groat. Perhaps the transition of the name was facilitated by the "Guldengroschen" (uncialis) struck in South Germany at the end of the xvth century or by the "Dickgroschen", the immediate predecessor of the taler. In any case it is certain that the word *ghrŭsh* had already undergone this change of meaning as early as the reign of Selim I. (918—926 = 1512—1520). Sulaimān II. (1099—1102 = 1689—1691) was the first to take the final step of striking this large silver piece in his own mints, — at least no Turkish piastre of an earlier reign has as yet been found. This national *ghrŭsh* was struck on a standard of 6 (Constantinople) dirhems (296 grains), i. e. considerably lighter than the Austrian taler (valued at 9 dirhems) which was then the pre-dominant coin in Turkey. (This Austrian taler was struck at the rate of 9.75 to the Vienna mark of 4380 grains and therefore weighed 442 grains, from which weight divided by 9 we actually get the Constantinople dirhem weight of 49.4 grains). After the *aḳḳa* had been finally supplanted by the new small silver coin, the *pāra* [q. v.] the relationship between the *ghrŭsh* and the *pāra* was fixed at 40:1, which still holds. The fractions of the piastre were: the *zolaṭa* [q. v.] of 30 *pāras*, the *yirmilik* or half piastre, *onbeshlik*, *onluk* and *beshlik*; its multiples were the *altmyshlyk*, *ikilik*

(double piastre) and *yūslik*. In the reigns of Maḥmūd I. and Oṭhmān III. (1143—1171 = 1730—1757) the weight (although not the value) was temporarily raised and the *ghrūsh* approximated to the Austrian taler (c. 475 grains); with the accession of Selīm III. (1203 = 1789) a rapid depreciation of the weight and value of the alloy began, which lasted till the currency was definitely reformed by Sulṭān ‘Abd al-Madḡid in 1259 (1843). This last reform transformed the piastre to a small coin weighing 19 grains of .83 fine silver and worth about two pence.

Ghrūsh were struck not only in Constantinople but in the North African vassal states of Turkey also, in inconsiderable numbers however and only after the reign of Muṣṭafā III. (began in 1171 = 1757). The first *ghrūsh* were issued in Egypt under ‘Alī-Bey in 1183 (according to the inscriptions but probably not till 1185), on a standard of c. 5 drachms = 248 grains and halves of c. 2½ drachms = 124 grains; they were to contain .5 fine silver but hardly attained ¼. They were worth 40 and 20 pāras (called *medīn* [q. v.] in Egypt) respectively. The same coins but still more reduced in weight and value were also struck at the mint in Cairo during the French occupation.

Bibliography: See the authors cited in the article FUNDUKLY, ii. 117b.

(E. V. ZAMBAUR.)

GHUBĀR (A.), “dust”, an exceedingly fine kind of writing, the lines of which are finer than hairs and which requires to be read with the aid of a glass. It may be used in any of the various calligraphies. — It is also the name of a kind of decimal figures, which are very similar to the Hindu-Arabic numerals.

Bibliography: Cl. Huart, *Calligraphes et Miniaturistes*, p. 53; S. de Sacy, *Grammaire Arabe* 2, i. 91 and Pl. viii. (Cl. HUART.)

GHUJDŪWĀN, a large “village like a town” (according to the *Rashahāt ‘Ain al-Hayāt* of ‘Alī b. Ḥusain al-Kāshifī, MS. of the University of St. Petersburg, Or. 293, f. 12a) six farsakh from Bukhārā, the birthplace of the saint ‘Abd al-Khālīq Ghudjdūwānī (viith = xiith century) is mentioned at quite an early date by Narshakhī (ed. Schefer, p. 66 at the foot) in his account of Muḥanna^c (second = viiith century) and probably dates from the pre-Muslim period. In the viith = xiith century there was a much frequented weekly market there (cf. the text of Sam‘ānī in Barthold, *Turkestan v epokhu mongolskago nashestviya*, ii. 123, note 6). In the xth = xvth century Ghudjdawān appears as a strong fortress and the key to Bukhārā (‘Abd Allāh Balkhī in Barthold, *Zapiski vost. otd. arkh. obsht.*, xv. 202); Bābur was defeated here by the Uzbegs in 918 = 1512 and this ended the rule of the Timūrids in Mā warā’ al-Nahr. At a later period Ghudjdūwān is mentioned as one of the seven *tūmen* in the neighbourhood of Bukhārā (‘Abd al-Karīm Bukhārī, ed. Schefer, p. 77) and there is still a tax-collector (*Amīkdār*) stationed there.

(W. BARTHOLD.)

GHUJDŪWĀNĪ, KHŌWĀDJA ‘ABD AL-KHĀLĪQ, a famous Sūfī, born in the village of Ghudjdūwān (see preceding article); almost nothing is known of his life except that he studied under Shaikh Abū Ya‘qūb Yūsuf Hamadhānī in Bukhārā and died in 575 (1179–1180). Ḥādīdī Khalīfa, vi. 444 mentions his *waṣāyā* (admonitions) and some of them are given in *Djāmī, Nafahāt al-Uns*, ed.

Lees, p. 431, and in Cod. Leid. 1051 (2). The Naḳsh-bandīs hold him in particular reverence, whence his name appears in the *sanad* of this order. Further materials for his biography may perhaps be found in the manuscripts described by Pertsch (which exist elsewhere however also but are not accessible for publication): Cod. Gotherus, Cat., p. 123 and Cod. Berol., Cat., no. 260. Cf. also Rieu, Cat. of Persian Mss. (Brit. Museum), 862a and Herbelot, *Bibliothèque orient.*, s. v. Agduani.

GHUFRAN (A.), pardon (of sins).

GHŪL. For the ancient Arabs the *ghūl* (fem. pl. *ghilān* and *aghwāl*) was a peculiarly bestial, diabolic and hostile variety of the mārids of the djinn which allured men from their path by assuming different forms, then fell upon them unawares, destroyed and devoured them. In the root seem to lie two ideas: 1. changing into different appearances and 2. treacherously assailing and destroying. There are many references to them in the early poets. According to the *Aghānī* (vol. xviii. 209 *et seq.*) Ta‘ab-baṭa-Sharran spoke frequently in his verses of them; see especially his description of one (ibid., p. 212 foot) and his boasting of comradeship with them as a wanderer of deserts (ibid., p. 210 top). It was said to be the same as the *siṭāt* (pl. *saṭālī*) which had a similar power of transforming itself and which was called on that account the sorceress (*sāhīra*) of the djinn. The masculine of the *ghūl* was said to be the *kuṭrub*. It is plain that the word *ghūl* is a descriptive, for it can be used, and not apparently as a metaphor, of any destruction which comes upon a man; so even of spiritual things in the *Ta‘rifāt* of al-Djurdjānī, *sub voce* and Horten, *Theologie des Islām*, p. 335. Otherwise a man could hardly have been called Abu ‘l-Ghūl (*Hamāsa* (ed. Freytag), p. 12) and Ka‘b b. Zuhair in his Burda-poem could not have compared Su‘ād, even in her changeableness, to a *ghūl*. For some reason Muḥammad disliked the word, and only one derivative from the root occurs in the Kur‘ān (xxxvii. 46) *ghawl*, “insidious destruction”, used of the effects of wine (cf. *Mufradāt* of al-Rāghib, p. 375). In a tradition, also, he declares that there is no such thing as a *ghūl* (*Lisān*, xiv. p. 21, ll. 10 *et seq.*). This has justified Muslims, especially Mu‘tazilites in denying the existence of the *ghūl* altogether, e. g. Zamakhsharī on Kur. xxxvii. 46 (ed. Calcutta, p. 1205). But others held that it was only the changing of appearance (*taghawwul*) which the Prophet denied, and they quoted traditions from him telling how to drive away the *ghūl* by reciting the *adhān*. For the mediaeval system in which the *ghūl* is fully accepted, see Damiri *sub voce*, also under *siṭāt* and *kuṭrub*; Jayakar’s transl., vol. ii. 47 *et seq.* Kazwīnī classifies the *ghūl* among the diabolic (*mutashaitana*) djinn (ed. Wüstenfeld, i. 370) and that is overwhelmingly the later attitude. In the popular mind *ghūl* (also *ghūla*; similarly *kuṭruba*) was an ordinary word for cannibal, whether human or demonic, and thus became equivalent to the European ogre, and the standard ‘Märchen’ told elsewhere of ogres are connected with them. For Persia see Sir John Malcolm’s *Sketches of Persia*, chap. xvi.; for Egypt, Spitta’s *Contes arabes*, by vocab. under *ghūl*; for North Africa, Stumme, *Märchen aus Tripolis*, passim; for Turkey, Kūnos, *Türkische Volksmärchen*, by index under *Dew* and *Dschinn* and passim. See also in *Arabian*

Nights, Sindbad, voyage iv, Story of Saif al-mulūk, Story of envious Wazīr, all with Lane's notes. On ghūls haunting graves and feeding on dead bodies see Lane, *Modern Egyptians*, chap. x.; *Arabian Nights*, end of Note 21 to Introduction and addition by editor, with reference to a passage to Makrizī's *Khitāt*, to Note 39, chap. x. For ghūl as a demon producing hydrophobia (al-Madīna) see Burton's *Pilgrimage*, chap. xviii. *Saidāna*, a kind of ghūl, is an Ethiopic loan-word; see Nöldeke, *Neue Beiträge*, p. 50.

(D. B. MACDONALD.)

GHULĀM (A.), boy, servant, slave = 'abd [q. v.]; whence frequently found in proper names (see the following articles), in Persia and India with the meaning of 'Abd.

GHULĀM AHMED KĀDIĀNĪ. [See AHMEDĪYA, i. 206].

GHULĀM 'ALĪ [ĀZĀD] AL-HUSAINĪ AL-WASĪTĪ AL-BILGRĀMĪ, a member of the Saiyid family of Bilgrām [q. v.], was born in 1116 A. H. (= 1704); he travelled extensively in India and in 1151 made the pilgrimage to Mecca, where he stayed two years; after his return to India, he settled in Awrangābād and died there in 1200 (1786). Among his numerous writings may be mentioned *Ma'āthir al-kirām fī tarīkh-i Bilgrām*, a biographical work on the famous men of Bilgrām and other parts of India, and *Rawḍat al-Awliyā'*, a brief account of the great saints of India; he compiled three *Tadhkiras*, giving biographies not only of Persian but also of Hindustānī poets, *Sarw-i Āzād*, *Yad-i Baiḍā'* and *Khazāna-i 'Amira*; biographies of Indian theologians and learned men together with a compendium of rhetoric and poetics in *Subḥat al-Mardjān fī Athār Hindustān* printed 1303; he also brought out the first edition of *Ma'āthir al-umara'*, a biographical dictionary of famous nobles under the Mughal emperors in India, compiled by Šamsām al-Dawlah [q. v.]; after the assassination of Šamsām al-Dawlah in 1171 A. H. (= 1758), the manuscript of this work was scattered, but was collected together again and put in order by his friend, Ghulām 'Alī. His *takhalluṣ* was Āzād and he wrote poems in Arabic, Persian and Hindustānī. An autobiography of the author is given in most of his works e. g. *Subḥat al-Mardjān*, p. 118.

Bibliography: Lāchmī Narāyan, *Shafiq, Gul-i Ra'nā*, s. v.; Ibrāhīm Khālil, *Suhuf-i Ibrāhīm*, s. v.; Rieu, *Cat. Pers. MSS. Brit. Mus.*, iii. 978; Pertsch, *Pers. Handschriften Kon. Bibl. Paris*, ii. 326.

GHULĀM HUSAIN SALĪM ZAIDPŪRĪ, an Indian historian, born at Zaidpūr in Awadh; he migrated to Māldah in Bengal, where he held the office of *Dāk Munshī* (or Post Master) under Mr. George Udny, the Commercial Resident of the East India Company's factory at that place, at whose instigation he compiled his history of

Bengal. This work, entitled *Riyāḍ al-Salāṭīn*, was completed in 1788, and is the fullest account in Persian of the Muhammadan history of Bengal. It was published in the Bibliotheca Indica, (1890-1891). Ghulām Husain died in 1233 A. H. (= 1817).

Bibliography: *The Riyāzu-s-Salāṭīn, a history of Bengal by Ghulām Husain Salim*, translated from the original Persian, by Maulavi Abdus Salam. (Bibliotheca Indica, Calcutta, 1902—1904), pp. 2—5.

GHULĀM HUSAIN KHĀN B. HĪDĀYAT 'ALĪ KHĀN AL-HUSAINĪ AL-ṬABĀṬABĀ'Ī, historian, born 1140 A. H., author of *Siyar al-Muta'akkhkhīrīn* (or *Manners of the Moderns*), a history of India from 1118 to 1195 (= 1707—1781), comprising the reigns of the successors of Awrangzēb [q. v.] and an account of the progress of the English in Bengal, together with a critical examination of their government and policy; printed in India several times, e. g. Calcutta, 1836, Lucknow, 1866; translated into English by Raymond (Hājī Muṣṭafā), Calcutta, 1789; a revised translation by J. Briggs (only one vol. published), London, 1832.

Bibliography: *Asiatic Annual Register*, (Characters, p. 28—32) (London, 1802); Elliot-Dowson, viii. 194 *et seq.*; Rieu, *Cat. Pers. MSS. Brit. Mus.*, i. 280.

GHUMDĀN, a castle in Šan'ā in the Yaman, famous for its size and splendour. Hamdānī and other contemporary geographers give very full descriptions of it, but by that time it had long been merely a gigantic ruin. It is said to have been already destroyed when the Abyssinians conquered the Yaman in 525 A. D. It was then rebuilt, however, for, according to an oft quoted verse, which is ascribed by some to the father of the celebrated Ūmayya b. Abi 'l-Šalt, it was the abode of Dhū Yazan's son, after the Persians had conquered South Arabia about 570. Several authors say that it was the Caliph 'Othmān who finally destroyed it, but D. H. Müller considers this to be probably a malicious invention. In any case its destruction was connected with the Muslim conquest of the country. From several poems, whose South Arabian origin is confirmed in an interesting way by a number of technical expressions which are also found in Sabaeen inscriptions, we learn that the castle was built on a rock and that the lower part was built of freestone and the upper part of polished marble. According to Hamdānī, the ruins lay opposite the two first east doors of the chief mosque; he was still able to see a stronghold on the top, where the Ḳarmaṭians had encamped in 908. E. Glaser has actually discovered, northeast of the chief mosque, a large mound of ruins in the lower part of which were many beautiful freestone blocks; the large mosque has been built of the debris of the ancient castle as the style and size of the stones show.

AL-GHURĀB (A.), "raven", the name of a constellation in the southern sky (*corvus*), cf. Kazwīnī, *Kosmographie* (ed. Wüstenfeld), i. 420.

GHURĀBIYA, a branch of the Shī'ī "exaggerators" (*ghulāt* q. v.). Its adherents believe that 'Alī and Muḥammad were so like in physical features as to be confused, as like "as one raven (*ghurāb*) is to another" (a proverbial expression for great similarity, cf. *Zeitschr. f. Assyr.*, xvii. 53), so that the Angel Gabriel when commissioned by God to bring the revelation to 'Alī gave it in mistake to Muḥammad. 'Alī was, they say, appointed by God to be a Prophet and Muḥammad only became one through a mistake. It is related that in the fourth century A. H. the holders of this view in Kumm raised a serious revolt against the decision of the judge Abū Sa'īd al-Iṣṭakhri (died 328 = 940) when he divided an inheritance equally between two claimants, one of whom was the daughter and the other the uncle of the deceased. The Ghurābiya demanded that the whole estate should go to the daughter and the uncle be quite excluded; as our authority rightly observes, this was the result of their political creed, according to which the succession to Muḥammad was only legitimate in the line of his only daughter Fāṭima and not in that of his uncle ('Abbās) (Subkī, *Ṭabaḳūt al-Shāfi'īya*, ii. 194). Cf. the regulations made by the Caliph al-Mu'izz regarding the inheritance of daughters in Ibn Ḥaḍḍar, *Raf' al-Iṣṭ*, ed. Guest (in the appendix to al-Kindī, *Governors and Judges of Egypt*, Gibb-Memorial, xix.), p. 587, 3 from below. Ibn Djuhair, who visited Damascus in 580 = 1184, mentions the Ghurābiya among the minor sects to be found in Syria.

(I. GOLDZIEHER.)

GHURAMA'. [See GHARIM.]

GHURSH. [See GHRUSH.]

GHUSL is the so-called "major" ritual ablution, which the law ordains for a *djunub*, i. e. a man who is in a state of major ritual impurity (cf. the article DJANĀBA, i. 1013^a). The *ghusl* consists in washing the whole body. The formulation previously of the *niya* (intention) is indispensable for this and the believer has to be careful that not only is every impurity removed from his body but also that the water moistens every part of his body and his hair.

Bibliography: The chapter on purity (*ṭahāra*) in the collections on Tradition and the Fikḥ books; R. Strothmann, *Kultus der Zaiditen* (Strassburg 1912), p. 21 *et seq.*; A. J. Wensinck in *Der Islam*, i. 101 *et seq.*; iv. 219 *et seq.* (TH. W. JUVNBOLL.)

GHŪṬA is the name given to the girdle of gardens that surrounds Damascus; it is the intensively cultivated area, watered by the delta and the canals of the Baradā [q. v., i. 652^b], extending from the exit of this river from the gorges

of the Antilebanon to its disappearance in the Lake of 'Ataiba, the ancient "Sea of Damascus", a number of lakebeds only intermittently filled with water. The Ghūṭa is protected by this network of ponds with their reedbeds from the advance of the desert. "The area reclaimed on the east looks like a green mountain spur thrust boldly into the sea of sand" (Maspéro). The name Ghūṭa is found in the Umayyad poets, Ibn Kaïs al-Ruḳaiyāt, Akḥṭal, al-Rā'ī and in Ḥadīth, where it is designated by the Prophet as the scene of a future great battle (Mardj Rāhiṭ?). It is to this wonderful oasis that Damascus [q. v., i. 902^b *et seq.*] owes the glory of ranking as one of the four "paradises on earth". Tradition says that Abraham was born here and points out the hill which served 'Isā and his mother as a refuge (Ḳor'ān, xxiii. 52). Its greatest diameter is from west to east. The statements of the authorities on its area vary; 18 square miles or 2 days' journey (*marḥala*) in length and one in breadth. It is entirely covered with gardens and plantations — particularly orchards, from which come the celebrated fruits of Damascus, notably apricots, which are exported great distances — with villages buried among them, quite recalling the "*dhāt al-ḳurā wa 'l-ḳilā'*" of Ibn Kaïs al-Ruḳaiyāt (ed. Rhodokanakis, p. 209). Several of these villages, says Ṣāliḥī, possess the importance of towns, such as al-Mizza, Dārāyā, Harastā and Dūmā. Others have disappeared like Dair Murrān [q. v., i. 898], Bait Lāhyā, which Ṣāliḥī proposes to identify with a quarter in Damascus. The same writer also mentions the Druzes, *Tayāmina* (i. e. those who come from the Wādī 'l-Taim, on the western slope of Hermon) as already here. According to the old geographers, the Ghūṭa was occupied chiefly by the Banū Ghassān (cf. GHASSĀNIDS), then by the Banū Kalb and various groups of the Kaïs. Ṣāliḥī counted 5345 *bostān* or estates and 530 vineyards in his day (xth century A. H.); cf. the interesting monograph which he has devoted to the Ghūṭa: *Ḍarb al-ḥūṭa 'alā ḍjam' al-ghūṭa* (ms. in Leiden, no. 1862; section on cosmography).

(LAMMENS.)

AL-GHUZŪLĪ, 'ALĀ' AL-DĪN 'ALĪ B. 'ABD ALLĀH AL-BAHĀ'Ī AL-DIMASHQĪ, an Arab author, of Berber origin, who died in 815 = 1412; under the title *Maṭālī' al-Budūr fī Manāzil al-Surūr* he composed an anthology after the model of the Adab books but which, as the author in his preface rightly prides himself, is favourably distinguished from the mass of these books by its contents. He deals with the house and its parts, with all the pleasures of life and sport and the accessories required for these. He illustrates these subjects by anecdotes and verses from the later poetry, thereby giving us a very rich wealth of material, which is still far from being exhausted, for the study of the history of Muslim culture, similar to the *Kitāb al-Muwashshā*, to which it is superior

however in the greater area covered by its subject matter. The book was printed in two volumes in Cairo in 1299-1300 A.H. (C. BROCKELMANN.)

GHUZZ, the Arabic name for the Oghuz branch of the Turkish people. This seems to have been the name of the great people who united all the tribes from China to the Black Sea into one nomad empire in the vith century A.D.; in the Orkhon inscriptions of the viiith century they are also called Tokuz-Oghuz ("the nine Oghuz") so that they were divided into nine tribes. On the linguistic and ethnological relationship of the Oghuz to other Turkish peoples opinions differ; Ramstedt's attempt (in *Sbornik v čest semid'syatičetiya G. N. Potanina, Zapiski Imp. Russk. Geogr. Obšč. po otděleniyu etnografii*, Vol. xxxiv. p. 547 *et seq.*) to prove that Oghuz is to be identified with the Mongol *oirat* (properly *oyirad*) has found no support, any more than the equation to Ughor and Uighur proposed on the same philological grounds by different scholars (B. Munkácsi etc.).

The Tokuz-Oghuz (called Tughuz-ghuz by the Arabs) are mentioned for the last time in the west in 205 = 820-821, when they are said to have invaded the land of Ushrūsana (Tabari, iii. 1044). The geographers of the ivth = xth century call the people living in the west Ghuzz alone without the addition of a numeral. These Ghuzz were the immediate neighbours of the *Dār al-Islām* from Djurdjān on the Caspian Sea to Fārāh and Asbidjāb in the Sir-Daryā territory; in the west their territory was bounded by the lands of the Khazar and Bulghār, in the east by the lands of the Kharlukh, in the north by the lands of the Kaimāk (in Turkish probably Kimāk), cf. Ištakhri, ed. de Goeje, p. 9; on the other hand to reach the land of the Tughuzghuz from the *Dār al-Islām*, one had to traverse the whole of the broad territory of the Kharlukh, more than 30 days' journey, setting out from the eastern frontier of Farghāna (Ibn Hawkal, p. 11). The boundary between the Ghuzz and the Kaimāk was formed by the upper course of the river Itil, i.e. the Kama (Ištakhri, p. 222); in the same century a section of the Ghuzz had separated from its fellow-tribesmen and migrated to the previously uninhabited peninsula of Siyāhkūh (Mangishlak) (*ibid.*, p. 219). The headquarters of this people were on the lower course of the Sir Daryā (Ibn Hawkal, p. 393). According to Ibn al-Athir (ed. Tornberg, xi. 117) these Ghuzz had separated from the Tughuzghuz in the time of the Caliph al-Mahdī 158-169 = 775-785 and even at this early period adopted Islām; in reality Islām only began to spread among the Ghuzz in the ivth = xth century; one section of them had adopted Christianity perhaps even earlier (Kazwini, ed. Wüstenfeld, ii. 394). The Muslim Ghuzz were also called Turkman (Turkomans): this name (of uncertain origin), which was later to supplant the name Ghuzz utterly, first appears in Mukaddasi (ed. de Goeje, p. 274 *et seq.*).

The migration of the Ghuzz to Muslim territory began towards the end of the ivth = xth century; they first settled at Nūr in Bukhārā; at an even earlier period Constantine Porphyrogenetos mentions the advance of another branch of the Ghuzz (*Oŭŭa*, called Torki in the Russian annals) westwards over the Volga against the Pečenegs. In the vth = xith century considerable bodies migrated in both directions; in Western Asia the Ghuzz or Turkomans, sometimes as robber bands

and sometimes under the leadership of their chiefs, penetrated all the civilised lands up to the Mediterranean sea; in the west the Uz crossed the Danube in 1065 and ravaged the Balkan peninsula as far as Thessalonica and Hellas but were soon afterwards almost exterminated by the Pečenegs and Bulghārs; the remainder entered Byzantine service and seem afterwards to have become merged in other peoples. The campaigns of conquest of the Ghuzz had nevertheless great influence on the ethnographic conditions of Western Asia. The Saldjūk dynasty which arose from among the Ghuzz gradually succeeded in subduing all the lands from Chinese Turkestan to the frontiers of Egypt and the Byzantine empire. The Saldjūks seem to have been fond of settling their unruly relatives on the western frontier of their empire and thus Asia-Minor and the northern provinces of Irān received their Turkish population. Only one movement of the Ghuzz in the east of any importance is mentioned; in 548 = 1153 the tribes settled around Balkh rose against Sulṭān Sandjār, a rising which resulted in the taking prisoner of the Sulṭān and the devastation of Khorāsān and several other provinces, but these events only affected political conditions for a brief period and the ethnographic not at all, as far as can be seen. The lands abandoned by the Ghuzz on the Sir-Daryā and north of the Caspian Sea and Sea of Aral were occupied by the Kipčak (also written Khifčak), a branch of the Kaimak (so Gardizi in Barthold, *Očēt v Poëndkie v Srednyu Aziiu*, p. 82). As early as 421 = 1030 we find the Kipčak mentioned as neighbours of Khwārizm (Baihaki, ed. Morley, p. 91 at the foot); Naṣir-i Khusrav (in Browne, *A Literary History of Persia*, ii. 227) already uses the term "desert (*dash*) of the Kipčak", afterwards adopted by the Muslim geographers, in the same sense as Ištakhri (p. 217 *et seq.*) at an earlier period uses the term "desert of the Ghuzz" (*maṣāat al-Ghuzziya*).

Ibn al-Athir (xi. 54) mentions the division of the Ghuzz into two groups of tribes, the Učuk and the Buzuk; we do not learn further details of this division, or of the 24 tribes of the Oghuz and their common ancestor, the eponym hero Oghuz Khān till the *Ta'rikh-i Ghāzāni* of Rashid al-Dīn (cf. the article GHĀZĀN, ii. 149^b *et seq.*); the same authority gives the totem (*onghen*) and seal (*tamgha*) of each tribe. Oghuz Khān appears as early as this as a Muslim hero; geographically also the saga is for the most part localised in Western Asia, Egypt and Europe (even the Franks are subdued by Oghuz Khān). Another version of the same saga, still free from Muslim colouring, in the Uighur script, but composed in a dialect differing from Uighur (such Persian words as *dōst* and *dushman* are also found in it), has been published by W. Radloff; nothing is known of the origin of this version or the date of its composition. The geographical proper names mentioned in it refer mostly to Eastern Asia and suit the Mongol period; a similar saga was utilised by Rashid al-Dīn in another section of his work (in the section on the Turks; cf. Baron Rosen in *Collections Scientifiques*, iii. 99 *et seq.*) and by Abu 'l-Ghāzi. All that is given by later Muslim writers on Oghuz Khān and the 24 tribes of the Oghuz may be traced to the *Ta'rikh-i Ghāzāni*; this is particularly true of the *Tawārikh-i Āl-i Saldjūk*, whose author has taken the alleged claims of Čingiz Khān from the *Ta'rikh-i Ghāzāni* and simply substituted Oghuz

Khān for Čingiz Khān. Led astray by this falsification, a Turkish scholar has recently propounded the thesis that we have the foundations of the celebrated *Yāsā* of Čingiz Khān in the book of laws of the Oghuz Turks (cf. M. Hartmann, *Der Islamische Orient*, iii. 37 *et seq.*). As late as the xixth century the Turkomans of the Caspian Sea still considered **Uz Khān** (for Oghuz Khān) as the ancestor of their people (Galkin, *Etnograficeskie i istoričeskie materialy po srednei Azii i Orenburgskomu krayu*, St. Petersburg 1868, p. 5); popular legends of his life and deeds are not yet known.

In Asia Minor even in the Ottoman period the "times of the Oghuz" (*Oghūz-zamāni*) were for long famous; every saga handed down by the bards (*uzān*) about the past was called an *Oghūz-Nāma*; a collection of such legends is contained in the *Kitāb-i Dede Korkud* which is preserved in a unique manuscript in Dresden (Fleischer, N^o. 86). The Korkud or Korkut, who appears in this book, is also known on the Sir-Daryā (the erstwhile abode of the Oghuz) and in the Turkoman steppes as a saint, bard and sage; similar legends were also current at one time in *Ādhar-bāidjān*, at Derbend (cf. i. 943^b *infra seq.*) and in Asia Minor. The view propounded by Inostrantzew (*Zapiski vost. otd. arkh. obšč.*, xx. 040 *et seq.*) that this Korkud may be identical with the Korkud b. 'Abd al-Hamid, mentioned by 'Imād al-Dīn Isfahānī (ed. Houtsma, p. 281 *et seq.*) and by Ibn al-Athīr (xi. 54), will hardly hold; the saga must certainly be older and have been known to the Oghuz even at the beginning of their wanderings; its wide dissemination cannot be otherwise explained.

Bibliography: M. Th. Houtsma, *Die Ghuzenstämme* (*Wiener Zeitschr. für die Kunde des Morgenlandes*, ii. 219 *et seq.*). For the text of Rashīd al-Dīn see Berezin, *Trudi vost. otd. arkh. obšč.*, vii. 13 *et seq.*, and C. Salemann in W. Radloff's *Kudatku-Bilik*, i., St. Petersburg 1891, p. xiv. *et seq.*; the text of Abu 'l-Ghāzī (p. xxviii. *et seq.*) and the "Uighur" saga (p. x. *et seq.*, 232 *et seq.*) is also given there. On the name Tughuzghuz: M. J. de Goeje on the authority of Th. Nöldeke in *Bib. Geogr. Arab.*, vii. p. viii. The identity of the Oghuz with the Turks of the vith century was recognised by Radloff (*Kudatku-Bilik*, p. lxxvii.) even before the discovery of the Orkhon inscriptions; for details see Barthold, *Očer o poezdke v Srednyuyu Aziyu*, p. 33 *et seq.* On the contents of the *Kitāb-i Korkud* cf. Barthold in *Zapiski vost. otd. arkh. obšč.*, viii. 203 *et seq.* On the Greek accounts (especially Joannes Scylitzes, p. 654 *et seq.*) Hertzberg, *Geschichte der Byzantiner*, Berlin 1883, p. 245; J. Marquart, *Osteuropäische und ostasiatische Streifzüge*, Leipzig 1903, p. 338 *et seq.* (W. BARTHOLD.)

G'AUR (r.) = Geber [q. v., ii. 131^b].

G'AUR DAGH, the Turkish name for the Amanus mountains, to be more accurate, for the northern part of the range [cf. i. 312^b].

GIBRALTAR, a rocky limestone peninsula belonging to Great Britain in the S.E. of the Spanish province of Cádiz [q. v., i. 810] almost the most southerly point in Spain (3 miles from N. to S., greatest breadth one mile with an area of 2 square miles and greatest height 1439 feet) with a town and harbour of the same name lying along the gentler western slope, with

28,000 Spanish, English, Jewish and Moroccan inhabitants (including a garrison of 7000 men). Being the key of the Mediterranean it is very strongly fortified and honeycombed with batteries; in the Bay of Gibraltar or Algeciras (q. v., opposite it in the west) there was in ancient times the European pillar of Hercules (Herakles = Phoenician-Punic Melqart from Malkart = king of the city), also called Calpe or Alyba Mons, opposite (15 miles) the African Column Abyla or Abenna, the modern Ceuta [q. v., i. 836^b *et seq.*] with Castillo and Monte del Acho (600 feet high) and Punta de la Almina (but not along the strait like the whole chain of the Sierra Bullones [as Baedeker⁴ still has it] or of the Djebel Mūsā [called after Mūsā b. Nušair]. The very ancient Carteia (Calathea) on the most northerly point of the Bay of Gibraltar, east of the mouth of the Guadarranque, seems to have been of Iberian origin in spite of the Phoenician name, and played a part in history under the Carthaginians as a seaport; in 171 B.C. it received the first Roman colony on the peninsula and under the Arabs was called *Ḳarṭāǧienna* like Carthago and Carthago Nova (Cartagena); in the xviith century the tower built on its ruins was still called Cartajena or Cartagena, the modern Torre del Rocalillo on the Farm el Rocalillo with low mounds of ruins. Gibraltar from the northeast commands the whole of the strait between Europe and Africa, between the Atlantic and Mediterranean usually called the strait of Gibraltar, Strasse von Gibraltar, Estrecho, Détroit de Gibraltar, in ancient times *Γαδελύτιδες Πύλαι*, Fretum Gaditanum (from Gades, Cádiz) or Herculeum, Arabic (*ḵhalīǧ*) *al-Zokāk*, (canal of) the street [cf. BAIHAR AL-MAGHRIB]. After 711 Gibraltar was called *Djebel Ṭarīk*, Ṭarīk's hill, by the Arabs after Ṭarīk's first landingplace, which was soon fortified by him (also *Djebel al-Fath*, hill of victory) but never wrongly with the article as one frequently finds it even to the present day: the Spanish only inserted a euphonic *r*, Gibraltar for *Gibaltar* (cf. *estrella* from Latin *stella*, *Priego*, Arab. *Bēgha*, and the correctly Italianised form of the name, Gibilterra), just as it has added an *r* in Tanger = Arab. *Ṭandja* (Tingis); cf. also the citadel of Malaga: Castillo de Gibralfaro from *Djebel Fārō*, "hill of the Pharos", while Gibraleon, north of Huelva = Arab. *Djebel al-'Uyūn* "mountain of the springs", of which the name of the hill El Jahaleon, N.W. of Baza in the N.E. of the province of Granada, is only another form (cf. Monte Jabalcuz S.W. of Jaén = Arab. *Djebel K'uz*). Throughout the whole of the Arab period, the harbour, town and citadel ("The Moorish Castle") on the N.W. of the rock played a constant part as a strong base for the fleet; while Algeciras opposite became more and more the prosperous capital of the southern part of Andalusia (cf. the decline of Cadiz, i. 810^a *infra seq.*). In 1160 the Almohad 'Abd al-Mu'min strengthened the fortifications of the rock. In 1309 Gibraltar was taken by Alonso Perez Guzmán el Bueno for Ferdinand IV of Castile, but in 1333 it passed to the Marinids of Morocco from whom it was taken in 1410 by the Nasrid Yūsuf III Abu 'l-Ḥadīdj of Granada, and finally on the 20th August 1462 it was won for Henry IV of Castile by Count Guzmán of Medina Sidonia. From 1462 it was with the whole mountainous Campo de Gibraltar, in the N.W. of Gibraltar (practically the whole Sierra de los Gazules) the hereditary fief of

the Guzmans de Medina Sidonia till 1502, when it lapsed to the crown. In 1540 Gibraltar was plundered by the Algerian corsair Khair al-Din, but strongly fortified by Charles V till 1552; it was from here in 1610 that Admiral Don Juan de Mendoza shipped the banished Morescoes back to Africa. During the war of the Spanish Succession Gibraltar was taken by the English in 1704 and had subsequently to suffer severe sieges, notably in 1779–1783 under General Elliot against the French and Spanish.

Index; *Encyclopédie arabe* (*Dāʾirat al-Maʿārif*), vi. 383–386; Seybold, *Zur spanisch-arabischen Geographie: die Provinz Cádiz*, Halle 1906 (s. Cádiz); Baedeker, *Spanien und Portugal*⁴ (with plan); Gayangos, *History of the Muhammadan Dynasties in Spain*, ii. 355 "Gibraltar was afterwards taken from the Beni Merin by Muḥammad, surnamed al-Ghanī-billah" and Index s. v. Jébal-Tārik, "recovered by Mohammed IV" has misunderstood Maḥḥārī's text i. 295; it is rather the conquest of Algeciras in 1369 by Muḥammad V (not IV) that is referred to. (C. F. SEYBOLD.)

GILĀN (properly land of the Gēls, *Gelae*, Γῆλαι), a province of Persia, south of the Caspian Sea and north of the Elburz chain. It is bounded in the east by Ṭabaristān or Māzandarān, and its northern limit is marked by the juncture of the Kur and the Araxes; its political boundary with Russia, however, is marked by the Astāra stream. The chief town is Resht. The interior is swampy (whence the popular etymology of the name from *gil* "mud") and covered with woods and mulberry groves; the mountainous part bears the name Dailam; the natives call themselves *Gilek*. The Safid Rūd flows into the sea near Lāhidjān. The silk industry and the cultivation of rice flourish in it.

The perpetual moisture of the climate has a relaxing effect; the mild and wet winter is broken by the *bād-i garm* (warm wind). Seen from the above, the forests have the appearance of a vast sea of green; in them a kind of tiger, resembling that of India, is found.

According to the recent reforms Gilān forms an independent wilāyet of the first class with Resht as capital and its seaport Enzeli [q. v., ii. 28] ranks as a village. The population numbers about 250,000 and revenues amount to 20,278 tūmāns. The province is divided into 4 *bolūk*: Tawālīsh (chief town Kergāne-Rūd), Lāhidjān, Lenge-Rūd (with Rūdsar and Rānhuk) and Mandjil (with Raḥmetāhād). It was formerly divided into five districts: Rāneḳī, Lāhidjān, Resht, Fūmen and Gesker. Fūmen was once considered the capital and the most important places were Tūlem, Lāhidjān, Bimashahr, Kūtem, Salūs and Djeshm. The natives, however, only recognise the geographical division of the province into two districts by the Safid-Rūd: Biye-pas (district of Resht) and Biye-pīsh (district of Lāhidjān); in the dialect of the country *biye* means river (Aḥmed Rāzī, *Haft Ikhlām*, quoted by Schefer, *Chrest. Pers.*, ii. 104; cf. Melgunof, p. 230, note; Dorn, *Caspia*, p. 46). After remaining for long independent Gilān was conquered by Hūlāgū, who razed the fortifications of Shāmīrān to the ground in 1227, and was finally incorporated in Persia by the Ṣafawids; under

ʿAbbās I the capital was Resht. Ṭālīsh in the north was separated from it and the greater part ceded to Russia by the Treaty of Gulistān (1813).

Yāḳūt mentions a tribe named *Djilān*, which emigrated from *Iṣṭakh*r to Bahraīn; according to a verse by Imru' al-Ḳais they entered the service of the rulers as miners and masons (Van Vloten, *Wien. Zeitschr. f. d. Kunde d. Morgenl.*, viii. 1894, p. 62); it is probably Gēls that are referred to.

The old kings seem to have borne the title *Gēl* (Arab. *Djil*; cf. Gloss. Ṭabari; Mas'ūdi, *Murūdj*, i. 359; Naṣīr-i Khusrāw, *Sefer-nāme*, p. xxii. and 16).

AL-GILDAKĪ (*DJILDAKĪ*) ʿALĪ B. AIDAMIR B. ʿALĪ, according to other authorities, ʿIzz al-Din Aidamir b. ʿAlī, author of a number of works dealing with occult sciences, notably alchemy which are detailed by Brockelmann, *Gesch. der arab. Litterat.*, ii. 139, who gives the following as printed: *al-Miṣbāḥ fī Asrār ʿIm al-Miftāḥ*, Bombay 1302, and *Naṭṭīdī al-Fikar fī Ahwāl al-Hādīar*, Būlāḳ n. d. Almost nothing is known of his life; all that is certain is that he composed one of his works in 740 (1339) in Damascus and another in 742 (so Hādjdjī Khalifa, not 743) in Cairo. 743 (1342) is usually given as the date of his death; Brockelmann, however, also gives 762 (1361).

Bibliography: See Brockelmann, *op. cit.*

GILGIT. A province in the extreme N.-W. of the Indian empire, the capital of which is the small town of Gilgit, situated in a valley 4890 feet above sea-level on the Gilgit R. which is a tributary of the Indus. It is surrounded by great mountain ranges, and is opposite to the gap leading to Hanza, beyond which the northeastern Hindū Kush separates it from Wakḥān and the Muṣṭagh from Chinese territory. The population belongs to the Shīn race, and the Shīna language, one of the Pishācha group, is spoken. This race is probably mainly Aryan, the people are good cultivators and fond of sport, light-hearted and cheerful, but with a reputation for treachery. The routes by which Gilgit is approached from India lead down the Gilgit R. to its junction with the Indus near Bundjī, and hence to Kashmīr by the Trāgbal and Burzil passes or to Abbottābād by Čilās, the Bābusar pass and the Kaghān valley. In Gilgit the whole population is Muhammadan, mainly Shīʿah, and not fanatical. Little is known of the earlier history. In Paurānic lists the Čīnas (or Shīns) are classed with the Dardas. Al-Bīrūnī mentions Gilgit, and says that the people speak Turkish and that their king is called Bhatta Shāh. It is improbable that Turkish was actually spoken, but the Shīns still claim relationship with the

Mughals of India. Till recently Gilgit was under kings of the Trakhānī family, from a former king Trakhān who reigned in the 14th cent., and established the Muḥammadan faith. The title of the kings before that period was *Rāz*, but since then it has been *Shāh-rai*. The country is also said to have been formerly called Sārgin, and afterwards Gilit.

In 1841 the last of the legitimate rulers Karīm Khān was expelled by Gauhar Rahmān (or Gauhar Amān) a member of the Khushwaqtī family of Yāsīn who made himself master of the country, and proved to be a cruel tyrant. The expelled ruler took refuge with the Sikh governor of Kashmīr, who invaded Gilgit and set up Karīm Khān again in 1842. He ruled under Sikh suzerainty, and when Gulāb Singh Dōgra became Mahārājā of Kashmīr in 1846, Gilgit passed to him with the other Sikh possessions. In 1852 however, Gauhar Rahmān attacked and routed the Dōgras while they were invading Hanza, and Karīm Khān was killed. The Dōgras recovered possession in 1860, and shortly afterwards 'Alidād Khān, an infant, was installed by them as Rā. He was a son of the ruler of Nagar, but was considered to be a representative of the Trakhānī family. The Gilgit agency under Biddulph was first established in 1877, and renewed afterwards under Durand in 1889. In 1895, at the time of the Čitrāl war, Gilgit was occupied by a small force which advanced on Čitrāl via the Shandur Pass. (See art. ČITRĀL). The country has continued to form part of the Kashmīr kingdom, but the relations with the local chiefs are controlled by the British agent at Gilgit.

(M. LONGWORTH DAMES.)

GIMBRI, GINBRI. [See KONBUR.]

GIRĀY, a Tatar dynasty, which ruled the Crimean peninsula for three centuries (ixth—xiith = xvth—xviiith). The accounts of the beginnings of the dynasty and the deeds of its founder Hādījī Girāy b. Čhiyāth al-Dīn b. Tāsh-Timūr, a prince of the kingdom of the Golden Horde are very meagre and contradictory. His earliest coins are of the year 845 = 1441-1442; he is said to have laid the foundations of his power at a considerably earlier period with the help of the rulers of Lithuania and Poland, on whom he afterwards continued to rely till his death (871 = 1466). We have no reliable information on the origin of the name Girāy. According to local tradition the tutor (*atalik*) of the prince is said to have belonged to the tribe of Girāy (this tribal name is still known in Central Asia where it is pronounced "Kirāy"); Aḥmed Wefīk Pasha says in his *Dictionary* (p. 1043), without giving authorities, that Girāy is a Mongol word, pronounced "Garāy" in Mongol and used with the meaning "meritorious, worthy, qualified" (*mustahakk*, *shāyista*, *ahakk*). Hādījī does not seem to have intended to transmit this name to his descendants; only one of his sons, Menglī, and he not the eldest nor the immediate successor of his father, bore the name Girāy; on the other hand this name was given to every prince of the ruling house from Menglī's time onwards. After the conquest of Kaffa by the Turks (880 = 1475) the Crimea nominally belonged to the Ottoman empire. The southern coast passed directly under

Turkish rule while the Girāy retained possession of the remainder as vassals of the Porte; but neither the relations of the Pasha stationed in Kaffa to the Khān nor the relations of the Khān himself to the Porte were accurately defined. It was only after the reign of Islām Girāy II (992—996 = 1584—1588) that the Sulṭān's name was mentioned before the Khān's name in the Friday service; the coins were afterwards struck in the name of the Khān only. The earliest Khāns (Hādījī Girāy, Nūr Dawlat and Menglī-Girāy before the Turkish conquest) bore the title "Sulṭān" on their coins; they afterwards contented themselves with the title Khān; the word "Sulṭān" denoted, as among the Uzbek and Kāzāk, a prince of the reigning house, who was not actually ruling. The seal (*tamghā*)

II is characteristic of the coins and docu-

ments of the Girāy. Several Khāns extended their power far beyond the bounds of the peninsula, sometimes independently and sometimes by authority of the Sulṭāns of Turkey: northwards to Moscow, eastwards to the Volga and the Caspian Sea. In 1736 the peninsula was occupied temporarily for the first time by Russia, in 1771 it was permanently conquered and has not been vacated since then, although, according to the terms of the peace of Kučuk-Kainardje (1774) and of the treaty of Ainali-Kawaq (1779), the Khān was to be chosen freely by the Tatar population and was to rule his land as an independent prince, free of the Porte and Russia alike. In 1783 the Crimea was incorporated in the Russian empire whereupon the rule of the Girāy came to an end; the last Girāy to bear the title Khān, Bakhtī-Girāy died in Ramaḍān 1215 = January 1801 on the island of Mytilene. Cf. also article BĀGHĈE-SARĀI (i. 562 *et seq.* where *Bibliography* is given).

(W. BARTHOLD.)

GIRGĀ, a province (*mudiriya*), district (*markaz*) and town in Upper Egypt. The etymology is uncertain. The name of Saint Girgis (George) is presumably concealed in Girgā. 'Alī Muḥārak connects it with a Dagirgā or Digirgā known in the same district (the latter place is also mentioned by Ibn Djān, p. 189 and Ibn Duḥmāk, v. 27). The older Egyptian sources do not seem to be acquainted with Girgā so that it is not mentioned in Kuḍā'i's list of *kūra*'s; it is given by Yāḳūt however. The name first appears as that of a province in the *Description de l'Égypte* (1212 = 1798); it is not yet found in the *Rök Nāṣiri* of 715 = 1315. The province of Girgā therefore probably first arose in the Ottoman period. In the Khedival period Sōhāg became capital of the province of Girgā, while Girgā itself declined to the level of the chief town of a district. The town was celebrated for its industries in wood and leather, which, like all Egyptian industries, were in the hands of Christians. Its large Christian population is evidence of its age. The town flourished as long as the pilgrims' caravans went via Kuṣair, as its inhabitants provided the pilgrims with provisions, particularly *baḥsamāt* (παῖσαμίδιον "biscuit"). With the alteration in the route Girgā began to decline; cf. the similar fate of 'Aidhāb [q. v., i. 210^a]. Under Muḥammad 'Alī the town, which was well built, suffered from the inundations of the Nile, but it was saved from destruction by protective works under Ismā'il. At the present day

the population of the town is 19,893, of whom 5443 are Copts, and that of the province about $\frac{3}{4}$ of a million.

(C. H. BECKER.)

GIZEH (Djīza), town in Egypt [s. i. 821^a *infra seq.*].

GOG AND MAGOG. [See YĀDUDJ.]

GOGO, a town in the Sūdān on the left bank of the Niger, about 250 miles east of Timbuktu in 16° 12' 4" N. Lat. and 42° 53" E.

(Greenw.). The name Gogo (گوكو) has been written

in various ways by the European translators of the Arab geographers; we find the following forms, Kaogha, Caucau, Kaokao, Kaokou, and Gago in Leo Africanus. Barth writes Gao or Gogo. The etymology of the name moreover is obscure. Al-Bakrī (*Description de l'Afrique*, transl. de Slane, p. 399) gives a fantastic explanation of it. "The inhabitants say that the name Kao Kao has been given to their town because their drums make this sound very distinctly". According to Houdas, (*Tarikh es-Soudan*, transl., p. 6, Note 3), these various forms are corruptions of *Kokoy Korya* "the king's town", the first of these two names having been taken for a place-name.

Gogo was the capital of the Songhai empire (cf. the articles SŪDĀN, SONGHAI). It was founded in the viiith century A.D. When Dia (Zā) al-Aimān had settled at Gugia (Kukiya of the Arab authors), on the right bank of the Niger, a section of the Songhai, the Sorko-Faran, who lived in these regions, had to go northward and build a new town, Gogo, about 100 miles up the river on its left bank. About 890, according to Barth, the sovereigns or Dia of Gugia seized Gogo. Even at this time Gogo was an important commercial centre to which the caravans from Tripolitania and Ifrīkiya flocked. This is how (according to Ibn Khaldūn. *Hist. des Berbères*, transl. de Slane, iii. 201), Abū Yazīd, the adversary of the Fāṭimids, came to be born in this town during a business journey which his father had taken into the Sūdān. The presence of these merchants from the north made Gogo a centre of Muslim propaganda. The fifteenth prince of the dynasty of the Dia, Dia Kossoi, became a convert to Islām, perhaps during a journey to Gogo, about 400 = 1009-1010 and moved his capital to the latter town. M. Delafosse thinks that this change of residence was brought about at the request of Arab and Berber merchants, whose caravans ran the risk of being pillaged between Gogo and Gugia by the Sorko or by the Tuāregs of Awellimiden and for whom the presence of the sovereign was a guarantee of security.

In any case, we find Gogo one of the most prosperous cities in the Sūdān in al-Bakrī's time. It consisted of two parts, the native town inhabited by infidels in the midst of which rose the royal palace and the merchants' quarter occupied by Muslim traders. The population consisted of negroes, Berbers, and Arabs. The Arabs called the natives *Buzurgān*, a word which Slane (*l.c.*) connects with the Persian words *buzurgān* (the great) or *bāzārgān* (merchants). Although the rulers had adopted Islām, the mass of the people had remained pagan and never abandoned their ancient

beliefs. Commerce was active but money was unknown; its place was taken by salt, which came from the mines of Taotek in the middle of the Sahara, 6 days' journey beyond Tadmekka (es-Sūkh). Idrisi likewise emphasises the economic importance of Gogo and describes the part taken by the natives in the trade. "Persons of importance and the notables (transl., p. 13) far from keeping apart from the merchant class, visit them, associate on equal terms with them and supply them with means for their commercial undertakings by entrusting them with merchandise and receiving from them in return a share of the profits". Ibn Baṭṭūṭa, who spent some time at Gogo in 752 (1352) says that it is "one of the fairest and largest cities of the land of the negroes and the best supplied with provisions".

About 1325 A.D., the king Dia Assibai had to acknowledge himself a vassal of the empire of Mallī (Melle), but by 1339 his son, 'Alī Kolen, escaping from the court of Mallī where he had been kept as a hostage, recaptured Gogo and restored its independence. 'Alī Kolen was the founder of the *Sonni* dynasty, of which 19 sovereigns ruled from 1335—1493. Limited in size under the early rulers of this dynasty, the kingdom of Gogo became of considerable extent through the conquests of the last of the dynasty, Sonni 'Alī (1464—1492), who conquered Timbuktu (1468) and Djenne (1473). Under the Askia dynasty whose founder was the Soninke Muḥammad Tūri (Muḥammad Askia) Gogo became the capital of a vast empire comprising the greater part of the country enclosed in the northern part of the bend of the Niger. The description of Gogo given by Leo Africanus gives a very clear idea of the great city of the Sūdān. "Gogo" he says "is a very large city, like the above-mentioned (Kabara) i.e. without walls and about 400 miles south of Tombut. The great majority of the houses are ugly in appearance; however, it does contain a certain number of buildings of considerable beauty and convenience, in which the king and his court live. The inhabitants are rich merchants, who spend their time on the marketplace, selling their merchandise and trading in all directions. A vast number of negroes come to this city, who bring gold in immense quantities to buy and carry away the goods brought from Europe and Barbary, but they cannot find sufficient goods, so great is the sum of dinars that they bring with them, so that they are forced to return home taking a half or a third of their money with them. The other towns of the negroes cannot equal it in culture". The slave-trade was a busy one, the other goods sold, particularly salt and European goods, fetched very high prices.

Gogo's reputation for wealth attracted the attention and covetousness of the Sherifs of Morocco. Profiting by the dissensions in the second half of the xvith century, which were enfeebling the power of the Askia, Aḥmad al-Manṣūr al-Dhahabī appointed Djuder Pasha to conquer the Sūdān. The Askia Issihak II's army was routed on the 12th April 1591 at Tangondibo, about 35 miles N. of Gogo. By their ruler's orders, the inhabitants then evacuated the town and retired to the opposite bank of the Niger. The Moroccan troops entered the capital without resistance and only found in it an aged *khaṭīb*, several students and foreign merchants. Djuder Pasha was then able to confirm how exaggerated was the reputation of the Sūdānese capital.

"The palace of the Askiya" he wrote to the Sherif "is not equal to the house of the chief muleteer of Marrākush".

Juder's expedition put an end to the Gogo empire. The Askia of the north who continued to reside in this town till the xviiith century were now subordinated to the Moroccan pashas of Timbuktu. A garrison was installed in the town to protect it against the attacks of the Askias of the south, who had succeeded in maintaining their independence in the region of Say and against the incursions of the Tuāregs. The Tuāregs ultimately however succeeded in taking Gogo from which they expelled the Moorish garrison in 1680. The Pasha Maṣṣūr Seniber retook the town in 1688 but did not leave a garrison in it. After 1770 (according to Barth) all trace of Moorish domination disappeared and the Awellimiden were henceforth masters of Gogo.

The town continued to decline more and more. When Barth passed through it in 1854 it was only a village of 300—400 huts, built on the edge of a dry arm of the Niger and inhabited by Songhai, Tuāregs and Ruma, degraded descendants of the Moorish conquerors. Of the monuments of architecture praised by Leo Africanus there only survived a tower about 60 feet high and some traces of the great mosque (Djingereber) where Muḥammad Askia was buried. Barth, however, claims to have recognised the site of the ancient town, the circumference of which must have been about 4 miles. At the present day Gogo is "a collection of large villages of straw huts" (Hourst). As a result of the occupation of the Timbuktu region by the French, a station was established at Gogo (1898) which has become the centre of a region and of a military circle in the Sudan.

Gautier, *A travers le Sahara français in La Géographie*, 15 Febr., 1907; F. Dubois, *Tombouctou la mystérieuse* (Paris, 1897), chap. vii.; M. Delafosse, *Haut Sénégal et Niger*, First Series, Vol. ii., *L'Histoire*, Paris, 1912. (G. YVER).

Cf. now also M. Hartmann, *Zur Geschichte der westlichen Sudan*, *Mitteil. des Seminars f. orient. Sprachen*, xv. (1912), Part 3, *Afrik. Stud.*, p. 155 *et seq.*; do., *Kūga und Kūgū*, *Orientalist. Literaturzeitung* 1911, col. 465 *et seq.*; H. von Māik, *Kūga, Kūgū und Gāna*, *ibid.* 1912, col. 193 *et seq.*; J. Marquart, *Die Benin-Sammlung des niederländ. Reichsmuseums f. Völkerkunde in Leiden* (Leiden 1913), p. xcv.—cvii. and Index.

Hartmann considers Bakrī's كوغه to be Gogo and the Kūgū (كوكو) of the other geographers to be the land of Wadai.

Marquart, *Benin-Sammlung*, p. cvi., observes that no fewer than seven places in the Sūdān are to be distinguished which have names written in the same or similar ways and proceeds to discuss them in detail.

GÖKÇAI, Turkish Gökçe-tengiz ("blue sea"), Armenian Sewanga (Sew-Wank = "Black cloister"), a freshwater lake in Russian Armenia (gouvernement of Eriwan), 7000 feet above sea-level, covering an area of 62 square miles and drained by one stream, the Zanga, which flows into the Araxes. As Le Strange (*The Lands of the Eastern Caliphate*, p. 183) points out, the name first appears in Ḥamd Allāh Kāzwini; in the Muhammadan sources of the pre-Mongol period the lake is not mentioned at all. The monastery from which the lake has received its Armenian name lies on an island near the north-western shore. At the present day the Gökçai is best known for its wealth in fishes (trout, Turk. *ışkhan*, Armen. *gegarkunī*). Cf. E. Weidenbaum, *Putevoditel po Kavkazu*, p. 31.

(W. BARTHOLD.)

GÖKLÂN, a Turkoman tribe who dwell in the mountains between the upper course of the Görgen and Atrek [q. v., i. 512^b *et seq.*] i. e. in Persian territory; but some are said to live on Russian territory in Kḥiva, Karaḥal'a and Candir. They are divided into the following clans, Çakur, Kirik, Bayandır, Kayi, Yangak, Saghri, Kara, Balkhān, Ay-derwish, Arkakli and Shaikh Khodja. The total number of the Göklân cannot be accurately ascertained; Schuyler gives 3000 *kibitka* = 15,000 souls, with which Vambéry agrees, while Yate gives only 2000 *kibitka* (10,000); in other accounts quoted by Vambéry higher figures are given, which is perhaps explained by the fact that these records date from an earlier period and the numbers have meanwhile decreased. The Göklân are not nomads but follow agriculture and grow silk. They are fairly prosperous and pay the Shāh a fixed annual tribute. It cannot be ascertained how long they have been in these lands, but probably they were there as early as the Saldjūk period. They often come to blows with their neighbours on the west, the Yomuts, and with the Kurds of Budjurd. The Göklân seem to be rather lax Muslims but they hold their religious leaders (khodjas) in great respect.

Bibliography: Vambéry, *Das Türkenvolk*, p. 393 *et seq.*; Schuyler, *Turkistan*, ii. 382; Yate, *Khurasan and Sistan*, p. 212 *et seq.*; Sykes, *Ten thousand miles in Persia etc.*, p. 18, Note (varying statements).

GÖKSU, the "blue river", a name given to several rivers by the Turks. The best known is the river of Selefke, also called Ermenek-şn, the Calycadnus of the ancients, the Saleph of the mediaeval authors in which the Emperor Frederick was drowned on the xth June 1190.

Bibliography: Ritter, *Erdkunde*, xix. 2, p. 306 *et seq.*

GÖKSÜN (the ancient Cucusus), a village in Turkey in Asia, the capital of a nāhiya of the kaḫā of Andrin in the sandjaḫ of Maḫaḫ in the province of Aleppo. It lies in a low, swampy plain, surrounded by argillaceous hills and consists only of huts built of tree-trunks. On the heights there still stand the ruins of several Armenian castles; the land around is almost entirely desert. St. Chrysostom spent some time here in

404 A.D. during his exile. During the first Crusade the Franks spent three days in Goksun (Cocson, Cosor), as they found ample supplies here.

Bibliography: Ch. Texier, *Asie Mineure*, p. 585; Michaud, *Hist. des Croisades*, 7th ed., i. 132. (CL. HUART.)

GÖK-TEPE ("Blue Hill"), a Turkoman stronghold, made famous by Skobelew's campaign (1880-1881). The name properly belongs to a stronghold afterwards called Kohna-Gök-Tepe (Old Gök-Tepe), abandoned by the Turkomans in 1879; in a wider sense the same name was given to the whole oasis, in which the Teke tribe had collected their forces on the approach of the Russians. The strongest fortress was Dengil-Tepe (circumference about 3 miles, about 5 miles S. of Old Gök-Tepe) which was successfully defended in 1879. Shortly before Skobelew's arrival defences had been erected (it is said, under the direction of the English officer Butler), to give the stronghold greater power of resistance; but the besieged (about 12,000 men not under a single leader) had only one cannon at their disposal, captured from the Persians in 1868; two light guns were also captured from the Russians during the siege but the Turkomans could do nothing with them. The Russian troops numbered 8000 men with 70 guns. On the 12th (24th January 1881 Gök-Tepe was stormed after a twenty days' siege and given over to plunder by the soldiers for four days; the number of Turkomans who fell during the siege and storming of the fortress was 6000-8000; the Russians won their success at greater sacrifice than all their other victories in Central Asia, the total loss in killed and wounded being over 1000 men; the battles before Gök-Tepe were moreover the only ones in which the Russian troops in Turkestan had colours and guns captured from them. Cf. the latest and fullest account of these battles in M. Teremjew, *Istoriya zarovoyevaniya Srednei Azii*, iii. 157 et seq.

The name Gök-Tepe is now borne by the station on the Trans-Caspian Railway (30 miles W. of Askaniya, built close beside Dengil-Tepe; there also is a museum of the campaign of 1880-1881, which is visited by the passengers during the wait made by the trains at the station (10-15 minutes). (W. BARTHOLO.)

GÖL, "a large assemblage of stagnant water, lake or pond", also the name of two nāhiyas in Asiatic Turkey of which the first is in the Qazā of Köprü (sandjak of Amāsiya, wilāyet of Siwās) and contains 43 villages, and the second attached to the capital of the wilāyet of Kāstamūni and including 61 villages.

Bibliography: *Sālmāme* 1325, p. 820, 833. (CL. HUART.)

GOLDEN HORDE. [See the articles KIPČAK and MONGOLS].

AL-GOLĒA (AL-KULĀFA), a qṣar and oasis in the Algerian Sahara, 166 miles south of Ghardaya, 240 southwest of Wārglā and 245 north of 'In Šālāh, 30° 31' 12" N. Lat., 3° 7' 30" E. (Greenw.), population 2500.

Al-Golēa, the name of which means "the little fortress", called in Berber Taurirt, consists of two parts, the qṣar proper built on the northern flank of a "garat" which serves as storehouses for the nomads and a lower part occupied by the settled population. The latter is composed of Zenāga, who came from Gurāra and of manumitted negroes

who cultivate the gardens of the oasis. A subterranean water supply fed by the Wēds Segguier, Zergun, Mehaiggen and Lua assures the irrigation of the palmgroves containing about 7000 date-palms. It would also suffice to put a valley 7 miles long and 2 broad under cultivation. The water brought to the surface by artesian wells has given rise to a small lake called Bel Aid, the neighbourhood of which renders the oasis very unhealthy. The Shaanba Muādi lead a nomadic life around al-Golēa and are divided into five sections.

Little is known of the history of al-Golēa. This qṣar seems to have been first occupied by Zenāta Berbers and to have enjoyed a fair amount of prosperity, owing no doubt, to its situation between the eastern and western Erg on the road leading from the Mzāb to Tnat and Tidikelt. In the xviith century, according to the traveller al-Aiyāshī, al-Golēa belonged to the Sultān of Wārglā who maintained a governor there. In the xixth century the qṣar was visited for the first time by a European, Duveyrier, in 1859. In 1873 a French column reached it under General de Gallifet and a permanent garrison was established in 1891. With its outposts, Fort Miribel and Fort MacMahon (Hassi Shebaba), al-Golēa was the most advanced French station in the Sahara till the occupation of the Saharan oases in 1900.

GOLETTA, the harbour of Tunis [q. v.].

GOLKONDA, a city and fortress in the Dakhan, formerly the capital of the Muḥammadan kingdom of Telingana. Its site was originally occupied by a mud fort built by the Hindū rulers of the country and the primitive structure was strengthened and improved by the Bahmanī kings of the Dakhan. Sultān Kulī Kuṭb al-Mulk, who was appointed governor of western Telingana in 1495 by Maḥmūd Shāh Bahmanī, made Golkonda the headquarters of his administration, rebuilt the fortifications with stone, and called his city Muḥammadnagar, a name which never replaced the older appellation. In 1512 he became independent and made Golkonda his capital. It remained the capital of the Kuṭb Shāhī kings until 1591, when Muḥammad Kulī Kuṭb Shāh, fifth king of the dynasty, built Bhāgnagar, afterwards named Ḥaidarābād, at a distance of seven miles from the old fortress, and moved his court thither. Golkonda remained, however, the citadel, and the court moved thither when danger threatened. 'Abd Allāh Kuṭb Shāh, seventh king of the dynasty, was besieged there in 1656 by Awrangzib, when viceroy of the Mughal province of the Dakhan, but the

prince was obliged by his father's orders to raise the siege. Awrangzib, after his accession to the throne, set himself in due course to extinguish the two remaining independent dynasties of the Dakhan and, having captured Bidjāpūr, in 1687 besieged Abū 'l-Hasan Kuṭb Shāh, eighth and last king of the Kuṭb Shāhī dynasty, in Golkonda. The fortress fell after a siege of eight months and the king was sent captive to Dawlatābād, where he ended his days twelve years later.

Golkonda was famous as the diamond mart of southern India, most of the mines being situated in the kingdom of which it was the capital.

(T. W. HAIG.)

GÖRDÖS, the capital of the qazā of the same name in the sandjak of Şarukhān, in the wilāyet of Aidin, important for its manufactures of carpets (particularly *seyhade*, the so-called prayer-carpets) originally belonged to the territory of the Karasi-oghlu and passed with the rest under Ottoman rule in 1340; the modern town has about 5000 inhabitants of whom 4000 are Muhammadans and 1000 Greeks (Münedjimbashi, iii. 36; *Djihan-nümā*, p. 635; Cuinet, *Turquie d'Asie*, iii. 556 *et seq.*).

(J. H. MORDTMANN.)

GOUM (in written Arabic **ḲAWM**), the form and pronunciation usual in the Arab lands of North Africa of the name given to the body of armed horsemen or of fighting men of a tribe. Its derivative *gouma* means "a levy of goud or troops" or "a bold raid, rebellion, or revolt". The written Arabic form *ḳawm* is also found in the dialects of North Africa with the meaning of "people, nation, tribe" etc. (Beaussier, *Dict. pract. arabe-français des dialectes parlés en Algérie et en Tunisie*). It should, however, be noted that *ḳawm* in written Arabic may also mean "enemies" or a "body of men going out to plunder" (Dozy, *Supplément*, ii. 424^b).

The Goud of the old Barbary states of Algiers and Tunis received their official position in the army from the Turks, who based on them their system of military occupation of the country. All the tribes were divided by them into *makhzen* or auxiliaries, exempted from most of the taxes and *ra'ya*, who were subject to all taxation. When one or more tribes of the latter class refused to pay taxes or for any cause rose in rebellion the Turkish army speedily moved to the territory of the rebels. This army supplemented its small numbers by exceedingly mobile bodies of horsemen of the goums. As soon as the enemy was sighted, the goums of the *makhzen* tribes, under the leadership of the chiefs of the tribe or *kā'id*s, charged straight upon those in front of them and continued the pursuit till they had overtaken them. The regular army followed as quickly as possible in the direction of the goums to assist to form a position where these horsemen could reform if they were driven back by the rebels; as a rule, however, the little body of Turkish regular troops only arrived in time to be present at the triumph of the goums of the *makhzen*.

Soon after the occupation of the regency of Algiers the French saw the advantage to be derived from these goums. But once the country was pacified the *makhzen* or auxiliary troops disappeared. The organisation of goums was then extended to all tribes without exception. The goums under

the command of chiefs, *kā'id*s or *aghas* invested with authority by France, had to co-operate with the military police in the maintenance of security in the country, to protect nomad tribes on their migrations and the passage of trading caravans.

In military territory the number of goumiers or members of a goud varies with the requirements of the district from time to time. The goumiers draw a monthly allowance and encamp on the state lands, which are at their disposal, but they must pay the cost of maintenance of their equipment and horses. On service they have also a claim on the *mi'na*, a special allowance for rations.

In civil territory the goumiers equip and mount themselves at their own expense. They receive no pay but when they are called up for service they receive the special allowance for rations. The goums of civil territory are only called up in case of rebellion or a European war. It is a regular territorial militia under the command of the chiefs of the tribes and receiving its orders from the government. The goud of each mixed or native commune contains 120 horsemen. The goumiers have the right to carry arms. Their distinctive badge is a green and red cord rolled round the turban. The goumier's horse is exempt from the war-tax and the goumier himself is exempted from the *sakāt* or cattle-tax. The natives consider it an honour to be a member of a goud and any condemnation for a serious crime or habitual evil living causes their exclusion from the body.

The French government has been encouraged by the warlike valour of the goums to use their services in case of war on the Algerian frontier or in Moroccan territory. It was the goumiers of the military circle of Mécheria who under Commandant Pein took Uḍja by surprise in 1907. Other goums have successfully co-operated in the conquest of Western Morocco with the regular French troops. When in this latter case the government calls up the horsemen of the goums, service is voluntary and the period does not exceed six months, the expenses of the march and of any sickness being paid by the state. The men are subjected to medical examination before their departure. On the other hand the goums are only employed as auxiliaries and retain their own organisation. On an expedition they camp apart from the regular troops; they bring their own provisions and maintain themselves on the country occupied.

GRÑ, Imām of HARAR [q. v. and above i. 120^a].

GRANADA, capital of the modern Spanish province and of the former kingdom of Granada, which, besides the present province, included in addition practically the province of Málaga in the west and that of Almería in the east, has at the

present day 80,000 inhabitants, while at the end of the Moorish period it sheltered half a million within its walls. It lies 2200 feet above sea-level at the foot of the northwestern spurs (Sierra del Sol) of the Sierra Nevada (Cerro de Mul(a)hacén 11,600 feet high, called after 'Alī Abu 'l-Ḥasan 1461—1485) on the right (north) bank of the Genil (Genil, Latin *Singilis*, Arabic *Shenīl*) which rises to the southeast and on both sides of the Darro (Arab. in the older period Kulzum, not Calom, Salom or Salon, and later called Hadāro, cf. Dozy, *Recherches* ³, i. 340—344), a tributary from the northeast which flows into the Genil south of Granada, almost at the east end of the broad, extremely fertile and healthy upper valley of the Vega (probably from the Arabic *baḡ'a*, *buḡ'a*, cf. *baḡ'a* [Vocabulista: *waḡ'a* = campus], which runs 35 miles westwards to Loja (Arab. Lōsha, the ancient Laus [Halos], Ilipula major); usually however called *al-Fahṣ*, *al-Marājī*, *al-Baḥḥa*, by the Arab authors; cf. also *al-Biḡā* = Coelesyria, the upper valley of the Leontes = al-Liṭānī between Lebanon and Anti-Lebanus). Whether the Arabic Ḡharnāṭa or Agharnāṭa (Agharnāṭa; the corresponding *nisba* is Ḡharnāṭī and in popular language Ḡharnāṭīshī, Granadine), is connected with a Berber place-name Kernāṭa (Idrisī, *Description de l'Afrique et de l'Espagne*, p. 56, 79) or perhaps merely represents the Romance Granata and is connected with the Ḥiṣn *al-Rommān* = pomegranate citadel, the ancient Alcazaba, *al-Ḳaṣabat al-ḡadīma*, the oldest settlement in Granada on the hill to the west afterwards and still called Albaicín, while the new Alcazaba, *al-Ḳaṣabat al-ḡadīda*, gradually advanced eastwards down to the Darro and became linked up with it (especially in the time of the Zirids 1012—1090, whose residence *Dār Dik al-Riḥ* (house of the weathercock) is perpetuated in the names at least Calle and Casa del Gallo [= de la Lona] near Santa Isabel la Real), just opposite the corresponding fortress-topped hill of the Alhambra (afterwards the residence of the Naṣrids 1232—1492) east of the Darro, which is mentioned occasionally at quite an early date, can no longer be definitely ascertained; the true connection with the ancient Iberian and Roman Iliberri is also difficult to ascertain, cf. the article ELVIRA, ii. 24^b. The only certain fact is that Granada has gradually extended itself from the two parallel hills, commanding the Darro-Genil plain (afterwards called) Albaicín and Alhambra (*al-Ḥamrā* the red fortress) in the north, as it is again doing at the present day, southwards on both sides of the Darro towards the Genil. Besides the Alhambra [q. v., i. 278 *et seq.*] on the whole well preserved, with the summer residence of the Naṣrids to the east of it, the garden palace of Generalife (older Ginaralife = Arab. *Djannat al-Arif*, garden of the architect) the relics of the Arab period are very few in number; of the walls which surrounded *al-Ḳaṣaba al-ḡadīma* and *al-ḡadīda*, for example, there only remains the northwest side with several gates on the north side of Albaicín which at the present day is mainly occupied by gipsies: Bib Cieda, Bib al-Bonaida, Bib Elvira, and farther north the outer wall on the hills which included the later northern suburbs with the Bib al-Bayezin (the falconers' gate) whence comes the name Albaicín (*Bāb* and *Rabaḡ al-Baiyāzin* is not so called from immigrants from Baeza, which would be *al-Baiyāzin* [with *sin*] in Arabic) and Bib Fadjdjal-

lauza, Fajalauza (= Almond-ravine gate, *Bāb Fadjdj al-Lauza*), while gates and walls have entirely disappeared in the south of the town in the Darro-Genil plain and only *al-Funduḡ al-Djadid* (Alhondiga Nueva) in the Casa del Carbon has survived. Of the nine Arab bridges over the Darro the majority of those in the south have been incorporated in the covering in of the river, while the old bridge over the Genil, *Ḳanṭarat Shenīl*, in the east above the mouth of the Darro, is still in existence (Puente del Genil). The old mosques have mostly been turned into churches, e.g. the great mosques *Djima*^c (with Granadine imāle = *Djāmi*^c, cf. bib = *bāb*, ḥammīm = *ḥammām* etc.) *al-Kābir* is represented by the modern cathedral (particularly by the Sagrario); northeast of the great mosque was the high school (madrasa) southeast the great bazaar or market, Alcaicería (*al-Ḳaisāriya*), burned down in 1843 and afterwards rebuilt with the old pillars; the great street of second-hand shops El-Zacatin (= *al-Saḡḡāṭin*) runs southwards. Both led westwards to the great Plaza de Bibarrambra (*Raḡbat Bib al-Ramla*), where the Rabaḡ al-Ramla, on the other side of the city wall on the west, with the Bib al-Ramla (destroyed in 1873 near the modern Puerta Real) joined the Rambla of the Darro. Of the many Arab baths there only survives perhaps the "nut tree bath" Ḥammīm al-Geuza (Baño del Nogal) at the *Ḳanṭarat al-Ḳāḍī* (Puente del Alcalde). As the whole of the hilly northeast part of Granada is now called Albaicín so is the southeastern slope called Antequera, so called after the immigration of the Muhādīr from the town of Antequera (Arab. Antaḡira, the ancient Anticaria, S.W. of Granada, north of Málaga; Yāḡūt, i. 370). On the southwestern hill which runs parallel to the Alhambra, the modern Campo de los Mártires there lay also the Jewish quarter with a synagogue (*Djima*^c *al-Yahūd*) which is also called *Ḡharnāṭat* or *Madīnat al-Yahūd*. On the N.W. spur lay the Ḥiṣn Maurōr, the still surviving Torres Bermejas of the southeastern fortifications of Greater Granada, while on the slope and in the valley of the Darro there lay Rābiṭa and Rabaḡ Maurōr = Bib Axarc (*Bāb al-Shark*, Eastgate, Puerta del Sol); the whole range of the Campo de los Mártires is now called Monte Mauror after these Muhādīr of Mauror = Moron de la Frontera between Seville and Ronda. On the history of Granada cf. the articles ALHAMBRA, ELVIRA, ZIRIDS and NAṢRIDS.

Bibliography: Cf. the article ALHAMBRA (where there should be added to the bibliography, the large plan (the best) by the Arquitecto Director de la Alhambra D. Modesto Cendoya, 1909), ELVIRA (CÓRDOBA); Idrisī, p. 204 *et seq.*; Yāḡūt, iii. 788; *Marāṣid al-Iṭṭilā*, ii. 307; Kazwīnī, ii. 367 (i. 193 'Ain Ḡharnāṭa); Abu 'l-Fidā, p. 176; Ibn Baṭṭūṭa, Index; *Bibliotheca Geograph. Arab.*, Indices; Madoz, *Diccionario s. v.*; Baedeker's *Spain und Portugal*⁴ (with good plans); L. Seco de Lucena, *Guía práctica y artística de Granada*⁵, 1909; do., *Plano de Granada árabe* (precedido de un prólogo par D. Mariano Gaspar Remiro [Director del Centro de Estudios Históricos de Granada and of the *Revista* of this Centro] 1909, in which previous studies on Moorish Granada are comprised and made clear to the eye on the excellent plan although there are several errors still in it, as for example when Maurōr (Moron see above)

is explained by del Moritano, de los Mauritinos, Rabad al-Gomera (Calle de Gomeres or Gomeles), Rabad al-Zenata (cf. Calle del Zenete) appears wrongly with the article, compared with the classical *Chomāra*, *Zenāta*, cf. however, south of Granada, Alhendīn = *Ḥaryat al-Hemdan* and class. *Hamdan* (without article); Dozy, *Recherches* 3, i. 345. The uncritical *Historia de Granada*, 1843 (unaltered reprint: Granada 1904—1907), by Miguel Lafuente Alcántara is useless as it is based on Conde's makeshift of 1820. The next best would be a good edition and critical translation of Ibn al-Khatīb's (died 1374) *Ḥaṭa fi Ta'rikh Gharnāta* (Cairo 1319, i. ii. is only the synopsis *Merkez al-Ḥaṭa*, which still lacks Vol. iii.) (C. F. SEYBOLD.)

GUAD ... **GUADI** ... in a large number of Spanish river-names like Guadalquivir [q. v.], Guadiana [q. v.] from the Arabic *wādī* = river, valley, particularly a river which dries up in summer, which is the case with the majority, especially the smaller of rivers in Spain, cf. also *rambla* from the Arabic *ramla*, a dry sandy bed, which becomes used as a road, cf. La Rambla de Cataluña, the Corso of Barcelona = the Italian *fiunara* (secca); *wādī* in the west is usually *wād*, *wēd* (French *oued*), in Granada *guīd* (Pedro de Alcalá, like *bīb* for *bāb* etc.) c.g. Guadalaviar (also contracted to Gualaviar) = *Wād al-abyad*, white river = Turia at Valencia and = Segura of Murcia; Guadalete from *Wād Lekh*; Guadalmedina and Guadalhorca at Málaga; Guadaira (Alcalá de Guad.) at Seville; Guadiaro (with Guadalevín) rising at Ronda = Arab. *Wādī āra* or *āro*, also *yāro*, *yārā*; Guatizalema, a mountain brook east of Huesca, with *t* in a solitary instance); Guajara, Guabacar from Guadijara, Guadibacar; Guadarizas, Guarizas, a mountain brook east of Linares; it is readily transferred from rivers (valleys) to towns: e.g. Guadalajara [q. v.], Guadix [q. v.], Guarromán, contracted from *Wādarrummān*, pomegranate river, a small town north of Linares; also transferred to mountains, e.g. Guadarrama from *Wādarrambla* (sand-river); still as the name of a river, village and mountain, e.g. Guadalupe, from *Wādallubb* (*lubb*, Spanish *lobo*, Latin *lupus*, Wolf, while the Spanish *adive*, Portuguese *adibe*, borrowed from the Arabic *al-dhib* as in North Africa means not "wolf" but "jackal") a mountain and village, while the stream is called Guadalupe and Guadalupejo; Guadalupe is also the name of a southern tributary of the lower Ebro; Guadalupe a mountain at Serpa on the lower Guadiana; Guadelim = Alcarrache, a stream on the borders of Spain and Portugal south of Badajoz. In Portuguese, Spanish Guad(i) is usually represented by Odi ... Ode ..., e.g. Odiana = Guadiana [q. v.], Odivellas, Odisseix, Odiarca, Odemira, Odeleite, Odelouca, Odegai; Degebe = Odigebe; Divor = Odivor; cf. the Odiel with its tributary Odivarga in the province of Huelva, adjoining South Portugal with the Guadiel between Linares and Bailén, Guadiela on the upper Tajo, and many others. (C. F. SEYBOLD.)

GUADALAJARA, the capital of the Spanish province of the same name, on the plateau (2000 feet high) of northeastern Castile, with 12,000 inhabitants, is the ancient *Arriaca* (from *arri*, Basque "stone") on the left (eastern) bank of the Henares, which the Arabs called *Wādī 'l-Ḥidjāra* "Stone-river" (*amnis lapidum* in Rodericus Toletanus), whence the name Guada-

laxara, the modern Guadalajara, which was then transferred to the town and used particularly of it; the latter was also called *Madīnat al-Faradj*, which might be translated "city of joy", if a note by al-Yāqūbī did not inform us that it was the fief of a Berber family, the Banū Faradj (*Bibliotheca Geogr. Arab.*, vii. 355). In 714 Guadalajara was taken on the joint campaign of Mūsā and Ṭāriq and remained an Arab possession, till it was surprised by Ferdinand I of Castile in 1060, although not permanently captured till 1081, when it was taken by Alvar Fañez de Minaya, a cousin of the Cid, for Alfonso VI of Castile. Like Toledo (Toleṭula till 1085) and Madrid (Madīnit), it had till then been an important Arab fortress on the northern frontier and the home of many scholars as is testified by the *Bibliotheca Arabico-Hispana* (ed. Codera, 10 vols.) and al-Maḥḥari passim; the *nisba* is *Ḥidjāri* (cf. also *al-Sam'ānī*, p. 156, *Moshṭabih* and *Lubb al-Lubāb*) and is best known as that of a celebrated historian born in Guadalajara. Even under Arab rule there was a strong Christian element in Guadalajara (cf. Simonet, *Histoire de los Mozárabes*). Of its later history as a Spanish town, which does not concern us here, we need only mention that it was the residence (with a Gothic-Moorish palace) of the (Basque) family of Mendoza, the Duques del Infantado, whose most celebrated member "el Gran Cardenal de España", the Cardinal-Primas of Toledo, Don Pedro González de Mendoza, the soul of the last phase of the Reconquista, the recapture of Granada by the Reyes Católicos in 1492, died in Guadalajara in 1495.

In Dimishḥī p. 244, *al-ḥrdj wahiya 'alā nahr yusammā Wādī 'l-Ḥidjāra*, transl. p. 350 "Heredj près de la rivière Guadalaxara" with Mehren's erroneous Note: "D'après la position indiquée, Heredj pourrait être altérée de Alcala de Henares" [p. 428^b even Hennāres] is of course to be read *al-Faradj* simply = *Medīnat al-Faradj* = Guadalajara; Madoz, *Diccionario*, viii. 637; Gayangos, *History*, i. 48, 319, 533; ii. 441; *Crónica del Moro Rasis* (*Memoria* p. Gayangos), p. 48: Et la ciudad de Alfar que agora llaman Aguadalfaxar yaze.... sobre un rrio á que dicen Aguadalfaxar; Rodericus Toletanus, *Historia Arabum*, p. 62: Medina Alfaraḡel, quae nunc dicitur Guadalfasara. (C. F. SEYBOLD.)

GUADALQUIVIR, the ancient Baetis (Tartessos, Perces, Certis), whence the province of Baetica (with Baeturia in the north) = Andalusia, is the most southerly of the four great rivers of the Iberian peninsula flowing from N.E. to S.W. into the Atlantic Ocean. The Spanish name is derived from the Arabic *Wād(i) al-Kabīr*, popular for *al-Wādī* or *al-Nahr al-Kabīr*, the "great river" also *Nahr al-Aẓam* the "greatest river" (there are several Wādī 'l-Kabīr just as there are a number of Río Grande). We find the popular form as early as Yāqūt, i. 275 (*Nahr 'aẓīm yuḥālu lahu Wādī 'l-Kabīr*) and Kazwīnī, ii. 275 (*al-Nahr al-akbar alladhī yu'raḡu bi Wādī 'l-Kabīr*). The Guadalquivir proper rises in the Sierra del Pozo between the Sierra de Cazorla and Segura

(Saltus Tugiensis and Argentarius Mons), receives on the left bank the Guadiana Minor formed of the Guardal or Barbata (with the Cúllar), Fardes and Guadabortuna, and after running for a considerable distance between the Sierra Mágina and Loma de Úbeda is joined by the Guadalimar (with the Guadalén and Guadalmena) on the right bank; these three together properly form the sources of the Guadalquivir. Of further tributaries there may be mentioned on the right bank the Jándula, the Guadamellato formed of the Matapueras, Cuzna (Arab. *Kuzna*) and Guadalbarbo above Córdoba, the Guadiato below it, the Bembézar with the Benejarafe, the Viar with the Benalijar, the Ribera de Huelva (with the Cala) near Seville, the Guadamar, which flows through the famous district of Ajarafe or Axarafe (between Seville and Niebla) rich in olive trees (Arabic *al-Sharaf* or *Sharaf* *Ishbiliya*, raised undulating ground, hill-country) and flows into the salt swamps on the coast (las Marismas) formed by the inundations of the sea. On the left the Guadalquivir receives the waters of the Guadalbullón (from Jaén) and the Guadajoz (*Wādī Shōsh*), which flows through the fertile Campiña (Arab. *Ḳanbūniya* and *Ḳanbūnya*, south of Córdoba, but its most notable tributary is the Genil (Arab. *Shinil* [*Shindīl*] from the ancient *Singilis*) which runs through Granada, Loja and Eciya [q. v.], and next the Corbones and Guadaira (*Wād(i) aira*); *Ḳabṭūr* and *Ḳabṭāl* are the modern Isla Mayor and Menor.

Bibliography: Madoz, *Diccion. Geogr.*, s. v.; Edrisi, *Description de l'Afrique et de l'Espagne*, p. 196; Dimishki, *Cosmographie*, p. 112, 246 = 139, 353, where *Kulya* = Cúllar should be read for *K'ila* (Marrékoshi, *History of the Almohades*, p. 269, 9, *Kulya*, cf. p. 271 *et seq.*), for *Abla Kulya* or *Ubbēdhā*; Makḳari, i. 299; Aboulféda, *Géographie*, transl. ii. 235–238, 243, 249, 269; *Crónica del Moro Rasis* (ed. Gayangos), p. 61 and 62. (C. F. SEYBOLD.)

GUADIANA, Arab. *Wādī* or *Nahr Yāna* or *Āna* or *Ānā* (s. *Yākūt*), river *Āna* = *Anas* of the ancients, the Portuguese *Odiāna*, the second most southerly of the four great rivers of the Iberian peninsula flowing into the Atlantic Ocean after parallel courses from N. E. to S. W., only navigable for 40 miles from its mouth, rises in the mountains of the eastern Iberian border of the central tableland (Meseta) in the Serranía de Cuenca, as, according to more recent geographers (notably Theobald Fischer), the Záncara (in the N. E.) and the Gígüela (in the N. W.) together form the proper source-streams of the Guadiana, not the Guadiana Alto flowing from southeastern Mancha from the 18 small lakes lying in terraces one above the other (Lagunas de Ruidera), nor the so-called eyes (*Ojos*) of the Guadiana Bajo, which rush from the level tertiary land between Daimiel and Villarta and soon unite with the Rio Azuer, which runs parallel to the Guadiana Alto from the Campo de Montiel and the spurs of the Sierra de Alcaráz. These *Ojos* del Guadiana were regarded from ancient times as the "reborn Guadiana", for the Guadiana Alto, which usually disappears in summer in the steppes of northern Mancha at Don Quixote's home Argamasilla de Alba, but which otherwise can only discharge its waters northwards into the Záncara. The Arab authors also mention the disappearance and reappearance of the Guadiana, notably Idrisi, p. 181 (220) and 186 (226), who actually

describes the Guadiana as *al-Nahr al-Gha'ūr*, the disappearing river, with a subterranean course, and also mentions a *Ḳaryat Yāna* above Calatiava, on which cf. *Ḳazwīnī*, i. 177 = *Ethé's* translation, p. 361. Dimishki (*Cosmographie*, 112 = 139 *et seq.*) speaks of the Guadiana as the combination of the *Nahr Uḳlīsh* (river of Uclés = Bedija—Riánsares—Gígüela) with the river of (*Ḳal'at*) *Rabāḥ* (Calatrava, q. v.) = Guadiana Alto + Bajo + Záncara. Mehren says "the river of Rabāḥ (Guadalaviar)", but instead of *al-Bahr al-Rūmī* = Mediterranean, as the terminus of the Guadiana one ought of course to read *al-Bahr al-Muḡlim* = Atlantic Ocean. In Dimishki's second reference to the Guadiana, *ibid.* (only in the Paris Codex), and p. 246 = 353 *Uḳlīsh* should be read for *Tortōsha* (Tortosa) and (*Ḳal'at*) *Rabāḥ* for *Dalāya* (= *Dalías* W. of Almería). The Guadiana is also called, as here, *Nahr Ḳal'at Rabāḥ*, the river of Calatrava, or also *Nahr Uḳlīsh*, river of Uclés, still oftener *Nahr Mārida*, the river of Mérida, and *Nahr Baṭalyōs*, the river of Badajoz after the principal towns on its banks.

Bibliography: Madoz, *Diccion. Geogr.*, ix. 27; Aboulféda, *Géographie*, p. 172 = 247 s., but where it is wrongly said of Mérida: *alū djanūbi nahr Baṭalyōs* "south of Guadiana" for *djōfi* "north" [جنوب and جوف often confused, particularly in the Maghribi script]; *Crónica del Moro Rasis* (ed. Gayangos 1852), p. 62, where probably Uclés should be read for the puzzling Richin. (C. F. SEYBOLD.)

GUADIX, the capital of a district in the Spanish province of Granada on the northern slopes of the Sierra Nevada (*Djebel Shulair* = Solorius Mons, *Djebel al-Thaldj* = "snow-mountain" like Hermon), the ancient Iberian *Acci* (Colonia Julia Gemella, which was however 7 miles N. W. [Baedeker wrongly S. E.] of the modern Guadix and is distinguished as Guadix al Viejo), one of the oldest bishoprics in Spain (*Sedes Accitana*), with 13,000 inhabitants, on the left bank of the stream of the same name which rises to the south (Rio de Guadix), with a Moorish castle (Alcazaba), in Arabic called *Wādīyāsh*, more rarely *Wādīyāsh* (and *Wādīyāsh*) also in poetry *Wādī 'l-Ashī* and *Wādī 'l-Ashāt*, with imāle *īsh* (from *āsh*), wrongly explained by Mármol as "water of life" (an explanation which is still given everywhere, e. g. Baedeker, *Spain and Portugal* 1913, p. 330) and confused with *'aish* = life, whereas *āsh*, *ashī* is of course = *Acci*. In the Barrio (suburb) de Santiago there are remarkable cave dwellings inhabited by gipsies. West of Guadix on the Fardes (Anchuron) is the ancient Arab bath Graena (from the Arabic *Djilyēna* = *Juliana*), celebrated for its apples, hence called *Djilyānat al-Tuffāḥ* (*Yākūt*, *Geogr. Worterbuch*, ii. 109). Dimishki (*Cosmographie*, p. 84 = transl. p. 99, speaks of black antimony (*al-kuhl al-aswad wajusammā al-ithmīd*), which is obtained near Guadix. The whole of the northern slopes of the Sierra Nevada around Guadix are called in Arabic *Sened Wādīyāsh* = slopes of Guadix, which still survives in the Spanish Marquesado del Zenete (cf. Jerez del Marquesado, S. W. of Guadix, N. E. of the highest peaks of the Sierra Nevada and the citadel built in 1510 for Rodrigo de Mendoza, Marqués del Zenete, south of Guadix above Alcudia (Arab. *kudya* = hill) de Guadix in the little town of La Calahorra (arabised from the Iberian Calagurris, cf. Gröber,

Grundr. der Rom. Phil., I², 522). In 1232 the first Nasrid or Aḥmarid, Muḥammad I of Granada made himself master of Guadix. In 1315 the Christians under the Infante Don Pedro of Castile were severely defeated before Guadix. In 1489 it was conquered by the Reyes Católicos, after having been previously made tributary in 1433. The *nisba* is in Arabic *Wādīyāshī* or *Wādīyāshī*; for example it is that of the poet Abu 'l-Ḥasan b. Nizār who was born there.

Bibliography: Simonet, *Description del Reino de Granada*² (1872), p. 98—101; do., *Historia de los Mozárabes*, Index; Madoz, *Diccionario geográfico*, p. 9, 43; Idrīsī, *Description de l'Afrique et de l'Espagne*, p. 202—247; Marrékoshī, *History of the Almohades*, p. 269; Maḳḳari, i. 94-95; Yāḳūt, i. 279, where Ḳaṣr ash (rather Ḳaṣrāsh = Cáceres) is confused with Guadix. — Soler, *Sierra Nevada y las Alpujarras*, Madrid 1903, p. 92—106, where however Jerez (Jéres) is to be read throughout for Jerez (only Madoz writes Jeréz). (C. F. SEYBOLD.)

GUARDAFUI, the most eastern cape in Africa, the Ἀρκαδίων ἀκρόγριον of Ptolemy, and the Arabic Ra's 'Asīr. The origin of the name is uncertain; the only certain point is that the name Hafūu (Opone) is concealed in it; indeed there is another cape about 60 miles southwards which the Arabs call *Djard* (*Gard*) Hafūn. But it is doubtful if this *Djard* or *Gard*, which cannot be explained from the Arabic, has not been taken over from Europeans because the earliest name given by the Portuguese is rather to be traced to *Ward*, which word need not necessarily be of Arab origin. It may be possible that the name did not originally denote a cape but the whole land of Hafūn (Ard Hafūn) and was erroneously limited by the Portuguese to the Cape.

Bibliography: Yule and Burnell, *Hobson-Jobson*², p. 398 *et seq.*

GUDJAR (GUDJĪAR, GUDJUR). The name of a very widely spread tribe in Northern India akin to the Rājputs and Djaṭs and like them probably descended from Scythian immigrants about the 6th century A. D. Their physical characteristics show them to be of the purest Indo-Aryan type without Dravidian admixture. It has been shown by V. A. Smith (*Journ. Roy. As. Soc.*, 1909), by A. M. T. Jackson (*Bombay Gazetteer*, 1896, Vol. i. pt. i.) and by D. R. Bhandarkar (*Epigraphic Notes and Questions*, iii.) that the Gurdjars entered Northern India about 550 A. D. with or soon after the White Huns. The Gurdjars are first mentioned in Bāṇa's *Harṣacarita* which couples them with the Hūṇas as enemies of Harṣa's father. They founded a powerful state with its capital at Bhīmāl near Mt. Ābū. From the southern branch of this kingdom comes the name of the southern Gudjārāt, while the ruling families of the central part developed into Rājput tribes, especially the Pratihāra or Parihār clan. But the bulk of the Gurdjars is represented by the Gūdjars of the present day, and their wide distribution bears witness to the former extent of their rule. The Gūdjars were mainly a pastoral race given to war and plunder, and the same tendencies are found in many at the present day. They have not the same reputation as steady cultivators as their near kindred, the Djaṭs, but still they have mainly adopted a settled life. In the extreme northwest of India, especially in the outer fringe of the

mountains in Hazāra, Djamnū, Kāngra and Cibhāl they are still nomad herdsmen and speak a dialect of their own, known as Gūdjarī or Gōdjri, in which Grierson finds a strong resemblance to the Mēwātī dialect of eastern Rājputāna. This seems to show that, during the days of Gurdjara power, when their headquarters were in Rājputāna, they adopted the language of that country, which has been retained by their least civilized outlying northern branch even now though isolated among speakers of Pandjābī and Western Pahārī dialects. In Peshāwar the name Gūdjar is often used as a synonym for 'herdsmen' in general. The more settled Gūdjars are most numerous in the modern district of Gudjārāt where they are an important element in the population numbering 111,000 in 1901. In Hazāra (settled and pastoral) they number 91,670, and in both districts as well as in the whole of the North and West Pandjāb they are all Muslims. Further east Gūdjars are numerous in Hosh-yarpur and in the districts along the Djamnā both in the Pandjāb and the United Provinces, but here the majority remain Hindū. In the Pandjāb the Gūdjars number 739,622 and in the U. P. 344,000. In the whole of India they number 2,103,000 and are found in most provinces especially (in addition to those already mentioned) Rājputāna, Central India and Bombay.

It is generally believed that most of the pastoral Gūdjars of the plain were forced to settle in fixed villages in Akbar's time, and that the Pandjāb Gudjārāt obtained its name at that time. The conversion to Islām is attributed to the reign of Aurangzēb, but Audh tradition puts it down to the time of Timūr, which is very improbable. In addition to the Northern and Southern Gudjārāts the tribe has given its name to Gūdjrānwāla in the Pandjāb (where however Gūdjars are not numerous) and to a part of the district of Sahāranpur formerly called Gudjārāt. The Gudjārātī language derives its name from the Southern Gudjārāt province, and has no connection with the tribe.

LONGWORTH DAMES.)

GUDJARĀT in the present 20th century denotes the tract of country immediately east of the Peninsula of Kathiawār; but at the time of the Muhammadan power in India it included not only that, then known as Sōrāṭh, but also the districts as far as Sūrāt and even Bombay on the south, part of Khāndesh and Mālwah to the East, and the south-west corner of Rājputāna round Anhilwāra to the north. It was first known to the Muhammadans when Sulṭān Maḥmūd of Ghaznī marched from Multān to Anhilwāra and sacked the famous temple of Sōmnāth on the south coast of Sōrāṭh in 1034 A. D. The Sulṭān Shihāb al-Dīn met with a check at Anhilwāra in 1178, but 16 years later this was avenged by the Dihlī viceroy, Ḳuṭb al-Dīn Aibak. One hundred years afterwards the place was taken by Ulugh Khān, general of Sulṭān 'Alā' al-Dīn Khaldjī; and between 1347 and 1351 Sulṭān Muḥammad Taghlaḳ waged several campaigns in Gudjārāt from Sind,

where he died. His successor, Sultān Fīrōz Shāh established his authority in the country, which thenceforth remained under Muhammadan governors, one of whom, Zafar Khān, became an independent ruler of Guḍjarāt, under the title of Muzaḥfar Khān, after the central power at Dihli had been crushed by the invasion of Timūr. This ruler was a notable general and in his time destroyed Sōmnāth for a third time, and subdued Īdar, Dhār and Mandū. He also saved the Dihli ruler from the attack of Ibrāhīm Shārkī of Ḍjawnpūr. He was succeeded by his grandson Ahmad I who founded Aḥmadābād in 1413 A.D. These rulers attacked at different times Čāmpānēr, Ḍjūnahgarh, Īdar, Čitōr and Kačh, and greatly extended their power; but towards the close of the dynasty they became embarrassed by the Turks and Portuguese. The country was invaded in 1573—1575 by the emperor Akbar, who came in person to Aḥmadābād, Barōda, Cambay and Sūrat, and from that time forward the Guḍjarāt country remained under Muhammadan viceroys of the Dihli court until the rise of the Marāṭhas and the advent of the English put an end to the Muhammadan domination of these parts. The revenue settlement of it was made by the famous Tōdar Mal. Among the best known viceroys were Mirzā 'Aziz Kōkaltāsh, foster brother of the emperor Akbar; Mirzā Khān, afterwards dignified with the title of Khān Khānān; Prince Khurram, afterwards the emperor Shāh Ḍjahān, in 1618—1622; Prince Awrangzēb in 1644, and his brother Dārā Shikōh in 1648—1652, and Murād Bakhsh in 1654—1657. In 1659—1662 Mahārāḍja Ḍjaswant Singh of Ḍjōḍpūr was governor. Early in the 18th century the power of the Marāṭhas became more and more aggressive, and the government fell more and more into confusion, Sūrat being sacked once by Malik Ambar and twice by Sivādji. An attempt by the Muhammadans to recover Aḥmadābād after the battle of Pānipat (1761 A.D.) failed, and the Gaikwār making terms for himself apart from the Pēshwā, the British took possession of the Guḍjarāt country of the mainland in 1818.

(H. C. FANSHAWE.)

GUDJARĀTĪ, a modern Indo-Aryan vernacular language, spoken by over 9 million persons in Western India and by more than one million persons from Guḍjarāt who have settled in other parts of the country; it has a printed character of its own, a modification of the Dēvanāgarī, and its literature extends back to the fourteenth century. It is the chief commercial language of Western India, and, as such, acquires modifications according to the class which uses it; while most of the Muhammadans of Guḍjarāt speak Urdū, those who are descended from Hindū converts speak Guḍjarātī, and the educated members of this class introduce into the vocabulary of their native language a large number of Urdū (and, through it, of Arabic and Persian) words. The Muhammadans have employed Guḍjarātī but little

as a medium for literary expression, and have preferred to write either in Persian or (in more recent times) in Urdū. The few works written in Guḍjarātī by Muhammadans consist mainly of translations from Arabic, Persian and Urdū, or of religious tracts and elementary books of religious instruction.

GUDJRĀNWĀLA. A district in the Panḍjāb, 3198 sq. miles in extent with a population in 1901 of 890,577 of whom 603,464 are Muhammadan. The district lies in a level plain between the Čanāb and Rāvi rivers, but does not extend to the latter river. Like Guḍjarāt it obtains its name from the Guḍjar tribe, but there is not now a large Guḍjar element in the population. The district took its name from the town which was founded by Guḍjars. Rāḍjpūts (especially Bhaṭṭis), Ḍjats and Arains are now the most numerous tribes. There are Buddhist remains at Takī which has been identified with the 'Tse-kiē of the Chinese pilgrim Hiouen Tshang. The ruins of Shāhkot in the south perhaps represent the Sākala of the Hun king Mihirakula. Under the Mughal emperors this tract was prosperous, and some of the principal towns were founded. Eḥinābād (properly Aminābād) was founded by Muḥammad Amin, and Ḥāfiẓābād by Ḥāfiẓ, both in Akbar's reign, and Shēkhopura (properly Shikōh-pura) by the prince Dārā Shikōh, son of Shāh Ḍjahān, who made an irrigation channel there while his grandfather Ḍjahāngir was still living. In the eighteenth century the country was nearly deserted, and was afterwards colonized by the Sikhs. Randjūt Singh was born at Guḍjrānwāla and erected there a mausoleum to his father Mahān Singh. The principal towns are Guḍjrānwāla (pop. 29224) and Wazirabad (pop. 18069). The Čanāb canal has its head in the Čanāb river and irrigates a large tract in the Ḥāfiẓābād and Dōgrān taḥsils. Wazirābād is an important railway junction.

Bibliography: *Local Gazetteers and settlement reports* (Lahore); *Imp. Gazetteer of India*, Panḍjāb Section (1908).

M. LONGWORTH DAMES.)

GUDJRĀT (Panḍjāb). The name of a district in the Panḍjāb in British India lying between 33° and 32° 8' N. and 73° 17' and 74° 30' E. It contains an area of 2051 sq.m. and a population of 750,458 (in 1901), of which the greater part (87 per cent.) is Musalmān. It is a submontane district lying between the Čanāb River to the S.E. and the Ḍjehlām to the N.W. The outer fringe of the Himālaya bounds it to the N.E. and the open waste of Shāhpur to the S.W. A great part of the waste land of Guḍjrāt and Shāhpur is now being brought under cultivation through irrigation from the Ḍjehlām canal.

The district was traversed by Alexander who crossed the Hydaspes, (Vitastā, Vēhat or Ḍjehlām), near the modern town of Ḍjehlām, and skirted the mountains crossing the Acesines, (Čanāb), near the point where it issues into the plains. It seems to have formed the central portion of the kingdom of Porus. It afterwards formed part of the kingdoms of the Mauryas and the Kushans, but does

not seem to have been included in the Gupta kingdom nor in that of Harṣa. The prevalence of the Guḍjār tribe and of the name Guḍjrāt makes it probable that the great Guḍjārā kingdom which had its centre at Bhīmāl in Rājputāna included this tract. But the local princes had no doubt been long separated from the central kingdom, which had its capital at Kānnaudj when the territory known as Guḍjār-dēs corresponding roughly with the Guḍjrāt district was ceded by the king reigning at Jammū to the king of Kashmir in the 9th century. In later times this tract from its position must have been the thoroughfare of every invading army including those of Mahmūd, Muḥammad b. Sām, Timūr, Bābar and Nādir Shāh. Its population, whether Djaṭ, Rājput or Guḍjār, was gradually converted to the Muhammadan faith; the Sikh religion has never made much progress and the country remains mainly a Musalmān tract. In modern times a rather lax heretical sect known as Ditteshāhi has arisen in this district. They consider the founder Ditteshāh Arain to be a true rasūl and disregard the strict doctrines and ceremonies of Islām.

Although the Sikhs did not spread their religion in Guḍjrāt they obtained possession of the country from the time of the abandonment of the Central Panjāb by Aḥmad Shāh Durrāui. The Bhangī Misl occupied the country up to the Djeḥlam, and in 1768 they went even further, as far as Rāwal Pindī. The dominions of the Bhangī confederacy were soon absorbed by Randjīt Singh. After his death Guḍjrāt continued to be part of the Sikh kingdom till 1849, when it was the scene of the most severe fighting in the second Sikh war. The battles of Sa'adullāpur, Čiliānwālā and Guḍjrāt took place within the limits of the district, and Gough's victory at the latter place led to the annexation of the whole Panjāb to British India.

The town of Guḍjrāt near which the battle took place is now the district headquarters and has a pop. of 19,048. It is well known for its damascened work (*kāṭgarī*). Here is the shrine of Shāh Dawla celebrated for its semi-idiotic mendicants with heads artificially narrowed, known popularly as "Shāh Dawla's rats".

Bibliography: V. A. Smith, *Early History of India*², Oxford 1908, pp. 59—67, *Gazetteer of Guḍjrāt in Imp. Gazetteer of India, Provincial Series*, Panjab, 1908; Ibbetson, *Outlines of Panjab Ethnography*, Calcutta, 1883; Cunningham, *History of the Sikhs*, London, 1849. (M. LONGWORTH DAMES.)

GUINEA, a land on the coast of West Africa. Yāḳūt, *Muḍjam*, iv. 307, mentions a land Kināwa (Gināwa), which, according to him, received its name from its inhabitants; the Gināwa are said to have been a Berber tribe who had penetrated into the land of the negroes (Sūdān) and become neighbours of Ghāna [q. v., ii. 139^b *et seq.*]. It seems to follow from this that the usual derivation of the name of Djenne (see above i. 1035^b *et seq.*) is incorrect. As far as we know, Marquart was the first to call attention to this passage in Yāḳūt (*Benin*, p. clxvi).

On the penetration of Islām among the peoples of Guinea, cf. the article by Westermann in *Die Welt des Islams*, i. 85 *et seq.* and the literature quoted there. For further details cf. the article **SUDAN**.

GUL (P.) the rose. The rose plays a great part in Oriental poetry, whence its name frequently

appears in the titles of Persian, Turkish and Indian books. The relations between the rose and the nightingale have already been discussed above (art. **BULBUL**, i. 785^a). There are therefore numerous poems with the title *Gul u Bulbul*, but the rose is also associated with other things; cf. the indices in the *Grundriss der Iran. Phil.*, ii., and in Gibb, *History of Ottoman Poetry*. Here we will only mention *Gul u Šanawbar*, "the Rose and the Pinc tree", a subject which has been chosen mainly by writers in India. A Persian version is mentioned by Ethé in the *Grundriss der Iran. Phil.*, ii. 321; on the versions in Hindustāni and other modern Indian dialects cf. Garcin de Tassy, *Histoire de la Littérature Hindouie*², i. 157 *et seq.* The same author published a complete French translation of this poem in the *Revue Orient. et Améric.*, vii. 69—120; on the original editions that have been published in the East, cf. Ethé, p. 323.

GÜL-BĀBĀ, a Bektāshī dervish, a native of Marzifūn (Marsivān in Asia Minor in the wilāyet of Siwās) took part in several wars waged by the Turks in the reigns of Sulṭāns Meḥmed II, Bāyazīd II, Selim I and Sulaimān II and fell during the siege of Buda (Ofen) in a skirmish below the walls of the city on the 29th Rabī' II 948 = 21st August 1541 (Pečewi, i. 227). After he had been buried on the spot where he had fallen, Sulaimān II declared him the patron saint of the city (*gocūşu*). His name was also borne by a Bektāshī monastery near the hot springs of Welī-bey outside the Khoros gate, which was founded for charitable purposes by the descendants of Ghāzī Mikhāil. The tomb of the saint still stands in Budapest; it is in the Turkengasse (Torókutca) and is in the form of an octagon, on which is a dome covered with lead plates and wooden tiles, on the top of which is a lantern. Its exterior is covered by creeping plants. Tóth Béla discusses this saint in his *Szajról Szajra*.

Bibliography: Ewliya Čelebi, *Siyāhat-nāme*, vi. 225, 244 (his authority is information given him by his father). (CL. HUART.)

GULBADAN BĒGAM, daughter of the Emperor Bābur, half-sister of Humāyūn, and aunt of Akbar. Her mother was Dildār Begam, whose real name, apparently, was Šāliḥa Sulṭān, and who was daughter of Sulṭān Maḥmūd Mirzā the ruler of Samarkand. Gulbadan was born in the city of Kābul, and as in her charming Memoirs she tells us that she was eight years old when her father died, i. e. in the last week of December 1530, she must have been born in 929 (1523). She remained in Kābul when her father went off to the conquest of India, but she joined him in 1529 and she was in Agra when he died. She was there also in 1539 when Humāyūn returned, defeated, from Bengal. By this time, apparently, she had been married to Khizir Khwādja Khān, a Čaghatāi Moghul and a great-grandson of Yūnus Khān. Rieu states that the marriage took place in 942 (1545), but I do not know on which authority. By her husband, who was an officer of Humāyūn and of Akbar, and who was at one time governor of the Panjāb, she had at least one son, Muḥammad Yār, and one daughter. When Humāyūn was driven out of India, she did not accompany him to Persia, but remained in Afghānistān with her brothers Kāmran and Hindāl, and did not see Humāyūn again till 1545. She did not leave Kābul

for India till after Humāyūn's death, arriving there in 1557, the second year of the reign of her nephew. In 1576 she went on pilgrimage to Mecca in company with her niece Sālīmā Sultān Begam and other royal ladies. On her way back, she was shipwrecked at Aden, and did not return till 1581 or 1582 (Badā'uni, Lowe's translation, 216). In 1590 she went to Kābul in company with Akbar's mother, in order to visit the emperor. She died at Agra on 6 Dhū 'l-Hijjā 1011 (7 May 1603), not long after the death of Queen Elizabeth of England. She was then 82 lunar years of age. The correct date of her death is given in Rieu's *Catalogue*, iii. 1083. She was greatly respected, and Akbar himself took her bier upon his shoulder.

The interesting thing about Gulbadan is that she wrote her Memoirs. The work is called the *Humāyūnnāmāh* and has been edited and translated by Mrs A. Beveridge for the Royal Asiatic Society (London 1902). Unfortunately the only known MS. is that described by Rieu in his *Catalogue of Persian MSS.* I, 247, and it is imperfect, and breaks off in the middle of a sentence. She wrote the Memoirs at the request of Akbar in order to furnish his secretary Abu 'l-Faẓl with materials for his history. Probably this was in 1587. Her book is valuable on account of its domestic details, and gives a pleasing picture of the author, and of Court-life in Humāyūn's time. There are several references to Gulbadan in the third volume of the *Akbarnāmāh*.

(H. BEVERIDGE.)

GULBARGA, spelt *Kalburga* in Marāthī, was a town of little importance until 'Alā' al-Dīn Bahman Shāh made it his capital in 1347 on establishing his independence as sultān of the Dakhan. It remained the capital of the Dakhan until 1429, when Ahmad Shāh I, ninth king of the Bahmanī dynasty, rebuilt Bīdar and transferred his court thither. On the disruption of the Bahmanī kingdom in 1490 Gulbarga was in the possession of the African eunuch, Dastūr Dīnār, but ten years later he was defeated and slain by Yūsuf 'Adil Shāh and the city and province were absorbed in Bidjāpur and remained part of that kingdom until it was annexed to the Mughal empire by Awrangzib ('Ālamgīr) in 1686. The city is famous for its great mosque and for the shrine of Muhammad Gisū Darāz, a saint who flourished in the early years of the fifteenth century.

Bibliography: Historic Landmarks of the Deccan, by Major T. W. Haig.

(T. W. HAIG.)

GÜLEK BOGHAZ, the Turkish name of the celebrated *Pylae Ciliciae* of the ancients, which have already been often described. The name is derived from a place named Gülek in the neighbourhood which, according to Cuinet, has including some other adjoining villages a population of 1850. In the Armenian notices we find *Guglag* in place of Gülek, latinised as *Gogulat* or *Coqelaquus*, although the Latin chroniclers always speak of the *Porta Judae*. In the Arab chroniclers we find simply *Darb* or *Darb al-Salāma*. For a more detailed description see the works quoted below.

Bibliography: Ritter, Erdkunde, xix. 2, p. 273 et seq.; Ramsay, *Historic Geogr. of Asia Minor*, p. 349 et seq.; Le Strange, *The Lands of the Eastern Caliph*, p. 133 et seq.; Cuinet, *La Turquie d'Asie*, ii. 49.

GÜLISTĀN, a place in the Caucasus (in

the gouvernement of Elisavetpol), famous for the peace concluded there (peace of Gülistān) in 1813. Instigated by Napoleon, Fāṭh 'Alī Shāh had declared war against Russia. After the victories of the Russian general Kotliarevsky at Aslanduz and Lenkoran the treaty of Gülistān was concluded on the 12th (24th) October 1813, by which Russia came into the possession of the khānates of Karabagh, Sheki, Shirwān, Derbend, Kuba, Baku and Tālīsh. The khānate of Gandja [q. v.] had been previously occupied by the Russians so that the treaty only ratified what was actually a fact. At the same time Persia pledged herself not to maintain any warships on the Caspian Sea. (A. DIRR.)

GULISTĀN (P.), "land of roses, rose-garden", the name of a celebrated didactic work, a mixture of prose and verse, by the Persian poet Sa'dī of Shirāz, consisting of a preface, eight chapters (the lives and doings of kings, manners and customs of the derwishes, frugality, advantages of silence, love and youth, infirmity and old age, importance of education and rules of conduct) and an epilogue. A number of anecdotes interwoven give us information on the personal experiences of the poet. The *Gulistān* was completed in 656 (1258), one year after the *Bostān*; it bears a dedication to the Atābeg of Fārs, Abū Bakr b. Sa'd b. Zangī and his son Sa'd and has appeared in numerous editions (the best European ones are by E. B. Eastwick, Hereford 1850; Johnson, *ibid.* 1863; J. T. Platts, London 1874) and translations; of the latter we may mention: Latin: by G. Gentius (*Rosarium Politicum*, 1651, 1655); French: by D'Allègre (1704), Gaudin (1789, 1791), Semelet (1834), Defrémery (1858), Franz Toussaint (with a preface by Comtesse de Noailles, 1913); German: by A. Olearius (*Persianisches Rosenthal*, 1654, 1660), Schummel (1775), B. Dorn (1827), Ph. Wolff (1841), K. H. Graf (1846), G. H. F. Nesselmann (Berlin 1864); English: by Gladwin (Pers. text with transl., Calcutta 1806, 1809); Dumoulin (1807), J. Ross (1823), Eastwick (1852), J. T. Platts (London 1873), E. H. Whinfield (Pers. text with transl. and notes, London 1880), Edw. Arnold (1899); Roumanian: by Gh. Popescu Ciocănel (Ploesti 1906); Polish: by Biberstein-Kazimirski (Paris 1876); Italian: by Gherardo de Vincentiis (selection, Naples 1873); Arabic: by Djibrā'il b. Yūsuf al-Mukhallā' (1263 = 1847); Hindustānī: by Mir Shir 'Alī Afsōs under the direction of John Gilchrist (*Bāgh-i Urdū*, Calcutta 1802).

(CL. HUART.)

GÜLKHĀNE, the "house of roses", or *Gülkhāne Meidāni*, is the name of a part of the gardens, which lie along the Sea of Marmora on the east side of the old imperial Serai in Stambul; the name is derived from the fact that in olden days the building, in which the rose sweetmeats for the use of the court were prepared, stood there. The place is famous in history because the celebrated firmān of Sultān 'Abd al-Majīd, the so-called *Khatt-i Sherif* promulgating the reforms, was publicly proclaimed there on Sunday the 26th Shābān 1255 (3rd November 1839); cf. the description in Rosen, *Geschichte der Türkei*, ii. 14 et seq.; Luṭfi, *Tārīkh*, vi. 59 et seq.; on the place itself cf. White, *Three Years in Constantinople*, i. 110, and *Revue Histor. publ. par l'Inst. d'Hist. Ott.*, i. 291 et seq.

(J. H. MORDTMANN.)

GULPĀYAGĀN, a town in Persia at the foot of the Zagros range in the fertile valley of the Kūm. The Arab geographers give the form of the name *Djārbādḥakān*, i. e. *Gurbādḥakān*. *Hādīdjī Khal.*, *Djikhānnūmā*, p. 299 still knows both forms for his *Darbāyagān* is probably only a misprint for *Gurbāyagān*. It is only in the modern times that the place is frequently mentioned; the Arab geographers only refer to it as a station on the road from *Ispāhān* to *Hamadḥān*. Although *Gulpāyagān* is the capital of a Persian province, which exports opium, tobacco and cotton in addition to agricultural produce satisfying the local requirements, it gives one the impression of considerable decay. Among the 12,000—15,000 inhabitants are a few Jews, about 150 families.

Bibliography: Vākūf, *Mu'djam*, ii. 40; Le Strange, *The Lands of the Eastern Caliphate*, 210; Ritter, *Erdkunde*, ix. 63; Aubin, *La Perse d'aujourd'hui*, 310 *et seq.*; Kazwini, ed. Wüstenfeld, ii. 233; Schefer, *Stassetnamēh*, Suppl. 192; Brugsch, *Reise nach Persien*, ii. 25 *et seq.*

GÜLSHENĪ, a Turkish poet, born in *Şarūkhān* (Asia Minor in the wilāyet of *Aidin*), a contemporary of *Muḥammad II*, to whom he dedicated his book, led the life of a hermit. His *Maḳālāt* consist of series of moralising dialogues in verse illustrated by anecdotes.

Bibliography: Gibb, *Ottoman Poetry*, ii. 378; v. Hammer, *Osm. Dichtkunst*, i. 286.

(CL. HUART.)

GÜLSHENĪ (SHAḪH IBRĀHĪM), a celebrated mystic of the *Khalwetī* order, a native of *Aḥarbaiddjān*, studied in *Tabriz* and migrated to *Cairo* after *Shāh Ismā'īl* had proclaimed the *Shī'a* creed the state religion of Persia. After the capture of the city by the Turks he was treated with the greatest respect by *Sultān Selīm I*. In 935 (1528-1529) he went to *Constantinople* on *Sultān Sulaimān's* invitation, where he was received with unusual distinction. He died in 940 (1533-1534) in *Cairo*. He wrote a Persian mystic poem of 40,000 distiches entitled *Mā'nawī* in answer to *Djalāl al-Dīn Rūmī's Mathnawī*. Of his numerous pupils particular mention may be made of the poet *Usūlī* of *Yeñidje-i Wardar* and the mystic *Yūsuf* called *Sīne-ṭāk*. An order founded by him bears his name *Gülshenī* or sometimes is also called *Rūshenī* after the epithet of his teacher and consecrator *Dede 'Omar Rūshenī*. This order is distinguished by the form of its turban of eight folds.

(CL. HUART.)

GUMAL. A river in *Afghanistan* formed by the junction of the *Gumal* proper which rises near *Ghaznīn*, with the *Kundar* in the *Wāno* territory. It then flows eastward and, after being joined by the *Zhōb* from the south, passes through the *Gumal* Pass into the plains of the *Indus* valley. Its water is here diverted into irrigation channels, and does not reach the *Indus* except during high floods. The *Gumal* Pass is one of the principal passes from *India* into *Afghanistan*, and is more used than any other by the *Powindahs* or nomadic traders of the *Ghazai* and other tribes.

Bibliography: Vigne, *Ghuzni*, London, 1840.

(M. LONGWORTH DAMES.)

GUMUSH-KHĀNE, the "silver house" (translated into modern Greek as *Ἀργυρούπολις*), capital

of a *sandjak* of the wilāyet of *Trapezunt*, and till 1913 see of the Greek Metropolitan of *Chaldia*, is said to have been founded only 250 years ago and according to *Ewliyā* (ii. 343) identical with *Djāndje* which is known as a mint for silver currency from *Suleimān I* to 'Osmān II *Gumush-khāne* was formerly the centre of the mining industry in the coast lands of *Pontus* famous even in antiquity for its silver; in the xviiith century (under *Mahmūd I*) *ghrūsh* (dollars) were struck there for a time. During the war of 1828-1829 the Russians temporarily occupied the district of *Gumush-khāne*; after their departure the greater part of the Greek inhabitants, who were mainly engaged in working the mines, migrated and the mining industry declined. Recently attempts have been made, but without marked success, by European enterprise to set the flooded mines at work again; argentiferous lead is exploited there. The present population is about 3000 half of which are Greeks. The rich decorations of the five Greek churches, which date from a time when the Greek population numbered 5000 families, testify to the prosperity of the earlier inhabitants (cf. *Djikhānnūmā*, p. 622, 623; Hamilton, *Researches*, i. 234 *et seq.*; *Triantaphyllides*, *Τὰ Ποντιακά*, p. 97 *et seq.*; *Sava* *Joannides*, *Ἱστορία Τραπεζοῦντος*, p. 141, 248 *et seq.*; *Cuinet*, *La Turquie d'Asie*, i. 122 *et seq.*; view in *Texier*, *Descr. de l'Arménie, la Perse etc.*, Pl. 2).

(J. H. MORDTMANN.)

GURČĀNĪ. A *Baloč* tribe located partly in the plains of the *Dēra Ghāzi Khān* District of the *Pandjāb*, and partly in the adjacent mountains called *Māri* and *Drāgal* in the *Sulaimān* Mts. and the upland plains of *Shām* and *Phailāwagh*. They are of mixed origin, some sections being *Dodāis* of *Sindh Rājput* extraction, and others being *Rind Baloč* of pure blood. The Chief's family belongs to one of the *Dōdāi* sections. The tribe was till lately very turbulent and often at war with its neighbours and with the *Sikhs*. In 1848 they joined *Edwardes* against the *Sikhs*. The *Lashāri* and *Durkāni* sections are mountaineers occupying a very difficult hill country.

(M. LONGWORTH DAMES.)

GURDJ, **GURDJĪ**, **GURDJISTĀN**. [See *GEORGIA*].

GURGĀNDJ, Arabic *Djurdjāniya*, a town in the northern part of *Kh'wārizm*; on the situation of the town and the arm of the *Oxus* which flows past it, cf. the article *AMU-DARYĀ*, i. 341^a. Although the town is first mentioned by the Arabs, it was undoubtedly founded in the pre-Muhammadan period; the oldest Chinese name for *Kh'wārizm* (*Yüekien*) is apparently to be traced to the name *Gurgāndj*. In what condition the Arabs found the northern part of the country is not narrated in the sources dealing with the Arab conquest (93 = 712). In the ivth = xth century *Kh'wārizm* broke up into two independent kingdoms, the land of the *Kh'wārizmshāh* with *Kāth*, the ancient capital of the country, and the land of the *Emīr* of *Gurgāndj*. According to *al-Bīrūnī* (*Chronology*, ed. Sachau, p. 36), the dynasty which had its residence in *Kāth* only retained the regal title (*shāhiya*) after the Arab conquest; the real power (*wilāya*) was henceforth sometimes in the hands of the members of the dynasty itself, sometimes in the

hands of others, until under its last ruler both (the *shāhiya* and *wilāya*) were finally taken from it. This statement is interpreted by Sachau (*Sitz.-Ber. Wien. Ak.*, lxxiii. 499) to mean that the old dynasty resided in Kāth and the Arab wālī in Gurgāndj and that the political separation of north from south was brought about by this system of dual rule. In the year 385 = 995 the Emir of Gurgāndj succeeded in conquering Kāth, overthrowing the dynasty which had held it since pre-Muhammadan times, uniting Khwārizm once more into a single kingdom and transferring the title Khwārizmshāh to his own house.

Gurgāndj is described as the second largest town in Khwārizm by the Arab geographers of the ivth = xth century (cf. W. Barthold, *Turkestan*, ii. 146 *et seq.*; G. Le Strange, *The Lands of the Eastern Caliphate*, p. 447 *et seq.*); in contrast to the ancient town of Kāth it was then a rapidly rising city of commerce and industry. After the union of the two kingdoms Kāth and Gurgāndj are described as the two capitals of this kingdom each enjoying equal privileges; under the later rulers and governors, Kāth gradually became quite overshadowed by Gurgāndj. The period of Gurgāndj's greatest prosperity coincides with the rule of the Khwārizmshāhs of the vith = xiith and viith = xiiith century. Yāqūt (ii. 54, 486; iv. 260 *et seq.*) gives most of the notices, unfortunately however very scanty, of the brilliant capital of this dynasty; 3 *farsakh* from the capital there was in this period another town called "Little Gurgāndj". Djuwaini's account of the siege and capture of the city by the Mongols in 618 = 1221 contains much information on the topography of Gurgāndj in the viith = xiiith century; cf. the text in Schefer, *Chrestomathie Persane*, ii. 136 *et seq.* and the comparison with other sources in W. Barthold, *Turkestan*, ii. 467 *et seq.* The city is said to have been raised to the ground on this occasion, the dikes destroyed and the whole district inundated by the Āmu-Daryā; on the contrary other sources (Djūdzjāni, *Tabakāt-i Nāgiri*, transl. Raverty, p. 281, 1000; cf. also 'Abd al-Karīm Bukhārī, ed. Schefer, p. 78), say that several buildings, including the tomb of Sultān Takash escaped destruction. The inscription found in a minaret (cf. the picture in H. Landsell, *Through Russian Central Asia*, p. 517) giving the date of erection as 401 = 1010-1011, published by Katanow (*Zapiski vost. otd. arkh. obsht.*, xiv. 015 *et seq.*), actually shows that some remains of pre-Mongol Gurgāndj have survived to the present day. On the commercial city rebuilt on another site a few years later, cf. URGENC. (W. BARTHOLD.)

GÜRKHAN, a title of the rulers of the Karā Khitāi [q.v.]. The word is said by the Muslim authorities to mean "Khān of Khāns" (*Khān-i Khānūn*). This explanation is rejected by Grigoryew (*Vostochny Turkestan*, i. 398) and Gürkhan equated to Mongol Gūrgen = "son in law"; the founder of the kingdom of the Karā-Khitāi is said by him to have adopted this title because he was related to the former Emperors of the house of Liao (in North China). Documentary authority on which this view might be supported has not yet been found; nor do we know any better how far the language of the Khitāi was related to Mongol or had adopted Mongol words and whether a form "Gürkhan" for "Gūrgen" could be explained by any phonological peculiarities of

this language; indeed the Persian accounts of the Karā-Khitāi show that the Chinese word *fu-mu* was used for son-in-law at the Gürkhan's court (cf. Defrémery's note to his edition of Mirkhond, *Histoire des Sultans du Kharezm*, p. 124). Čingiz-Khān's rival Djāmūka (cf. the article ČINGIZ-KHĀN, i. 857a *infra*) adopted the title "Gürkhan" in the early years of the xiiith century, apparently in imitation of the rulers of the Karā-Khitāi; the title does not seem to be found later.

(W. BARTHOLD.)

GWALIOR, (GWĀLIYĀR), the capital of the principal Native State of Central India, ruled by the Mahārājā Sindhiā, is chiefly famous for its fortress, situated on a great table rock of Vindhyan sandstone. This rock rises 300 feet above the plain, and stretches two miles from north to south, and is half a mile broad at its widest point. It was threatened by Sultān Mahmūd of Ghazni in 1032, and was captured in 1196 for Sultān Shihāb al-Dīn (Ghōri), by his Dihlī deputy, Kuṭb al-Dīn Aibak from the Parihārs, who had ousted the Kaṭhwāha Rājputs. It was recovered by the Parihārs 14 years later, but was reconquered by the emperor Ilutmish in 1232 after a long siege, which ended in the immolation of the women of the defenders at the Djaubar tank at the north end of the fortress. After capturing the fort, the emperor destroyed the famous Surya Dēva temple, which stood near the Suraj Kund at the south of the tableland. During the confusion caused by the invasion of the emperor Tīmūr, the place was seized by the Tōnwāra Rājputs, who held it till 1518, in spite of several sieges by Hōshang Shāh of Mālwa, Husain Shāh Sharqi of Djaunpūr and the Lōdī Kings of Dihlī. During this century and a quarter the place rose to high renown, especially under Rājā Mān Singh, who built the famous Mān Mandir (palace), and the principal gate leading into the fort. When the fort surrendered to Ibrāhīm Lōdī he carried off from it to Dihlī a famous brazen bull, which was afterwards transferred to Fathpūr Sikrī, and there broken up. The emperor Bābur visited Gwalior in 1526. In 1542 it fell to the Pathān Sultān Sher Shāh Sūr, and under him and his son Islām Shāh, who died there in 1553, it was practically the capital of India. It was surrendered to Akbar soon after his accession, and the fine tomb of Muḥammad Ghawth near the foot of the fortress is, with the mausoleum of the emperor Humāyūn at Dihlī, one of the earliest important works of Mughal architecture in India. Under the Mughal emperors the fortress became a state prison, and many inconvenient members of the royal family died in the Naw Čawki cells near the north-west gate of the fort, known as the Dhōnda-pōl. The Mughal governor Mu'tamid Khān built a small mosque by the Ganēsh Gate, and deepened the Nūr Sāgar Tank; he also destroyed the shrine of the hermit Gwālīpa, from whom the rock is said to derive its name. The Djāmi' Masjdīd, a fine building, was begun about 1605 and finished 60 years later. The Djāhāngiri Mandir (about 290 by 180 ft.) was built in the reign of the fourth Mughal emperor, north of the palace of Mān Singh, and upon the site of that of the Sūr emperors; the Shāhjahānī Mandir (520 × 170 ft.) stands north again of the former on the spot where the palace of the emperor Humāyūn once stood. After the defeat of the emperor Aḥmad

Shāh at the battle of Pānīpat (1761) the fortress fell into the hands, first of the Djaṭs and afterwards of the Marāṭhas; captured by the British in 1780 and handed over to the Rānā of Gōhad, it was again taken by the Marāṭhas in 1781. After various vicissitudes, it was occupied by British troops from

1857 till 1886, since when it has been in the hands of the Mahārādja Sindhia.

Bibliography: *Gwalior State Gazetteer* (Calcutta, 1908); *Archaeological Survey of India*, First Series, Vol. ii. (1862—1865), p. 330. (H. C. FANSHAWE.)

H.

HĀ, the 26th letter of the Arab alphabet with the numerical value 5, our *h*; it has survived everywhere except in Maltese where it has become *hanza* or *h*. As a feminine termination (*hā al-ta'nīth*) with the pronunciation *t* the character receives the two points of the letter *tā'*. In reality the written form is here based on the *ah* pronunciation of the feminine termination *at* in pausa, while the pronunciation *at* (as in Hebrew) has survived in combination with a vowel following. The transition from *at* to *ah* in pause did not, however, take place at the same time throughout the whole of the Arabic language wherever spoken, but appeared earlier in the west, where the pronunciation was authoritative for the orthography, than in the east (Noldeke, *Beitr. zur Sem. Sprachwissenschaft*, p. 10), so that the Persians have adopted Arab words with the pronunciation *at*. In Arabic itself this *h* was afterwards dropped everywhere so that the spelling with *h* has now only a historical interest.

HĀ, the 6th letter of the Arab alphabet with the numerical value 8. It is a guttural characteristic of the Semitic languages, approximating to the unvoiced sound corresponding to 'ain [q. v., i. 211^b], as 'ain passes into *hā'*, where it dialectically drops its voiced pronunciation; e. g. in Egyptian Arabic by assimilation (*arbaḥāšār*, 14 from *arba'ta'šār*) and in Maltese throughout when final (*dumūh* from *dumū'*). Our knowledge of the nature of this sound is no more complete than that of the related 'ain. A discussion of the various views may be found in E. Mattesson, *Études phonologiques sur le dialecte arabe vulgaire de Beyrouth* (Upsala 1910), p. 41 *et seq.* — In South Arabia the sound approximates to *hā'*. The Persians and Turks also pronounce *h* for *h* in words borrowed from the Arabic. — In various African names e. g. that of the Hausa people the spelling with *hā'* (حوسة) is simply an affectation, it is really *h*.

(H. BAUER.)

AL-ḤABAṬ, the name in South Arabia for a sacred area, which is under the protection of a saint, who is usually buried there, and is a place of refuge. No one who seeks asylum on this holy ground may be slain or attacked there. The verb *ḥabaṭa* in South Arabia means "to hold back" "to restrain". The most important *ḥabaṭ* in South Arabia is that of *Djebel Kadūr*, which lies to the south of the village of *Lihya* (Lahya) on the *Wādī Ḥabbān* in the land of the *Wahidi* [q. v.]. Four saints (*maḥḥā'ikū*) of the tribe of *Bā Marḥūl*, to whom *Lihya* belongs, are buried there. This *ḥabaṭ* therefore is also known as *Ḥabaṭ al-Arha'a*. It is uninhabited, and the surrounding tribes only allow their cattle to pasture there after the rains. Besides places of refuge which are called *ḥabaṭ* there are others which bear the name *ḥawṭa* [q. v.].

Bibliography: Comte de Landberg, *Arabica*, v. 203-204, 205, 206, 207, 214.

(J. SCHLEIFER.)

HABBA, literally grain or kernel, a fraction in the Troy weight system of the Arabs, of undefined weight. Most Arab authors describe the *ḥabba* as $\frac{1}{60}$ of the unit of weight adopted, as a $\frac{1}{10}$ of the *dānaḳ* (which in Arab metrology is a sixth part of the unit, see i. 912^b), but there are other estimates which vary from $\frac{1}{48}$ to $\frac{1}{12}$. The *ḥabba* thus means something very different according to the unit of weight; there is a *ḥabba* of the silver measure, a *ḥabba* of the gold measure, a *ḥabba* of the *mithḳāl*, later of the *dirham* etc. On the supposition that the oldest Arab unit of Troy weight was the *mithḳāl* [q. v.] of 4.25 grammes ($65\frac{1}{2}$ grains Troy), we get as the most probable weight of the *ḥabba* in the early days of Islām about 70–71 milligrammes (1.1 grains), which approximately agrees with the European apothecary's weight of the *granum* (grain, $\frac{1}{100}$ of the pound) as it was used throughout Europe down to the most recent times (cf. the English Troy grain of 64.8 milligrammes). The statements regarding the subdivisions and multiples of the *ḥabba* also vary; the *ḥabba* is usually divided into 2 grains of barley (*shā'ir*) or 4 grains of rice (*aruz*) or about 100 mustard-seeds (*ḥaradā*); sometimes 3 and sometimes 4 *ḥabba* on the other hand make a *ḳirāṭ* [q. v.].

At the present day in Constantinople in Troy measure (for precious metals, jewels and drugs) the *ḥabba*, of which four make a *ḳirāṭ*, weighs 50.04 milligrammes (.75 grains) (the drachm of 64 *ḥabba* thus weighs 3.2025 grammes = 49.4235 Troy grains); in the coinage system it is somewhat heavier: 50.11 milligrammes (the coin-drachm = 3.207 grammes = 49.497 grains Troy). In Cairo the *ḥabba*, of which 3 go to the *ḳirāṭ*, is the same for all measures: 64.3417 milligrammes (one drachm = 3.0884 grammes = 47.66 grains Troy).

ḤABBĀN (ABBAN), a town in South Arabia, the capital of the territory of the Upper Wāḥidī [q. v.], situated in the wādī of the same name. According to Miles it has about 4000 inhabitants, but this figure seems to be too high. The Sultān of the Wāḥidī dwells here in the Castle of Maṣnaʿa Ḥākīr, which is built on a small isolated hill in the midst of the city and surrounded by a wall. The town itself has no walls and only two watch-towers at each end of it. The houses are strongly built like little fortresses and, as usual in the land of the Wāḥidī, often five stories high. In the houses of the better families the second storey is used as a *maḍlīs* (reception-room). Besides one large mosque, Ḥabbān has eight smaller ones and an important library. The town is divided into four quarters: 1. the quarter of the Ḥaḍramī and Raʿīya; 2. that of the Jews; 3. that of the family of the Faḳīh Muḥammad b. Ḥasan al-Shihlī (of the prominent family of Muḥammad b. ʿUmar in al-Ḥawṭa and al-Rawḍa) and 4. that of the carpenters who here form a caste and are descended from the ancient great carpenter family of al-ʿAwd, who came originally from Jeshbum and are now scattered throughout almost all South Arabia. The Jews (about 200 in number) are mostly goldsmiths and, as usual in South Arabia, are subject to many restrictions; they may not carry arms, nor acquire land and have to pay a kind of poll-tax (*furda*) to the Sultān. Miles saw many inscriptions, which he describes as Hebrew near Ḥabbān in the little wādī of Shughāib.

Bibliography: K. Ritter, *Erdkunde*, xii. 624; H. v. Maltzan, *Reise nach Südarabien*, p. 230; Comte de Landberg, *Arabica*, v. p. 216—220. (J. SCHLEIFER.)

HABESH, see ABYSSINIA, i. 119 *et seq.*

HABĪB B. AWS. [See ABŪ TAMMĀM].

HABĪB B. MASLAMA, a Meccan of the clan of Banū Fihir, one of the Caliph Muʿāwīya's greatest generals. He is generally recognised as a companion of the Prophet except by the Medina school, who are infatuated by their anti-Umayyad prejudices. The chronology confirms the correctness of this view. For, as he must have been about 15 years old at Muḥammad's death, there is no reason to suppose that he was not personally acquainted with him. He very early took part in the first fighting in Syria and vigorously championed the cause of the Umayyads. Under the governorship and later the Caliphate of Muʿāwīya he distinguished himself by his numerous incursions into Asia Minor and particularly Armenia. Tradition ascribes to him the conquest of the latter country. He is also known as *Ḥabīb al-Rūm*, Ḥabīb of Byzantium, on account of his frequent raids into Byzantine territory. He was also a *muḍjāb al-daʿwa* i. e. he possessed the privilege of having all his prayers and requests answered by God. He must have died at the age of about 55 early in the reign of the Caliph Muʿāwīya; at least he seems to have played no part in history after this date.

Bibliography: Ibn Ḥaḍjar, *Iṣāba* (Egyptian edition), i. 309. A complete bibliography is given in my *Études sur le règne du Calife Omayyade Moʿawīya Ier.* (H. LAMMENS.)

HABĪB AL-NADJIDJĀR (the carpenter), the saint of Antākiya, after whom Mount Silpius

is called by the Arabs, because a much visited grave, alleged to be his, is said to be there (cf. above i. 360a). This Muslim saint is no other than the Agabus mentioned in *Acts* xi. 27—30 and xxi. 10 *et seq.*, and his legend, which is related in *Sūra* xxxvi. 12 *et seq.*, although his name is not mentioned, is consequently of Christian origin. When Allāh, as is there related, sent two apostles (according to the expositors, Yahyā and Yūnus) and afterwards a third (*Shamʿūn*) to convert the inhabitants and the latter threatened them with death if they did not give up preaching, a man came running from the most distant part of the town, who warned his fellow-citizens to believe the messenger and proclaimed himself a believer. The wrath of the people was thereupon turned against him and, when they were putting him to death, they cried in scoffing tones to him "Enter thou into paradise", but he rejoiced that he was worthy of the high honour of martyrdom. Allāh thereupon put all the blasphemers to death and without sending an army against them: a single cry (a voice from heaven) was heard and all were dead.

That man, say the expositors of the *Qurʾān*, was Ḥabīb al-Nadīdjār, a carpenter who made idols but had become a convert, when he saw the miracles performed by the apostles. As it appears from the *Qurʾānic* account as if Ḥabīb had prided himself on his martyr's death after he had suffered it, we find in al-Dīmaṣḥqī (ed. Mehren, p. 206) the fantastic story, that Ḥabīb took his decapitated head in his left hand and placed it in his right and walked for three days and nights through the city in this fashion, while the head cried with a loud voice out the verses mentioned in the *Qurʾān*.

Bibliography: The commentaries on *Qurʾān*, *Sūra* xxxvi.; cf. also the bibliography to the article ANTĀKIYA.

HABĪL and **KABĪL**, the names given by Muhammadans to the two sons of Adam, mentioned, but not by name, in the *Qurʾān*, who brought an offering to God. Jealous that his sacrifice was rejected the one slew his brother. A raven sent by God, which scratched upon the ground, showed him how he could dispose of the body (*Sūra*, v. 30—34). As this account in the *Qurʾān*, following the Bible narrative, appears bald and uninteresting, *Qurʾānic* exegesis, like the Biblical, endeavours to discover the psychological motives underlying the affair. According to it, the sons of Adam were all born with twin sisters; Kabīl's (also sometimes called Kain, Kāʾin and Kāyīn) was called Aqlīma, Ḥabīl's, who was two years younger, Labūdā (the names are given in varying forms). According to one tradition which is traced among scholars *bi'l-Kitāb al-Awṣal* (presumably the book of Genesis is meant), Kabīl first saw the light in Paradise and Ḥabīl was born on earth, just as also *Pirke de R. Elieser*, 21. Adam demanded that each should marry the other's twin sister; but Kabīl wished to marry his own sister who was the fairer. It was to be decided by a sacrifice to which of the two the fairer sister was to go (so also *Jebamoth*, 62, *Gen. R.*, 22 etc.). According to another tradition, to which the marriage with a sister was abhorrent, Ḥabīl was to have married a houri of Paradise, while Kabīl had to marry a woman of the Djinn, with which he did not agree. Enraged at the rejection of his sacrifice

(according to Ṭabarī, i. 144 *infra*, he had sacrificed fruits of the field of little value, while Kābīl slew his favourite sheep), Kābīl slew his twenty-year old brother, according to one account following the example of Iblīs, who appeared with a bird in his hand and struck off its head (a similar story is given in *Sanhedrin*, 30). As Hābīl was the first man that had died, the murderer did not know what to do with the corpse; he therefore carried it for a year on his back in a sack to protect him from the birds and wild beasts. He then noticed a raven fighting with another kill his opponent and bury him by scratching the earth over him. Kābīl did the same with his brother (similarly in *Pirke de R. Eliezer*, 21, while according to *Gen. R.*, 22, the birds and beasts buried Abel). When God said to him: "The voice of thy brother's blood crieth unto Me from the ground. Wherefore hast thou slain him?" Cain replied: "Where is his blood, if I have slain him?" thereupon God forbade the earth ever again to drink human blood.

(J. EISENBERG.)

HĀBUS (A.), properly *hubus*, a pious endowment, synonymous with *wakf* [q.v.].

HADATH (A.), ritual impurity. The law recognises two conditions of ritual impurity which are distinguished from one another as "major" and "minor" *ḥadath*. A Muslim in a condition of *ḥadath* can only regain his ritual purity (*ṭahāra*) by the prescribed ritual ablutions (*ghusl* or *wuḍūʾ* respectively); cf. *DIJĀNĀBA*, *GHUSL* and *WUḌUʾ*. Not only is a *muḥḍith* (a person in a condition of "minor" *ḥadath*) forbidden to perform the *ṣalāt*, but also he is not allowed to make the *ṭawāf* around the Kaʿba nor to touch a copy of the *Qurʾān*; further the *ṣalāt* and *ṭawāf* of a *muḥḍith* are legally invalid. The same regulations apply to a case of major *ḥadath*; but there are a few additional rules applicable to the latter, cf. *DIJĀNĀBA*, i. 1013^a.

(TH. W. JUYNBOLL.)

AL-ḤADATH, also **AL-ḤADATH** **AL-ḤAMRĀʾ**, a border fortress often mentioned in the wars between the Arabs and the Byzantines. The exact situation of al-Ḥadath, the "Adara of the Greeks, has not yet been ascertained, because the town (see below) has been utterly deserted for over six centuries, but there can be no doubt that it is to be located not far from Inekli on the Aḳsu. It is the Aḳsu that Yāqūt (iv. 838) means by the Nahr Ḥurith, which according to him rises in the Lake of al-Ḥadath and flows into the Djaibān. Ibn Serapion's statement that the river flows through several small lakes, which are now called Göinük Göl, Azablī Göl and Bash Göl, is more accurate, although, as Le Strange points out, this author is wrong, when he says that the river is a tributary of the Nahr al-Ḳubāḳib (Melas). In Ramsay, *A Sketch of the Historical Geography of Asia Minor*, p. 278, Adata is wrongly placed a short distance to the north of Germanicia (Marʿash). The fortress was captured by a body of Arab troops under Iyād b. Ḡhanm as early as the reign of ʿOmar I; in 162 (779) it was destroyed by the Byzantines but rebuilt in the same year by command of the Caliph al-Mahdī. It was then called al-Muḥam-

madiya and al-Mahdiyya in his honour, but these names could not supplant the old one. The town was of great strategic importance to the Arabs, because it commanded one of the great military roads from Ḥalab (ʿAintāb) to Elbistān (Asia Minor), while another led thither via Marʿash. Al-Ḥadath was therefore garrisoned by Hārūn al-Rashid and was reckoned one of the most important towns in the frontier provinces (al-*Thughūr*). The fortress proper was built on a hill called al-Uḥaidab, while the town itself was of the same size as Marʿash; it was much harassed in the campaigns of Basil I (882) and Leo VI (904). It suffered still more, when in 337 (948) Bardas Phokas burned it, which induced the inhabitants to call in the help of Saif al-Dawla [q.v.]. The latter did not hesitate to answer their appeal, won a great victory in the neighbourhood of the town in 343 (954) and had it rebuilt. But the building was not completed, because soon afterwards the Byzantines were again victorious and won the upper hand in those regions. It was not till 545 (1150) that Maʿūd, the Salḡūḳ ruler of Ḳonīya, again won the town for the Muslims, who held it till the Armenians of Sis under Constantine, the father of Haithum, captured it. This caused Baibars to send a body of troops against it in 671 (1278), who took the town and castle, massacred the inhabitants and razed the town to the ground so that it was henceforth known as Göinük "the burned" (so the various readings in al-Maḳrizi and al-Dimashḳī are to be emended). This name survives to the present day as that of the lake and plain where Adata once lay.

(1838).

HADD (A., plural *ḥudūd*), boundary, limit, stipulation, also barrier, obstacle. As a scientific term the word is used in several senses.

In the *Qurʾān*, where it is always found in the plural, it means the "limits" laid down by God, i.e. the provisions of the Law, whether commands or prohibitions. It appears in this sense at the end of several verses, which contain legal provisions, e.g. *Sūra* ii. 183, where it is said after the exposition of the rules regarding fasts: "These are God's *ḥudūd* (the bounds prescribed by God), come not too near them" (lest ye be in danger of crossing them). Cf. also *Sūra* ii. 229 *et seq.*, where the law of divorce is laid down and other passages. According to Kazimirski (note to *Sūra* ii. 283) the expression recalls the *sepes legis*, the hedge drawn round the Mosaic law.

In Muslim criminal law *ḥadd* means an unalterable punishment prescribed by canon law, which is considered a "right of God" (*ḥaqq Allāh*). (Cf. the article **ʿADHĀB**, i. 132 *et seq.*). These punishments are 1. stoning or scourging for illicit intercourse (*zināʾ*, q.v.); 2. scourging for falsely accusing (*kadhf*, q.v.) a married woman of adultery; 3. the same punishment for the drinking of wine and other intoxicating liquors; 4. cutting off the hands for theft (cf. the article **SĀRIḲ**); 5. various punishments for robbery which differ

according to circumstances, cf. Kor'an, v. 37-38. — Although the above mentioned breaches of the law are considered very serious, the criminal can nevertheless hope for the mercy of God, because he has offended against Him. If he denies the deed and refutes the accusations brought against him, the judges are recommended not to press him further, but to give him every possible opportunity to clear himself; for further details see Juynboll, *Handbuch des islamischen Gesetzes*.

In philosophy *hadd* means definition; the qualities that differentiate an object are called *ta'rifāt*. The definition is perfect when it gives the genus proximum and the differentia specifica, e.g. man is an *animal rationale*. There is a kind of definition, which places the object to be defined between two limits so that it is the end of one and the beginning of the other.

Hudūd is also the name given to the definitions which stand at the beginning of various sciences, e.g. at the beginning of Euclid's geometry; the postulates are called *muṣṭadārāt* (*Codex Leidensis* 399, 1. *Euclidis Elementa*, ed. Besthorn and Heiberg, 1893).

In astronomy *hadd* means certain areas under each sign of the zodiac, which are each allotted to one of the five planets.

Among the mystics *hadd* and particularly the participle *maḥdūd* means the finiteness of creatures in contrast to the infiniteness of God; man is limited and bounded (*maḥdūd*) in space and time. (B. CARRA DE VAUX.)

HADENDOA, a Hamitic tribe in N.E. Africa belonging to the Bedja [q.v., i. 687^b] group and closely allied to the Bishārī, Hālānga and Banī 'Amir tribes. They live in the country between the river Atbara and the Red Sea and extend towards the South as far as the borders of Eritrea and Abyssinia. Politically nearly the whole tribe belongs to the Red Sea and Kassala provinces of the Anglo-Egyptian Sūdān.

They are a nomadic or semi-nomadic tribe of camel-owners and caravan-guides; in their general characteristics and customs they do not differ materially from the rest of the Bedja tribes with whom they also share the use of the Bedawye language. Their claim to Arab descent must be rejected, but there is little doubt that they have at various times received considerable admixture of Arab blood. Although they have been Muslims for centuries their Islām is of the primitive African type and often only skin-deep. At the same time there are scholars among them who have acquired a certain amount of Islāmic learning through intercourse with Egypt and more especially the Ildjāz.

Historically the tribe has never played an independent part until the most recent times. Although the Ottoman Turks have held Suākin since the time of Sultan Selim I, they seem to have exercised little authority in the interior and have left no traces of their influence. During the revolt of Muḥammad Aḥmad, the Mahdī of the Sūdān, the Hadendoa took a prominent part in the fighting against the British and Egyptian troops and won a reputation for reckless courage and fanaticism. Their adherence to Mahdism was however less inspired by religious motives than by the personal influence of their well-known leader 'Osmān Digna ('Othmān Dikna), a man of semi-Turkish descent. Since the occupation of Suākin and

Tōkar by the Anglo-Egyptian troops and more especially since the defeat and death of the Khalifa, the Hadendoa have gradually become reconciled to the new régime, under which their material prosperity has increased considerably.

(S. HILLELSON.)

HADHF, the act of cutting off, e.g., the tail of a beast, hair, or part of a garment. Then, 1. as a grammatical term, the elision especially of a weak letter (*harf al-illa*), e.g., *yahabu* from *wahaba*, *kum* from *yaḳūmu*, *yarmi* from *yarmi*; 2. the omission of part of a sentence; e.g., the subject or predicate, protasis or apodosis (Baidāwī on *Kur.* x, 81 and *passim*); 3. in prosody, the cutting off of a final closed syllable (*sabab khafif*), so that *fā'ilātun* becomes *fā'ilun*, and so on.

(T. H. WEIR.)

AL-HĀDĪ (A.), the guide, one of the names of God, thence a favourite epithet of Shī'ī rulers, e.g. of the Imāms of Ṣan'ā' and Ṣa'da; it was first adopted by the 'Abbāsīd Mūsā. The full expression is *al-Hādī ila 'l-Ḥaqq*, the guide to truth (God).

HĀDĪ SABZAWĀRĪ (HĀDĪ MULLĀ), son of Hādījī Mahdī, a Persian philosopher and poet, born in 1212 (1797-1798). He was a pupil of Hādījī Mullā Ḥusain and wrote a short treatise when only twelve years old. He then went with his teacher to Meshhed and devoted himself for five years there to study and the practice of asceticism. He spent the next seven years in Ispahān studying under Mullā 'Alī Nūrī, then made the pilgrimage to Mecca and returned via Kirmān to settle in Sabzawār, where his reputation soon assembled a host of students around him. He delivered two lectures a day, of two hours each. In 1295 (1875) he died suddenly while engaged in teaching. The grand vizier had a mausoleum built over his grave before the gates of Meshhed, which is much visited by pilgrims. According to his teaching, the world is an emanation, manifestation or projection of God; it is a mirror in which the Deity regards himself, the scene on which his attributes unfold their activities. It is a brilliant ray emanating from the source of light. The farther these emanations go from their source, the thicker and coarser they become until they finally form the material world. This he calls *ḳaws-i nuẓūl* (descending arc); the human soul is able to re-ascend this ladder again by the different steps of the *ḳaws-i su'ūd* (ascending arc). He adopted a system of metempsychosis (*tanāsukh*), but only within the world of the uniform (*'ālam-i mithāl*) in which every one assumes the form suitable to his qualities. It was mainly the teaching of Mullā Ṣadra that he continued. He laid down his views in his book *Asrār al-Ḥikma*; he took the pen-name (*takhalluṣ*) of Asrār and under

it published a collection of poems of which two lithographed editions exist (1299 and 1300). The British Museum possesses his autograph (Rieu, *Suppl.* p. 258, n^o. 31).

AL-HĀDĪD, iron. According to the *Sūrat al-Hādīd* (lvii. 25) God sent iron down to earth for the detriment and advantage of man, for weapons and tools are alike made from it. According to the belief of the Šabians, it is allotted to Mars. It is the hardest and strongest of metals and the most capable of resisting the effects of fire, but it is the quickest to rust. It is corroded by acids; for example, with the fresh rind of a pomegranate it forms a black fluid, with vinegar a red fluid and with salt a yellow. Collyrium (*al-kuhl*) burns it and arsenic makes it smooth and white. Kāzwinī distinguishes three kinds of iron, natural iron, *al-sābūr-kān* — which can only mean dark iron ores such as micaceous ore, magnetic ironstone etc. — and that which is made artificially, which is of two kinds, the weak (Pers. *norm-āhan*) or female i. e. malleable iron and hard or male i. e. steel (*fūlād*). According to al-Kindī, however, the kind of iron called *sābūr-kān* is identical with male iron; both kinds are called natural iron, while steel on the other hand is not natural. These contradictory statements cannot be reconciled here. Chinese and Indian iron are particularly esteemed. The applications of iron and iron-rust in medicine and magic are fairly numerous and varied.

Bibliography: Kāzwinī, ed. Wüstenfeld, i. 207, transl. by Ethé, p. 424; Dimishkī, *Cosmographie*, ed. Mehren, p. 54; E. Wiedemann, *Beiträge zur Gesch. d. Naturw.*, xxiv. 114; Ibn al-Baitār in Leclerc, *Notices et extraits*, i. 422; *Steinbuch des Aristoteles* (ed. Ruska), p. 180. (J. RUSKA.)

HĀDĪD (A.), the lowest part, in astronomy, the perigee or the nearness to the earth of the sun, moon or a planet; its opposite, the apogee, or distance from the earth is usually expressed by the Persian word *awdī* [q. v., i. 517^a] which corresponds to the Sanskrit *ucca* (height, highest point). These are the points in the eccentric orbit, i. e. the orbit in which the sun, or in the case of the moon and planets the centre of the epicycle, move, which are least or most distant from the earth, the termini of the Apsis. In the later astronomers, al-Bardjandī, al-Djaghminī, etc., several varieties of *ḥaḍīd* and *awdī* are distinguished.

Bibliography: al-Kāzwinī, *Cosmographie* (ed. Wüstenfeld), i., 17, 22; *Mafānīḥ al-ʿUlūm* (ed. van Vloten), p. 221; *Dictionary of the Technical terms*, etc. (ed. Sprenger etc.), s. v. *Ḥaḍīd* and *Awḍī*. (H. SUTER.)

AL-HĀDĪNA, a small independent territory in South Arabia, north of the Wāḥidī. It is one of the most interesting and most fertile territories in South Arabia. The products of the soil, which is artificially irrigated by canals from the Wādī ʿAbadān are *hawir* (indigo), *dhura* (a kind of maize) and *dukhūn* (millet). Al-Hādīna is inhabited by the tribe al-Khalifa, which claims descent from the Hilāl [q. v.]. On the migration of the Hilāl they remained in South Arabia, whence

their name Khalifa. They number about 1000 fighting men and are ruled by an ʿAqīl whose residence is in the little town of al-Djābiya. In case of war they serve under the banner of the Sultān of the Upper ʿAwālīk [q. v., i. 514] in Nišāb.

Bibliography: H. v. Maltzan, *Reise nach Sudarabien*, p. 248; Comte de Landberg, *Arabica*, IV, p. 57—60. (J. SCHLEIFER.)

AL-HĀDIRA (AL-HUWAIDIRA), a surname of the pre-Islāmic poet KUTBA B. AWS of the tribe of Thāʿlaba (Ghatafan). He is said to have flourished about 600 A. D.; Hassān b. Thābit knew some of his verses. He exchanged lampoons (*hidjāʾ*) on several occasions with the poet Zabbān b. Saiyār al-Fazāʾī, who on one occasion had treated him very contemptuously. His epithet is said to be taken from a verse of the latter's in which his form was compared with that of a frog. It is also related of him that he took part in a battle between his tribe and the B. ʿĀmir.

His poems, that have survived, are very few in number; he probably composed very little altogether: it is said that he was *muqill*. One of his *ḥaṣīda*'s has been incorporated in the *Mufaḍḍaliyāt* (ed. Abū Bakr b. ʿUmar Dāghistānī al-Madanī, Cairo, 1324, I, 10—12 = Engelman's edition, p. 5 *et seq.*). His *Diwān* was collected and annotated by the philologist Abū ʿAbd Allāh Muḥammad b. al-Abbās al-Yazīdī (died 310 A. H.).

Bibliography: *Aghānī*, iii., 81—84; W. H. Engelman, *Specimen literarium exhibens al-Hādirae Diwānnum*, Leiden Diss. 1858; Brockelmann, *Gesch. d. arab. Lit.*, I, 26.

(C. VAN ARENDONK.)

HĀDĪTH (A.) Tradition. The word *ḥadīth* means primarily a communication or narrative in general whether religious or profane, then it has the particular meaning of a record of actions or sayings of the Prophet and his companions. In the latter sense the whole body of the sacred Tradition of the Muḥammadans is called "the *Ḥadīth*" and its science '*ʿIlm al-Ḥadīth*'.

I. Subject-matter and Character of *Ḥadīth*. Even among the heathen Arabs (see I. Goldziher, *Muhamm. Stud.* i. 41, note 8) it was considered a virtue to follow the "*sunna*" of one's forefathers (*sunna* is properly the way one is accustomed to go, i. e. use and wont, ancient tradition). But in Islām the *sunna* could no longer consist in following the customs and usages of heathen ancestors. The Muslim community had to hold up a new *sunna*. Every believer had now to take the conduct of the Prophet and his companions as a model for himself in all the affairs of life and every endeavour was made to preserve information regarding it.

At first the *Ṣaḥābī*'s (i. e. people who had lived in the society of the Prophet) were the best authority for a knowledge of the *sunna* of Muḥammad. They had themselves listened to the Prophet and witnessed his actions with their own eyes. Later the Muslims had to be content with the communications of the *Tābīʿūn* (i. e. "successors", people of the first generation after Muḥammad), who had received their information from the *Ṣaḥābī*'s and then, in following generations, with the accounts of the so-called "successors of the successors" (*Tābīʿū al-Tābīʿīn* i. e. people of the second generation after Muḥammad, who had mixed with the successors), and so on.

The traditions retained the form of personal statements for several generations; every perfect *ḥadīth* therefore consists of two parts. The first contains the names of the persons who have handed on the substance of the tradition to one another; this part is called the *isnād* (or also *sanad*) i. e. the "support", i. e. for the trustworthiness of the statement. He who communicates the tradition (A) says "I have heard from B (or "B has told me") on the authority of C", and so on, whereupon the whole chain of transmission should follow, beginning with A, the last authority, and ending with the original authority. The second part is the *matn* or text, the real substance of the report. For details see Goldziher, *op. cit.* ii, 6—8.

After Muḥammad's death the original religious ideas and usages which had prevailed in the oldest community could not remain permanently unaltered. A new period of development set in. The learned began systematically to develop the doctrine of duties and dogmatics in accordance with the new conditions. After the great conquests Islām covered an enormous area. New ideas and institutions were borrowed from the peoples conquered, and not only Christianity and Judaism, but Hellenism, Zoroastrianism and Buddhism also influenced the life and thought of the Muslims of the day in many respects.

Nevertheless the principle was steadfastly adhered to, that in Islām only the *sunna* of the Prophet and the oldest Muslim community could be a rule of conduct for believers. This of necessity soon led to deliberate forgery of Tradition. The transmitters brought the words and actions of the Prophet into agreement with the views of the later period. Thus numerous interested traditions were put into circulation, in which Muḥammad was made to say or do something, which was at that time considered the proper view. Christian texts, sayings from the Apostles and the Apocrypha, Jewish views, doctrines of Greek philosophers, etc. which had found favour in certain Muslim circles, appear in the *Ḥadīth* simply as sayings of Muḥammad (Goldziher, *Neutestamentliche Elemente in der Traditionslitteratur des Islām in Oriens Christianus*, 1902, p. 390 *et seq.*). No scruples were felt in making the Prophet expand in this form the legends or stories, only briefly outlined in the *Qurʾān*, or proclaim new doctrines and dogmas, etc. A very large portion of these sayings ascribed to the Prophet deals with the *Aḥkām* (legal provisions), religious obligations, *ḥalāl* and *ḥarām* (i. e. what is "allowed" and "forbidden"), with ritual purity, laws regarding food, criminal and civil law and also with courtesy and good manners; further they deal with dogma, retribution at the last judgment, Hell and Paradise, angels, creation, revelation, the earlier prophets, and in a word with everything that concerns the relations between God and man; many traditions also contain edifying sayings and moral teachings in the name of the Prophet.

In course of time the records of Muḥammad's words and deeds increased more and more in number and copiousness. In the early centuries after Muḥammad's death there reigned great diversity of opinion in the Muslim community on many questions of the most diverse nature. Each party therefore endeavoured to support its views as far as possible on sayings and decisions of the

Prophet. He who could base his view on these was certainly right and thus arose the numerous utterly contradictory traditions on the *sunna* of the Prophet. In the great partisan struggles also, both sides used to make an appeal to Muḥammad (Goldziher, *Muḥamm. Stud.* ii, 88 *et seq.*). Thus for example the Prophet was said to have prophesied the foundation of their dominion to the Abbāsids. In general not only the course of later political events and religious movements but also the new social conditions, that only first arose out of the great conquests (the increasing luxury etc.), were made to have been prophesied in apocalyptic-prophetic form to justify them in the eyes of the community. A special branch of these prophetic traditions is formed by the sayings ascribed to Muḥammad regarding the merits of various places and districts in the lands which were only at a later period to be conquered by the Muslims. (Goldziher, *op. cit.*, ii, 128 *et seq.*).

The majority of traditions then cannot be regarded as really reliable historical accounts of the *sunna* of the prophet. On the contrary, they express opinions which had come to be held in authoritative circles in the early centuries after Muḥammad's death and were only then ascribed to the Prophet. Scholarship is deeply indebted to I. Goldziher (see his *Muḥamm. Stud.*, Halle 1890 and other works) and C. Snouck Hurgronje (cf. among other works his treatise *Le Droit Musulman* in the *Revue de l'histoire des Religions*, xxxvii, 6 *et seq.*) for having first clearly demonstrated the true character and historical importance of the *Ḥadīth* in this respect.

Although the invention and wanton dissemination of false traditions was condemned by Muslims, alleviating elements were recognised in certain circumstances, particularly when it was a question of edifying sayings and moral teachings in the name of the Prophet. For details see Goldziher *op. cit.*, ii, 131 *et seq.*, 153 *et seq.*; do., in the *Zeitschr. der Deutsch. Morgenl. Gesellsch.*, lxi, 860.

The *Ḥadīth* is held in great reverence next to the *Qurʾān* throughout the whole Muhammadan world and the scruples which were originally raised in certain circles against the dissemination and recording in writing of Muḥammad's words (cf. Goldziher, *Kämpfe um die Stellung des Ḥadīth im Islām* in the *Zeitschr. der Deutsch. Morgenl. Gesellsch.*, lxi, 860 *et seq.*), were soon overcome. In some cases it is even believed that the actual "word of God" is to be found in the *Ḥadīth* as well as in the *Qurʾān*. Such traditions, usually beginning with the words "God said" are designated *ḥadīth qudsī* (or also *ilāhī*, i. e. "holy" or "divine" *ḥadīth*) by Muslim scholars in opposition to the ordinary *ḥadīth nabawī* (*ḥadīth* of the Prophet). A list of such holy traditions is given in the Leiden MS. n^o. 1526 (*Catal. Cod. Or.*, iv, 98).

II. Muslim criticism of Tradition. According to the Muslim view, a tradition can only be considered credible when its *isnād* forms an unbroken series of reliable authorities. The critical investigation of *isnād's* has caused the Muslim scholars to make thorough researches. They endeavoured not only to ascertain the names and circumstances of the authorities (*riḍāl*) in order to investigate when and where they lived, and which of them had been personally acquainted with the other, but also to test their reliability, truthfulness and accuracy in transmitting the texts, to

make certain which of them were "reliable" (*thika*). This criticism of the authorities was called *al-djarh wa 'l-ta'dil* (wounding and authentication). (Goldziher, *Muhamm. Stud.* ii. 143 *et seq.*). The so-called "knowledge of the men" (*ma'rifat al-riqāl*) was considered indispensable for every student of *Hadith*; all the commentaries on the collections of Tradition therefore contain more or less copious details concerning the authorities. Special works are also devoted to this subject, among them many of the so-called *Ṭabaḳāt* works (i. e. biographies arranged in "classes" of various scholars, transmitters of Tradition and other persons. Cf. O. Loth, *Ursprung und Bedeutung der Ṭabaḳāt in der Zeitschr. der Deutsch. Morgenl. Gesellsch.*, xxiii. 593—614), for example the famous "class book" of Ibn Sa'd (died 230 = 844) and the *Ṭabaḳāt al-Huffāz* of al-Dhahabī (died 748 = 1347). To this class also belong the works on those "weak" in transmitting, e. g. Nasā'ī's *Kitāb al-Du'afā* (Goldziher, ii. 141 *et seq.*) and the biographies of the *Ṣaḥābī's*, e. g. *al-Isāba fī tamyiz al-Ṣaḥāba* of Ibn Ḥajjar (died 852 = 1448) and *Usd al-Ghāba fī Ma'rifat al-Ṣaḥāba* of Ibn al-Athīr (died 630 = 1232).

Now opinions on the reliability of the authorities might differ very considerably. The same person, whose communications might be implicitly trusted in the view of one party, was sometimes considered by others exceedingly "weak" in transmission or even as a liar. Originally even the authority of many highly respected contemporaries of Muhammad was not generally recognised; for example the truthfulness of Abū Huraira was hotly disputed by very many. The verdict usually differed with the standpoint of the party, and this often gave rise to bitter quarrels. We must, however, remember in this connection that the substance of the transmitted statements was really always the main thing. If the truthfulness of the authorities was disputed, it was in reality almost always the bias of their substance that aroused opposition. The ultimate decision then rested not on the reputation of the authorities but rather on the substance of the accounts transmitted by them.

But at a later period, after the ritual, dogma and the most important political and social institutions had taken definite shape in the second and third centuries, there arose a certain *communis opinio* regarding the reliability of most transmitters of Tradition and the value of their statements. All the main principles of doctrine had already been established in the writings of Mālik b. Anas, al-Shāfi'ī and other scholars, regarded as authoritative in different circles, and mainly on the authority of traditional sayings of Muhammad. In the long run no one dared to doubt the truth of these traditions; nor was it any longer possible to regard men like Abū Huraira, who had put these accounts into circulation, as liars. Even traditions which contained the most obvious anachronisms were generally considered reliable. Only such traditions were rejected as could not be brought into agreement with what had been long regarded by the majority as well established. But on the whole the inclination was to give credence to such traditions also, at least when it was possible to explain them in a conciliatory spirit. The old quarrels had now in course of time lost all practical interest for the younger generations and it was found that the majority of the traditions con-

nected with them, although sharply opposed to one another, could very often be reconciled to one another by skilful interpretation of the contents. The rejection of a tradition thus came to be considered an extreme measure, only to be resorted to in desperation (cf. Snouck Hurgronje, *op. cit.*); the many contradictory traditions on the same subject, which have been adopted side by side as reliable in the great collections of Tradition thus often form priceless evidence to the historian of the internal development of Islam. The traditions were not, however, all considered of equal value by Muslim scholars, but divided into categories distinguished by definite technical terms according to the completeness of their *isnād's*, the reliability of their transmitters etc.

III. The classification of Tradition.
a. In the first place the three following categories are distinguished: 1. *ṣaḥīḥ* (sound); this name is given to the utterly faultless tradition in whose *isnād* there is no *'illa* (weakness) and whose tendency does not contradict any generally prevalent belief; 2. If a tradition is not absolutely faultless, e. g. because its *isnād* is not quite complete, or because there is no perfect agreement regarding the reliability of the authorities for it, it is called *ḥasan* (beautiful); 3. On the other hand every tradition is considered *ḍa'īf* (weak), against which serious doubts can be raised, e. g. by reason of its contents or because one or more of its transmitters is considered unreliable or not quite orthodox.

b. Further it may happen that the value of a statement is uncertain because some remarks by a transmitter have been interpolated among the words of the Prophet and it is impossible accurately to separate these two components of the text; such a tradition is called *mudraḡḡ*. — If a tradition is transmitted by only one informant, whose authority besides is considered weak, it is called *matrūk* ("abandoned", "no longer considered"). — If a tradition is considered absolutely false, it is called *maḍḡūf* ("invented").

c. All traditions do not deal with sayings or doings of the Prophet; we also find in the *Hadith* information regarding the *Ṣaḥābī's* and Successors. In this connection a distinction is made between: 1. *marfū'* a tradition which contains a statement about the Prophet; 2. *marḡūf*, a tradition that refers only to sayings or doings of the *Ṣaḥābī's*; 3. *maḡfū'*, a tradition which does not at most go farther back than the first generation after Muhammad and deals only with sayings or doings of the *Ṭabī'un*.

d. The following distinctions are made according to the completeness of the *isnād*. If a tradition can be traced through an unbroken chain of trustworthy authorities to a companion of the Prophet, it is usually called *musnad* ("supported"). If it also contains special observations regarding all the authorities (e. g. if it is expressly mentioned that all the authorities swore an oath as they handed on the tradition, or that they all gave one another the hand), the tradition is called *musalsal* (in the first case *musalsal al-half* in the second *musalsal al-yad*, etc.). Cf. W. Ahlwardt, *Katal. der Arab. HSS. der Kgl. Bibliothek zu Berlin*, ii. 267—273.

If the *isnād*, although complete, is comparatively very short because the last authority only received the statement from the original authority through

the intermediary of few persons, the tradition is called *‘ālī*. This is considered a great advantage, because the possibility that errors have crept into the tradition is very small in this case. On long-lived transmitters of tradition cf. Goldziher, *op. cit.*, ii. 170, 174.

If the chain of transmitters is unbroken and complete, it is called *muttaṣīl*, in the opposite case *munkaṭi‘* (in the general sense), but as a rule *munkaṭi‘* (in the particular sense) means a tradition in whose *isnād* the authority in the second generation (the *Tābi‘ī*) is wanting. — *Mursal* is the name given to a tradition handed down by a *Tābi‘ī* about the Prophet, when it is not known from what *Ṣaḥābi* he received his statement. The question whether such traditions are valid was answered in different ways; the older teachers such as Abū Ḥanīfa and Mālik b. Anas answered in the affirmative but the later ones in the negative (cf. among others, *Zeitschr. der Deutsch. Morgenl. Gesellsch.*, xxiii. 595 note 3). — If two or more transmitters are lacking anywhere in the *isnād* (or, according to some other scholars, if they fail consecutively), the tradition is called *mu‘ḍal*. — If the authorities in the *isnād* are only connected by the preposition *‘an* (e. g. A *‘an* B, i. e. A from B), it is possible that they were not personally acquainted with one another, but only heard the statement through the intermediary of other persons not mentioned in the *isnād*. In this case the tradition is called *mu‘an‘an* (for further information cf. Goldziher, *Muhamm. Stud.*, ii. 248). — *Mubham* is the name of a tradition in which one of the authorities is only indicated in the *isnād* as “a man”, without mention of his name.

c. The following categories are distinguished according to the *ṭuruk* (“ways” i. e. according to the different chains of transmitters): 1. *mutawātir* is a communication handed down on many sides, which was generally known from very early times and to which objections have never been raised; 2. *maṣḥūr* is a statement, which is handed down by at least three different reliable authorities, or, according to another view, a statement which, although widely disseminated later, was originally only transmitted by one person in the first generation; 3. *‘azīz* is the name of a statement which is transmitted by at least two persons and was not so generally disseminated as those traditions which are called *mutawātir* or *maṣḥūr*; 4. *āḥād* are traditions given by only one authority; 5. *gharīb* is in general a rare tradition; with reference to the *isnād*, *gharīb muṭlaq* means a tradition, which is transmitted in the second generation only by one *Tābi‘ī* (cf. also FARD, ii. 61^b and GHARīb, ii. 141^b); if a tradition is transmitted by only one definite person of later generations, it is called *gharīb* “in reference to that person” (*gharīb bi l-nisbatī ilā ṣaḥābiṣin mu‘ayyanīn*). A tradition which contains foreign or rare expressions in the text is also called *gharīb* (with reference to the contents).

These technical terms were not originally understood in the same sense by all Muslim scholars. For example it is expressly mentioned that the Imām al-Shāfi‘ī made no distinction between *maḥṭūf* and *munkaṭi‘*; in later works also there is no absolute agreement concerning all these definitions. For details see F. Risch, *Commentar des ‘Izz al-Dīn Abū ‘Abd Allāh über die Kunstdrucke der Traditionswissenschaft nebst Erläuterungen*, Leipzig dissertation 1895; cf. Djurdjāni, *Kitāb*

al-Taṣrīfāt (ed. G. Flügel) and: *A Dictionary of Technical Terms* (ed. A. Sprenger and others). The division of traditions into different categories is also discussed in the general introductory works on the principles of *‘Ilm al-Riwāya* (i. e. science of transmission). Such introductory works are amongst others the three following: 1. *‘Uṣūl al-Hadīth* of Ibn al-Ṣalāḥ (died 643 = 1245); cf. Goldziher, *op. cit.*, ii. 187 *et seq.*; Brockelmann, *Geschichte der Arab. Litt.*, i. 359; 2. *al-Taḥrīb wa l-Taysīr* of al-Nawawī (died 676 = 1277), with its commentary the *Taḥrīb al-Rāwī* of al-Suyūṭī (died 911 = 1505); 3. *Nukḥbat al-Fikr* of Ibn Ḥaǧǧar (died 852 = 1448) with a commentary by the author himself, published by N. Lees in the *Bibl. Indica*, N^o. 37 of the second series, Calcutta 1862.

IV. The Collections of Tradition. Numerous collections of traditions have been prepared by different scholars. Some of these works have obtained almost canonical standing among later Muslims. An official codification of Tradition, which would be exclusively valid, has however never been made.

At first traditions were not arranged according to their contents but only according to their transmitters (*‘ala l-riǧāl*). Such a collection was called *musnad* after the tradition with complete *isnād*’s incorporated in it. This name was thus transferred from the single tradition to the whole collection. The best known of these works is the *Musnad* of Aḥmad b. Ḥanbal (died 241 = 885). For further details on this collection see Goldziher, *Neue Materialien zur Litteratur des Überlieferungs-wesens bei den Muhammedanern in Zeitschr. der Deutsch. Morgenl. Gesellsch.*, L. 465–506.

Such *musnad*’s were also formed at a later period; some scholars, for example, arranged the traditions contained in the great collections for greater convenience in alphabetical order, others incorporated the traditions which were mentioned in the *Muwatta‘* of Mālik b. Anas or other similar works not planned as proper collections of Tradition in separate collections etc. (see Goldziher, *Muhamm. Stud.*, ii., 227).

But as a rule the later collections of tradition were almost all arranged according to the content of the traditions. Such a collection arranged “according to chapters” (*‘ala l-abwāb*) is called *muṣannaf* (i. e. arranged). Six of these *Muṣannaf* works were in course of time generally recognised by the orthodox Muslim world as authoritative; they all arose in the third century A. H.; they are the collections by 1. al-Bukhārī (died 256 = 870), 2. Muslim, (died 261 = 875), 3. Abū Dāwūd (died 275 = 888), 4. al-Tirmidhī (died 279 = 892), 5. al-Nasā‘ī (died 303 = 915) and 6. Ibn Māǧā (died 273 = 886). These works are usually called briefly the “six books” (*al-Kutub al-sitta*) or also “the six *Ṣaḥīḥ*’s” i. e. the “sound” (i. e. the correct, reliable collections). They were, so to speak, looked upon as sacred books of second rank next to the *Kur‘ān*, God’s own word. The collections by al-Bukhārī and Muslim were held in particularly high esteem. They are known as the “two *ṣaḥīḥ*’s” (*al-ṣaḥīḥān*) i. e. the two collections particularly recognised as authoritative. Only traditions which are recognised as absolutely *ṣaḥīḥ* are included in these works. In this respect, however, the *ṣhuruf* (i. e. the “stipulations”) of Bukhārī were not the same as those of Muslim (Goldziher, *op. cit.*, ii.,

247). Al-Bukhārī has besides often added fairly copious notes to the headings of his chapters, which are quite lacking in Muslim's *Ṣaḥīḥ*. Both trace the traditions where possible to different *ṭurūḥ* and both collections contain not only traditions relating to "canon law" and to the "permitted" and "forbidden", but also many historical, ethical and dogmatic traditions (for details, see Goldziher, *op. cit.*, ii., 234—248).

On the other hand the traditions included in the works of the four other compilers deal almost exclusively with the *sunna*'s, i.e. use and wont. Hence their collections are usually put together as "the four *Sunan* works". They further contain not only the traditions which are considered *ṣaḥīḥ*, but also the "beautiful" ones and in general all traditions on which the learned have relied in their deduction of the law even if doubts can be raised against their *isnād*. When the collectors think that one of the traditions given by them should be rejected they usually call the reader's attention to the fact. Cf. Goldziher, *op. cit.*, ii. 248 *et seq.*

The prestige enjoyed by these six books in Islām is readily explained. In the third century circumstances were peculiarly favourable for the work of the collector of traditions. A certain unanimity had been attained on all questions of law and doctrine and a definite opinion regarding the value of most traditions had been formed by the majority of Muslim scholars. It was thus now possible to proceed to collect all that was recognised as reliable. The merit of al-Bukhārī and the compilers of the other *Ṣaḥīḥ*'s therefore lay not so much in the fact that (as is often wrongly stated) they decided for the first time which of the numerous traditions in circulation were genuine and which false, — for the personal opinion of the compilers would have had scarcely any appreciable influence on the prevailing opinion — but rather in the fact that they brought together everything that was recognised as genuine in orthodox circles in their time. (Cf. Snouck Hurgronje, *op. cit.*).

Although other famous collections arose in the third century, e.g. the *Sunan* of 'Abd Allāh al-Dārimī (died 255 = 868), these works were never permanently able to attain such great prestige in the Muslim world as the six *Ṣaḥīḥ*'s. Even the general recognition of the latter works themselves was only attained very gradually; Ibn Mādjā's collection in particular was for long viewed with suspicion on account of the many "weak" traditions in it. Besides, in spite of the great authority of the "six books", it was not considered improper to criticise freely traditions, which, although included in the great collections, were not universally recognised as *ṣaḥīḥ*. 'Alī al-Dāraḳuṭnī (died 385 = 995) for example compiled a work in which he proved the weakness of 200 traditions given in al-Bukhārī and Muslim (cf. Goldziher, *op. cit.*, ii. 257).

Even at a later period new collections were made by many scholars. The work of these late collectors of tradition was limited chiefly, however, to the preparation of more or less comprehensive compilations in which they excerpted the contents of the "six books" (and sometimes at the same time of other famous collections like that of Ibn Hanbal) and arranged them in different ways. One of these is Baghawī's (died 510 = 1116) collec-

tion called *Maṣābiḥ al-Sunna* (i.e. the lamps of the *Sunna*), which, on account of its fullness and convenience, has always been popular among Muhammadans. It contains a selection of traditions which are taken from older collections with the *isnād*'s omitted. The recension of this collection by Walī al-Dīn al-Tibrizī is particularly well-known; it bears the title *Mishkāt al-Maṣābiḥ* (the name is taken from Qur'ān, xxiv. 35 and is usually interpreted the "niche of the lamps"). Among large collections of the later period we may mention al-Suyūṭī's (died 911 = 1505) two works entitled *Djamī' al-Djawāmi'* and *al-Djamī' al-ṣaḡḥir*. Suyūṭī's main object was to give a comprehensive compilation of extant collections (for details see W. Ahlwardt, *Katalog der Arab. HSS. der Kgl. Bibliothek zu Berlin*, ii. 155 *et seq.*). Other compilers confined themselves to a definite section of the traditions contained in the larger collections (e.g. to the "moral"), or to a definite number of important traditions. Thus arose, for example the numerous so-called "*Arba'in*" works (i.e. collections which contain 40 important traditions).

As the substance of the *Ḥadīth* was in many respects no longer intelligible to the later generations of believers, many scholars felt compelled to prepare commentaries on the collections of Tradition. Obsolete words and expressions required explanation; in particular many contradictions had to be explained, or rendered harmless by artificial "explanation". Most commentators further dealt with the prescriptions to be deduced from the traditions and the divergent opinions which had been championed by different scholars in this connexion. Among the best known copious commentaries we may mention those of Ibn Ḥadjar (died 852 = 1448) and al-Kaṣallānī (died 932 = 1517) on the *Ṣaḥīḥ* of al-Bukhārī and of al-Nawawī (died 676 = 1277) on the *Ṣaḥīḥ* of Muslim (cf. C. Brockelmann, *Gesch. der Arab. Litt.*, i. 156 *et seq.*).

The Shī'is judged *Ḥadīth* from their own standpoint and only considered such traditions reliable as were based on the authority of 'Alī and his adherents. They have therefore their own works on this subject and hold the following five works in particularly high esteem: 1. *al-Kaṣf* of Muḥammad b. Ya'qūb al-Kulīnī (died 328 = 939); 2. *Man lā yastahdīrūhu 'l-faḥīḥ* of Muḥammad b. 'Alī b. Bābūya al-Ḳummī (died 381 = 991); 3. *Tahdhīb al-Aḥkām* and 4. *al-Istīḥṣār fima 'khtalafa fīhi 'l-Akhbār* (extract from the preceding) of Muḥammad al-Ṭūsī (died 459 = 1067); and 5. *Nahj al-Balāgha* (alleged sayings of 'Alī) of 'Alī b. Ṭāhir al-Sharīf al-Murṭaḍā (died 436 = 1044) or of his brother Rāḍī al-Dīn al-Baghdādī; cf. C. Brockelmann, *Gesch. der arab. Litteratur*, i. 187, 404 *et seq.*; E. Sell, *The Faith of Islām*, London 1880, p. 69, note 2; Goldziher, *op. cit.*, ii. 148, note 4; do., *Beiträge zur Literaturgesch. der Shī'a in Sitz.-Ber. Wiener Akad., Phil.-Hist. Cl.*, lxxviii. (1874), p. 508.

V. The Transmission of Tradition. The general view of Muslims that a knowledge of sacred learning could only be obtained through oral instruction from a teacher, who had himself acquired his knowledge in this way (cf. C. Snouck Hurgronje in the *Zeitschr. der Deutsch. Morgenl. Gesellsch.*, l. 145), was from ancient times held to be particularly applicable to Tradition. The traditions had to be "heard" and students even used to take long journeys to attend the lectures of such

persons as were famous as reliable authorities (*ḥamala*, i. e. properly "bearers") of Tradition. In many sayings of the Prophet, travel "*fi ṭalab al-ilm*" (i. e. to search for knowledge) is recommended as work pleasing to God. For further information regarding those *ṭalab* journeys and their degeneration (how, for example, vain scholars prided themselves on having travelled through far distant lands to "hear" a few almost unknown traditions) see Goldziher, *op. cit.*, ii. 175—193.

In transmission, the traditions were delivered orally by the teacher. It was also very usual for one of the students to read out a copy while the others listened and the teacher when necessary improved what was read and gave explanatory notes. In this case also it was the custom to say of traditions learned in this way: N. N. (the teacher) told me (*ḥaddathani* or *akhbarani* namely *ḵirʿatun ʿalaihi*, i. e. while the tradition was read in his presence). One who had heard traditions in this way under the direction of a teacher, could now in his turn again communicate them to others and often received from his teacher a so-called *iqḍāʿa* (i. e. sanction, permit, namely for further transmission of these traditions) for this purpose. The old method of transmitting traditions, however, was not always held in respect. The copying and collation of written texts often became the main object and oral transmission fell quite into disuse. The traditions were then simply copied and permission was obtained to transmit them with the usual formula *ḥaddathani* (i. e. "N. N. told me"), just as if the contents had been acquired by direct oral intercourse from the teacher. For details of the *iqḍāʿa* custom and its degeneration in Islām cf. Goldziher, *op. cit.*, ii. 188—193, A. Sprenger in the *Zeitschr. der Deutsch. Morgenl. Gesellsch.*, x. 9 *et seq.*; W. Ahlwardt, *Katal. der arab. HSS. der Kgl. Bibliothek zu Berlin*, i. 54—95.

In certain circles the copying of traditions (*kitābat al-ḥadīth*) was originally regarded as actually forbidden. Credence was only given to those traditions which had been preserved in the memories of reliable men and orally transmitted by them, but not to texts copied often without sufficient care or from unreliable records; cf. Ibn ʿAsākir's warning: "Strive eagerly to obtain traditions and get them from the men themselves, not from written records, lest they be affected by the disease of corruption of the text" (in Goldziher, *op. cit.*, ii. 200). Nevertheless, scholars, who utterly abstained from paper and books, are always quoted as the exceptions only, and the recording in writing of Tradition seems to have been the general custom even in the most ancient times. At the same time it could of course be acknowledged in this connexion that the writing only served to aid the memory and that the knowledge was really to be preserved "by heart" and not on the paper. For details on the writing down of *Ḥadīth* and the objections to it, see Goldziher, *op. cit.*, ii. 194—202; do. in the *Zeitschr. des Deutsch. Morgenl. Gesellsch.*, l. 475, 489; lxi. 862; A. Sprenger, *op. cit.*, x. 1 *et seq.*; do. in *Journ. of the Asiat. Society of Bengal*, xxv. 303—329.

HADĪTHA (A.) = Newtown, the name of several cities.

I. *Ḥadīthāt al-Mawṣil*, a town on the east bank of the Tigris, one farsakh below the mouth of the upper (Great) Zāb. Its ruins are to be recognised in the mound of Tell al-Shaʿr. Various accounts of its origin are given. According to Hishām b. al-Kalbī (in Ibn al-Fakīh, p. 129 and Balādhuri, ed. Būlāq, p. 340) Harthama b. ʿAfrāḡja, after making Mawṣil the capital came to *Ḥadīthā* in the reign of ʿOmar b. al-Khaṭṭāb where he found a village with two churches in which he settled Arabs. That this story is authentic (it is also given in Yāqūt, ii. 222) is confirmed by Ṭabarī (i. 2807), according to whom in 24 Walīd spent some time in *Ḥadīthā* on his way back from Armenia. Ḥamza says that *Ḥadīthā* is the translation of the Persian Nōkard. If it is not an invention of Shuʿūbiya bias, the best explanation of the name would be that of Balādhuri, viz., that inhabitants of the "Newtown" of Anbar Fairūzshābūr migrated thither and transferred the name to their new abode. When Ḥamza and others ascribe the "foundation" of the town to the last Umayyad Marwān II. b. Muḥammad or Bar Bahlūl to his father Muḥammad b. Marwān I, these rulers may have built there but nevertheless the explanations of the name "Newtown" as "newer" than Mawṣil are inventions (cf. Yāqūt, ii. 22, Hoffmann, *Syr. Akten pers. Mārt.*, p. 178; E. Reitemeyer, *Städtegründungen der Araber*, p. 83). The town's period of greatest prosperity falls within the early ʿAbbāsīd period when the Caliph al-Ḥādī stayed there before his mortal illness and when the rebel general Mūsā b. Bogha made it his headquarters in the reign of al-Muḥtadī (Ṭabarī, iii. 578, 1327). The population remained Christian. Mār Abrahām was bishop of *Ḥadīthā* before he became Patriarch and Katholikos (837—850), (Budge, *Thomas of Margū*, ii. 103; Assemani, *Bibl. Or.*, iii. 1, p. 508 note 1).

The town lay on the terraced east bank of the Tigris in the form of a semicircle. Its mosque lay close to the river and the buildings, with the exception of the mosque, were of brick. The tomb of ʿAbd Allāh b. ʿOmar b. al-Khaṭṭāb was shown there but probably wrongly as he died in Medīna (Muḥaddasī, p. 139; Marāṣīd, p. 292). It is remarkable that *Ḥadīthā* is sometimes described as

the northern extremity of Sawād, which had a greater extent than the province of 'Irāk (Yāqūt, iii. 174; Dimishki, p. 185). Elsewhere it is mentioned as a station on the postroad from Baghdad to Mawṣil. The distances are as follows:

Baghdād—Baradān	4 farsakh
Baradān—'Ukbarā (now 'Ukbarā)	5 "
'Ukbarā—Bāhamshā (now Nahr Abū Hamsha).	3 "
Bāhamshā—Kādisiya (now Kādisiya).	7 "
Kādisiya—Surr man ra'a (now Sāmarra)	3 "
Surr man ra'a—Djabiltā (opposite Takūt, now al-Kanā'is)	7 "
Djabiltā—Sudākāniya	5 "
Sudākāniya—Bārimmā (near al-Fatḥa, really 6 farsakh)	5 "
Bārimmā—Sinn (at the mouth of the Lower Zāb)	5 "
Sinn—Ḥadītha (1 farsakh below the mouth of the Upper Zāb, really 16—18 farsakh)	12 "
Ḥadītha—Banū Tamyān (?)	7 "
Banū Tamyān (?)—Mawṣil	7 "

But when Hamd Allāh al-Mustawfi gives this itinerary in the xivth century he is only copying older figures, no longer true of his time. This is clear from the fact that the Tigris has only occupied its modern bed between Sāmarā and Baghdad since the beginning of the xiiith century. Ḥadītha like many other places was already in ruins by that time. The invasion of the Tatars had made an end of it.

II. Ḥadīthāt al-Furāt, also called Ḥadīthāt al-Nūra (Lime-Newton) on the Euphrates, south of 'Āna in 34° 8' N. Lat. and 42° 26' East Long. (Greenw.), a nāhiya of the qaḍā' of 'Āna. The town itself is built on an island, only the caravan stations being on the western river bank. It has very much declined since 1910, when the reefs and dams in the river were blown up in order to make way for packet-boats which have never come; it had formerly 400 houses, 2 ḍjāmi' and 3 masḍjid, 2 corn-mills, gardens with 1500 date palms (about 6000 in the whole nāhiya). It was irrigated by great waterwheels called *nā'ūra*, which were put up at the rapids of the river. There are limestone quarries on the western side of the Euphrates valley which are of importance for future engineering works in the 'Irāk. There are three saints' tombs of the xith—xiiith centuries there, from N. to S.; 1. Shaikh al-Ḥadid (a certain Muḥammad b. Mūsā al-Kāzim); 2. The Awlād Saiyid Aḥmad al-Rifā'i; 3. a certain Naḍīm al-Dīn, said to have been one of the occupants of Noah's ark. As to the history of the town, Yāqūt (ii. 223), following Aḥmad b. Yaḥyā b. Ḍjabir, observes that it was taken even before 'Omar's time in the governorship of 'Ammār b. Yāsir. It had a strong castle on the island which was of importance as late as the Caliph al-Kā'im's time (*Marāsid*, p. 292). According to Abū Sa'd al-Sam'ānī the inhabitants were Christians.

The place is now a usual stopping-place on the Euphrates route from Baghdad to Aleppo, which will probably soon fall into disuse after the completion of the Baghdad railway and therefore deserves to be recorded, more particularly because several of its stations, which are also

found in the ancient itineraries, are not marked in modern maps.

The following are the distances according to my itinerary:

Baghdād—Nukta	6	hours
Nukta—Fallūḍja	6	"
Fallūḍja—Kal'at Rumādī	10	"
Kal'at Rumādī—Hit	11	"
Hit—Baghdādī	8½	"
Baghdādī—Ḥadītha	8½	"
Ḥadītha—Fuḥaima	6½	"
Fuḥaima—'Āna	7	"
'Āna—Nuhiya	7½	"
Nuhiya—al-Kā'im	9	"
al-Kā'im—Albu Kamāl	5½	" (frontier of the wilāyet)
Albu Kamāl—Ṣālihiya	7	"
Ṣālihiya—Mayādīn	10½	"
Mayādīn—Dair al-Zawr	9½	"

(cf. the Damascus edition of the *Rahnāma-i Baghdad*, by Senior Lieut. Muṣṭafā Diyā, 1314 II.).

The old itineraries are in part badly preserved as regards names and their order, but they are mostly corrected in de Goeje's editions.

KHURDĀDBIH, p. 73 and QUDĀMA, p. 217:

Baghdād—Sailahīn	4 farsakh
Sailahīn—Anbār	8 "
Anbār—al-Rabb	7 "
al-Rabb—Hit	12 "
Hit—Nāwūsa	7 "
Nāwūsa—Ālūsa	7 "
Ālūsa—Fuḥaima	6 "
Fuḥaima—Nuhiya (sic!)	12 "

MUKADDASĪ:

Baghdād—Sailahīn	2 barid
Sailahīn—Anbār	1 marḥala
Anbār—al-Rabb	1 "
al-Rabb—Hit	2 "
Hit—Nā'ūsiya	1 "
Nā'ūsiya—'Āna	1 "
'Āna—Ālūsa	1 "
Ālūsa—Fuḥaima	1 "
Fuḥaima—Ḥadītha	1 "
Ḥadītha—Nuhiya (sic!)	1 "
and so on.	

While the two stations Ḥadītha and 'Āna are omitted in Ibn Khurdādbih and Qudāma, they are interchanged in Mukaddasī. Ālūsa and Nāwūsa still exist although not marked, or given under wrong names in modern maps.

III. Ḥadītha called *Djrs* or *Djrs*, a village in the Ghūṭa of Damascus (Yāqūt, ii. 225; *Marāsid*, p. 292). (E. HERZFELD.)

HADJAR in South Arabia means "town" and is therefore often found in place-names; for example there was a Hadjar in Naḍjran, one in Ḍjāzān and several in Mādḥin, all in South Arabia. The best known is Hadjar in southern Bahraīn, the ancient capital of the land. It lay in a fertile district rich in palms (*Humāsa*, p. 811, v. 1; whence the proverb, *Prov. Arab.*, ed. Freytag, iii. 539) and exported a celebrated kind of date-honey. The population was very mixed (cf. Nöldeke, *Ṭabari*, transl., p. 59 *et seq.*). Under Persian rule a Persian governor, to whom the Arab chief was subordinate, resided here or rather in the adjacent stronghold of Mushakkar; thus in the time of the Prophet we find the Persian Sebokht here, who submitted to Muḥammad. In the great rebellion

on the death of the Prophet a man named Gharrūr, a member of the royal family of Hira, raised the standard of revolt in Hadjar, but was overcome by al-'Alā'. During the Karāmatian troubles Abū Sa'īd conquered the towns of Bahrain (cf. the article AL-DJANNĀBĪ), among them finally Hadjar, shortly before his death in 913-914. Abū Sa'īd's son Abū Ṭāhir made al-Ahsā' [q. v., i. 207 *et seq.*] the capital of the land. It should be remembered that Hadjar (or with the article al-Hadjar) is very often used as the name of the land itself (instead of Bahrain).

Hadjar should not be confused with Hadjr, which appears as the name of several towns, including one in Vamāna inhabited by the descendants of 'Ubaid b. Varbū' (of the Banu Ḥanifa, q. v.), cf. c. g. Nābigha p. 9, Labid (ed. Huber) p. 30, 2.

AL-HADJAR AL-ASWAD. [See AL-KA'BA.]

HADJAR AL-NASR (the eagle's rock), a fortress in the Rif, in the land of the Ghomāra, built in 317 (929-930) by Ibrāhīm b. Muḥammad Kāsim b. Idrīs II. The sons of Kāsim, called Guennūn (Djannūn) or Hannūn (so al-Bakrī, ed. de Slane, p. 129) settled here. When Mūsā b. al-'Āfiya had driven the Idrīsids out of all their possessions in the Maghrib, he wished to besiege this fortress also to destroy the survivors of the Idrīsīd family who had taken refuge in it; but he was dissuaded from doing so by the remonstrances of the most prominent men in the Maghrib. After Mūsā b. al-'Āfiya's fall, one of Guennūn's sons founded a kind of kingdom with Hadjar al-Naṣr as capital under the suzerainty of the Umayyad Caliph of Cordoba. The Spanish sovereigns and the Fātimids disputed the suzerainty over it in turn, till the former finally succeeded in destroying all the petty kingdoms of the Idrīsids. Hadjar al-Naṣr was taken by Ghālīb, the Umayyad general, and the last king, al-Ifasan, taken prisoner to Spain. The decline of Hadjar al-Naṣr dates from this time (369 = 975-976).

The fortress lay three days' journey from Ceuta on the top of a steep cliff; it could only be reached by a very narrow way which only allowed access to one person at a time. The surrounding country was very fertile and covered with gardens (Ibn Ḥawkal, ed. de Goeje, p. 56; al-Idrīsī, *Description de l'Afrique et de l'Espagne*, ed. Dozy and de Goeje, p. 96 of the text).

Its situation is not exactly known. An attempt has been made (by Beaumier) to identify it with Alhucemas, but without any real evidence. According to the statements collected by Mouliéras (*Le Maroc inconnu*, ii. 390-391, note), the ruins of the fortress still survive under the name "Hadjarat en-Nasour" in the district of Djinān Medjber

(Djinān Madjbar) between al-Branes, cd-Dsoul (Tsoul) and Ṣanhādja on the summit of a very high red cliff.

(RENÉ BASSET.)

HADJARĒN (HADJARĒN), a town in Hadramūt on the djebel of the same name, S.W. of Meshhed 'Alī [q. v.] on the Wādī Daw'ān (Dō'an) situated in extremely picturesque country. It is surrounded by extensive palmgroves and reminds one of many mediaeval castles on the Rhine. As a centre of traffic between the coast and the interior of Ḥadramūt it is of importance. The houses of the town are built of bricks and are large but the streets are narrow and dirty. It belongs to the Ku'āitī of Shībām [q. v.], who are represented in it by a member of their family, who bears the title *naṣīb* and lives in a splendid palace on the summit of the hill. The town probably has about 1500 inhabitants. There are relics of the ancient Ḥimyaritic period around Hadjarēn, when the trade in frankincense still flourished in this district. Ruins of an ancient town, Raidūn, with inscriptions are still to be seen about the valley.

Hadjarēn is an old town, known even to Hamdānī; al-Hadjarain (al-Hadjarān, dual of *hadjar* "town", as he writes it), consisted in his time of two towns of Khawdūn and Dammūn lying on opposite sides of the wādī; Khawdūn was inhabited by the Ṣadaf, Dammūn by the Kinda. At the foot of the fortified hill, on which Hadjarēn lay, there were palmgroves and fields with *dhura* (a kind of maize) and *burr* (a kind of corn or wheat), which were watered by a *ghail* coming from the top of the hill.

HADJDJ (A.), the pilgrimage to Mecca, 'Arafāt and Minā, the last of the five "pillars" of Islām.

1. THE ISLĀMIC HADJDJ.

a. The journey to Mecca. — According to the law every adult Muslim, of either sex, has to perform the Hadjdj at least once in the course of his life, provided he is able to do so (cf. Sūra iii. 91). The fulfilment of the last proviso depends on various circumstances. Lunatics and slaves are exempted from the obligation; likewise women who have not a husband or a relative (*dhū mahram*) to accompany them. The want of the necessary means of subsistence, the inability to provide beasts of burden, the precariousness of the journey are circumstances which relieve one of the obligation to perform the pilgrimage. The Shāfi' school further allows its followers to postpone the pilgrimage beyond the grave provided

a deputy is hired out of the estate of the deceased. This explains how the majority of Muslims die without ever having seen Mecca. Even among Caliphs and Sultans many have remained at home all their lives while others have made the pilgrimage several times; even some, who were not Muslims, have taken part in the Hadjdj; their works are invaluable sources for our knowledge of this subject.

Since Muḥammad instituted an absolute lunar year, the Hadjdj runs in time through all seasons as it is fixed for certain days in the first half of the month *Dhu 'l-Hiǧǧja*. When it falls in summer the toils of the journey prove fatal to many a pilgrim. Muḥammad is therefore said to have said: "The pilgrimage is a sort of punishment" (*Sunan Ibn Māǧja*, Bāb al-*Khurūǧ* ila 'l-Hadjdj). Those pilgrims suffer most who have to come from their homes to Mecca by land either on foot or on horseback. The steamship traffic from Djidda to other Muslim lands which was instituted specially for the Hadjdj, as well as the Hiǧǧz railway has however considerably diminished their number. The pilgrimcaravans only survive out of religious conservatism. The following may be mentioned.

The Syrian caravan follows the ancient trade-route from Damascus (or Constantinople) through the trans-Jordan territory, the ancient Moabitis, via Maʿān, Madāʿin Šalīḥ and al-Medina. It is the largest of the caravans (in 1876, according to C. M. Doughty's estimate, it contained about 6000 persons) and is accompanied by a *maḥmal* [q. v.]. Blockhouses are built at the stations where food is kept ready and facilities for refreshment provided. According to Burckhardt (*Travels*, ii. 3), the journey from Damascus to al-Medina takes 30 days.

The Egyptian caravan is likewise accompanied by a *maḥmal*; in it is the new *kisra* [q. v.] for the Kaʿba. According to Lane (*Manners and Customs*, London 1899, p. 493), it usually leaves Cairo in the last week of Shawwāl and reaches Mecca in 37 days, following the route along the sea-coast. (A favourite route for pilgrims from Egypt and the Maghrib used to be from Cairo or somewhere else in the north to one of the harbours on the Red Sea opposite Djidda; cf. Ibn Džubair's journey and al-Batanūni, *al-Kiḥla al-Hiǧǧsiya*², p. 27 *et seq.*).

A caravan from the Irāk makes its way across Arabia. Burckhardt, in Appendices I and II to his *Travels*, gives the stations of the caravan from Yemen as well as further geographical notes. Pilgrims from the Maghrib, Persia and Yemen, however, come for the most part by ship, not to speak of those from more distant lands.

The caravans are composed of the most diverse elements; princes, beggars, traders with their wares, Bedouins, travellers on foot and on horseback find their place there, which is usually settled by their place of origin, so that people from the same town travel together. Most pilgrims make an arrangement with a *muḥawwim* who for a definite sum provides for all the necessities of the journey.

The danger of attack by Bedouins has always been an unpleasant feature of the pilgrimage; if the pilgrims submit to being plundered, they usually escape with their lives, but otherwise not always. The Meccan authorities have finally been forced to conclude agreements with the chiefs through whose lands the caravans come, whereby the pilgrims are allowed to travel freely. The

authorities have to pay a fixed sum (called *surra* q. v.) for this privilege. In the history of the Hadjdj there have been many other powers obstructing the pilgrims, e. g. the Karmatians, the Egyptian authorities, pirates and the Wahhābīs.

The arrival of the Syrian and Egyptian caravans with the two *maḥmal*'s is always a great event for the Meccans. Both are received with ceremony; they encamp on certain spots outside the town proper (see the plan of the town in C. Snouck Hurgronje, *Mecca*, I); as a rule they arrive only a few days before the Hadjdj.

The numbers of the pilgrims who arrive via Djidda are fairly well known, since the international sanitary commission has instituted a quarantine station there. As each pilgrim has to pay a certain sum for what professes to be hygienic control, but really is quite superficial, the number of persons arriving is accurately noted. We find that in recent years the number has varied from 36,000 to 108,000 and averages 70,000. If Burckhardt could now accompany the pilgrimage again, he would not be able to repeat his observations (*Travels*, ii. 1) made in 1814 on the number of the pilgrims and the pious zeal of the Muslims.

Most pilgrims arrive shortly before the time of the Hadjdj; a considerable number, however, even spend the month of Ramaḍān of the year in Mecca, which is considered particularly meritorious. Many ḥadǧǧīs also remain in Mecca after they have completed the Hadjdj, either to pursue sacred studies or to die in the holy city. The number of pilgrims is usually particularly large when it is expected that the principal day of the Hadjdj, the 9th *Dhu 'l-Hiǧǧja*, will fall on a Friday (*ḥadǧǧi akbar*). It may further be noted that the Shiʿis also take part in the pilgrimage; but travellers report that the adherents of ʿAlī do not always have a peaceful time in the holy city. Interesting data on the Hadjdj of the Shiʿis are given in Kazem Zadeh, *Relation d'un pèlerinage à la Mecque* in the *Revue du Monde musulman*, xix. 1912, p. 144 *et seq.* (has also appeared separately).

b. Arrival in Mecca. The holy ceremonies are performed in a state correspondingly holy, the law therefore recommends the pilgrim as soon as he sets out from home to assume the *iḥrām* [q. v.]. But as in most cases this is not convenient, they generally enter the holy condition when they approach the holy territory. One should enter Mecca as a *muḥrim* and then perform the *ʿumra* [q. v.]. Almost every pilgrim does this as well as the other sacred duties, accompanied by a guide (*ḥaikh*, *dalil*, *muṭawwif*), who on each occasion pronounces the prescribed formulæ, which are then repeated by his protégés. These guides further do all sorts of business for the pilgrims who in their ignorance of the language, of local customs etc., would be for the most part quite helpless without them.

When the sevenfold circumambulation (*tawāf*, q. v.) of the Kaʿba and the sevenfold running (*saʿy*, q. v.) between Šafā and Marwa has been performed the pilgrim may cut his hair and come out of the *iḥrām*, till the Hadjdj proper begins. But if the *iḥrām* has been assumed for *ʿumra* and *ḥadǧǧi (ḥirān)*, this is not allowed [on these and related questions cf. the article *IḤRĀM*].

c. The Ceremonies of the Hadjdj. On the 7th *Dhu 'l-Hiǧǧja* there is usually preaching in

the mosque of the Ka'ba, by which the pilgrims are prepared for the holy ceremonies. In the evening of the same day or on the morning of the next the pilgrims leave Mecca. The 8th is called *yawm al-tarwiya* ("day of moistening"), because (according to an improbable explanation) on this day the pilgrims provide themselves with water for the following days. The two *maḥmal*'s unite outside the town and lead the way; then follows the variegated seething mass of representatives of different races, on foot and in litters, on asses and horses, perpetually pushing and struggling. The plain of 'Arafāt, where a halt is to be made (*wuḥūf*), is reached via Minā (now usually pronounced Munā) and Muzdalifa (also called Djamā' and al-Maḥṣār al-Harām). Here the representative of the caliph used to plant a standard, whose place is now taken by the *maḥmal* [see AMIR AL-HADJDI, i. 330].

The description of the thickly covered plain in modern travellers agrees in its main features with those of the old Arab annual markets in the classical authors. Tents and booths (see C. Snouck Hurgronje, *Bilder aus Mekka*, No. 13-16, cf. also 10-12) are everywhere, in the latter the numerous traders expose their wares as in the bazaar; jugglers and fakirs entertain the crowd with their skill. Many pilgrims ascend the sacred mountain (*Ṭaḥal al-Rahma*, see the illustration opposite and the article 'ARAFAT), and repeat the prescribed formulae after their shaiḫ at the proper places; loud cries of *labbaika* [q. v.] are heard everywhere. Thus the time is passed till the evening, at which brilliant illuminations take place. Pious pilgrims spend the night in the repetition of prayers, others amuse themselves in worldly fashion.

The *wuḥūf* proper takes place on the 9th and lasts from the time when the sun has crossed the meridian to its setting. Almost the whole period is filled by two *ḥuḍū'a*'s, celebrated as a rule by the *kaḍi* of the holy city. The latter rides up to the platform on the holy hill, from which he reads pious commonplaces out of a book, which are not audible to the greater part of those present, or, if heard, could not be understood by them. But this does not prevent them being much moved and continually calling *labbaika* loudly, waving the holy garments in the air and weeping and sobbing. But as soon as the sun disappears behind the western hills, the *ifāda* (or *duf'*, *naḥr*), i. e. the running to Muzdalifa begins. Amid the greatest confusion as the horses are spurred on by the rushing crowd, amid continual shooting and din, accompanied by military music, every one rushes to Muzdalifa. The *alamain*, which mark the boundary of the *ḥaram* [q. v.] are passed; the evening darkness soon falls and torches are kindled; fireworks are discharged and the soldiers keep firing off their guns. In this fashion, rarely without accidents, Muzdalifa is reached, where the Maghrib and 'Ishā' salāts are celebrated together and the night is spent. The mosque here is illuminated. On the morning of the 10th (*yawm al-naḥr*) *wuḥūf* is again held at the mosque before sunrise and the *kaḍi* of Mecca again preaches a *khutba*. After the completion of the morning service the crowd goes to Minā.

Here quite different duties have to be performed. Each pilgrim has on this day to throw seven small stones at one of the three so-called *djammā*'s here [q. v.], the *Djamrat al-ʿAḳaba*. For

this purpose he has previously gathered the stones in Muzdalifa. Amid a tremendous crush a rush is made for this *Djamra*, which stands at the west end of the valley of Minā. A picture of it is given in Kazem Zadeh, *op. cit.*, opposite p. 222. Only the stoning of this *Djamra* is prescribed for this day in the law and the turn of the other *djamra*'s does not come till the following days. The accounts in 'Alī Bey and Burton agree very well with this prescription. It should, however, be noted that Burekhardt (*Travels*, ii. 578) and Keane (*Six Months in Meccah*, p. 161) expressly state that the pilgrims on the 10th Dhu 'l-Hidjja throw seven stones, which they have brought from Muzdalifa, first at the eastern *Djamra* (*Djamrat al-ūlā*, *al-ṣuḡhrā*), then at the middle one (*al-wusṭā*; see the picture) and finally at the western (*al-suḥfā*, *al-aḳṣā*, *al-ʿAḳaba*); perhaps however this is an error of the two last-named travellers.

According to the Muslim explanation, this stoning is really a stoning of Satan, who is said to have appeared here to the patriarch Ibrāhīm and to have been driven away by him in this fashion. After the stoning the crying of *labbaika* ceases and the *hadjdi* proper is at an end; various ceremonies, however, have still to follow, first that of the sacrifice, which has given this day its name. Thousands of sacrificial victims, chiefly sheep and goats, are kept ready in Minā by the Beduins and merchants and sold at high prices. Only people of high rank slaughter camels. The pilgrim, who does not care to kill the animal himself, may get a butcher to do it for him. Although there is no place specially prescribed by the law in Minā for the sacrifice, a rock at the west end of the valley near the Aḳaba is preferably used for this purpose (Burekhardt, *Travels*, ii. 59; Burton, *A Pilgrimage*, ii. 240). It is considered meritorious to give the flesh of the animals sacrificed to the poor as *ṣadaqa*; what they do not use is left lying. The sacrifice, which is celebrated on this day throughout the whole Muslim world, is *sunna* (see the article AL-ʿID AL-KABİR). Its omission may be made good by fasting.

It is usual to have the head shaved after the sacrifice; for this purpose there are quite a number of barbers' booths in Minā. Both the barber and the pilgrim observe certain rules during the process, such as turning towards the *qibla* etc. Thereafter the *iḥrām* may be discarded and a return made to a secular condition (*ihlāl*); but the pilgrim is not yet allowed to transact all the business of everyday life. The series above described, stone-throwing, sacrifice, shaving, is described in the law as *sunna* (*Minhādj*, i. 331); but it should be noted that there is no time legally prescribed for the sacrifice and the two other ceremonies are only limited as to time in so far that they must be performed on the 10th day.

It is usual to return to Mecca on the same day to perform a *ṭawāf* there, on which occasion the ka'ba is seen for the first time with its new covering. Ordinary garments are donned if this has not been done in Minā already; the pilgrim bathes and washes, which is usually very desirable after being the previous "holy state". It is usual also to drink from the holy Zemzem water or to have oneself sprinkled with it; but this may as well be done on any other day.

The following days 11-13th Dhu 'l-Hidjja are called *aiyām al-taḥrīq* (on the explanation

of this name see below) called by Muḥammad "day of eating, drinking and sensual pleasure", are spent in Minā; the three Djamra's have each to have seven stones thrown at them each day, after midday. It is also the custom to sacrifice at a granite block on the slope of mount Thabir (cf. Burckhardt, *Travels*, ii. 65; al-Batanūnī, *al-Rihla*, p. 696). Abraham is said to have prepared his son for the sacrifice here. The law itself (cf. Sūra ii. 199) permits departure from Minā even on the 12th Dhu 'l-Hidjdja. It seems from the works of the travellers that this permission is usually taken and the pilgrims return to Mecca on this day. It is the custom to throw stones at the alleged grave of Abū Lahab in the vicinity of the town. Finally the 'umrat al-wadā' (farewell 'umra) has to be performed. For this purpose the pilgrim goes to Tan'im, again to assume the iḥrām. Modern travellers thus often call Tan'im also "al-'Umra". With the performance of ṭawāf and sa'y the Ḥadjdj is at an end. Some days later the caravans leave Mecca and go to Medina to honour the tomb of the prophet with a visit.

From what has been said above it is clear that the law divides the ceremonies of the Ḥadjdj into various categories; but it should be noted that the various schools differ from one another in almost all details. A good survey is given in the table on p. 178 of al-Batanūnī's work.

II. THE ORIGIN OF THE ISLĀMIC ḤADJDJ.

Muḥammad's attitude to the Ḥadjdj was not always the same; in his youth he must have often taken part in the ceremonies. After his "call" he paid little attention at first to the festival: in the oldest sūras it is not mentioned and it does not appear from other sources that he had adopted any definite attitude to this originally heathen custom. If many obviously polytheistic practices had been usual at it, he would hardly have been so silent about it and Tradition would probably have preserved expressions of opinion from which we could ascertain more or less clearly the ancient practices.

Muḥammad's interest in the Ḥadjdj was first aroused in al-Medina. Several causes contributed to this, as Snouck Iurrgionje has shown in his *Mekkaansche Feest*. The brilliant success of the battle of Badr had aroused in him thoughts of a conquest of Mecca. The preparations for such a step would naturally be more successful if the secular as well as the religious interests of his companions were aroused. Muḥammad had been deceived in his expectations regarding the Jewish community in Medina and the disagreements with the Jews had made a religious breach with them inevitable. To this period belongs the origin of the doctrine of the religion of Abraham, the alleged original type of Judaism and Islam. The Ka'ba now gradually advances into the centre of religious worship; the father of monotheism built it with his son Ismā'il and it was to be a "place of assembly for mankind". The ceremonies performed there are traced to the divine command (Sūra ii. 119 *et seq.*). In this period also the Ka'ba was made a kībla (cf. Sūra ii. 136—145) and the Ḥadjdj is called a duty of man to Allāh (iii. 91). This is the position of affairs in the year 2 of the Hidjra. It was only after the unsuccessful siege of al-Medina by the Meccans in the year 5 that Muḥammad was able to attempt to carry out his plans. The first effort was made in the ex-

pedition to Hudaibiya, which, although it did not bring him to Mecca, by the treaty with the Quraysh brought an 'umra into prospect for next year. In the year 7 Muḥammad instituted the ceremonies at the Ka'ba; but it was only after the conquest of Mecca in 8 that the opportunity was afforded of publicly celebrating the festival. But he did not take advantage of this occasion himself, for in the year 9 he sent Abū Bakr in his stead as leader of the pilgrim caravan to Mecca. While the latter was on the way, he was overtaken by 'Alī b. Abī Tālib, who had been commissioned to read out to the pilgrims the *Barā'a* (Sūra ix. 1 *et seq.*) which had been revealed in the meanwhile; in these verses the performance of the pilgrimage was forbidden to unbelievers except those with whom the Prophet had made special treaties.

In the year 10 Muḥammad himself led the Ḥadjdj. Tradition has much to tell on the subject of this so-called farewell-pilgrimage (*Ḥadjdj al-Wadā'*). These accounts of the ceremonies performed by Muḥammad agree essentially with the later practice. The arrangements, which he made on this occasion, are of importance, however, for the history of the Ḥadjdj, notably the abolition of the "intercalation" (*naṣī'*) and the introduction of the pure lunar year which is mentioned in the Korān with the words: "Verily the number of months with God is twelve months in God's book, on the day when he created the heavens and the earth; of these four are sacred; that is the true religion. In these shall ye do no injustice to one another. But fight the unbelievers, as they fight you, one and all, and know that God is with the righteous. The intercalation is but an increase of the unbelief, in which the unbelievers err, for they make it (i.e. the time in which it falls or should fall) lawful one year and unlawful the next" (Sūra ix. 36 *et seq.*). On other ordinances of Muḥammad on this occasion see below.

III. THE PRE-ISLĀMIC ḤADJDJ.

The investigation of the original meaning of the root H-DJ goes no further than hypotheses, some however probable. The Arabic lexicographers give the meaning "to betake oneself to"; this would agree with our "pilgrimage". But this meaning is as clearly denominative as that of the Hebrew verb. Probably the root H-DJ, which in North as well as South Semitic languages means "to go around, to go in a circle", is connected with it. With this we are not much farther forward however; for we do not even know whether religious circumambulations formed part of the original ḥadjdj. We do know that in the pre-Muslim period two annual markets were held in the month of Dhu 'l-Kāda, in 'Ukāz and Madjanna. These were followed in the early days of Dhu 'l-Hidjdja by that of Dhu 'l-Madżāz and thence the people went direct to 'Arafāt. The Muslim practice of going out from Mecca to 'Arafāt is therefore probably an innovation; and Islām knows nothing of religious circumambulations in 'Arafāt and we as little.

This Ḥadjdj in 'Arafāt was not a local peculiarity; pilgrimage to a sanctuary is an old Semitic custom, which is prescribed even in the older parts of the Pentateuch as an indispensable duty. "Three times a year shall you celebrate for me a

ḥag" is written in Exodus xxiii. 14, and "three times a year all thy males shall appear before the Lord Jahwe" (ib., 17 and xxxiv. 22). But in Arabia also there were probably several places of pilgrimage where festivals like that of the Ḥadjdj of 'Arafāt were celebrated. The month of Aggathal-baeith mentioned by Epiphanius seems to presuppose a sanctuary in the north.

The Ḥadjdj of 'Arafāt took place on the 9th Dhu 'l-Ḥidjdja; the most diverse Arab tribes took part in it, but this was only possible when peace reigned in the land. The consecutive months Dhu 'l-Ḥa'da, Dhu 'l-Ḥidjdja and Muḥarram thus formed a sacred period during which tribal feuds were at rest; weapons were laid aside in the holy territory.

It may be regarded as certain that in Muḥammad's time the sacred festival fell in the spring. Wellhausen has, however, made it appear probable that the original time of the Ḥadjdj was the autumn. If, as is probable, the above mentioned intercalary month had for its object to maintain this time of the year, the intercalation did not effect its purpose; from what cause we do not know. If the Ḥadjdj originally fell in the autumn, it is natural, when inquiring into its original significance to compare it with the North Semitic autumnal festival, the "feast of booths" (or day of atonement), a proceeding which finds further support in the fact that the feast of booths in the Old Testament is often called briefly the *ḥag* (e.g. Judges, xxi. 19; 1 Kings, viii. 2, 65). We will actually find several features in agreement.

Great fairs were from early times associated with the Ḥadjdj which was celebrated on the conclusion of the date-harvest. These fairs were probably the main thing to Muḥammad's contemporaries, as they still are to many Muslims. For the significance of the religious ceremonies had even then lost its meaning for the people. The following may be stated. A main part of the ceremony was the *wuḳūf* "the halt" in the plain of 'Arafāt; in Islām the ḥadjdj without *wuḳūf* is invalid. This can only be explained as the survival of a pre-Muslim notion. Houtsma has compared the *wuḳūf* with the stay of the Israelites on Mount Sinai. The latter had to prepare themselves for this by refraining from sexual intercourse (Ex. xix. 15) and the washing of their garments (Exod. xix. 10, 14). Thus they waited upon their God (יְהוָה, 11, 15). In the same way the Muslims refrain from sexual intercourse, wear holy clothing and stand before the deity (قف = كن = stand) at the foot of a holy mountain.

On Sinai, the deity appeared as a thunder- and lightning-god. We know nothing of the god of 'Arafāt; but he probably existed. Muḥammad is related to have said at the farewell pilgrimage: "The whole of 'Arafāt is a place for standing (*maḥḥif*), the whole of Muzdalifa is a place of standing, the whole of Minā a place of sacrifice". Snouck Hurgronje has explained these words to mean that the particular places there, where heathen ceremonies were performed, were to lose their importance through these words. A little is known of these heathen places in Muzdalifa and Minā (see below).

It is uncertain whether the day of 'Arafāt was a fast-day or not. In Tradition it is several times expressly stated that Muḥammad's companions did not know what was his view on this question.

He was therefore invited to drink and he drank. The ascetic character of the Ḥadjdj days is clear from the *ihṛām* prohibitions. That these were once extended to include food and drink is clear from Muḥammad's explanation. "The Tashriḳ days (11th—13th Dhu 'l-Ḥidjdja) are days of eating, drinking and sensual pleasure". In early Islām ascetically disposed persons therefore chose the Ḥadjdj as the special time for their self-denials (cf. Goldziher in the *Revue de l'Histoire des Religions*, xxxvii. 318, 320 *et seq.*).

The *wuḳūf* lasts in Islām from the moment after midday till sunset. Tradition records that Muḥammad ordered that 'Arafāt should not be left till after sunset, while it had previously been usual to begin the *ifāda* even before sunset. But the Prophet is said not only to have shifted the time, but even to have suppressed the whole rite by forbidding the running to Muzdalifa and to have ordered that it should be slowly approached. But how tenacious the old custom is, is clear from the above description of the *ifāda*. Snouck Hurgronje thinks he sees a solar rite in the latter, a view which has been more definitely formulated by Houtsma in connection with the character of the Ḥadjdj (see below), viz. that it was originally considered a persecution of the dying sun.

The god of Muzdalifa was Ẓuḥal, the thunder-god. A fire was kindled on the sacred hill also called Ẓuḥal. Here a halt was made and this *wuḳūf* has a still greater similarity to that on Sinai, as in both cases the thunder-god is revealed in fire. It may further be presumed that the traditional custom of making as much noise as possible and of shooting was originally a sympathetic charm to call forth the thunder.

As soon as the sun was visible, the *ifāda* to Minā used to begin in pre-Islāmic times. Muḥammad therefore ordained that this should begin before sunrise; here again we have the attempt to destroy a solar rite. In ancient times they are said to have sung during the *ifāda*, *ashriḳ ṭhabir kaimā nuḡhīr*. The explanation of these words is uncertain; it is sometimes translated: "Enter into the light of morning, Ṭhabir, so that we may hasten".

When they arrived in Minā, it seems that the first thing they did was to sacrifice; the 10th Dhu 'l-Ḥidjdja is still called *yawm al-aḏāḥi*, "day or the morning sacrifices". In ancient times the camels to be sacrificed were distinguished by special marks (*taḳlīd*) even on the journey to the ḥaram; for example two sandals were hung around their necks. Mention is also made of the *ishḥār*, the custom of making an incision in the side of the hump and letting blood flow from it; or wounds were made in the animal's skin. It is frequently mentioned also that a special covering was laid on the animals.

According to a statement in Ibn Hishām (ed. Wüstenfeld, p. 76 *et seq.*), the stone throwing only began after the sun had crossed the meridian. Houtsma has made it probable that the stoning was originally directed at the sun-demon; important support is found for this view in the fact that the Ḥadjdj originally coincided with the autumnal equinox; similar customs are found all over the world at the beginning of the four seasons. With the expulsion of the sun-demon, whose harsh rule comes to an end with summer, worship of the thunder-god who brings fertility and his in-

vocation may easily be connected, as we have seen above at the festival in Muzdalifa. The name *tarwiya* "moistening", also may be explained in this connection as a sympathetic rain-charm, traces of which survive in the libation of Zemzem water. These are again parallels to the feast of booths (or day of atonement): the goat, which was thrown from a cliff for 'Azazel, is not difficult to identify as the type of the sun-demon; and the libation of water from the holy well of Siloam was also a rain-charm, for the connection between the feast of booths and rain is expressly emphasised (Zach. xiv. 17). Further we may call attention to the illumination of the temple on the feast of booths, which has its counterpart in the illumination of the mosques in 'Arafāt and Muzdalifa, as well as the important part which music plays at both feasts.

Quite other explanations of the stone throwing are given by van Vloten (*Festbundel . . . aan Prof. M. J. de Goeje aangeboden*, 1891, p. 33 *et seq.*) and Chauvin (*Annales de l'Acad. Royale d'Arch. de Belgique*, 5th Ser., Vol. iv. p. 272 *et seq.*). The former connects the stoning of Satan and the Korānic expression *al-Shaitān al-radjīm* with a snake, which was indigenous to the 'Akaba. The latter finds in it an example of scopelism: the object of covering the Hādjī ground with stones thrown on it was to prevent the cultivation of it by the Meccans. Both these theories have been satisfactorily refuted by Houtsma. Cf. also Douffé, *Magie et Religion*, p. 430 *et seq.* — On the significance of the shaving in connection with the history of religions, cf. the article *IHRĀM*.

On the *Tashrīk* days some of the pilgrims dry the flesh of the animals sacrificed in the sun to take it with them on the return journey. This custom agrees with the meaning of the word *tashrīk*, given by the Arab lexicographers, i. e. "to dry strips of meat in the sun"; but it may be doubted whether this is the original meaning of the word. A satisfactory explanation has not yet been given. Cf. however Th. W. Juynboll, *Über die Bedeutung des Wortes Tashrīk* (Zeitsch. f. Assyr., xxvii. 1 *et seq.*). It must also be noted that Dozy in his book *De Israëlieten te Mekka*, traces the words *tashrīk* and *tarwiya* as well as the whole Hādjī to a Jewish origin; but his thesis may be considered definitely refuted by Snouck Hurgronje's *Het Mekkaansche Feest*.

HĀDJĪJ, HĀDJĪJĪ, one who has performed the pilgrimage to Mecca. [See AL-HĀDJĪJ.]

AL-HĀDJĪJ ḤAMMŪDA (B. ʿABD AL-ʿAZĪZ), an Arab historian of Tunis, accompanied 'Alī b. al-Ḥusain into exile in Algiers, during the reign of 'Alī b. Muḥammad (1740) and became his first secretary when this prince succeeded to power (1782—1799). He retained this office also under 'Alī Bey's son, Ḥammūda Bey (1782—1814) who had been his pupil. He composed a history entitled *Kitāb al-Bāḥiyya*, in which he gives a brief survey of the history of the Ḥafṣids and of the Turkish governors of Tunis and many details of the reigns of 'Alī Bey and Ḥusain b. 'Alī. The text which is still unpublished exists in numerous copies in the Great Mosque of Tunis. A section dealing with the wars of Khair al-Dīn and of 'Arūdj was published by Houdas in his *Chrestomathie Maghrébīne* (Paris 1891), p. 14—96; another section dealing with the French expedition against Tunis in 1770 was translated by Rousseau (Algiers 1849) and a third dealing with Murād Bey's campaign against Constantine by Cherbonneau (*Journ. As.*, July 1851).

AL-HĀDJĪJ ʿOMAR, a religious fanatic and conqueror in the Sūdān, founder of the Tuculor kingdom (1797—1864). Born at Aloar in Futā in Senegal, 'Omar Saidū Tal began his theological studies under the direction of his father, a celebrated marabout, completed them in Wahata among the Moors of Tagant and made the pilgrimage to Mecca about 1820. During his stay in the holy city he attached himself to Shaikh Muḥammad al-Ghālī, a pupil of Tidjānī's and entered the Tidjānī order. On his return to Africa he spent some time in Bornū and Sokoto and posed as a reformer of Islām there, showing himself particularly hostile to the members of the Kādiriya order, censuring them severely for their laxness and tolerance. He was kindly received by the sultāns of both kingdoms and was presented by them with wives and slaves; on the other hand on continuing his journey to Segū he was kept prisoner for a long time by the ruler of Bambāra. He then went to Futā Djallon [q. v., ii. 120^b *et seq.*], where he won the sympathies of the Djallonke, who were striving to shake off the yoke of the Pūl (Fulbe) and the Sorya faction. The zāwiya founded by him in Diegunko was much visited and he himself was soon recognised throughout the country as its spiritual leader.

From 1846 to 1848 al-Ḥādjī 'Omar undertook a missionary journey in the lands bordering on Futā and won a great number of the tribes dwelling within the curve of the Niger and on its southern tributaries and even on the Senegal over to his teaching. Disturbed by his continually growing influence, the Alfaya-Almamy forbade him to enter the land of Futā whereupon al-Ḥādjī 'Omar settled in Dingiray. There he built a fortress, collected weapons and munitions and began to preach a holy war against the unbelievers. At this time he had at his disposal about 700 guns and a small body of men composed of his *ṭalibe* (Arabic *ṭalibā* "pupils") and *sofa* (stablemen); the latter were young slaves, converts to Islām, who began their military training by looking after the horses of the warriors. This small body was continually increased by new converts who were attracted by the hope of booty.

In less than fifteen years al-Ḥādjī 'Omar was lord of an extensive territory. In 1849 he conquered the districts of Bure, Bambūk and Belūdgū, then turned against the Massassi of Kaarta and invaded their land after annihilating their forces. Their ruler Kandia was forced to submit with the principal chiefs of his land after a vain resistance and in 1854 the capital Niore was occupied. The victor obliged the inhabitants of the land to adopt Islām, forbade them to keep more than four wives and divided the remainder among his soldiers. It was only after five years' hard fighting, however, that Kaarta was completely subdued. Risings broke out in many places, while the Pūl of Massina besieged Niore. Al-Ḥādjī 'Omar had further to defend himself from the attacks of the Moors and against Ahmadū, Sultān of Segū, and finally came into conflict with the French on the upper Senegal. The military station of Medine defended by Paul Holl withstood his attacks from the 20th April to the 18th July 1857, till his whole army was put to flight by Colonel Faidherbe.

When he had finally become undisputed lord of Kaarta, al-Ḥādjī turned against the Bambāra of Segū and the Pūl of Massina, whose rulers had formed an alliance against him. He occupied Sansanling, defeated the allied forces of his opponents at Tio (January 1861) and entered the city of Segū on the 10th March 1861 and fortified it. After another victory over Ahmadū, Sultān of Segū, and 'Alī, sultān of Massina, Ḥamdallāhi, the capital of Massina, fell into the hands of the Tukulors. Ahmadū was overtaken while fleeing across the Niger and slain, and Ahmadū Shaykhū, son of al-Ḥādjī 'Omar, appointed ruler of Segū.

Al-Ḥādjī 'Omar then undertook a campaign against Timbuktu, which he gave over to plunder. Soon afterward, however, a general rebellion broke out in Massina, instigated by several Pūl chiefs, who were supported by Ahmad Bekkai, chief of the Kūnta. A second attack by al-Ḥādjī 'Omar on Timbuktu failed and the army of his general Alfa 'Omar, which was to revenge al-Ḥādjī's defeat, was destroyed by the son of Ahmad Bekkai, whereupon the rebellion in Massina assumed still greater proportions. Besieged by the rebels in Ḥamdallāhi, al-Ḥādjī 'Omar succeeded in escaping after eight months' siege by setting the town on fire. Pursued by his enemies he fled into a cave where he committed suicide rather than fall into their hands alive. According to another story he was suffocated by them with smoke (Sept. 1864).

The kingdom founded by al-Ḥādjī 'Omar soon after his death broke up into the independent states of Segū, Kaarta and Massina. Ahmadū Shaykhū endeavoured in vain to regain his father's heritage but was only successful in winning back Niore in 1885 and Massina in 1891. In 1890 the French occupied Segū and in 1891 they took Kaarta and in 1893 Massina.

(G. YVER.)

ḤĀDJĪJĀDJ B. YŪSUF, an Omayyad statesman, was born at Tā'if about 41 = 661, the grandson of the Thakāfi Ṣahābī 'Urwa b. Mas'ūd. His father, Yūsuf b. al-Ḥakam had married the divorced wife of Mughtra b. Shu'ba. According to one tradition, which is corroborated by lampoons, he at first so far mistook his vocation as to begin life as a teacher. His early years, the history of his first appearances in public life, which are viciously travestied by hostile historians, are not much known. He left Arabia at an early period to throw in his lot with the Marwānids. When 'Abd al-Malik undertook his campaign against Muṣ'ab b. al-Zubair, the young Ḥādjījādj succeeded in attracting the attention of the Caliph and followed him into the 'Irāk. His sovereign sent him from Kūfa to the Ḥijāz to regain this land from the anti-caliph 'Abd Allāh b. al-Zubair. Ḥādjījādj at first took up his quarters in Tā'if. As soon as he had completed his preparations he advanced against Mecca and began to bombard the town from the heights of Abū Qubais; it soon fell into his hands. Ibn al-Zubair was shut up in the quarter of the Ka'ba and met his death there after a seven months' siege. His body was hung on the gallows (Djumādā 73 = October 692); thanks to Ḥādjījādj's vigorous measures, the *djama'a* or political unity was restored throughout the empire. As a reward he was first given the governorship of the lands conquered by him, then that of Medina, of the Yemen and of the Yamāma. One of his first cares was to rebuild the Ka'ba which had been destroyed during the siege and he was careful to give it the old dimensions which it had had before its restoration by Ibn al-Zubair.

Two years were sufficient for Ḥādjījādj to restore perfect peace in Western Arabia. After the death of his brother Bishr b. Marwān [q. v., i. 731] the Caliph 'Abd al-Malik sent him (Dec. 694) as governor to the 'Irāk, which had been disorganised by the continual rebellions of the Khāridjīs. The story of his entry into Kūfa and his proclamation of his policy in the mosque there has become famous in literature. The threat which he renewed in Ba-ra that he would cut off the heads of the mutineers resulted in the soldiers flocking in troops to the camp of his general Muhallab. The latter soon succeeded in inflicting a series of defeats on the Khāridjīs, in which the ringleaders perished. To dispose of the unruly and notorious Khāridjī Sha-

bib [q. v.] Ḥadjdīdādī had to call in the help of Syrian troops, as those of the 'Irāk refused to act. Shabīb thereupon seized upon the absence of Ḥadjdīdādī in Baṣra to advance against Kūfa. The viceroy only reached it a few hours before him and step by step he fought his way into the capital; after several days of fierce fighting Shabīb had to vacate the field and being pursued by the 'Irāk cavalry was drowned in crossing the Duḡjail. In the same year (77-78 = 696) Ḥadjdīdādī succeeded in putting down the rebellion of a provincial governor, Muṭarrif, son of Mughira b. Shu'ba.

He had just begun to recuperate a little after this heavy task when suddenly a rebellion broke out which was immeasurably more serious than all the earlier risings. It was fostered by the jealous aristocracy of the 'Irāk and was directed not only against the viceroy but against the Umayyad dynasty; it was decidedly a separatist movement against the preferential position of Syria in the Caliph's empire. After the overthrow and death of Shabīb, the Syrian troops had remained in the country and were overwhelmed with tokens of Ḥadjdīdādī's favour. The *Ḥurū'* ('*Qur'ān* reciters') made common cause with the political malcontents. A leader for the dissatisfied arose in the person of 'Abd al-Rahmān, a grandson of Ash'ath b. Kais, [q. v., i. 56]. Sent by Ḥadjdīdādī to Sidjistan at the head of 40,000 men, he rebelled against the viceroy, returned and soon had 100,000 men under him. With these he drove back the troops sent against him and captured the cities of Kūfa and Baṣra. Ḥadjdīdādī had once more to appeal to Syria. Besieged in a suburb of Baṣra, he held out for a month against the onslaughts of the rebels. In the early days of March 701 he succeeded in inflicting a sanguinary defeat upon them, which was crowned by his victories at Dair al-Djamādīm and Maskin [q. v.]. The 'Irāk was now utterly exhausted and lay at the feet of the powerful statesman; his tenacity had crushed the spirit of rebellion.

Thereupon (83-86) the tireless governor proceeded to found a new capital, Wāsiṭ [q. v.]. Situated almost halfway (whence its name!) between Kūfa and Baṣra it was so to speak a detached camp of the Syrian troops garrisoning the country. From the year 78 he united to his governorship of the 'Irāk that of Khorāsān and the whole Arab east, a territory which had been considerably increased by the conquests of the famous general Muhallab [q. v.]. He finally incorporated 'Omān on the Arabian peninsula in the empire, which had hitherto been independent and his generals penetrated even into the valley of the Indus. Ḥadjdīdādī prepared the way for the brilliant empire of Walid I by these extensions of territory abroad and the restoration of peace in the 'Irāk. In spite of his autocratic rule he actively supported such important generals as Muhallab and Muslim b. Ḳutaiba. As a statesman his activities were not confined to reforms but were creative also. "His administrative regulations on the currency, measures and taxes and in the improvement of agriculture were epoch-making" (Wellhausen, p. 159). He has been reproached with corrupting the *Qur'ān*. But his work was limited, it appears, to a critical revision and the introduction of orthographical signs which were to prevent incorrect readings in the recitation of the sacred text. He

also endeavoured to use Arabic in place of the local dialects which had hitherto been in use in the chancellery of the 'Irāk. After putting down the rebellions, it was his first care "to heal the wounds, which a twenty years' war had inflicted on the prosperity of the country" (Wellhausen, p. 157). He dug new canals and restored the old ones.

His fidelity to the Umayyads knew no bounds; the grotesque manifestations of it related of him are inventions of historians writing in the service of the 'Abbāsids. The Marwānids rewarded it by their constant favour. Ḥadjdīdādī has therefore also been numbered among the 'sins of 'Abd al-Malik'. His influence continued to increase under Walid I. Ḥadjdīdādī had energetically supported the candidature of the young prince to the detriment of his uncle 'Abd al-'Azīz [q. v., i. 36], the successor designate of 'Abd al-Malik. Walid delighted in seeking the advice of his lieutenant; on his death he received official expressions of condolence as if a member of the ruling house had died. Matrimonial alliances further attached the family of the powerful governor to that of the Omayyads.

Ḥadjdīdādī's eloquence has become celebrated. The histories and literary collections have preserved numerous specimens. He laid great weight on purity of language and aimed at a kind of Arabic Atticism. From the point of view of religion, he impressed one as being a sincere Muslim. He protested however against the exaggerations of the extreme parties and against the disproportionate importance which even then was being accorded to Tradition. "In his life and in his death he showed a good conscience" (Wellhausen, p. 160). Did he deserve the reproach of cruelty? We read of 130,000 victims handed over to the executioner; at his death his prisons are said to have held 50,000 men and 30,000 women. Such enormous figures are their own refutation. In this period of political anarchy, of incessant risings, nothing authorises us to say that his repressive measures passed the limits of severity. "The kindest of men to good citizens, he showed himself pitiless to the rebellions" (al-Dhahabī). But even in these cases a frank confession or a show of spirit frequently sufficed to disarm in a moment, this officer of justice, who "dominated the majority of his contemporaries by the breadth of his intellectual outlook" (al-Dhahabī). On the other hand his excessive vehemence rendered him liable to be impatient with his best friends (al-Mubarrad); his great general Muhallab in particular had to learn this. The whole character of Ḥadjdīdādī betrayed a jealous tendency — he was the first to confess it — to concentrate all authority in his own vigorous hands. It resulted in his "showing himself brusque, sometimes harsh, but never cruel, still less mean or narrow" (Wellhausen, p. 159). He has been often compared with Ziyād b. Abīhi, minister of the Umayyads, a Thakāfi like himself and his most famous predecessor in the 'Irāk. His excess of vigour, his feverish nervousness and his crushing and provocative eloquence were not to Ḥadjdīdādī's advantage. He lacked the smiling and somewhat sceptical *hilm*, which characterised the statesmen of the school of Mu'āwiya; whence arose complications which a more pliant nature might have avoided.

If Ḥadjdīdādī at the end of a long period of political anarchy applied himself to the amelioration of the material situation of his vast vice-

royalty, his character, embittered by family bereavements, by the injustice of an unintelligent opposition, made him forget to staunch the moral wounds and to work efficaciously for the pacification of the minds of men.

The interests of the state had forced him to take harsh measures against Yazīd, son of the celebrated Muhallab. This gained him the enmity of Sulaimān [q. v.], the guardian of Yazīd and successor designate of Walīd I. Ḥadjdjādī had incurred the blame of inducing this monarch to exclude his brother from the succession in favour of his own sons; the viceroy therefore vowed not to survive Walīd. He had just completed his 52nd year, prematurely aged and worn out by the labours and disappointments of his tumultuous life when he died of a cancer in the stomach in the month of Ramaḍān 95 = June 714. He was buried at Wāsiṭ and to prevent posthumous vengeance all traces of his grave were removed. Feared in his lifetime the inexorable officer of justice was regretted by the wisest and fairest of his contemporaries, such as Muslim b. Ḳutaiba [q. v.] and Ḳhalīd al-Ḳaṣrī [q. v.]. The hatred in which later tradition holds him testifies to the important part he played in his lifetime; holding him up to opprobrium as the greatest supporter of the Marwānids, it places him with Yazīd I among the few Muslims, for whom it believes eternal damnation to be assured. "It is always a moral sentence of death for a governor, if he is compared to Ḥadjdjādī even in the remotest feature" (Becker, *Papyri Schott-Reinhardt*, Vol. i. 17). Unbiased history gives him his place beside Ziyād b. Abīhi and reckons him among the statesmen of the Umayyad period who have deserved most of their country.

(H. LAMMENS.)

ḤADJDJĪ BEG. [See RIZWĀN BEGOVIĆ.]

ḤADJDJĪ-GIRĀI, the founder of an independent Tatar kingdom in the Crimea. Of his origin we only know that his grandfather Tāsh-Timūr, a prince of the Golden Horde, ruled in the Crimea for a short period (his coins are dated 797 = 1394-1395) towards the end of the viiith = xivth century. According to native tradition Tāsh-Timūr had entrusted the education of his son Ghiyāth al-Dīn to a member of the tribe of Girāi, Dawlat-Geldi; Dawlat-Geldi afterwards went on a pilgrimage to Mecca; on his return a son was born to his former pupil, and therefore received the name Ḥadjdjī-Girāi. According to Polish sources, Ḥadjdjī-Girāi was born in Lithuania, whither his family had fled and thence subdued the peninsula of the Crimea with the help of the Grand Duke Witold. In the year 1434 he won a victory over a Genoese army under Carlo Lomellino. Down to his death in 871 = 1466-1467 he appears as an ally of the Poles and Lithuanians and as the enemy of the Genoese in Kaffa and of the kingdom of the Golden Horde on the Volga. In 1465 Pope Paul II. sent an embassy to him with the singular proposal that he should declare war on Sulṭān Muḥammad Fātiḥ. Cf. also BAHİÇE-SARĀI (i. 562 *et seq.*) and GIRĀY (ii. 171).

(W. BARTHOLD.)

ḤADJDJĪ KHALĪFA, i. e. MUṢṬAFĀ B. 'ABD AL-LĀH, also known as KIĀTİB ÇELEBİ, the famous Turkish encyclopaedist, was born in Constantinople in Dhu 'l-Ḳa'da 1017 H. (February-March 1608). At the age of fourteen he enlisted in the picked corps of the *Silihdār's*, in which his father also was serving; at the same time he was admitted as a junior clerk in the so-called Anatolian audit office (*anadolu muhāsabe kalemi*). From 1033-1045 H. he stayed continually but for two short intervals with the Imperial Army at the Eastern frontier of Asia Minor; he joined in the first campaign against the rebel Abāza Paṣha (battle of Kaisariye end of 1033 H. = beginning of October 1624) and against the Persians (unsuccessful siege of Baghdad from Ṣafar 11th till Shawwāl 7th 1035 H. = Nov. 12th 1625 till July 2nd 1626) as well as the second and third campaign against Abāza Paṣha (repeated siege of Erzerum, beginning of Moharram till 16th Rabi' I. 1037 H. = middle of September till Nov. 25th 1627 and from Muharram 6th-22nd 1037 H. = Sept. 5th-21st 1628), and only returned to Constantinople with the army at the end of Rabi' II. = beginning of December 1628. His father had in the meanwhile died in Moṣul in the Dhu 'l-Ḳa'da 1035 H. = August 1625, during that campaign, as the army was retreating from Baghdad; at this same period he himself became a clerk in the Office of Control of the cavalry (*suvārī bash mukābele kalemi*). In the beginning of Shawwāl 1038 H. = end of May 1629, he again joined the expedition, under the grand vizier Khosrew Paṣha against Persia (conquest of Hamadhān end of 1039 H. = beginning of June 1630, and siege of Baghdad from Ṣafar 22nd till Rabi' I. 8th 1040 H. = Sept. 30th till Oct. 15th 1630) so that he only returned to Constantinople about the middle of 1041 H. = end of 1630. Finally he took part in the great expedition against Persia

1043—1045 H. (Sept. 1638 till end of 1635) under Murād IV. himself (conquest of Eriwan, Şafar 22nd 1045 H. = August 7th 1635). At this time he made the pilgrimage to Mecca, whilst the army was wintering in Haleb (1633-1634). After his return to Constantinople a considerable fortune which he had inherited enabled him hence to give himself up entirely to his favourite hobby, his scientific studies. He gave up his post in the Office of Control in 1055 H. (1645) as he did not advance as his merits deserved, but three years later his friends secured him the post of second K̄halifa (assistant) in the same Office, and henceforth he called himself İĀdjđjī K̄halifa. He died in Constantinople in Dhu 'l-Hijđja 17th 1067 H. = Oct. 6th 1657 not yet fifty years old. The list of his works as given here, is drawn from his own autobiography, with the exception of N^o. 5 and N^o. 12, which the author does not mention for unknown reasons:

1. *Fadhlika*, sketch of the history of about 150 dynasties, and at the same time an extract of the historical work of al-Djannābī (died 999 H.); written in Arabic in 1051. The author mentions it incidentally in his biographical encyclopaedia under N^o. 2198 and 3496 (see N^o. 13); this is probably lost.

2. A compilation of two commentaries upon the Korān, one of them being the commentary of al-Baidāwī (1052 H.); seems lost.

3. A commentary to the *Muhammadiya* of 'Alī Kūshđjī the astronomer; this was not finished and seems likewise lost.

4. *Takwīm al-tawārīkh*, chronological tables finished in 1058 H.; the introduction and the different appendices are written in Turkish, whilst the tables themselves relating all historical facts from the creation up to the year 1058 H. are written in Persian (see *Lex. Bibl.*, N^o. 3496); it was printed in Constantinople in 1146 H. (1733) together with the following tables that go as far as 1145 H., and other additions; Italian translation by the Venetian dragoman Rinaldo Calbi, Venice 1697 (see Zenker, i. N^o. 924; for other translations see Rieu, *Catalogue of Turkish manuscripts in the British Museum*, p. 33, and Pertsch, *Verzeichn. der türk. Handschr. . . zu Berlin*, N^o. 195).

5. *Djihānnumā*, i. e. Cosmography, first edition, begun in 1058 H. and dedicated to the Sultān Mehemmed IV (see *Lex. Bibl.*, N^o. 4355); this work was already considered as lost in the time of the printer Ibrahim (cf. below N^o. 10).

6. *Sullam al-wuṣūl ilā ṭabaḳāt al-fuḥūl*, i. e. biographical encyclopaedia of famous men, in Arabic. The fair copy of Vol. i. was finished in 1061 and 1062 H.; the holograph of the author is now to be found in the library of Şahid 'Alī Pasha in Constantinople.

7. *Tuḥfat al-ahyār fi 'l-hikam wa 'l-amthal wa 'l-ashār*, an anthology containing maxims, aphorisms, proverbs and poems, composed in 1061 or 1063 H., quoted in the *Lex. Bibl.*, N^o. 2537; a copy of it exists in Es'ad Efendi's library in Constantinople.

8. *Kashf al-ẓunūn 'an asāmi 'l-kutub wa 'l-funūn*, is the celebrated encyclopaedia in Arabic, the author's most important work, for which he spent over twenty years in gathering the material; Vol. I. concluded in 1064 H., standard edition published by Fluegel, Leipzig 1835—1858; and further in Būlak, 1274 H. and Stambul, 1310-1311 H.

9. *Lawāmīf al-nūr fi ḡulmet atlas minūr*, a translation into Turkish of Mercator's and Hondius's

Atlas Minor, following the Arnheim Edition of 1621; the translation was completed in 1064 and 1065 H. with the help of the French renegade Akhlāsi Shaikh Mehemmed Efendi; copies are to be met with in several libraries in Constantinople.

10. *Djihānnumā*, second edition of N^o. 5, founded on quite a new plan, the author having in the meantime largely used the European standard works of that epoch (Mercator, Ortelius, Cluevins). Of the original work, which the author never brought to end, we know those parts treating of Asia Minor, by the publication of the printer İbrāhīm Muteferriḳe (*Djihānnumā*, Constantinople 1145 H. = 1732, only the first part; the second part intended to contain the description of Europe, Africa and America, was never published; for translations of the printed text by Norberg, Arnain, v. Hammer, Charmoy, and others see Fluegel, *Die arab. pers. u. türk. Handschr. der K. K. Hofbibl.*, N^o. 1282 and Rieu, *o. c.*, p. 111) and by two important fragments, both by the author's own hand, one of them in the British Museum (Or. 1038) and the other in the Court Library of Vienna (see Fluegel, *o. c.*, N^o. 1282). Further we possess the description of the Ottoman dominions in Europe, in several copies, three of which are to be found in the library of Rāghib Pasha, in the Mewlewī-khāne of Pera and the Kutubkhāne-i 'Umūmī in Constantinople; the fourth one is in the Court Library in Vienna; the fifth copy by the author's own hand has disappeared, and it is from this last, that von Hammer translated some parts in his *Rumeli and Bosna*, Vienna 1812.

11. A translation into Turkish of the Latin translation of the Byzantine historian Khalkokondylas, or as the author himself styles it of a "Frankish Chronicle"; no copy of it extant.

12. *Rawnaḳ al-Sallānat*, i. e. History of Constantinople, supposed to be a translation of a work originally written in Arabic by the same author; now lost.

13. A Turkish translation of *Fadhlika* (see N^o. 1); a manuscript of it is said to exist in the library of Es'ad Efendi in Constantinople.

14. *Al-ilhām al-muḳaddas min al-faid al-aḳdas*, a treatise on different rites and rules of Islām, that cannot be observed under certain circumstances. A copy of it exists in the Kutubkhānc-i 'umūmī in Constantinople.

15. *Dustūr al-'amal li-islāḥ al-khalal*, a treatise on the financial reforms, written in 1063 H., but published only three years after. It was printed in Constantinople 1280 H. (1863) and translated into German by Behrmayer, *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, xi. 111—132.

16. *Radjm erradđim bil-sin wa 'l-nūm*, a collection of curious cases of law and of the different decisions given upon them.

17—19. Extracts of about 300 miscellanies (*madymū'a*), and two small volumes containing historical and literary anecdotes; have all disappeared.

20. *Fadhlikat al-tawārīkh*, the continuation of the *Fadhlika*, N^o. 1 and 13, in Turkish, containing the history of the Ottoman Empire from 1000 H. till beginning 1065 H.; printed in Constantinople 1286-1287 H.

21. *Tuḥfat al-kibār fi asfār al-bihār*, History of the Ottoman navy, written in 1067 H. (1656); published in Constantinople in 1141 H. (1728) and 1329 (1914) English translation by James Mitchell (chapt. I—IV), London 1831 (Zenker, N^o. 927, cf. 923).

22. *Mizān al-haḥḥ fī ikhtiyār al-aḥaḥḥ*, the author's last work written in Ṣafār 1067 H. (Nov. 1656). A treatise concerning several theological disputes of that epoch. In this treatise he breaks definitively with his first teacher, Kāḏizāde, the head of the orthodox party. Published in Constantinople in 1281, 1286 and 1306 H.

Bibliography: The autobiography of the author at the end of N^o. 22, very incorrectly edited by Wickerhauser, *Wegweiser* etc., p. 159—167, and the autobiographical note at the end of the first part of the *Sullam al-wuṣūl* (N^o. 6); the *Manāḥib-i K'atib Ālebi*, which precedes the print of the *Takwīm* (N^o. 4); the 158th biography in the *Dhail-i 'Aḥā'ī* by 'Ushākizāde (see von Hammer, *Osm. Gesch.*, vi. 47); *Sidḥill-i 'Osmānī*, iv. 395; *K'atib Ālebi* by Brusali Mehemmed Tāhir b. Rif'at, Stambul 1331 H.; the older European authors who treat of Hādjī Kḥalifa and his works are quoted by Flügel, *Handschr. der K. K. Hofbibliothek*, i. 49 and Rieu, *o. c.*, p. 33; compare also Wustenfēld, *Die Geschichtschreiber der Araber* etc., N^o. 570, and Brockelmann, *Gesch. der arab. Litt.*, ii. 428.

HĀDJDĪ PASHA (AIDŪNLĪ HĀDJDĪ PASHA), whose real name was Kḥidr b. 'Alī b. Kḥaṭṭāb, a contemporary of Sulṭān Bāyazīd Yildirim, an Ottoman jurist and student of medicine. He went to study in Cairo where he studied under Shaikh Mubārak Shāh Muntaka and went through his theological and legal courses in company with Shaikh Ekmel al-Dīn and Shaikh Badr al-Dīn Sihāvi. An illness, which he went through, turned his attention to the study of medicine and he soon attained fame in it. He ultimately became chief physician at the Cairo Hospital *Māristān-i Miṣr*. Returning to Aidīn he settled in Birgi on the invitation of Aidīn Oghlu Mehmed Bey, and died there in 820 (1417). He also placed his services at the disposal of the conqueror Timūr and is said to have instructed his physicians. He also spent some time at the court of Prince Sulaimān in his service.

In his early days he wrote theological and legal works: e.g. a *Tafsīr fī Maḥjma' al-Anwār fī Qjemī' al-Asrār* in two volumes, a commentary on Baiḏūwī's commentary on the Kur'ān dedicated to 'Isā Bey, one of the sons of Aidīn, entitled *Tawālīf al-Anwār fī 'l-Kalām*, and marginal notes on Fakhr al-Dīn Rāzī's commentary on the *Maṭālīf al-Anwār* (fī 'l-Manṭiq) of Kāḏī Sirādj al-Dīn Muḥammad al-'Urmawī. His medical works are more important and have maintained their authority down to modern times. The largest is the *al-Shifā'*, a work on therapeutics in Turkish written for Aidīn Oghlu Mehmed Bey which is divided into three sections treating respectively of *a.* physiology and dietetics, *b.* foods, drinks and medicaments and *c.* causes, diagnosis and cure of diseases. A brief similarly divided handbook for the layman is his *Teshīl al-Tibb* (The facilitation of medicine). Both works are said to have been translated into Latin. Less known are his: *Shifā' al-Eṣṣām wa Dewā al-Ālām* ("Cure of disease and alleviation of pain"), his *Forūde fī Dhikr al-Aghdiyet al-Mufide*, *al-Te'ālīm* and *al-Kīmī al-Djelaḥ*.

HĀDJIEWAD, a character in the shadow-play, the inseparable companion of the *Karagöz* [q. v.].

HĀDJIB (from *hadjaba*, to prevent any one entering) is the name of the office of doorkeeper e.g. *Hadjabat al-Bait* (the doorkeepers of the Ka'ba, see Lane's *Lexicon*). It corresponds to the office of chamberlain in our time. We may here mention the theoretical explanation of Ibn Khaldūn that the chamberlain should protect the ruler from troublesome visitors so that he may remain undisturbed in his important labours. In the western kingdoms (e.g. in Cordova) he frequently became representative of the Caliph and chief of the viziers. The petty, practically independent kings of Spain took the title *Hādjib*. Among the Hāfṣids [q. v.] he was superintendent, war-minister and as being the chief official the real ruler, among the Zayānids [q. v.], superintendent of the palace and minister of finance. In the eastern kingdoms (Mesopotamia, Syria and Egypt) he had a position at court similar to that of chamberlain and was also given this title even if he served the ruler as commander of the army. He received quite different duties in the Mamlūk period. To relieve the Sulṭān's governor in Cairo (*al-Diyār al-Maṣriya*) and in the provinces or perhaps to diminish his influence, the *Amīr Hādjib* or *Hādjib al-Hudūd* was entrusted in Balbars' reign (658—676 = 1260—1277) with the decision of quarrels between the emirs and the soldiers, at a later period, when the office of governor of the sulṭānate in Cairo was abolished, he was placed at the head of the administrative military court in the reign of Sulṭān Naṣir Muḥammad and his sons. In difficult cases he consulted with the Sulṭān. He gradually from being a judge in military matters began to encroach on civil cases also which belonged to the kādī's province; the parties concerned seem to have resisted this at first, as Maḥrizī vividly describes but they ultimately became reconciled to it and often preferred the civil jurisdiction of the Hādjib to the ecclesiastical of the Kādī. Kalkashandī (in the time of Sulṭān Mu'ayyad Shaikh 815—824) ranks him as the eighth official, the author of the *Dīwān al-Inṣhā'* (in the reign of Sulṭān Barsbey, 825—842) calls him the twelfth in rank, and Khalīl al-Zāhiri (under Sulṭān Djaḥmaḥ 842—857) the seventh; and, according to him, the second Hādjib was *Ṭablaḥūna* (Amir of 40 Mamlūks, q. v.), the third Hādjib Amir of twenty or ten Mamlūks; there were also 20 subordinate Hādjibs without the rank of Amir. In the provinces, according to Kalkashandī, the Hādjib came third next to the governor and the commander of a corps (Atabeg), and, according to Khalīl al-Zāhiri, he was likewise third after the governor and the commander of the citadel, when there was one, and second when there was no citadel. He was the deputy of the governor in his absence, in case of his death till the appointment of a successor. The Sulṭān himself only corresponded with officers here mentioned; to the Amīr Hādjib of the great provinces of Damascus, Aleppo and Tripolis he called himself in the signature "his father Sulṭān

N. N.", while the Emīr İĤĤĤİb in İĤamā, Şafad, and Ĥazza had to be content with the simple "Sultān N. N."

Bibliography: Ibn Kĥaldūn, *Prolegomena*, transl. by de Slane, ii. 5, 7, 11—16; Makrīzī, *Kĥiṭaṭ* (Bulāĥ), ii. 219—222; *Ḍan' al-Şubĥ*, extract from Kalkaşhandī (Cairo 1906), p. 247, 323, 476, 478; *Zubdat Kaşif al-Mamālik*, ed. Ravaisse, p. 114, 115; *Diwān al-Inşū'*, Paris Ms. arab. ancien fonds 1573, fol. 124^a, and in Silv. de Sacy's *Chrestomathie* (extracts from Makrīzī's *Kĥiṭaṭ* with numerous notes), Paris 1826, ii.

AL-ĤĤĤR, the ancient Hatra, "Αττῆ on the Wādī Tharthār in the desert, three short days' journey S. W. of Mōşul, now in ruins, on which cf. the works mentioned in the *Bibliography*. The town's claim to be mentioned here is that the Arab historians give a certain amount of information about its former extent and rapid decline. ĤĤĤr, says Yāĥūt, *Muĥdjam*, ii. 282, was built entirely of hewn stone; there were sixty strong forts there and 9 smaller ones between every two; there were a palace and a bath near every fort. During the reign of the Sāsānid Şĥāpūr I. (240—271) a man of the name of Sāṭirūn (according to Noldeke = Sauatruces) ruled here; the Arabs called him Ḍaizan. As the latter had made a raid on Persian territory, Şĥāpūr resolved to besiege him in his capital, but could not take the strong fortifications until Ḍaizan's daughter fell in love with him and betrayed to him the secret by which he could make powerless the talisman that protected the castle. He thus succeeded in taking the town and utterly destroying it. He took Ḍaizan's daughter with him to marry her, soon however he became so disgusted with her ingratitude to her father, who had certainly treated her most tenderly, that he had her bound to the tail of a wild horse so that she died a terrible death. Firdawsī and several Arab historians wrongly say that it was Şĥāpūr II, who destroyed Hatra, for it is certain that the town was already in ruins by 363.

Golf.*, ii. 3 *et seq.* (where the earlier literature is also given); Noldeke, *Geschichte der Perser und Araber*, p. 33 *et seq.* (according to Tabarī, ed. Goeje, i. 827 *et seq.*, with occasional references to the accounts of other writers); Pauly-Wissowa, *Real-Enc.*, s. v.; Herzfeld in *Zeitschr. der Deutsch. Morgenl. Ges.*, Vol. lxviii.

ĤĤĤRA, "presence". is used broadly by mystics as a synonym of *ḥuḍūr*, "being in the presence [of Allāh]". Its correlative is *ghaiba* (q. v. with its references) "absence" from all except Allāh. On the controversy as to whether in expressing this relation to Allāh *ḥaḍra* or *ghaiba* is to be preferred — that is, which is the more perfect, final element — see especially Nicholson, *Kaşif*, pp. 248 *et seqq.* The term was later extended by Ibn 'Arabī, in working out his monistic scheme, to "The Five Divine Ĥaḍarāt", stages or orders of Being in the Neoplatonic chain (cf. above, vol. I, pp. 62 *et seq.*, 986). There is a short state-

ment of these in the *Tārīfāt* of Ḍjardĥānī, p. 6 (Cairo 1321), which has been translated by Horten in his *Theologie des Islam*, pp. 294 *et seq.*, where, and on p. 151, he also gives some minor uses of the term. See, too, Massignon's *Kitāb al-Tawāsin*, p. 183 with a reference to Ibn 'Arabī's *Fuşūş al-ĥikam*, and Hughes, *Dict. of Islam*, p. 169. In consequence, the Plotinian scheme of dynamic emanation was called in Islam *mathḥab al-ḥaḍarāt* (Ibn Kĥaldūn, *Muĥaddima*, ed. Quatremère, III, p. 69; De Slane, III, p. 100). Derivatives call their regular Friday service *ḥaḍra* (above, Vol. I, 958). The use of *ḥaḍra* (*ḥaḍrat*) as a title of respect — the Deity, saints, prophets, any educated man — belongs to the Lexicon.

(D. B. MACDONALD.)

ĤĤĤİMAWT (the הַצְרִימָה of the South Arabian inscriptions), now pronounced Ĥāḍīamūt, a land in Arabia in the east of Yemen between 47° and 53° East. Long. and 15° and 19° North. Lat. It is bounded in the south by the sea, in the southeast by the land of Mahra, in the N. E., N. and N. W. by the great Central Arabian desert, in the S. W. by the land of the 'Awālīk [q. v.] and of the Wāḥidī [q. v.]. The name Ĥāḍīamawt is according to Arab tradition derived from Ĥāḍīamawt b. Ḥimyar b. Ya'rub b. Kaṭṭān (Ĥaṣarmāweth, the son of Yoĥtan in *Genesis* x. 26).

In ancient times Ĥāḍīamawt was celebrated as a land of frankincense and was greater in extent than it now is. The *Χατράμωρτιται* (*Χατράμωρται*) of Strabo (Atramitae in Pliny) were one of the most powerful tribes of the great South Arabian kingdom; their metropolis was Sabbata (Sabbata). According to Greek legend, the scent of the frankincense tree was deadly and the valley in which it grew was therefore called the "land of death". The Arab lexicographers also connect the name Ĥāḍīamawt with the alleged unhealthy situation of the land, for they explain it as a combination of *ḥaḍr* "town, land" and *maut* "death"; but, apart from the fact that the land has only borne the name İĤāḍīamūt in modern times, the climate of İĤāḍīamawt has always been regarded as healthy. In the pre-Muhammādan period Ĥāḍīamawt was inhabited by the Şadaf or Şadif. To these the Kinda [q. v.] attached themselves, who migrated from Baḥrain to Ĥāḍīamawt to the number of over 30,000 men about the time of the birth of Muḥammad; their most important clan at this time was the Tuĥĥib, who numbered 1500 men in İlamdānī's time. In the time of the Prophet princes with the title 'Abāhila ruled in Ĥāḍīamawt; the Kinda prince Ĥais b. Aşḥ'ath adopted İslām in Mnḥammad's time; after the death of the prophet he succeeded but was soon afterwards conquered. The land is now under Turkish suzerainty, but this is merely nominal for the Porte keeps no garrisons in the country nor does it levy any taxes.

Ĥāḍīamawt is a mountainous land traversed by a great valley with several wādīs of considerable size branching off from it. Along the coast there are hills. These are followed by a high chain of mountains, of which the highest is the Djebel al-'Arşha (a vast plateau). A second chain of mountains adjoins the main valley on the north and this runs up to the great desert. The two chains consist mainly of limestone and are as a rule barren; only here and there do we find small şibr (aloe)-trees, thorn-bushes and pastures.

The main wādī runs from west to east and then to the south where it flows into the sea near the fishing-village of Saiḥūt, which belongs to the land of the Mahri. The most western town in the main valley is *Shabwa*. From *Shabwa* the road runs through a sandy and sparsely populated district to the isolated mountain al-*Kā'ima*. To the left of this road to al-*Kā'ima* lie the wādīs *Djābiya* (well cultivated) and *Sūr*, and on the right the wādīs *Irma*, *Duhr* and *Rakhiya* (the latter with the important town of *Sahwa* [*Ṣahwa* in *Wrede*]); to this wādī also belongs the *Baḥr al-Ṣafī* mentioned by *Wrede*, where in the midst of the desert, according to the observations of this explorer, all that is thrown in sinks; in the S. of the W. *Duhr* and *Rakhiya* begins the land of the 'Awālik. S. E. of al-*Kā'ima* lie the two towns *Ḳa'ūṭha* and *Hainin* (*Hainan*, *Ḥahnem* in *Niebuhr*, on the wādī of the same name, in *Hamdānī's* time a large village with *ḥiṣn* and a market, inhabited by the *Tudjib*). South of *Ḳa'ūṭha* rise (on the right of the main wādī) the three wādīs 'Amd (formed by the union of the two wādīs *Nir* and *Raida* *Arḍin* at the town of 'Amd), *Daw'an* and al-'*Ain* (in *Hamdānī* also called 'Abr). The important Wādī *Daw'an* (a town of *Daw'an*, mentioned by *Hamdānī* [*Ḍawān* in *Ptolemy*], no longer exists) has a right (western) arm *Daw'an al-Aiman* and a left (eastern) arm (*Daw'an al-Aiman* and *Daw'an al-Aisar*); the northern part of the Wādī bears the name *Hadjarēn* after the isolated mountain *Hadjarēn* with the town of the same name near it [q. v.]. The wādī is thickly populated. The most important places in this wādī are: al-*Khuraiba* (the most southern town in the wādī), *Ṣif* (*Seif*, *Ssayf* in *Wrede*), *Bitha*, *Ḳaidūn* (*Ḳahdūn* in *Niebuhr* and *Wrede* after the tomb of the greatest saint of *Ḥaḍramūt*, *Alḥmad b. 'Isā*, called 'Amūd al-Dīn), *Meshhed* 'Alī with the so-called tombs of the kings; we may further mention of the other localities: al-*Karrain*, 'Awra, *Hodūn*, *Halbūn*, *Rihāb* and *Ar-sama*. Not far from the confluence of the W. 'Amd and W. *Daw'an* lie the villages of 'Andal (in *Hamdānī's* time, an important town inhabited by the *Ṣadaf*), *Ḳāra* (in *Hamdānī* *Ḳāra al-Ashbā*) and *Adjlāniya* (called a large town by *Hamdānī*). On the Wādī 'Amd is the important town of *Ḥawra* [q. v.]. From the town of *Hainin* up to the ancient and still important town of *Shibām* [q. v.] the main valley is called Wādī al-*Kasr* (in *Hamdānī* also Wādī *Kasr Ḳashākis* or *Ḳushākis* after the town of this name built on the top of a hill), to *Shibām* Wādī bin *Rashid* or Wādī al-*Alḫāf* (also in *Hamdānī*), also briefly al-Wādī (*Ḥaḍramawt*) or Wādī *Masīla*. The most important towns in the main valley east of *Shibām* are: al-*Ghurfa*, *Taris* (*Tris* in *Niebuhr*, *Teryse* in *Wrede*, in *Hamdānī's* time a large town), *Sai'ūn*, now the largest town and chief centre of learning, the very ancient town of *Maryama*, *Bōr*, *Tāriba* (*Tarbe* in *Niebuhr*, *Tyārby* in *Wrede*), the ancient capital *Tarīm* [q. v.], *Ṭnāt* ('*Eināt*, on the Wādī of this name) and al-*Ḳasm*. From al-*Ḳasm* *Ḳabr Ḥūd* is reached, the tomb of the prophet *Ḥūd* on the Wādī *Barahūt* [q. v., i. 653^b *et seq.*]. West of *Shibām* in the main valley we must further mention the important town of al-*Ḳatn*. From *Ḥawra* to al-*Ḳasm* the valley is thickly populated and covered with date-groves, gardens, fields and many villages, from al-*Ḳasm* to *Ḳabr Ḥūd* it is less populated and

from *Ḳabr Ḥūd* to *Saiḥūt* the population is very small. Of side-wādīs of the great valley there are still to be mentioned: (in the north) *Widyān Sarr* (with *Ḳabr Ṣālih*), al-*Na'am*, al-*Dju'aima* (both the latter east of *Shibām*), *Madar* (east of *Sai'ūn*), *Thibbī* (*Thebī*), 'Aidid (with the tomb of the saint 'Aidid), both west of *Tarīm*, and al-*Ghabrā* (east of *Tarīm*), (in the south) the two important wādīs Bin 'Alī (east of *Shibām*) and 'Adim (*Odīm* in *Wrede*, not far from *Tarīm*). The more important localities on the coast in addition to the two great harbours al-*Makallā* [q. v.] and al-*Shihṛ* [q. v.]: are *Borūm* (*Brūm*, *Berūm*, with an important harbour, according to *Sprengr* identical with the *Prionotus* of *Ptolemy*), *Fūwa* (with 50 houses including a few of some size), *Ghail Bawazir* (with very fine tobacco plantations), al-*Hāni*, al-*Shirma* and *Koṣaī'ar*. Of wādīs on the coast may be mentioned: *Djirba*, *Huwaira* and al-*Ma'di*. The chief wādī and the side-wādīs are usually dry and only swollen with floods in the rainy season.

Among mountains in *Ḥaḍramawt* we may mention *Huwaira* (on the wādī of the same name), 'Abd Allāh *Gharīb*, al-*Fikra*, the Plateau al-'*Arsha* already mentioned, *Ṭamḥa* (all in the north near the coast), *Raida al-Daiyin* (in the south of the Wādīs 'Amd and *Daw'an*), *Hasyūn*, al-*Ghūz*, *Raida al-Ma'ara* (in the south of the Wādī 'Adim), *Ṣu-waighira* (with *Ḥiṣn al-Ḳā'*, in the south of the Wādī Bin 'Alī), *Djahlan*, *Ghumdān*, al-*Ghaiwār* (in the north of the Wādīs 'Amd and *Daw'an*), *Djihāl al-Abtar* (between the Wādī *Djābia* and Wādī *Hainin*), *Djilda* (with *Ḥiṣn 'Arḳūb*), *Djithma* (both south of *Sai'ūn*), *Waṭi* (in the north of *Tarīm*), al-*Munaiḥāz* (south of *Tarīm*), *Ghail Bin Nomain* (N. W. of *Ḳabr Ḥūd*). In the west of the northern mountain chain rises a large plateau, *Raida al-Ṣaī'ar* (called after the ancient *Bedouin* tribe *Ṣaī'ar*, a clan of the *Ṣadaf*, whose name was borne in *Hamdānī's* time by a fine breed of camel), to which a larger plateau *Nadjd* (*Naiyid*, *Nadjd* *Al Ḳathir* and *Nadjd al-'Awāmir* is linked up. Both bound on the great Central Arabian desert in the north. In neither of these mountain ranges is there any place of the slightest importance.

The climate of *Ḥaḍramawt* is dry and healthy; in summer it is very warm and in winter very cold; even in summer it freezes on the high mountains. The rainy period lasts from October to February, in which however it hardly rains four times; in many years there is absolutely no rain; in the coast the rainfall is more abundant. The products of the soil are: cereals, *dhura* (a kind of maize), *dukhūn* (a kind of oats), dates, grapes, figs, *nebek* fruit, indigo, sesame and tobacco. The irrigation of the soil is artificially performed by artesian wells. The houses are built of bricks, sometimes in the style of a *ḥiṣn*; they are from two to four stories high and are loopholed. The *Bedouins* live in mud huts or caves; there are no tents in *Ḥaḍramawt*; nor are there coffee-houses (*ḳahwa's*) here, such as are found everywhere else in Arabia.

The ruling class in *Ḥaḍramawt* is the tribe (*ḳabā'il*). The chiefs of the tribes called *muḳaddam's* live in fortified palaces and maintain small garrisons. The free citizens of the towns, who control the trade and industries of the town are *ra'iya* of the *muḳaddams*, who levy oppressive taxes on them. The most powerful prince on the coast of *Ḥaḍramawt* is the ruler of al-*Shihṛ*, to

whom the towns of al-Makallā, Ghail Bawāzīr, al-Hadžarēn, Hawra, al-Kaṭn and Shibām also belong. In the interior the greatest muḥaddam is he of Saiṭūn, who bears the title Sultān and owns the towns of Tarim, Taris and al-Ghurfa. Ḥaḍramawt is inhabited by the following tribes: I. Baraik, Bedouins with the hereditary title *Shaiḥ* in the country round Shabwa (a portion belongs to al-Shiḥr); II. Āl 'Amr, in the wādīs of Irma and Duhr; III. Bait Kinda, Bedouins, divided into: Āl Ṣaī'ar (in the Raida al-Ṣaī'ar and the mountains around) and 2. Āl Maḥfūṭh (formerly in Ḥadžarēn, now scattered over the adjoining mountains); IV. Āl al-Karab, Bedouins around Rakkān on the Wādī Djabīya; V. al-Nahd, on the lower part of the wādī Rakkhiya and in the main valley as far as Ka'ūṭha and Hainin (with ten subdivisions, of whom the Ḥukmān are the most important; the chief of the Ḥukmān, who lives in Ka'ūṭha is muḥaddam of the whole tribe); VI. Āl Ballaiṭh and VII. Āl Haidara (both Bedouins on the upper part of the Wādī Rakkhiya); VIII. al-Dja'da, almost all Bedouins, on the Wādī 'Amd; IX. Āl 'Amūd or Banū 'Isā (called after *Shaiḥ* Aḥmad b. 'Isā, 'Amūd al-Dīn) with the hereditary title *Shaiḥ*, on the Wādī Daw'an and on the Raida al-Daiyin (with 22 subdivisions; the most important are the Āl Muṭahhar, whose chief lives in Biṭha); X. al-Dhayābina (sing. *Dhaybān*) and XI. Āl b. Sa'd (both Bedouins, on the Wādī 'Ain and in the surrounding mountains); XII. Āl Yāfi, on the coast and in the towns of al-Hadžarēn, Hawra, al-Kaṭn and Shibām, divided into: 1. Āl Thobai (with 8 minor divisions); 2. Āl Lab'ūs (sing. al-Bu'sī, with 4 minor divisions); 3. Āl al-Muṣṭah (with 8 minor divisions, of which the most important is the Ka'ta [sing. al-Ku'aṭī], whose chief is head of the whole tribe); XIII. Saibān, a large Bedouin tribe, divided into: 1. Saibān proper in the north and northwest of the Djebel Howaira; 2. al-Akābira (sing. al-Akbārī), in the south and S.W. of the mountain mentioned; 3. al-'Awābiṭha (sing. al-'Awbāṭhānī), in the S.E. of the Wādī Daw'an; 4. Āl Baḥsan (sing. al-Baḥsanī), on the Wādī Djirba and the surrounding mountains; XIV. al-Hamūm, Bedouins in the mountains of 'Abd Allāh Gharīb, al-Fiḥra, al-'Arsha, Tamḥa; XV. al-Shanāfira, descendants of Shanfari al-Hamdānī (according to the legend the first prince of Ḥaḍramawt), a large tribe, divided into: 1. Āl Kathīr (Kathīrī), between Shibām and Saiṭūn (with five large subdivisions, among them the Āl 'Abd al-Wodūd, around Koṣai'ar); 2. al-'Awāmīr (al-'Āmirī), in the large valley between Saiṭūn and Tarim and the mountains to the north; 3. Āl Djabīr, Bedouin tribe, in the mountains of Djilda and Djithma and the Wādīs Bin 'Alī and 'Adim; the chief of the Shanāfira is the Sultān of Saiṭūn; XVI. Āl Bādjaraī in the N. E. of Saiṭūn between the Kathīr and 'Awāmīr; XVII. Banū Thanna (see al-Thannī), divided into: 1. Āl Tamīm, in the large valley between al-Ḳasm and Ḳabr Hūd (their chief resides in al-Ḳasm); 2. al-Manāhil (Minhālī), a Bedouin tribe on the Wādī Masila between Ḳabr Hūd and Saiḥūt and in the mountains to the east and west (their chief lives in 'Ināt); 3. Āl al-Simāḥ (sing. al-Simāḥī), a Bedouin tribe in the hills to the north of Wādī 'Ināt.

Besides the *ḡabā'il* and *ra'iya* there is in Ḥaḍramawt another separate class of society, the Saiyids, who represent the religious aristocracy

of the land. They are very numerous and enjoy a great prestige among the people, surpassing that of the muḥaddams; the other inhabitants kiss their hands in token of respect. They are exceedingly conservative and averse to any innovation; they bear the title *ḡabīb* and are divided into families whose hereditary superior bears the honorific title *munṣīb*. Many of the Saiyids are revered as saints and presents are lavished on them, many again enjoy a great reputation as scholars. They bear no arms and as a rule pay no taxes. They consider themselves the highest nobility in Arabia. They trace their descent from the *Shaiḥ* Aḥmad b. 'Isā mentioned above, who in his turn is said to have been a descendant in the seventh generation from Muḥammad's grandson Ḥusain. According to tradition, Aḥmad b. 'Isā came several centuries ago from Baṣra to Ḥaḍramawt with eighty men, who became the ancestors of the Saiyids.

The number of inhabitants of Ḥaḍramawt is not accurately known. According to Van den Berg's investigations, the total population is not more than 150,000, viz., from the Wādī Duhr to the Wādī Rakkhiya 20,000, in the Wādīs 'Amd, Daw'an and al-'Ain 25,000, from Shibām to Tarim 50,000, from Tarim to Saiḥūt 6000, in the north of the great valley up to the Central Arabian desert 15,000, south of the great valley to the sea 16,000, Shiḥr and the neighbourhood 12,000, Makallā and the neighbourhood 6000.

The trade is of importance on the coast particularly in the towns of Shiḥr and Makallā. It extends to the east coast of Africa, British India, the Red Sea, the south coast of Arabia (particularly Aden, Maṣṣaṭ and Zafār) and the Persian Gulf. The exports are: fish-fins (to British India and China), dates, cloths dyed with indigo, gum-arabic and resin. Imports are: cereals, coconuts, coffee, sugar, rice, cotton, iron, petroleum etc. The trade by caravans with the interior is slight. It stretches on the west as far as Yemen on the one side and on the other eastwards as far as 'Omān. In the larger towns there is a market every Friday (the largest is at Saiṭūn). The tribes have their representatives at the markets of the larger localities, called *dallāl* [q. v.] (brokers, called *kitāb al-sūḡ* "market-dogs" by the people), who are appointed to sell their goods and who form a separate gild under an *abū* (superior). The chief industry is the textile, which is now on the decline on account of the competition of cheaper European products; its great centre used to be Tarim. Besides the textile industry we may mention the manufacture of indigo and shipbuilding on the coast. Agriculture is in the hands of the *ḡabā'il* and the Saiyids, who have their fields tilled by slaves. The latter are as a rule Somalis or Nubians and are usually Muslims; they bear special names, which are distinct from the usual Arab names, e.g. Mabruk, Murdjan etc.

The Ḥaḍramī's are an able, industrious people devoted to their native land. On account of the increasing poverty of the country many are forced to leave home and seek their fortune in foreign lands; many Ḥaḍramī's are to be found at the present day in the trading centres of Arabia where they earn a living as porters and petty traders, in Egypt and particularly in the English and Dutch Indies. As soon as they have acquired a modest

fortune, they return home often after an absence of twenty to thirty years. They are *Shāfi*'s and are exceedingly fanatical and superstitious; they believe in spirits, who haunt places where treasure is buried; Christians and Jews may not even make a temporary stay in their land which they call *Balad al-'ilm wa 'l-dīn* ("land of knowledge and of faith"). Their women, who (even those of the Saiyids) are as a rule ignorant of reading and writing, enjoy a better fate than their kinswomen in other parts of Arabia. Divorces are exceedingly rare; nor is polygamy practised among these Bedouins.

Haḍramawt was first visited in 1843 by Adolph v. Wrede, who could only explore a part of the land, as he was recognised as a European in the town of Šif and only managed to escape the death that threatened him by a hurried flight. Fifty years later Leo Hirsch and Mr and Mrs Th. Bent visited the country but could not explore the land to its full extent.

HAḌŪR (HAḌŪR NABĪ [NEBBĪ] SHU'ĀIB), a mountain in South Arabia, belonging to the Sarāt group of Aihān, to the west of Šan'a [q.v.] between the Wādī Sahām and the Wādī Surduḍ near the Harāz range [q.v.], from which it was separated in Hamdānī's time by the Balad al-Akhrūdī (now Ḥaima [q.v.]) inhabited by the Šulāih (a branch of the Hamdān). The name Haḍūr is derived from Haḍūr b. 'Adī b. Mālik, an ancestor of the prophet Shu'āib b. Maḥdam, mentioned in the *Kur'ān* (cf. *Sūra* vii. 83 *et seq.* and xi. 85 *et seq.*) who was sent to preach and to warn his people on Mount Haḍūr and was thereupon slain by them.

The mountain is about 9400 feet high; according to Arab tradition, Haḍūr Shu'āib was the highest of the three mountains (the other two were Djebel Shahāra [Shuhāra] and Kanin in Khawlān [q.v.]), which remained above the waves during the Deluge. The highest peak on Haḍūr is the Djebel Kāhīr, also called Djebel Bait Khawlān, on which is the celebrated tomb (with mosque) of the prophet Shu'āib, which is always much visited (particularly by young women who hope to be cured of barrenness here); on the last day of Ramaḍān and on the festival at 'Arafāt, great

festivities are arranged here. From the terrace of the mosque a splendid view is obtained over the whole Yemen. 700 yards W. by N.W. of Djebel Kāhīr lies Djebel 'Izzān, south of which are the mountains of Iḍabaḥ, Maṣūra and Iḍabyan (with the village of the same name and ancient ruins). Djebel Zā'la lies to the south of Kāhīr.

To the east of Haḍūr lies the Kā'a Sahmān, with the villages of Metne (Mottene in Niebuhr), called Khān Sinān by the Turks (8000 feet above sea-level, with a *semser* [shelterhouse] said to have been built by Sinān Pasha, which is open free to any traveller), Sahmān (also called Mirriḥ), Bait Maḥdam, Bait Radam, Dā'er, Masyab (Masyab), Bait Kāhīn, which now belong to the so-called *Bilād al-Bustān*.

The following localities in Haḍūr may also be mentioned: al-Kārya ("the village"), Rakb or Rakab (north of Kārya), Dja'āl (in the N.W. of Haḍūr), the Sāda- (Hidjra)-village Zuhār or Duhār in the south. The range is traversed by numerous wādīs (among them the W. Dā'ūd and W. Jāzil, which latter is often mentioned in the South Arabian inscriptions), which flow into the large Wādīs Khārid, Surduḍ and Sahām. In the valleys of the range excellent vines are found in addition to various fruit-trees; in the deeper parts of the Haḍūr the cereals particularly grown are *dhura* (a kind of millet), barley and *burr* (a kind of wheat or corn).

On the Haḍūr Shu'āib it snows almost every winter and the snow often lies for days several feet deep so that the inhabitants cannot leave their houses.

In Hamdānī's time the Mikhlaḥ Haḍūr comprised amongst others the districts of al-Ma'āl (so Müller, *Djazira*, in several passages, which he equates with the מַעְלָל of the South Arabian inscriptions, for Glaser's Dja'āl, consisting of Wādī, Haḍl Sahmān and al-Ma'āl proper [al-Dja'āl]), Ma'dhīn (including "the two gardens of Yemen", Dahr and Dila', and Rī'ān or Rari'ān), Shamm (lower part), Maḍikh, Šabiḥ, al-Aghyūm, Baraish, Masyab, al-Šayad. The hard white honey of Haḍūr was famous in Arabia, it is even mentioned by Imrī'u 'l-Kais in one of his poems. The people of Haḍūr according to Hamdānī spoke bad and clumsy Arabic (Himyaritic).

The Haḍūr of the Banū Azd, called Haḍūr al-Shaikh, is distinct from Haḍūr Shu'āib and is the largest mountain of the Sarāt group al-Mašānī' (al-Mašāna'a). It is about 9500 feet high.

The Haḍūr Shu'āib and that of the Banū Azd have been visited and explored in modern times by the explorer Eduard Glaser.

(J. SCHLEIFER.)

AL-HĀFIZ (A.), the guardian, the protector, one of the names of God, cf. i. 303^b. When used of men a *hāfiz* is one, who knows the *Kor'ān* by heart, literally "preserves it" (in the memory).

HĀFIZ, a Persian lyric poet. His real name with *laqab* was Shams al-Dīn Muḥammad.

He seems to have been born in Shīrāz, not earlier than 1320 A.D. Practically nothing is known of his parents or other relatives; he never explicitly mentions them in a way that is free from ambiguity (a sister and her children are referred to without mention of names over two centuries later in Ferishta's *History*, ed. Briggs, Bombay 1831, Vol. i. p. 577). In his youth he learned the Qur'ān by heart (*ḥāfiẓ*), devoted himself to the study of theology and allied subjects and obtained an excellent knowledge of the Arabic language and literature. In later years he mentions (*Diwān*, ed. Brockhaus, No. 579) as a reminiscence of the reign of the Turk *Shāikh* Abū Ishāq-i Indjū (see the article INDJŪ), king of Fārs, four notables of Shīrāz whom he had apparently known personally: 'Aḍud al-Dīn 'Abd al-Rahmān al-Idjī, died 1355; (cf. Brockelmann, *Gesch. d. arab. Litt.*, ii. 208-209), probably his tutor; the chief judge of Shīrāz, Madjd al-Dīn Ismā'il b. Muḥammad b. Khudhādād (died 19th July 1355, *Diwān*, ed. Brockhaus, No. 604; cf. Ibn Baṭūṭa, ed. Defrémery, ii. 54-63); the dervish, otherwise unknown, *Shāikh* Amīn al-Dīn, who had perhaps considerable influence on the development of Hāfiẓ's more liberal outlook; lastly Hādjdjī Kīwām al-Dīn Ḥasan (died 11th May 1353), a high favourite at the court, a noble spirited philanthropist, to whom Hāfiẓ seems to have been indebted for material support, either directly or indirectly (Brockhaus, No. 610; *Mirkh-wānd*, *Rawḍat al-Safā*, Bombay 1271 A.H., iv. 142).

In 1353 the vigorous Sulṭān Mubārīz al-Dīn Muḥammad [q.v.] of the Muzaffarid family conquered the province of Fārs and finally took Shīrāz also (2nd Nov. 1353) to the great misfortune of its citizens. Hāfiẓ himself was unable long to put up with the changed conditions. Mubārīz al-Dīn was a strict ruler who forbade the people of Shīrāz the enjoyment of wine. There was also a religious ground for discomfort in his reign. Hāfiẓ was a Shī'ī (*Diwān-i Hāfiẓ*, ed. Calcutta 1791, text fol. 1 v—2 v), although no fanatic. 'Alī al-Riḍā is celebrated by him as *Shāh*-Sulṭān of Khorāsān; Hāfiẓ belonged to the Shī'a sect of the Twelvers (Ithnā 'Ashariya, cf. the *kaṣida* in *Cod. Pers. Monacensis*, No. 69, fol. 9 r—10 v; cf. also *Cod. Pers. Monac.*, No. 68, fol. 138 v). In one passage his belief in the Korān having existed from eternity (*kaḍīm*) appears (Brockhaus No. 686, Bait 119, which belongs to the last two years of the poet's life). Hāfiẓ breathed more freely when the relentless Mubārīz al-Dīn was deposed by his son Djalāl al-Dīn Shāh Shudjā' (1358) and the new government again allowed greater freedom for the free enjoyment of life. Hāfiẓ by this time was a notable literary figure. He had previously sung the praises of Mubārīz al-Dīn's vizier Burhān al-Dīn Faṭḥ Allāh and now lamented the death of the vizier Abū Naṣr Luṭf Allāh (died 29th Oct. 1359, *Cod. Pers. Monac.*, No. 67, fol. 135 v). It is therefore no cause for surprise that among Hāfiẓ's friends was the new vizier and former master of the mint Khwādja Kīwām al-Dīn Muḥammad b. 'Alī (1358-1359—26th August 1363), a man who steered the ship of state with dignity and great authority. When the minister was ultimately executed with great barbarity by his sovereign, he was lamented by Hāfiẓ (Brockhaus No. 605) although the latter is careful to avoid the wrath of the tyrant. Hāfiẓ was professor of Qur'ān exegesis

in a madrasa in Shīrāz (*Diwān-i Hāfiẓ*, ed. Calcutta 1791, 2nd introduction, p. 8) and tradition credits one of the two Kīwām al-Dīn's, either the above mentioned Kīwām al-Dīn Ḥasan or the minister Khwādja Kīwām al-Dīn Muḥammad with having given the appointment to Hāfiẓ.

Hāfiẓ excelled in the ghazal. He ultimately collected his ghazals into a *Diwān*, which he expanded by the addition of *kaṣidas* and other smaller poems, completing it in 770 (1368-1369) (ed. Calcutta 1791, text fol. 2 v, line 9). Now for the first time the poet's name became widely known beyond the bounds of his native town. The ruler of Hormuz (Tūrān-Shāh, according to Münedjdjim bāshī, *Ṣaḥā'if al-Akhhbār*, Turkish edition, iii. 23; for other accounts of the genealogy and order of succession see the much more reliable account of the great Portuguese historians João de Barros, *Decadas da Asia*, Vol. ii. 1, Lisbon 1559, fol. 15 v—17 v, and Conto, *Decadas da Asia*, tomo i. 1, Lisbon occidental 1876, p. 579—583) liberally showed his appreciation of the poet, while the Muzaffarid Nuṣrat al-Dīn Yahyā, the ruler of Yezd (from about 1358 to 1392), noted in his life-time as a miser, would hear nothing of the impecunious singer of Shīrāz (Brockhaus No. 577). In the reign of Mahmūd Shāh I. (1378—1397), a ruler of the Bahmānī dynasty of the Deccan, Hāfiẓ was invited to his court by his minister of justice; but Hāfiẓ did not in the end accept. The Ilkhān Aḥmad, himself a poet (cf. above s.v. AHMED WALAIR, i. 196^b *et seq.*), is also said to have invited Hāfiẓ to Baghdād. Hāfiẓ, who in his time had sung the praises of Aḥmad's father Sulṭān Uways (Brockhaus No. 204) cautiously declined the invitation of his bloodthirsty son.

He was deeply affected in 1383-1384, when he lost his "brother" Khwādja 'Adil at the age of 59 (Brockhaus No. 600). On the 9th October 1384 Sulṭān Shudjā' al-Dīn died; the period of Hāfiẓ's poetical activity lies practically within his reign. Hāfiẓ had often sung his praises and many anecdotes are related of their friendship. Before as well as after the latter's death Hāfiẓ was on remarkably good terms with the all-powerful vizier Djalāl al-Dīn Tūrānshāh (died 28th Aug. 1385; Brockhaus No. 602), who had once devotedly stood by Sulṭān Shāh Shudjā' and on his death had secured the succession for his son Zain al-'Ābidīn (1384—1387) against another claimant to the throne of Fārs. In December 1387, on the conclusion of his great campaign of conquest in Persia, Timūr came to Shīrāz and spent two months there. It is possible that on this occasion the celebrated dialogue about one of the poet's verses, alleged to have been held between him and Hāfiẓ, took place (cf. Brockhaus No. 8, 1). Towards the end of his life Hāfiẓ once more found a patron in the Muzaffarid Shāh Manṣūr who seized the province of Fārs shortly after Timūr's departure and was celebrated by Hāfiẓ more than any of his predecessors in a tone of most devoted affection. Hāfiẓ who seems to have filled an office at the court of Shāh Manṣūr (ed. Calcutta 1791, 2nd Introd., p. 8, l. 8) had need of patrons of high rank; for his property had long since slipped away from him, and too many, who professed to be his friends, did not hesitate to cavil at this grey haired old man bowed down by debts (Brockhaus No. 639; No. 418, Bait 10). In 791 (1389), perhaps however not till 733 (began 20th Dec. 1389), Hāfiẓ died in Shīrāz.

Hāfiz clung with touching affection to his native city of Shirāz, which he only rarely left and even then apparently only for short journeys. The story, however, that his travels abroad were confined to a journey to Yezd and the Persian Gulf seems to be a legend. He himself mentions his pilgrimage to the tomb of 'Alī al-Ridā in Meshhed (*Cod. Pers. Monac.*, N^o. 69, l. c.). Hāfiz never tires of singing the beauty of the women and boys of Shirāz, the charm of its river Ruknābād and the promenade of Muṣallā. He is buried on the latter in a beautiful tomb.

Hāfiz is the greatest writer of ghazals and the finest lyric poet that Persia has produced. He is restrained in his love-scenes and avoids the obscene. As a singer of the joys of wine he is unequalled by his predecessors or successors in the east. Of contemporary authors Hāfiz only mentions the panegyricist Salmān (Brockhaus, N^o. 612) and of the older poets Firdawsī. The general line of thought in his poems raises the question whether Hāfiz's untiring praise of love and wine is to be interpreted in the Shī'i fashion as a profession of Muslim Pantheism. Apart from occasional exceptions, the answer is in the negative. It is also said that Hāfiz belonged to a Dervish order (which?); but we have no reliable literary authority on this point.

A number of Hāfiz's poems particularly of the earlier period have certainly been lost. After his death, his friend Muḥammad Gul-andām collected the scattered poems, arranged them in the original *Diwān* and gave the whole a preface. This fact of the posthumous arrangement of the *Diwān* by a strange hand explains the numerous variations in the number, the order as well as the text of the poems in the manuscripts, a circumstance which moreover is of importance for selecting the contents of the original *Diwān* of the year 770 and completing the poet's biography. Relatively the most complete is the printed edition of Abū Ṭālib Khān (Calcutta 1791; 725 poems) but it is full of errors. The most carefully prepared from the point of view of textual criticism is that of Hermann Brockhaus, based on Südi's recension (Leipzig 1854—1863; 692 poems). Of commentaries four Persian and three Turkish are known with their authors' names (Ethé, *Grundr. d. iran. Phil.*, ii. 303, 304; cf. also Nos. 1142 and 1143 of the *Catalogue of the Hamidiye Library* in Constantinople, 1300 A. H.). The best of all the commentaries on Hāfiz is the Turkish of Südi (died 1591-1592), which has been often printed; he however omitted the few Shī'i poems of Hāfiz.

We possess three complete translations of the works of Hāfiz; two in German: 1 by Joseph von Hammer-Purgstall (2 vols., Stuttgart and Tübingen, 1812-1813) and 2 by Vincent Ritter von Rosenzweig-Schwannau (in 3 vols., Vienna 1858—1864) as well as 3 an English one by H. Wilberforce Clarke with valuable notes (3 vols., Calcutta 1891). Hāfiz has inspired Western literature in Goethe's *Westöstlicher Diwān* (1819) and in Friedrich Bodenstedt's *Die Lieder des Mirza Schaffy*.

Besides his poetical works Hāfiz left glosses on Zamakhshari's *Kashshūf* and on the *Mishbāḥ* (see *Diwān*, ed. Calcutta, 1791, p. 8).

AL-HĀFĪZ, the eleventh Fātimid Caliph, whose real name was Abū 'l-Maimūn (al-Maimūn) 'Abd al-Madjid. He was born about the year 467 = 1074 (there is no general agreement about the exact date) at Ascalon, whither his father, Abū 'l-Kāsim Muḥammad, a son of the Caliph al-Mustansir, had gone on account of the famine then raging in Egypt (Ibn al-Athir, x. 468). But it was not till late in life that he began to play an active part in politics. He was a comparatively old man when in 524 = 1130 al-Āmir [q. v., i. 328^b et seq.] fell a victim to the Assassins without leaving a male heir and he was elected regent as the prince with the nearest claim to the succession, under the name al-Hāfiz li-Dīn Allāh but not Caliph, as the imāmat could only descend from father to son according to the Shī'i views then prevailing and as the accouchement of al-Āmir's widow was shortly expected; in the end however she gave birth to a daughter. The new ruler had hardly taken up the reins of government when they were torn from him, when Abū 'Alī Aḥmad, son of al-Afḍal [q. v., i. 146], known as Kalifāt, rebelled against him with the support of the troops, overthrew the vizier appointed by al-Hāfiz and took over the office himself; he imprisoned the regent in the palace and having little regard for the legitimacy of the dynasty had prayers offered for the expected Imām and coins struck in his name. For a year he ruled supreme till 'Abd al-Madjid succeeded in putting him out of the way and ascending the throne as Caliph. His first vizier was the Armenian Yānis, who however soon seemed to be too powerful and was disposed of by poison after only three months of office. The Caliph now sought to govern the state alone — not unsuccessfully it appears — until the quarrels of his own sons, Ḥasan and Ḥaidara, shook his power to its very roots. The corps of *Djuyūshīya* took Ḥasan's side, while the *Raiḥāniya* championed his brother and after fierce fighting the latter were defeated. The arrogant attitude of Ḥasan, who was now practically omnipotent, and even treated his father in a most humiliating fashion, finally led to his fall and al-Hāfiz found himself forced, yielding to the clamour of the army, to have him poisoned by his Christian physician. The troops now effected the appointment of a new vizier, the Christian Armenian Bahrām, but he favoured his countrymen and fellow Christians too much, so that he was deposed after two years of office. With his exit closes the "Armenian period" of the later Fātimids which had begun with the rise of Badr al-Djamālī. He was followed by Ruḍwān, who however likewise soon quarrelled with al-Hāfiz, as he tried to arrogate all power to

himself and being himself a Sunnī also cast doubts on the genuineness of his claim to be Imām. At the same time the Caliph was enraged because the vizier, to win popularity with the people, repealed the market dues and thus deprived him of a source of revenue. Thus new turmoils arose in which Rūdwan was finally slain. In the next year, the aged Caliph died of acute colic — the beating of a drum made of seven metals at the culmination of each one of the seven planets is said to have given him relief — at the age of about 75 (Djumādā 544 = October 1149) in the midst of a period of mutiny and unrest. His reign already shows all the signs of the approaching end of the dynasty.

HĀFİZ-I ABRŪ, a Persian geographer and historian. His proper name was Shihāb al-Dīn 'Abd Allāh b. Luṭf Allāh b. 'Abd al-Rashīd al-Khawāfi (not Nūr al-Dīn Luṭf Allāh b. 'Abd Allāh al-Harawī, as is stated in European catalogues following an erroneous statement of 'Abd al-Razzāk Samarkandī). According to 'Abd al-Razzāk, he was born in Herāt and educated in Hamadān. From his own works we only learn that he was considered an expert chess player, was at Timūr's court and was on terms of personal intimacy with the sovereign himself and was able to write of the last campaigns and death of Timūr and probably of Shāhrukh's campaigns also as an eyewitness. In 817 = 1414-1415 he was commissioned by Shāhrukh to write a geographical compendium based on an Arabic manuscript (probably a copy of the Balkhī-Istakhārī), which had come into that monarch's possession. The work (its title is nowhere given) is divided into two volumes: Vol. I contains, besides a cosmographical introduction, a description of the various lands (generally following the direction W. to E.) from the Maghrib to Kermān; in the two last chapters (on Fārs and Kermān) the geographical description is followed by a compilation of the accounts of the political history of the districts concerned down to the author's time. The author intended to deal in much greater detail in the second volume with the geography and history of Khorāsān and Mā warā' al-Nahr (the chapter on Khorāsān alone exceeds in extent the whole first volume), but no complete copy of this volume has yet been discovered; the Codex Fraser 155 (in the Bodleian Library) ends with the geography of Mā warā' al-Nahr (the history is wanting), while the other manuscripts only contain the section on Khorāsān. The cosmographical introduction was written in 820 = 1417, Vol. I concluded in 822 = 1419, while in the second volume the date of its composition is given as the following year. By command of the same ruler, Hāfiz-i Abrū was in 820 = 1417 to combine in one work the most important chronicles of the world's history; to prepare himself for this task he had the Persian Ṭabarī, the greater part of the *Djāmī' al-Tawārīkh*

of Rashīd al-Dīn and the *Zafar-Nāma* of Nizām al-Dīn al-Shāmī copied word for word; Hāfiz-i Abrū himself only wrote the continuation of the *Djāmī' al-Tawārīkh* (from 703 = 1304 to the accession of Timūr) and of the *Zafar-Nāma* (events of the year 806 = 819 = 1403 = 1416) for this work. A complete copy is preserved in Constantinople (Dāmād Ibrāhīm Pāshā, N^o. 919). In 826 = 1423 Hāfiz-i Abrū began to write a history of the world in four volumes for prince Baisonghor (q. v., i. 596^b *et seq.*); the two first volumes (pre-Muslim history, history of the Prophet and Caliphs) and the second part of the fourth (history of Shāhrukh to 830 = 1427) have survived, the latter (certainly the most important part of the work) exists only in one very carelessly written manuscript (Elliot 422 in the Bodleian); 'Abd al-Razzāk gives most extracts from the lost portions (cf. i. 63^b *infra et seq.*). A Persian writer of modern times, Muḥammad Ḥasan Khān, claims to have a complete copy of the *Zubdat al-Tawārīkh* in his possession; but nothing has as yet been disclosed about this copy. In 828 = 1424-1425 Hāfiz-i Abrū by order of Shāhrukh published a new edition of the *Djāmī' al-Tawārīkh*; the portion of the work then considered lost was replaced by the first part of the *Zubdat al-Tawārīkh*. The composition of his history of the world was interrupted by the death of the author on the 3rd Shawwāl 833 = 25th June 1430. As a compiler Hāfiz-i Abrū incorporated much information in his work from writings which have since been lost; for the events and conditions of his time the pertinent sections of his work are an authority of the first rank. Cf. W. Barthold, *Hāfiz-i Abrū i igo Sochinieniya in al-Muṣaffariya*, St. Petersburg 1897, p. 1 *et seq.*; cf. also *Zapiski vost. otd. arkh. obsht.*, xviii. 0138 *et seq.*

(W. BARTHOLD.)

HĀFİZ AHMAD PASHA was the son of a mu'adhdhin native of Philippopolis. Owing to his rare accomplishments as a musician and a poet he was employed at the imperial Serai and became the confident (*muṣāḥhib*) of the Sultān. After quitting the court service he was appointed *doghāndji bashi*, and appointed Grand Admiral (*kaptan pasha*) 22th Shawwāl 1016 = 12th December 1607, but was dismissed in 1018. After this he became Governor-General (*beglerbeg*) of Damascus and remained there till 1027 (1618). Whilst he was there the first insurrection of the Druzes headed by Fakhr al-Dīn broke out and Hāfiz Ahmad Pasha specially distinguished himself at this period. He remained governor of several more Anatolian provinces, till we finally find him governor of Diyārbekir. In this office he managed to suppress the revolution headed by Bekir Şubashi, who had seized Baghdād, but he could not prevent Shāh 'Abbās from entering the city on the 28th November 1623. After the death of Çerkes Mehmed Pasha (died 18th Rabi' II 1034 = 28th January 1625) Hāfiz Ahmad Pasha became his successor as Grand Vizier; he was at the same time commander in chief of the Ottoman Army at war against Persia. In the following year he besieged Baghdād for 8 months (from the 12th Şafar to the beginning of Shawwāl 1035 = 13th November 1625—beginning of July 1626) but without success. Owing to his lack of success he was relieved of his functions and returned to Constantinople where he was made second Vizier of the Cupola. Though 60 years of age he now married a sister of the Sultān.

A few months after having been appointed Grand Vizier for a second time (29th Rabī' I 1041 = 25th October 1631) he was put to death in a most atrocious manner by mutinous Sipāhis (19th Redjeb 1041 = 10th February 1632) in the presence of the Sultān himself, who had in vain tried to rescue him. Historians and men of his time specially note his strength of will, his upright and generous character, qualities that raise him far above the other statesmen of his era; it must be confessed however that both as Grand Admiral and commander-in-chief he had nothing but defeats to report.

Bibliography: Besides the short biographical notices in Hādjdjī Khalifa, *Fadhlika*, ii. 148 *et seq.*, (on which Munedjdjimbashi, iii. 676 *et seq.*; 'Osmānzāde Ta'ib, *Hadiqat al-Wuzerā*, p. 73 *et seq.* is based) and in the *Sidri'l-i 'Osmāni*, ii. 98 (inexact in its dates), there should also be consulted the passages relating to the history of this period in the chronicles of Pečewi, Hādjdjī Khalifa (*Fadhlika*, *Tuhfat al-Kibār*) and Na'imā, and in von Hammer, *Geschichte des Osman. Reiches*, vol. v., and Zinkeisen, *Geschichte des Osman. Reiches*, vol. iv.; lastly Wüstenfeld, *Fachr-ed-din der Drusenfürst und seine Zeitgenossen*, §§ 50, 125–132, 142–148.

(J. H. MORDTMANN.)

HĀFĪZ AL-DĪN, protector of religion, an honorary title, borne, for example, by al-Nasafi [q. v.].

HĀFĪZ AL-MULK. [See HĀFĪZ RAḤMAT KHĀN.]

HĀFĪZ RAḤMAT KHĀN. During the latter part of the 17th century, and the first part of the 18th, extensive settlements of Afghāns were made in the fertile lands of the Ganges valley. In the troubled times which followed the death of Awrangzēb, and especially after the invasion of Nādir Shāh, these brave and turbulent settlers began to form states under successful leaders of their own race and were generally known by the name Rōhilla (properly Rōhilā) or Highlander, a western Pandjābi adjective from *rōh* "a hilly country"; and the territory lying between the Ganges and the Himālaya, now comprised mainly in the Bareilly Division of the United Provinces, obtained the name of Rōhilkhānd, although the intruders spread beyond its limits. Three families in particular stand out among these chiefs, the Barēč of Aōnla and Bareilly, the Bangash of Farrukhābād, and Nadjib Khān of Bidjānōr who was also connected with the Barēč. Among these Hāfiz Raḥmat Khān Barēč was perhaps the most important. He was the son of Shāh 'Ālam, a Barēč whose family, originally from Shōrāwak (now included in British Balōčistān) had settled first in Čāč Hazāra on the Indus, and afterwards in Hindustān. A slave of Shāh 'Ālam's (his son according to some writers) named Dā'ūd rose to a position of importance in the country of Katēhr (afterwards Rōhilkhānd), and was succeeded by his son (or adopted son) 'Alī Muḥammad, commonly believed to be by birth a Hindū Džāt. Shāh 'Ālam followed Dā'ūd to his new country and there Raḥmat Khān was born about 1120 (1708). Four years afterwards, probably at the beginning of Farrukhsiyar's reign, Shāh 'Ālam was murdered by Dā'ūd's orders, and Dā'ūd himself was killed soon afterwards. 'Alī Muḥammad continued to develop the new state, and after his services against the fallen Sayyids of Bārḥā at the siege of Džansath in 1150 (1737) he received the title

of *nawwāb*. Raḥmat Khān was now associated with him and by his ability and courage contributed to the increase of his dominions especially after Nādir Shāh's invasion. 'Alī Muḥammad was soon at enmity with Safdar Džang, Nawwāb of Awadh, whose influence in the Empire was now paramount, and in 1155 (1746) he was defeated and taken as a prisoner to Dihli. Raḥmat Khān however by a bold stroke suddenly appeared at the capital with all his forces at a moment when it was destitute of troops, and not only obtained the release of 'Alī Muḥammad but his appointment as Governor of Sirhind, so that when Aḥmad Shāh Durrāni invaded India in the following year he was in a position to recover his lost dominions. After the accession of the Emperor Aḥmad Shāh to the throne of Dihli in 1161 (1748) 'Alī Muḥammad made peace with Safdar Džang to whom Raḥmat Khān rendered important services in obtaining the post of Wazīr of the Empire. In this year 'Alī Muḥammad died having appointed Raḥmat Khān to be Hāfiz or Guardian of his sons, Dūndī Khān his cousin to be commander of the troops and other relations to other important posts. The elder sons 'Abd Allāh and Faiz Allāh were hostages with Aḥmad Shāh Durrāni, and the others were minors. Hāfiz Raḥmat Khān became the actual ruler, and continued so throughout his life, his recognition of the claims of 'Alī Muḥammad's family being little more than nominal. Safdar Džang soon resumed hostilities, as the Rōhilla states stood in the way of his ambitions. After failing in a direct attack on Hāfiz Raḥmat Khān he induced Kā'im Khān the Bangash Nawwāb of Farrukhābād to attack him, offering him the *Šūba* of Katēhr as a reward. Kā'im Khān however was defeated and slain at Badāōn, and Hāfiz Raḥmat Khān annexed that part of his dominions which lay north of the Ganges. Safdar Džang without any scruple immediately began to insult and plunder the family of his late ally, and the Rōhilla chiefs incensed at this (being nearly connected with the Bangash Pathāns) joined in the war. Hāfiz Raḥmat Khān himself was at first unwilling to take part in it, but did so after a force under Sa'd Allāh (a son of 'Alī Muḥammad) had been defeated. The Wazīr Safdar Džang was supported by a powerful Mahrātta army and by the Džāts, and the forces of the two Pathān States could not make head against them. Hāfiz Raḥmat Khān lost Aōnla and Morādābād and was forced back to Lāldhang in the Terai on the skirt of the Himālaya. The advance of Aḥmad Shāh Durrāni however in 1166 (1752) induced the Wazīr to make terms, Hāfiz Raḥmat Khān agreeing to pay tribute to him as ruler of Awadh, and also giving a bond for 50 lakhs of rupees to be paid to the Mahrāttas. Aḥmad Shāh insisted on the recognition of the rights of 'Alī Muḥammad's sons who were with him, and a partition of the territory was made, an arrangement which did not last long. Hāfiz Raḥmat Khān extended his rule over Pilibhit (renamed Hāfizābād by him), and this town with Bareilly becomes his principal residences. After his misfortunes he soon became more powerful than before. His adversary, Safdar Džang, who had lost the post of Wazīr, retired to his dominions in Awadh and died there in 1167 (1754). His son Shudjā' al-Dawla was for a time allied with Hāfiz Raḥmat Khān, and the two combined to resist the Mahrātta army which had been in-

stigated by the new Wazīr Ghāzī al-Dīn to attack the powerful Pathān leader, Nadjīb al-Dawla, in Bidjūr. After the murder of the Emperor 'Alam-gīr II. by Ghāzī al-Dīn, the Durrāni king again entered India, calling upon all Muḥammadan chiefs to combine in resisting the growing power of the Mahrāttas. HāfiẒ Raḥmat Khān contributed a large force, and his son 'Ināyat Khān and his cousin Dūndī Khān took part in the battle of Pānīpat 1174 (1760). In reward the conqueror assigned the Etāwā district in the Doāb to HāfiẒ Raḥmat Khān, but it was still held by the Mahrāttas and he had to conquer it for himself. The Awadh attacks on the Bangash chiefs of Farrukhabād soon recommenced, and Nadjīb al-Dawla, now Wazīr, was allied with Shudjā' al-Dawla in this enterprise, but HāfiẒ Raḥmat Khān took the side of Farrukhabād, and was able to prevent its accomplishment. In the following year however he allied himself with Shudjā' and Kāsim 'Alī Khān of Bengal against the English, taking part in the attack on Patna and the battle of Buxar (Baksar). After his defeat the Nawwāb of Awadh found a refuge with HāfiẒ Raḥmat Khān at Bareilly, and after his further defeat at Kōrā he made terms with the English, but no attempt was made to interfere with HāfiẒ Raḥmat Khān whose prosperity continued for some years longer, although the Mahrātta danger was never absent. His administration was good and he was especially praised for his abolition of transit duties. His position was however precarious, and no reliance could be placed on any treaty or alliance among the rulers of that period. Nadjīb al-Dawla in 1184 (1771) joined with the Mahrāttas in attacking him and the Farrukhabād State, and HāfiẒ Raḥmat Khān was not able to retain his late acquisition of Etāwā. His son 'Ināyat Khān rebelled against him at this period, and died soon after.

The death of his cousin Dūndī Khān was a blow to him, and the death of Nadjīb al-Dawla made matters worse, as his son Zābiṭa Khān to save himself became an agent of the all-powerful Mahrāttas. To understand the events that followed, the universal terror inspired by the Mahrātta power must be realized. The English East India Company considered that the best course to prevent the whole of Northern India falling into the hands of this race was to establish a strong Muḥammadan State capable of resisting their perpetual raids, the Empire of Dihlī having ceased to fulfil this function, and the State of Awadh under the Nawwāb Shudjā' al-Dawla was the only one likely to develop the necessary power. HāfiẒ Raḥmat Khān to promote this object bound himself to pay 40 lakhs of rupees to the Nawwāb to be used against the Mahrāttas. This agreement was made in the presence of the British General, and by the joint efforts of the allies the Mahrāttas were for the time repulsed. HāfiẒ Raḥmat Khān, however, did not pay the stipulated sum, and the dispute speedily developed into war in which the Awadh army was assisted by a British force. Some of the Rōhillas condemned their leader's action, especially Faiz Allāh Khān, son of 'Alī Muḥammad, and the sons of Dūndī Khān took no part in the war. The Awadh army and the British forces after expelling the Mahrāttas from Etāwā invaded Rōhil-khand. HāfiẒ Raḥmat Khān met them at Mirānpūr Katrā, but was defeated and killed in the battle 1188 (1774). His territories with the exception

of Rāmpūr were annexed to Awādh, and Rāmpūr was given to Faiz Allāh Khān, and continues to the present day to be ruled by his descendants.

The stories of wholesale desolation of the province which were circulated at the time by the opponents of the Governor General, Warren Hastings, are void of foundation: the mass of the population was unaffected by the change of masters, and Musta'djab Khān, son of HāfiẒ Raḥmat Khān, in the Gulistan-i Raḥmat, gives no countenance to such charges. The whole subject has been fully dealt with by Strachey.

F., London 1831); Sa'adat Yār Khān, *Gul-i Raḥmat* (trans. in Elliott and Dowson, *Hist. of India*, London 1877, vol. VIII); Francklin, *Reign of Shah Aulum* (London 1798); Mill and Wilson, *Hist. of India*, 5th ed. (London 1858), vol. III; Keene, *Fall of the Mogul Empire* (London 1887); Nevill, *Gazetteer of Bareilly* (Allahabad 1911); *Imperial Gazetteer of India*, Calcutta 1908 (Provincial Series, United Provinces and Oudh., vol. 1); Strachey, *Hastings and the Rohilla War* (Oxford 1892); Hamilton, *History of the Rohilla Afghans* (London 1787).

(M. LONGWORTH DAMES.)

HĀFIẒĀBĀD. Town in the District of Guḍj-rānwala, Panḍjāb 32.4 N., 73.41 E. Founded by HāfiẒ, a favourite of Akbar, and mentioned in the *Ā'in-i Akbarī*, as the chief town of a Maḥāl. Formerly the Tahsil of HāfiẒābād was entirely in Guḍj-rānwala, now partly in Dīhang. The dry tracts are now irrigated from the Čināb canal, and there is also a fertile moist belt near the river.

Bibliography: *Ā'in-i Akbarī*, trans. Blochmann (Calcutta 1873); *Imperial Gaz. of India*, vol. XIII.

(M. LONGWORTH DAMES.)

HAFRAK, a district in Fārs, in the plain at the confluence of the Pulwar Rūd and the Kurr. It is only mentioned by Ḥamd Allāh al-Mustawfi (Le Strange, p. 66 and 113) and seems to be unknown to the older Arab geographers. At one time it was sought to recognise in it "Hapirak", the name of a district derived from the name of the Elamite people Ha-pir-ti. This was in the first place geographically very unsuitable, but it is now quite untenable, since V. Scheil has shown that the character "pir" in the name Ha-pir-ti is also transliterated "ta-am" and the Elamite name of the Elamites is to be read "Hatamti" and not Hapirti, cf. Scheil, *Or. Lit. Zeit.*, viii. (1905), 203 and 250 *et seq.*; *Déleg. en Perse Mém.*, Vol. ii. n. xciii. and xcvi. (1911); Weissbach, *Keilinschr. d. Achaem.*, in *Vord. As. Bibl.* (1911), p. 143; *Zeitschr. d. Deutsch. Morgenl. Ges.*, lxxvii. (1913), 292 *et seq.*; Nöldeke in *Grundr. d. iran. Phil.*, ii. 540. Hafrak is not identical with the district and town of the same name of Khabr, the modern Khafr (south of Sarwistān, west of Fasā) on the map compiled by Ḥadjdji Mirzā Saiyid Ḥasan al-Shīrāzi. From the Arabic Khabr and the modern Khafr the original name may be supposed to have been Khapr. The etymology of the name may therefore be connected with Hafrak.

(E. HERZFELD.)

HAFS B. SULAIMĀN. [See ABŪ SALAMA, i. 106].

HAFṢ AL-FARD, ABŪ 'AMR or ABŪ YAḤYĀ, an Arab theologian, according to the *Fihrist*, p. 180, was a native of Egypt and went to Baghdād

where he became a pupil of the Mu'tazilī theologian Abū Iḥdhal [q. v.]. According to another account (in al-Murtaḍā, *Ithāf al-Sāda*, ii. 47) he had previously studied under the ḳāḍī Abū Yūsuf and afterwards went over to the Mu'tazilis. He had many disputations with the Imām al-Shāfi'ī, who had little good to say of him and his *kalām* and called him *Munfarid* ("isolated, solitary" instead of Fard). (See H. Bauer, *Die Dogmatik al-Ghazālī's*, p. 19). But he is said to have afterwards returned to orthodoxy, as did al-Ash'arī after him, and to have professed the *ḵalḵ al-af'al* (that man's actions are caused by God). The *Fihrist* (and al-Shahristānī also) numbers him with Nadjdār to the *Mudjabbir* school (absolute determinism) and quotes six works by him, including one against the Mu'tazilis and another against the Christians. Cf. also Horten, *Die philos. Systeme der spek. Theologen*, p. 499, and the literature given there.

(H. BAUER.)

ḤAFṢA, daughter of the Caliph 'Omar and wife of the Prophet. She had first married the Ḳuraishī Ḳhunaīs b. Iḥdhāfa, who had died childless in Medina soon after the battle of Badr. She must then have been about 20 years of age. Muḥammad, who wished to secure 'Omar's co-operation, married her after the "day" of Uḥud. She was once repudiated, it is not known on what grounds, but was restored to favour by divine command in consideration of her Muslim virtues, i. e. her devotion to prayer and fasting. In reality the Prophet feared to estrange 'Omar. In Muḥammad's ḥarīm Ḥafṣa took the side of 'Ā'isha against his other wives and threw her whole influence into the service of the "triumvirate" i. e. the party, which was endeavouring to secure the succession to Muḥammad for Abū Bakr and 'Omar. Like the other wives she received her share in the booty of Ḳhaibar and on Muḥammad's death an annual revenue which was entered in the Diwān and amounted to about 10,000 dirhems. On the whole, even in her father's Caliphate, she played a very modest part in striking contrast to the versatile 'Ā'isha. On the occasion of the *ḥukūma*, of the "judgment" of Adhruḥ [q. v.] Ḥafṣa induced her brother, the insignificant 'Abd Allāh, to appear as a claimant to the Caliphate. She is agreed to have died in 45 in the reign of Marwān b. al-Ḥakam aged about 60. Her marriage with Muḥammad was a childless one.

ḤAFṢIDS, a Berber dynasty of northern Africa, which ruled Ifriḳiya for over three centuries (626-981 = 1228-1574). It took its name from Shaikh Abū Ḥafṣ 'Omar, chief of the Hintāta, one of the first disciples of Ibn Tūmart and one of 'Abd al-Mu'min's most faithful lieutenants. [Cf. the article **ALMOHADS**, i. 317^b]. His descendants enjoyed such esteem that, according to Ibn Khaldūn, they alternated with the descendants of 'Abd al-Mu'min as governors of Spain, the Maghrib and Ifriḳiya. It thus came about that Abū Mu-

ḥammad b. Abī Ḥafṣ was appointed governor of Ifriḳiya by the Caliph al-Nāṣir in 603 = 1207. He won great successes over Ibn Ghāniya (q. v., i. p. 285^b et seq.) and retained his command till his death in 618 = 1221-1222. His son Abū Zaid chosen to succeed him by the Almohad chiefs in Tunis was dismissed, then replaced in office; lastly two of his other sons Abū Muḥammad 'Abd Allāh and Abū Zakariyā were given office by the Caliph al-Ādil, the first being appointed governor of Ifriḳiya and the second of Gabes.

Up till then the Ḥafṣids had remained subject to the authority of the Almohads. Abū Zakariyā cast it off and founded an independent dynasty. Appointed governor of Ifriḳiya by al-Ma'mūn in place of his brother, who had refused to recognise this caliph, he installed himself in Tunis (1228). Soon afterwards, giving the violent deeds and heterodox innovations of the Caliph as his reason, he left his name out of public prayer and himself took the title of Emir. In 634 = 1236-1237 he finally had prayers read in his own name. Successful expeditions won him Constantine, Bougie and Algiers. The Huwāra, who had risen, were severely punished, Tlemcen taken (639 = 1242) and Yaghmorāsen forced to pay tribute. The Marinids and the people of Miknāsa likewise recognised the suzerainty of the Emir of Tunis, whose sway now extended from Tripoli to Ceuta and Tangier and from the Mediterranean to the Zāb and Sidjilmāsa. Valencia, Murcia, Seville, Xeres and Tarifa, being threatened by the Christians, summoned him to their help and placed themselves under his rule. When he died at Bōne in 647 = 1249, he was rightly regarded as the most powerful ruler in Muslim Africa.

The reign of his son and successor Abū 'Abd Allāh al-Mustanṣir billāh (647-675 = 1249-1277) was not less brilliant. Emerging victorious from the rebellions raised against him by his cousin al-Lihyānī, by the Arabs Riyāh, Dawāwida etc., he succeeded in maintaining Ḥafṣid authority throughout the Central Maghrib. In 1270 he successfully resisted the expedition sent against Tunis by St. Louis and Charles of Anjou. His fame spread far and wide. At his court assembled the envoys of the Marinids, ambassadors from the King of Kānem and also Christian princes, who had sought refuge there and who took part in the expeditions into the Maghrib by the side of Muslim chiefs. While Abū Zakariyā had been content with the title emir, al-Mustanṣir took that of Caliph and Amir al-Mu'minīn. After the capture of Baghdād by the Tatars (1258) he actually had a diploma granted him by the Grand Sharif of Mecca designating him the heir to the 'Abbāsīd Caliphate.

The foundation of the Ḥafṣid empire assured Ifriḳiya some years of real prosperity and made Tunis not only the political capital but also the political and intellectual centre of the whole country [cf. **TUNIS**]. The two first rulers of the dynasty erected numerous buildings there (palaces, mosques, zāwiyas, aqueducts and libraries). They attracted poets and scholars from all parts of the Muslim world, notably from Andalusia. The friendly relations which they maintained with the Christians, gave a new impetus to commerce between Europe and Africa. Treaties were concluded with Frederick II. of Sicily (1231), with Marseilles, Pisa (1234) and Venice and renewed in the reign of al-Mustanṣir.

This brilliant epoch was followed by one of disorder and anarchy. Al-Wāṭḥik, al-Mustansir's successor, was deposed by his uncle Abū Ishāk (678 = 1279); the latter driven from his capital by the usurper, Ibn Abū 'Amara, was slain near Bougie in 682 = 1283. The Ḥafsid empire itself soon became divided into two kingdoms: that of Tunis, where Abū Ḥafṣ ruled, and that of Bougie (q. v., i. 766 *et seq.*) held by Abū Zakariyā (683 = 1284). After twenty-three years of internecine warfare, in which the Arab tribes of Ifrikiya, and the Central Maghrib and the 'Abd al-Wādis of Tlemcen joined, peace was finally restored. An agreement concluded between the king of Tunis, Abū 'Asida Muḥammad b. al-Wāṭḥik, and Abu 'l-Bakā', Sultān of Bougie, stipulated that the whole empire should fall to one of them on the decease of the other. Abu 'l-Bakā' was thus able to restore Ḥafsid unity to his own advantage but only for a short time, for in 1311, Abū Zakariyā b. al-Liḥyānī, a Ḥafsid prince, seized Tunis and slew Abu 'l-Bakā', while another claimant, Abū Yahyā, set himself up in Bougie. In 718 = 1318, however, Abū Yahyā succeeded in regaining Tunis and reunited Ifrikiya and Central Maghrib under his sway. His position still remained very precarious however. Forced to fight the Kawb and other Sulaimī tribes allied with the 'Abd al-Wādis, as well as Abū Dorba, the ex-Sultān of Tunis, Abū Yahyā was driven from his capital on four occasions. He finally overcame his adversaries with the support of the Marīnids, with whom he contracted a close alliance. A Ḥafsid princess married Abu 'l-Ḥasan, son of al-Sa'id, Sultān of Fās. By the end of his reign, Abū Yahyā had succeeded in restoring order in Ifrikiya; he had reduced to obedience the towns of the Djarid, which, taking advantage of the disorder had constituted themselves independent principalities, and, although Tripolitania slipped from him, he at least succeeded in regaining Djarba, which the Christians had seized at the end of the preceding century (cf. DJARBA, BILAD AL-DJARID).

On his death in 747 = 1346, disorder broke out once more. The massacre of the Ḥafsid princes by Abū Ḥafṣ, who had usurped the power to the detriment of the legitimate heir Abu 'l-'Abbās, provoked Marīnid intervention. Sultān al-Ḥasan advanced on Ifrikiya, occupied Constantine and Bougie and entered Tunis, which had been abandoned by Abū Ḥafṣ (748 = 1347). But being defeated in the following year near Qairawān by rebel Arabs, and recalled to his own country by the rebellion of his son Abū 'Inān, the Marīnid Sultān could not retain his conquests. Ḥafsid princes re-established themselves in Bougie, Bōne and Constantine. One of them, al-Faql, even re-entered Tunis, but fell a victim to a plot led by his vizier Ibn Tāfarādīn. The Marīnids besides were again able to invade the Ḥafsid kingdom. Abū 'Inān seized Bougie in 1353, Constantine, Bōne and Tunis in 1357 (758), but when he attempted to check the excesses of the Arabs, who only saw in these wars a pretext for devastation and plunder, he found himself abandoned by his army and had to evacuate Ifrikiya. The Ḥafsid Abū Ishāk II. seized the opportunity to re-enter Tunis.

The situation of the kingdom nevertheless was still deplorable; anarchy continued. Three princes were reigning simultaneously, Abū Ishāk II. at Tunis, Abū 'Abd Allāh at Bougie, Abu 'l-'Abbās

at Constantine. The latter finally remained sole ruler (770 = 1368-1369). He, endeavouring during his reign to restore peace and order, placed a curb on the turbulence of the Arabs, forced the *Shaiḥs* of the Djarid, Gafsa and Gabes to submit to him. This restoration of Ḥafsid power continued in the reign of his son Abū Fāris 'Azīz (796 = 837 = 1393-1434), who held the balance of power in the Maghrib. He was thus able to intervene at Tlemcen, first in favour of the pretender Abū 'Abd Allāh against the Sultān 'Abd al-Malik, and again in favour of 'Abd al-Malik himself. After the death of this king he seized Tlemcen and placed a Zaiyānī prince on the throne, who recognised the suzerainty of Tunis (1431). Reviving the tradition of his ancestors, Abū Fāris was a literary ruler and friend of the arts. Al-Qairawānī gives a long list of all kinds of buildings (mosques, *zāwiyas*, schools, libraries and hospitals), built under his auspices.

His successors, Abū 'Omar Othmān (834-893 = 1434-1488), Abū Zakariyā Yahyā (893-899 = 1488-1494), Abū 'Abd Allāh Muḥammad (899-932 = 1494-1526), patrons of literature but lacking vigour, allowed the Ḥafsid power once more to decline. By the end of the xvth century Constantine, Bōne and Bougie had regained their independence; Tripoli, Gabes and the townships of the Djarid had constituted themselves republics, and the Arab tribes of the interior refused allegiance to the Sultāns of Tunis.

During this period the Ḥafsid sovereigns observed a policy towards Christians identical with that of their predecessors. The treaties of commerce concluded in the xiiith century with the Genoese and Pisans were renewed in the xivth, others were concluded with Aragon, Majorca, Montpellier, Venice and Florence. Tunis, Bōne, Bougie, Sfax, Gabes and Djarba had *funduqs* (q. v., ii. 117b) where Christian merchants stored their goods. But the acts of aggression committed by Christian powers (occupation of Djarba, attack on Mehdiya etc.), on the one hand, and the increase of piracy on the African coast from the last years of the xivth century on the other, rendered friendly relations more and more difficult to maintain. The ports of the Ḥafsid kingdom became the regular refuge of the corsairs; the kingdom thus found itself exposed to the reprisals of the Spaniards, when they thought of establishing themselves on the most important points of the African coast.

They were, however, anticipated by the Turks. In 1534 *Khairaddin* [v. *Khair al-Dīn*], in response to an appeal by a Ḥafsid prince, who had escaped the massacre of his brothers by Mūlay Ḥasan, successor of Abū 'Abd Allāh Muḥammad, seized Tunis. Mūlay Ḥasan was able, however, through the support of Charles V., who took Tunis in 1535, to regain possession of his kingdom, but he had to pay tribute to Spain; he was moreover only able to maintain his position in his capital with the help of the Spanish garrison of La Goulette. With the exception of a narrow strip of land between Tunis and Bizerta, the whole of Tunisia slipped from his rule. He was finally dethroned and blinded by his son Aḥmad Sultān (1542). This ruler retained the reins of power till 1569, when Euldj 'Alī took Tunis to prevent the Spaniards using the town as a base of operations against the Turks. As a result of the victorious expedition of Don John of Austria the

Ḥafṣids regained the throne for the last time in 1573, but the next year Sinān Pasha took Tunis and La Goulette (981 = 1574). The last representative of the Ḥafṣids, Muḥayyid al-Muḥammad was led captive to Constantinople and the Turks definitely established themselves in Tunisia.

ḤAID (A.) menstruation. Even in pre-Muḥammadan times the menstruating (*ḥā'id*), other terms in Wellhausen, *Reste arab. Heidentums*, p. 170, note 6) could not take part in feasts and sacrifices and this remained the case in Islām. During this period a woman is ritually impure, may not perform the ṣalāt nor the ṭawāf, nor fast, nor touch a Qur'ān, nor repeat a verse from it nor enter a mosque. Cf. Juynboll, *Handbuch des Islām. Gesetze*, p. 174 *et seq.* She only becomes ritually pure again on the completion of her courses after a major ablution (*ghusl*, q. v., ii. 167^a). According to Qur'ān, ii. 222, sexual intercourse with her during this period is forbidden, but it does not, like the Jewish law (Lev. xv. 19 *et seq.*), prescribe seven days' separation.

ḤAIDAR, one of the names of the lion in Arabic, which was given him on account of the strength of his neck and forepaws (*Lisān al-'Arab*, v. 246). 'Alī's mother first of all gave him the name *Asad* after her father; she herself was called Fāṭima bint Asad; but when Abū Ṭālib returned from his journey he gave him the name 'Alī. In some poems ascribed to him he gives himself the name *Ḥaidara*, but Ibn Mukarram thinks this is only to suit the metre; nevertheless *Ḥaidar* is supported by a poem, which Ibn Abī Maiyās al-Murādī, of the same tribe as his murderer, composed on the occasion of his death (Tabari, *Annales*, i. 3466, 14). (CL. HUART.)

ḤAIDAR (SHAIKH ḤAIDAR), son of the Ṣafawī Shaikh Djunaid of Ardabil (grandfather of Ismā'il Shāh) and of Khadīdja Begam, Uzun Ḥasan's sister. On the death of his father, who was killed by an arrow in a battle against Khalil, Sultān of Shirwān (shortly before 860 = 1456) he was recognised as his successor by his followers. His uncle Uzun Ḥasan gave him his daughter Ḥalima Begam, who was called 'Ālam Shāh, to wife. She became the mother of Sultān 'Alī, Saiyid Ibrāhīm and Shāh Ismā'il. When Uzun Ḥasan

died, Ḥaidar collected his retainers ostensibly for a raid into Georgia, in reality however to wreak vengeance on Shirwān; but the ruler of this land, Farrukh Yasār, supported by his son-in-law, Ya'qūb Beg, offered a stubborn defence; Ḥaidar fell in battle at the head of his army in 898 = 1488. He wore a scarlet turban with twelve peaks, according to the story, on account of an appearance of Alī to him in a dream; whence the name *Tādji Ḥaidari*, which was given to this headgear, which he also prescribed for his followers. It is from this that the Turkish term *kızıl-bāsh* (redhead), applied to the Persians of the Ṣafawī period, is derived. This story, however, may be entirely an invention to give the name *kızıl-bāsh* an honourable origin (Noldeke).

Soc.*, April 1896, p. 253); Johannes Rota Physicus, *Vita, costumi e statura de' Sofi* (Venice, s.d.), p. 1; Caterino Zeno, *Commentarii del Viaggio in Persia*, Venice 1557; Munedjimbashi, *Ta'rikh*, iii. 181; Schefer, *Chrestomathie persane*, ii. 76. (CL. HUART.)

ḤAIDAR B. 'ALĪ ḤUSAINI RAZĪ, a Persian historian, author of the *Ta'rikh-i Ḥaidari*, begun in 1020 = 1611-1612 and concluded in 1028 = 1618-1619, when the author was 35 years of age; cf. Pertsch, *Verzeichniss* etc., Berlin, N^o. 418 (p. 408 *et seq.*); Ch. Rieu, *Supplement to the Persian Catalogue*, p. 20 *et seq.* The author himself gave no title to the work and did not dedicate it to any ruler; this fact as well as its explanation in the preface shows, as Pertsch remarks, "a sense of independence remarkable in an Oriental". The arrangement of events is also peculiar in that it is not chronological but geographical; the work is divided into five parts (*bāb*), each of which is devoted to a separate area: 1. The Arab world; 2. The Persian world; 3. Central and Eastern Asia; 4. The West; 5. India. The chronological order is observed only within each *bāb*. The first volume which is devoted to the "Prophets, Caliphs and Sultāns" was to be followed by a second on "philosophers, scholars and poets". Rieu's assertion that the work contains "no original matter" but can only be described as a "comprehensive and useful compilation of standard historical works" does not quite agree with the facts; the narrative is frequently brought down to the author's time and therefore contains much information which could not have been taken from written sources. The preface was published by Wilken (*Mirchondi Historia Gasnevidarum*, p. xii. *et seq.*). The three chapters given by Ch. Schefer as an appendix to his edition of the *Ta'rikh-i Narshakhi* (p. 230 *et seq.*) from what he calls an anonymous "*Madjma' al-Tawārikh*" composed towards the end of the xviith century" are in reality taken from the *Ta'rikh-i Ḥaidari*. No details of the MS. are given by Schefer; it is therefore not known whether it is identical with one of the two mentioned by Blochet (*Catalogue de la Collection... formée par Ch. Schefer*, p. 69, N^o. 1330-1331) *Madjma' al-Tawārikh* (sic), which are said to contain a "history of the Mongols down to Shāh Tahmasp" (sic) or with a manuscript in the British Museum; in the latter the author's name is certainly not mentioned and the work has been given the title *Madjma' al-Tawārikh* by the first owner of the

manuscript. Cf. also Elliot, *History of India*, vi. 574; W. Barthold, *Turkestan*, ii. 37 *et seq.*

(W. BARTHOLD.)

HAIDAR 'ALĪ KHĀN BAHĀDUR, founder of the short-lived Muhammadan dynasty of Maisūr, was born in 1722, the son of Fath Muhammad Khān, a soldier of fortune, and a Navāyat lady. He first distinguished himself at the siege of Devanhalli, captured in 1749 for the rājā of Maisūr by his minister Nandjarādī, and was rewarded with the command of 50 horse and 200 foot. His advancement was rapid and he soon became *favūjdār* of Dindigul and *djāgīrdār* of Bangalor. He gained great credit by the success of his operations against the Marāṭhas in 1759 and was saluted as Fath Haidar Bahādur. He enriched himself by indiscriminate plunder and speculation and by the enforcement of the most extravagant demands against the state which he served. He was instrumental in degrading his former patron, Nandjarādī, and after this service added four districts to his fiefs, which already included more than half of the Maisūr state. In 1760, when Haidar had sent most of his troops to assist the French against the British the rājā's party made a determined attempt to rid the state of a servant who had become its master. Haidar was defeated by Khānde Rāwa who had succeeded Nandjarādī as minister, and reduced to great straits, but by means of strenuous exertions and the expedient of enlisting the assistance of Nandjarādī, whom he afterwards ignored, succeeded in making himself stronger than ever, and imprisoned Khānde Rāwa in an iron cage. Haidar was now the real ruler of the state of Maisūr and it was only from policy that he retained the rājā as a pageant. On his death he formally acknowledged his son, but kept him in confinement. Haidar now coined money in his own name and extended his dominions westward to the coast, where he established an arsenal, but, having encroached on some districts claimed by the Nizām and the Marāṭhas, was involved in hostilities. Though defeated by the Marāṭhas he contrived to retain his conquests, and when the allies invaded his territory he bribed the Nizām to join him against the British. He and the Nizām were defeated and the British compelled the latter to enter into an alliance with them. In 1769 the British made peace with Haidar but during the next thirteen years he was frequently at war with them, in alliance with the French, and died in camp near Arkāt in Dec. 7, 1782, while invading British territory. He was succeeded by his son Tipū.

(T. W. HAIG.)

HAIDAR-MĪRZĀ, a Persian historian, author of the *Ta'rikh-i Rashidi*, born in 905 = 1499-1500, died in 958 = 1551. On his descent cf. the article DUGHĪLĀT (i. 1079 *et seq.*); through his mother he was a grandson of the Čaghatāi Khān Yūnus and a cousin of Bābur. Most of our knowledge of his life is gleaned from his own work; Bābur (ed. Beveridge, p. 11) devotes a few lines to him; the Indian historians Abu 'l-Faḍl and Firishṭa give some information about his later years. His real name was Muḥammad Haidar; as he himself says, he was known as Mīrzā Haidar; Bābur calls him Haidar Mīrzā.

After the assassination of his father (914 = 1508) he had to flee from Bukhārā via Badakhshān to Kābul, which he reached in 915 = 1509. Received like a son by Bābur, he took part in the victorious campaigns against the Uzbeks and in the reconquest of Bukhārā and Samarḳand, but abandoned his benefactor in the black year 918 = 1512, betook himself to Farghāna to the Mongol prince Sa'id Khān, received from him the title Gurgān (son-in-law) and went with him to Kāshghar and Yār-kand. In the Mongol empire as restored by Sa'id Khān he held a prominent position; by the Khān's orders he carried out several campaigns to distant lands like Badakhshān, Kāfiristān, Ladak and Tibet. On the Khān's death in 939 = 1533 and the accession of his successor 'Abd al-Rashid, who was no friend of the house of Dughlāt, Haidar Mīrzā had to leave the country and go over to the Timūrids, against whom he had fought as recently as 936 = 1529-1530 in Badakhshān. In 948 = 1541 he succeeded in conquering Kashmīr and founding a practically independent kingdom for himself there, although his coins were struck first in the name of the native prince Nāzuk Shāh and later in the name of the Emperor Humāyūn; in 958 = 1551 he was slain during a rising of the native population.

It was while ruler of Kashmīr that Haidar composed his work which was called after his former sovereign 'Abd al-Rashid. The second part, which describes the vicissitudes of the author's life and the events of his time, was written as early as 948-950 = 1541-1544, the first (history of the house of Čaghatāi from the accession of Khān Tughluḳ Timur in 748 = 1347-1348) not till later (951-953 = 1541-1544). As Bābur testifies, the author had received a good literary training, and this is also apparent in his work; the book had a great success not only among Haidar's compatriots (it was twice translated into Eastern Turki) but in other countries also (India, Turkestan and Persia) and was used as an authority by all later geographers and historians who have discussed the events of the xth = xvth century. The historical narrative as well as the geographical sections inserted in it (descriptions of various provinces, towns etc.) give a wonderful picture of the conditions of his time. In Russia extensive excerpts from the *Ta'rikh-i Rashidi* have been published, in particular by Weljaminev-Zernow (*Izvestiia o kasimovskikh carakh i carevichakh*, ii. 130 *et seq.*) and Salemann (*Mélanges Asiatiques*, ix. 321 *et seq.*) while an excellent English edition has been prepared by N. Elias (*The Ta'rikh-i Rashidi of Mīrzā Muḥammad Haidar Dughlāt*, an English version edited by N. Elias, the translation by E. Denison Ross, London 1895; cf. the review by W. Barthold in *Zapiski vost. otd. arkh. obšč.*, x. 215 *et seq.*). No complete edition of the text has yet been published. Cf. also Elliot, *History of India*, v. 127 *et seq.* (W. BARTHOLD.)

HAIDARĀBĀD, now the capital of the Nizām's dominions in the Dakhan, was founded in 1590 by Muḥammad Ḳulī Ḳuṭb Shāh, fifth king of the Ḳuṭb Shāhī dynasty of Golkonda, who at first named it Bhāgnagar after his favourite Hindū mistress Bhāgmātī, but afterwards, regretting his infatuation, changed its name to Haidarābād, the city of Haidar, or 'Alī. In 1591 he made it his capital and it remained the capital of the kingdom until the extinction of his dynasty in 1687.

Ḥaidarābād then became the chief town of a ṣubah of the Mughal empire and in 1724 passed into the possession of Āṣaf Khān (Āṣaf Dīh, Nizām al-Mulk) who made himself viceroy of the Dakhan and established his virtual independence of Dihlī by defeating Mubārīz Khān at Shākarkhelda, renamed Fathkhelda by the victor, in Berār. The principal buildings in Ḥaidarābād are the *Ār Nimār*, a large building originally designed as a college but now a central police station, the *Djāmi' Masdjīd*, built by Muḥammad Kulī, the *Ār Kamān*, a market place, and the *Mukkah Masdjīd*, a magnificent mosque founded by Muḥammad, sixth king of the Kutb Shāhi dynasty, but left unfinished until after the capture of the city in 1687 by Awrangzib, who completed it.

HAIDARĀBĀD (Sindh). The name of a town and district in the province of Sindh. The district lies between lat. 24° 13' and 27° 14' N. and long. 67° 52' and 69° 22' E. It has an area of 8291 sq. m., and a population of 989,030 of which 75 per cent are Musalmans, chiefly Balōḥ and Sindhis of Rādjpūt and Dīāt origin, of whom the Sammā and Somrā are the principal. There are also many persons claiming Arab descent. The Hindū population is concentrated in the towns. The Balōḥes have been to some extent naturalized and have mostly lost their original language. The Indus bounds the district to the W, and it extends eastwards to the dry tracts of Thar and Pārkar and southwards to the Rann of Kāth. The soil is barren except near the Indus where it is irrigated by the Jamrāo and Naṣrat canals.

The city of Ḥaidarābād is of modern origin. Under the Mughal Emperors Thatta was the capital of the ṣubah of Sindh. Ḥaidarābād was founded in the middle of the eighteenth century by Ghulām Shāh Kalhōra, and soon after his death the Kalhōras were superseded by the Tālpur Balōḥes, whose Amirs made Ḥaidarābād their capital. They continued to rule there until 1843 when Sindh was annexed to British India after the battle of Miāni. The capital was transferred to the port of Karāḥi, and Ḥaidarābād lost the importance it had obtained as the seat of government.

HAIFA, a port at the foot of Mount Carmel. The name is not found in the Old Testament and is first found as Ḥōḥ in Eusebius and as Haifa in the Talmud. After the Arab conquest of Palestine Haifa, which was overshadowed by Akka, did not play an important part and it is not till the middle of the xith century that we have a brief description of it by Nāṣir Khusrāw, who mentions the many palm-groves and the large barques built by its inhabitants. In 1100 the town was taken by the Crusaders and attained some importance, as is clear from Idrisi's account of it, during the Frankish period as the harbour for Tiberias and a good anchorage. But by 1177 Salāḥ al-Dīn regained it for Islām. In modern times Haifa has risen at the expense of Akka as

a place of call for steamers and terminus of the railway. The modern town does not occupy the site of the ancient Haifa but lies to the east of it.

ḤĀIK (ḤĀ'IK), a piece of cloth of rectangular form, on the average about ten yards long and three broad, which is worn as a garment by men and women in North Africa. Doutté distinguishes: "1. the *ḥaik* for men, made of wool, which is worn alone or also as the principal garment; it is more frequently called *ksā* than *ḥaik*; 2. the over-*ḥaik* of silk or fine wool, which townspeople wear over their other garments; it is worn more for decorative purposes and is likewise often called *ksā* also; 3. the *izār*, likewise a rectangular piece of cloth, without seams, usually of linen or cotton, which forms the usual dress of Beduin women in North Africa; 4. the *ḥaik*, which women, particularly in the towns, wear above their other clothes when they go out." The *ḥaik* is woven in North Africa itself by men on the looms with low warp by women with high warp; but in Lyons also a highly prized *ḥaik* cloth (of silk and wool) is manufactured, which is destined only for North Africa and sold nowhere else, not even in Lyons itself.

On the manner in which the *ḥaik* is put on and worn, cf. for the men the illustrations in Doutté (*Merrakech*, i. 255—259, Paris 1905), for women of the towns, see A. Bel and P. Ricard, *Le Travail de la Laine à Tlemcen* (Algiers 1913), p. 107.

There is an excellent treatise on the *ḥaik* in the above mentioned work of Doutté (p. 248—252). On the manufacture of the *ḥaik* by native weavers, cf. *Le Travail* etc., p. 109 and *pass.* This book as well as *Archives Marocaines* (Vol. xv. part 1) is now to be added to the excellent bibliography given by Doutté. (ALFRED BEL.)

ḤAIMA AL-KHĀRIDJĪYA ("Outer-Haima", in Niebuhr Heime al-Asfal "Lower-Haima"), also called Ḥudjra, a district in South Arabia, between Ḥarāz [q.v.] and Ḥaḍūr Shu'aib [q.v.]. It is an *izzle* (small district) of the *kaḍā* (large district) of Manākha [q.v.] and stretches from Baw'ān (probably Yoān in Niebuhr, 8570 feet above sea-level, with a market) to Bait al-Mahdi. The capital is Mefḥak (Mofhak in Niebuhr with ḥiṣn). North of Mefḥak at Djebel Manār (8700 feet above sea-level) lies Sūk al-Khamis, a spur of the *Karn al-Wa'l* ("deer-antlers", which it resembles; highest pass 9186 feet) which is connected with the Ḥaḍūr. Between Baw'ān and Sūk al-Khamis on the Wādī 'Abd al-Hakk (tributary of the Wādī Sahām) lies the village and citadel of Kumlān. Of places in Haima we may also mention: 'Idjz al-Djahādib, 'Alasan and Rukhamiya (the two latter now in ruins). There are few coffee plantations or corn-fields in Haima. In Niebuhr's time the district of Haima was rich in vines.

Haima al-Dakhiliya ("Inner-Haima" in Niebuhr Heime al-A'la "Upper-haima") adjoins Haima al-

Kharidjiya, with the villages of Yanā' and 'Urr ('Orr).

Haima al-Khāridjiya corresponds to Balad al-Akhrūdī in Hamdānī. It belonged to the Sarāt Alhān and lay near the Wādī Sahām between the Ḥaḍūr and Hawzan (Ḥarāz). It took the name Akhrūdī from Akhrūdī b. al-Ḡhawth b. Sa'd. The Balad was inhabited by the Ṣulāih, a clan of the Hamdān, who still live in Ḳumlān. Dhāt Djirdān (which E. Glaser proposes to identify with Mc-hak) lay in the centre of their land. Besides Dhāt Djirdān, Hamdānī mentions the villages already mentioned of al-Djahādib, 'Alasān and Yanā' (he reckons the two latter to Lower Ḥaḍūr). The language of the people of Balad al-Akhrūdī was intermediate between good and bad Arabic.

Bibliography: Hamdānī, *Djazīra*, p. 68, 17, 72, 119, 106, 12-13, 135, 7-8; K. Niebuhr, *Beschreibung von Arabien*, p. 250-251; E. Glaser, *Von Hodeida nach Sa'nā in Petermanns Mitteilungen*, xxxii. (1886), p. 38-39, 41 and Tafel 1. (J. SCHLEIFER.)

HĀ'IR or HAIR, originally a place-name; for example the sacred district of Hebron (Ḥabrūn or Habrā'), which contains the graves of the Jewish patriarchs (Yāqūt, ii. 195, wrongly pointed Habr; Mukaddasī, p. 172, 10); also the area sacred to Ḥusain in Kerbelā (Yāqūt, ii. 188; *Marāṣid*, p. 282; Ṭabari, iii. 752). The passage in Ṭabari is also historically important as it testifies to the existence at so early a period of the cult of Kerbelā with official priests, who were supported by endowments founded by Umm Mūsā, mother of the Caliph al-Mahdī. A large quarter of Sāmarrā was also called Hair; it included the whole hinterland of the central town and consisted of lands which had originally formed part of Mu'tasim's great zoological garden. The latter bore the peculiar double name of Hā'ir al-Hair (cf. Ṭabari and Ya'qūbī, *passim*; Yāqūt s.v. Hair). Hair is also found as the name of a park in the 'Uyūn al-Tawārikh of Muhammad b. Shākir (in Sauvaire, *Journ. Asiat.*, 1896, May-June, p. 377), where a park, Hair Sarhūn, belonging to Sarhūn b. Manṣūr al-Rūmī, Mu'āwiya's secretary is mentioned; it lay at the Kaisān-gate of Damascus and was afterwards called *Bustān al-Kitt*, the "Cat-garden". There was a Hā'ir al-Ḥadīdī in Baṣra and it is mentioned this was dry, with which fact is probably connected the erroneous meaning "basin", which was given to the word (according to Azhari in Yāqūt, ii. 188 and *Marāṣid*, p. 282). There was a "day of the Arabs" at a Hā'ir Malham in Yamāma (Yāqūt and *Marāṣid*, l.c.). Lastly Mukaddasī calls the harbour of Tyre Hair (p. 164 Cod. C.); and according to Ṭabari, i. 745, Bukhtnaṣar built a Hair in Hira as a market for the Arab merchants there.

From these illustrations it is clear that the meaning of the word is "enclosed area, temenos", i.e. similar to that of the originally descriptive name al-Hira. Hair might therefore also be a loanword. As is the case with loanwords the plural varies as well as the singular: *ḥirān*, *ḥūrān*, *ḥurwār*. The lexicographers give the meaning "park, pen". An etymology goes back to Aṣma'ī, according to which the word means "a place with a depression in the centre and higher round the edges" (read *ḡuruf* for *ḥuruf* in Yāqūt, ii. 188). This etymology must be described as false as well as that which attempts to explain the word from the motion of water in it (*yataḥaiyar*) or connect

it with the many variants of the word *ḥūr* (cf. Lane, Freytag, s.v., de Goeje's glossaries to Balādhuri and *Bibl. Geogr. Arab.*, ii.).

(E. HERZFELD.)

HĀIS (HĀS, HĒS), a town in South Arabia, at the foot of the Djebel Ra's at the entrance to a valley about five miles S.E. of Zabīd [q.v.]. In 1842 it consisted of 500 houses of earth and stone, 250 round huts, an old castle with a garrison of 300 men, 21 mosques, including one large one which was already falling into ruins, 10 coffee-houses and inns, several coffee-mills and potteries, the latter of which supplied the whole of the Yemen, a few dye-works and indigo factories, and numbered 2000 men capable of bearing arms among its inhabitants in addition to the male population of the twelve villages belonging to it, which amounted to about 1000 men. The market was held regularly every week. The town was of special importance because it lay on the road by which coffee was brought from the mountains, e.g. from Djebel Ra's, Beled 'Ans, sometimes also from Ta'izz [q.v.] and Sa'nā [q.v.]. The streets were narrow and dirty. There were date groves and fields of indigo and sesame around the town.

Hais is an ancient town and was known even to Hamdānī. He gives the Rakb as its inhabitants, a branch of Ash'ar, to whom the Wādī al-Milh also belonged, it joins the Wādī al-Nakhla at Kanā, one of the peaks of Hais, whence the latter is also called Hais al-Kanā and their waters flow together to the sea.

During Niebuhr's stay in the Yemen the town of Hais was of little importance; it belonged to the district of Awṣāb (Osab) al-Asfal ("Lower Awṣāb") which was bordered by those of Mokhā [q.v.] and Zabīd; the manufacture of pottery was even then the main industry of the town. Niebuhr mentions a mountain named Debās near Hais. The town became important when it became the residence of the brave and energetic Shaikh Ḥusain (Ḥasan) b. Yahyā, called Bisbal al-Djibāl "pepper of the mountains", whom the Egyptian general Mehemmed 'Alī appointed his representative and governor of Tihāma with the title of Grand Sharif of Abū Arīsh after the withdrawal of the Egyptian troops from the Yemen. The French botanist Paule Emile Botta, during his explorations on the Djebel Ṣabr in 1836-1837, received the most kindly welcome and support from him. For three months he showed the French scholar the greatest hospitality both at Hais and also at his mountain fortress of Maamara (Ma'mara), 1½ days' journey S.E. of this town. In the year 1842 Hais was visited by the French naval lieutenant Passama.

Bibliography: Hamdānī, *Djazīra*, p. 53, 26, 71, 91, 75, 11, 131, 161, 100, 22, 103, 7-8, 119, 16; Yāqūt, *Mu'djam*, ii. 380; K. Niebuhr, *Beschreibung von Arabien*, p. 224; K. Ritter, *Erdkunde*, xii. 749, 756, 757, 758-759, 799-802, 803-808, 809; Manzoni, *El Yemen* (Rome 1884); A. Sprenger, *Die alte Geographie Arabiens*, p. 66, 310. (J. SCHLEIFER.)

HAIṢA BAIṢA, the nickname of the Arab poet SHIHĀB AL-DIN ABU 'L-FAWĀRIS SA'D B. MUHAMMAD B. SA'D B. AL-ṢAIFI AL-TAMIMI. He claimed to be a descendant of Aktham b. Ṣaifi (cf. *Usd al-Ḡhāba*, Cairo 1286, i. 112 *et seq.*). He is said to have received the name Haiṣa Baiṣa because he once used the expression (cf. *Lisān*,

viii. 274 and 285 *et seq.*; Grünert in *Verhandlungen des VII. Orient. Congresses*, Vienna, 1888, Sem. Sect., p. 202 *et seq.*) to express the great excitement of a crowd. He does not seem to have known the date of his birth himself; according to a note in *Khariḍat al-Ḥaṣr*, f. 70^a, 2, he was in the fullness of manhood (*fi ra'ian 'umrihi*) in 520 (1126). He studied Fiqh under the Shāfi'ī Qādī Muḥammad b. 'Abd al-Karīm al-Wazzān (cf. al-Subkī, *Ṭabaqāt al-Shāfi'iya*, iv. 77 *et seq.*) in Raiy, but at the same time followed his inclination for belles lettres and attained a great reputation as a poet and stylist on account of the elegance of his diction. He was considered an authority on poetry as well as on Bedouin dialects and used always to speak pure Arabic; he was also fond of dressing as a Bedouin, which gave an opponent subject for a satire. He had many a "flying" with the poet Ibn al-Qaṭṭān [477(8)—558] celebrated as a satirist and is said to owe his nickname to him. Among his patrons special mention may be made of the vizier Sharaf al-Dīn 'Alī b. Ṭarrād al-Zainabī (under the Caliphs al-Mustarshid and al-Muṭtafi). Imād al-Dīn al-Iṣbahānī's *Khariḍat al-Ḥaṣr* contains a long series of fragments of his poems. In addition to a number of verses descriptive in matter, there are a large number of panegyrics addressed to Caliphs (al-Mustarshid, 512—529 = 1118—1135, al-Mustadiq, 566—575 = 1170—1180), Salḍjuḡ Sultāns (e. g. Maḥmūd b. Muḥammad b. Malik Shāh, 511—525 = 1117—1131, Mas'ūd b. Muḥammad b. Malik Shāh 527—547 = 1133—1152), viziers, particularly the above-mentioned al-Zainabī, and other nobles; cf. above ii. 150^b; fragments of elegies (*Marāṭhi*) and specimens of his letters are also preserved in al-Iṣbahānī's work.

The Berlin manuscript, Ahlwardt, *Verzeichnis*, No. 8628, 3, contains 7 short begging letters from the poet to the Caliph and the latter's reply.

Ḥaiṣa Baiṣa died on the 6th Sha'bān 574 (17th January 1179) in Baghdād.

AL-ḤAIYA (A.), the snake. When God sent the serpent on the earth, it fell on the land of Sidjistan, so that to this day there are still most snakes there. The land would be uninhabitable if large numbers were not devoured by the 'irbadd, a large snake.

There are many kinds of snake. The most notable is *al-aṣala* or *al-ṣill*; it is exceedingly large and has a human face; it said to retain the same appearance for thousands of years and can slay a man by looking at him. The kind called *al-mukallala* by Damīrī and *al-malik* by Ḳazwīnī, which has a little crown on its head, is most deadly. It burns up all that it crawls over; no plant grows near it, birds fall dead when they cross its path, and no animal can pass it without

perishing. It kills by its hissing even a bowshot off, its look also is mortal and whoever is bitten by it dies at once. Similar things are told of other kinds.

Snakes reach the age of 1000 years; they cast their skin every year. They lay 30 eggs after the number of their ribs(!), but the ants collect on the eggs and destroy them so that only a few are hatched. The eggs of the snake are longish and dirty in hue, or green, black, white or spotted. In copulation the snakes wind themselves round one another. The female snake remains beside the eggs till the young ones are hatched, while the male is constantly crawling around disquieted. The tongue is split, so that many people think that a snake has two tongues. The snake swallows its prey without chewing it; to break bones, it winds itself firmly round a tree so that the bones are broken in its stomach. It will under no conditions eat a dead animal; if it can find nothing to eat, it lives on air. It can go for a very long time without food, particularly in old age, when it then becomes lean. It does not require water; but when it has once began to drink, it takes too much and poisons itself with it so that death often ensues. The eye is firm and immovable like a nail in the head; if torn out, it grows again, while the fangs if taken out grow again in three days, as does the tail if cut off. When the snake becomes blind or comes blinded out of the ground, it rubs its eyes on fennels and regains its sight. Snakes are attracted by fire but flee before naked men. They have extraordinarily strong backs; for although it has neither claws nor limbs with which to hold on, no man is able to draw a snake out of its hole.

According to al-Djāhīz, three groups of snakes are to be distinguished according to their poisonousness. No remedy nor treatment can avail against the bite of the first; antidotes and medicines are of use against the second, while the third kills through horror which opens the pores of the body, by which the poison takes effect. There are naturally numerous charms and amulets against snakes. He who kills a snake performs a work as meritorious as if he had slain an unbeliever. Not all snakes are aggressive, many only bite when aroused or trod upon, others are harmless. The medical applications are numerous.

Snakes play an important part in folklore and superstition, for they are one of the most usual forms in which Djinn appear.

Al-ḥawwā, the snake-charmer, is the Arabic name of the ὄφιοῦχος and *al-ḥaiya* the name of the snake he holds.

HAIYAN B. **KHALAF**. [See **IBN HAIYAN**.]

ḤAKAM (A.) "judge, arbitrator", one of the names of God.

ḤAKAM B. SA'D AL-**ASHIRA**, a tribe in South Arabia. They lived in Tihāma in the district of Abū Arīsh and were neighbours of the Ḥāshid (Hadjūr [see **HASHID**]) and **Khawlan** [q. v.]. Their land the Balad Ḥakam was five days' journey in length. The following places belonged to them, al-Sā'id, al-Sakīkatān (or al-Sakīkatāin, Yākut, *Mu'djam*, iii. 104, Sakīfatān probably misprint), al-**Khaṣūf** (all three on the Wādī **Khulab** or **Khilab**),

al-ʿAdāya, al-Hadjar, the group of villages of al-Makhārīf (watered by the Wādīs Zāʾira and Shāya) and besides the Wādīs just mentioned, those of Harād, Hairān, Djadlān, Djuhfan, Qamad or Qamid, Djaẓān, al-Haid, Taʾshar, Liya and Ṣabya, most of which flowed from the land of the Ḥashid and Kḥawlān. The chief town of the Ḥakam was al-Kḥaṣūf (usually called Madīna Ḥakam); in Hamdānī's time the coast town of the Balad was Sharādja. Sprenger identifies Ḥakam with the Ἀκμυ πόλις of Ptolemy. Their chiefs are descended from ʿAbd al-Djadd (Djidd or Djudd), whence their name Āl (or Banū) ʿAbd al-Djadd (Djidd).

AL-ḤAKAM, the name of two Spanish Omayyads:

1. AL-ḤAKAM I B. HISHĀM, third Omayyad Amīr of Cordova (180—206 = 796—822), waged continual warfare for almost twenty years against the pretensions of the Faḳīh and the people inclined to rebellion by them, notably their superior Yahyā b. Yahyā. After the first risings in Cordova (189 = 805) and Mérida (190 = 806) had been soon suppressed and Toledo (Ṭolaitola), strongly fortified which was endeavouring to win independence, had finally been taken by stratagem and the treachery of the governor ʿAmrūs, a renegade (191 = 807), a second, much more dangerous, general rebellion broke out in Cordova in Ramaḍān 198 (May 814; according to Ibn Adhārī and Ibn Khaldūn in 202 = 817, cf. Dozy, *Musulmans d'Espagne*, ii. 353 *et seq.*) which ended with the utter destruction of the southern suburb by al-Ḥakam (whence his name al-Rabaḍī "the suburbaner"), the massacre of the greater part of its inhabitants and the expulsion of the remainder (about 60,000) from Spain. The exiles found a new home in Egypt and afterwards in Crete [q. v., i. 879^a, and ABŪ ḤAFṢ ʿOMAR, i. 87^b] or in Fās [q. v., ii. 77^a]. Al-Ḥakam punished a last rising in Toledo similarly by the destruction of a quarter of the town (199 = Autumn 814). All these domestic troubles naturally favoured the advance of al-Ḥakam's enemies abroad, Alfonso II of Asturia and Galicia gradually extended his kingdom to the south and east and al-Ḥakam lost Barcelona in 185 = 801 to Alfonso's ally Louis the Pious, then Viceroys of Aquitania.

Bibliography: Ibn ʿAdhārī, *al-Bayān al-Mughrib*, ii. 70—82 (transl. Fagnan, ii. 109—130); Maḳkārī, i. 219—222, s. Index and Introd., p. xxxiv; Ibn Khaldūn, *Ibar* (edition Būlāḳ), iv. 126 *et seq.*; E. Fagnan, *Ibn el-Athīr: Annales du Maghreb et de l'Espagne*, i. 154—179; Dozy, *Musulmans d'Espagne*, ii. 58—86, 97; do., *Recherches* 3, i. 136—139, 212; Müller, *Islam*, ii. 461 *et seq.*, 466—473.

2. AL-ḤAKAM II B. ʿABD AL-RAḤMĀN III, called AL-MUSTAṢSIR BI ʿLLĀH ("he who seeks his help in God"), the ninth Omayyad Caliph and second of Cordova (350—366 = 961—976), fought successfully against Sancho I, king of Leon and Castile, and Garcia, king of Navarra, and forced them to make a lasting peace in 355 (966). In the same year his fleet victoriously repulsed a Norman invasion on the Rio de Silves, after the latter had almost annihilated a Muslim army on

land near Lisbon. The war with the Faṭimid al-Muʿizz and his allies, the Idrisids of Tangier, ended, after the Faṭimid governor Bulukkin [q. v.] had unsuccessfully attacked Ceuta (360 = 971) with the conquest of Tangier by al-Ḥakam's admiral ʿAbd Allāh b. Riyāḥin in 361 = 972 and the capture of the Idrisids who were brought prisoners to Cordova by al-Ḥakam's general Ghālib b. ʿAbd al-Raḥmān (363 = 974). Al-Ḥakam II thought more of the prizes of peace than of war and was an enthusiastic and liberal patron of art, science and education; indeed he was himself probably the most scholarly ruler Islām has known. The university of Cordova became the first centre of learning in the western Muslim world by his foundation of a splendid library (about 400,000 volumes); mathematics, astronomy and medicine particularly flourished there. On his architectural activity see CORDOVA, i. 878^a. With al-Ḥakam's death on the 3rd Ṣafar 366 = 1st Oct. 976 the decline of Omayyad power in Spain began.

ḤAKĪKA (A., pl. ḥaḳāʾik) is (a) an abstract noun meaning "reality", so a thing which has no reality, *lā ḥaḳīka lahu*, then "the reality of a thing", meaning that by which the thing is what it is with regard to its reality (distinguish *huwiya* "individuality" and *māhiya* "quidditas") or, broadly, what distinguishes it from other things; this is called also its *dhātīya*. Then (b.) "a reality" in the sense of a thing which certainly exists; using the verb you say, *ḥaḳḳa-l-shayʾ*, "the thing certainly exists." Hence *ahl al-ḥaḳīka* are the mystics who know the real nature of God, as opposed to *ahl al-ḥaḳḳ*, the orthodox followers of the Sunna, and *al-ḥaḳīka* is the last thing reached at the end of the derwish *ṭarīka* (W. H. T. Gairdner, *The way of a Moh. mystic*, pp. 19 and 23). Also *ḥaḳīkat al-ḥaḳāʾik* is Allāh as the stage of unity which embraces all realities, otherwise called the *ḥaḍrat al-djām*, "Presence of joining" and *ḥaḍrat al-wudjūd*, "Presence of Being" (see art. ḤADRA). The *ḥaḳīka* of Allāh is distinguished by Ṣūfis from his *ḥaḳḳ*; it indicates his Qualities (*ṣifāt*) while *ḥaḳḳ* indicates his *dhāt* (*Dict. of techn. terms*, pp. 333 *et seq.*). With this apparently connect the following definitions belonging to the system of Ibn ʿArabī, but formative for all later mysticism in Islām (*Fuṣūṣ al-Ḥikam* of Ibn ʿArabī, ed. of Cairo 1309 with comm. of ʿAbd al-Razzāḳ al-Kāshānī [q. v.], *passim*, and *Djurūdjanī*, p. 62). The *ḥaḳāʾik* of the Names of Allāh are individualizings of his essence and are its relationships to the things of the world; by relationship to these things, which are called also the Qualities (*ṣifāt*) and which are infinite in number, the primal unity is broken up. Also the *ḥaḳīka al-muḥammadiya* is the divine essence taken along with the first of these individualizings (i. e. Muḥammad); it is also the Most Great Name (*al-ism al-aʿzam*; *Fuṣūṣ*, p. 428, l. 9). *Ḥaḳīkā* also

indicates (c.) a descriptive noun or phrase used in a primary or real sense as opposed to a metaphor (*maǧāz*). When, however, the metaphor has been used so often as to have become conventional, the word or phrase may be called *ḥakīka 'urfīya*. (Mehren, *Rhetorik*, pp. 31, 78).

(D. B. MACDONALD.)

ḤAKĪM (pl. *ḥukamā'*) the Arabic name for "physician, doctor". The root-meaning of the word, is "wise, skilled, clever"; cf. the Hebrew and particularly the Aramaic meaning of the root *ḥ-k-m*. From this original meaning *ḥakīm* ("governor, judge") has developed as well our *ḥakim*. (Cf. the French *sage-femme*, midwife, and *sage-homme*, jurist). In the same way the root of the second Arabic word for "doctor" *ṭabīb* (pl. *aṭibbā'*) is *ṭbb* "to be wise, to understand", which has been particularly developed in Ethiopic. In the older period *ṭabīb* is more frequent particularly in the literary language; in the later period and particularly in popular language *ḥakīm* is preferred, sometimes with the subtle distinction that *ḥakīm* means a "doctor", *ṭabīb* rather a "physician". In addition to the general term *ḥakīm* there are other names for specialists; e. g. *al-djarrāḥ* "the surgeon", *al-kaḥḥāl* "the oculist"; in the modern language it is usual to use compounds of *ḥakīm* for these, thus *ḥakīm al-'uyūn* "oculist", *ḥakīm al-aṣnān* "dentist". *Ta'riḫ al-Ḥukamā'* "history of the physicians" is the title of several works on the history of medicine, of which the best known is that of Ibn al-Kiftī [q. v.], which has been edited by J. Lippert (Leipzig 1903).

(E. MITTWOCH.)

ḤAKĪM (A.), he who decides, the authority.

AL-ḤAKIM BI AMRĪ 'LLĀH, sixth Fātimid Caliph, his pre-accession name was Abū 'Alī al-Manṣūr. To get as clear as possible an idea of the character of this enigmatical ruler three periods in his life must be sharply distinguished; first, the period of his minority, from his accession as an eleven-year-old boy till the assassination of Bardjawān in 390 = 1000; the second period runs from this event till 408 = 1017, when he declared his divinity; and the last covers the period to his disappearance in 411 = 1021.

1. 386—390 (996—1000). On the very day that al-'Aziz died in Bilbis, his only son al-Manṣūr (born of a Christian mother on the 23rd Rabi' I 375 = 13th August 985) received homage as Caliph; he was then given the title "al-Ḥakim bi Amrī 'llāh". His guardian by the will of his late father was the slave eunuch Bardjawān but he could not maintain his authority against the Maghribī Ibn 'Ammār, commander-in-chief of the troops, to whom Ḥakīm had given the rank of "Wāsiṭa" and the title "Amin al-Dawla". The way in which the general gave his kinsmen, the Kitāma, preferment among the troops, led to a most intolerable state of affairs. Finally the Turkish troops resorted to force of arms against the aggressions of their Berber comrades-in-arms, conquered them and thus brought about the fall of Ibn 'Ammār,

who although pardoned, was soon afterwards disposed of by assassination. Bardjawān was now all-powerful, but becoming overbearing, he allowed his grasp of power to slacken and gave himself carelessly up to the enjoyment of his immense riches neglecting the education of his ward, whose feelings he had deeply hurt by nicknames ridiculing him. Only too soon, however, he was to learn the latter's true character; in 390 = 1000 Ḥakīm made short shrift of his guardian and although after this bloody deed he appealed to the people, who had thereupon rebelled, to stand by him in his helpless youth, he soon showed that he no longer required any one to wait on him by actions which showed an alarming independence.

2. 390—408 (1000—1017). The character of the Caliph, in the form in which it developed soon after the death of Bardjawān, becomes intelligible perhaps, if we see the motives of his whole attitude in an extraordinary religious fanaticism, which endeavoured to exert itself not only in the most rigid enforcement to the utmost letter of the law of certain prescriptions of Islām in general but especially in the promotion of Shī'ī-Ismā'īlī ideas in particular among the people, throughout whom Sunnī views still prevailed. If this is the striking feature of his whole attitude, it was complicated by a sense of unrestricted power, which grew more and more in this strange personality, and a boundless capriciousness, with which cruel traits were strongly mingled. The first mentioned tendencies may explain the rigorous edicts (such as the prohibition of intoxicating liquors and certain foods, as well as the regulations regarding women etc.) which were published up to 399 = 1008-1009, some obviously directed against the Sunna; they also explain the harsh and ruthless oppression of the *Ahl al-Kitāb*, e. g. the laws regarding dress passed against the latter and the destruction of their places of worship. That at the same time Christians continued more and more to fill the highest offices, shows how impossible it was even now to do without their ability. To Shī'ī enthusiasm also al-Ḥakīm's buildings owe their origin: the Rāshida mosque, the mosque of al-Maks and the great university called *Dār al-'Ilm* (*Dār al-Ḥikma*), opened in Djumādā II 395 = March 1005. The "Ḥakīm mosque" was completed in 393 = 1002 or 401 = 1010, (which had been begun by al-'Aziz). — But the Caliph always displayed a tendency to despotic deeds of brutality, of which the highest officials and officers of the kingdom, of whom hardly one died a natural death in this period, were particularly the victims. The dangers of this provocative rule of tyranny soon showed themselves in the rising of the Spanish Omayyad prince known as Abū Rakwa who threatened Egypt and the capital itself with disaster and found ready support from the Banū Ḳurra and Zanāta, driven desperate by Ḥakīm's violence, and later from the Kitāma also. It was only with great difficulty that the doughty al-Faḍl was finally able to overcome this dangerous enemy (396 = 1006). Probably influenced by these events as well as by the failure of crops for several years in succession, the caliph saw the necessity for milder measures and for conciliating the Sunnis to a considerable degree; indeed he went further and abolished those customs that were peculiarly Ismā'īlī and went right over to the Sunna. We so far have the possibility of suggesting motives

for Ḥakīm's actions, it is quite impossible to do so in the years that follow, which show alternately a leaning to Ismā'ilism or to the Sunna in the constantly changing stream of edicts issued by the Caliph. Only the persecution of the Christians and Jews remained unchanged and the cruel treatment of those in authority without distinction of creed.

III. 408—411 (1017—1021). At all events the Caliph carried Ismā'īlī secret doctrines to their farthest conclusions when in 408 = 1017, dominated by the influence of al-Akḥram, Ḥamza al-Zūzānī [q. v.] and the Bāṭinī *Ḍā'i* Darazī [q. v.], he agreed to the proclamation of his own divinity. Considering Ḥakīm's psychology, this step is really not very surprising; it should also be remembered that his father and grandfather before him seem at least to have claimed supernatural powers (de Sacy, *Druzes*, p. cccxcvii. and Wüstenfeld, *Fatimiden-Chalifen*, p. 160). — It was quite in accordance with the dogmas of the Ismā'ilīs under whose influence he was, that Ḥakīm finally showed the greatest tolerance in religious matters; the penal enactments were repealed and Christians and Jews now began to breathe freely. (The Jewish story given by Kaufmann in *Zeitschr. d. Deutsch. Morgenl. Ges.*, li. 442 *et seq.* is characteristic). On the other hand the Muslim population rebelled against the heresies openly proclaimed by the heralds of the new teaching, and the result was that the ruler was imprisoned in his palace in which the agitator Darazī was known to be concealed. Ḥakīm, however, facilitated the latter's flight to Lebanon where he founded the sect of the Druzes, who still revere Ḥakīm as an incarnation of God and look forward to his return (cf. DRUSES, i. p. 1076^b *et seq.*). — The Caliph did not hesitate to wreak terrible vengeance with his negro troops on the town of Fuṣṭāt, where the rebellion had originated. Fierce battles between the Turkish and Berber troops on the one side and the arrogant black soldiery on the other followed, the confusion in the capital was becoming worse and worse, when suddenly deliverance came in the mysterious disappearance of the Caliph in the night of the 27th Shawwāl 411 = 23rd February 1021. The suggestion, often put forward, that he was murdered at the instigation of his sister Sitt al-Mulk, has not sufficient basis in fact (see de Sacy, *Druzes*, i. p. cccxcvi. *et seq.*); on the other hand, considering the whole development of his character, A. Müller's (i. 693) hypothesis that, recognising the impossibility of propagating his views in Egypt, he retired into concealment, is not without probability.

In Ḥakīm, whose final self-deification prejudices them before hand for a fair appreciation of his personality great in its way, Muslim historians and also the naturally biased Christian authors see only a madman and a blood-thirsty tyrant, around whose strange figure they hastened to gather a mass of stupid anecdotes, which have yet to be carefully investigated. Most European historians also are influenced by the same view; Dozy alone, and following him A. Müller, has endeavoured to give a just appreciation of his character; it combined fanatical religious enthusiasm with truly oriental notions of despotism, yet is not without its ideal trait. Many of his much abused regulations were clearly intended to check the immorality of his people, to whom he set an excellent example by his own stainless conduct and a contempt for

all pomp. Even in the second period of the reign we constantly find edicts in which he orders his name to be mentioned in prayer only in the simplest manner possible and forbids the usual tokens of respect to be paid him. His liberality is nowhere denied and scenes have been preserved from the years of the low Nile for example, in which he is depicted in the midst of his people, accessible to every request and anxiously endeavouring to check the ravages of famine. Nevertheless it cannot be denied that his administration guided as it was solely from his one-sided point of view and subject to his capricious will, particularly in his last years, was on the whole, disastrous to the country.

On the political events which had their scene outside of Egypt during al-Ḥakīm's reign and hardly concern us here in discussing his personality, cf. the article *FĀTIMIDS* [ii. 90¹].

ḤAKĪM ATĀ, a Turkī saint of *Kh*warizm, a pupil of Aḥmad Yasawī (cf. i. 204^b *et seq.*) who died in 562 = 1166-1167. His proper name was Sulaimān Bāḡirghānī and he is also called Sulaimān Atā or Ḥakīm Khodja; this Bāḡirghān is not identical with the Bāḡirghān mentioned by Muḡaddasī (ed. de Goeje, p. 343, 10) but lay considerably farther north, a little below the modern town of Kungrad; the tomb of Ḥakīm Atā there is still visited by pilgrims; according to a biography of the saint, the name is said to be a corruption of Apāk Kūrghān = "very white fortress". We find the same place-name in another part of Turkīstān; at Khodjand there flows into the Sir-Daryā, the river Khodja-Bāḡirghān, on which, as the name shows, the cult of a saint has likewise been localised. We have only legends of the life of Ḥakīm Atā. The works ascribed to him (besides the collection of hymns called *Bāḡirghān Kitābī*, also *Ḥadrat Maryam Kitābī*, *Akḥir Zamān Kitābī* etc.) have frequently been printed in Kazan; old manuscripts have, as far as is known, not survived. Cf. C. Salemann in *Bulletin de l'Acad. Imp.* etc. 1898, Sept., ix. N^o. 2, p. 105 *et seq.*; cf. also W. Barthold in *Turkestan etc.*, ii. 149 and *Nachrichten über den Aral-See* (Leipzig 1910), p. 33; P. Komarow in *Protokoli Turk. Kruška Ljub. Arkh.*, vi. 105 *et seq.* (W. BARTHOLD.)

ḤAḤḤ. The original meaning of the root *ḥḥḥ* has become obscured in Arabic but can be recovered

by reference to the corresponding root in Hebrew with its meanings of "cut in" or "on", thence "prescribe", "fix by decree" (Brown-Driver-Briggs, *Hebrew Lexicon*, pp. 349 *et seq.*). We have thus in Arabic to begin with the primary idea of permanence, fixity (*ṭhubūṭ*) and not with that of correspondence, suitableness (*muṭābaqa*, *muwāfaqa*) which is essentially secondary and a discovery of the rhetoricians (*aḥl al-ma'ānī*; Djurdjānī, *Ta'rifāt*, p. 61, 11 *et seqq.* of ed. of Cairo 1321). This point is unfortunately confused in Lane (s. v. pp. 605 *et seqq.*), following some of the native lexicons. *Al-ḥaḳḳ*, then, means that which is fixed, permanent, real, and is regularly paraphrased in the commentaries on the Kur'ān as *al-ṭhābit*. Thus Baiḍawī explains *al-ḥaḳḳ*, meaning Allāh, as *al-ṭhābitu rubūbiyatuhu*, "he whose lordship is fixed, real" (Kur. x. 33; Baiḍ. ed. Fleischer, i. 414, l. 8); similarly *al-ṭhābitu ilāhiyatuhu*, "whose divinity is fixed," contrasted with that of false gods which is *būṭil*, "vain," "unreal" (Kur. xxxi, 29; Baiḍ. ii. 116, ll. 10 *et seq.*); in Kur. xx. 113, he is *ṭhābit* in his essence and qualities (Baiḍ. i. 607, l. 5); further, on Kur. xxii. 6, Baiḍ. explains (i. 628, l. 6) "because he is the *ṭhābit* in himself by whom things became realities," *bīhi tataḥaḳḳaḳu-l-aṣṣayā'u*. On this last passage, Rāzī explains (*Maṣāṭiḥ*. Vol. vi. p. 144, l. 3 of ed. of 1308) "he is *al-mawḍū'ūd al-ṭhābit*". The *Ṣaḥāḥ* (s. v.) contents itself with defining *ḥaḳḳ* as the opposite of *būṭil*, and that is the fixed usage in the Kur'ān and elsewhere. This is pre-Islamic as in the well known verse of Labīd (Huber, *Diwan des Labīd*, xli. verse 9), *Alā kullu ṣḥā'in mā ḵalā-l-lāha būṭilu*, "Lo, everything is vain except Allāh alone." In Semitic psychology it connects also with Hebrew conceptions of nothingness, vanity, unreality contrasted with that which is sure, real and trustworthy. So, *būṭil* stands in Arabic over against *ḥaḳḳ* and *al-ḥaḳḳ* is most suitably a name for Allāh, the absolutely real, even as *ne'ēman*, "trustworthy" is said of Yahwē (cf. *al-mu'min* of Allāh in Kur. lix. 23). Allāh is real of himself and of necessity (Baiḍawī on Kur. xxii. 61, vol. i. p. 638, l. 15), while other beings depend for their reality on him (see Baiḍawī above on Kur. xxii. 6). "The Real", or "The Reality" is therefore the nearest rendering of the word when used as one of the Names (*asmā*, see Allāh above) of Allāh, and "the Truth" as it is often translated is misleading. All the native authorities distinguish carefully between *ḥaḳḳ* and *ṣidq* with its opposite *kidhb*, and lay down the rule that *ḥaḳḳ* is equivalent to *ṣidq* only when used of a judgment (*ḥukm*). Thus an event (*wāḳi'*) really took place, so it is *ḥaḳḳ*; but a judgment or statement about it is *ṣidq*, though the statement may also be called in this sense a *ḥaḳḳ*. Used as one of the Names, *al-ḥaḳḳ* is frequently explained as Creator, but for this the only basis seems to be its constant contrast with *al-ḵalq* "creation", e. g. in *Iḥāf al-sāda*, vol. x. p. 556, l. 20, *alsinat al-ḵalq aḵlām al-ḥaḳḳ*. "Vox populi, vox dei". Yet see another explanation suggested in Massignon, *Kitāb al-Tawāsīn*, p. 174. Besides the above meanings of "reality" — used absolutely of Allāh and derivatively of his creation — and "truth" used of a statement corresponding to reality, *ḥaḳḳ* means also "right", "duty", going back to the idea of prescription. Thus, *ḥaḳḳun li* "a right due to me" and *ḥaḳḳun 'alaiya*, "a right obligatory on me." From this

comes the *ḥaḳḳ* of Allāh — as distinguished from the *ḥaḳḳ* *ūdāmī*, *ḥaḳḳ al-nās* — the punishment for trespasses against Allāh by which no man is injured in his rights (see Juynboll, *Handbuch des Islām. Ges.*, p. 292 and by index). Again, just as *al-ḥaḳīqa* is the last thing reached by the Ṣūfī on his journey, after even *ma'rifa* is passed, so *ḥaḳḳ al-yaḳīn* is that real certainty which comes with the passing away (*fanā'*) of the creature in his *ḥāl* in the Reality after he has had visual certainty (*'ainu-l-yaḳīn*) and scientific certainty (*'ilmu-l-yaḳīn*). On this see Nicholson, *Kashf*, pp. 36, *et seq.*, Ḳushairī, *Risāla* with commentaries of 'Arūsī and Zakariyā, ii. pp. 99 *et seqq.* and Djurdjānī, *loc. cit.*, the phrase is derived from Kur. lvi, 95. Among Ṣūfis the *ḥuḳūḳ al-nafs* are such things as are necessary for the support and continuance of life as opposed to the *ḥuḣūḣ*, things desired by the *nafs* but not necessary to its existence (*Dict. of techn. terms*, pp. 311, 330 and 417, ll. 10 *et seqq.*).

Bibliography: *Dict. of tech. terms*, p. 329 *et seq.*; Nicholson, *Kashf al-Maḥyūb*, by index; Massignon, *Kitāb al-Tawāsīn*, by index; Rāghib, *Mufradāt*, pp. 124 *et seq.*; Horten, *Theologie des Islām*, pp. 152 *et seq.*, 295 *et seq.*; also references given above. (D. B. MACDONALD.)

HAKKĀRĪ (HEKK'ARĪ), now the name of a sandjak in the wilāyet of Wān on the Persian frontier, which formed an independent wilāyet before 1876. According to Cuinet, *La Turquie d'Asie*, ii. 716, it now has an area of about 11,000 sq. miles and about 300,000 inhabitants, most Kurd or Armenian in origin. We may also mention the Syriac Christians (Nestorians), whose Patriarch lives at Koçannes, 11 miles N. E. of Djulamerḡ. The land is mountainous and difficult of access as much on account of the predatory character of its inhabitants as on account of the nature of the country and has therefore been little explored. The Turkish government, which only instituted a certain amount of order here about the middle of last century, has its representative in Djulamerḡ [q. v., i. 1061^a]. With the possible exception of 'Amādiya [q. v., i. 324^b *et seq.*] there are no other towns of importance.

The name Hakkārī is derived from the inhabitants, the Hakkāris, a branch of the Kurds, who have inhabited the wilāyet of Wān and the surrounding Turkish and Persian provinces with other Kurdish tribes from ancient times. They are mentioned as early as Ibn Hawḳal and the land is called Hakkārīya after them by Arab geographers and historians. These Hakkāris led a practically independent existence in their almost inaccessible mountain fortresses. The celebrated Atābeg Zangī was the first to attempt to bring them into subjection and took several of their mountain fortresses, to one of which he gave the name 'Imādiya (cf. 'AMĀDĪYA). But the country soon returned to its previous state. The all-conquering Timūr alone was able to force the Hakkāris to own his sway, when he besieged their Emīr in the fortress of Wān in 787 = 1385. Later they fought with the Aḳ-ḳuyunlū, but even after the rise of the Ṣafawīs in Persia and under the rule of the Ottomans they remained the real masters of their country.

AL-HAKKĀRĪ, see ADİ B. MUSAFİR, i. 136^b *et seq.* To the bibliography may now be added: R. Frank, *Scheich 'Adī, der grosse Heilige der Yesidis* (*Türk. Bibliothek*, Vol. xiv.).

HAKKĪ. [See İBRĀHİM HAKKĪ.]

HĀL, also HĀLA (pl. *aḥwāl*, *ḥalāt*), means a "state", normally regarded as present, transitory and changeable. On its use in grammar see Wright³, ii. p. 112 *et seqq.*; *Mufaṣṣal*, ed. Broch², pp. 27 *et seqq.*; *Alfiya*, ed. Dieterici, pp. 170 *et seqq.*; Fleischer, *Kl. Schr.* i, by index. In rhetoric (*ilm al-ma'ānī*) it means the situation or subject to be dealt with, and it is the object of rhetoric to show how to find verbal expression corresponding to "the requirement of the situation" (*mukāḍa 'l-ḥāl*, see preface to *Talkhīs* of Qazwīnī; Mehren, *Rhetorik*, pp. 13, 15, 17). Compare

with this *lisan al-ḥāl*, what the situation itself says. In philosophy the *kaifiyāt al-naḥsāniya*, "modalities of the *naḥs*" are *ḥalāt*, so long as they are transitory. When they become permanent faculties in the mind they are *malaḥāt* (*Dict. of techn. terms*, p. 1257, Djurdjānī, *Ta'rifāt*, p. 127). In systematic theology (*Kalām*) a *ḥāl* — for those who accept that view — is a quality (*ṣifa*) belonging to an existent thing (*maḥdūd*), but itself being neither existent nor non-existent. Things, then, are four: entities, non-entities, states and relationships (*ʿtibārāt*), (Baidjūrī's comm. to the *Kifāyat al-Awāmm* of Faḍālī, p. 59 of ed. of Cairo, 1315 and Macdonald, *Muslim Theology* etc., pp. 159 *et seq.*, 201 *et seq.*, 241 *et seq.*). Thus the *aḥwāl* are a kind of universals, and include the genera and differentiae; such *aḥwāl* exist in the essence of Allāh and are his qualities of "being a knower" (*ʿālimiyya*) "being powerful" (*ḥādīriyya*) etc. (Ibn Khaldūn; *Proleg.* ed. Quatremère, iii. 114; de Slane's transl. iii. 157 *et seq.*). See on the whole doctrine of *aḥwāl* as opposed to *ṣifāt*, Horten, who calls them *modi*, in his *Philos. Systeme*, pp. 412 *et seqq.* and also *passim*. In the science of *Uṣūl* (Foundations) *ḥāl* means legal status (= *istishāb*, Juynboll, *Das islam. Ges.*, p. 53 *et seq.*); it indicates the taking for granted that the legal status of a person remains unchanged so long as there is no evidence to the contrary (*Dict. of techn. terms*, p. 809). In medicine there are three *ḥāls*, health, disease and an intermediate state; a lengthy scholastic discussion of this by Ibn Sīnā and others in *Dict. of techn. terms*, pp. 813 *et seq.* under *Ṣiḥḥa*. In mysticism a *ḥāl* is a mental condition, given immediately and momentarily by divine grace, not to be gained by application or effort, consisting of joy, sorrow, depression, exaltation etc. It passes when the powers of the *nafs* get the upper hand, but may be followed immediately by another *ḥāl*. Djurdjānī teaches (*Ta'rifāt*, p. 56) that it may continue, apparently by the effort of the *murīd* on whom it falls, and then becomes a possession (*milk*) and is called a *maḥām*. But usually the *maḥāmāt* are sharply distinguished from the *aḥwāl* as gains by human effort from divine gifts and are the stages in the progress of the *murīd* to repose in the Divine (*tamkin*). They are reached by his intention and exertion and have a certain fixed order (Nicholson, *Kashf*, pp. 180, 370).

There is much controversy as to the possibility of the continuance (*dawām*) of *aḥwāl*. To be distinguished also from the *ḥāl* is the *waḳt*. It is that "Now" of the present, with its content of presence with or absence from God, and with it alone the *Ṣūfi* should be occupied. It belongs to the *murīd* and is his religious experience under the effect of an ever renewed Now, while the *ḥāl* comes from God and enters that Now "like a soul in a body" (Nicholson, *Kashf*, pp. 367 *et seq.*; Kushairī, *Risāla*, ii. pp. 21 *et seqq.*).

Soc.* for 1901-1902, *passim*; E. Blochet, *L'Esotérisme musulman*, p. 181 *et seqq.*; Macdonald, *Religious Attitude*, pp. 182, 188 *et seqq.*

(D. B. MACDONALD.)

HALAB (ALEPPO). A. A Turkish wilāyet in Northern Syria, bounded on the N. W. and N. by the wilāyets of Adana and Siwās, in the N. E. by the wilāyet of Ma'mūriyat al-ʿAzīz, in the E. by the sandjak of Dēr al-Zōr, in the S. by the wilāyet of Damascus and in the W. by the wilāyet of Bairūt and the Mediterranean Sea. The district presents no marked geographical features; it is divided into three liwā's or sandjak's, a. Aleppo, with 24,000 square miles, 672,500 inhabitants; b. Marʿaṣh [q. v.] and c. Urfa [q. v.]; the whole wilāyet has an area of 36,000 square miles, 995,800 inhabitants (792,500 Muslims, 49,000 Armenians, 134,300 Syrian Christians, according to Brockhaus' *Conversationslexikon*). Aleppo may be considered the name of an administrative area since the time of the Ḥamdānīd Saif al-Dawla (about 420 A. H.); he was the first prince of Aleppo. From this time on the district of Aleppo (whether principality, sultānate or province of the Mamlūk or Ottoman empire) continued to stretch over the Euphrates to Harrān, till in the last quarter of the sixteenth century its area was diminished by the creation of the independent sandjak of Dēr al-Zōr; in the south however Ḥamā was separated as early as the Fātimid period. It reached its greatest extent in the Mamlūk period in the ixth century A. H., when it stretched as far as Diwrigi in the N. F. of Asia Minor and for a time included Ḥimṣ in the south. In the Byzantine period down to the ivth century A. H. Kinnisrīn [q. v.] was the capital of the province; Antioch and the lands attached to it, which had been ruled by the Crusaders for over a century, was taken from them by Sultān Baibars in 668 and added to the province of Aleppo.

We have a certain amount of information (collected in A. v. Kremer, *Kulturgeschichte des Orients unter den Chalifen*, Vienna 1875, p. 350, 351, and in Le Strange, *Palestine under the Muslims*, p. 43—48) about the total of the taxation, which the province had to pay in the time of the ʿAbbasīd governors. The province of Aleppo and al-ʿAwāṣim paid, according to Ibn Khaldūn's quotation from the *Djirāb al-Dawla*, 400,000 (in another Ms. 420,000) dinārs (the dīnār may be estimated at ten shillings following Le Strange) in the reign of al-Ma'mūn (158—170); 470,000 dinārs (according to a quotation from al-Djāshshiyārī's *Kitāb al-Wuzarāʾ*) under the Caliph al-Rashīd (170—193); 360,000 in the year 204, according

to Qudāma, *Kitāb al-Kharādj*; 400,000 dinārs in 250, according to Ibn Khuradbiḥ and Ibn al-Fakīḥ, 360,000 dinārs in 371 (al-Mukaddasī). The revenue under Nūr al-Dīn (541—569) was smaller; it is given by Carlyle from the Cambridge Ms. of the *Tawārikh Banī Ayyūb* on p. 17 of his notes to his edition of the *Mawriḍ al-Laṭāfa* of Ibn Taghribardī. He gives 402,733 dinārs as the revenue for the whole kingdom, which included Syria as far as Damascus and Mesopotamia to Mosul, but did not include the 'Awāṣim (for Aleppo and the immediate neighbourhood 96,186). The revenues were considerably higher in the reign of Sulṭān al-Zāhir Ghāzī, they are given for the year 609 by A. v. Krcmer in the *Sitzungsber. der Wiener Akad., Phil. Hist. Klasse*, 1850, p. 245—248 in the translation of Ibn Shihna (on authority of Ibn Abī Ṭaiy), viz. 6,984,500 dirhems = 465,633 dinārs for the town of Aleppo (including its fields and gardens) and at the close of the reign of Sulṭān al-Nāṣir Yūsuf II (about 656 A. H.) they approached 8,000,000 dirhems = 533,333 dinārs.

As to the administration of the province of Aleppo, our authorities for the Mamlūk period are good. According to the *Ḍaw' al-Jubh* of Kaḷ-kaṣhandī (cf. the article ḤĀDJIB (ii. 206^b *et seq.*), Aleppo was the largest province next to Damascus. At the head was the governor, an Emir of 1000 Mamlūks, the representative of the Sulṭān, with the title Malik al-Umarā' (Chief Emir). Next to him came *a.*) the governor of the citadel independent of the former (an Emir of 40, who was often promoted in this position up to an Emir of 1000), the Atābeg, the commander of troops stationed in the province (at this period 6000 mercenaries and 500 Mamlūks); and the president of the military administrative court (*ḥādijib al-ḥudūdīyā*), who was assisted by three ḥādijibs [q. v.] of lower rank. These were the military officials, almost always chosen from the Turkish corps of Mamlūks. *b.*) The religious officials: the chief kādīs of the four recognised schools; a Ḥanafī and a Shāfi'ī military kādī, each with a muftī; the administrator of the treasury (*bait al-Māl*, q. v., i. 598 *et seq.*). *c.*) civil officials: the vizier, who bore the title "inspector of the province" in Aleppo, the private secretary (in Aleppo called "chief of the correspondence-office"; these two officials were of lower rank than the corresponding officials in Cairo); the chief of the commissariat; the inspector of offices; the mayor; the postmaster; the inspector of government lands; the inspector of buildings; the chief of police; the superintendent of the market (who was often chosen from among the ecclesiastical officials). *d.*) Medical officers: (*min al-waṣā'if al-ṣanā'iya*; the chief physician, the chief oculist and the chief surgeon. — This complicated administration, which was a copy on a small scale of the central government in Cairo, was based as regards the mercenaries and Mamlūks to some extent on a system of feudalism. It remained similar in constitution under the Turks, although the titles and the divisions were slightly altered. It was only after the destruction of the Janissaries in the first quarter of the xixth century and the introduction of the reforms that the administration was simplified. The province of Aleppo in the Mamlūk period was governed by sub-governors of different ranks, who were in part directly under the governor, while the more important were appointed

by the Sulṭān. The frontier fortresses were under Emirs of 1000, other towns according to their military importance under Emirs of 40 and 10 or under officers of the mercenary troops. Two Bedouin tribes, 13 Turkoman tribes and a few tribes of Kurds were ruled by their own chiefs who were appointed by the Sulṭān. On the modern administration cf. the article TURKEY.

B. Halab (Aleppo), the second largest city in Syria.

I. TOPOGRAPHICAL AND GENERAL.

Aleppo is situated in 37° 2' E. long. (Greenw.) and 36° 11' N. Lat., 1335 feet above sea-level, on the river Kuwaik (Gök Şū) on the border between the areas into which Northern Syria may be divided, mountainous west and the flatter east. The climate is cold in winter (for accurate meteorological observations see Russell's *Natural History of Aleppo*, London 1794, i. 83—96), but the spring begins in February; the heat is very great from May to September; the average temperature for the year is 68°, in winter 42°, in summer 87° Fahrenheit. Aleppo's commercial importance rests on the fact that it lies on the great route from north to south and on the roads from the Mediterranean to Mesopotamia; it thus concentrates upon itself (cf. Karl Andree's *Geographie des Welthandels*, new ed. 1912, ii. 278) the trade of a great part of Northern Syria and Northern Mesopotamia as far as Diyārbakr and Mārdīn and on the Euphrates as far as 'Ana. Although the commercial importance of Aleppo began to decrease after the discovery of the sea-route to the East Indies, it was still a flourishing centre of trade in the xviith and xviiith centuries. A large number of French, German, Dutch and Venetian merchants traded in exports and imports there under the protection of their consuls, chiefly through the intermediary of Jewish middlemen; the most numerous however were the English who possessed a great factory there from the reign of James I (1603—1625). In 1775 80 European firms were represented in Aleppo. In the middle of the xixth century Aleppo had almost entirely lost its prosperity and trading connections through the insecurity of the Mediterranean during the time of Napoleon I, through particularly bad government, the mutinies of the Janissaries in 1814 and 1826, the terrible earthquake of 1822 (and smaller ones in 1827 and 1832), the ravages of cholera (1832) and plague (1837), as well as the incredible misgovernment of the Egyptian officials from 1831—1837, which did not affect other parts of Syria so unfavourably (see F. Perrier, *La Syrie sous le gouvernement de Mehemmed Ali jusqu'en 1840*, Paris 1842), and the return of the Turkish régime. While in 1775 the imports amounted to about 8½ million francs and the exports had risen as high as 9 millions, in 1844 the imports had declined to 5½ million frcs. and the exports as low as 2½ millions (see Henri Guy's instructive work, *Esquisse de l'état politique et commercial de la Syrie*, Paris 1862). It was not till the eighties of last century that Aleppo began again to revive, the number of inhabitants and the totals of exports and imports are increasing and the favouring railway connections (Aleppo—Rayāk—Damascus—Bairut; Aleppo—Himş—Tripoli; Aleppo's proposed connections as a station on the Baghdad railway; and its future direct connection with the harbour

of Alexandretta) make it certain that the town is destined to have a great future.

At the present day the imports amount to 58½ million francs (of which 20 millions is cotton etc. alone); the exports 20 million francs (sesame, liquorice, gall-apples, butter, olive-oil, wool, silk, hides etc.). Before the earthquake of 1822 the population was estimated by travellers at 150,000, after 1822 it sank to 50,000. In 1882 (Guide Joanne for 1887) it is said to have been only 90,000—100,000, in 1894 it had risen to 130,000 (Meyer's *Reisebuch*) while in 1912 the figure is estimated (Baedeker, French ed.) at 200,000—150,000, which is probably too high. The old city was a quadrangle (4½ miles round) enclosed by walls but even by the time of the Arab conquest there were suburbs around it (see below). The city and the suburbs had gates. Of the city-gates several are well preserved, but nothing has remained of the gates of the suburbs except the inscription at the former Bāb al-Malik (Pl. x.). The Europeans live in the 'Aziziya quarter (see Pl. 25), the native Christians mostly in the Mushārīka (see Pl. 23) and Kuttāb quarters (see Pl. 22), the Jews in the Bahsita quarter (Pl. 1; also called Shaikhsita). The inhabitants are protected from rain and heat by vaulted bazaars; these are so extensive that a walk of 1½ hours' duration may be taken on their roofs. Aleppo is notorious because its inhabitants are liable to a disease, the Aleppo scab, an ulcer (*habb*), which disfigures the skin. The germ of the disease seems to enter the body through slight wounds in the skin, children are particularly liable to it, while adult Europeans are seldom attacked by it. Cf. v. Lusehan, *Mitteil. über die Therapie des Aleppo-Knotens*, in *Verhandl. d. Wien. Anthr. Gesells.*, xiv. 71; *Globus*, Vol. lviii.

II. HISTORY OF THE CITY.

1. Before Islām.

Aleppo, one of the oldest cities in existence, perhaps a Hittite foundation, is first mentioned as early as the second millenium B.C. under the name Ḫallab (Hallaw, or Ḫalvan) in the documents of Boghāzköi, among which is a treaty with Aleppo. In Babylonian texts Aleppo is mentioned in the treaty between Ashurnirāri and Matu-ilu about the year 750 B.C.; there and in Assyrian on Salmanassar's monolith inscription of 850 the god Ramman of Ḫallab is mentioned (information supplied by E. Weidner). In Egyptian texts Aleppo (*H-r-b*) is mentioned in the xvth century B.C. in the biography of the general Amenemheb (Sethe, *Urkunden*, iv. p. 890 *et seq.*) and in the accounts of the battle with the Hittites at Kadesh in 1288 B.C. (information supplied by Dr. Burckhardt). In the Old Testament Aram Šoba seems to correspond to Aleppo. In the Seleucid period it was given the name Beroia (Βέροια, Βέρροια, Βερόν etc.) by Seleucus Nikator, who favoured it exceedingly. It suffered severely at Khusrav I's conquest in 540 A.D. (not Khusrav II. as is wrongly stated in Pauly-Wissowa and Baedeker). In the Byzantine period we find the old name reappearing in the Greek form Χάλεπ.

2. Under Arab Rule.

Aleppo seems to have been predominantly a Syrian town with a strong admixture of immigrant Arabs in contrast to the more cosmopolitan Kinnisrin.

The suburb of Ḥāḍir Ḫalab or Tanūkh was entirely settled by Bedouins of that tribe. The Arabs therefore met with no strenuous opposition in 16 A.H. at their advance on Aleppo under Khālīd b. al-Walid and the city capitulated to Abū 'Ubaida without resistance. The Arabs presumably first occupied the suburb of Ḥāḍir Ḫalab before the Bāb Antākiya and entered the city through the latter. There they founded the first mosque, which later was called al-Masjd al-Ḥadā'iri and al-Madrasa al-Shu'aibiya and is now known as al-Tūti. The people of Aleppo were given the usual grant of protection which assured them security for their lives, churches and houses. A number of the Arabs embraced Islām immediately, others not till the caliphate of 'Abd al-Malik. The Christians retained five churches, of which several [see below] were turned into mosques during the Crusades. The Arabs erected camps, *djunūd* [q. v., i. 1064 *infra*] in the conquered provinces. Abū 'Ubaida became governor of Ḫimṣ, Kinnisrin and Mesopotamia and appointed governors beneath him. After his death in 18 Mu'awiya became governor of the whole of Syria. When he became Caliph, he separated the administration of the province of Ḫimṣ from that of Kinnisrin and its dependencies (according to another authority this measure is due to his son Yazid). The governors of the Umayyad Caliphs resided for a time in Aleppo and the neighbourhood, and their memory is still preserved in local place names, e.g. Ḥāḍir Ḫalab is to this day called Ḥāḍir al-Sulaimān, after a palace built by the governor Sulaimān, brother of the Caliph 'Abd al-Malik. Other governors resided in the neighbourhood of Aleppo. During the struggle between the Omayyads and 'Abbāsids for the caliphate, the people of Aleppo were at first won over to the side of the 'Abbāsīd general, the Ḥāshimī 'Abd Allāh b. 'Alī, but they afterwards supported Maḍjzā Abu 'l-Ward in his efforts on behalf of the descendants of the Omayyad Maslama; but they could effect nothing against the new rulers. On the death of the first 'Abbāsīd Caliph al-Saffāh [q. v.] in 136 his uncle, the general 'Abd Allāh b. 'Alī already mentioned, seized Syria and Mesopotamia but had to flee before Abū Muslim who was sent against him. The latter was then appointed governor general of Syria and appointed governors subordinate to him for the separate districts. In 139 he left Syria and was succeeded by the Ḥāshimī Ṣāliḥ, a descendant of 'Abd Allāh b. 'Alī. The office of governor of Syria was frequently filled by members of this family during the next century (down to 250 A.D.). Caliph Hārūn al-Rashīd, who as heir-apparent had been governor of Syria, separated its frontier lands from the province of Kinnisrin because they had been considerably enlarged by successful wars on the Byzantines (summer campaigns, *ṣa'ifa*, q. v.). He therefore founded a new administrative area in 170 with the capital Antākiya [q. v., i. 359 *et seq.*] called al-'Awasim [q. v., i. 515 *et seq.*], of which the frontier defences proper, the *Thughūr*, were outposts.

In 258 the Turkish general Ahmad ibn Tulūn [q. v.] was granted the *Thughūr* in fief. He assisted in putting down a rebellion in Syria with numerous troops collected for the purpose, and then declared war with his army on the governor of Syria, Ahmad al-Muwaffaq, brother of the Caliph al-Mu'tamid, to win Syria for himself. Without

meeting any serious resistance he occupied Damascus and Aleppo, where he was hailed as a liberator. His son Khumārwaīh [q. v.] appointed Toghdj b. Djaff (father of Muḥammad al-Ikhshīd, q. v.) governor of Aleppo in 275. Khumārwaīh died in 280. He was succeeded by his son Djaish, and next by his second son Hārūn. After protracted hostilities peace was finally made in 286 between the Caliph and Hārūn; Aleppo remained to the Caliph. In 290 an invasion of the Ḳarmanīans [q. v.] took place, they defeated the governor and besieged Aleppo but were forced to retreat after a sortie in which the troops were assisted by the citizens. To reconquer the lost provinces of Damascus and Egypt, the Caliph al-Muktafi sent a strong army under Muḥammad b. Sulaimān, which received accessions in Aleppo from the tribes of Kilāb and Tamīm. He routed the Ḳarmanīans in Central Syria, conquered Egypt and slew Hārūn in 292 A.H. This victory secured the Caliph's hold on Syria for a considerable time. The governors and deputy governors were changed frequently usually by force of arms. In 325 Syria became dependent on the governor of Egypt, Muḥammad al-Ikhshīd [q. v.], who appointed Aḥmad ibn Sa'īd al-Kilābī, chief of the Bedouins of the tribe of Kilāb, to be governor of Aleppo. The Kilābis flocked thither in large numbers. The Caliph granted Syria to Muḥammad b. Rā'īk [q. v.] to rid it of Ikhshīdids who did not recognise his authority. Ibn Rā'īk drove out the Ikhshīdid governor, Aḥmad al-Kilābī, and took the field against al-Ikhshīd himself. Muḥammad al-Ikhshīd was defeated, surrendered Damascus to Ibn Rā'īk and fled into Egypt. In 329 Muḥammad al-Ikhshīd sent his general Kāfur with a large army into Syria; he defeated Ibn Rā'īk's governor and conquered Aleppo. In the following year peace was made between al-Ikhshīd and Ibn Rā'īk, who now received Aleppo and Hims also. In the same year Ibn Rā'īk was slain by the Ḥamdānīd Naṣīr al-Dawla; the latter became Amir al-Umarā', and his famous brother 'Alī received the title of honour Saif al-Dawla. The history of Aleppo for the next few years is so closely bound up with his career that we must refer the reader to the article SAIF AL-DAWLA. After the death of Saif al-Dawla in 356 (967) his descendants continued to rule there till 406 (1015) if we include the sequel of Ḥamdānīd rule under the Ḥamdānīd Mamlūk Lu'lu' and his son Maṣṣūr. During this period, the history of which is given in greater detail in the article ḤAMDĀNIDS, Aleppo had developed with the lands attached to it into a practically independent principality and was now the most important city in northern Syria. Its importance in the world's history lies in its successful struggle with the Byzantine empire. By his extraordinary abilities Saif al-Dawla had retained Syria for Muslim culture; in the above mentioned year, however, the city fell directly under Fāṭimid rule, for which it had already been prepared under the Ḥamdānīds and Lu'lu' and Maṣṣūr.

The Caliph al-Ḥākim remitted the taxes for 407 of the province which had been so impoverished by continual warfare and appointed 'Aziz al-Dawla Fātik governor of Aleppo and its citadel. The latter built himself a fortified residence connected with the citadel and renovated the walls (see architecture). He was also able to come to good terms with the Byzantines. At this time the Emperor Basil had forbidden trade with the "infidels"

in Syria and Egypt in reprisal for al-Ḥākim's cruel treatment of the Christians, but he made an exception in favour of 'Aziz al-Dawla. Relying on his twofold power as governor of the city and its citadel and a friend of the Byzantines, he showed his independence of al-Ḥākim by striking his own coins and gave up paying revenue to him. The Caliph enraged prepared to take the field against him, but before the preparations were complete he was murdered [but see the article ḤĀKIM] in 411. 'Aziz al-Dawla is said to have made peace with his successor al-Zāhir and Ḥākim's sister who conducted the government; but it is related that he was murdered in 413 at the queen's command. Others throw the guilt on Badr, commander of the citadel in Aleppo, who wished the power for himself. His plan miscarried however. The regent drove him out of the city with her troops and as a precaution in 414 appointed two independent governors, one for the city and another for the fortress. But no one in Syria was satisfied with Fāṭimid rule. We thus come to have in the next year the remarkable phenomenon of the chiefs of the three great Bedouin tribes of North Syria, the Kilābis (led by Ṣāliḥ b. Mirdās, q. v.), the Kalbis (led by Sinān) and the Taiyis (led by Ḥassān b. al-Mufarradj) uniting for joint action. Ṣāliḥ was to attack Aleppo, Sinān Damascus and Ḥassān Palestine. In face of this danger the Caliph's best general, Anushtikin al-Dizbari, was sent to Palestine to put down the rebellion. Anushtikin was overcome by superior forces. Ṣāliḥ was thus free to advance on Aleppo and after two months the city was delivered up to him through dissension between the two governors. Ṣāliḥ left a portion of his army behind to capture the citadel, and went southwards with the remainder, again defeating Anushtikin and taking Hims, Ba'albek and Sidon in 416; Raḥba, Manbiḍj, Bālis and Rafaniya in the east also submitted to him. Syria thus regained its independence. When the situation in Egypt had improved the Caliph al-Zāhir in 420 sent a new army to Palestine under Anushtikin, this time successfully; Ṣāliḥ b. Mirdās fell in the battle of Uḡḡuwāna on the Jordan. His sons, who had stayed behind in Aleppo, shared his power; Mu'izz al-Dawla Ṭhīmāl received the citadel, Ṣihl al-Dawla Naṣr the city, but in the next year he seized the citadel also and indemnified his brother elsewhere. He again began the famous summer raids on the Byzantines and severely defeated the governor of Antioch. To revenge himself the Emperor Romanus advanced against Aleppo, but his army, which had suffered severely from the great heat of summer and the scarcity of water, was defeated and forced to retreat. The new governor of Antioch was more successful in plundering towns belonging to Aleppo and capturing numerous Muslims. Naṣr thus found himself forced to submit; he promised to pay tribute and observe peace. The next few years passed peaceably enough apart from a few trifling outbreaks. In 427 the new Fāṭimid Caliph, whose favour he had won by vast gifts taken from Byzantine booty, confirmed his investiture and granted him the highest rank of vizier. Two years later, Anushtikin, who had been governor of Damascus since 420, resolved to take Aleppo with Fāṭimid troops aided by the irreconcilable Kilābis. Naṣr advanced to meet him with his followers. In the battle of Laṭmīn Ṭhīmāl took to

flight and Naṣr was killed. His brother Thimāl took his place as ruler of Aleppo, but went off to Mesopotamia leaving representatives in the city and citadel. After his departure anarchy and plunder reigned there till Anuṣhtikin besieged the town, which surrendered by agreement; the citadel also surrendered shortly afterwards. Anuṣhtikin placed governors in Aleppo both for the city and citadel and further strengthened his power in Northern Syria. His successes aroused the mistrust of the Fātimid vizier, who prevented the general's family in Cairo from going to see him. Vigorous protests from Anuṣhtikin widened the breach, till finally the vizier ordered Anuṣhtikin's k̄āids to leave him and again granted Aleppo to the Mirdāsīd Thimāl. Abandoned by the k̄āids Anuṣhtikin went with a small following to Aleppo, followed by Thimāl; Anuṣhtikin, despondent and ill, died in 433. His successor handed over Aleppo to Thimāl on receipt of the Caliph's firmān to that effect after fighting several battles with him. He was on good terms not only with the Caliph in Cairo, who in 436 again confirmed the firmān granting him his position, but also with the Empress Theodora, who granted him and his successors titles and presents in return for payment of a yearly tribute. He was also able to avoid war with the powerful Turkish chief al-Basāsiri who had fled from Baghdad before the Saldjūk Sultān Ṭoḡhrul Beg and granted him Raḳḳa. The demands of the Kilābis continued to cause great difficulties to Thimāl and their insolent attacks hurt him so much that he exchanged Aleppo for Djubail, Bairūt and 'Akkā in 449 with the permission of the Fātimid Caliph. The Caliph appointed two governors in Aleppo one for the town and one for the citadel and peace reigned for three years. But in 452 the Kilābis under Thimāl's nephew Maḥmūd collected their forces to capture Aleppo. After long fighting with varying success (Aleppo on one occasion saw three different masters in three days) Maḥmūd finally occupied the city and its citadel. But he could not long enjoy its possession; by command of the Caliph, Thimāl retook it from him in 453, without however having defeated him, as the Shaikhs of the Kilābis decided that it was improper to support a nephew against his father's brother; Maḥmūd received compensation elsewhere. Towards the close of the reign of Thimāl fighting with the Byzantines went on continuously with varying result. About the end of 453 Thimāl fell very ill and died; during his long reign he had been able to maintain for Aleppo a fairly independent position between the Byzantine and Fātimid empires. Shortly before his death he appointed his brother 'Aṭiya his successor, but Maḥmūd declined to recognise his uncle and revived his old claim to the inheritance as Naṣr's son. After four years of fighting Maḥmūd, who had obtained Turkish mercenaries with Byzantine money, succeeded in taking Aleppo in 457. In 459—462 pestilence and the continual ravages of Turkish hordes brought about destitution, famine and great loss of life in Northern Syria. By this time the power of the Fātimids had declined. The 'Abbāsīd Caliphate, supported by the arms of the Saldjūk Sultāns, had won new influence, so that Maḥmūd found himself forced to mention the Caliph al-Ḳā'im and Sultān Alp Arslān in prayer, hoping for their effective support. While the Shaikhs understood the changed political situation and put on black

('Abbāsīd) garments, the people rebelled and took the straw mats out of the mosque, saying these were 'Alī's praying carpets, Abū Bakr could get new ones for himself. Alp Arslān then demanded of Maḥmūd that he, like the other vassals, should join his army at the head of his followers. When Maḥmūd declined, Alp Arslān, although he advanced against Aleppo, contented himself with surrounding the town hoping to take it without storming it, in order not to weaken it unnecessarily so that it might serve him as a bulwark against the Byzantines. At the last moment Maḥmūd surrendered the city, but received it back at once from the Sultān in fief. He was sent on an expedition against Damascus and had reached Ba'albek when he had to return Aleppo to protect his kingdom from the raids of his uncle 'Aṭiya, who had formed an alliance with the Byzantines. Against the latter Maḥmūd enlisted the leaders of Turkish mercenaries from Palestine in his service and the Byzantines retreated; 'Aṭiya went with them to Constantinople where he soon afterwards died. In 466 Maḥmūd died, in the latter years of his reign he had become avaricious and autocratic; he was succeeded by his eldest son Djalāl al-Dawla Naṣr, a cruel tyrant. When he was slain in 468, the Turkish mercenaries chose his brother Sābiḳ as ruler, while soon afterwards the Kilābis took the side of another brother, Waṭṭḥāb, and advanced on Ḳinnisrin. They dared not face the advancing Turks however and fled in disorder. The Turks took possession of their camp with their women, children and flocks as booty of war. Waṭṭḥāb and his followers then turned for help to the Sultān, who was not himself able to assist them; however he granted Syria as a fief to his brother Tutush and ordered the leaders of the Turkish mercenaries to place themselves under his banner. Tutush entered Syria and made an alliance with the Kilābis and with the 'Oḳailid chief Sharaf al-Dawla Muslim. The united forces besieged Aleppo for three months in 471 but the alliance between the Arabs and the Turks was not a close one. The Kilābis and the 'Oḳailids kept aloof from them, Muslim returned homewards with Sābiḳ, took leave of Tutush and advised the other Kilābi chiefs to seek safety. The remaining Kilābis went over to Sābiḳ. After further Turkish auxiliaries who were approaching Aleppo had been defeated by the Bedouins, Tutush raised the siege and went to the Euphrates. Next spring he again advanced on Aleppo, but was once more defeated and went to Damascus, which was given him by the Turk 'Azīz. From this centre he ravaged Northern Syria and plundered the country from Ma'arrat al-Nu'mān to Aleppo so that many of the inhabitants fled to Mesopotamia. As Sābiḳ felt he could no longer resist, he surrendered Aleppo at the end of 492 to the 'Oḳailid Muslim against his brother's wish. Muslim came with fresh troops and munitions and compensated the three brothers by granting them smaller towns. An Arab ascended the throne of Aleppo for the last time in the person of Muslim b. Ḳuraish [q. v.]; after he had fallen in 477 in battle with the Saldjūk Sulaimān b. Ḳuṭulmish [q. v.], the city was henceforth ruled only by dynasties of Turkish origin. Ibn Ḳuṭulmish proceeded to besiege Aleppo, but the inhabitants led by the Sharif al-Hutaiti (who had built an outer fort at the southern side of the city wall, called 'Ḳal'at al-Sharif") resisted in the hope of receiving

support from Malik Shāh. They next sent for help to Tutuṣh, who hurried at once to their relief; Ibn Kuṭūlmish advanced to meet him. In an encounter near Aleppo his troops were put to flight and he in despair committed suicide. Tutuṣh came up to Aleppo to occupy it as had been agreed but when Sharif al-Ḥutaiti refused to surrender the town, he forced his way into it after a few days with the aid of traitors in the town. Sālīm b. Kuraish, the commander of the citadel, who had been pledged by Muslim to surrender the citadel only to Sulṭān Malik Shāh himself, alone successfully resisted Tutuṣh. Meanwhile Malik Shāh was approaching with a large army, subjecting all the strongholds on his route. Tutuṣh retired to Damascus and Malik Shāh marched unopposed to the shores of the Mediterranean. In Aleppo he appointed his faithful friend Kāsim al-Dawla Aḡsonḡur [q. v., i. 226^b *infra seq.*], the founder of Zangid line, as governor in 479. The trade and commerce of Aleppo [see Architecture sect. iii.] flourished under him and during almost ten years of peace security reigned and his subjects were mildly treated. Unfortunately he was taken prisoner in 487 in battle with Tutuṣh and executed, Aleppo passed to Tutuṣh and, on the latter's death soon after, to his son Riqdwan [q. v.].

Period of the Crusades. For the next few years devastating wars raged continuously between the rulers of Syria so that they were unable to resist the invasion of the Franks at the beginning of the Crusades in 490. How Boemund of Tarentum captured Antioch, defeated the powerful army sent to its relief in consequence of the dissension among the Syrian Emirs and founded the kingdom of Antioch, which formed a continual danger to Aleppo for many years is well known. Although Riqdwan, being hated as a member of the Ismā'ili sect of the Assassins, received little support from his fellow Muslims, the Crusaders were unable to take Aleppo itself while he lived. On their raids however they frequently came up to the very gates of Aleppo. He died in 507. After the short reign of his feeble-minded and debauched son Alp Arslān, who was assassinated in 508, his son, the infant Sulṭān Shāh, came to the throne under the regency of Lu'lu', who met a violent death in 511. In the same year Ilghāzī b. Urtuḡ [q. v.] was chosen regent, but he could not at first maintain his army in consequence of the devastation and destitution of Aleppo, so that it was not till 512 that he obtained a firm footing by alleviating the famine to some extent by a favourable treaty with the Franks. Ilghāzī, occupied in constant fighting, spent little time in Aleppo, where he had left his son Sulaimān as his representative. As the latter rebelled against his father in 514, Ilghāzī deposed him and put his nephew Sulaimān b. 'Abd al-Djabbār in his place. The latter built the first madrasa (a theological school of the orthodox, Sunni creed) in Aleppo and aroused such wrath among the Shī'ī population that they are said to have destroyed by night what he built by day. Sulaimān, who succeeded to power on his uncle's death in 516, was deprived of it the next year by his uncle Balak b. Bahrām [q. v., i. 612^b], when he failed to defend the province successfully against the Franks. Balak deposed the king of Aleppo, the Saldjūḡ Sulṭān Shāh, and exiled him to Ḥarrān. In this year the ravages of the Franks brought them up to the gates of Aleppo; plundering the

sanctuaries they tore the sarcophagi out of their consecrated tombs. In reprisal the Kādī Ibn al-Khashshāb turned three churches in Aleppo into mosques [see ARCHITECTURE]. In the next year Balak fell at the siege of Manbiḡ, and his inheritance passed to his cousin Timūrtāsh [q. v.] of Mārdīn, who appointed a governor for Aleppo. Timūrtāsh was not strong enough to protect his new possessions against the Franks, who advanced on Aleppo with Sulṭān Shāh and Dubais [q. v., i. 1077 *et seq.*] of Ḥilla; the latter, a Shī'ī, hoped that the inhabitants, of whose enthusiasm for the Shī'a we have already had two examples, would surrender to him without striking a blow. But he was deceived in this expectation; for the inhabitants led by the Kādī Ibn al-Khashshāb defended themselves valiantly. As their lord Timūrtāsh had left them in the lurch, they had applied for help to Aḡsonḡur, ruler of Mōṣul. The latter advanced with a large army and with it forced the Franks and their Muslim allies to retreat. Wisely refraining from following up the enemy's retreat, he contented himself with making his hold on Aleppo secure in the closing days of 518. His brief reign was occupied with wars with the Franks till in 520 he was murdered in Mōṣul by the Assassins. He had shortly before appointed his son Mas'ūd his representative in Aleppo. The latter succeeded him in the government of his lands but, when he died the next year, utter anarchy reigned in Aleppo. Kuṭluḡ, to whom Mas'ūd is said to have ceded the town, took possession of it, but was thereupon besieged by the dissatisfied inhabitants in the citadel, till finally Ẓarāḡūsh, the lieutenant of the new lord of Mōṣul, the Atābeg Zangī [q. v.], arrived with an army and put an end to the strife. When Zangī himself arrived, he restored order but severely punished the culprits. In the next year (523) he was granted Aleppo by the Saldjūḡ Sulṭān. Aleppo itself was never endangered during his reign, filled with fighting as it was; security and prosperity were restored. He increased his territory by the conquest of Ḥamāt, Ḥims, Ba'albek etc. When he was slain in 541 at the siege of Kal'at Dja'bar, he was succeeded by his son Nūr al-Dīn Maḡmūd [q. v.] in the government of Mōṣul and Aleppo (including the Syrian appanages). He improved his position against the Crusaders, by taking Damascus from the incapable Būrid [cf. i. 800^a] Abāḡ and prepared the way for the end of the feeble Fāṭimid rule in Egypt through Salādin. His son al-Malik al-Ṣāliḡ Ismā'īl, who succeeded to power on Nūr al-Dīn's death in 569, had repeatedly to purchase a shameful peace from the Franks and to cede Damascus to Salādin. Ismā'īl soon afterwards died in 577 and 'Izz al-Dīn Mas'ūd I of Mōṣul, whom he had designated to succeed him, ceded Aleppo in the following year to 'Imād al-Dīn Zangī II of Sindjār, but the latter was not able to defend it against Salādin. In the beginning of 579 the latter again advanced on Aleppo; but although the troops offered a valiant defence against the besiegers, Zangī II finally saw that he could not hold Aleppo, as he lacked provisions and money to pay his soldiers. After secret negotiations the two princes came to an agreement whereby Zangī II received Sindjār, Niṣībīn and other lands, while Aleppo in return was ceded to Salādin.

The Aiyūbids (579—658). Salādin at first granted his eleven year old son al-Malik al-

Zāhir Ghāzī Aleppo, but a few months later he transferred the government of it to his brother al-Malik al-ʿĀdil [cf. i. 138^a]. In 581 Saladin fell so ill that his death was hourly expected. On this occasion he became convinced that he could not trust his relatives absolutely and, when he had recovered, decided in 582 on a new division of his lands. Al-ʿĀdil was removed from his Syrian post and sent to Egypt as Atābeg of Saladin's son; Ghāzī was again granted Aleppo and betrothed to al-ʿĀdil's daughter Dāʿifa Khātūn. Ghāzī, like a faithful vassal, supported his father against the Crusaders and on the latter's death recognised al-Malik al-ʿĀdil as his suzerain. The aim of his policy was to maintain the balance of power of the Aiyūbid chiefs by alternating alliances. He strengthened the defences of Aleppo to defend himself against all attacks. Ghāzī died in 615; he had previously designated as his successor his younger son al-Malik al-ʿAzīz Muḥammad by his marriage with al-ʿĀdil's daughter, in order to influence al-ʿĀdil in his favour. Al-ʿĀdil's son al-Malik al-Ashraf Mūsā took over the command of the troops in Aleppo and was successful in warding off an attack by the Saljūq Sultān Kaikāwūs; the civil administration was in the hands of Ghāzī's trusted lieutenant the Atābeg Tughril (see architecture) and the famous Kādī Bahā' al-Dīn Ibn Shaddād [q. v.]. Al-ʿĀdil and his son and successor al-Malik al-Kāmil each confirmed al-ʿAzīz in his throne. In 628 he took over the administration himself, appointed new officials in Aleppo and commanders in the fortresses of his vassals to strengthen his position. With the support of al-Kāmil he captured the fortress of Shaizar; he inherited al-Bīra (on the Euphrates) from his uncle al-Zāhir Dāʿūd (a son of Saladin's). Ghāzī and al-ʿAzīz brought great prosperity to Aleppo and extended their territories in Mesopotamia and Syria. Al-ʿAzīz died young in 634 and left the throne to his seven-year-old son al-Malik al-Nāṣir Yūsuf II (by his marriage with Faṭīma, daughter of Sultān al-Kāmil). Yūsuf's grandmother Dāʿifa Khātūn [see above] became regent during a period of political crisis. Mistrusting al-Kāmil of Egypt, she formed an alliance with al-Ashraf of Damascus. She was easily able to defend herself against the Templars who were raiding her territory and her troops under the command of al-Muʿazzam, son of Saladin, on several occasions inflicted such losses on them that they were forced to retire. To strengthen her power the regent made a close alliance with the Saljūq Sultān Kai-Khusraw of Rūm (Asia Minor), recognised him as suzerain (in *khutba* and on coins) and betrothed her youthful grandson to his sister. A great danger was at this time threatening Syria. The wild, warlike people of Khwārizm, driven by Čingiz-khān [q. v., i. 859 *et seq.*] out of their lands on the Caspian Sea had come to Mesopotamia and occupied the lands of al-Kāmil's son al-Šāliḥ Aiyūb. Unfortunately the Aiyūbid princes in consequence of their eternal rivalries were not united and when it suited their interests allied themselves with the Khwārizmis. In 638 the armies of Aleppo were severely defeated by much superior forces, their leader al-Muʿazzam taken prisoner, all their baggage fell into the hands of the enemy, who laid the whole country waste from the Euphrates to Hamā in their raids up and down the country; finally the Aleppo army reinforced by the king of Ḥimṣ and a body

of Beduins, who had deserted from the enemy, felt strong enough to offer battle to the Khwārizm troops. They had to follow the enemy, who evaded them, as far as al-Ruhā, and the armies met not far from there. The invaders were utterly routed and retreated via Ḥarrān to ʿAna on the Euphrates, where they remained in the Caliph's territory. All the towns in Mesopotamia were taken from them and the captives left in Ḥarrān set free. In 640 the Aleppo troops again utterly defeated the Khwārizmis, plundered their camp and took rich booty. A few months later the regent died; her grandson al-Nāṣir Yūsuf took over the government and extended his power over almost all Syria, but just when it had reached this zenith, the end of his kingdom was at hand. The Tatar Khān Ilūlāgū advanced on Aleppo in 658. Sultān Yūsuf, who had relied in vain on help from Egypt, fled to Damascus and had afterwards to surrender to Ilūlāgū. The latter took Aleppo, which was given over for days to plunder, conquered the Syrian cities of Ḥamā, Baʿalbek, Damascus and appointed governors in them.

Later Period. The rule of the Tatars lasted but a short time. In 659 they were utterly routed by Sultān Kūṭuz at ʿAin Djalūt [q. v.] and forced to retreat. Kūṭuz placed a governor in Aleppo. Soon afterwards a body of Tatar troops succeeded in taking Aleppo once more and maintained themselves in it for three or four months practising the greatest cruelties. At the end of the year they were defeated at Ḥimṣ and had to abandon Syria. Sultān Yūsuf is then said to have been executed by Hūlāgū (not after the battle of ʿAin Djalūt as is often stated). Aleppo now passed under the sway of the Mamlūk Sultāns; in 800 it once more suffered terribly from Timūr Lenk's invasion. It was restored after the retreat of the Mongols and now became a bulwark against the hereditary enemy Armenia, against which the governors waged countless wars, later against the Turkoman rulers of the Ak and Kara-Küyūnlū and of Ablistin, as well as against the Ottomans. The territory in Asia Minor conquered from time to time by the Mamlūks was always added to the province of Aleppo. The town itself was strongly fortified by its governors, notably its citadel by Abrak, the governor of the second last Mamlūk Sultān Ghūrī. It passed to the Ottomans by treachery; the citadel was so strongly fortified that the rebel Djanbardī could not take it in 926 in spite of a siege of several months' duration. The scheme of its defences has remained almost unaltered to the present day. Under the Ottomans Aleppo continued to be a flourishing commercial centre although it suffered a great deal from the misgovernment of the Pashas. From 1831–1839 Aleppo was held by the Egyptians. Ibrāhīm Pasha [q. v.], an enlightened man, although he had the best intentions, oppressed the city by heavy war-taxes and conscriptions as well as by a system of monopolies, which were only beneficial to his officials. Matters became even worse on the return of Turkish rule. Since 1880 however the city has made great steps and will once again regain its ancient importance as a commercial centre.

III. NOTES ON THE ARCHITECTURAL HISTORY.

(Based on the joint researches of Dr. Herzfeld and the writer).

Aleppo is rich in monuments of a military, religious and civil character. The majority are

well preserved and almost all bear inscriptions defining their date and origin. In addition to these we have the numerous architectural notes in the historians. The buildings of Aleppo thus afford a complete picture of the architectural development, which is authoritative not only for the town itself but for the whole of northern Syria.

1. The City-walls. Aleppo was a strongly fortified town even in the Seleucid and Byzantine period and it is probable that its walls formed a rough rectangle with a gate in the middle of each side. Khusraw I captured Aleppo on his campaign of conquest in Syria (540 A. D.) (Procopius, ii. 7, and Niceph. Kalisth., xiv. 39), and destroyed the walls but spared the citadel. Between the Bāb al-Djinnān (see plan iii.) and the Bāb Antākiya (see plan iv.) portions of the walls built with Persian bricks, said to date from the restorations by Khusraw, were still to be seen in Ibn Shaddād's time. The name "The Ditch of the Greeks" of the ditch, which the walls now follow in the south and east, does not go back to these ancient times however, for it was dug by the Emperor Nicephoros when he besieged Aleppo in 351 A. H. When the Arabs captured Aleppo, Abū 'Ubaida entered by the Antioch Gate in the year 16 A. H., so that it is evident that the position of the main gate has not been altered. The old line of defence was apparently always followed by the wall in the first four centuries of the Hījra, for which we have but few notices of it, while architectural remains are entirely absent.

The oldest part of the defences that still survives is the inner wall in the parapet between the two towers of the Antioch gate, built by the governor 'Azīz al-Dawla in the reign of the Caliph al-Hākim (407—413 A. H.). It cannot be ascertained with certainty how much of the wall proper dates from an early period, as inscriptions only exist on the gates and towers. The architectural history of the wall is therefore based on the latter.

Saladin's son, Sulṭān al-Zāhir Ghāzi, in 609 built the north gate of the city the Bāb al-Naṣr (Pl. i.), which was called Bāb al-Yahūd before his time. It has not altered: it consists of two strong towers forming a gate way, the entrance is through one of them by a zig-zag path (*barbakhāna, dergāh*, cf. van Berchem, *Notes d'Arch.*, p. 42, Note 2). More has survived of the restorations undertaken by Sulṭān al-Mu'ayyad Shaiḫh after the destruction by the Mongols under Timūr Lenk. The Bāb Antākiya (West Gate) in its present form dates from his time (823). Two inscriptions of Sulṭāns Barkūk (792) and Farajī (804) replaced on the gate by al-Mu'ayyad bear witness to the restorations carried on between 807 and 823, which had been rendered necessary by earthquake and the Tatars. This gate is from the point of view of architectural technique the most advanced in Aleppo and shows the type in perfection viz., the two towers, both of which jut out with flattened cornices, with lofty vaulting within, a narrow gateway and *barbakhāna* in the right tower, a protected way between the towers. The gateway is defended by loopholes in its three walls and machicolations. The gates had folding gates and draw gates in front of them. In the tops of the vaultings were openings through which missiles could be hurled on the enemy from the upper storey if they penetrated so far. There was a sanctuary in one of the great niches of the gate way. A portion of the Bāb Kinnesrīn (Pl. v.

south gateway) also dates from the time of al-Mu'ayyad, namely the courtine between the two towers, also the second tower south of the Bāb al-Djinnān (west wall) and the fine towers at the southwest corner of the city (south wall). Al-Mu'ayyad intended that his restorations, which were never completed, should cover the whole of the old line of defence. Under Barsbey (825—842) this was definitely abandoned and an outer wall which followed the "Greeks' ditch" was added to the city wall, with the Maḳām (Pl. vi.), Nērab (Pl. vii.) and Ḥadīd (Pl. viii.) [in place of the earlier Bāb al-Ḳanāt] gates.

About 893 A. H. Sulṭān Ḳāit Bey built the Bāb al-Farajī (Pl. ii.) at the south side, of it only the south tower, now quite built over, survives. Unlike the older gates the entrance is through the courtine between the two towers. The Bāb al-Maḳām also, built on the same principle, may be essentially the work of Ḳāit Bey although it also bears Barsbey's cartouches. Barsbey built the Bāb Nērab.

At the close of the Mamlūk period Sulṭān Ḳanṣaul Ghūrī, once more repaired the fortifications of Aleppo to defend it against the Ottomans. From him dates the modern form of the Bāb al-Djinnān (918) and the fine Bāb Kinnesrīn which resembles the Bāb Antākiya; several towers of the east wall, the Bāb al-Aḥmar (Pl. viii. east gate) and the Bāb al-Ḥadīd (Pl. ix.) were entirely renewed by him (northeast corner 915). The town soon afterwards passed to the Ottomans through treachery, but they allowed its fortifications to fall into decay. Only one slight tower, the third to the south of the Bāb Antākiya bears an inscription commemorating repairs by Sulṭān Aḥmed (1012—1026) and on the Bāb Nērab Sulṭān Maḥmūd (1143—1168) has perpetuated his name by some immaterial improvements.

As Syrian architecture is essentially moderate in character, avoiding all superfluous ornament and only seeks effect through the solidity of its freestone work and the beauty of its proportions and disposition of its masses, we naturally find these features particularly well marked in defensive works. Apart from the inscriptions and their frames there is hardly the slightest decoration on the walls of Aleppo. A frieze on the Bāb al-Naṣr may be mentioned as quite unique; it shows an arabesque undergrowth through which a hare is running (see ARABESQUE, i. 363 *et seq.*, Pl. ii. 15). There are Mamlūk escutcheons on a number of towers, lions or leopards in the rudest relief, which can scarcely claim to be works of art but are only placed on the walls as heraldic emblems (perhaps with talismanic significance).

2. The Citadel. The citadel is a natural mound with its slopes artificially steepened and a deep ditch. Its form is oval, about 300 yards × 150 in area at the top, while the ditch encloses an area of 500 × 350 yards, its height above the bottom of the ditch is 100 feet. The mound does not lie equidistant from the city walls but near the centre of the east wall. The only entrance (Pl. α) is in the south.

The citadel was certainly in existence at a very early period, the period when we find Aleppo mentioned in Assyrian and Hittite monuments; from this time date two Hittite sculptures of lions in basalt. It is to be presumed that its sanctuaries also date from this remote age. Although Aleppo

was only a provincial town in the Byzantine period it was fortified. A relic of this period is a vast cistern almost in the centre of the citadel hewn out of the rock and covered with nine cross arched vaultings resting on four pillars. The 'Abbasid and early Arab dynasties have left no monuments. The deep well on the north side, around whose cylindrical shaft a staircase winds, was built in the Seldjūk period as an inscription of Malik-shāh found in a passage below, near the steps, shows.

The existing fortifications must have been rendered useless by earthquake in 565 as Nūr al-Dīn instituted great works of restoration, of which several inscriptions have survived on towers on the west side (568). In the interior Nūr al-Dīn (563) built the lower sanctuary of Ibrāhīm al-Khalīl (Pl. 7) (Abraham is said to have visited Aleppo on his travels) with a splendid mihrāb carved in wood, one of the finest examples of this branch of art. The celebrated minbar of the Aḳṣā mosque in Jerusalem was also originally designed for this sanctuary. The space on which Sulṭān Ghāzī undertook restorations already shows the type usual in the 'Aiyūbid period, a rectangle covered by a cupola between two broad girders.

In the reign of al-Zāhir Ghāzī the citadel was entirely transformed and to him in the main it owes its present form. In the years 606—608 he deepened the moat and repaired the slopes, parts of which he probably also cemented. He built the high arched entrance bridge and the great gate (Pl. 8), which, according to the style of city-gates then in vogue, consisted of two much projecting towers close together. A well-known talismanic relief of a snake above the gate in the archway certainly dates from him. The vaulted gateway is broken into five pieces. The entrance was closed by three heavy hammered iron gates. This edifice of Ghāzī's is the most perfect example of a fortified gate in the east, nor indeed is there anything like it in the west. Considerable portions of the outer walls also date from Ghāzī, particularly in the north where there is a small sortie gate with a hammered iron door. This wall had a vaulted parapet along it and only rectangular towers projecting slightly. Inside the citadel in addition to the restorations of Maḳām Ibrāhīm in 610 Ghāzī rebuilt the great mosque with its minaret 8. It was a very ancient sanctuary and had been a church down to the time of the Mirdāsids. Nūr al-Dīn had restored it, but in 609 it had been entirely destroyed by fire. Ghāzī's building is a rare type of mosque: a large central area with a cupola between every pair of cross-vaults, and a court in front of it surrounded by barrel-vaulted halls. The minaret, like all old Syrian minarets, is square in plan and divided by ceilings into stories (here three); at the top is a gallery with a cupola supported by four pillars.

In 659 Hülāgū captured and destroyed the fortress so that it had to be entirely restored under Sulṭān al-Ashraf Khalīl (inscriptions on the great gate of 691). By 786 the portions of the wall repaired by Khalīl required restoration, which was carried out by Barḳūk in anticipation of attack by the Mongols. This building was severely damaged in 803 by the Mongols under Timūr. In 809 the governor Djakam began to rebuild the walls, when he proclaimed himself Sulṭān in opposition to al-Nāṣir Faraj. He vaulted the gate-

way and above the rectangular area thus obtained he built a great hall which is still the characteristic feature of the citadel. He further built two isolated talus towers connected by the citadel by posterns in the north (Pl. 9) and south (Pl. 10). This period of the development of the citadel closes in the reign of al-Mu'ayyad about 820. In 877—880 Kaīt Bey began improvements in the hall and built a square bastion with considerable projection in the centre of the north wall (877). Then followed the period of the decisive struggle between the Mamlūks and the Ottomans. For his defence Ghūri repaired the citadel and the city walls in a most thorough fashion. In 910 he repaired the hall, deepened the moat in 911—915 and cemented its sides anew, repaired the bridge and built the lofty tower at its head (913). He seems to have entirely rebuilt Djakam's two talus towers (Pl. 9 and 10) (914) and in 915 built a high storey on Kaīt Bey's north bastion. The main object of these comprehensive additions and restorations must have been to fit the citadel for the use of the new artillery.

Although the citadel was built entirely with a view to defensive operations, the architects of the various periods expended much art upon it. The splendid freestone architecture and the imposing dimensions of the buildings are enhanced by the many valuable materials used and by the use of decorative elements marked by excellent taste and artistic feeling. All things considered, the citadel is one of the most impressive and important monuments of Syrian architecture.

3. The Great Mosque (Pl. A). — The Great Mosque of Aleppo, also called the Mosque of Zachariah after a tomb in it, lies in the bazaars to the west of the citadel. It was founded in the reign of the Umayyad Sulaimān Ibn 'Abd al-Malik and is said to have been built on the cemetery of the chief church (see Hālāwiya). No traces have survived of this early building, which is said to have built after the plan of the Umayyad mosque in Damascus. According to a tradition (Ibn Abī Tayi), partly confirmed by inscriptional evidence, the present edifice was first begun by the Kaḏī Abu 'l-Hasan Ibn al-Khashshāb under the Mirdāsīd Sābiḳ Ibn Maḥmūd. In the troubled period that preceded the taking of Aleppo by Aḳṣonḳur, Malik-shāh's governor, little progress seems to have been made with the building. The lower storey of the minaret bears the date 483 and its inscription mentions Malikshāh and the Kaḏī Ibn al-Khashshāb, that in the upper ceiling mentions Malikshāh's brother Tutuṣh. The remains of an inscription in a medallion, which we found in 1908 during repairs of the east wall of the east hall belongs to the same period (since plastered over and now invisible). The architecture of the whole building and the absence of later inscriptions show that the appearance of the whole mosque has remained practically unaltered for centuries. Kalāūn built its mihrāb (684), as the old one had been destroyed during a fire begun by the Armenians allied with Hülāgū. Sulṭān al-Nāṣir Muḥammad built the minbar. Four Mamlūk maḳṣūras, which we were still able to see in 1908, have been removed except the Maḳṣūrat al-Khaṭīh (746) during the repairs since undertaken. The central door of the ḥaram dates from the early Mamlūk period, in spite of their later inscription (Sulṭān Murād III, 996).

The ḥaram consists of a hall of three naves each with 18 cross vaultings on solid quadrangular pillars. In Malik Shāh's time the hall is said to have had marble pillars. The mihrāb is a simple, deep, round niche. On the left beside it in the south wall is the tomb of Zachariah. Before the ḥaram lies the splendid wide court with old decorative marble pavement, two roofed wells, a sundial and an open prayer estrade. Around it are halls similar to the ḥaram. The two-naved east hall belongs to the architectural period of Malik Shāh. The north hall with a large water reservoir has also two naves; it was restored by Barkūk in 797 but he preserved the old front. The one-naved west hall is a modern building. At the northwest corner of the mosque the four cornered minaret of five stories rises above the flat roof of the halls. Entirely a work of the fifth century, with its rich classicising ornament and its inscriptions in *kūfi* and *nashkī* it is quite unique in the whole of Muslim architecture.

A work of the same period, but afterwards essentially altered is the mosque with tomb of "al-Ṣāliḥin", south of the city built by Aḥmed, a younger son of Malikshāh designated as his successor in 479, with an old and interesting mihrāb.

4. The madrasa al-Ḥalāwīya (Pl. W). — The Madrasa al-Ḥalāwīya lies to the west of the great mosque from which it is separated only by a narrow bazaar street. Before the Arab conquest this was the cathedral church of Aleppo. On its ancient remains Dr. Samuel Guyer writes: "The Madrasa al-Ḥalāwīya contains in the south remains of an ancient Christian ecclesiastical building. The tradition which mentions a church built by Helena, points in this direction and the exedra-like vaulting borne on pillars adjoining the main cupola in the west, which strikingly recalls similar motives in the central churches of Diyārbekr and Ruṣāfa, must on account of the form of its pillars etc. be traced to a building of the end of the vith century. According to Herzfeld's investigations, the cupola itself was built contemporaneously with this exedra and the same holds of the aisles north and south of it. We have apparently to recognise in this complex the most western part of a basilika covered by two or three cupolas, parts of the choir of which abutted on the street still running between the madrasa and the chief mosque (cf. Guyer's article in *Bulletin de l'Inst. Franc. d'Archéol. au Caire*, 1914)".

It was not till 517 that the Qādī Ibn al-Khashshāb transformed this church into a mosque in revenge for the destruction of Muslim tombs by the Crusaders. In 543 Nūr al-Dīn made it a madrasa. The first Madrasa in Aleppo was the Madrasa al-Zadjdādiyya built by Sulaimān b. 'Abd al-Djabbār b. Ortuḳ (510—517) of which no traces have survived (a generation later than the Nizāmiya of Baghdād). Almost at the same time in 509 the first khānḳāh, Khānḳāh al-Balāṭ was built by a freeman of Riḍwān's under Alp Arslān b. Ibn Riḍwān.

5. The Shu'aibiya. — Close behind the Antioch gate lie the remains of a building which later writers describe as an ancient arch with a Kufic inscription of later date, called Djāmi' al-Tūti. In reality it is the Madrasa al-Shu'aibiya built by Nūr al-Dīn in 545, which occupies the site of the oldest mosque in Aleppo built by Abū 'U'baida (see history). The importance of this

building with its luxurious ornament, its architectural features which seem quite archaic for so late a period and its Kufic inscriptions, lies in the fact that it is one of the chief evidences for the still unexplained radical change, which took place in the reign of Nūr al-Dīn, in the epigraphy and style of his inscriptions and in the style of architecture.

6. Aiyūbid buildings. — The whole wealth of Aiyūbid buildings in Aleppo can only be touched on here. But as even Cairo itself, otherwise so rich in monuments, is poor in religious buildings of this period, we may here at least mention the chief buildings viz.: the Mashhad 'Alī in the west of the city, part of which is older in origin, the sepulchral mosque of al-Zāhir Ghāzī, the Sulṭāniya (Pl. H.) to the south, at the foot of the citadel, and the Zāhiriya in the Maḳāmāt (Pl. 48), the sepulchral mosque of Firdaus (Pl. 47) in the same place, the Khānḳāh in the Farafrā (Pl. 14) and that of Abū Ridjā in the Kallāsa (Pl. 24) as well as the sepulchral mosque of Shaikh Fāris in the north of the city in Babillā.

7. Mamlūk buildings. — A large number of the buildings belong to the period of the Mamlūks and Ottomans. In addition to the many mosques, Djāmi' Utrūsh (Pl. I), Altunbughā (Pl. K), Ta-wāshī (Pl. M) with their varied minarets, which cause the prospect of Aleppo to remind one of Cairo, a beautiful Muristān Arghūn (Pl. f) of the year 755 and a whole series of large warehouses and shops (Khān) (Pl. a—c), dwellings, baths and public wells have survived.

Bibliography: No comprehensive modern account of the history and topography of Aleppo has yet been prepared. I have collected the necessary material for the purpose of editing the inscriptions there. Dr. Herzfeld has undertaken the description of the buildings as well as the history of the architecture. The preparatory studies for Aleppo are almost completed and the volume will appear in about two years as a section of Van Berchem's *Corpus Inscriptionum Arabicarum* in the *Mémoires de l'Institut Français d'Archéologie du Caire*. The same holds of Hamā and Iḥims. — On the topography of Aleppo: Muḥammad Ibn Shaddād al-Ḥalabī (not Saladin's qādī) about 674 wrote *al-'Alāk al-khaṭira fī Dhikr Umarā' al-Sha'm wa 'l-Djazīra* (cf. Sobernheim, *Ibn Shaddāds Darstellung im Mittelalter in Centenario della Nascita di Michele Amari* ii. 152—163). His history of the rulers of Aleppo has been lost. The works by Ibn Khaṭīb al-Nāṣiriya and Ibn Shihna are based on him. The Qādī Aḥu 'l-Yumn al-Batrūnī, a teacher in the mosque of Khusrāw Pasha in Aleppo, produced a version of Ibn Shihna in the xith century A. H. (the manuscripts of Ibn Shihna in Berlin, Vienna, Gotha and Copenhagen are copies of it; C. Brockelmann, *Geschichte der arab. Literatur*, ii. 42), printed in Bairut 1909 by the Jesuits. A. von Kremer translated several chapters in *Sitzungsberichte d. Wiener Akad. Phil. Hist. Klasse*, Vol. iv. 1850, p. 212—250 and 304—310; the anonymous Ms. 1683 in Paris is also based on an edition of Ibn Shihna; Blochet has translated several passages from it in his *Histoire d'Alep* (see below, p. 226—245) as is Dr. Bischof's *Geschichte von Aleppo* (Arabic, written by a Shaikh) an uncritical book without the slightest claims

to accuracy; the Turkish geography *Djihān Numā*, Constantinople 1732, p. 593, and Ritter's detailed account of Aleppo in his *Erdkunde*. Vol. xvii., part. ii. 1733—1777, were the principal older sources are quoted and digested. Plans of the city of Aleppo, prepared by Rousseau in his *Recueil des Mém. de la Soc. de Géogr.*, Paris 1825, ii. p. 194—244, by Niebuhr, published in his *Travels* and in Russell's above mentioned *Natural History of Aleppo*; as well as a new plan prepared by the engineers of the wilāyet, which is given here. On the geography cf. also M. Hartmann, *Das Liwa Halab* in *Zeitschr. d. Geogr. Ges.*, Berlin 1894; I. e. Strange, *Palestine under the Muslims*.

On the History of Aleppo: on the history of the conquest by the Arabs: Leone Caetani, *Annali dell' Islam*, Milan 1910, Vol. iii., which contains a list of the works consulted (the most important are the writings of Wellhausen and de Goeje), as well as a critical investigation of the sources. For the history to 640 'Omar b. al-'Adim's work is the fullest; of the Arabic text there have been published: the years 16—336 by G. W. Freytag, with Latin translation, introduction and valuable notes (Bonn 1819); *Die Regierung des Sa'd al-Dawla* (356—361), *Arabischer Text mit Deutscher Übersetzung und Anmerkungen* (Bonn 1820); the text for the reign of Ibn Sa'id (381—392) and for the years 634—641 in the Bonn Chrestomathia (Lokmani Fabulae) 1823, p. 41—46, the text for the years 577—588 in the *Chrestomathia Arabica*, Bonn 1834, p. 97—138; the history from the death of Ibn Sa'id to the end of the Mirdāsids (394—472) from the same work by N. Müller, Bonn 1830, in a Latin translation often abbreviated and inaccurate; the history of the Hamdānids, in German in extracts by G. W. Freytag, *Zeitschr. d. Deutsch. Morgenl. Ges.*, x. 432—498; xi. 177—252; the years 488—569 in a Freuch translation by Silvestre de Sacy, printed in Röhrich's *Beiträge zu den Kreuzzügen*, Berlin 1874, Vol. i. 209—246 (see also *Recueil des Historiens orientaux*, iii. 577—690); Blochet's translation of the years 541—640, entitled *Histoire d'Alep*, Paris 1900; further extracts in Defrémery, *Mémoires d'Histoire orientale*, i. 35—65; in the edition of Leo Diaconus, Bonn 1828, p. 389—391. The christian-arabic sources (Eutychius and his son Yahyā b. Baṭrik) and the Byzantine are best utilised in Schlumberger, *Un Empereur Byzantin au royaume de Sicile: Nicéphore Phocas*, Paris 1890, *L'Épopée Byzantine à la fin du dixième siècle*, 1896—1905, 1—3. For the Crusading period: Wilken, *Geschichte der Kreuzzüge*; Reinaud, *Extraits des Historiens arabes*, Paris 1829; *Recueil des Historiens orientaux*, Paris, 1—5; Röhrich, *Geschichte des Königreichs Jerusalem*, Innsbruck 1898; Wüstenfeld, *Geschichte der Fatimiden-Chalifen*, Göttingen. Also the standard works of Weil, A. Müller and Clément Huart. — Arabic authors: Ibn al-Athīr, *Balādhurī*, Abu 'l-Fidā, Ibn Ḥabīb (extract in *Orientalia II* by Meursinge and Weijers, Amsterdam 1846), Ibn Iyās (printed in Cairo, except the years 906—922; for this gap cf. Mss. in Paris and Petersburg); Ibn Khaldūn (particularly Vol. iii., History of the separate Dynasties); Maḳrīzī's *Sulūk* (translation from the beginning to 648, by

Blochet, Paris 1908, with valuable extracts from Ibn Wāṣil); Quatremère (translation of the years 648—708 under the title *Histoire des Sultans Mamlouks* with valuable notes, Paris 1837); Nuwairi (Mss. in Leiden and Paris); Ibn Taghribirdī's *Nudjūm*, edition of the text from the beginning to 365 by Juynboll and Matthes (Leiden 1852—1861), 365—564 by Popper, Leiden 1909—1913. — For biographical notices: Kamāl al-Dīn 'Omar, *Bughyat al-Ṭālib* (a few biographies printed in the *Recueil des Historiens orientaux*, iii. 691—782; Ms. in Paris); Ibn Khallikān's well-known work; al-Ṣafādī, *A'yān al-'Aṣr* (Ms. in Berlin) and *al-Wāfi bi 'l-Wafayūt*, various portions of the Mss. in Paris, London etc.; Ibn Taghribirdī, *Manhal al-Ṣāfi* (Mss. in Cairo, Paris, Vienna). — Epigraphy in Blochet's *Histoire d'Alep*, translation of the inaccurate texts of inscriptions by Bischof. A few inscriptions in M. Freiehr von Oppenheim, *Innschriften aus Syrien, Arabische Inschriften*, edited by M. van Berchem; also Sobernheim in *Mélanges Dérenbourg*, p. 379—390: *Das Heiligtum Shaikh Muḥassin in Aleppo*.

(M. SOBERNHEIM.)

AL-HALABĪ, IBRĀHĪM B. MUḤAMMAD, an Arab jurist, author of a handbook on the *Furū'* according to the Ḥanafī school much used in Turkey and often annotated. Its title is *Multaḳa 'l-Abḥur* (printed with Shaikhizāde's commentary, Stambūl 1241, 1310, by al-Ḥaṣkafī, ibid., 1258, 1287, 1310; French transl. by Sauvaire, Marseilles 1882, Turkish transl. by Ḥamīdī Rāghib, printed in Būlāḳ 1254, Stambūl 1269; cf. Ḥādījī Khal., vi. 102 et seq.). Al-Halabī, a native of Ḥalab (Aleppo) studied in his native city and in Cairo, then came to Constantinople where he filled the offices of preacher and professor and died in 956 (1549) at the age of 90. Besides the textbook already mentioned he composed other works detailed by Brockelmann, *Gesch. d. Arab. Lit.*, ii. 432.

Bibliography: cf. Brockelmann, l. c.

AL-HALABĪ NŪR AL-DĪN B. BURHĀN AL-DĪN 'ALĪ B. IBRĀHĪM B. AḤMAD B. 'ALĪ B. 'OMAR AL-KĀHIRĪ AL-SHĀFĪ'Ī, an Arab author, born in 975 = 1567 in Cairo, was a professor in the Madrasa al-Ṣalāhiya there and died on the 30th Sha'bān 1044 = 17th Febr. 1634. The best known of his numerous works is the biography of the Prophet, entitled *Inṣān al-'Uyūn fī Sirat al-Amin al-Ma'mūn*, usually called *al-Sira al-Halabiya*, an excerpt from *al-Sira al-Sha'niya* of Shams al-Dīn al-Ṣāliḥ al-Sha'mī (died 942 = 1536), considerably expanded by numerous additions, completed in 1043 = 1633, printed in Cairo 1280, 1308. We also still possess from his pen the Ṣūfī treatise *al-Naṣiḥa al-'Alawiya fī Bayān Ḥusn Ṭarīqat al-Sāda al-Aḥmadiya*, see Ahlwardt *Verzeichnis d. Arab. Hdss. der Kgl. Bibl. zu Berlin*, No. 10104, and the *'Iqd al-Mardjān fīmā yata'allaq bi 'l-Djānn*, a digest of Suyūṭī's digest of Shiblī's work, discussed by Nöldeke in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.* (Vol. lxiv. p. 439 et seq.; see also lxx. 155), see *Fihrist al-Kutub al-'Arabiya al-Mahfūza fī 'l-Kutubkhāna al-Khadāwiya*, vi. 157; vii. 302, Bibl. de M. le Baron S. de Sacy, Paris 1842, Vol. iii. Mss. p. 5, No. 31, 2. Of the many commentaries and supercommentaries which he wrote on textbooks current in his time, the only one that has survived is that on Zakariyā al-Anṣārī's commentary on Nawawī's *Minḥādī al-*

Tālibin, see de Slane, *Cat. des Mss. Ar. de la Bibl. Nationale*, 1015-1016 (Muḥibbī, iii. 123, 8 mentions instead of this a *Ḥāshiyā 'alā Manḥadī al-Ḳāḍī Zakariyā*).

Bibliography: Muḥibbī, *Khulāṣat al-Aṭhar*, iii. 122 et seq.; Wüstenfeld, *Die Geschichtschreiber der Araber*, N^o 560; Brockelmann, *Arab. Litt.*, ii. 307. (C. BROCKELMANN.)

ḤALĀL (A.) legally permitted, in opposition to *Ḥarām* [q. v.].

ḤĀLET EFENDI (MUḤAMMAD SA'ID), a statesman of the time of the Ottoman Sultān Maḥmūd II. He was the son of the Ḳāḍī Ḥusain Efendi, a native of the Crimea. Like his father he entered the service of Sharif Efendi, the Shaikh al-Islām; on the latter's death he became successively *yamaḳ* (assistant) to the *muhūr-dār* (keeper of the seals) of Rāshid Efendi, president of the Imperial Receptions, and factor to the *nā'ib* (judge) of Yenī-Shehri-Fanār (Larissa). His relations with the poet Ghālīb Dede, superior of the monastery of Mewlewī dervishes at Galata, gave him the idea of devoting himself to the studies, which he had hitherto much neglected. His keen intelligence obtained him positions as secretary with different people such as Callimaki, dragoman to the Admiralty, through whom he formed associations with the gild of fanariots, and the Master of Ceremonies Muṣṭafā Rāshid, who obtained him an appointment at the Sublime Porte. There he soon became chief of the audit office. Soon after the conclusion of peace with France he was sent as ambassador to Paris (4th Ramaḍān 1217 = 29th Dec. 1802). On his return in 1807 he was appointed *beylikci* (keeper of the seals) to the Imperial Dīwān and barely two months later president of the Imperial Receptions (*rikāb ra'isi*); but on the 22nd Shawwāl of the same year (23rd Dec.) he was dismissed at the complaint of the French ambassador General Sebastiani, who accused him of an understanding with England, and kept a prisoner in Kutahya, where he remained for a year. He was next sent upon a mission to Baghdād, but did not succeed in collecting the sums due by Sulaimān Pasha. He revenged himself however by having the latter condemned to death, and was thus able to return to the capital in triumph with the confiscated amount (1225 = 1810).

He now became Master of Ceremonies and a few years later chief of the office of calligraphers, whose duty it was to place the *tughrā* on the firmans (*terakki*). But he used his power and influence for his private ends by procuring for several fanariots whom he favoured posts as woiwod of Moldau and Wallachia; he also contributed to the banishment from the empire of 'Alī Pasha of Tepedilen and was thus the indirect cause of the revolt in the Morea. This brought about his fall; in 1238 (1822-1823) he was arrested in Kōnia and strangled there. His body was buried there and his head brought to Constantinople and buried in the Mewlewī monastery in Galata, to which he had belonged. There also is a *sebil* (public fountain) and a library founded by him. His collected poems were printed in Bülāk in 1842.

Bibliography: Djewdet, *Tārikh*, vii. 274; viii. 317; xi. 5, 152, 191; xii. 64; Shānī-zāde, i. 249; Sāmi bey, *Ḳāmūs al-A'lām*, iii. 1915; Cl. Huart, *Histoire de Bagdad*, p. 166, 170; Jouannin and Van Gaver, *Turquie*, p. 368, 393, 396. (CL. HUART.)

ḤĀLETĪ 'AZMĪ-ZĀDE MUṢṬAFĀ EFENDI, known as 'Azmi-zāde or by his pen-name Ḥāletī, a famous Ottoman scholar and poet, born in 977 on the 15th Sha'bān (23rd Jan. 1570) in Constantinople, the son of Pīr Meḥmed 'Azmi Efendi, a literary man of some importance, the tutor of Sultān Murād III. He had the good fortune to study under the most distinguished scholars of his time, notably the historian Khodja Sa'd al-Dīn. Under their direction he laid the foundations for his later encyclopaedic knowledge of history. He was a muderris and ḳāḍī in various places, Damascus, Cairo, Jerusalem, Brusa, Adrianople and Constantinople and reached the highest office viz. *Ḳāḍī 'Asker* of Anatolia and later of Rumelia. He died on the 26th Sha'bān 1040 (30th March 1631) and was buried in Constantinople near the Süfler Çarshıy.

Ḥāletī was one of the most cultured and best read men of his time, and rivalled 'Alī Çelebi Kınālī-zāde in encyclopaedic knowledge. He left a library of 3000—4000 volumes, all of which he had annotated in his own hand. As a poet he occupies an honourable place among Ottoman poets of the second rank; to the first he does not belong, however much he may have been esteemed in his own time. His language is fine and dignified. His poems are pitched on a tender key. They are characterized by a certain pessimism of tone. Ḥāletī's main importance in poetry lies in his *kiṭā'* and even more in his *rubā'īs* (quatrains), composed after Persian models and forming a separate *Dīwān*, in which he successfully imitated 'Omar Khayyām and won a special place in Ottoman literature from which he has never been ousted. He also left a fairly good *Dīwān* which is still popular (printed Bülāk 1258), and a *Sāḳī-Nāme* (Book of the Cup-bearer) in *Mathnawī* verses, after the Persian model, a typical example of this style of poetry, and a *Pend-Nāme* in *Mathnawī* verses (moral precepts). He added a considerable number of new verses to it, although he did not complete the romantic *Mathnawī Mihr u Müshteri* (Sun and Jupiter), the translation of the work of the Persian poet Muḥammad 'Aṣṣār, which his father had left unfinished.

His prose works are all those of a professional scholar: marginal notes on the *Menār Ibn Malik* and the *Durer we Churer*, a commentary on the *Mughni 'l-Lebīb*, additions to the commentary on the *Hedāye*, the *Miftāḥ-i Shurūḥ* and the *Miṣbāḥ*, further treatises on the exegesis of the Qur'ān and collections of letters (*Munsha'āt-i 'Azmi-zāde Efendi*) as models of style.

ḤĀLF, ḤALĪF [see HILF.]

ḤALĪ (HALY, HVALY), a town in Arabia, lying to the south of Konfude on the border between the Hidjāz and Yemen on the Wādī 'Ashr, with the small harbour of Marsā Ḥalī and the mountain spur of Ra's Ḥalī (the latter according to Niebuhr in N. Lat. 18° 36'). Ibn Baṭūṭa, who visited the town on his journey to Yemen in 1331 A. D., gives it the name Ḥalī b. Ya'qūb and

describes it as a flourishing seaport with fine buildings and a splendid mosque. The Sultān, who was at that time ruling the town, belonged to the Kināna [q. v.] and was a gifted poet and a model of Arabian hospitality. In Niebuhr's time it was a dependency of the Sharif of Mecca, who had a ḥiṣn with a garrison here. In 1805 or 1806 the town with the whole coast was taken from the Sharif by the Wahhābis [q. v.]. In 1815 Muḥammad 'Alī's Egyptian troops regained it after having been driven out in the preceding year by the neighbouring mountain tribes of 'Asir [q. v.] and in the same year Burckhardt during this stay there found the tax-collectors of the Sharif of Mecca again installed in it. In 1824 and 1825, on their campaigns against the tribes of 'Asir, the Egyptian troops passed through Ḥālī. During the Egyptian campaign against 'Asir in 1834 Ḥālī was burnt to the ground by Aḥmad Paṣhā's troops.

ḤĀLĪ, SAYYID ALTĀF ḤUSAIN ANṢĀRĪ, the foremost living Urdū poet, was in his youth a pupil of the poet Ghālib [q. v.]; at the age of 40 he came under the influence of Sir Saiyid Aḥmad Khān [q. v.], at whose suggestion he wrote his *Musaddas*, entitled *Maddu d-jāz-i-Islām* ("The flood-tide and ebb of Islām"), first printed in 1296 (= 1879); this poem embodies the ideals of the reform movement in Muslim India and has exercised a wide-spread influence on contemporary thought and activity; it has frequently been reprinted and later editions have been considerably enlarged. In 1893 he published his *Diwān*, accompanied by a prose introduction on the nature of poetry and the characteristic features of poetic literature in various languages, including Urdū. Among his prose writings are *Ḥayāt-i-Sa'dī* (1886), *Yādgar-i-Ghālib* (1897), and *Ḥayāt-i-djāwīd* (a life of Sir Saiyid Aḥmad Khān) (1901). He has been living for some time past, in retirement in his native town, Pānīpat.

Bibliography: Abdul Qadir, *The New School of Urdu Literature*, p. 17 et seq. (Lahore, 1898); G. E. Ward, *The Quatrains of Ḥālī, edited with a translation into English* (Oxford, 1904).

AL-ḤALĪM (A.) the mild, one of the names of God, see i. 304^a.

ḤALĪMA, a woman of the Banū Sa'd b. Bakr, according to Tradition, Muḥammad's nurse. In a year of famine she came to Mecca with other women of her tribe to seek foster-children and finally adopted the orphan Muḥammad, who soon brought great happiness to her household. During his stay with her, two angels came to him, opened his breast and took out a black clot of blood. Although in the later accounts of Muḥammad's wars there are one or two illusions to his foster-kinship with the Banū Sa'd, the whole story is simply an evangelium infantiae, the motif of which, as the story itself shows, is that every true prophet should have once been a shepherd. The custom of sending children to Beduin nurses is occasionally mentioned (Ṭabari, i. 851, cf. Burckhardt's *Reisen in Syrien*, p. 344 et seq. for the Sharif-families), but was only

practiced by rich or distinguished people. The cleaning of the breast, which is placed at a different period in other traditions (Ṭabari, i. 1154 et seq., 1157) is apparently only a materialising of Sūra xciv. 1.

Sachau, i. 1, 69—71; Ṭabari, *Annales*, ed. de Goeje, i. 969—972, 1143; Caussin de Perceval, *Essai sur l'histoire des Arabes*, i. 286 et seq.; Sprenger, *Muḥammed*, i. 119, 163 et seq.; Caetani, *Annali dell' Islām*, i. 154 et seq. (FR. BUHL.)

ḤALĪMA, the name of the daughter of al-Ḥārith b. Djabala, king of the Ghassān, celebrated for her remarkable beauty. It was from her — or according to others, from a meadow, called Marḍī Ḥalima after her — that the *Yawm Ḥalima*, one of the most celebrated battles of the pre-Islāmic Arabs, the *Aiyām al-'Arab* [q. v.], received its name. It was a battle between the Ghassānids led by the above named king and the Lakhmids commanded by al-Mundhir b. Mā' al-Samā'. The cause and the course of the battle are differently given in the different accounts. The fray is said to have been so fiercely fought that the dust raised hid the sun and the stars became visible by day. A well known proverb says: *Mā yawm Ḥalima bisirr* "the day of Ḥalima is no secret". This is said of anything which every one knows.

AL-HALLĀDJ ("the carder") **ABU 'L-MUGHITH AL-HUSAIN B. MANṢŪR B. MAḤAMMĀ AL-BAIḌĀWĪ**, a Persian mystic and theologian who wrote in Arabic. He was born about 244 (858) at al-Tūr near al-Baidā (Fārs), the grandson of a fire-worshipper, or descendant, it is said, of the Ṣaḥābī Abū Aiyūb. From 260 (873) to 284 (897) he lived in retirement (*khalfwa*) with Ṣūfī teachers (Tustarī, 'Amr Makki, Djunaid). Then he broke with them and went out into the world to preach (*da'wā*) asceticism and mysticism, thus assuming the part of a Ḳarṣatīan *da'ī*, in *Khurāsān* (Tālikān), Ahwāz, Fārs, India (Gudjarāt) and Turkistān. On his return from Mecca to Baghdād in 296 (908) disciples (Hallādjīya) rapidly gathered round him. He was then accused of being a charlatan by the Mu'tazila, excommunicated by a *tawḳīf* of the Imāmiya and a *fatwā* of the Zāhiriya, and twice arrested by the 'Abbāsīd police. Brought before the vizier Ibn 'Isā and put on the pillory in 301 (913), he spent eight years in prison in Baghdād. The patronage of Shaghab, mother of al-Muktadir, and of the *ḥādīj* Naṣr brought upon him the hatred of the vizier Hāmīd, who had him executed after a seven months' trial on a *fatwā* approved by the Mālikī Qāḍī Abū 'Umar. On Tuesday 24th Dhū 'l-Ḳa'da 309 (26th March 922), on the esplanade of the new prison of Baghdād (on the right bank of the river) opposite the Bāb al-Tāq, al-Hallādj was flogged, mutilated, exposed on a gibbet (*maṣṭūb*) and finally decapitated and burned. This "crucifixion" gave rise, as in the case of Christ, to legends of substitution (cf. *Rev. Hist. des Religions*, lxii., 195—207). His persecuted disciples gathered round

Abū 'Umāra al-Hāshimī in al-Ahwāz, and Fāris al-Dīnawarī in Khurāsān. It was from this last group that the mystic revival of Persian poetry originated with Abū Sa'īd [q. v.] and of Turkish with Ahmed Yescwī and Nesīmī [q. v.].

Madhhab (doctrines) of the Hallādjiya:

a. in *Fikḥ*, the five *farā'id*, even the Hadjdj may be replaced by other works (= *iskāt al-wasā'il*).

b. in *Kalām*, God's transcendence (*tanẓīh*) above the limits of creation (*tūl*, *'ard*), the existence of an uncreated Divine spirit (*rūḥ nāṭiqa*), which becomes united with the created *rūḥ* (spirit) of the ascetic (*ḥulūl al-tāhūt fi 'l-nāsūt*); the saint (*walī*) becomes the living and personal witness of God (*ḥuwa ḥuwa*) whence the saying: *Ana 'l-Ḥaqq*, "I am Creative Truth" (cf. *Tawāsīn*, VI, 32).

c. in *Taṣawwuf*, perfect union with the divine will (*'ain al-djām*) through desire of and submission to suffering. The *dhikr* given them by Shaikh Sanūsī is modern.

Few men in Islām have been so much discussed; in spite of the *iljmā'* of the judges who condemned him, popular devotion has canonised him. The following are the principal doctors who have taken part in this cause célèbre: (*k* = *takfir*, *w* = *wilāya*, *t* = *tawakkuf*).

A. Fuḳahā: Zāhiriya (*k*: Ibn Dā'ūd, Ibn Ḥazim); Imāmiya (*k*: Ibn Bābūya, Tūsī, Hillī, *w*: Shūsh-tārī, 'Amilī); Mālikiya (*k*: Turṭūshī, 'Iyād, Ibn Khaldūn, *w*: 'Abdārī, Dulundjāwī, Hanābila (*k*: Ibn Taimiyya, *w*: Ibn 'Aqīl [retracted], Tawfi); Hanafiya (*t*: Ibn Buhlūl, *w*: Nābulusī), Shāfi'iya (*t*: Ibn Suraidj, Ibn Ḥadjar, Suyūṭī, 'Urḍī, *k*: Dju-wainī, Dhahabī, *w*: Maḳdisī, Yāfī'i, Sha'rāwī, Haitamī, Ibn 'Akīla, Saiyid Murtaḍā).

B. Mutakallimūn: Mu'tazila (*k*: Djubbā'i, Kaẓwīnī); Imāmiya (*k*: Muḥid, *w*: Naṣīr Tūsī, Maibudhī, Amīr Dāmād); Ash'ā'ira (*k*: Bākilānī, *w*: Ibn Khaffī, Ghazālī, Fakhr Rāzī); Sālimiyya (*w*); Maturidiyya (*k*: Ibn Kamāl-pāshā, *w*: Kānī).

C. Ḥukamā: *w*: Ibn Ṭufail, Suhrawardī Ḥalabī. D. Ṣūfiya: *k*: 'Amr Makki and most early writers except (*w*) Ibn 'Aṭā, Shibli, Fāris, Kalābādhi, Naṣrābādhi, Sulamī, and (*t*): Ḥusri, Dakḳāk, Kūshairī; then *w*: Sa'idālānī, Hudjwiri, Abū Sa'īd, Ilarawī, Fārmaghī, 'Abd al-Kādir Gilanī, Baḳlī, 'Aṭṭār, Ibn al-'Arabī, Rūmī, and most moderns except (*t*): Aḥmad Rifā'i, 'Abd al-Karīm Djili.

Among European scholars different verdicts have been passed upon him. A. Müller and d'Herbelot think him to have been secretly a Christian; Reiske accuses him of blasphemy, Tholuck of paradox; Kremer makes him a monist, Kazanski a neuropath and Browne "a dangerous and able intriguer". Hallādji, a dialectician and exstatic, (cf. Lullius, Swedenborg), endeavoured to bring dogma into harmony with Greek philosophy on a basis of mystic experience; he was in this a precursor of Ghazālī; and although he would have repudiated their cautious esotericism, the Ṣūfis have made him their "martyr" par excellence. — Of his works (cf. *Kiṭāb al-Fihrist* I, 192) there remain the *Kiṭāb al-Tawāsīn* (ed. Massignon, Paris, 1913), 27 *Riwayāt* of the year 290 (902); 400 fragments in prose and 150 in verse of rare beauty.

Bibliography: v. Kremer (*Herrsch. Ideen*, p. 70, 78) and Browne (*Lit. hist. of Persia*, I, 361, 428) no longer suffice. A detailed list of sources, notices by historians and hagiographers, report of the last trial by Ibn Zandjī, monographs

by Sulamī, Ibn Bākūya (v. *Quatre textes inédits relatifs à la biographie d'... al-Hallāj*, publ. p. I. Massignon, Paris 1914), Khafīz, Kaẓwīnī, Ibn al-Djawzī, Dhahabī, metrical legends by Aṭṭār (*Ḥilādji-nāme*), Maḳdisī, Niyāzī Miṣrī. is given in *Der Islam*, iii. (1912), 248-249 and in the ed. of *Tawāsīn* (cf. supra) — cf. Goldziher in *Der Islam*, iv. (1913). 165-169.

(LOUIS MASSIGNON.)

HAMĀ (also called Hamāt or Epiphania) is built on both sides of the Orontes (Nahr al-'Aṣī); the larger part of the town lies on the left bank (cf. Plan), which in places rises as high as 120 feet above the river. Three bridges connect the two sides. No traces remain of the mediæval citadel and only a mound of ruins marks the site of the palace. Their stones are said to have been used to build the palace of the family of 'Abd al-Kādir al-Gilānī which immigrated from Baghdad; in this palace and also in that of the palace of the 'Adm family there are two fine *ḥaṭ'a* (rooms built for the hot season) ornamented with wood carvings. The water of the Orontes is led to the gardens and fields through aqueducts, to which it is raised by water wheels (*nāṣūra*), whose singing noise has a peculiarly soporific effect. There are also similar *nāṣūras* in Antioch. (The Crusaders brought them to Germany, where they are still used in a little valley in Franken near Bayreuth). In Abu 'l-Fidā's time there were 32; now there are about 9 such water wheels. Hamā has 51,000 inhabitants (about 6000 Christians, the remainder Muslims); it is connected by railway with Aleppo, Hims (whence there is a branch line to Tripolis) as well as with Damascus and Bairūt. A high road leads to Lattakia via Djisr al-Shuḡhr. On the prospects of Hamā see M. Hartmann's *Reisebriefe aus Syrien* (Berlin 1913), p. 50-57.

Historical. Hamā was first settled by Hittites; it is the most southerly place where Hittite inscriptions have been found. In the wars against Salmanassar II in the years 854 and 849 B. C. king Irkhuleni of Hamā took part as an ally of Hazael of Damascus; in 738 king Eni-El paid tribute to Tiglath Pileser. In 720 a rebellion by king Ilu-Bidu was put down by Sargon and the town incorporated in the Assyrian empire. Hamā called the "great" in the Bible is frequently mentioned there. In the Hellenistic period it received the name Epiphania from Antiochus IV Epiphanes. In 16 A. H. (unlike Hims it was a little town of no importance) it was surrendered to the Muslims and remained till the ivth century under the administration of the *djund* (military district) of Hims. In the time of the Ḥamdānīd Saif al-Dawla (333-356, q. v.) it was incorporated in the administrative district of Aleppo in which it remained till the death of Ridwān, in 507. The ruler of Damascus the Atābeg Tughtikin [q. v.] seems then to have taken the town. It was taken from him in 509 by the Saldjūk general Bursūk and given to Khirkhān ibn Karādja, governor of Hims [q. v.], who transferred it to his brother Shihāb al-Dīn Maḥmūd. During his reign the Franks in 511 took advantage of an eclipse of the moon, to penetrate into the suburb of Hamā but they had to retire without taking the town itself. When Maḥmūd died in 518, Tughtikin at once marched his troops into the town and took possession of it. On his death in 522 his son Būrī [q. v.] succeeded him. In 524 Būrī made an alliance

with Zangī and sent the governor of Hamā, his son Sewindj, to his support. Zangī treacherously imprisoned him, entered Hamā with *Khirkhān* and handed the city over to the latter, as had been agreed, but soon afterwards made him a prisoner in order to gain Hamā for himself; once more he lost the city for a brief period. Būrī's son Ismā'īl took possession of it in 527 and held it till 529. Zangī again took it in the latter year and placed a strong garrison there. The ownership of the city next passed to Nūr al-Dīn and to his son Ismā'īl, till Saladin took it in 572. Two years later he granted Hamā in fief to his nephew al-Malik al-Muẓaffar, whose descendants retained it in their possession and made it their aim to keep on good terms with the great Aiyūbid rulers. Recognising their weakness they did not attempt to resist Hūlāgū Khān and after his defeat had to acknowledge the Mamlūk Sultāns as overlords. The main line became extinct in 698; the nephew of the last Sultān was the celebrated author Abu 'l-Fidā Ismā'īl [q. v.] who accompanied Sultān Muḥammad al-Nāṣir on his campaigns and was bound to him by ties of the closest friendship. Al-Nāṣir Muḥammad granted him Hamā with the rank and title of Sultān. Under him the town enjoyed great prosperity. His tomb is still preserved in Hamā (see Graf Müllinen in the *Zeitschr. d. Deutsch. Morgenl. Gesellschaft.*, 1908, p. 657—660). His son al-Malik al-Afḍal Muḥammad drew the wrath of the Sultān upon himself by his incompetence and was finally banished to Damascus. After his death (742) Hamā was ruled by governors of the Mamlūk Sultāns. In importance it was overtaken by Tripolis and about 750 was considered a governorship of the second class. Under Ottoman rule Hamā at first continued to be a province under a Pasha. At the present day it is a *şan-djak* under a *mutasarrif* of the wilāyet of Damascus.

The Great Mosque. The Hāram has been evolved from a Christian basilica of unusual form: 3 naves of different breadth, 8 supports with 5 cupolas in the centre and covered by five cross vaultings on each side. The west wall seems to have been the narthex wall of the church. The south wall dates from the pre-Christian period so that, as in Damascus, the building is temple, church and mosque. In the east, standing alone, is an old four cornered minaret with Kufic inscription, probably of the vith century.

The beautiful court is surrounded by vaulted halls, an estrade with two mihrābs before the hāram, a second with a basin and isolated mihrāb at the north hall, a *khazna* on 8 ancient pillars. In the east hall a turbe and a hall of prayer with heavy bronze windows of the Mamlūk period. From the west hall one enters through a room the mausoleum of al-Malik al-Muẓaffar III (683—698) with splendid cenotaphs carved in wood; a second minaret rises outside in the centre of the north hall; its form and inscription proclaim it a Mamlūk building. A peculiar feature of the architecture of Hamā finds marked expression in the mosque: the adornment of the walls by mosaic effects in colour by the alternation of black basalt and white limestone.

The Djami' al-Nūri is built on the left bank of the Orontes on sloping ground and high substructions. The building was founded by Nūr al-Dīn and, in spite of the many alterations, still contains considerable portions of the old building,

for example, the long hāram, the cross vaulting of which belongs to a later period, three cupolas of different forms in the east hall, the substructions of the east and north sides and the north outer wall of the mosque. The lower part of the minaret with its square white blocks is perhaps also old. The mosque contains the beautiful remains of a wooden minbar given by Nūr al-Dīn, and a richly decorated mihrāb with decorated marble pillars given by Malik al-Muẓaffar Taḳī al-Dīn (626—642) and in the eastern ante-room a mihrāb of marble columns the capital of which bears an inscription of Abu 'l-Fidā.

Bibliography: See under HALAB. Some of its numerous inscriptions have been edited by van Berchem in *Freih. v. Oppenheim's Syrische Inschriften* (see under HALAB), p. 22—34. (M. SOBERNHEIM.)

HAMADHĀN, the Hagmatāna of the Old Persian inscriptions, 𐎧𐎠𐎧𐎡𐎴 of the Bible (Ezra vi. 2),

Ἡρατᾶνα in Herodotos, Ecbatana in the classical authors, lies in a fertile plain at the foot of Mt. Elwend [q. v.]. This is not the place to discuss its pre-Muslim history for which the reader may be referred to Pauly-Wissowa, v. 2155, and Streck in *Zeitschr. für Assyriol.*, xv. 367 *et seq.* Persian Arabic tradition still knows of the age and ancient greatness of Hamadhān. A Persian author quoted by Yāqūt (cf. *Muḍjam*, iv. 983) says that Djem created Sārū (Sārū, Sārūk is the name of the citadel of Hamadhān), Dārā surrounded it with a girdle, Bahman b. Isfandiār completed it, i. e. Djem (Djamshīd, Yima) built the citadel (in the old Persian tradition also Yima is the builder of the castle, *Vara*), Darius fortified it with walls, and Bahman, the ancestor of the Sāsānids, completed it. According to another tradition, Darius rebuilt the city, which had been lying in ruins since the time of Bokht-Naṣr in order to have a safe asylum for his harem and treasures during the war with Iskandar. For this purpose a palace was built in the centre of the town with not less than 300, according to others, as many as 1000 treasure-chambers and 8 double iron doors 18 ells high. Whether the later citadel of Hamadhān actually dated back to such early times, must remain uncertain; it is certain, however, that it was destroyed by Agha Muḥammad Khān in 1789 and that the remains, now called al-Muṣallā (the place of prayer) are to be seen outside the town.

Another monument of ancient times, of which the Arabs give an account is the Lion Gate (Bāb al-Asad), which gave entrance to the town from the Elwend side and was adorned by a colossal figure of a lion. The inhabitants looked on this figure as a talisman, which protected the town from misfortune and cold, so that no small commotion was aroused when the Caliph al-Muktafi ordered it to be brought to Baghdad in a car drawn by elephants. Fortunately they were able to convince him of the impossibility of carrying out his plans so that the lion remained in Hamadhān. Shortly afterwards (319 = 931) the Bāb al-Asad was destroyed by the rude Dailami warriors of Merdawīdj and the lion thrown down. (Mas'ūdi, *Murūdj*, ed. Paris, ix. 21). The inhabitants, however, to this day esteem a figure of a lion lying outside the town as a talisman against hunger and cold (Curzon, *Persia*, i. 568). Cf. the picture in Jackson, *Persia Past and Present*, p. 197.

Other old buildings mentioned by the Arab geographers were not in Hamadhān itself but in the neighbourhood, e. g. the fire-temple of Barāhān or Furdagān which was destroyed by the Turk Burun in 282 (895) (cf. Yāqūt, *op. cit.*, i. 540; iii. 870); buildings erected by Bahram Gūr at Djuhasta, 3 parasangs from Hamadhān, with Persian inscriptions and others besides. The fullest account of them is given by the geographer Ibn al-Fakih, a native of Hamadhān (ed. de Goeje, p. 217 *et seq.*). Old Persian inscriptions of Artaxerxes II have, it need hardly be mentioned, been found in Hamadhān and others of Darius and Xerxes on Mount Elwend.

As the centre of a well populated district Hamadhān developed at a very early period and is said to have been four parasangs in length and in breadth to have stretched as far as where later the villages of Zainawābād, Sangābād, Barshikān etc. lay. After the battle of Nchāwand in 23 = 644 the town fell into the hands of the Muslims (cf. al-Balādhuri, ed. de Goeje, 309 *et seq.*) but continued to be the market of the country round. According to Ibn Hawkal, it was one parasang square and consisted of the town proper and suburbs (*rabād*). Four gates led into the town. The cold climate and the heavy snowfalls during the long winters did not make it a very inviting residence so that it played the modest part of the chief town of a province until, in the last years of Saldjūk power, it was chosen as a residence by these Turks, who were used to a cold climate. Royal palaces were then built in the city, but nothing has remained of these. They were all apparently destroyed by the Mongols when they took and sacked Hamadhān in 617 (1220) (cf. Ibn al-Athir, ed. Tornberg, xii. 248 *et seq.*). The town however afterwards recovered, as is clear from Hamd Allāh Mustawfi's description, but remained what it had been under the Arabs and still is, the market place of a fertile district. The local industries are leather and metal (gold, silver and copper) work. According to Ker Porter, the population in the beginning of the sixteenth century was about 40,000, according to Curzon in 1889, there was no more than 20,000. Among these are a considerable number of Jews (1500—2000), who are attracted not only by the favourable conditions of trade, but also by the alleged grave of Mordecai and Esther in the middle of the town, not far from the Masjid-i Djum'a to which also many Jews from other countries make a pilgrimage, cf. *Jewish Encycl.*, v. 233; at Hamadhān there is also the tomb of the celebrated philosopher Avicenna who died here in 428 (1037). Cf. the picture in Brugsch, *Reise nach Persien*, i. 362.

Bibliography: The History of Hamadhān by Abū Shudjā' Shirūya b. Shahrār has unfortunately not survived. Cf. also: *Bibl. Geogr. HAMADHĀNĪ (358—398) ABU 'L-FADL AHMAD B. AL-ḤUSAIN B. YAHYĀ B. SA'ID B. BISHR, called Badī' al-Zamān, poet and elegant writer. He studied at his native place Hamadhān with the grammarian Aḥmad b. Fāris and others, and in 380 went to Raiy, where he for a time secured the favour of the Ṣāhib b. 'Abbād, thence to Djurdjān where he found a patron in Abū Sa'īd Muḥammad b. Maṣṣūr. In 382 he went to Nisābūr, which he reached destitute, having been attacked by brigands on the way; he was less warmly received than he had hoped by Abū Bakr Khwārizmī, the leading *adīb* of the time, and was presently invited to compete with this personage in public in the various branches of *adab*; in the account which he gives of the match (translated by v. Kremer, *Kulturgesch.*, ii. 471 *et seq.*) he represents himself as victor; but though this appears doubtful, the affair brought him credit and when Khwārizmī died in the following year he succeeded to his honours. He found patrons in the various cities of Khorāsān, Sijjīstān, and Ghazna, and finally settled at Herāt, where he married the daughter of al-Ḥusain b. Muḥammad Khushnāmī.

Of the works by him which have come down to us the *Maḳāmāt* would seem to have been dedicated to Khalaf b. Aḥmad, prince of Sijjīstān, whose honourable treatment of the author is also described in the Letters (nº. 173). The word *Maḳāma* which before his time seems to mean "sermon" (*Murūdj al-Dhahab*, v. 421) or "discourse" (*Djāhīz*, *Bukhārā*, p. 218, 13) from its employment as the title of Hamadhān's compositions came to mean something like the Greek *Mime*, i. e. an entertaining dialogue. Hamadhān claims to have composed 400 of these, no two alike; this boast is not borne out by the surviving collection, which numbers 51 pieces, some of them duplicates. The subject is ordinarily *kudya*, i. e. ingenious devices for obtaining money, wherein the hero displays some learning, eloquence or wit; some however might better be described as scenes of contemporary life in Baghdād, while some are placed in the past, e. g. one in which the poet Dhu 'l-Rumma figures, one which deals with Muḥammad b. Ishāq al-Ṣaimarī (died 275), and one which reproduces a scene in the life of Saif al-Dawla (died 356). The subjects include theological discussions, sermons, poetical puzzles, as well as the devices of beggars and thieves. According to Ḥuṣrī (*Zahr al-Adab*, i. 254, 1305) they were suggested by the *Arba'in* of Ibn Duraid.

The collection of Letters (233 in number) consists mainly of private communications, written however with sufficient elaboration to justify publication. The persons to whom they were addressed were in most cases men of some eminence, though only a few are still remembered, e. g. the historian Ibn Miskawaih, and the *adīb* Abū Bakr Khwārizmī. The contents are usually only of private interest, e. g. requests for the loan of books, or complaints of the amount of his *kharaḍj*; some however deal with matters of more general importance, e. g. nº. 167 which describes the spread of the Shī'ī heresy.

Selections from his poems were made by Tha'ālibī (*Yatima* iv, 195—214), and some others are inserted by Yāqūt in his biography; the *diwān* which has been published (Cairo 1903 by 'Abd al-Wahhāb Riḍwān and Muḥammad Shukrī) fills

84 pages only. The odes are mostly encomia upon patrons.

Editions of the *Maḳāmāt*: Constantinople 1298; Beyrūt, 1307 (expurgated) with commentary by Muḥammad 'Abdo; Cairo (about 1910) with notes by Muḥammad Maḥmūd al-Rāfi'.

Editions of the *Letters*: Constantinople 1298; Cairo 1304 (margin of Ibn Ḥidjida's *Khizānat al-adab*); Beyrūt 1890 with Commentary by Ibrāhim Aḥdab Tarābulusī.

The European literature on Hamadhānī is enumerated by Brockelmann (i. 94). The biography by Yākūt (*Udabā* i. 94—118) is based chiefly on Ṭha'libī, but also on Shīrūya's *History of Hamadhān*. (D. S. MARGOLIOUTH.)

ḤAMĀ'IL, talismans. The use of amulets is very widespread in the lands of Islām. In North Africa they are called *ḥurza*, among the Arabs in the East *ḥamāya* or *ḥāṣi*, *ūdha* or *ma'ādha*, and in Turkey, *yafsa*, *nushka* or *ḥamā'il*. They are often carried in little bags, lockets or purses, which are worn round the neck or fastened to the arm or turban. Among rich people they are of gold or silver. Children are given these amulets as soon as they are forty days old; the crudest articles may be used as amulets, such as a shell, a piece of bone, sewn into leather and fastened under the left arm (see Emily Ruete, *Memoirs of an Arabian Princess*, transl. by L. Strachey (New York, 1904), p. 68). Bedouin girls have an amulet which they call *ḥurza* and prize highly; it is a book of prayers 7 cm. long and 4.5 broad enclosed in a gold or silver box and is worn as a brooch.

The prayers, signs and figures on these talismans are of very different origin and their investigation offers great difficulties. We find on them divine names, names of angels, verses from the Kor'ān, astrological symbols, Kabbalistic letters magic squares, signs of geomancy, figures of animals and men (cf. DJADWAL, i. 992^b *et seq.*). According to Muslim tradition, God has 99 names, which in reality are only epithets, such as "the Great", "the Wise", "the Knowing", "the Merciful", some authors like Tirmidhī and Ibn Mādja enumerate them all. (They are also given in Douitté, *Magie et Religion dans l'Afrique au Nord*, p. 200; see also Redhouse in *Journ. Roy. As. Soc.*, 1880; cf. the article ALLĀH, i. 302^b *et seq.*). These names may be used as one pleases or arranged according to the numerical value of the letters composing them. Besides these, God has a name not to be spoken, which men do not know but which is revealed only to prophets and saints.

The names of the angels are also numerous. The best known are those of the four archangels Mikhā'il, Djabrā'il, 'Azrā'il and Isrā'il, which are found on many amulets. Besides these there is a host of others, which are given in the angelologies. There are several works of this kind in Arabic which are ascribed to supposititious authors like Anḍrūn or Andahriush; they contain a doctrine, which is derived from the notion of the gnostic aeons. There are angels who preside over the planets; others preside over the months or the days of the week. Seven are given for each day; their names, barbaric in their sound, frequently appear in pairs e.g. Ṭalikh and Ilikh, Kaitar and Maitar, Kintash and Yākintash, a kind of combination such as we find in the Gog and Magog of the Bible and the Yādūdī and Mādūdī of Arab Tradition. An angel very prominent in the

world of magic, who presides sometimes over the planet Jupiter and sometimes over Mercury, and whom the Arabs seem sometimes to have confused with Mikhā'il, is Metatron. He is one of the great figures in Kabbalistic literature. We find him also in the Zohar, where he fills the part of a kind of demiurg. (Cf. Renan, *Vie de Jésus*, p. 247, note 4; *Les Apôtres*, p. 170; Schwab, *Vocabulaire de l'Angéologie*, p. 170). — Two other angels, who have a history of their own, are also mentioned in the Kor'ān likewise appear on talismans, namely Hārūt and Mārūt [q. v.]. — Besides the angels, several mythical beings are also invoked, notably the seven sleepers (*Aṣṣūb al-Kahf*, q. v., i. 478^b *et seq.*).

Of the verses of the Kor'ān the most efficacious as amulets are the short sūras cxiii. and cxiv.: "Say: I take refuge (*a'ūdhu*) in the lord of the dawn etc. — Say: I take refuge in the lord of men, the king of men etc.". These two sūras are called *al-mu'awwidhatān* ("the two who preserve"). In the first the evil women are mentioned "who blow upon knots", it is believed that it is particularly efficacious against the ills of the flesh; the other is credited with more power against psychic afflictions. Besides these the Sura *Yā-sin* is highly esteemed by pious Muslims. This is also true of the *Fāṭha*, the *Āyat al-Kursī* (Sūra II. 256) and the throne-verse, *Āyat al-'Arsh* (Sūra IX. 130). Other verses than these are also used in special circumstances.

The astrological signs, the signs of the planets and of the zodiac are well-known; they are naturally used for talismans. We often find quite peculiar signs which may be traced to different Kabbalistic alphabets; these frequently turn out to be transformations or corruptions of Hebrew or Kufic letters. Kabbalistic alphabets are given by Ibn al-Waḥshiya in his *Kitāb Shawḥ al-Mustahām*. Small circles, or rings or ornaments are often found behind the Hebrew letters; these scrolls are called "little moons" or "crowns". According to the *Sefer Yetsirā*, every letter in a talisman ought to have its crown (*Sefer Yetsira*, transl. by Mayer Lambert, p. 114).

Geomantic figures formed by points arranged in different groups are also sometimes used. Geomancy, Arabic *Ilm al-Ramal*, is divination from points formed in sand. Four lines are drawn in the sand, points marked at regular intervals and some of them wiped out at random. The remainder form definite figures to which names and different meanings have been given. These figures are used on talismans; for further details see RAMAL.

Magic squares (*wafk*, *wifk*, q. v.) are also often met with. They consist of 9 or 16 compartments. Usually the same number is added to each of the 9 or 16 numbers of which they consist. This gives the thing a more learned look. Thus they begin with 9 instead of 1 and run from 9 to 24 instead of 1 to 16. Instead of numbers, letters are often written in the squares, e.g. the four letters of the name Allāh, *allh*, four times in different order. The problem of magic squares has been thoroughly studied by the Arabs, for we see from the *Ikhwān al-Ṣafā* that squares of 9 columns were known.

Forms of men and animals are rarely found in North Africa on talismans; but in the East we find them on amulets and charms, which have been produced under the influence of Persian art. Looking-glasses, cups and seals to which magic

power is ascribed, are often adorned with them. For this purpose figures of angels or animals, particularly griffins with human heads or the signs of the zodiac are used. A talisman, which Reinaud saw, represented a man drawing something out of a well; this talisman had the peculiar property of helping to locate hidden treasure. Several other examples are given in Herklots, *The Customs of the Muslims of India*, p. 339 *et seq.*

The human hand is a very popular symbol among Muslims. It is carried around the neck, cut out of gold or silver or engraved on a medalion; it is said to avert the evil eye. This charm is usually called "the hand of Fāṭima". The Shī'īs interpret the five fingers as the five saints; Muḥammad, 'Alī, Fāṭima, Ḥasan and Ḥusain.

To sum up, it may be said that the subjects used, except the verses from the Kor'ān, may for the most part be traced back to Gnostic or Talmudic sources. According to Arab tradition, Adam himself discovered or rather revealed the talisman. According to the *Abrégé des Merveilles* (transl. Carra de Vaux, p. 142), 'Anāk, the son of Adam, stole from Eve, while she slept, the charms she used to conjure spirits; but he made a bad use of them. Solomon was a great magician, according to Muslim belief; his ring plays a great part in Talmudic legends and Arabian tales. The djinnī, who appears in the story of the fisherman in the "Arabian Nights", was confined in a vase, which had been sealed with Solomon's ring. The talisman, still known as Solomon's seal and worn by Muslims and Jews alike, represents a six pointed star. The Berbers also, according to the *Abrégé des Merveilles*, were very skilled in magic and, when they threw their talismans into the Nile, they were able to bring numerous plagues upon Egypt.

In Arabic literature, there are various treatises on the science of talismans. The most celebrated writers on this subject are Maslama al-Madrītī (died 1007 A. D.), who brought the *Ikhwān al-Safā* to Spain, the "forger" Ibn al-Waḥshīya, the author of the "Agriculture of Nabataea", and al-Būnī (q. v., i. 793). A number of amulets preserved in the Bibliothèque Nationale in Paris are ascribed — certainly wrongly — to the great theologian al-Ghazzālī.

Muslim theology, which prohibits sorcery, tolerates the use of amulets. They are usually prepared by dervishes, who belong to various brotherhoods, and are only of value when they are received from their hands.

(B. CARRA DE VAUX.)

AL-HAMAL (A.), the Ram (Aries), the first constellation of the zodiac, after the Greek κριός. It contains 13 stars which make up the figure and five others outside it. The ram is represented with its body facing the west but its head is turned back. The two bright stars on the horn (β and γ) are called *al-Sharāṭān*, "the two signs", because they betoken the approach of the equinoxes; the bright star α outside the ram is called *al-Nāṭih*, "the butter"; sometimes it is included with α and β under the name *al-Ashrāt*, "the signs". The stars ϵ , δ in the tail, which form an equilateral triangle with γ on the thigh, are called *al-Buṭāin*, the belly, i. e. of the ram. *Al-Sharāṭān* and *al-Buṭāin* are also the names of the first two stations of the moon.

AL-HAMĀM (A.), the dove, particularly the ring-dove. A distinction is made between tame doves which live in dove-cots and wild doves. The dove is one of the cleverest of birds, for it can find its way home from the most distant parts. To find its bearings, it flies upwards in spirals like a man climbing a minaret; when it finds the direction of its home, it darts off thither in a straight line and reaches its goal in the shortest possible time. Only clouds, which obscure its view, or birds of prey can cause it to lose its way.

According to Muḥannā b. Zuhair, there are no tokens of love between man and woman which are not also to be observed in doves. The cock knows the brooding-place of the hen and alternates with it in sitting on the eggs; they also build the nest together in proportion to the size of their bodies, by first scraping a hole and filling it with straw and leaves. The dove lays two eggs after fertilization, one containing a cock, the other a hen. The feeding of the young is done principally by the cock. Even the young ones can distinguish between eagles and hawks; if they see a white hawk (*shāhin*), they die of fright. The worst enemy of the doves is the marten (*al-dalaḳ*). It enters the dove-cots and leaves not a dove alive, although there be hundreds of them.

Allāh sent two wild pigeons to the opening of the cave in which Muhammad was concealed; the pigeons of the sacred area in Mecca are descended from these. Proverbial expressions are "safer than the doves of Mecca" and "tamer than the doves of Mecca". The use of pigeons as lettercarriers and as objects of the chase is often mentioned. Hārūn al-Rashīd is said to have been very fond of doves. The medical applications are numerous.

Bibliography: Ikhwān al-Safā, ed. Bombay, ii. 133; Kazwīnī, ed. Wüstenfeld, i. 410; Damīrī, *Hayāt al-Hayawān*, ed. Cairo, i. 215; Ibn al-Baitār, in Leclerc, *Notices et Extraits*, i. 457; G. Jacob, *Studien in arab. Geographien*, ii. 104. (J. RUSKA.)

HAMĀN, the Persian minister hostile to the Jews in the book of Esther, according to the Kor'ān (xl. 25) acted with Kārūn (Korah) on Fir'aun's council and filled the office of grand-vizier. These two learned of the approaching birth of Mūsā and advised that the boys should be slain and the girls allowed to live. When Mūsā appeared as a prophet of God, they called him a liar. Fir'aun said: "O Hāmān, build me a tower, on which I shall reach the paths, the paths to

heaven and ascend to the god of Mūsā" (Sūra xl. 38 *et seq.*). That Muḥammad places Hāmān in this period betrays his confused knowledge of history, of which many other examples may be found in the Qur'an. Indeed the Talmud (*Sanh.* 106) and Midrash (*Exodus R.* 18) contain a similar anachronism when they make Balaam, Job and Jethro all members of Pharaoh's great council which advised that Moses should be disposed of. Another passage in the Midrash (*Num. R.* 22) describes Hāmān and Qorah as the richest men in the world. The Qur'an commentary on the above passages (xl. 25 and xxviii. 38) is interesting; it gives the following account of the building of the tower by Hāmān: 50,000 masons worked for seven years on the building and when it had reached an extraordinary height Djibril overthrew it. In any case it is remarkable that neither Qur'an nor commentary nor the Arab historians know anything of the true Hāmān of the book of Esther. It must be presumed nevertheless that the story of Hāmān was not quite unknown in Arabia. This is irrefutably established from the frequent mention of the name Hāmān.

Bibliography: The Commentaries of Zamakhsharī and Baiḍāwī; Tha'alabī, *Kiṣaṣ al-Anbiyā'*, Cairo 1213, p. 110-111; al-Kisā'ī, *Kiṣaṣ al-Anbiyā'*, p. 212-214. (J. EISENBERG.)

HAMĀSA (A.), bravery. Poems, which celebrate valour in battle, form a considerable portion of the ancient Arab poetry and therefore occupy pride of place in anthologies; the collections by Abū Tammām [q. v.] and al-Buḥturī [q. v.] are therefore briefly called *Hamāsa*.

HAMAWAND, a notorious tribe of Kurds, which rendered the banks of the Tigris south of Mōsul unsafe by their robberies in the second half of last century. According to Cuinet, *La Turquie d'Asie*, ii. 768 they migrated thither from Southern Persia; according to Curzon, *Persia*, i. 557, they are a small body of the settled Kurds of Kermanshāh. It was only after several expeditions that the Turkish authorities succeeded in putting an end to their depredations.

Bibliography: In addition to Cuinet: Cholet, *Arménie, Kurdistan et Mésopotamie*, p. 298 *et seq.*

HAMAWĪ, SA'D AL-DĪN MUḤAMMAD B. AL-MU'AYYAD B. HAMMŪYA, died in 650 (1252) in Khorāsān, a famous Arab mystic. His *Uṭm al-Ḥaḳā'iq* were published in Kurdi's *Madjmu'at al-Rasā'il*, Cairo 1328 (p. 494 theory of *Lāhūt* and *Nāsūt*). Cf. Djāmi, *Nafahāt al-Uns*, ed. Lees, p. 492 *et seq.* (LOUIS MASSIGNON.)

HAMD (A.) Praise. Cf. the article ḤAMDALA. **HAMD ALLĀH MUSTAWFĪ**. [See AL-ḲAZ-WĪNĪ.]

AL-ḤAMDALA means the saying of the formula, *al-Ḥamdu lillāh* (for the different vocalizations — *du, di, da* — see *Lisān*, iv. 133 ll. 7 *et seqq.*). "Praise (in its whole genus and of every species) belongs to Allāh"; for from him all praise-worthiness proceeds and to him it returns. *Ḥamid* is the opposite of *ḥamm*, being praise for something dependent on the will of him who is praised and it differs in this from *maḍī* which is not so limited; it is thus different from, although it may be an expression of *shukr*, "gratitude", the opposite of which is *kufṛān*; *ḥanā*, often rendered "praise", more exactly "taking account of", is used both of praise and dispraise. The phrase is formally *ikhbārī* or *khabarī*, "narrative" but in its

use it is *inshā'ī*, "assertive", for the speaker makes it an expression of the praise which he at the moment directs towards God (Muḥammad 'Abdū in *Tafsīr al-Fātiḥa*, Cairo, 1323, p. 28; see, too, the elaborate discussion by Baiḍjūrī in his *Ḥaṣhiya* on the *Kifāfat al-ʿAwāmm* of Faḍālī, p. 3 *et seq.* of ed. of Cairo, 1315). In Lane's translation, "Praise be" (*Lexicon*, p. 638) he meant an emphatic affirmation, not a *du'ā'*; this is plain from his letter to Fleischer on the translation of *tabāraka* etc. in the *Zeitsch. d. Deutsch. Morg. Gesell.*, xx. p. 187. But this use of "be" is misleading and hardly defensible as English. Perhaps the *inshā'ī* force could be indicated by a mark of exclamation as Palmer does in his translation of the Qur'an. As the phrase occurs twenty-four times in the Qur'an, besides other forms such as *lahu 'l-ḥamd*, it naturally became frequent in Muslim usage. All things come from Allāh, and for all things, pleasant or grievous, he is to be praised. Yet the verb *ḥamdala* does not seem to belong to the classical language and is thus later than *basmala*, which may even be pre-Islamic. In the *Ṣaḥāḥ* and the *Lisān* it does not occur, though *basmala* is in both, in the latter fortified with a verse from 'Omar b. Abī Rab'ā (Schwarz, *Dirwān*, No. 413, ii. 241; the evidence for the line and the usage is fullest in the *Tāǧī*, s. v.). In the *Miṣbāḥ* (finished A. H. 734) *ḥamdala* is mentioned, but only under *basmala*; it has no entry of its own. Finally, it is entered in its place in the *Ḳāmūs*; so slowly did it win recognition as a word. Besides its broad, devout usage the phrase is statedly a part of the *ṣalāt* and of the supplemental *tasbeḥ* being repeated thirty-three times in the latter (Lane, *Modern Egyptians*, chap. iii.; *Lexicon*, 1290^b). Further, as one of the seven *Mathnā*, in the sense of the verses of the *Fātiḥa*, it has part with the *Fātiḥa* in various mystical and magical usages and meanings. Thus it is the *Mathnā* assigned to the first of the seven stages of the Rifa'ite *ṣarīḥa* (W. H. T. Gairdner, *Way of a Mohammedan Mystic*, p. 12, 23). Even in orthodox tradition the *Fātiḥa* has begun to have magical value; cf. in Bukhārī (*Kitāb al-Tafsīr*; *Bāb Fātiḥati al-Kitāb*) the story of the man who used it as a charm (*rukya*) against snake-bite, and the Prophet approved. For later elaborate developments in magic, see al-Būnī, *Shams al-Ma'ārif*, Faṣl X, and Aḥmad al-Zarkāwī, the modern Egyptian magician, *Mafātīḥ al-Ḡaib*, p. 175. But the *Ḥamdala* does not seem to be used by itself in magic as is the *Basmala*. Again, the tendency to use the phrase as an introductory formula soon expressed itself as a tradition from the Prophet: "Whatever speech (or thing of importance) is not begun with praise of Allāh is maimed" (cf. *Basmala*). Thus the *Ḥamdala* became one of the three required things at the beginning of any formal writing. But this requirement was distinctly later, for, while the use of the *Basmala* in this way held from the earliest times, we do not find the *Ḥamdala* prefixed to the *Sira* of Ibn Hishām nor to the *Aghānī* nor even to the *Fihrist*. See on this usage and the traditions supporting it, the commentary of the Saiyid Murtaḍā on the *Iḥyā'*, i. 53 *et seq.* On the praiseworthiness of this exclamation see especially *ibid.*, v. 13 *et seqq.* (*Kitāb al-Adhḳār*).

(D. B. MACDONALD.)

HAMDĀN (ḥmdn) of the South Arabian inscriptions), a large Arab tribe, belonging to the Yemen group. Their genealogy is Hamdān (Awsala) b. Mālik b. Zaid b. Rabīʿa b. Awsala b. al-Khiyār b. Mālik b. Zaid b. Kahlān.

Their land, the Balad Hamdān, a centre of civilization in ancient Arabia, was five days' journey in length and breadth and lay to the north of Ṣanʿā [q. v.]; it stretched eastwards as far as Maʿrib [q. v.] and Naḍirān [q. v.], northwards to Ṣaʿda [q. v.] almost up to the desert and westwards to the coast (Abū Aṛīḥ). It was divided into two parts, the east belonged to the Bakīl and the west to Ḥāshid, who still form two powerful groups of tribes in their ancient abodes [cf. Ḥāshid and Bakīl]; but Ḥāshid clans also lived in the land of the Bakīl and vice versa. In addition to the Balad Hamdān proper there were also Hamdān in Ḥarāz ([q. v.], the clan of Naḥḥ), on the Djabel Buraʿ (in the south of the Kōhriya country on the Wādī Sahām), in Ḥaḍramūt (e. g. in the village of al-Maḥāʾil and in the large fortified town of al-Kāra [the clan of Naḥḥ]), in Kaḥma (a town near Zabīd), al-Yaḥṣībān (belonging to the South Arabian Mikhlaḥ al-Saḥūl), Thulā (a fortified town in the Mikhlaḥ Shībām Akyān [Upper Sharaf, the Lower Sharaf belonged to the Ḥāshid], inhabited by the clan of Marrānī) and Faladja, which belonged to the district of Damascus. The land which now bears the name Balad Hamdān is only a portion of the great area once known by this name (cf. E. Glaser in *Petermanns Mitteilungen*, xxii., 1886, Table 1).

In the time of Djabiliya the Hamdān worshipped the idols Yaḡhūth and Yaʿūk. The idol Yaḡhūth was the cause of a battle at Mulāḥā (Razm, in the Djauf) in the land of the Murād between the latter, who were carrying off Yaḡhūth, and the Hamdān, on the same day as the battle of Badr (17th or 19th Ramaḍān 2 = 624). The Hamdān with their allies, the Balḥārith (Ḥārith b. Kaʿb [q. v.]), inflicted a severe defeat on the Murād; another battle between them and the Murād was fought at al-Kāʿ (in the Djauf). On the "second day of Kulāb", fought between the Balḥārith and the Tamīm tribes Ribāb and Saʿd b. Zaid Manāt, the Hamdān fought on the side of the Balḥārith along with the Kinda and Kuḍāʿa. When the Abyssinian ruler Abraha (in the "year of the elephant") tried to destroy the Kaʿba, the Hamdān at the instigation of the Yemen chief Dhū Nafar took the field against him with other tribes whom Dhū Nafar had roused to defend the house of God. In the "year of the deputations" (9 = 630-631) a deputation from the Hamdān under Mālik b. Namaṭ and Abū Thawr, called Dhū ʿl-Mishʿar, was among those that appeared before the Prophet. In the year 10 (631-632), when the greater number of tribes had already been subdued, the Hamdān were among the few who did not yet absolutely recognise the Prophet. Muḥammad therefore sent ʿAlī against them at the head of an army, whereupon they submitted without resistance. In 37 (659) 12,000 of the Hamdān fought on the side of the Caliph ʿAlī in the ʿIrāk. In the same year with the aid of the Hamdān, whom he called his "spear and cuirass", ʿAlī revenged the death of ʿAmmār b. Yāsir, who had fallen in battle against

the ʿIrākis. Under the Caliphs ʿOmar, ʿOthmān, ʿAlī and under the Umayyads the Hamdān numbered with the Madhhidj and the Ḥimyar "a seventh" (Ṭabarī, i. 2495) of all the Arabs.

HAMDĀN KARMAT B. AL-AṢḤATH, an Ismāʿīlī missionary, the founder of the Karmatian sect, was a peasant in the neighbourhood of Kūfa; his nickname *karmīthā*, which belongs to the Aramaic dialect spoken in that district seems to mean "man with red or fiery eyes" (Ṭabarī, *Annales*, iii. 2125). He was converted through meeting Ḥusain al-Ahwāzī, ʿAbd Allāh b. Maimūn's missionary, whom he succeeded at his death. He settled in Kalwādhā near Baghdad, from which he could easily keep in touch with the mission in Khorāsān and with the Grand Master, who resided in ʿAskar-Mukram (261 = 875); near Kūfa he built himself an official residence called *Dār al-Hidjra* (place of refuge); this became a centre around which his followers settled and from which they undertook their raids (277 = 890). He was a man of keen intellect, who was never at a loss, of engaging manners, very capable and full of ambition. On the death of ʿAbd Allāh he declined to recognise his son Aḥmad as Grand Master and remained faithful to the Imām Muḥammad b. Ismāʿīl. He went to Syria where he died soon after. His brother-in-law ʿAbdān who composed most of the sacred books of the sect was murdered soon afterwards by Zikrawāh, one of Aḥmad's followers. To obtain funds Karmat had introduced, a series of taxes, each heavier than the preceding, first the *fiṭr*, a silver piece per head, then the *hidjra*, one gold piece per head, which was changed to the *bulgha* or seven gold pieces; finally he demanded *ulfa* or community of wives and property.

Bibliography: See the article KARMAṬIANS. (CL. HUART.)

AL-HAMDĀNĪ, ABŪ MUḤAMMAD AL-ḤASAN B. AḤMAD B. YAʿQUB B. YUSUF B. DĀWUD B. SULAIMĀN DHU ʿL-DUMAINA B. ʿAMR B. AL-ḤĀRITH B. ABĪ DJAISH(?) B. MUNQIDH (according to al-Dhahabī, *op. cit.*), called IBN AL-ḤĀʾIK, a versatile South Arabian scholar. He was also called Ibn Abi (or Dhi?) ʿl-Dumaina after his ancestor, for the quotations from Ibn (Abi) al-Dumaina al-Hamdānī in Yāḡūt (*Muʿdjam*, see Index), who elsewhere quotes our author as al-Ḥasan b. Aḥmad and most usually as Ibn al-Ḥāʾik, are almost all to be found in the *Djazira*. According to al-Khazradjī quoted in al-Suyūṭī, he was born — the

year is not given — in Ṣanʿā and grew up there. He then went on his travels, spent some time in Mecca, afterwards returned to Yemen and settled in Ṣaʿda. He is said to have been thrown into prison there on the accusation of the local poets that he had composed a lampoon on the Prophet. From the Berlin MS., Ahlwardt, *Verzeichn.*, N^o. 9664 (fragment of the *Chronicle* of Muslim al-Laḥdī, cf. Strothmann, *Die Litteratur der Zaiditen in Der Islam*, i. 363 *et seq.*), f. 45^b *infra*, 46^a *supra*, it is clear that he was in prison in the time of the Zaidī Imām Aḥmad al-Nāṣir (died 315⁵) and Aṣʿad b. (Abī) Yaʿfur al-Ḥiwālī (died 332) in Ṣaʿda or Ṣanʿā and that he appealed for assistance from his cell to Abu ʿl-Ḥasan ʿAlī, the son of the Karmaṭian dāʿī Abu ʿl-Kāsim al-Ḥasan al-Manṣūr (the latter died in 302; cf. al-Djanadī in Kay, *Yaman* etc., p. 140 *et seq.* of the text) and dedicated panegyrics to him, which are said to be in his *Diwān*. From f. 217^b *infra*, 218^a *supra* of the Paris MS. Bibl. Nat. (Blochet, *Catal. de la Coll.* Schefer, Paris 1900) N^o. 5982, said to contain the *Chronicle* of al-Laḥdī, but giving amongst others a synopsis only of the Berlin fragment, it may be deduced that his imprisonment was connected with the desertion of two of al-Nāṣir's officers and the rebellion of the people of al-ʿAshsha. A reference is here made to a detailed account, which appears no longer to exist.

Al-Hamdānī died in 334 (945-946) in prison in Ṣanʿā, according to tradition. It is hardly to be supposed, however, that he had been continuously deprived of his freedom since the time of al-Nāṣir.

Al-Hamdānī crowned himself with honour in several fields of knowledge. He had a reputation as a philologist, poet, historian and genealogist (he is also given the name *al-Nassāba*) and had also studied astronomy and geometry. His native land was the focus of his interests and his works are of the utmost importance for the study of the geography and tribal relationships of Arabia and particularly South Arabia. In his *Iktil*, of the 10 books of which only viii. [ed. and annotated by D. H. Müller in *Sitzungsber. d. kais. Akad. d. Wiss. zu Wien, phil.-hist. Cl.*, xciv. (1879), p. 335 *et seq.*; xcvi. (1880), p. 955 *et seq.*] and x. have survived, he discussed the ancient history, genealogies of the tribes and antiquities of Yemen [cf. D. H. Müller, *Südarab. Studien in Sitz.-ber.*, Vol. 86 (1877), p. 108 *et seq.*]. His "*Geography of the Arabian Peninsula*", *Ṣifa Djasīrat al-ʿArab* (ed. D. H. Müller, Leiden 1884-1891) was written after the *Iktil* and at the earliest in the reign of the al-Nāṣir already mentioned (cf. p. 58, 4 *et seq.*). Al-Hamdānī's poetical works formed a *Diwān* in 6 volumes, which was collected and annotated by Ibn Khāliya (died 370) (al-Dhahabī, *op. cit.*); in addition to this there is also mentioned his *al-Kaṣida al-Dāmigha* (according to Yāḳūt "*fī faḍl Kaḥḥān*"), according to Ḥādīdjī Khalifa "*fī ʿl-luḡha*"), on which he himself wrote a very full commentary. On astronomy he left tables (*Zīdj*); his work *Sirr (Sarāʾir) al-Hikma* (Ibn al-Kifī, *op. cit.*) dealt with the science of the heavens. He also wrote a *Kitāb al-Ḥayawān al-mustaris*, *al-Yaʿsūb fī ʿl-Kisī* (to his *Kit. al-Kawṣ min al-Yaʿsūb* he refers in *Djaz.*, p. 203, 9, 10) wa ʿl-Ramy wa ʿl-Sihām wa ʿl-Niḍāl and *Kit. al-Kuwā*. Except the two books of the *Iktil* and of the *Ṣifa Djasīrat al-ʿArab*, all these works seem to be lost.

Arab.*, ii. 126 *et seq.*); al-Suyūṭī, *Bughyat al-Wuʿāt fī Ṭabaḳāt al-Lughawiyin wa ʿl-Nuḥāt* (Cairo 1326), p. 217 (already published in D. H. Müller, *Südarab. Stud.*, p. 170); Yāḳūt, *Irḥād al-Arib* (Gibb Mem., vi. 3), iii. part 1, p. 9; Ḥādīdjī Khalifa (ed. Flügel), Nr. 1110, 5379, 6975, 7111, 9461, 10080, 12896, 14458; Brockelmann, *Gesch. d. arab. Lit.*, i. 229, and the literature there given. (C. VAN ARENDONK.)

HAMDĀNIDS. The Hāmdānids took their name from Hāmdān b. Hāmdūn, a member of the great tribe of Taghlib (cf. his genealogy in Wustenfeld's *Tabellen*, C. 32). We find him as early as 272 (885) a close ally of the Khāridjī Hārūn and a few years later in possession of the fortress of Mādin. When in 281 (894) the Caliph al-Muʿtadid advanced against this town, he found Hāmdān no longer there; he had escaped, leaving his son Ḥusain [q. v.] behind. The latter opened the gates of the fortress of Dair al-Zaʿfarān to the Caliph, who soon afterwards captured Hāmdān also. Cf. Ibn al-Muʿtazz in Lang, *Muʿtadid als Prinz und Regent in Zeitschr. der Deutsch. Morgenl. Gesells.*, xli. 243. The Caliph kept Hāmdān a prisoner in Baghdād as long as the Khāridjī Hārūn was in the field, but when he was defeated by Ḥusain in 283 (896) and rendered harmless, Hāmdān was pardoned and honours were heaped on his sons, notably Ḥusain. This was the beginning of the future greatness of the Hāmdānids. Ḥusain distinguished himself in the wars against the Karmaṭians, but had to become a refugee in the reign of al-Muʿtadir, as he had taken the part of the unfortunate poet ʿAbd Allāh b. al-Muʿtazz against the Caliph. Through the intervention of his brother Ibrāhīm, he was pardoned by the Caliph and received the governorship of Kum and Kāshān, which he had administered by a deputy. In 303 (915) he again quarrelled with the Caliph and ended his days in prison in 306 (918-919).

His brothers Abu ʿl-ʿUlā Saʿīd, Ibrāhīm, Dāwūd and Abu ʿl-Haidjā ʿAbd Allāh [q. v.] prospered no less than he during the nominal reign of the insignificant Caliph al-Muʿtadir. Honoured with important governorships, they did as they pleased and thus occasionally came in conflict with the Caliph, but at once pretended to submit and were left in their offices or received others not less important. The swashbuckler Abu ʿl-Haidjā distinguished himself most; by 293 (905) he was appointed governor of al-Mawṣil and ruled this important city with short interruptions till his death in 317 = 929, although from 308 (920) he entrusted the actual administration to his son Ḥasan. Ḥasan, who afterwards received the title of honour, Nāṣir al-Dawla [q. v.] was able to keep his position there till his death in 358 (968) and to extend his power over the whole of Diyār Rabīʿa and Diyār Muḍar. He was succeeded in al-Mawṣil by his son Abū Taghlib Faḍl Allāh, better known under the name al-Ghaḍānfar [q. v.], but he became involved in the conflict between the various Būyid rulers and was unfortunate in the struggle so that he had to vacate Mesopotamia and soon afterwards met his death in Syria (369 = 979). The rule of the Hāmdānids in al-Mawṣil seemed to have come to an end with him, for al-Ghaḍānfar's brothers,

Abū Ṭāhir Ibrāhīm and Abū 'Abd Allāh al-Ḥusain, entered the service of the Būyids. After Sharaf al-Dawla's death, however, they obtained Bahā al-Dawla's permission (379 = 989) to return to al-Mawṣil and, although the Būyid at once saw the false step he had made, they succeeded in obtaining the city with the help of its inhabitants. But their rule did not last long, for they had to fight with the Kurds and Oḡailids; in the struggle Abū Ṭāhir and his sons were taken prisoner by Muḥammad b. al-Musaiyib and slain in 380 (991). Abū 'Abd Allāh had before this been taken prisoner by the Marwānid Abū 'Alī and was only liberated on the intercession of the Fāṭimid al-'Aziz, who sent him to Syria. The last we hear of him is that he plundered Tyre in 386 (996); his descendants, however, long occupied high positions at the Fāṭimid court till in 465 (1072-1073) the last of them, Naṣir al-Dawla Abū 'Alī and his son Fakhr al-'Arab fell victims to a conspiracy.

The Ḥamdānids did not however rule al-Mawṣil and Mesopotamia only; by 333 (944) they had extended their rule over Ḥalab and Northern Syria also. It was 'Alī, the brother of Ḥasan, afterwards famous as Saif al-Dawla [q. v.], who won the first-named town and Ḥimṣ also from the Ikshīdids of Egypt in this year. But it was some years before the Egyptians under Kāfūr left them in peaceful possession of Northern Syria. Saif al-Dawla, however, owes his fame to his wars with the Byzantine unbelievers. Even before 333 he had made raids into Byzantine territory, but it was not till he had made his position secure in Ḥalab that he devoted himself entirely to war on the infidels, with varying success, it is true, as is detailed in the article SAIF AL-DAWLA; here we will only mention further that another member of the Ḥamdānid family, the famous poet Abū Firās [q. v.], cousin of Saif al-Dawla, also distinguished himself on these campaigns. Saif al-Dawla's claim to fame as a patron of Arabic literature and science is no less great, than as a warrior; but this also is dealt with below. Saif al-Dawla died in 356 (967). (EDITORS).

His sole surviving son, Abū 'l-Ma'ālī Sharif, who afterwards received the title of honour Sa'd al-Dawla from the Caliph in Baghdad, was at once recognised by Karghūyā and the other chiefs and went from Maiyāfārikīn, where he had buried his father in the family tomb, to receive homage in Aleppo. He then advanced against his father's cousin and companion-in-arms Abū Firās, his vassal in Ḥimṣ whose subjects had lodged complaints against him. They met at Sadād where the latter was slain; Ḥimṣ was then taken by Sa'd al-Dawla. The first encounter with the Byzantines took place in the second year of his reign. Byzantine troops attempted to surprise Aleppo; Karghūyā who went against them was himself captured but managed to escape. Soon afterwards the Emperor Nicéphoros, with a large army, took all the towns between Aleppo and Ḥimṣ and conquered Laṭṭakiya and Djabala. In the beginning of 358 he blockaded Antioch, occupied Baghrās and fortified it as a supporting base for the Byzantine troops. He returned to Constantinople and left Petras Phocas (in Arab authors Torbasī or Atrabasi, probably derived from τραπεζίτης) in command of the towns conquered in Mesopotamia and Michael Burtzes in command of Baghrās. Sa'd al-Dawla went via Bālis to his mother in Maiyā-

fārikīn, as Karghūyā prevented him from returning to Aleppo in order to rule there himself and appointed Bakdjūr joint ruler. Sa'd returned to besiege Aleppo with the troops who had remained faithful to him; skirmishes took place between his and Karghūyā's troops, who had appealed for help to Torbasī. Torbasī set out for Aleppo with his troops; meanwhile Michael Burtzes was summoned by the Christians to Antioch, where discord reigned. As he was in danger of being captured by his adversaries who occupied a tower, he sent for Torbasī and with his help took Antioch at the end of 358. The town remained Byzantine till 477. After this success Torbasī went to Aleppo, delivered it from Sa'd al-Dawla's siege only in order to besiege it himself. A treaty was made between Karghūyā and the Byzantines in the beginning of 359, in which the Emperor was recognised as suzerain and the payment of considerable tribute by the towns in the administrative district of Aleppo was agreed upon. This interesting treaty contains, in addition to the list of towns and villages, detailed regulations for the exchange of prisoners, the treatment of escaped slaves, change of religion, as well as for customs, the guidance of caravans etc. In the meanwhile Sa'd al-Dawla had entrenched himself in Ma'arrat al-Nu'mān and declined to recognise the treaty. To force him to do so, the Byzantines destroyed Ḥimṣ. But Sa'd received reinforcements, rebuilt Ḥimṣ and succeeded in having his name mentioned in the *khutba* in Aleppo. In spite of the raids and devastations of John Tzimiskēs no change seems to have taken place in these conditions for a time (it is hardly possible to win certainty from the contradictory accounts), until at the end of 364 Tzimiskēs left Syria and the ambitious Bakdjūr imprisoned Karghūyā in order to exercise power alone. Sa'd, the nominal overlord, would not tolerate this deed of violence but advanced against Aleppo. As the Byzantines, in spite of his entreaties, did not come to Bakdjūr's help, the city of Aleppo fell into the Ḥamdānid's hands in 365. The citadel continued to hold out for two years. In 367 (977) Bakdjūr was allowed to march out with all the honours of war and was granted Ḥimṣ. In this year Sa'd recognised the real ruler of Baghdad, the Būyid Sultān, in addition to the Caliph and abandoned the annual tribute to the Emperor. The Byzantines tolerated this for a time; but when in 371 the Domesticus Bardas Phocas found his hands free after suppressing the rebels in Asia Minor, he advanced on Aleppo. Sa'd at once agreed to renew the treaty recognising Byzantine suzerainty and to pay tribute and, when in 373 Bakdjūr revived the old plan of taking Aleppo with the help of the Fāṭimid Caliph al-'Aziz, Sa'd received help from Bardas Phocas as soon as he applied for it, for the latter saw the importance of Aleppo as a bulwark against the Fāṭimids. The Domesticus forced Bakdjūr to retreat and took Ḥimṣ from him to deprive him of his last stronghold. (Kamāl al-Dīn's story that the Domesticus appeared before Aleppo with a large army after the conquest of Ḥimṣ is a confusion with the campaign of 375). Presumably to punish Sa'd al-Dawla for a refusal to pay tribute the Domesticus took Killis in 375 and then laid siege to Apamea. Sa'd, who dared not venture so far with his troops, resolved to divert the Domesticus; he sent his tried general Karghūyā to destroy the celebrated monastery of

Kalfat Sim'an and take its monks as prisoners to the slave market. A roar of rage went up from the whole Byzantine world. Bardas Phocas at once raised the siege of Apamea and advanced on Aleppo. Sa'd was unable to offer any serious resistance, had to submit and peace was only granted him in 376 on condition that he paid all the arrears of tribute. Bardas Phocas treated him very leniently, as he wished to be free for the war against the Bulgars. Sa'd had peace for five years, till in 381 (991) Bakdjür, who after a quarrel with the Fātimid Caliph had been living peaceably in Rakka, once more marched on Aleppo, in the vain hope of obtaining the support of the Fātimid Governor. Sa'd and his general Lu'lu' defeated him with the aid of Byzantine reinforcements at Nā'ura and had him executed on the spot. Soon afterwards Sa'd in 381 fell sick of a colic. To some extent recovered he held his triumphal entry into Aleppo but died the same night, as he had not taken sufficient care of himself. He was succeeded by his son Sa'id al-Dawla under the regency of Lu'lu', whose daughter he afterwards married. His reign was occupied with battles with the Fātimid troops under Bandjütikīn (Mangutegīn), whom he defeated with the help of the Byzantines. He had to sustain long sieges. When he was hard pressed in 384, he appealed for help to the emperor Basil, who, although occupied with the Bulghār war, arrived with incredible rapidity before the walls of Aleppo with 17000 men and this alone was sufficient to disperse the enemy. Although Sa'id could have offered him no serious resistance, the Emperor remained faithful to the treaty and scorned to occupy Aleppo. Sa'id on his side also observed the treaty till his death in 392 (1002); he with his wife was poisoned by the latter's father Lu'lu', who coveted the throne for himself. At first he ruled in the name of Sa'id's sons, but two years later he sent them with the whole Ḥamdānid harem to Cairo and made his son Manšūr his co-regent. When in 399 (1008) Lu'lu' died at a great age, he was succeeded by Manšūr under the name Murtaḍa 'l-Dawla, a title granted him by al-Ḥākim (*Journ. As.*, ix. 160), when he began to mention the latter's name in the *khutba*, so that Fātimid rule in Ḥalab may be said to date already from this time, although Manšūr afterwards quarrelled with Ḥākim. A brother of Sa'id rose against him with the help of the Kilābis but was defeated, when Manšūr won the latter to his side with bribes and promises, and fled to the Byzantines. To get rid of the Kilābis, who pressed him to fulfil his promises, Manšūr invited their chiefs to a great feast, at which he seized them. Many perished in the noxious dungeons, half-starved; Šālih b. Mirdās alone succeeded in escaping. He then led his Bedouins against Manšūr and forced him to make terms favourable to the Kilābis which he once more did not observe. Through all this he aroused great dissatisfaction; Fātiḥ, the commander of the citadel, abandoned him and by a stratagem made him believe that Šālih had entered the town, Manšūr fled in terror to the Byzantines. On the further history of Ḥalab see the article ḤALAB [ii. 229 *et seq.*].

(M. SOBERNHEIM.)

ḤAMDĪ, ḤAMD-ALLĀH ĀLEBĪ, the youngest son of Shaikh Ak Shams al-Din (cf. i. 226^a), a famous Ottoman poet. He was born in Goinik about 852 (1448), 12 years before his father's death in 864 (1459-1460). The early death of his father proved detrimental to his education, for his brothers bore him no goodwill. At first he devoted himself to a theological-legal career but had only advanced in the official hierarchy as far as the office of muderris in Brusa, when he went into retirement to enjoy a life of quiet meditation and follow up his literary inclinations and the study of mysticism and poetry. He is said to have obtained the means for his modest subsistence by copying his own chief work. Little esteemed in his life-time, which explains the scanty notices of him in the biographers, he died in Dhu 'l-Ḥa'da 914 (February-March 1509, according to others in 900 or 909) and was buried beside his father in Goinik.

His earliest works are a number of mystic tracts *Medjālis al-Tefāsīr* (the reunions of the commentaries); a treatise on a ḥadīth, taken from the New Testament, that God has prepared for the believer "what eye hath not seen, nor ear heard etc." and another, "The sweetness of this world is bitterness for the next and the bitterness of this world is sweetness for the next". Of much more importance are his poetical works. He was not a great creative genius, but rather an industrious and clever imitator and editor. When he relies entirely on himself, his usually so brilliant language begins to halt. He does not seem to have composed a regular *Divān*, unlike the usual practice of scholars, but only a collection of *ghazels*. His fame as a poet is based almost entirely on his romantic *mathnawīs*, of which he is said to have written five in imitation of Nizāmi's *Khamsa*: *Yūsuf u Zelikhā*, *Leilā u Medjūn*, *Mewlid-i Nebi* (*Mewlid-i dīsmānī* and *Mewlid-i rūhānī*), *Tuhfet al-'Ushshāk* and *Muhammediye*.

Yūsuf u Zelikhā marks an epoch in the history of the Ottoman *mathnawī*. It has become by far the most popular and best known Turkish *mathnawī*. From the point of view of language it is the most perfect work in Ottoman literature up to the appearance of Fuẓulī's *Leilā u Medjūn*. In the first part it appears to be a version of Firdawsi's simple work of the same name, while the second part is a brilliant translation, expanded by additions and lyrical pieces scattered through it, of the almost contemporary work of Dījāmī, the head of the rhetorical and allegorical school in Persia. The subject "the story of Joseph", taken from the Qur'an, which has always been popular throughout the east on account of its Šūfī interpretation, was particularly popular in this version, as Ḥamdī followed the most scrupulous commentators on the Qur'an. The work, which was completed in 897 (1491-1492), bears no dedi-

cation. Hamdi is said to have fearlessly withdrawn the dedication to Bāyazid II. It has never been printed but numerous manuscripts exist.

His *Leilâ u Medjânûn* is the oldest version of this likewise popular motif after Nizâmî's Persian model, but it was soon displaced in popularity by Fuzûlî's work. Copies of the *Mathnawî*, *Mewlid-i-Nebî* are very rare. The only one of his works that can lay any claim to originality is the *Tuhfet al-'Ushshâk* (Present for Lovers) which is distinguished by simplicity of language.

His much praised and popular *Kiyâfet-Nâme* is also written in simple Turkish *mathnawî* verses: it is a book on the science of physiognomy for the discernment of character, which seems to be the oldest of its kind. An *Esrâr-nâme* is also ascribed to him.

HAMÎ, a coast-town in Haḍramût, about 18 miles N.E. of Shihr [q. v.], near Ra's Sharma in a very picturesque and fertile district. Like Makalla and Shihr it belongs to the Ku'aitî of Shibâm [q. v.] and has, as the name shows, thermal wells of the temperature of boiling water. The houses of the little town are low and built of mud; in the centre of the town and on the shore there are two important ḥiṣn. The inhabitants are mainly fishermen; and their number was estimated by Capt. Haines at 500 in 1839. Behind the town lie thick palmgroves and fields with luxurious crops of Indian corn.

HAMID B. AL-'ABBÂS ABŪ MUḤAMMAD, born in 223 (837), died 311 (923), according to the satirist Ibn Bassâm, in early life a waterseller and vendor of pomegranates, was one of the ablest financiers of the 'Abbâsîd Caliphs al-Muwaffâk and al-Muqtadir. He combined the collection of the *kharaḍj* and *diyya* of Wâsiṭ (from 273 = 886) with that of Fârs (from 287 = 900) and Baṣra. In 306 (918) he was appointed vizier, and afterwards was given 'Alî b. al-Djarrâḥ as his *nâ'ib*. His financial administration resulted in riots in Baghdād and his strong measures with dissenters like the Karmāṭians, Šūfis (execution of al-Hallādj [q. v.]) and particularly the Imāmiya (imprisonment of Ibn Rūḥ, the Imām's *wakîl*) finally brought about his fall. He was tortured by the new vizier's son, Ibn al-Furāt and put in the pillory; he died in Wâsiṭ soon afterwards, apparently of poison.

Remains, ed. Amedroz, Index s. v. (In his preface, p. 18, the editor gives as a vivid picture of this cunning and ruthless financier).

(LOUIS MASSIGNON.)

HAMİD (the *Merḫūm* of Khalkokondyles, p. 65, 66, and *Merḫūm* of Phrantzes, p. 82; for Hamid al-Din?), was the founder of the dynasty called after him Hamid-oghlu. He had been the leader of the Turkoman tribes on the Byzantine frontier of the Seldjūkid kingdom of Kōnia, "in the mountainous region between Adalia and Kōnia" (Abu 'l-Fidā), corresponding to the ancient Pisidia; we find him finally independent by the end of the viiith century of the Hidjra. Of his successors we know: 1. his son Felek al-Din Dündār Bey, who took up his residence in Egerdir, since then known as Felekābād. In 724 H. Timūrtāsh, the governor of İlkhānî Abū Sa'îd Bahādūr in Asia Minor, put an end to his rule. Shortly before this Thabit b. Hamid had conquered Adalia (Abu 'l-Fidā), which remained under the rule of the Hamid-oghlu till the Teke-oghlu took possession of it; 2. Khidîr bey, son of Dündār. During his reign, which began in 728 H., he conquered the districts Akshahir, Beyshehri and Seidishehri. We suppose him to be identical with Seif al-Din Kaidar, mentioned in the *Kitûb al-inṣhâ*, *Not. et Extr.* xiii. 361, Note 3), and his name-sake the governor of Adalia quoted by Shihâb al-Din reigning in 728 H. Nedjîm al-Din Abū Ishâk, son of Dündār. Ibn Battûta visited him in Egerdir (*Voyages*, ii. 267), as well as his brother Mehmed Çelebî who was residing in Göl-ḥiṣâr. 4. Elyâs Bey who was continually at war with his neighbours, the Karamân-oghlu, and was defeated by them several times. 5. Kemâl al-Din Hüsain Bey, son of Elyâs, who sold the greater part of his dominions to Sulṭân Murâd I in 783 H. The latter's successor Bāyazîd I put an end to Hüsain Bey's rule in 793 H. Of his son Muṣṭafâ we know only that he had been following Murâd I a year before, and that he fought in the battle of Kossova. The provinces in the Eastern part of the country with the cities of Akshahir, Beyshehri and Seidishehri were then occupied by the Karamân-oghlu and afterwards formed a source of continual dispute between them and the different Ottoman Sulṭâns. During the invasion of Asia Minor by Timūr (1402-1403) the country was devastated several times by his troops, and Timūr ended his expedition by storming the fortresses of Uluborlu and Egerdir (Sharaf al-Din. *Zafernâme*, ii. 448, 456, 464, 484 et seq.). Under Turkish government the dominion of the Hamidoghlu was formed into a sandjak of the eyalet Anadolu called Hamid-eli, and Isparta became the residence of the Sandjak-bey (cp. the description in the *Dihānnumâ*, p. 639). Nowadays it figures as a sandjak of the wilâyet Kōnia under the name of Hamid-âbâd. After Isparta we may mention as towns of importance Uluborlu, Egerdir, Burdur, Keçiborlu, 'Aṣî Kara-aghâç (= Aghlasūn) and Yalowâc; then the lake of Burdur and the lakes of Egerdir and Ḥaïran, and the lake of Beyshehri, the country being an important lake district. The chief products of the country are "Hamid-wheat", opium, tobacco, traganth (*ketre*), carpets, cotton and cloths of mixed fabric (*alâdjia* and *boghâzî*), leather and silver goods.

Since the continuation of the Smyrna—Dineir Railway the country has been opened up to commerce and civilisation, as far as the lake district.

The numerous mosques and madrasas in Isparta, Egirdir, Oluburlu, Burdur and the collections of manuscripts in these towns belong to the older period.

HAMĪDĪ, HAMĪD AL-DĪN ABŪ BAKR 'OMAR B. MAHMŪD BALKHĪ, a Persian writer of makāmas, died in 559 (1164); he wrote his makāmas, some of which are to be considered *munāzarāt*, in 551 (1156) on the model of his Arab predecessors al-Hamadhānī and al-Harīrī. Their number is 23 or 24; printed, Cawnpore 1268 (1852), Lucknow 1879, Teherān (1873).

HĀ-MĪM B. MANN ALLĪH B. HĀRĪZ B. 'AMR, of the Berber tribe of B. Zerwāl in the Rif, known as al-Muftarī (the forger). He attempted to introduce a new religion among the Ghomāra, which, although not exactly in its practices, at least in its dogmas proceeded from Islām. His period of activity covered the years 313—325. Of the canonical prayers he only retained those at sunrise and sunset; he abolished the fast of Ramaḍān and replaced it by fasting on the three (or ten) last days of this month, on two days in Shawwāl and on the Wednesday forenoon and Thursday of each week. The breach of this rule was punished by a fine of 6 head of cattle. He abolished pilgrimage, purification and complete ablution and allowed the eating of pork; on the other hand, he forbade the eating of fishes, which were not killed in the lawful fashion; the heads of all animals and birds' eggs were likewise forbidden food. To this day the Tuāreg and the Berber tribe of Shenūa near Tipasa will not eat hens' eggs. Hā-mīm wrote a book which the Muslim historians call a *Qur'ān*. His aunt Tangit (var. Talyah, Tabā'ih) was supplicated in the prayers of the faithful and regarded as a prophetess, as was her sister Dadju. He won many adherents and fell in a battle with the Maḥmūda near Tangier in 319 or, according to others, 329. But the religion which he founded did not die with him.

(RENÉ BASSET.)

HAMMĀD, a Berber ruler, founder of the Hammādid dynasty, son of the Zirid

Bulukkīn [q. v.], chief of the Ṣanhādja and governor of the Maghrib under the Fāṭimid Caliph al-Mu'izz, was given the governorship of Ashīr [q. v., i. 482^b *et seq.*] in 377 (987-988) by his brother al-Manṣūr, Bulukkīn's successor. For several years he valiantly championed the cause of the Ṣanhādja, continued the war against the Zenāta, who had invaded the central Maghrib, with the aid of his brother Ittū-west, and in 391 (1000-1001) put down the rebellion of his uncles Māksin, Zāwī and Ḥalāl, whom he besieged in Shenwa and forced to submit [cf. BĀDĪS ABŪ MENNĀD, i. 556^b *et seq.*]. In 395 (1004-1005) he raised the siege of Ashīr which the Zenāta, the allies of the rebels, were trying to take, thus restoring the supremacy of the Ṣanhādja throughout Central Maghrib and in 398 (1007-1008) built himself a strong mountain fortress, al-Kāfa [q. v. and ALGERIA, i. 265^b] as a secure place of refuge in case of another hostile invasion. But soon afterwards his feudal lord Bādīs Abū Mennād, successor of the Zirid al-Manṣūr, wished to rescind Hammād's governorship of the district of Tīdjīs and Constantine in favour of his son al-Mu'izz, the latter thereupon rose against Bādīs, at the same time revoking his allegiance to the Fāṭimids and declaring himself a vassal of the 'Abbāsids. Bādīs marched against the rebel and shut him up in al-Kāfa, but died during the siege (406 = 1016). The war continued between Hammād and al-Mu'izz, the son and successor of Bādīs, and was concluded by a treaty, which was negotiated by al-Kā'id, a son of Hammād, (408 = 1017-1018). It resulted in the dismemberment of the Zirid kingdom: Hammād received Mila, Tobna, the Zāb, Ashīr and all the lands of the central Maghrib, which he was likely to conquer. "From that hour" writes Ibn Khaldūn "the two rivals laid down their weapons and allied themselves by marriages, after dividing the kingdom between them. The Ṣanhādja dynasty was thus divided into two lines, that of al-Manṣūr in Kairawān and of Hammād in al-Kāfa". Hammād died there in 419 (1028).

Bibliography: Ibn Khaldūn, *Histoire des Berbères*, transl. de Slane, ii. 16 *et seq.*, 43; Fournel, *Les Berbères*, ii. (G. YVER.)

HAMMĀD AL-RĀWĪYA, i. e. the transmitter, namely of old Arabic poetry. He was born in 75 (694-695; Ibn Khall.: 95) in Kūfa; his father, whose name is differently given (Hurmuz, Maisara, Sābūr) and who bore the kunya Abū Lailā, was a Dailamī prisoner of war. Hammād's speech also betrayed his origin.

He won great fame from his comprehensive knowledge of pre-Islamic as well as of Islamic poetry, of battles and Bedouin dialects. It is even said of him that he could recite *qaṣidas* of the *Djāhiliya* of considerable length, rhyming in each letter of the alphabet, a hundred for each letter, and that he could at once decide whether a poem was old or modern. Great value was placed on his judgment on poets and poetry. He was almost always able to detect plagiarism and borrowings. He himself was less conscientious however in transmitting and used his gifts to smuggle verses of his own into ancient poems, a proceeding for which al-Mufaddal al-Dabbī censured him and for which al-Mahdi took him to task (*Agh.* i. 172, 16 *et seq.*).

As Nöldeke has pointed out, Hammād's great merit is that he collected the *Mu'allakāt* [q. v.].

He was one of the three Hammādūn (with

Ḥammād 'Adīrad and Ḥammād b. al-Zibrkān), who, bound by ties of closest friendship, caroused and worshipped the Muse together and were all suspected of *zandaqa*. Among his friends were also the poets Muṭī' b. Iyās and Yahyā b. Ziyād.

He enjoyed the favour of the Caliph Yazīd II; he was afraid of Hishām, but the latter also is said to have once invited him to court and richly rewarded him. This story, however, is doubtful on account of an anachronism and features similar to those of an anecdote related of Walīd II. This last Caliph in particular often entertained himself by listening to Ḥammād's recitations. — Ḥammād expected little good from the 'Abbāsids. He was one of the poets who left Baghdād in the reign of al-Manṣūr "to seek a livelihood"; he then went to Kūfa; the Caliph however is said to have invited him back to Baghdād from Baṣra. But the latter's son Dja'far, into whose presence Ḥammād allowed himself to be taken by his friend Muṭī' at the latter's solicitation, treated him shamefully, when a verse recited by the poet proved distasteful to his superstitious notions.

The date of his death is differently given: 155 (Ibn Khallikān), 156 (*Fihrist*) or in the Caliphate of al-Mahdī, i.e. 158 or later; in *Agh.*, iii. 80 *infra*, he is even associated with al-Rashīd.

ḤAMMĀDA (also called *gada* in the Sahara Atlas and *tasili* in Berber), a form assumed by elevations of the ground in the Sahara, according to E. F. Gautier (*Sahara Algérien*, Chap. I), "the form assumed by the desert in the plateaus", usually appears as a broad flat surface which is sometimes slightly undulating but rarely traversed by ravines. The edge of the plateau often consists of long series of steep slopes with rather well marked contours which are called *bāten* or *djebel*. The upper surface is devoid of vegetation on account of the utter absence of soil and covered with stones, which sometimes are broad and flat and sometimes consists of small splinters which are formed by the breaking up of the rocks through the sudden changes of temperature and severely impede the progress of men and animals. The Ḥammāda thus forms an almost insurmountable barrier to traffic through the Sahara, so that the caravans prefer to go round rather than cross them. The most important Ḥammāda are, the Ḥammāda al-Harīsha, west of Tawdeni, the Ḥammāda of Tinghert, south of the Eastern Erg, the Ḥammāda of Murzūk and notably the Ḥammāda al-Ḥamrā' in the south of Tripolitania, which is 140 miles broad and 400 long, and reaches an elevation of 1600—2000 feet.

Bibliography: See the article SAHARA.

(G. YVER.)

ḤAMMĀDIDS, a Berber dynasty in Central Maghrib, which was founded in 405 (1014)

by Ḥammād b. Bulukkin [q. v.] and overthrown in 547 (1152) by the Almohads. They had to wage continual warfare on the Zenata, who threatened them from the west, the Zirids, the former lords of the central Maghrib and lastly from the second half of the xth century onwards against the Hilālī Arabs also. Al-Kā'id, Ḥammād's successor (419—446 = 1028—1154-1055), defeated Ḥammāma, son of Mu'izz b. Ziri b. 'Aṭiya and forced his cousin, the Zīrid al-Mu'izz b. Badis, the ruler of Kairawān, who had besieged him in al-Kala to sign a truce (432 = 1040). To show clearly his independence of his Zīrid cousin, when al-Mu'izz had cast off the suzerainty of the Fatimīd Caliph, he had the *khutba* read in the latter's name. Soon afterwards the invasion of the Hilālī Arabs by destroying the power of the Zirids of Kairawān in 443 = 1051, assured the supremacy of the Ḥammādids in the Maghrib. After Bulukkin b. Muḥammad, second successor of al-Kā'id had suppressed the rising of the Beni Romman of Biskra [q. v., i. 732], he penetrated in the extreme Maghrib and seized the town of Fas, the notables of which he carried off as hostages. On his return from this campaign he was murdered by his cousin al-Nāṣir, whose sister Tammirt he had put to death.

The reign of al-Nāṣir b. 'Alennas (454—481 = 1062—1088-1089; on the variants of the name 'Alennās, see *al-Bayān al-Mughrib*, transl. by Fagnan, i. 445, note 3) and that of his successor al-Manṣūr (481—498 = 1088-1089—1104-1105) form the golden age of the Ḥammādīd dynasty. After al-Nāṣir had become lord of Algiers, Mil-yāna, Ḥamza, Nigāus and Constantine, the government of which he entrusted to his sons or brothers, he endeavoured to extend his kingdom eastwards by taking advantage of the feuds that had broken out among the Arab tribes. For a time he was recognised as their ruler by the people of the districts of Kaṣṭilya, Kairawān, Sūsa, Sfax and Tunis. After his defeat at Sbeitla in 457 = 1064, however, he could not prevent the devastation of the districts of Zāb and Jodna by the Hilālī Arabs and their allies, the Maghrawa of Tripoli, led by al-Mustanṣir b. Khazrūn. In the end, however, al-Nāṣir won the upper hand; the Zāb was reconquered and Ḥammādīd troops penetrated to the Sahara as far as Wargla. These successes made him the most powerful ruler in the whole Maghrib. To raise the prosperity of his subjects by increasing trade, he eagerly endeavoured to attract Italian merchants to Bougie [q. v., i. 766 *et seq.*] which had been founded by him. He also corresponded with the Pope Gregory VII through the intermediary of the priest Servandus, afterwards Bishop of Bōna.

Al-Manṣūr, al-Nāṣir's successor, moved his residence to Bougie in 483 = 1090-1091, being continually threatened in al-Kal'a by the inroads of the Arab Bedouins. He regained the cities of Bōna and Constantine, which the Ḥammādīd rulers had given over to the Zirids, subdued the Kabyls of the district round Bougie and paid particular attention to the defence of his lands against the Almoravids. When the latter had taken Tlemcen (474 = 1081-1082) they won the Benū Wamennū, who had till then defended the western Ḥammādīd frontiers, to their side and threatened the central Maghrib. Al-Manṣūr, who had taken bands of Hilālī mercenaries into his service, took the field

repeatedly against them, till the defeat of the Almoravid general Ibn Tinamēt at Djebel Tessala and the recapture of Tlemcen by al-Manṣūr 496 = 1102 checked the progress of the Almoravids. Successful campaigns against the Berbers, who had risen in several districts, finally completed the restoration of order.

Soon afterwards however, the decline of Hammāhid power began. The successes of al-ʿAziz (498—515 = 1104—1121), al-Manṣūr's successor, whose fleet captured Djerba and who defeated the Arabs who had invaded Hodna, were only temporary. His successor Yaḥyā, devoted to women and the chase, proved utterly incapable of coping with the ever increasing danger that threatened his kingdom from without. In 1136 the Genoese plundered Bougie, the Berbers again became restive, the Hilālī Arabs continued their raids, and finally the Almohads invaded the central Maghrib. On the approach of ʿAbd al-Muʾmin, the Hammāhid al-Kāʿid, governor of Algiers, abandoned the city without offering any resistance. Seba, another brother of the Sulṭān, suffered a defeat at Bougie, while Yaḥyā himself fled from his capital which was thereupon occupied by ʿAbd al-Muʾmin [q. v., i. 51^b] without opposition. After its fall al-Kāʿa was razed to the ground by the invaders. Yaḥyā, who had first of all fled to Bōna, and then to Constantine, finally surrendered to the conqueror without striking a blow (547 = 1152). He was taken a prisoner to Marrākush and then to Sale, where he died in 558 (1163).

CHRONOLOGICAL SURVEY OF THE HAMMĀDID DYNASTY.

List of the Hammādid rulers.

Hammād b. Bulukkīn . . 405—419 (1014—1028)
al-Kāʿid, son of Hammād 419—446 (1028—1055)
Muḥsin, son of al-Kāʿid . 446
Bulukkīn b. Muḥammad. 447—454 (1055—1062)
al-Nāṣir b. ʿAlennās . . . 454—481 (1062—1088)
al-Manṣūr, son of al-Nāṣir 481—498 (1088—1104)
Bādīs, son of al-Manṣūr . 498
al-ʿAziz, son of al-Manṣūr 498—515 (1105—1122)
Yaḥyā, son of al-ʿAziz. . 515—547 (1122—1152)

Fagnan, *Ibn al-Athīr: Annales du Maghreb et de l'Espagne* (Alger 1898), p. 402, 454, 471—479, 572 *et seq.*, 604; Müller, *Islam*, II, 621 *et seq.*, 629—631, 649. (G. YVER.)

HAMMĀL (Ar. *ḥamala* "to carry"), messenger, porter. In countries where the roads and means of transit are still very primitive, the porter is indispensable for the transport of all kinds of goods. In Muslim lands the *ḥammāl* are therefore numerous and much employed; sometimes they carry burdens, which in other countries would only be dispatched with the help of beasts of burden or conveyances. The simplest equipment used by the *ḥammāl* is a fairly thick rope which he ties round the object to be carried and thus keeps it firm on his back. But where the *ḥammāl* are

organised into gilds as in Constantinople, they carry on their backs a padded saddle (*semer*) covered with leather resting on a piece of leather on the back (*arḳalyk*). On this the weight of the burden rests and it takes the place of a porter's crate. If however the burden is too heavy for one man, several work together by taking a long stick (*syryk*) between each two from which the trunk or bale is hung by ropes. — When the *ḥammāl* are going through a crowd carrying burdens they push and shove the people aside, at the same time calling out in Arabic: *O'a rāsak* (*dāhrak*) "Mind your head (or back)", or in Turkish: *Doğunmasyn* (look out) or *varda* (Ital. *guarda*). In Pera the European women are carried in sedan-chairs (*sedia*), like those which were used in Europe in the xviiith century; this service also is in the hands of the *ḥammāl*. (CL. HUART.)

HAMMĀM (lit. "heater", Ar. *ḥamma* "to heat", Hebr. *ḥāman* "to be warm"), a hot steam-bath. These are isolated buildings communicating with the street or market place by more or less imposing door; they consist of a number of large rooms surrounded by little chambers and crowned by domes pierced with holes to admit the light, which filters through little glass bells like bottle-bottoms. The first room to be entered is the *maslakḥ* (*apodyterium*, *spoliatorium*), where the clothes are taken off and put up into a bundle which is entrusted to the owner of the bath; in the centre is a basin with a jet of water (*fiṣṣiya*). The *ḥarāra* (*caldarium*, *sudatio*) is next entered, a large room filled with steam; to avoid touching the superheated marble floor, wooden shoes or slippers with high heels are worn (*ḥabḥāb*). Here the bather stays till he perspires; the attendant then takes him into one of the little chambers with a basin (*maḡḥas*, *piscina*), which surround the *ḥarāra*, or into one where there are hot and cold taps (*ḥanaḥiya*), and rubs his body, after making all his joints crack, with a horse hair-glove (*kis*), which removes the epidermis in grey rolls, and covers him entirely with frothy soap, beaten up to a lather by means of a *lif* (palm-fibres), till he is quite clean. All that is now to be done is to wash in hot water, dry and wrap oneself up, including the head, in clean linen and go back to the *maslakḥ* to rest there smoking and drinking lemonade or coffee. On days, when the bath is reserved for women, a piece of cloth is hung across the outer door. In winter, the clothes are taken off in a room between the *maslakḥ* and the *ḥarāra*, which corresponds to the *tepidarium* and is called *bait awwal* (first room).

In Persian the *ḥammām* is called *garm-ābe*, the apodyterium *bīne* (H. Ferté, *Journ. As.*, 8th Ser., vii. 391, note 2) and in Turkish *djāmen* (Pers. *djāme-ken*).

(CL. HUART.)

HAMMŪDIDS. The Hammūdids are the successors of the two sons of the descendant of the Prophet Hammūd b. Maimūn b. Aḥmad b. ʿAlī b. ʿUbaid Allāh b. ʿOmar b. Idrīs b. ʿAbd Allāh b. al-Ḥasan b. ʿAlī b. Abī Ṭālib, who are connected with the Idrisids of Morocco (172—375 = 788—985) through Idrīs b. ʿAbd Allāh [q. v.] founder of the dynasty. In the confusion of the civil war that preceded the fall of the Umayyads

of Cordova, the elder brother, al-Kāsim, obtained the governorship of Algeciras [q. v.] and his ambitious younger brother 'Alī that of Tangier and Ceuta. After conquering Malaga the latter overthrew the feeble Umayyad Sulaimān al-Musta'in (407 = 1016) and made himself Caliph in Cordova. After his assassination the brother al-Kāsim did the same (408 = 1018), in 412-413 = 1021-1022 he was driven from the throne by his nephew, Yahyā b. 'Alī, but regained it in 413-414 = 1022-1023, at the same time ruling Malaga 1018-1021 and 1022-1025. 'Alī's descendant's (8) maintained themselves in Malaga from 1025 till 1057, when it passed to the Berber Zirid prince Bādīs [q. v.] of Granada, while Algeciras remained under the sway of al-Kāsim's son Muḥammad al-Mahdī (431-440 = 1039-1048) and his grandson al-Kāsim al-Wāṭṭik (440-450 = 1048-1058), when it was taken by the 'Abbāsid's [q. v.] of Seville. 'Alī's son Yahyā ruled Malaga 416-427 = 1025-1035 and was succeeded by Idrīs I al-Muta'ayyad 427-431 = 1035-1039, Ḥasan al-Mustansir 431-434 = 1039-1042, Idrīs II al-'Alī 434-438 = 1042-1046, Muḥammad I al-Mahdī 438-444 = 1046-1052, Idrīs III al-Muwaffaq 444-445 = 1052-1053, Idrīs II (second reign) 445 = 1053, and lastly Muḥammad III al-Musta'li 446-449 = 1054-1057.

Just as the half berberised early Hammūdids shared a glory reflected from the dying Caliphate of Cordova, a century later the dynasty has the darkness into which it was sinking illumined by the scholarship of the court geographer of the Norman Roger II of Sicily in Palermo, al-Sharīf al-Idrīsī [q. v.], the grandson of the kindly but feeble Idrīs II of Malaga.

(C. F. SEYBOLD.)

HAMRĪN, in Yāqūt (iii. 7) Ḥumrīn, the later name for the older Bārīmā [q. v.]; a chain of low hills (600-1000 feet) about 500 miles long, which begins in Mesopotamia about the latitude of Ḥaḍr, separating the Assyrian plains from the Mesopotamian, in the south the plains of Khūzistān from those of the Shaṭṭ al-'Arab, and finally loses its identity in border ranges of South Irān. The remarkable length of this quite homogeneous range is well known to the Bedouins and fellahin, and has given rise to fanciful notions, e.g. as early as Yāqūt, who speaks of the *Djabal al-muḥīt bi'l-'Arḍ*, as of an ocean surrounding the earth. Besides in Yāqūt the modern name of the range is also found as early as 758 A.H. in the great

waḳfiya inscription of the Madrasa al-Mirdjāniya (cf. L. Massignon, *Mission en Mésopotamie, Inst. Franç. d'Arch. Orient.*, Cairo 1912, p. 16 and 28). In the Turkish work (not yet printed) *Ḍamīr al-Anwār fī Manāḳib al-Akhyār* of Ṣafa al-Dīn 'Isā al-Kādirī al-Nakshbandī al-Bandanījī of 1077 A.H. a tomb not yet identified of Māḥid al-Kurdī (died 567) is mentioned on the Ḥamrīn as a well known place of pilgrimage (cf. *o.c.*, p. 60).

(E. HEERLID.)

HĀMŪN. A name given in E. Persia, Afghānistān and Balōčistān to the salt swamps, which sometimes swell into extensive lakes, occupying the depressions of the Iranian plateau. The most important of these is the Hāmūn of Sistān. The northern part of this is a permanent lake which expands towards the south in seasons of flood. The water when floods are exceptionally high flows, into the Gōd-i Zirah, a depression at a still lower level. This then forms a lake which surrounds Sistān to the south and nearly meets the Helmand River. This overflow occurs on an average once in ten years. The hill on which the fort of Kōh-i Khwādja stands is surrounded by the Hāmūn, and becomes an island at times. The Helmand, Khāshrūd, Farāh-rūd and Harūd-rūd fall into this Hāmūn. Other important Hāmūns are that of Dījāz-Moriān in Persian Balōčistān and that of Mashkēl in Balōčistān.

Journ.*, xxviii.); Molesworth Sykes, *Fourth journey in Persia*, do. xix. (M. LONGWORTH DAMES.)

HAMZA (A.), lit. "compression", is the name given to the glottal stop or toneless guttural explosive, which is said to be almost equal in value to 'ain among the Tamizis [q. v., i. 299a] and indeed the sign for hamza is derived from that for 'ain. For further details see the articles ALIF and BAINA BAINA and the literature there quoted.

(H. BAUER.)

HAMZA, son of 'Abd al-Muṭṭalib, uncle of the Prophet, and his fosterbrother, as Tradition adds in the effort to glorify this hero of the earliest days of Islām, otherwise so little known. Ignorant panegyrists make him at the same time take part in the Fidjār wars [q. v.], but this statement is a fiction, according to the author of the *Kitāb al-Aghānī*. At first, like the other Hāshimīs, he adopted a hostile attitude to the new creed. But revolting against the extravagant attitude of Abū Djaḥl, he is said to have attached himself to the Prophet two (according to others, six) years after the first revelation. He migrated with him to Medīna and at first led an obscure and miserable existence there. One day he so far forgot himself under the influence of intoxication as to make an onslaught on 'Alī's camels with his sword. For the rest Hamza is described to us as a valiant soldier. This quality won him the title of "Lion of God and his Prophet", which soon found a place in poetry. Muḥammad made use of his services by sending him at the head of a small column to hold up a Kuraish caravan. His fame as a soldier is particularly associated with the battle of Badr, where he and 'Alī shared the honours. He also took part in the siege of the Medīna Jewish clan of Kaīnuḳā'. He met his fate

at the battle of Uhūd where he wrought wonders of valour. The negro Wahshī pierced him with a javelin, tore his breast open and brought his still beating heart to Hind, the mother of Mu'āwiya, who buried her teeth in it. So at least says one story hostile to the Umayyads and without much support. Hamza is said to have been about 57—59 years old. But if our view is correct, that ten years should be deducted from the 60—65 years usually given to the Prophet, it will be necessary to make Hamza ten years younger also. None of Hamza's children left issue. Cf. also the articles BADR and OHOD.

HAMZA b. 'ALĪ b. AḤMAD, founder of the theological system of the Druses and author of several treatises, which have obtained a place among the sacred books of the Druses. Little is known of his life with certainty. According to al-Nuwairī, he belonged to Zawzan (Zūzan) in Persia and was by trade a maker of felt (*labūd*). In 410 (1019) he is said to have first publicly put forward his doctrines but, according to Hamza's own statements, this took place two years earlier in 408 (1017), from which year the Druses date the manifestation of the divine incarnation in the person of the Fātimid caliph al-Hākim b. Amr Allāh [q. v. ii. 225^a] and the beginning of the Druse era. It is not certain when he came to Egypt, possibly in 405 or 406. But after he publicly proclaimed his doctrines in a mosque in Cairo, a riot broke out and Hamza had to remain in concealment for a time under the Caliph's protection. What became of him after the latter's disappearance (411 = 1020) is unknown. He plays a still greater rôle in the religious system of the Druses as *Kā'im al-Zamān* or last incarnation of the universal intelligence (*aql*). According to al-Makīn and other authors, he was usually called *al-Hādī* i. e. *Hādī 'l-Mustadjībīn*, leader of those who obey (the divine call).

Bibliography: De Sacy, *Exposé de la religion des Druses*, Introduction p. 387 et seq., Texte i. 98 et seq., ii. 2 et seq.; Blochet, *Le Messianisme*, p. 94 et seq.

HAMZA, called the Siliḥdār, was born about 1140 in the district of Dewelu Ḳarahisār, the son of a landed Agha, called Mchemmed; he began his career in 1156 in the *ḥalwa-khāne* (honey-bakery) of the Imperial kitchen (cf. v. Hammer, *Staatsverfassung* etc., ii. 31), but soon his gifts won him a position among the pages (*enderūn-i humāyūn*, where he won the favour of Muṣṭafā III. When the latter came to the throne in the 21st Šafar 1171, he at once appointed Hamza his *siliḥdār* (sword-bearer, see v. Hammer, *l. c.* ii. 238 note), afterwards granted him the rank of vizier and betrothed him to the infant princess Hibetullāh, who died however on the 15th Dhu

'l-Hidjdja 1175. From 1172—1182, he filled in quick succession no fewer than twelve governorships in Rumelia and Anatolia, in accordance with the system then in force of annual change of office; in this period he fell into disgrace for a few months in 1178 and was banished to Demotica with loss of his rank. As wālī of Egypt in 1179 he came into conflict with the Mamlūk Emīrs and the celebrated *Shaiḫ al-Beled* 'Alī Bey (v. Hammer, *Gesch. d. Osm. Reiches*, viii. 292) and was finally driven out of the country by them. When in 1182 (1768) the Sultān was eager for a breach with Russia, but found his bellicose plans opposed by the Grand Vizier Muḥsin-zāde Muḥammad Pasha and the *Shaiḫ al-Islām*, he dismissed the former on the 21st Rabi' I 1182 and appointed in his place his old favourite the Siliḥdār Hamza, who was at that time governor of Anadolu. A few days after his arrival in the capital the new grand vizier had the ultimatum to Russia approved at a great council and imprisoned the Russian resident Obreskow, who declined to fulfil the demands of the Porte, in the Seven Towers (4th and 6th October 1768, see v. Hammer, *Gesch. d. Osm. Reiches*, viii. 312 et seq.); in consequence the unfortunate war with Russia broke out, which was only concluded by the peace of Ktčuk Kainardja in 1774. Hamza Pasha did not live to see the beginning of hostilities; he was suddenly dismissed from office on the 8th Djumādā II 1182 (20th Oct. 1768), the reason given being insanity, but others say at the instigation of the Khān of the Crimea and sent to Crete as governor of Canea; on his way thither he died at Gallipoli in the same month.

Bibliography: *Hadīkat al-Wuzerā*, continuation of Aḥmed Džawīd, p. 16 et seq.; *Sidjill-i 'Osmānī*, ii. 254 (biography); *Chronicle of Ahmed Wāṣif*; v. Hammer, *Gesch. des Osm. Reiches*, viii. passim. (J. H. MORDTMANN.)

HAMZA HĀMID PASHA, son of a merchant of Dewelu Ḳarahisār, named Aḥmed Agha, was born in Constantinople in 1110 and entered upon his official career in the offices of the Sublime Porte. Owing to the protection of the celebrated Rāghib Pasha (Grand vizier 1170—1176), whose pupil he was in the elaborate prose of the official style, he received a secretarial appointment to the Grand Vizier on the 19th Dhu 'l-Ḳa'da 1153 (5th January 1741), which he held for many years. On the 15th Muḥarram 1169 he was appointed *Kā'is al-Kuttāb* (i. e. Minister of Foreign affairs) and, in addition to other high offices in the years following, three times filled the office of *kiyā* to the Grand Vizier, i. e. Minister of Home affairs, but only for short periods and without further distinguishing himself. After being appointed "vizier of the dome" in Rabi' II 1176 he took the place of the Grand Vizier Rāghib Pasha, when the latter fell severely ill in Ramaḍān 1176, and on his death (24th Ramaḍān 1176 = 8th March 1763) he succeeded him. But he was not a strong enough man for this position, for, as his biographers say, he was slow in coming to a decision and was too fond of ease and comfort. The only note-worthy event of his period of office was his sending Aḥmed Resmī Efendi to the court of Frederick II in response to Graf Regin's embassy (cf. Ziukeisen, *Gesch. d. Osm. Reiches*, V, 897 et seq.). After less than a year of office he was deposed on the 24th Rabi' II 1177 = 2nd Nov. 1763 and sent to Crete, where

he remained, except for a brief interval, till 1183. In this year at his own request he was given the governorship of *Djidda* and *Ḥabesh* and died in Mecca in *Dhu l-Ḥijja* 1183.

Bibliography: Biography in the *Ḥadiqat al-Wuzerā*, continuation of Aḥmed *Djāwid*, p. 8 *et seq.*; *Sefinet al-Ruṣṣā*, p. 93 *et seq.*; *Sidjill-i 'Osmāni*, ii. 255; *Wāṣif's Chronicle*, passim; v. Hammer, *Gesch. des Osm. Reiches*, viii. 259—262. (J. H. MORDTMANN.)

ḤAMZA AL-ḤARRĀNĪ, a prominent family in Damascus of 'Alid descent, which for many centuries filled the office of *Naḡib al-Ashraf* there, so that the family is sometimes simply called Bait al-Naḡib. Muḥibbī *Khulāṣat al-Athar* (ii. 105) gives the complete genealogy down to the xth (xviith) century. As early as 330 (941-942) a member of this family, Ismā'il b. Ḥusain al-Natīf, was *Naḡib*, and this office has passed from father to son to the present day. Several members of the family distinguished themselves by their learning and literary gifts, as may be seen from Muḥibbī, ii. 105 *et seq.*, 125 *et seq.*, iv. 124 *et seq.* One of the best known members of the family in later times was Maḥmūd Ḥamza, born in Damascus in 1236 (1821), who became Mufti of Syria and won the thanks of the oppressed Christians during the massacres in his native town (1860) by his conduct. He was the author of an imposing series — 35 titles are enumerated — of writings, mostly on theological-legal subjects, of which several have been printed. He was also an excellent calligrapher: in his leisure-hours he used to amuse himself by writing the *fātiḥa* on a grain of rice or the names of those who fell at Badr on the stone of a signet ring. Maḥmūd Ḥamza died in 1305 (1887).

Bibliography: G. Zaidān, *Mashāḥir al-Sharḡ*, ii. 165 *et seq.*; Brockelmann, *Gesch. d. arab. Lit.*, ii. 466.

ḤAMZA AL-İSFAHĀNĪ. This is the shorter name by which the philologist and historian ABŪ 'ABD ALLĀH ḤAMZA B. AL-ḤASAN AL-İSFAHĀNĪ is usually known. He was born in the viiith decade of the third century A. H. in İsfahān in Persia and spent his life — except for a few journeys for purposes of study — in his native town, where he died between 350 and 360 (971—971). Although on his journeys he attended the lectures of the most important traditionists of his time, his own special field was philology and history. His "Annals", which became known comparatively early in Europe, have caused him to be described almost exclusively as a historian. The majority, however, of his works deal with questions of philology and lexicography. Of the twelve works, which he is known to have written, three have survived to us viz. "the Annals" (*Ḥamzai Isfahanensis Annalium libri x.* ed. I. M. E. Gottwaldt, Tom. i., Text. Arab., Tom. ii., Transl. Lat., Petrop.-Lipsiae, 1844—1848), the *Kitāb al-Amḥāl 'atū Af'al*, is a collection of proverbs in the form of comparisons (e. g. more liberal than Ḥatīm) preserved in the Munich *Codex Aumer* 642, and his edition of the *Diwān* of Abū Nuwās (Berlin Ms., Ahlwardt, Nr. 7531, and Cairo, iv. 239, besides 3 incomplete MSS.).

Ḥamza's writings are characterised by a strong personal note. A characteristic of his is his habit of paying particular attention to Persian affairs, readily explained by his Persian origin. He did

this in his "Annals" as well as in his philological works, in which he delights to discuss Persian words that have found their way into Arabic, and Pehlevi etymologies. All his works moreover bear evidence of a critical attitude, which often expresses itself very pithily. His criticism however is not, one might perhaps expect, one-sided or directed against the Arabs and Ḥamza cannot be described as a representative of the linguistic Shu'ābiya, the "philological reaction against Arabic influence". — Ḥamza's works soon found approval and have been much copied. In particular al-Maidānī has copied almost literally Ḥamza's collection of "comparative" proverbs in the second section of each chapter of his *Maḡima' al-Amḥāl*.

Bibliography: Goldziher, *Muh. Studien*, i. 209—213; Brockelmann, i. 145; Mittwoch, *Die literarische Tätigkeit Ḥamza al-İsbahānī's* (*Mitteil. d. Sem. f. orient. Sprachen*, 1909, Abt. ii. p. 109—169); do., *Altarabische Amulette und Beschwörungen nach Ḥamza İsbahānī* (*Zeitschr. f. Assyriol.*, xxvi., 1911, p. 270 *et seq.*); do., *Abergläubische Vorstellungen und Bräuche der alten Arabern nach Ḥamza al-İsbahānī* (*Mitteil. d. Sem. f. orient. Sprachen*, 1913, Abt. ii.). (E. MITTWOCH.)

ḤANAFĪS. The Ḥanafis are those Sunni Muslims who follow the teaching founded by Abū Ḥanifa (died 150 = 767, see above i. 90^b *et seq.*) which has been collected and contained in several authoritative, more or less detailed writings of his pupils. Abū Yūsuf [q. v. i. 114^a] and al-Shaibānī [q. v.] in particular were the direct pupils of Abū Ḥanifa who developed the system of *Fiqh* on their master's principles and placed the Ḥanafī school on a firm basis. Although rival systems arose in opposition to the Ḥanafī school, at once in the case of the school of Mālik and later in that of Shāfi'ī, which found more support in certain parts of the Muslim world, it was always able to assert itself in the eastern lands of the Caliphate and finally to attain an unchallenged supremacy in the Ottoman empire. In Central Asia also and in British India the majority of the Sunnīs belong to it.

The necessary preparatory work for a history of the Ḥanafī school has not yet been done, so that we will not here attempt to define the relationship of this school to the others. The usual view, however, is certainly wrong, namely that the Ḥanafis represent more liberal views than the other schools; as regards principles they are on exactly the same ground as the others. For the rest the reader may be referred to the article *FİQH* [ii. 103]. The Arabs have been content to collect biographical and bibliographical data in the so-called *Ṭabaḡāt* (class-books) among which the best known is Ibn Kutūbughā's [q. v.] compendium edited by Flügel. Cf. *Die Klassen der Hanefitischen Rechtsgelehrten* by G. Flügel in *Abhandl. der Kön. Sächs. Gesells. der Wissensch.*, vol. 8, Leipzig 1861. For works of the kind cf. Ḥādīdī *Khalifa*, s. v. It may therefore be sufficient to mention here a few of the most famous legal compendiums, which are considered authoritative within the *madhhab* and whose authors are all dealt with in separate articles. Such are the *Kitāb al-Kharāj* of Abū Yūsuf, the *Djāmi' al-saḡhīr* of al-Shaibānī, the *Mukhtaṣar* of al-Kudūrī, the *Ḥidāya* of al-Marghīnānī and its commentaries notably the *Wikāya* of Burhān al-Dīn Maḥmūd, the *Farā'id* of al-Saḍjāwandi, the *Kitāb Maḡima' al-Baḡrain* of Ibn

FRANKFURT VV.

al-Sāfi, the *Kanz al-Daʿāʾiq* of al-Nasafi and the *Mullaka 'l-Abhur* of al-Jalabi.

Bibliography: as far as not contained in the article itself, see the article FIḤH, ii. 105^b and ABU HANĪFA, i. 91.

HANAFIYA, a portable waterholder, with a cock, placed upon a stand and used for ritual ablutions; the name comes from the Hanafis, who must use running water for washing or at least water which runs from a receptacle at least 10 ells in height and breadth. These vessels are usually of copper gilt; after use the water runs into a copper basin. The Turks have similar water-vessels but of marble; they are called *musluk*. They are also found in baths. As the most important part of them is the water-cock, the word *hanafiya* has also received this meaning.

Bibliography: E. W. Lane, *Modern Egyptians*³, i. 94 *et seq.* (with illustration), ii. 48.

(CL. HUART.)

HANBALĪS, the adherents of the school of Ahmad b. Hanbal [q. v., i. 188 *et seq.*].

HANDASA, or *Ilm al-Handasa* is the name given by the Arabs to Geometry, one of the four propædæutic sciences [cf. the article HUSĀB]. The word is derived from the Persian verb *andākhātan* (or also *andāidan*) = to throw, to project, thence also to take the measure, to measure; from this is derived the substantive *andāzah* = size, measure, value, which was then used for "geometry" also; the geometrician is called *al-muhandis* in Arabic.

The Arabs became acquainted with pure (theoretical) geometry through the *Elements* of Euclid, which were first translated by Ḥadjdjād b. Yūsuf b. Maṭar (c. 790); later they came to know most of the geometrical works of Archimedes and the *Conic Sections* of Apollonius; for the later geometry they also used the Greek name *djūmatrīya*. From the Indian Siddhāntas and afterwards from the writings of Hero they learned applied (practical) geometry, i. e. the measurement of surfaces and bodies, the elements of trigonometry and mensuration.

Of works on pure geometry by Arabs, i. e. such as call in the aid neither of arithmetic nor algebra and are based partly on Greek and partly on Indian models, we can only mention two: the first is the work of the three brothers, Muḥammad, Ahmad and al-Ḥasan, the sons of Mūsā b. Shākir (the eldest, Muḥammad, died in 873) entitled: *The Book of the Science of Mensuration of plain and spherical Figures*; it was translated into Latin by Gerard of Cremona, and from this a German translation was published by M. Curtze (*Der liber trium fratrum de geometria*, in the *Nova acta der kgl. Leop.-Carol. Akademie d. Naturforscher*, vol. xlix. No. 2; cf. also H. Suter, *Über die Geometrie der Söhne des Mūsā b. Shākir*, in *Biblioth. mathem.*, 3^d Series, iii. 259—272). This treatise contains eighteen theses which deal with the estimation of the area of the circle, of the triangle from its three sides, of the surface of the cone and the truncated cone, the surface and the contents of the sphere with the problems of two mean proportions and the trisection of an angle. We class this book among the works on pure geometry, because it proceeds exactly according to the method of the classical Greek geometricians, i. e. excluding any application of arithmetic and algebra and giving no numerical examples. — The second work is the *Geometry*

of Abu 'l-Wafā' al-Būzjāni [q. v.], which has not survived in a work from his own pen, but in a Persian version by one of his pupils (cf. F. Woepcke in *Journ. As.*, 1855, i. 218—256, and 309—359, and *Extrait*, Paris 1855, p. 1—89); it contains a large number of geometrical problems, from the fundamental constructions of plane geometry to the construction of the corners of a regular polyhedron on the circumscribed sphere. Of special interest is the fact that a number of these problems are solved by a single span of the compasses, a condition which we find for the first time here. In other points many problems show a pronounced Indian influence. — In addition to these two treatises however we possess a whole series of smaller works by Arab mathematicians on various branches of geometry e. g. on the construction of regular polygons, particularly the heptagon and nonagon, which lead to equations of the third degree, on various portions of conic sections, of which we may specially mention the estimation of the area of the ellipse and parabola and the cubical content of the paraboloid, and the construction of conic sections by means of the "conic circle".

In the use of arithmetic and algebra in geometry and vice versa the solution of algebraic problems with the aid of geometry, the Arabs far outstripped the Greeks as well as the Indians. To the Arabs is due the honour of having recognised and emphasised as an obstacle the strict distinction between arithmetical (discontinuous) and geometric (continuous) magnitudes, which had so severely impeded the fruitful development of mathematics among the Greeks. Even al-Khwarizmi used algebra to solve geometrical problems, when he estimated the height of a triangle from the three sides by introducing an unknown quantity and forming an equation. The great user of this algebraic treatment of geometry is the Egyptian Abū Kāmil Shudjā' b. Aslam (c. 900) who in his treatise "On the Pentagon and Decagon" (only extant in a Hebrew translation, ed. in Italian by G. Sacerdote, in *Festschrift z. 80. Geburtstag M. Steinschneiders*, Leipzig 1896, and in German by H. Suter in *Bibl. Mathem.*, 3rd Series, x. 15—42), solved twenty problems in geometry with the help of linear, pure and mixed quadratic and reducible biquadratic equations, which are almost all incorporated in the works of Leonardo of Pisa. As a champion of the use of geometry in the solution of algebraic problems, we may here mention only the Persian 'Omar b. Ibrāhīm al-Khāyāmī [q. v.], whose solution of cubic and biquadratic equations with the help of conic sections is probably the most advanced work of Arabic mathematics that has survived to us.

Trigonometry is also to be reckoned among the applications of arithmetic to geometry, in which Arabs made the greatest advance on their Greek and Indian predecessors; a constant stream of workers from al-Battānī [q. v.] to Naṣīr al-Dīn al-Tūsī [q. v.] finally built up a system of trigonometry, on which Regiomontanus and Copernicus would have been able to make further developments at once, if they had known the works of Naṣīr al-Dīn on this subject. The Arabs became acquainted with the sine, cosine and versed sine from the Indians, then added the other functions to these, found the chief relationships (formulae) between the various functions, completed the trigonometric tables and finally solved

all cases of the plane and spherical triangle with the aid of the rules discovered (rule of the four quantities, theorem of tangents, rule of the plane and spherical sines etc.).

On purely practical geometry (mensuration, geodesy) the Arab mathematicians as a rule did not write special treatises, but discussed such problems in their works on the construction and use of the astrolabe and quadrant, on which cf. E. Wiedemann's work quoted below.

HANDŪS (i. e. brass or base silver), the name of the base small money of the Maghrib in the 7th to 8th centuries, the debased copies of the square Almoḥad silver coins, which had long enjoyed great popularity and were struck by many Christian rulers as *monetae miliarenses, millaris*. — The *ḥandūsiya* are small, irregularly cut little coins of base silver weighing from 7 to 14 grains. As a rule they bear neither ruler's name, mint nor date, but only a religious legend (a variant of *Qurʾān*, xl. 47) and probably owe their origin to the Zirid, Ḥafṣid, Marinid and other rulers of North Africa and the smaller Spanish dynasties of this period. They attained a certain importance as a standard coin in the petty commerce of the western Mediterranean and were therefore also imitated by the Christian mints of Spain and southern France.

HANĪ B. ʿURWA, one of the principal chiefs of the Banū Murād in Kūfa, in the early years of the governorship of ʿUḡaid Allāh, son of Ziyād. He was a devoted adherent of the ʿAlids and was numbered among the *ḥurraʾ*, or distinguished reciters of the *Qurʾān*. When Muslim b. ʿAqīl, the cousin and secret agent of Ḥusain b. ʿAlī in Kūfa, learned of the arrival of the new governor ʿUḡaid Allāh in this city, he hurriedly left his previous place of refuge, the house of Mukhtar, to find a new asylum with Hānī b. ʿUrwa. The latter had, although unwillingly, to agree to receive the fugitive for whom the authorities were searching. But he was denounced to ʿUḡaid Allāh and a few days later hanged beside Muslim b. ʿAqīl on the public square of Kūfa.

HANĪʾAN (A.) "May it do you good", is said by one who declines an invitation (made by saying *tafaḍḍal* or *bismillāh*) to a meal. The omission of this wish would be not only a gross discourtesy but would expose the meal itself to the danger of the evil eye; so Lane, *Manners and Customs*, chap. v. — According to Hartmann, *Arab. Sprachführer* 2, p. 39, in Syria, people, who still retain old customs, say to one who has drunk, "*ḥanīyan*", whereupon the latter answers *ḥannāk allāh* or *alla yḥannik*. — An invitation to eat is declined in Syria with the word *afḍalt* or *afḍaltū* "thou art (you are) very kind".

(H. BAUER.)

HANĪF (pl. *ḥunafāʾ*) appears repeatedly in the *Qurʾān* as the name of those who possess the real and true religion; e. g. in *Sūra*, x. 105; xxii. 32; xxx. 29; xcvi. 4 etc. It is used particularly of Abraham as the representative of the pure worship of God. As a rule it contrasts him with the idolaters as in iii. 89; vi. 79, 162; x. 105; xvi. 121, 124; xxii. 32; but in one or two passages it at the same time describes him as one who was neither a Jew nor a Christian; e. g. ii. 129: they (the *Ahl al-Kitāb*) say, become Jews or Christians that ye may be rightly guided! But thou shalt say: the religion of Abraham as a *ḥanīf*; he was not one of the polytheists, and iii. 60: Abraham was neither Jew nor Christian, but *ḥanīf muslim* and was not one of the polytheists. The simple collocation of *ḥanīf* and *muslim* found in this passage is sufficient to show that for Muḥammad the word was not the name of a particular religions body, which is still clearer from the phrase *ḥunafāʾ li-llāhi*, xxii. 32, so that the existence of Hanīfism as an organised body as insisted particularly by Sprenger has no support in the *Qurʾān* itself. *Sūra*, xxx. 29 is of special importance for the understanding of the *Qurʾān* meaning of the word, where is said: "Turn thy face towards religion as *ḥanīf*, (namely) Allāh's creation (*fiṭra*) according to which he has created man; there is no change in the work of Allāh"; cf. also vi. 79; x. 105. It is clear here that the word means the original, innate, primitive religion in contrast to the particular which arose later, polytheism on the one hand and the in part corrupt religions of the possessors of scriptures. As to the period of composition of the passages quoted, they may be mainly ascribed with certainty to Medina, only in vi. 79, x. 105, xcvi. 4, is it doubtful, but here also we must consider the possibility that they were afterwards put into another form.

The later Islāmic application of the word depends on the linguistic usage of the *Qurʾān*. The *Hanīfiya* (very rarely *Hanafiya*) means the religion of Abraham, e. g. Ibn Hishām, p. 143, 8, 147, 4, 822, 1. But as Muḥammad renovated the pure religion of Abraham, *ḥanīf* is frequently used in the sense of *muslim* (Muḥammadan), e. g. Ibn Hishām, p. 982, 18, 995, 11, cf. also p. 871, 5, where *ḥanīf* is used of religion itself in the sense of "pure, orthodox" as well as the obscene verse of Farazdaq, *Naḡāʾid*, i. 378, 11, where the variant offers a different reading.

In various traditions the Prophet describes the religion proclaimed by him as *al-ḥanīfiya al-samīḥa*, the mild or liberal Hanīfism, in opposition to ascetic movements, e. g. Ibn Saʿd, i. 1, 128, 12; iii. 1, 287, 28. The verb *taḥannuf* sometimes means the purer exercise of religion in the pagan period (Wellhausen, *Skizzen und Vorarbeiten*, iv. 156),

sometimes it is practically the equivalent of "to adopt Islam", *Kāmīl*, p. 526, 8 (a poem by ʿDjarīr); *Lisān al-ʿArab*, x. 404, 17. It is the same with the verb *ṭahannuṭh*, which Hirschfeld and Iyall as previously E. Deutsch, wish to derive from the Hebrew *tehinnoth*, but it perhaps rather derived from *ṭahannuf* (cf. Nöldeke, *Neue Beiträge zur Semit. Sprachwissenschaft*, p. 72); for the latter is explained by Ibn Hishām p. 152, 9, and Ṭabārī, i. 1149, 12, by *tabarrur*, to practise piety, but means also, to become Muhammadan, Ṭabārī, i. 2827, 12.

The above mentioned passage also (*Sūra*, xxx. 29) where the word means the innate religion is again found in later Arabic authors; e.g., *Kāmīl*, p. 244, 3: What is a *ḥanīf* *ʿala* *ʿl-fīṭra*...? or *Di-yārbakrī*, ii. 177; If I die *ʿala* *fīṭratī* *ʿl-lāhi*. Connected with this, but at the same time remarkably modified is the use of the word by some authors as the designation not of the pure primitive religion but of the ancient paganism, which preceded the later separate religions. Thus Yaʿqūbī calls the Philistines, who fought against Saul and David, *ḥunafā* and adds that they worshipped the stars; and particularly Masʿūdī in his *Tanbīh* uses the word as identical with *ṣabīʿūn* [q.v.] of the people of Persia and the Roman empire, before they adopted Mazdaism and Christianity respectively, and distinguishes this step in religious development as the first *ḥanīfiya* from the pure *ḥanīfa* religion. At the same time he says that the word is an arabicised form of the Syriac *ḥanifū*, in which connection it should be remembered that the Syriac *ḥanfe* is actually used particularly of the Ṣāliḥians (e.g. Barhebraeus, *Caronic*, p. 176).

If we now inquire into the origin and earliest history of the word *ḥanīf*, the first thing to do is to look for passages which may possibly contain a use of the word independent of the Korʾanic usage. But unfortunately most of such passages present great difficulties either because their genuineness is doubtful or because they are so indefinite and uncertain that different interpretations are possible. Scholars have thus arrived at utterly different results, e.g. Wellhausen deduces from such passages, that *ḥanīf* originally meant a Christian ascetic, de Goeje explains the word by "heathen", and D. S. Margoliouth thinks the word everywhere means Muslim. This last meaning undoubtedly best fits an oft quoted verse of the first century A. H. (*Yāqūt*, ii. 51; *Kitāb al-Aghānī*, xvi. 45 etc.), where the *ḥanīf* is distinguished from the Christian priest and the Jewish rabbi. On the other hand, it is doubtful if this meaning is also found in the story of the death of the Bakrī Christian Biṣṭām, the scene of which is laid in northeast Arabia (*Kāmīl*, p. 131, 4; *Naḥṣīd*, ed. Bevan, i. 314). Biṣṭām called, when his brother wished to return to him: I shall become a *ḥanīf*, if thou wilt return! However, Mubarrad shows, by his remark to the effect that Muḥammad had then appeared as a Prophet, that he understood *ḥanīf* to mean Muslim; but the sense is much more forceful if one translates it by "heathen" (Nöldeke) or "apostate". In Ṣakhr's verse (*Hudhail*, Kosegarten, xviii. 11), where the wine-drinking Christians are making a noise around a *ḥanīf*, one of the scholiasts suggests Muslim; but the passage would equally fit an ascetic who refrained from wine. The same holds of the *ḥanīf* in the verse of Dhū Rumma, *Lisān al-ʿArab*, xiii. 206, who turns to the west when praying, unlike the Christians, cf. the com-

mentary. The Hudhaili verse, *Lisān al-ʿArab*, vi. 133, where there is a reference to a stay for worship made by a *ḥanīf* is quite colourless. Greater value might, on the other hand, be attached to some verses where the verb *ṭahannuf* appears in the above mentioned sense of performing acts of worship. One is by a heathen poet ʿDjarān al-ʿAwd of the Hawāzin tribe of Numair in Nadjd (*Lisān al-ʿArab*, x. 404, cf. *Khizānat*, iv. 198), and mentions *al-ʿābid al-muṭaḥannif*, who observes his prayers (*ṣalāt*), by which he can only mean an Arab ascetic; ʿDjarīr (*Naḥṣīd*, ii. 595, 18) must also be thinking of such a one when he says of a tribe, that they have allied themselves with shame as the Christians with the religion him who *yataḥannafu*. The poems, which are ascribed to certain contemporaries of Muḥammad, would bring us an essential step forward, if their genuineness were only to some degree certain, but this is unfortunately not the case. This is particularly true of the verses placed in the mouth of the Awsī opponent of the Prophet, Abū Kais b. al-Aslat, in which he invites the foundation of a *dīn ḥanīf*, a pure faith (Ibn Hishām, p. 180, 2), and contrasts this primitive religion to Christianity and Judaism (ibid., p. 293). The genuineness of the poem of Umāya b. Abi ʿl-Salt, which speaks of the *dīn al-ḥanīfiya* as the only religion which will survive the resurrection (see Schulthess, *Beiträge zur Assyriologie*, viii. 3, 72, 129), is, to say the least, very doubtful. Even if we set aside these poems, however, the verses quoted above are sufficient to show, what must be considered quite certain, namely that Muḥammad in his use of this word was simply following a recognised usage, and it may be suggested as highly probable that *ḥanīf* even before his time denoted the people, who, although influenced by Christianity, had refused both Christianity and Judaism in favour of a simpler and more primitive religion. But the historical development of such a movement is wrapped in an obscurity, which cannot be cleared up with the material at present available. That it was connected with the religious movements of South Arabia, as modern scholars suppose, is possible, but by no means certain, as the most reliable of the verses quoted belong to the north.

As to the etymology of the word, as has already been mentioned, even Masʿūdī had seen in it an Aramaic loanword and his opinion has also a number of champions in modern times, who derive the word from the Canaanite-Aramaic *ḥanef* "hypocrite, godless, heathen, heretic". That this view would find substantial support, if the meaning "heretic" in the above-mentioned story of Biṣṭām were correct, is illuminating. The word would then be a foreign name for heretic, which those to whom it was applied, had somehow adopted in Arabia in a good sense. In any case, we should have to be content with this derivation from the Aramaic, as the corresponding Ethiopic word to which H. Winckler proposes to trace it, is a foreign loanword only found in literature. Schulthess has, it is true, rightly pointed out that the Aramaic *ḥanef*, *ḥanfā* cannot become the Arabic *ḥanīf*, but this probably only shows that we must presuppose an intermediate form, and this is supported by the form of the word in Mandaeen, cf. the Syriac abstract noun *ḥanifū*, mentioned by Masʿūdī. Besides we might, if forced, attain the meaning "secessionist" from the Arabic *ḥanafa* "to break off" which would give a similar development of mean-

ing; and of course the possibility must not be excluded that new South Arabian texts may throw light on the word and its history.

HANĪFA B. LUDJAIM, an important branch of the great North Arabian tribe of Bakr b. Wāʾil [q.v.], consanguineous to the ʿIdjl. During the Dīhāhiliya they were in part heathen, in part Christian. The pagans honoured an idol in the form of a cake of butter and honey, which they used themselves to consume in time of famine.

They led a settled life in Yamāma, where they built the fortified town of Ḥaḍīr, which later became the capital. The Wādī ʿl-ʿIrd and among others the following places belonged to them: al-ʿAwka (inhabited by the clan ʿAdī), Faishān (belonging to the clan ʿAmīr), al-Kīrs (on the lower Wādī ʿl-ʿIrd, inhabited by ʿAdī), Khidrima (a large town with many villages, inhabited by the Suhaim and ʿAmīr along with the ʿIdjl), Kurrān (belonging to the clan Suhaim), al-Mansif (a fortified town, belonging to the ʿAmīr), Talaʿ b. ʿAṭā (inhabited by ʿAmīr), al-Thakb (so Hamdāni, *Djazira*, p. 141, 7; *Djazira*, p. 162, 25 has al-Nakb; al-Nakb and al-Thakb appear to be identical and there is either a misprint or error in the manuscript; the place belonged to the ʿAdī), Tuʿām (in common with the Azd and ʿAbd al-Kais), Ubād (a battle took place here between Khālīd b. al-Walīd and Musailama) and ʿUḥāl. There was also a settlement of Ḥanīfa in Ḥsān, the mines of the Numair b. Kaʿb.

Historical. In the last years of the Basūs war [see BAKR B. WĀʾIL] the Ḥanīfa separated from the Bakr and went over to their opponents, the Taghlib, on whose side they then fought. Like the Taghlib, they recognised the sovereignty of the Lakhmids [q.v.] in Ḥīra, the vassals of the Sāsānids. In the famous battle of Dhū ʿKār between the Bakr and the Persians [see BAKR B. WĀʾIL] the Ḥanīfa took no part.

Hawda b. ʿAlī, chief of the Ḥanīfa, resided in Ḥaḍīr. He had to lead the Persian caravans coming from ʿIrāk to Yemen to protect them from attack on the way. On one such occasion he was attacked by the Tamīm in the Dahnā. This was by no means the only occasion on which the Ḥanīfa had to fight the Tamīm. When the ʿAmr, who migrated to Yamāma to the Ḥanīfa after the battle of Ḥabaʿa (with the Dhubyān) quarrelled with the chief of the Ḥanīfa Kaṭāda b. Maslama, they went to the Saʿd b. Zaid Manāt of the Tamīm and found asylum with

them. In the battle of Sītār Kais b. ʿĀsim of the Tamīm slew Kaṭāda. Of other battles with the Tamīm there may be mentioned that of Khushaiba (near Yamāma) and that of al-Zahr.

In Muḥarram 6 = 628 the chief of the Ḥanīfa, Thumāma b. ʿUḥāl, while on his way to Mecca to visit the holy places (*unra*), was surprised by thirty Muslims and taken prisoner. He adopted Islām and was released. Through his influence over the Ḥanīfa, out of friendship for the Prophet he prevented supplies of provisions reaching the Kuraish in Mecca from Yamāma whence they were wont to obtain them. In the "year of the deputations" (9 = 631) the Ḥanīfa appeared before the Prophet under Ḥārūn b. Ḥabīb, called Musailama, who later appeared as a rival to the Prophet and proclaimed himself a companion and future successor of Muḥammad. When he, whom Muḥammad called *al-Kadhḍāb*, the "liar", appeared on the scene in 11 = 633 at the same time as the false prophets Aswad al-Ansī and Tulaiha, a large section of the Ḥanīfa followed him, encouraged by their chief Radjdāl b. Unfūwa, who declared he had heard the Prophet with his own lips in Medīna designate Musailama as his colleague and successor. The majority remained faithful to him in the caliphate of Abū Bakr also. ʿIkrima b. Abī Djaḥl, who took the field against Musailama, was defeated. An attack by Shurahbil b. Ḥasaṇa was also repulsed by the Ḥanīfa. Musailama thereupon collected his forces at ʿAkrabā, a place near Ḥaḍīr. Here a famous battle was fought with the Muslims under Khālīd b. Walīd, which ended in the utter rout of the Ḥanīfa. Their two leaders, Muḥakkam b. Tufail and Radjdāl b. Unfūwa fell in battle and Musailama was put to death; the Ḥanīfa are said to have lost 10,000—20,000 men on this day. When Khālīd b. Walīd proceeded to besiege Ḥaḍīr, the Ḥanīfa submitted on the intervention of Mudjā and agreed to adopt Islām and deliver up all their movable property, which was divided among the Muslim soldiers.

HANSALIYA, plural of *hansalī*, the name given to the members of the *ṭarīqa* or religious brotherhood, founded by Sīdī Saʿīd b. Yūsuf al-Hansalī (known in Morocco as Sīdī Saʿīd Ahansal). The epithet Ahansal or Hansalī is said to be derived from his birthplace Hansala, a Berber village of the tribe of Benī Mṭīr (in the Moroccan Atlas).

He belonged to a family of marabouts, whose most important ancestor, Sidi Sa'īd al-Kabīr, is buried in Dades (southern Morocco), where his tomb is visited by many pilgrims. After the example of this holy man Sidi Sa'īd b. Yūsuf spent the whole of his youth in studying the teachings of the Ṣūfis in the most important zāwiya of Morocco. After spending periods in Fās, Kṣar al-Kabīr and Tafīlet, where the strictness of his conduct became everywhere proverbial, he went to the east, to make a pilgrimage to the tomb of the Prophet. He spent a considerable time in the East and studied successively in Medina and Cairo, where he completed his education in mysticism under the direction of Shaikh Sultān, who was popularly believed to have been inspired by the king of the djinn. He then went to Damietta and there became a pupil of Sidi 'Isā al-Djunaidi. He received the *dhikr* (prayer peculiar to the order) from the latter. This *dhikr* is a kind of poem of great inspiration, usually called *ḍamṣāfiya*. He then went to Alexandria to visit the tomb of the famous Muslim mystic Abu 'l-Abbās al-Marsī. While he was reading the Qur'ān one evening by this grave, the saints of the Paradise appeared to him with the Prophet at their head. The latter gave him a whip, to drive away the evil spirit and ordered him to win converts in his native land. Sidi Sa'īd now returned to Morocco and visited the principal zāwiya; he finally settled in Tedla, in the zāwiya of the *Djazūliya* and became their *muḥaddam*. He afterwards founded a zāwiya for his own followers in the land of the tribe of Ait-Messat between Tedla and the land of the Berāher, on the road to Marrākesh, in the upper valley of the Wādī Dra'a. There he died on the 1st Radjab 1114 (1st Nov. 1702). He had been able to win great prestige and considerable influence over the Berbers of the Atlas by his conduct.

He was succeeded as head of the brotherhood by his son Yūsuf, under whom it developed considerably. Feeling secure in his power he was not afraid to afford shelter to Aḥmed Dhahabi, the rebellious son of Sultān Mūlay Ismā'īl of Morocco. But this action and the jealousy of the sherifs of the influential marabouts, who were competing with them, cost him his life. His followers were persecuted and some of them entered the other brotherhoods of Morocco.

Yūsuf's successor Sidi Sa'dūn fled before his persecutors and found safety in the east of the régency of Algiers; there he won a vast number of adherents. His successor was Sidi Mu'ammār, who was buried among the Talaghma, a tribe in the neighbourhood of Constantine. On his death Sidi Zwāwī became head of the order; he belonged to an old and distinguished family of Constantine and already had a zāwiya near this town on the hill of Shattaba. Sidi Zwāwī's descendants have since directed the fortunes of the Hansaliya order in an unbroken line. The majority of the adherents of the Hansaliya are to be found in the province of Constantine and the High Atlas.

The chief centres of the influence of the order are: in Morocco the mother zāwiya among the Ait-Messat and that of Dades; in Algeria the zāwiya of Shettaba, near Constantine, and that of Kef in Tunis.

The Hansaliya, like several other religious orders, devote great attention to peculiar songs and dances,

which produce ecstasy by their effect on the nerves. They also practice flagellation. Their assemblies are secret and only members are admitted. The people credit them with a mysterious power over the *djinn*. They are therefore often invited to the houses in cases of sickness to drive away the evil spirits, which cause the illness. In Morocco the influence of the head of the zāwiya is so great among the Ait-Messat, that in the time of the *exploier de Foucauld* it was sufficient to afford the traveller protection from Marrākesh to Sūs.

HĀNSĪ. An ancient town situated 29° 7' N. 75° 58' E. in the Hīṣār district of the Pandjāb. Population (in 1901) 16,523. It is the centre of the taḥṣīl of the same name, a tract partly under irrigation and partly sandy waste, which has a pop. of 128,783.

Hānsī was possibly a foundation of the Kushāns, but the Tomara Rājapūts held it when historical information is first available. It had passed into the hands of the Čauhāns before it was taken by Maṣ'ūd I, the Ghaznawid invader, in 427 (1036). It was recovered by the Čauhāns and rose in importance until its conquest by Mu'izz al-Dīn in 588 (1192). It was the capital of the country known as Sawālakh until the rise of Hīṣār. It does not play an important part in history until it became the headquarters of the soldier of fortune George Thomas in 1798. Thomas ruled a considerable district and struck coins at Hānsī till defeated by Sindia's army under Perron in 1801. From 1803 till 1857 it was a British military station. Maṣ'ūd's first conquest is commemorated by the *Shahīd-gandj* mosque.

(M. LONGWORTH DAMES.)

HANZALA b. MĀLIK, an Arab tribe belonging to the Ma'addi group. Its genealogy is Hanzala b. Mālik b. Zaid Manāt b. Tamim. Among its more important subdivisions were the Barādjīm (to which the poet Farazdaq belonged), Dārim and Yarbū'. The poet 'Alqama b. 'Abada traced his descent from the Hanzala.

They dwelled between the two sandhills of Djurād and Marrūt near Himā Dāriya in Yamāma. The villages of al-Ṣammān (with many wells, cisterns and irrigation works), al-Rakmatān, the Wādīs al-Ghumain and al-'Irḳ, the lakes Khābi (Wüstenfeld, *Register*, p. 203, probably by error, Djabi) and al-Lawāhiz, and the mountain Kurfa belonged to them.

Historical. The Hanzala played an important part in the 'Aiyām al-'Arab. On the second day of Uwāra" (in the Dahna near Bahrain) the Lakhmid king 'Amr b. Hind had a hundred Hanzala of the clan Dārim buried alive, because one of his brothers, who had been entrusted to the guardianship of the chief of the Dārim, Zurāra b. 'Udas, was slain by the latter's son-in-law Suwaid b. Rab'a (Amr's epithet al-Muḥarrik "the consumer" dates from this event). When Zurāra's

lour. The more Somali blood there is in them, the more closely they approach a bright black. The early conquest by Abyssinian kings gave the Amharic language a firm footing in these lands and even when the population had long been Muslim, the Amharic dialect was still retained. This is spoken there to the present day, but it has borrowed more and more from the Galla, the Somali and particularly from the Arabic. It is doomed to decline, as it cannot hold its place against these languages. Quite recently the Shoani Amharic, the language of the governing classes and of polite intercourse in modern Abyssinia has penetrated to the town.

In the period in which the power of the Abyssinian empire stretched far to the south, southeast and southwest, Harar also passed under its sway; but we possess no reliable historical accounts of this period. The fact that an Amharic dialect is spoken in Harar and Makrizi's statement that Arabic and Abyssinian were spoken in these lands, show that the Abyssinians ruled there in early times; the date may be the xith, xiith and xiiith century; for by the xivth century a wave of Islām had begun to roll westward and, although often repulsed, gradually gained ground till for a time in the xvth century it covered all Abyssinia. If we go by tradition, *Shekh* Abādir is the earliest figure we meet with in the history of Harar. In reality, however, the name Harar is first found in an Abyssinian chronicle, that of King 'Amda Sion (1314—1344); there the governors of Harar are mentioned, who had allied themselves with many others against the Christian king of Abyssinia (Perruchon, *Historie des guerres d'Amda Sion*, Paris 1890, p. 52 and p. 150). At this time Harar belonged to the emirate of Zaila' and the chronicle of Harar counts the first Emirs, who were still residing in Zaila', as Emirs of Harar also. The first, to be mentioned in the chronicles, is 'Omar Walashmā who may have reigned about 1150. In 1457 Harar appears on Fra Mauro's map, with the name much corrupted however. In 1521 the Emir Abū Bakr transferred his official residence from Zaila' to Harar; he was probably forced to do this by the advance of the Turks, who at that time under Selim I were occupying Yemen and the whole African coast to Cape Guardafui and soon naturally came into conflict with the Portuguese, in Zaila' also. Meanwhile another man had arisen, who soon seized all power for himself. This was Ahmed called Grāñ. This epithet which means "left-handed" was perhaps given him by Christian Abyssinians. He was born about 1505; nothing is known of his origin. He served as a horseman in the Emir's army, but then hatched a conspiracy against him and rebelled. By his victories he made himself independent and forced the Somalis also to follow his standard. His future greatness is said to have been foretold him by a miracle with a swarm of bees and his memory still lives in the popular tales of Abyssinia. He became actual ruler of Harar, but he seems neither to have taken the title *Emir* nor *Sulṭān*, but to have contented himself with the title *Imām*. Beginning in 1576 he waged unceasing war on Abyssinia, soon subdued the whole country, burned monasteries, churches and manuscripts, plundered the treasures of the churches and carried off woman and children into slavery. Many Christians must have then lapsed to Islām, so

that later a special ritual had actually to be prepared in the Abyssinian church for the re-baptism of the apostates, who returned to their original faith. In 1543 Grāñ fell in battle against the Abyssinians, who were supported by the Portuguese under Christopher da Gama. In 1550—1551, Harar was burned by the Abyssinian general Fānū'el. Several Muslim generals had hostile encounters with the emperor Claudius (1540—1559) and were usually defeated; these battles are celebrated in an old Amharic ballad in praise of the emperor. But Claudius himself fell in battle against Nūr, then Emir of Harar. But Nūr could make no further progress against the Abyssinians, and at the same time the Galla hordes were pressing forward with all their forces and occupying the lands of Harar. The power of the Emir thus became gradually limited to the town of Harar and the once so mighty kingdom of Zaila'. Harar now became an insignificant principality till 1875. In this year Ra'uf Pasha of Zaila' set out against Harar at the instigation of the Egyptian government, while at the same time Prince Ḥasan operated against Abyssinia in the north and Munzinger Pasha advanced from Tadjura. The two latter expeditions failed in their object, but Ra'uf installed himself securely in Zaila' and Harar and began to reorganise the country. The Emir Muḥammad 'Abd al-Shakūr was pensioned, but murdered in 1876. In 1878 Ra'uf was dismissed by Gordon Pasha (General Gordon), as the latter feared that Ra'uf might establish himself in Harar independent of Egypt. After several other Pashas had ruled there, it was decided in 1884 to vacate these lands. In 1885 Ridwān Pasha handed over Harar to the Emir 'Abd Allāh. But Menelik II of Shoa soon attacked Harar and in the battle of Tshalanko, west of Harar, 'Abd Allāh was slain on the 26th January 1887. The correspondence on the occupation of Harar between Menelik II and the king of Italy was published in the *Documente Amariña* (Rome 1871), p. 295 *et seq.* Harar now came once more into the hands of the Abyssinian Christians, who had been driven out of it some 600—700 years before. The celebrated Ras Makonnen was installed as governor, a very capable, clever, energetic and cultured man. He died in 1906; a beautiful church-like tomb was built for him outside the walls of Harar.

AL-HARAWĪ [See AL-HEREWĪ.]

HARĀZ (HARAS, HARRAS, HARRĀZ), a high mountain range in South Arabia, lying to the west of Ṣan'ā [q. v.] between the Wādī Ṣahām and the Wādī Surdud near Ḥaḍūr Shu'aib [q. v.]. It is composed of basalt and is over 8500 feet high.

The following mountains belong to the Harāz:

Lahāb (with Djebel Meb'ar, Djebel Medherre, Djebel Shukruf, Djebel Lakama), Hawzan (حَوْزَان) of the South Arabian inscriptions, with the Djebel Kārad and Kāhil) and Shibām, Masār and joined to the latter, Šaḥfān. Of places in Harāz we may mention the large town of Manākha (southeast of Shibām with 3000 inhabitants, residence of the kāṭmākām of Harāz, Haima [q. v.] and the Djebel 'Aniz southeast of Harāz), 'Attāra (between Masār and Hawzan, formerly the residence of the dā'i of Yām [Nadīrān]) the large village of Masār (on the mountain of the same name), Humaid, Mitwah (both on Mount Šaḥfān), Shibām (on the mountain of that name), Lakama (north of Shibām with many Jews), Mawza (three hours from Manākha), Usil (on the mountain of that name near Masār), Birār (Brār, near the latter), Emka or Kušaba (on the Hawzan); at the foot of the Harāz lies the town of Hudjaila. Among wādis there are Hār, Idrūb (both west of the Šaḥfān, in the land of the Banū 'Arrāf) and Hidjān (near the village of Birār). There are extensive coffee plantations on the mountains which yield an especially fine quality of coffee. The fruits (apricots, peaches, a small kind of pear, several kinds of grapes and walnuts) are famous far and wide. The people of Harāz are some Šaḥfīs and some Ismā'īlis.

The Harāz is at present divided as follows: 1. Banū 'Arrāf (on the Šaḥfān); 2. Šaḥfān proper; 3. Masār; 4. al-Maghāriba (north of Masār); 5. Banū Ismā'īl (northwest of Masār); 6. Hasabān (on the Wādī Dayān, a tributary of the Surdud); 7. Hawzan; 8. Lahāb; 9. Thuluth (besides Lahāb); 10. Ya'ābir (south of Manākha); 11. Mukātil (adjoins Thuluth); 12. al-'Ukmur (southeast of Manākha).

Down to 1763 the Harāz was (nominally) under the Imām of Šaḥfā. In this year, however, it was taken from the Imām by the Maḥramī dynasty of Nadīrān (Yām) which had just arisen. In 1872 the citadel of the dā'i of Yām, Aḥmad al-Shibāmī, at 'Attāra was destroyed by the Turks, whereupon the Yām made peace with the Turks and retired to the lands of their tribe in Nadīrān.

In Hamdānī's time the Mikhlāf Harāz comprised the following seven parts: Hawzan, Karār (كِرَار) of the South Arabian inscriptions, Glaser: Kurār, Yākūt: Kirār), famous for an excellent breed of cattle, Šaḥfān (Yākūt, Šaḥfān, a misprint), Masār (with fortress, well and irrigation works), Lahāb, Mudjaiyil (Yākūt: Madjnah) and Shibām (with a fortress and a large mosque). The inclusive name for all these was Harāz and Hawzan, also called Harāz al-Mustaḥriza or briefly Harāz (in *Djazira*, p. 105, l. 9—11, to make seven, Harāz al-Mustaḥriza and Hawzan have to be counted as one; in *Djazira*, p. 68, l. 17—19, Shibām and Šaḥfān are omitted, but instead Harāz and Harāz al-Mustaḥriza are given as two). It was very fertile and rich in cornfields, honey and sesame. Among places in Harāz, Hamdānī mentions al-Taim, al-Idrūb, 'Adjab, al-Aḥaṣṣ, al-Dhanabāt, al-'Arida, al-Ma'shūr, Šawlāna (a fortified place). The market of Harāz was al-Mawza. As inhabitants Hamdānī gives the Harāz and Hawzan whom he describes as two Himyaritic stocks; in Harāz there were also Hanatila, Lu'f and Naṣḥk, of the Hamdān [cf. ii. 246]. The language of the people of Harāz was midway between good and bad Arabic.

In recent times Harāz has been visited and explored by the traveller Eduard Glaser.

HARB, a powerful Arab tribe of Yemem origin in the Hidjāz between Mecca and Medina. They are divided into two great bodies, the Banū Sālem and B. Moṣrūh. To the B. Sālem belong amongst other clans, al-Hamda, al-Šubh, 'Amr, Mu'ara, Welad Selim, Tamim (not the celebrated great tribe of this name), Muzaina, al-Hwāzim (Awāzim, Hāzim), and Sa'din (Saadin, sing. Saadani); to the Moṣrūh, amongst others; Sa'di (Sa'adi), Laḥabba (all robbers of pilgrims), Biṣhr, al-Humrān, 'Ali, al-Djahm, Banū Ḥasseyin (all Aṣhrāf), and Banū 'Amr.

Doughty gives amongst others the following villages of the B. Sālem (between Medina and Yanbu' and on the great Wādī Ferrā (probably Ferra'a), Djedeida, Umm Theiyān (Deiyān), Kaif, Dār al-Hamra, al-Kissa, al-Khorma, al-Wāsiṭa, al-Hassānie, al-Šafra (with extensive date-palm groves and a large market; besides the chief article of commerce, the date, which is here sold very cheaply and the excellent honey from the adjoining mountains, genuine Mecca balsam is sold here, and is found genuine nowhere else in Arabia except at Badr), al-'Alī, Djedid, Beddur (Bedr?), Medsūs, Šātha (Sweyḥa); of Moṣrūh: al-Kherēybey (near Mecca), Kleys, Rābuḥ (not far from here the traveller Charles Huber was murdered by his retinue, the Harb), al-Swerḳiya. A portion of the Harb also live in the great Wādī al-Humḍ (al-Hamḍ near Wādī Rumma), the small harbour of Liḥ and the Djebel Figgira (Fikḳera between Medina and Yanbu', belonging to the B. Sālem). The Harb, who make the pilgrims' route between Mecca and Medina unsafe by their ambushes and are therefore held in terror by the Syrian pilgrims, came from Yemen to the Hidjāz (a clan of the Wādī'a of the Hāshid [q. v.] bears the same name) in the Muslim period. In the beginning of last century they succeeded only after hard fighting in overcoming the Wāhhābis [q. v.]. During Palgrave's stay in Nedjd, in 1862, the Šammar chief Telāl b. Rashid in person led an expedition against the Harb tribes and conquered a portion of them. Palgrave gives the number of the Harb, who were under the Šammar chiefs, as 14,000, Doughty on the other hand only 2000.

In his *Djazira* Hamdānī mentions the Harb as neighbours of the Bali [q. v.] and Djuhaina [q. v.] in the country between Khaibar and Medina and near Mecca.

HARBA, (plur. *ḥirāb*) spear. According to the Arab lexicographers, the *ḥarba* is smaller than the *rumḥ* and larger than the *ʿanaza* [q. v.]. It has the same function as the latter in Muslim ceremonial; we therefore find in some traditions that in Muḥammad's time an *ʿanaza*, in others a *ḥarba* was used as *sutra* [q. v.] (cf. the chapter *sutrat al-muṣallī* in the different collections of tradition). It has been supposed that the erection of a *sutra* at the *ṣalāt* had originally a protective object; in agreement with this is the fact that, according to some traditions, when the Prophet went out to relieve nature he had an *ʿanaza* carried behind him (Bukhārī, *Kitāb al-Wuḍūʿ*, Bāb 17; Muslim, *Ṣaḥīḥ*, with Nawawī's commentary, Cairo 1283, i. 337); for it was just on these occasions that one was most exposed to demoniacal influence. On the ceremonial significance of the *ḥarba*, cf. further Rhodokanakis in *Wiener Zeitschr. für die Kunde des Morg.*, xxv. 75 *et seq.*

On the use of the *ʿanaza* by the *khafīf* cf. the article *ʿANAZA*. A spear is also used by the *khafīf*, e. g. in Celebes (cf. Adriani and Kruyt, *De Bare'sprekende Toradja's van Midden-Celebes*, i. 329 *et seq.*).

The spear is the attribute of the commander, the chief of a tribe, etc. It is related that Hāmān, the leader of Fir'awn's troops, held a *ḥarba* in his hand [*Thaʿlābī*, *Kiṣaṣ* (1290), p. 172]. Tabarī (ed. de Goeje, I, 1214, 18, 1215, 19) relates that ʿUṣaid b. Ḥudair when acting as chief of the Banū ʿAbd al-Ashhal took the *ḥarba* in his hand and that Saʿd b. Muʿādh, taking his place, took the *ḥarba* out of his hand. Lane tells us that a long spear is stuck in the ground in front of the tent of the Amīr al-Ḥadīdj [q. v.] in Cairo, perhaps also as a sign of his rank (*Manners and Customs*, London 1899, p. 443).

The story that Muḥammad received *ʿanaza* or *ḥarba* from Abyssinia as a present, gains in probability when one reflects that such staffs are used to this day in Abyssinian ceremonial (Bent, *The Sacred City of the Ethiopians*, p. 50, 54, 56).

Bibliography: Besides the works quoted in the text, cf. the bibliography to *ʿANAZA* [i. 346]. (A. J. WENSINCK.)

HARBĀ (with *alif* or *yā*), now Dījir Harba, a ruined town in the Dūdīl district, 1/2 hour S. W. of the palmgroves of Balad, on the west bank of the ancient Tigris bed, the *Shūtāt*, in about Lat. 34° N.

The name and the town date from pre-Muslim times. According to Yāqūt (i. 187), an older name was *Ukhūniya*, which sounds Babylonian. The Sāsānian authorities reckoned the northern boundary of Sūristān or Dīl-i Erānshahr, the later Sawād al-ʿIrāk, from Harba in the *ṭassūdī* Maskin (the modern Tell Masḥīn) and ʿAlth (or ʿIlth, the modern ʿAlth) lying opposite it on the east in the *ṭassūdī* Buzurgshapūr. In the north it adjoined the province of ʿAthūr. These frontiers were maintained in the early Muslim period down to the ʿAbbāsids, for example in Omar al-Khaṭṭāb's survey (cf. *Khurdādhbih*, p. 14; Yāqūt, p. 104; Masʿūdī, *Tanbih*, p. 38; Yāqūt, iii. 174). Another early mention of the place is found in Tabarī, ii. 916, year 76, where the Khārīdī leader Shabīb on his march against al-Ḥadīdjādj crosses the Tigris at

Harbā (an anecdote with pun on *Harbā* and *ḥarb*). In Harbā there were flourishing manufactures of heavy cotton goods, which were exported everywhere (Yāqūt, ii. 235, and *Marāyid*, p. 295). That pottery was also a highly developed manufacture is clear from the quantity of shards strewn among the ruins; it is usually a ware, identical with the so-called Raḳka-ware and belonging to the xiith—xiiith centuries.

When the great change in the course of the Tigris began in the beginning of the reign of al-Mustansīr billāh and the river left its ancient bed just above Harbā and forced a way into the bed of the canal *Ḳātīl* Abu ʿl-Djund, its modern course, the Caliph began to build great irrigation-works to irrigate the land rendered waterless. Apart from the fact that at least the whole of the present Dūdīl canal is a relic of his scheme, the ruins of the Mustansīr canal above Harbā and the great bridge at Harbā, after which the place is now called Dījir Harba are further witnesses of his enterprise. The bridge has already been examined by J. F. Jones and described in the *Selections from the Records of the Bombay Government*, xliii. (1857), but I have studied it in greater detail. It is solidly built of baked bricks and spans the ancient canal on four arches, 180 feet long and about 40 broad. An inscription about 300 feet long on both sides gives the date of its erection as 629 A. H. and is of particular interest on account of its detail and the unusual, from the orthodox point of view almost blasphemous eulogies. The ruins are rendered conspicuous by the cupola of the tomb of a Shaikh or Saiyid Saʿd, visible afar off. (E. HERZFELD.)

HARF, the side or edge of a thing. Hence 1. a letter of the alphabet (being the edge of the syllable or word), e. g. *ḥurūf al-madd* = *alif*, *wāw*, *yā*, and so on; 2. as a grammatical term, one of the three parts of speech, whatever is neither a noun nor a verb (*ism* or *fiʿl*), whether consisting of one letter or more, as *bi*, *ḥattā*, etc.; 3. in prosody, the letters *alif*, *wāw*, *yā* when they may not be employed as *rāwī* are called *ḥurūf al-iṭlāk*; 4. a dialect of the Arabs in the ḥadīth "The *Qurʾān* was revealed in seven dialects (*aḥruf*)"; or this may mean according to seven readings (*ḳirʾāt*); cf. Nöldeke-Schwally, *Geschichte des Qurʾān*, i. 48 *et seq.*; 5. as a Ṣūfī term *ḥarf* is defined to be the language or the medium through which the Truth speaks to one; and the *ḥurūf al-ʿāliyāt* potential realities such as that of the palm tree in the date stone; 6. in the cabalistic sense *ʿilm al-ḥarf* (*ḥurūf*) means disposing the letters in magic squares, etc.

HARFUSH, a family of Emīrs in Baalbek, which professed the doctrines of the Metāwila [q. v.] and during the Ottoman period held the power in their hands there till the Turkish system of administration was reorganised in the middle of last century. How and when the Harfush attained their influential position has not been made clear; we only possess detailed information for the Emīrs Mūsā b. ʿAlī and Yūnus, who lived in Baalbek in the time of Fakhr al-Dīn. Cf. al-Muḥibbī, *Khulāṣat al-Aṭhar*, iv. 432; Wüstenfeld,

Fachr ed-din der Drusenfürst und seine Zeitgenossen, p. 79 et seq.; Tannūs b. Yūsuf, *Akhbār al-A'yān fī Djabal Libnān*, p. 253, et seq.; Oppenheim, *Vom Mittelmeer zum Pers. Golf*, i. 36. Cf. also the bibliography to the article BAALBEK.

HARIB, a district in South Arabia, about two days' journey east of Ma'rib [q. v.] probably identical with the Caripeta of Pliny, the place from which the Roman general Aelius Gallus on his expedition to Arabia Felix began his retreat to the coast. Harib, a centre of ancient Arab civilisation, is traversed by a large wādī, the Wādī 'Ain, which receives on its left bank two small wadis, the Wādī Mukbal and Wādī Ablah. Two hours' journey before reaching Wādī 'Ain rises Mount Mablaka, to which a series of steps four yards long and fifteen yards broad, hewn out of the rock (by a certain Barghāl, according to tradition) leads, at the end of which is a large South Arabian inscription. At the junction of the Wādī 'Ain and the Wādī Ablah lies the isolated hill Karn (about 1200 feet high), on which the Banū 'Abd, who are mentioned as early as the South Arabian inscriptions, dwell. On this hill is the tomb of the saint Uwais al-Murādī al-Karānī, a contemporary of the Prophet, to which pilgrimages are made from distant districts. From the Wādī Ablah, Timna^c, the ancient capital of the Kaṭṭabāns, the Thamma or Thumna of Pliny, תמנא of the South Arabian inscriptions, is reached in a wide plain; a portion of the plain, called al-Djufra, which belongs to the tribes al-Kabasa and al-Šīr, is full of imposing ruins, which bear the name al-Muṣaina'a; in their midst rises a large building whose walls still stand with many inscriptions.

The capital of Harib is Darb Āl 'Alī situated between the Wādī 'Ain and the Wādī Mukbal. It is mainly inhabited by Ashrāf (nobles), about 750 in number (apart from their wives and slaves), who are divided into four families of whom the most important is the Āl 'Alī b. Tālib, from whom the Emīr of Harib, is always chosen; his residence is in Darb and he is held in great honour by all the people of the land. Besides the Ashrāf there are a few merchants, labourers and artisans (called *kirwān*, plur. of *karawī*) in Darb. Half an hour's journey from Darb Āl 'Alī lies the little town of Darb Bū Tuhēf (Tuhāif), belonging to the independent tribes (*kabā'il*) Āl 'Alī Tuhēf, who claim descent from the Hilāl [q. v.]. An hour's journey from here is a field covered with ancient ruins, called Hadjar Harib. Of places on the Wādī 'Ain (right side) there may be further mentioned: Darb Āl 'Amr, inhabited by the Āl 'Amr and Āl Mas'ūd, clans of the Banū 'Abd (on the Djebel Karn) and their *ra'iya*, with the ancient Ḥiṣn Ḥabbā and the Ḥiṣn Hidjrāna (the latter belonging to the Emīr of Harib, who incarcerates in it those who refuse to pay their tithes), and the village of al-Sāḥa, inhabited by the Āl Ghuthaim, who enjoy a great reputation throughout South Arabia for a kind of padlock (*kust ghuthaimi*), made by them which is sold everywhere.

We may also mention the ruined town of Hadjar Hinū at the foot of the hill Karn 'Ubaid above the Wādī 'Ain from the centre of which rises a large building the forecourt of which still stands, and which bears long inscriptions. The ruins are also called Hinū al-Zerēr (Zarīr) after a certain al-Zarār b. Ṣa'ak, who according to tradi-

tion was once king here. Possibly it is connected with the fortified town (citadel) 𐩦𐩣𐩪 of the South Arabian inscriptions. According to a legend this town was once inhabited by smiths (*ḥaddād*), *ra'iya* of the Sabao-Ḥimyar.

Harib is mentioned by Hamdānī in his *Djazira*. He mentions the Djebel Karn of which he says that it is described as belonging to Ma'rib [q. v.], Harib, Baiḥān [q. v.] and also to the Radmān. As inhabitants he gives the tribes of Murād, Rabi', Khalaf and 'Udhṛ, who speak good Arabic. Of these tribes the Murād still live on the borders of Harib, the Rabi' in Harib and Baiḥān al-Ḳaṣāb; traces are left of the Khalaf in the district of Ṭīn al-Khalīf, where there is also an isolated hill called Haid al-Khalīf.

Besides these, Hamdānī also mentions a Harib of Nihm of the Hamdān, which probably corresponds to the Harib of the Raḍrād, and one of the 'Ans. There is a Wādī Harib at Širwāḥ between Ma'rib and Ṣan'a. In the inscriptions the subject of this article is called Harib Ḥaḍramūt.

AL-HARİK (AL-HARYK), a province in Nejd in the South of Yamāma lying on the edge of the great desert (Dahnā). The mountain range of this very warm district is said by Palgrave to be about 60—70 miles long. Hūta is the most important place in the country. During the Wahhābī wars after the conquest of Dar'īya [q. v.] Harik was subdued by Ibrāhīm Pasha. After the Wahhābīs had regained Nejd and the Hidjāz, a rebellion broke out against the chief 'Abd Allāh b. Sa'ūd in Harik as in the adjoining Yamāma. 'Abd Allāh advanced against Harik with an army, put down the rebellion with great cruelty and laid the whole country waste with fire and sword; the town of Hūta was practically burned to the ground, and the women and children massacred; only 130 are said to have survived of the male population, which previously numbered 10,000. Palgrave gives from the official records in Riyāḍ [q. v.] the war contingent from Harik as 3000 men for the year 1863; he estimates the population of the sixteen townships of this province at 45,000; but this figure appears to be too high, for F. Mengin, relying on the accounts of Muḥammad 'Alī's military expedition of 1823, gives only 3000 warriors and 9000 others (women, children and old men), while W. Schimper estimates the population at 15,000, on the authority of a Wahhābī in 1836.

HĀRIM, a fortress in northern Syria often mentioned in the Crusading period (Castrum Harenc or Harench), 22 miles east of Antākiya, now the capital of a ḳaḍā' with 1636 inhabitants (Cuinet). The Crusaders took it during the siege of Antākiya in 491 (1098) and rebuilt the castle. In 559 (1163) in its neighbourhood Nūr al-Dīn won a great victory over the Christians, as a result of which Hārim again became Muslim. The

Christians more than once attempted to regain it but it remained permanently in the hands of the Muslims. In 630 (1232) the Aiyūbid al-ʿAziz built a strong castle on an artificial mound there, the ruins of which still exist.

HĀRIM (A.), forbidden, particularly the womens' apartments and their occupants (harem). — Certain pieces of ground, which are withdrawn from cultivation or building without the owner's consent, are likewise called *ḥarim*, such as the *Ḥarīm Dār al-Khilāfa* and the *Ḥarīm al-Tahīrī* in Baghdad, which included whole stretches of the town.

HĀRIRĪ (born 446, died 6 Redjeb 516), ABŪ MUḤAMMAD AL-KĀSIM B. ʿALĪ B. MUḤAMMAD B. AL-HĀRIRĪ, grammarian and elegant writer, was born and brought up at Mashān near Baṣra; he also studied at Baṣra, though the name of his teacher seems wrongly given by the authorities as al-Faḍl b. Muḥammad al-Kaṣabānī, since this personage died 444. At Baṣra he held the office of *ṣāhib al-khabar*, i. e. head of the intelligence department (cf. Ṭabarī iii. 1260, 13) to the court; and this office remained with his descendants till the time of ʿImād al-Dīn Iṣfahānī, who visited Baṣra in 556. Ḥarirī's house was in the quarter of the Banū Ḥarām, but his office at Mashān. He repeatedly visited Baghdad (e. g. in the year 504), and is likely to have performed the pilgrimage; other travels of his do not appear to be recorded. His office brought him into connexion with many of the notables of the metropolis.

His most famous work is the *Maḳāmāt*, a collection of fifty pieces modelled on those of Badīʿ al-Zamān Ḥamadḥānī, wherein the adventures of one Abū Zaid of Sarūdj are narrated by al-Ḥarīth b. Hammām. The historian Ibn al-Dubaiṭhī asserted that this Abū Zaid was a real personage named al-Muṭahhar b. Sallām to whom Ḥarirī addressed verses, but this is doubtless a fiction similar to those which are found in connexion with other celebrities of romance. According to one of Ḥarirī's friends and correspondents, Hibat Allāh b. Ṣāʿid b. al-Tilmīdh, the *Maḳāmāt* were commenced in 495 and finished by 504; the first date seems correct since they mention the taking of Sarūdj by the Franks in 490; but the last seems too early if Ibn al-Aṭhīr be right in stating that the Asadī Dubais was a youth in 503; since this personage is mentioned in the work as a well-known man. Different theories were held concerning the person at whose request the tales were composed; the viziers of Mustarshīd Abū ʿAlī b. Ṣadaḳa (512) and Anōsharwān b. Khālīd (cf. I, 357) are both named in this connexion.

The *Maḳāmāt* became classical in the author's lifetime, and he claims to have himself "licensed" 700 copies; in spite of detractors (such as Diyā al-Dīn Ibn al-Aṭhīr and the author of the *Fakhri*) they maintained their popularity; and an early commentator, Shamīm al-Hillī (died 601), told Yāqūt that he had been created in order to demonstrate the surpassing excellence of Ḥarirī; for he had found himself unable to rival the *Maḳāmāt*, after

outdoing all other monuments of Arabic literature. They fall far short of Ḥamadḥānī's in originality, but excel them in facility, command of the Arabic language and poetical ability. Their popularity spread beyond the Muslim community to Jews and Christians who translated or imitated them in Hebrew and Syriac. Some specimens were rendered into Latin in the eighteenth century by Schultens and Reiske, and a monumental edition of them was produced by de Sacy in 1822; this was followed by numerous editions both Oriental and European, and translations have been published in several modern European languages, e. g. by Rückert in German (*Die Verwandlungen des Abu Said von Serug*, 1826, etc.) and by Chenery and Steingass in English (London, 1898).

Of Ḥarirī's correspondence a selection was made by ʿImād al-Dīn, which is embodied in his *Kharīda*; another selection is reproduced by Yāqūt in his life of the author (*Muʿdjam al-Udabā*, vi.). Two of the epistles, called *Shīniya* and *Sīniya*, because in one every word contains the first of these letters and in the other the second, are also printed in Arnold's *Chrestomathy*. Some of the correspondence preserved by Yāqūt deals with the grammatical poem *Mulḥat al-Iʿrāb*, composed at the request of the above-mentioned Ibn al-Tilmīdh.

His remaining treatise, *Durrat al-Ghawwās*, is a collection of strictures on the erroneous use of various expressions; an extract of this treatise was published by de Sacy in his *Anthologie Grammaticale*, and the whole has since been printed; to the Constantinople edition of 1299 there is attached the commentary of Shihāb al-Dīn Khafādjī, who disputes many of the author's assertions.

Bibliography: Yāqūt, *Muʿdjam al-Udabā* vi. 179—184; Ibn Khallikān, tr. de Slane, iii. 490—494. (D. S. MARGOLIOUTH.)

HĀRIRIYA, a sect of the Rifāʿiyya in the district of Damascus founded by ʿAlī b. Abī ʿl-Hasan al-Ḥarīrī al-Marwāʾī who died in 645 (1147) at Boṣra in Ḥawrān. His extreme pantheism, as it finds expression in his poet Naḍīm al-Dīn b. Isrāʾīl, was banned by Ibn Taimiyya in a very important fatwā (vol. xxvii. n^o. 2 of the collection *Tafsīr al-Kawākib al-Dawāri*, formed by Ibn ʿUrwā, manuscript in Damascus, Tafsīr, n^o. 151). Cf. also al-Farūṭhī (died 694 = 1294) in Abu ʿl-Hudā, *Kilālat al-Djawāhir*, Sтамбул 1302, p. 326.

(LOUIS MASSIGNON.)

AL-HĀRITH, DIEBEL. [See ARARAT.]

HĀRITH b. KAʿB, usually called Balḥārith, an arab tribe belonging to the Yemenī group. Their genealogy is: al-Ḥarīth b. Kaʿb b. ʿAmr b. ʿUlā b. Djalal b. Madhhidj (Malik).

They lived in the district of Naḍjran [q. v.] and were neighbours of the Hamdān. The following places amongst others belonged to them: al-ʿArsh, al-ʿAdh, Baṭn al-Dhahāh, Dsu ʿl-Marrūt, al-Furūṭ [pl. Afrāt], between Naḍjran and the Djawf, Hadūra (Khadūra), ʿIyāna, al-Khaṣāsa (between Hidjāz and Tihāma), Kurra, Sahbal, Samʿar, Sūhan or Sawhān, Minān or Mainān, Shaṭṭ Ziyād (belonging to the clan Ziyād); wādīs: al-ʿAwhal al-aʿlā und al-ʿAwhal al-asfal, al-Nudārāt, Thadjir; waters: Ainā, al-Bathrā, Dhiʿb, al-Djafr, al-Ḥarār, Ilimā, Yadamāt, al-Kawkab, Khaṭma (Khitma, a well in the sand), Khulaiḳa, al-Malahāt, Māwa, Shisʿa, al-Shalila (belonging to the clan Dāʿir); mountains: Tukhtum.

Sections of the Balhārith lived also in Raidat al-Sa'far in Ḥadramūt, in the town of Radā (inhabited by the 'Ans and Khawlān), in the villages of al-Sama' and Ḥadaḡān, which belonged to the Bakil, and in al-Faladja near Damascus.

In the Djāhiliya a section of the Balhārith worshipped the idol Yaghūth. Another section professed Christianity. The 'Abd al-Madān b. al-Daiyān, a prominent family of the Balhārith, built a large church, Dair Nadjran, also called the Ka'ba of Nadjran (according to many authorities, a tent composed of 300 pieces of hide).

Historical. The idol Yaghūth was the cause of a battle between the Balhārith and the Murād, who claimed Yaghūth for themselves, at al-Razm (in the south of Nadjran, in the land of the Murād) on the same day as the battle of Badr (17th or 19th Ramaḡān of the year 2). The Balhārith, allied with the Hamdān, inflicted a severe defeat on the Murād and Yaghūth remained in their possession. On the "second day of Kulāb" (in the Dahnā) the Balhārith (under Nu'mān b. Djassās) fought against the Tamīm tribes Ribāb and Sa'd b. Zaid-Manāt (under Kais b. 'Asim). On the side of the Balhārith were Hamdān, Kinda, Kudā'a and other tribes, in all about 8000 strong, divided into four divisions, with four leaders, who all bore the name Yazīd and were under the supreme command of 'Abd Yaghūth b. Šalāt. In this battle the Balhārith were defeated. The chiefs of the allied armies fell and 'Abd Yaghūth was wounded. Of other battles of the Balhārith we may mention that of Ḥiḡra (in Tibāma) against the Daws, in which the Balhārith were again defeated, and that of Baṭn al-Dhahāb.

We find the Balhārith already in possession of Nadjran when the 'Azd, with whom they had many a feud, left the Yemen under 'Amr b. 'Amir Muzaikiya' after the bursting of the dam of Ma'rib. When Muḡammad's call had gone out through all Arabia, the Christians among the Balhārith (about the year 8 = 630) sent a deputation to the Prophet in Medina, which consisted mainly of ecclesiastics, including a bishop, Abu 'l-Hāritha. They arranged an interview with the Prophet at a place near Medina, where they were to undergo a trial by the ordeal called *mubāhala* or *li'an* (ceremony of objurcation). But when they were convinced of Muḡammad's mission and feared a defeat, they begged the Prophet to cancel the arrangement. The Prophet agreed on condition that they paid a larger tribute. In Rabi' I of the year 10 (630) Muḡammad sent Khālīd b. Walīd with 480 men to the Balhārith to demand that they should adopt Islām. Those who were heathen and a number of the Christians also submitted and Khālīd remained among them to instruct them in the Kor'ān and the institutions of Islām. After some time Khālīd returned with a deputation of the Balhārith (among them two members of the Christian family of 'Abd al-Madān) to the Prophet. Muḡammad gave each member 10 ounces (400 dirhams) and appointed one of them, Kais b. al-Husain, emir of the Balhārith. When in 11 = 633 the false prophet Aḡhab b. Ka'b, usually called al-Aswad al-Ansī, appeared, the Balhārith influenced by his emissaries, followed him. They drove out the governor of Nadjran ('Amr b. Ḥazm), and al-Aswad entered the town in triumph. The Muslims remained faithful to Islām under Abū Bakr, and the Christians renewed the treaty.

HĀRITHA B. BADR, of the Tamīm family of the Banū Ḥudāna, a general and friend of Ziyād b. Abīhi. He must have been born about the time of the Ḥiḡra. He is said in his early days to have been a follower of the prophetess Sadjāh [q. v.]. At the battle of the Camel he was on the side of 'Alī's opponents but afterwards entered the latter's service. He early became attached to Ziyād, afterwards viceroy of the 'Irāk. He was an orator and poet, particularly learned in the ancient history of the Arabs, and was of tried valour. He distinguished himself in society by his lovable nature no less than by his intellectual gifts. The combination of so many rare qualities in him won him the name Dāhiya (a term applied to a distinguished man). The only thing with which he is reproached is the vice of drinking. He owed it to his friendship with Ziyād that, although a Tamīmī, he was entered in the tribal lists of the Kuraish, a distinction which carried with it a considerable increase in his emoluments. 'Ubad Allāh, son and successor of Ziyād, did not show himself so ardent a friend of Hāritha. In the political turmoils which followed the death of Yazīd I, Hāritha fought with varying success against the Khāridjīs; his failures were usually caused by the lack of discipline among the Baṣra troops. In the course of one of these campaigns he fell ill in 66. It is not correct, as one source states, that he lived into the reign of Walīd I.

Wüstenfeld), p. 160; *Aghānī*, vi. 4-5; xviii. 166, and particularly xxi. 20-44; Ṭabari, *Annales* (ed. de Goeje), i. 322; ii. 25, 78, 449, 580-582, 585; H. Lammens, *Ziād ibn Abīhi*, p. 120-121, in the *Rivista degli Studi orientali*, iv., where further references are given. (H. LAMMENS.)

HARKARN, a Persian stylist, son of Maṭhurādās Kanbū of Multān; was for many years *munshī* (secretary) to Nawwāb 'Itibār-Khān, a eunuch in the service of the Moghul emperor Djahāngīr and was then appointed *ṣubadār* (governor of Akbarābād (Agra) (1031 = 1622). He is the author of a collection of letters (*inshā*), divided into seven sections, which bears his name and contains model letters as well as official documents (ed. with English transl. by Francis Balfour, Calcutta 1781, 2 1804, reprinted 1831; lith. Lahore 1869). The work was used by the English authorities as a model for official correspondence conducted in the Persian language with the Indian

sovereigns. The Paris manuscript is dated 1062 A. H. and is entitled *Irshād al-Tālibin*.

Bibliography: Rieu, *Catal. of Pers. Mss.*, ii. 530; Preface to the *Forms of Herkern*², p. 3; E. Blochet, *Catal. des Mss. persans*, ii. 277. (CL. HUART.)

HARRA, a basalt desert, "a district covered with black broken stones, which looks as if it had been burned by fire". Such harras, which owe their origin to subterranean volcanoes which have repeatedly covered the undulating desert with a bed of lava, are found particularly in the east of Hawrān and stretch from there to Medina. Samhūdī, *Khulāṣat al-Wafā' bi-Akhbār Dār al-Muṣṭafā*, ed. Mecca, 1316, p. 38 gives a detailed description of a great earthquake at Medina which began on the 1st Djumādā II 654 (26th June 1256) and lasted several days. Cf. also Wüstenfeld, *Geschichte von Madyna*. There is perhaps, as Wetzstein has suggested, an allusion to these fearful stony wastes in Jeremiah xvii. 6 (תַּרְרִים). Yāqūt, *Mu'djam*, ii. 247 *et seq.*, details no less than 29 of these harras with their names (cf. *Zeitschr. d. Deutsch. Morgenl. Ges.*, xxii. 365 *et seq.*), among which the Harra Wākīm at Medina has obtained a place in history on account of the bloody victory won by the Umayyads there over the Medinese in 63 (683). An accurate map with an index of names to the whole territory, in which harras are found is published in the *Zeitschr. des Deutsch. Palästinavereins*, vol. xii., in the narrative of A. Stübel's journey to Dīret it-Tulūl and Hawrān (1882). The same author has also discussed the supposed origin of such deserts of stones in *Die Vulkanberge von Ecuador* after v. Oppenheim, *Vom Mittelmeer zum Pers. Golf*, i. 90, note 5, as has v. Oppenheim himself in *Petermanns Geogr. Mitteil.*, 1896 (*Zur Routenkarte meiner Reise von Damaskus nach Baḡdād in dem Jahre 1893*). Cf. also the literature quoted in the first named work of v. Oppenheim, i. 89 *et seq.*

HARRĀN, a very old town situated in the Dīazīra province of Mesopotamia, near the sources of the Balikh river, between Edessa and Ra's 'Ain. It is familiar as the home of Abraham and Laban, but is especially famous as the chief seat of the Šābians and of their religion. To the Greeks it was known as *Xaḡḡāv*, to the Romans as Carrhae, to some Church Fathers as Hellenopolis ('heathen city'), to the Muhammadans as Harrān or Arrān. In its long history Chwolsohn distinguishes five periods, the Biblical, the Greek, the Roman, the Christian and the Muhammadan. The form of the name found on the cuneiform inscriptions, Harrānu, that is 'route', points to the importance of the place as a trading emporium; but it is chiefly famous all down its history as the seat of the worship of the moon-god Sin, whose temple was adorned by more than one of the Assyrian kings. The overthrow of the Chaldaean supremacy and the rise of Persia wrought no change in the circumstances of the City, but from the time of Alexander a large Macedonian population settled in northern Mesopotamia, which became known as Mygdonia, and the deities worshipped in Harrān received Greek names. Rome, on the other hand, left little trace of her sway in Asia: it was the Eastern civilization which influenced the western conquerors. About the beginning of the Christian era the indigenous Syrian population of northern Mesopotamia, was

largely mixed with Macedonians and Greeks, as well as Armenians and Arabs. As a frontier town Harrān was treated with indulgence by the earlier Emperors, and it was not until Christianity became the religion of the state, that efforts were made to suppress the cult of which Harrān was the chief seat. These attempts were not carried to extremes, no doubt owing to the fact that in Harrān, as in other places, the people depended for their livelihood upon the temple. Hence the Church-fathers speak of Harrān as a heathen city, and, although bishops of Harrān were appointed, the place continued a seat of idolatry, even after the country had become a province of the Caliphate. The same commercial necessity may account for the existence here from the beginning of the sixth century of a Monophysite community with a bishop at their head. The majority of the people, however continued heathen.

Harrān capitulated to 'Iyād b. Ghannm in the year 639 A. D., at which time it was the chief town of Dīyār Muḡar. It was the favourite residence of Marwān, the last Umayyad Caliph (744—750), and here Ibrāhīm the 'Abbāsīd was imprisoned and put to death. The people, however, appear to have been allowed to continue the practice of their religion, but under Kašhīd a violent persecution arose, from which the Harrānians sought to free themselves by means of bribes. It was in 830 A. D. that Ma'mūn offered the Harrānians the choice between Islām, the adoption of one of the tolerated religions, and extermination. They claimed that they were Šābians; and by this device they saved themselves from extinction [see ŠĀBIANS]. Towards the end of the 10th century Muḡaddasī describes Harrān as a pleasant town, defended by a fort built of finely cut stone. When Ibn Djubair visited it in 1184 it acknowledged the sovereignty of Saladin (Ṣalāḥ al-Dīn), and its people were noted for their hospitality towards strangers. By Abu 'l-Fidā's time (d. 1332), however, it had fallen into decay. At the present day the site is marked by a village of sugar-loaf cottages and ruins of ancient buildings of basalt.

In addition to the worship carried on there, Harrān was noted for its honey and for the preserve called Kubbait, as well as for the purity of the Syriac spoken there. Chesney states that splendid crops of maize, tobacco and cotton are raised on the plain; but its fame will always rest on the long line of philosophers and men of science who flourished there, of whom Thābit b. Qurra, and his sons and grandsons, and al-Battānī are the best known.

HARRAR. [See HARAR.]

HARŪD. A river in Afghānistān which rises in the Siyāh Kōh and flows southwards past Sabzawār and Zakin, discharging itself into the Hāmūn or Lake of Sistān. It has been identified by Tomaschek with the Pharnakotis of Pliny and the Hvarenañhaiti of the Avesta.

Bibliography: Holdich, *The Gates of India* (London 1910); Tomaschek, *Sitz.-Ber. der Wien. Akad.*, 1883; A. Stein, *Ind. Antiquary*, 1886, p. 22; Ferrier, *Caravan Journeys* (London 1857). (M. LONGWORTH DAMES.)

HĀRŪN B. ʿIMRĀN, the Aaron of the Bible, born 3 years before Mūsā, when Firʿawn's command to slay the male children was given (Thaʿlabī, p. 100; Ṭabarī, i. 448). When Mūsā received the command of God to effect the deliverance of the Israelites out of Egypt from Firʿawn, he asked for a companion of his own kin (Sūra, xx. 30—40). Hārūn, who sat on Firʿawn's council (al-Kisāʾī, p. 211, and *Tanchuma Exodus*) was entrusted with this position. He served Mūsā as spokesman as he had an eloquent tongue (Sūra xxviii. 34—35). He took the greatest share in the erection of the golden calf (Sūra, vii. 134—136; xx. 90—95 and *Exodus*, xxxiii. 1—7). According to the Talmud (*Sanh.* 77) he had been forced to do this by fear of the Israelites who would have slain him. But other legends show that the Israelites were particularly attached to Hārūn. For example al-Kisāʾī, p. 238, Thaʿlabī, p. 146 and Ṭabarī, i. 502 give the following story in almost identical words: Mūsā and Hārūn once noticed a cave from which light streamed. They went in and found there a golden throne with the inscription "destined for him whom it fits". As Mūsā proved too small, Hārūn sat upon it. The angel of death at once appeared and received his soul; he was 127 years old. When Mūsā had returned to the Israelites, they asked where Hārūn was. "He is dead", said Mūsā. "Thou hast slain him", they answered. Angels then at once appeared with Hārūn's bier and cried: "Do not suspect Mūsā of such a crime". According to another tradition (Thaʿlabī, *ibid.*, Ṭabarī, i. 505), Mūsā led the Israelites to Hārūn's tomb, where he called him back to life, and Hārūn confirmed the story of his death. Midrasch, *Jelamdenu*, *Yalkut*, 764, *Aboth de R. Nathan*, 32, *Pirke de R. El.*, 12, also give this Arabic legend.

HĀRŪN AL-RASHĪD, the most celebrated of the ʿAbbāsid Caliphs, born in al-Rayī in Dhu l-Hijja 145 = March 763 or, according to another, in itself more probable authority, in Muharram 149 = February 766. His father was the Caliph Muḥammad al-Mahdī, his mother a slave named Khaizurān, whom Mahdī set free and married in 159 = 775-776. After Hārūn ascended the throne in Rabīʿ I 170 = Sept. 786, he appointed the Barmakid Yahyā b. Khālīd as vizier with unlimited power, and during the following seventeen years the latter is said with his two sons al-Faḍl and Djaʿfar to have been the real ruler of the great empire; the catastrophe of Muharram 187 = January 803 [cf. BARMAKIDS and DJAʿFAR B. YAHYĀ] was thus all the more unexpected. In 176 = 792-793, an ʿAlid, named Yahyā b. ʿAbd Allāh, raised the standard of revolt in al-Dailam and won numerous followers, so that the Caliph had to send a great army against him under al-Faḍl b. Yahyā. The latter entered into negotiations and, when he gave Yahyā rich presents and Hārūn promised to pardon him, Yahyā surrendered. But when he arrived in Baghdād, Hārūn in spite of his promise had him thrown into prison. About the same time a bitter feud between the North Arabians and the Yemenis in Syria blazed up into open war and it was not till

180 = 796-797 that Djaʿfar b. Yahyā was able to restore peace. In 178 = 794-795 the Egyptians rebelled against the governor Iṣḥāk b. Sulaimān; but when Hārūn sent his able general Harthama b. Aʿyan against the rebels, they were soon routed. Unrest broke out in Kairawān also, but this was quieted by Harthama, for a time at least, but after his return in 181 = 797-798 the unruly populace rebelled again. Order was restored by the governor Ibrahim b. al-Aghlab, who however soon made himself independent, and in 184 = 800 Hārūn had to grant him the country as an hereditary fief on payment of annual tribute. Like so many of his predecessors, Hārūn had also much hard fighting with the Byzantines. At the very beginning of his reign he had the frontier towns fortified and almost every year his governors made raids into hostile territory without however winning any permanent advantages. In 181 = 797-798 the Caliph himself took the field, but soon returned. As usual war again broke out the next year; the Empress Irene, however, on account of internal disturbances in Constantinople had to make peace and pay tribute. Peace only lasted till the accession of the emperor Nicephorus in 186 = 802, who sent the Caliph a scornful letter and demanded the return of the tribute that had been paid. Hārūn at once took the field and forced the emperor to pay a new tribute. The latter, however, paid no attention to the agreement and the war was continued. In 190 = 806 Hārūn took Heraclea and forced the emperor to pay not only a new tribute but also a kind of poll-tax for himself and his family; in the following year however Yazīd h. Makhlad was defeated by the Byzantines and the efforts of his successor Harthama proved equally unavailing. The years of warfare therefore left the state of the parties in the end practically unchanged. According to western historians, Hārūn was on the other hand on terms of friendly intercourse with Charlemagne and mention is often made of embassies from one to the other. There is however no mention of this in Arab sources and the truth of these statements has even been seriously doubted [on this point cf. Schmidt, *Karl der Grosse und Harun al-Raschid* in *Der Islam*, iii. 409—411, Barthold, *ibid.*, iv. 333 *et seq.* and the literature there quoted]. The governor ʿAlī b. ʿĪsā had made himself generally hated by his extortions in Khorāsān. When the people complained, the Caliph went in person to al-Rayī in 189 = 805, but allowed himself to be fooled by ʿAlī and confirmed him in his office again. About the same time Rāfiʿ h. Laith rebelled in Samarkand. He was defeated by ʿAlī b. ʿĪsā; the complaints of the people of Khorāsān about the latter's boundless greed became louder and louder and Hārūn had finally to transfer the governorship of Khorāsān to Harthama. By this time Rāfiʿ was lord of all Transoxania and as the situation was rapidly becoming more serious, the Caliph resolved to take the field himself and sent his son al-Maʾmūn in advance to Merw. On reaching Tūs, Hārūn fell ill and died, according to the usual account, on the 3rd Djumādā ii. 193 = 24th March 809. He had a long time previously made arrangements to secure the succession for his son al-Amin, but these in the result proved most unfortunate [cf. the article AL-AMIN. i. 327^b *et seq.*].

Hārūn took a great interest in art and science

and his brilliant court was a centre for all branches of scholarship. In spite of occasional outbursts of Oriental despotism he was undoubtedly one of the best of the Abbāsids; nevertheless it is from his reign that the beginning of the decline of the dynasty dates. In legend and tradition however he has always been looked upon as the personification of oriental power and splendour and his fame has been spread throughout East and West by the "Arabian Nights".

(K. V. ZETTERSTÉEN.)

AL-HĀRŪNIYA i. a village in al-'Irāk near Djalūla. Yāqūt says that an ancient Persian bridge built of stone with leaden joints stood here.

2. One of the chain of frontier fortresses (*thughūr*) between Asia Minor and Syria. The exact position is not known, but it stood one day's march to the west of Mar'ash in the hill country between it and 'Ain Zarba. It was founded by the Caliph after whom it was named in the year 183 (799). The fort was ruined by the Byzantines in 348 (959-960), when 1500 Muslims were captured (Yāqūt, s. v.). In spite of this it was a flourishing town a few years later when Ibn Hawkal apparently visited it. The town was rebuilt by Saif al-Dawla the Hamdāuid of Aleppo (d. 356 = 967). Thereafter it was retaken by the Christians and included in the kingdom of Little Armenia.

HARŪRĀ, HARAWRĀ, the meeting place of the first Khāridjīs, not far from Kufa, when they publicly disclaimed allegiance to 'Alī and were soon afterwards almost exterminated in the bloody battle of Nahrawān. From it comes the name Harūriya for the early Khāridjīs [q. v.].

Bibliography: Yāqūt, *Mu'djam*, ed. Wüstenfeld, ii. 246; Ṭabarī, ed. de Goeje, i. 3341 *et seq.* and the other Arab chronicles in the passages quoted in Brinnow, *Die Charidschiten*, p. 16 *et seq.*, and Wellhausen, *Die religiös-politischen Oppositionsparteien*, p. 4 *et seq.*; al-Shahrastānī, ed. Cureton, p. 86 *et seq.* etc.

HĀRŪT and MĀRŪT, two angels who are mentioned in the Korān (Sūra, 2, 96) in the words "and it was not Sulaimān that was an unbeliever but the devils, who taught men sorcery and that which had been revealed to the two angels in Bābil, Hārūt and Mārūt; but they taught no one without saying "we are but a temptation, therefore be not unbelieving". People learn from them means by which they may separate man and wife" etc. A number of stories are attached to this passage, the main outlines being as follows. When the angels in heaven saw the sinful children of men, they spoke contemptuously of them before

Allāh. But He said: "If you had been in the same position you would not have done any better". They did not agree to this and received permission to send two of their number to earth as an experiment. The two chosen were Hārūt and Mārūt, who were ordered to abstain from grievous sins such as idolatry, whoredom, murder and the drinking of wine. But when they saw a wonderfully beautiful woman they were soon led astray and, when they were discovered, they slew the man who had discovered them. Then Allāh asked the angels to look down at their brethren on the earth: then they said: "In truth, 'Thou wast right.'" The pair were given the choice between punishment in this world or the next. They chose the former and were incarcerated in Bābil, where they have since suffered grievous torments.

A. Geiger has already noted that these elements are in the main also found in a Jewish midrash; and it can now be added that many are found as early as the New Testament (2 *Petr.* ii. 4; *Jude*, v. 6) and the Book of Enoch, in connection with *Genesis* vi. This is clear from the following.

The incident is said to have taken place, according to a Muslim version, "when men were multiplying and sinning". In the same circumstances the sons of God descend to earth in *Genesis* vi.; "and they took to themselves wives". The two angels are called Shamhazai and 'Azai in the midrash. These names are found in a corrupt form even in the book of Enoch. The 'alabi gives the following story: Three angels descended, Hārūt, or عزر, Mārūt or عزرا, and عزريائيل. The latter on the very first day felt himself too weak for earthly temptations and was at his own request again taken up to heaven. According to one version, Hārūt and Mārūt are said to have flown up to heaven at the end of each day; but when they had sinned their wings were disabled. A connected motif is found in the *Schatzhöhle* (ed. Bezold, 68-69), where the sons of Seth are no longer allowed to climb the holy mountain after their sin. It is also stated that the disabled ones begged their contemporary Idrīs to intercede with Allāh for them. According to Kāzwini (ed. Wüstenfeld, i. 61), the derision of men by Hārūt and Mārūt took place while Adam was still alive. As to the woman her name is given as Zuhra, Anāhid (Bāhind) and Bidukht; in the midrash she is called Istehar, in other Jewish legends Na'ma (the lovely); this all points to Venus. According to some, she was an ordinary woman who brought a dispute with her husband before Hārūt and Mārūt, who had to administer justice among men. When they both tried to seduce her, she begged them to act contrary to the divine command and tell her the word of might (in the midrash the name of God) by virtue of which they were able to ascend and descend. When she had learned it, she made use of it; but when she was in heaven, Allāh made her forget it and changed her into a star. Hārūt and Mārūt however remained in Bābil and taught sorcery (cf. Enoch, Chap. 8, 8, 9, 7). It is also related that they were kept imprisoned in a well in Demāwend. Their tortures are painted in vivid colours; they are kept in chains, as is already related of the fallen angels in the Book of Henoch (Chap. 14, c. 69, 28) and in the Jubilees (5, 6). (Cf. also the Syriac Apokalypse of Baruch, ed. Ceriani, p. 152, col. a, ult. = Chap. 56, v. 13). Water

also is held in front of their mouths but they cannot reach it (cf. Tantalus). Mention is even made of several Muslims who have seen them by magic means; the prisoners are said to have rejoiced, when they heard of Muḥammad's coming as the end of their tortures was believed to be at hand.

In a legendary history of Egypt, translated by Wustenfeld in *Orient und Occident* (i. 329) it is related that Hārūt and Mārūt lived in the time of the Egyptian king 'Aryāk.

The names Hārūt and Mārūt are connected by de Lagarde with Haurvātātī and Ameretātī. But it is remarkable that the pair of names shows a strong analogy to other such pairs, found in the Korān, such as Yādūdī and Mādūdī, Tālūt and Djalūt. One of each of these pairs may be traced to pre-Muslim tradition, the other was formed by Muḥammad by altering the first consonant of the former. Mārūt is quite a common Syriac word for power, it possibly contains a remembrance of מַרְוֹת.

On the use of the two names in magic cf. Doutté, *Magie et Religion*, p. 391.

In Persian *hārūt* has become a word for magician.

HASĀ, HASSA. [See AL-AḤSĀ'.]

ḤASAN (A.), beautiful, good; a technical term in the science of Tradition, see above ii. 191b. Cf. also Goldziher, *Vorlesungen über den Islām*, p. 106.

AL-ḤASAN B. 'ABD ALLĀH. [See NĀṢIR AL-DAWLĀ.]

AL-ḤASAN B. ABI 'L-ḤASAN AL-BAṢRĪ, a prominent figure in the first century of the Hīdjra. During the wars of conquest his father was carried off as a slave from Maisān and brought to Medina. There he became a client of the celebrated Zaid b. Thābit [q. v.] and married a client of Umm Salama [q. v.] named Khaira. Ḥasan was born of this marriage in 21 (642). Brought up in Wādī 'l-Kurā, he afterwards settled in Baṣra. There he won a great reputation for strength of character, piety, learning and eloquence. While other men, who were held in great esteem, such as Ibn Sirīn and al-Sha'bi, being questioned on Yazīd's succession did not dare give their opinion, Ḥasan frankly expressed his disapproval. He showed the same freedom of speech in his letters to 'Abd al-Malik and al-Ḥajjāj, so that later authors, like al-Shahrastānī, who thought they detected a leaning towards the doctrine of free will in them, preferred to ascribe them to Wāṣil b. 'Aṭā' [q. v.]. He was considered the equal of his contemporary al-Ḥajjāj as an orator; he was highly esteemed as a transmitter of tradition, because he was believed to have been personally acquainted with 70 of those who took part in the battle of Badr, although his chief authority was Anas b. Mālik [q. v.]. He exercised a lasting influence on the development of Ṣūfism, by his ascetic piety, which shone all the more by contrast, as by his time a worldly spirit had penetrated all classes in Islām. Numerous pious sayings are placed on his lips

and the Ṣūfis see in him a predecessor, whom they quote as often, as do the orthodox Sunnīs. But the Mu'tazila also openly reckon him one of themselves not only because the first representatives of their doctrine, 'Amr b. 'Ubaid and Wāṣil b. 'Aṭā', were among his pupils, but because he himself like them inclined to the doctrine of free will. That Wāṣil b. 'Aṭā' afterwards separated from him, does not alter the case. In this way almost all religious movements within Islām go back to Ḥasan and we cannot be surprised when we are told that, when he died full of honour on the 1st Raddjab 110 = 10th Oct. 728, the whole city of Baṣra attended his obsequies.

Bibliography: *Fihrist*, p. 183; Ibn Khallikān, *Wafayāt*, ed. Wustenfeld, N^o. 155; Ḥamad b. Yahyā, *al-Mu'tazilah*, ed. Arnold, p. 12 sq.; Shahrastānī, *Milal*, ed. Cureton, p. 32; al-Hudjwiri, transl. Nicholson (Gibb Mem., Vol. xvii.), p. 86 sq.; Farīd al-Dīn 'Aṭṭār, *Tadhkirat al-Awliyā'*, ed. Nicholson, i. 24 sq.; v. Kremer, *Geschichte der herrschenden Ideen des Islām*, p. 22 sq., 56 sq.; Horten, *Die philosophischen Systeme*, etc., p. 120 sq.

AL-ḤASAN B. 'ALĪ, the last Zīrid ruler of Mahdiyya (515—543 = 1121—1122—1148—1149). He was still a child when his father 'Alī died and had to leave the administration to his freemen. They were particularly occupied with warding off the attacks of the Normans of Sicily. In 1122 Admiral George of Antioch seized the island of Cossira (Pantellaria) and the castle of Cape Dimas and began to lay siege to Mahdiyya, but was forced to return to his ships after severe fighting in which he lost heavily. In 1135 the Christian fleet again appeared before the Zīrid capital, this time however to protect al-Ḥasan who, being attacked by land and water by the Hammādiids, had appealed for help to Roger II. The Muslim ruler rewarded the Christian sovereign for his assistance by allowing him to impose his authority on the chiefs of the coastlands and making over to him the yield of the customs in his land. A new naval demonstration, made before Mahdiyya by Admiral George of Antioch in 536 = 1141—1142, forced al-Ḥasan to accept the conditions imposed by Roger II, by which he became to some extent his vassal. This humiliation however did not save the Zīrid kingdom. Under pretext of defending the rights of the sons of Yūsuf b. Djamā, lord of Gabes, who had been dispossessed at the request of the inhabitants themselves, Roger II once more sent George of Antioch against Mahdiyya. Abandoned by its ruler and a number of its inhabitants, the town was occupied by the Christians without a blow being struck, at the end of 543 = 1148—1149. Thus spoiled of his lands, for the rest of Ifrīkiya had some years previously cast off the Zīrid yoke, al-Ḥasan took refuge among the Riyāh, then in Bone, and finally at Bougie whose king interned him in Algiers. He lived here till it fell into hands of the Almohads (547 = 1152—1153). He was kindly treated by 'Abd al-Mu'min, to whom he had made his submission and, after Mahdiyya had been regained from the Christians in 555 = 1160, al-Ḥasan returned to his former kingdom as governor. He was later recalled to Morocco by Yūsuf b. 'Abd al-Mu'min and died at Abar Zellū in the province of Temesnā in 563 = 1167—1168.

(G. YVER.)

AL-HASAN B. 'ALĪ B. 'ABĪ 'L-HUSAIN AL-KALBĪ, an Arab general, was sent to Sicily in 948 (336 or the beginning of 337) by the Fātimid caliph al-Manṣūr [q. v.] to put an end to the unrest there, which he did successfully. In Dhu 'l-Hijja 340 (May 952) he won a great victory over the Christians in Calabria, as a result of which the Byzantine Emperor Constantine VII made a truce and allowed the exercise of the Muslim religion in Calabria. Hasan himself then returned to Rhegium and built a great mosque there. Al-Manṣūr however died about this time and Hasan at once went over to Africa leaving his son Abu 'l-Husain Ahmad as his deputy in Sicily. He was confirmed in the office of governor of Sicily by al-Mu'izz, al-Manṣūr's successor, and held the appointment till his death in 354 (965). The rule of the Banū Abu 'l-Husain was firmly established in Sicily by his resolute and energetic action.

Bibliography: Ibn al-Athīr, *Kāmil*, ed. Tornberg, viii. 354 sqq., 371; transl. in Amari, *Bibliotheca arabo-sicula*, i. 419 sqq.; do., *Storia dei Musulmani di Sicilia*, ii. 244 sqq.; Müller, *Der Islam etc.*, ii. 617 sqq.; Vasilev, *Vizantia i Arabi*, ii. 303 sqq.

AL-HASAN B. 'ALĪ B. ABĪ ṬĀLIB, the eldest son of 'Alī and Fāṭima, the daughter of the Prophet. The exact date of his birth (the year 3 or 4?) depends on the date still to be settled of the marriage of his parents. The *Sira* represents him as a particular favourite of his grandfather. An abundant apocryphal literature has grown up around this subject, taken from the domestic life of Muḥammad. Sensuality and a lack of energy and intelligence seem to have been the fundamental features of Hasan's character. After the premature death of Fāṭima, he was not on particularly good terms with his father and brothers. He spent the best part of his youth in making and unmaking marriages; about a hundred are enumerated. These easy morals earned him the title *miṭlāk* 'the divorcer' and involved 'Alī in serious enmities. Hasan moreover proved a thorough spendthrift; he allotted to each of his wives a considerable establishment. We thus see how the money was scattered during the caliphate of 'Alī, already much impoverished. He was present at the battle of Siffin, without taking an active part in it; he took no further interest in public affairs during the lifetime of his father.

After the assassination of 'Alī, Hasan was proclaimed Caliph in the 'Irāk. His partisans tried to persuade him to renew the war against the Syrians. Their importunities upset the plans of the indolent Hasan, and he henceforth thought only of treating with Mu'āwiya. They led to a rupture between himself and the 'Irākis. The latter ended by severely wounding their nominal sovereign. From this time on, Hasan's one idea was to come to an arrangement with the Umayyads. Mu'āwiya left to himself the task of fixing his price for the renunciation of the Caliphate. Besides a pension of two million dirhems for his brother Husain, Hasan asked for himself a sum

of five millions and the revenues of a district in Persia during his lifetime. The 'Irākis later opposed the execution of this last clause. All his demands were granted and the grandson of the Prophet had the impertinence to express publicly his regret that he had not asked for double. He left the 'Irāk amid the jeers of the people to retire to Medina.

There he resumed his life of pleasure and foolish dissipation. Mu'āwiya agreed to pay the expense, only stipulating in return that Hasan should not disturb the peace of the realm. At a meeting at Adhruh [q. v.] he had previously forced him to renew publicly his renunciation of power. Henceforth Mu'āwiya ceased to trouble about him, being reassured by his negligible and indolent personality. Dissension continued to reign among the 'Alids however. Hasan was not on good terms with Husain, while both were in league against Ibn al-Hanafiya [q. v.] and the other children of 'Alī.

Hasan died at Medina of consumption, probably hastened by his excesses. An attempt has been made to throw the responsibility for his end on Mu'āwiya; in addition to the stain, which would thus be thrown upon the Umayyads the object of this charge was to justify the title *Shahīd* (martyr) and "*Saiyid* of the martyrs" given in compliment to Fāṭima's insignificant son. Only Shi'ī writers, or those particularly favourable to the 'Alids dare openly voice such a grave accusation. It at the same time gave an opportunity to implicate the family of Ash'ath b. Kaïs [q. v. i. 481b sq.] detested by the Shi'is on account of his share in the coup of Siffin. Mu'āwiya was not the man to commit an unnecessary crime and the frivolous Hasan had long become quite inoffensive. His life was a burden only on the treasury of the Umayyads, which was beset by his constant appeals. The sigh of relief heaved by Mu'āwiya on hearing of his decease can be readily understood. He probably died in 49 A. H. at the age of about 45. By his death his brother Husain became head of the 'Alids. In the later history of this faction we generally find that the numerous descendants of Hasan have to give way to the more enterprising Husainids. The two families did not agree any better than their ancestors had done.

AL-HASAN B. 'ALĪ. [See AL-'ASKARĪ, IBN MĀ-KULĀ, NIZĀM AL-MULK, AL-UTRUṢH.]

AL-HASAN B. HĀNĪ. [See ABŪ NUWĀS.]

AL-HASAN B. AL-KHAṢĪB, ABŪ BAKR, an important Arab astrologer, of Persian descent, often quoted in astrological works of the Christian middle ages under the name Albubather. He flourished about the middle of the third century A. H., for Ahmad b. Abi Ṭahir Taifūr (died 280 = 893) mentions him in his *Kitāb Baghdād* as a contemporary. A *Liber de Nativitatibus* (beginning:

Dixit Albulather magni Alchasili Aicharsi filius) by him was translated into Latin by a certain Canonici Salio(?) in Padua in 1218 and printed at Venice in 1492 and again in 1501, and in 1540 at Nürnberg. The words Alchasili Alcharsi are very probably corrupted out of Alchasibi Alfarsi, indeed a Munich manuscript has Alchasibi. It has not yet been established with which of the works mentioned by the Arab biographers this is identical; two works *fi 'l-Mawālid* ("on births") which are in the *Escorial* (Casiri, n^o. 935 and 973), ascribed the one to Ibn 'Azrā al-Khaṣībī, and the other ascribed to Ibn al-Khaṣīb al-Kūfī, are perhaps by this astrologer, although the first may be by Abraham b. 'Ezrā.

AL-ḤASAN B. MAḤLAD. [See IBN MAḤLAD.]

AL-ḤASAN B. MUḤAMMAD. [See AL-MUḤALLAB.]

AL-ḤASAN MULĀY ABŪ 'ALĪ AL-ḤASAN B. MUḤAMMAD, Sulṭān of Morocco, fourteenth of the dynasty still ruling there, the Ḥasanī [q. v.] Sherifs of Sidjilmāsa, also called Filālī Sherifs or 'Alawīs.

After the death of his father Muḥammad b. 'Abd al-Raḥmān (18th Radjab 1290 = 12th Sept. 1873) Mūlāy al-Ḥasan was chosen Sulṭān by the most prominent members of the Moroccan court, then in Marrākeṣh. But disturbances at once broke out on all sides; Fās, the capital of northern Morocco, drove out his governor Ḥādīdj Muḥammad al-Madanī Bennis; the people of Azemmūr killed their governor Aḥmad b. Farādīj; Mūlāy 'Abd al-Kabīr b. 'Abd al-Raḥmān, the Sulṭān's uncle, supported by the Berber tribes Banū Mķild, 'Ait Yūsi and Ait Aiyāsh set up as a claimant to the throne and occupied the town of Mekines with the surrounding country. Mūlāy al-Ḥasan then set out on his long series of campaigns to subdue the various rebellious elements in his kingdom. He turned his attention first to Azemmūr, put down the rising and levied a heavy indemnity on the people. He then marched through the Shawīya territory, collected the arrears of taxes and reached Rabāt, one of the three most important cities of northern Morocco, where he met with a friendly reception during a festival. Here he visited the most prominent religious leaders and scholars and made them presents. He also gave considerable sums for the benefit of the public libraries and madrasas. This was a clever stroke of policy, to seek his chief supporters among the Sherifi clergy to which his ancestors had belonged and among the educated citizens.

In the meanwhile his uncle 'Abd al-Kabīr had been surprised and captured among the Ait Yūsi and delivered up to him. The Sulṭān now suppressed the rebellion of the Arab Banū Ḥasan who lived in the plains of the lower Sbū and then made a pilgrimage to the tomb of Idrīs I on Mount Zarhūn. No Moroccan sovereign had previously prepared himself for his campaigns as did Mūlāy al-Ḥasan by visiting the tombs of saints in the great zāwīyas, particularly those

administered by sherifs. The pilgrimages to the great sanctuaries showed his zeal for religion and thus increased his prestige among the fanatical masses and assured him the support of agents, who established peace among the tribes or supplied valuable information. Mūlāy al-Ḥasan for example began his campaigns in Northern Morocco by visiting the tomb of Sidi 'Abd al-Salām b. Mshīsh (1306 = 1888), those against Tadla and the High Atlas by visiting the marabouts of Bu 'l-Dja'd (1307 = 1889), the campaigns against Taflelt by visiting the tombs of his ancestors (1310 = 1892) etc.

But it was almost always force alone that enabled him to win the upper hand over tribes little inclined to submit and objecting to the payment of badly distributed taxes. To collect the taxes and keep the tribes under control, Mūlāy al-Ḥasan's father, Sulṭān Muḥammad, had tried to create an army on modern lines, on the European model. The wars with France (campaign of Isly in 1844) and with Spain (Tetwān war of 1860) had determined him to this measure by showing him the strategic inefficiency of the *Djish* [q. v., i. 1047 sq.] contingents. Mūlāy al-Ḥasan benefitting by his father's efforts further developed them by entrusting the instruction of his troops and the creation of an arsenal to bodies of English, French or Italian officers. The new army, the *'asker* enabled him with the help of the *Djish* to put an end to the interminable rebellions and pursue the collection of taxes. Throughout his reign the Sulṭān never ceased to march his army or *maḥalla* up and down his territory. In his twenty-one years' reign he made over thirty military expeditions, often of long duration. His army used to encamp in a district and, after cutting off numerous heads, eat up the country (to use the Moroccan expression) till the imposts levied had been completely paid. This procedure, more feared than actual battle, soon prevailed with the tribes or towns forced to maintain the Sulṭān's troops during their stay with them.

There were nevertheless times when the Sulṭān's troops were unfortunate. In 1305 (1887) notably, his army under the command of his uncle Mūlāy Sghūr was utterly routed by the marabout 'Alī b. al-Makki Maḥaūsh and the Berbers in the High Atlas. This marabout slew the Sulṭān's uncle with his own hand.

The expeditions against the Banū Snassen in (1291-1292 = 1874-1875), those of the Spaniards in the Rif, the settlement of the English at Cape Juby in 1305 (= 1887) brought the Sulṭān into negotiations with France and other European powers. Numerous embassies were sent to him to seek all sorts of industrial or commercial concessions in Morocco. Resuming the policy of his most illustrious ancestors, but only after a public consultation with the official jurists (1304-1816) on the possibility on religious grounds of commerce with Christians, he increased the number of ports open to commerce and organised the Sherifi customs in them. He thus established a source of revenue more stable and reliable than the razzias on the tribes for the collection of taxes.

This ruler, one of the most remarkable for energy and intelligence that Morocco has known, recalls by more than one side of his character the founder of his dynasty, the great Mūlāy Ismā'il. Like the latter he was a great builder. In Fās he

built a palace imitated, according to Muslim writers, from the Alcazar in Seville. He built roads, bridges etc. He devoted all his care to the development of Muslim teaching.

He never would grant to Europeans industrial concessions as he feared that their influence would thereby find opportunity to penetrate into the interior of Morocco. Jealous of his rights and authority, all reforms, all improvements that he made, were carried out in the name of the Makhzen [q. v.], even those executed by foreign agents. They were thus as transitory in their effects as the persons enforcing them.

Mulāy al-Ḥasan died on Thursday, the 3rd Dhū l-Ḥijja 1311 (9th June 1894), on the way back from a campaign against the Berbers of the High Atlas. He was succeeded by his son, Sulṭān 'Abd al-'Aziz.

(A. COUR.)

AL-ḤASAN B. AL-ṢABBĀḤ, founder of the order of Assassins. According to passages in the *Djāmi' al-Tawārikh*, the *Ta'rikh-i Guzida* and in Mirkhwānd, based on the *Sargudhashht-i Saiyidnā* (cf. i. 491^a) his genealogy was Ḥasan b. 'Alī b. Muḥammad b. Dja'far b. al-Ḥusain b. al-Ṣabbāḥ al-Ḥimyarī. Ḥasan claimed to be descended from the ancient Ḥimyarite kings, but Mirkhwānd quotes on this point a statement of Nizām al-Mulk that the people of Tūs alleged the contrary and said that his ancestors had been peasants in their country. While Ḥasan is said to have further alleged that his father migrated from Kūfa to Ḳum, we find him simply called Rāzī, i. e. native of Raiy, in Ibn al-Athīr. The date of his birth is unknown, but he was still a young man when he was won over for the Fātimid propaganda. The chief Dā'ī in Persia was then Ibn 'Aṭṭāsh; the latter commissioned him in 464 (1072) to go to Cairo to the Fātimid Caliph al-Mustanshir. In 471 = 1078 (Ibn al-Athīr, x. 304, gives the date as 479) he arrived there after first travelling through Persia, Mesopotamia and Syria. In the struggle as to who was to succeed the aged ruler, he took the side of Nizār, while others preferred another of Mustanshir's sons, who actually occupied the Egyptian throne on his father's death under the name al-Musta'li. He then returned to the east and eagerly advocated Nizār's cause in different places. Finally, in 483 (1090-1091), he gained possession of the strong mountain fortress of Alamūt [q. v.] although the stories in the *Sargudhashht-i Saiyidnā* (also in the *Ta'rikh-i Guzida*) on this point are legendary. According to Ibn al-Athīr, x. 216, he was able to win the confidence of the commander, an 'Alid, and then had him seized by his men and taken to Dāmaghān. The same thing happened, although by different means, with other fortresses, probably by Ibn 'Aṭṭāsh's orders, whose son, likewise usually called Ibn 'Aṭṭāsh, himself resided in the fortress of Shāhdiz near Ispahān. As long as the latter lived, Ḥasan played no prominent part, although the famous Saldjūk vizier Nizām al-Mulk had already long suspected him on account of his frequent meetings with Egyptian missionaries. The well-known story of the early friendship of these two men, in which 'Omar-i Khayyām appears as a third, even if, as Browne has shown, it is accepted by Rashid al-Din also, is however a fable. Cf.

Recueil de textes rel. à l'histoire des Seldjucides, ii. Introduction, p. 14, note. To make this dangerous opponent harmless, the Assassins resorted to assassination, a means they were so often to use in the years following. Nizām al-Mulk was to be first to fall, being murdered in 485 (1092). It is probably also in this period that the organisation of the Assassins into a secret society falls; on their organisation and aims, cf. the article ASSASSINS (i. 491 *et seq.*). It has also been pointed out there that conditions were then favourable to them and that it was only after the death of Barkiyārūk, that Sulṭān Muḥammad could seriously think of putting an end to the Assassins' reign of terror. After Shāhdiz has been taken in 500 (1107) and Ibn 'Aṭṭāsh executed, the other robbers' nests fell one by one; and finally Alamūt too. During the siege Muḥammad died (511 = 1118) and his troops as a result ran away; Ḥasan, who after the death of Ibn 'Aṭṭāsh had presumably been recognised as Grand Master of the Assassins, was saved. Seven years later (518 = 1124) he died after arranging that K'āya Buzurg Ummid Rūd-bārī should succeed him.

If Ḥasan is considered the founder of the Assassins, it must not be supposed that the main object of his life was to secure his personal power by planning assassinations; it is not even proved that he recommended or used this detestable means. Assassination had, as is pointed out in the article ASSASSINS (i. 491^a) already for long before Ḥasan's time been commended as a religious duty by the leaders of certain sects, and shortly before Ḥasan's public appearance it had been practised wholesale, notably in Ispahān. Cf. also Ibn al-Athīr, x. 214. Ḥasan's importance lies much rather in the fact that he gave the Assassins' power a central stronghold in Alamūt, so that it maintained itself there even after his death also. He also devoted his activities to authorship and composed several works in Persian, which were all unfortunately destroyed at the capture of Alamūt by the Mongols. The quotations from them given by Shahrastānī and others go no farther than well-known Shī'ī doctrines; the fact expressly emphasised by the authorities that he did not publicly proclaim his teaching to the people, also agrees entirely with the Shī'ī principle of *taḳīya*. He only differed from other Shī'īs in that he recognised Nizār, son of al-Mustanshir, as Imām even after he had been incarcerated by al-Musta'li in 488 (1095). How far he was responsible for the organisation of the sect as a secret society cannot be ascertained from the lack of exact details. That he was held in great reverence by his followers is proved by the title *Saiyidnā*, "our lord", by which he was called by them.

AL-ḤASAN B. SAHL B. 'ABD ALLĀH AL-SARAKHSĪ, one of al-Ma'mūn's governors. Like his brother, al-Faḍl b. Sahl, al-Ḥasan was originally a fire-worshipper; but the two adopted Islām. In 196 = 811-812, when al-Ma'mūn entrusted the administration of the eastern provinces to al-Faḍl with almost unlimited power, he appointed al-Ḥasan minister of finance. After al-

Amin's assassination in 198 = 813, he was appointed governor of Arabia and the 'Irāk through his brother's influence, while the Caliph himself stayed in Merv. But al-Ḥasan, as a Persian, was unable to win the sympathy of the Arab population and trouble soon broke out. An adventurer, named Abu 'l-Sarāyā, appeared in Kūfa in 199 = 815, and allied himself with an 'Alid, Ibn Ṭabāṭabā, whom he persuaded to set up as a pretender. The government troops were defeated; but Ibn Ṭabāṭabā died suddenly and al-Ḥasan turned for help to the tried general Harthama b. A'yan, who blockaded Abu 'l-Sarāyā in Kūfa. When the latter tried to escape he was captured and beheaded in Rabi' I 200 = October 815. Soon, however, the mercenaries of Baghdad mutinied, but had to surrender after three days' fighting; but after the murder of Harthama b. A'yan in Dhu 'l-Ka'da 200 = June 816 the governor of Baghdad, Muhammad b. Abi Khālid joined the rebels and advanced against al-Ḥasan in Wāsit. Muhammad was defeated and died soon after of his wounds. Meanwhile, however, al-Manṣūr, a son of the Caliph al-Mahdī, had been recognised as al-Ma'mūn's representative in Baghdad. His troops were defeated however by Ḥumaid al-Tūsi and, as he drew his adherents mainly from the lowest classes and the town as a result was given over to all possible excesses, the more thoughtful elements of the population sided with Ḥasan and put an end to the rule of the mob. But peace did not last long. When Ma'mūn in Ramaḍān 201 = March 817 proclaimed the 'Alid 'Alī b. Mūsā, called al-Riḍā, as his successor, a rebellion broke out in Baghdad and Ibrāhīm, another son of al-Mahdī, was proclaimed Caliph. In Rujab 202 = February 818 the rebels attacked al-Ḥasan in Wāsit, but were defeated and had to retire to Baghdad. After the murder of his brother al-Faḍl in Sha'bān 202 = Febr. 818, al-Ḥasan became insane. He recovered however and in Ramaḍān 210 = 825-826, his daughter Būrān married al-Ma'mūn. Al-Ḥasan was much esteemed for his liberality to poets and scholars. He died in Sarākhs on the 1st Dhu 'l-Hijja 235 (16th June 850) or 236.

AL-ḤASAN B. USTĀDH HORMUZ ABU 'ALĪ, the son of Abū Dja'far Ustādh Hormuz [q. v. i. 83b], became even in the lifetime of his father leader of the Dailamī troops under Šamsām al-Dawla. After the murder of the latter in 388 (998), Ḥasan entered the service of the Buyid Bahā' al-Dawla, who sent him as governor to Khūzistān in 390 (1000) and gave him the title 'Amid al-Djuyūsh. He later sent him in the same capacity to the 'Irāk and there he waged several wars with his predecessor Abū Dja'far Hadjdjādī, Abū 'l-Abbās b. Wāsil, who had rebelled in the swamp country [see BAṬĪḤA], Badr b. Ḥasanwaih [q. v.] and others. He died before his father at the age of 49 in Baghdad in 401 (1010-1011) and was

entombed in the burying-place of the Kuraish. The famous poet al-Šharif al-Raḍi dedicated an elegy to his memory.

Bibliography: Ibn al-Athīr, *Kāmil*, ed. Tornberg, ix. 67 sqq.

AL-ḤASAN B. YUSUF B. 'ALĪ B. AL-MUTAHHAR AL-ḤILLĪ AL-ŠHĪ'Ī DJAMĀL AL-DĪN ABU 'L-MANŠŪR, known as 'ALLĀM, born 648 (1250) at Hilla, was the greatest Shī'a jurist of his day. He successfully represented the Shī'a sect in a discussion which once took place with the Sunnis in the court of Sulṭān Ghiyāth al-Dīn Uldjaitu Khudābandah Muḥammad (703—716 = 1304—1316) and the Sulṭān was so impressed with his arguments that he adopted the Shī'a doctrines in many respects. He died in Hilla in 726 (1326) and his dead body was taken to Mashhad and buried there.

Muḥammad b. al-Ḥasan al-Ḥurr al-'Āmilī in his work *Amal al-'Āmil*, p. 40, enumerated no less than 67 works of this learned author of which the following may be mentioned: 1. *Kašhf al-Yaḳīn fī Faḍā'il Amir al-Mu'minin*, a short treatise on the excellence of 'Alī b. Abi Ṭālib. 2. *Minhādī al-Šalāh fī 'khtišār al-Miṣbāḥ*, a work on religious duties especially prayer [an abridgment of Abū Muḥammad b. al-Ḥasan b. 'Alī al-Tūsi's (d. 460 = 1068) *Miṣbāḥ al-Mutahadjdjid*]. 3. *Minhādī al-Karāma fī Ma'rīfat al-Imāma*, a vindication of the Shī'a doctrine on the Imāmate. 4. *Minhādī al-Yaḳīn fī Uṣūl al-Dīn*, a treatise on the Fundamental Principles of the Shī'a Creed. 5. *Ma'aridī al-Fahm*, a commentary by the author on his own work *Naẓm al-Barāhīn*. 6. *Nahdī al-Ḥaḳḳ wa Kašhf al-Šidk*, a refutation of the Theology and Legal System of the Sunnis. 7. *Naẓm al-Barāhīn fī Uṣūl al-Dīn*, a work on scholastic theology. 8. *Tadhkirat al-Fuḳahā'* a work on Shī'a jurisprudence in three volumes.

Bibliography: *Muntaḥa 'l-Maḳāl fī Asmā' al-Riḍā'*, p. 105; *Amal al-'Āmil*, p. 40; *Rawḍat al-Djannāt fī Ahwāl al-'Ulamā' wa 'l-Sādāt*, p. 171; Brockelmann, *Gesch. der arab. Litt.* ii. 164. (M. HIDAYET HOSAIN.)

AL-ḤASAN B. ZAID B. ḤASAN, a great-grandson of 'Alī. He was a pious man, who, following the example of his father and grandfather, abandoned all political aspirations and reconciled himself to 'Abbāsīd rule. His daughter became the wife of the Caliph Abū 'l-Abbās, while he himself lived at the Caliph's court, and is even said to have occasionally communicated the views of his 'Alid relatives and their dependants to al-Manṣūr. In 150 = 767 al-Manṣūr made him governor of Medina, but in 155 = 772 he aroused the Caliph's wrath and was dismissed, imprisoned and had his property confiscated. But restitution was made to him by al-Manṣūr's successor, al-Mahdī, who gave him back all that he had lost, after al-Manṣūr's death. He died in 167 = 783 at al-Ḥādjir, while on a pilgrimage to Mecca, and was buried there.

(FR. BUHL.)

AL-ḤASAN B. ZAID B. MUHAMMAD, a great-grandson of the preceding, founder of an 'Alid dynasty in Ṭābaristān. The high-handed and ruthless rule of the Ṭāhirids produced such resentment in this country that a number of men, under the

influence of the strong 'Alid sentiment in these regions, looked around for a man of 'Alī's line to whom they could entrust the government. They therefore turned to Ḥasan who was living in Raiy and had been recommended to them by another 'Alid; the choice proved a fortunate one, for Ḥasan possessed an energy and sturdy resoluteness of purpose rare in an 'Alid. He was summoned to power by a section of the Ṭabaristānis and a number of Dailamī chiefs; he succeeded in defeating the Ṭahirid troops and seizing the town of Amul and Sāriya and, after an unsuccessful attempt, Raiy also. But Ḥasan had to be perpetually on his defence against attacks on all sides and was more than once driven out of the country, on which occasions he found it very useful to have a secure refuge in friendly Dailam. From there he always returned and fortune often favoured him so that in 257 = 871 he was able to take Dīrdjān and in 259 = 873 Kūmis. In this latter year a new and dangerous enemy arose against him in the person of Ya'kūb [q. v.], the "coppersmith", whom Ḥasan, not without humour called al-Sandān, "the anvil". He succeeded in being commissioned by the Caliph to punish the rebellious 'Alid and easily found a *casus belli* when Ḥasan would not deliver up the Sidjīstāni 'Abd Allāh who had sought asylum with him. Ḥasan was not strong enough for so powerful an opponent and was again forced to retire to Dailam but was saved by tremendous rains, which in these lands are particularly dangerous, and brought Ya'kūb to such a plight that he could only get out of the country with great loss. Ḥasan returned and remained for a period unharmed, till in 266 = 880 a Khudjūstāni, named Aḥmad b. 'Abd Allāh, invaded Dīrdjān and conquered a part of it. While Ḥasan was fighting with him there, another 'Alid, in order to have himself proclaimed ruler, spread the news in Ṭabaristān that Ḥasan was slain, but on Ḥasan's return he was defeated and killed. Ḥasan died in 270 = 884 in possession of his territory and his family continued to rule in Ṭabaristān till 316 = 928. Personally he was a deeply religious man with a taste for poetry and the various branches of jurisprudence and allied sciences.

HASAN ABDĀL. A small town situated in the district of Atak (till lately part of Rāwal Pindī) in the Pandjāb. Extensive ruins and Buddhist remains in the neighbourhood were supposed by Cunningham to represent the site of Taxila, but recent discoveries make it probable that Taxila was situated at Kālā Sarāi, more to the East. The sacred spring of Ēlāpatra visited by the Chinese pilgrim Hiouen Tsiang in the 7th cent. A. D. is no doubt identical with the spring at Ḥasan Abdāl now dedicated to the Saint Bābā Walī of Kāndahār. It is full of sacred fish which may not

be killed. This spring according to Hiouen Tsiang was 70 li from Taxila to the northwest. The Sikhs as well as the Muhammadans have a shrine near the spring, named Pandja Šāhib from the supposed impression of the fingers (pandja) of the Guru Nānak on a stone. Here was a halting place of the Mughal Emperors, from Akbar onwards, in their journeys to Kashmīr, and a tomb surrounded by cypresses is assigned by tradition to Lāla Rukh, daughter of Awrangzēb. Akbar followed this route certainly and Dījahāngir on one occasion after arriving at Ḥasan Abdāl turned back to Kalānūr and entered Kashmīr by the Bhimbar route. Bernier's memoirs show that later emperors preferred the Bhimbar and Pir-Pandjāl route. Yet a tomb at Ḥasan Abdāl is by tradition assigned to Lāla-Rukh, daughter of Akbar, who is the heroine of Moore's well-known poem, one of the scenes in which takes place at Ḥasan Abdāl. Descriptions will be found in the travels of Elphinstone, Moorcroft, Burnes and Hügel, and a notice by Cunningham in the *Archaeological Survey of India*. The name Ḥasan Abdāl is undoubtedly, as supposed by Elphinstone, the true name of the Saint now called Bābā Walī, although Cunningham doubted the fact, and said that Bābā Walī was a saint from Kāndahār, while Ḥasan the Abdāl (or religious madman) was a Gūdjār whose tomb was at the foot of the hill. The mention of Bābā Ḥasan Abdāl in the *Ta'rikh-i Ma'sūmī* shows that he was born at Sabzawār and accompanied Shāh Rukh, son of Timūr, to India and afterwards died and was buried near Kāndahār, where his tomb became a place of pilgrimage. Mir Ma'sūm, the author of this history, lived in Akbar's reign and claimed descent from Bābā Ḥasan Abdāl. The town bore his name already in Akbar's time, for the *Ā'in-i Akbarī* records (p. 446, Blochmann's trans.) that Shams al-Dīn built himself a vault there, and that Ḥakīm Abu 'l-Faṭḥ was buried in this vault by Akbar's order, also that Akbar himself visited the tomb on his return journey from Kashmīr.

(London 1839); Moorcroft, *Travels* etc., London 1841; Hügel, *Travels in Kashmīr* etc. (Eng. trans.) (London 1845); Burnes, *Bokhara*, vol. i. (London 1834); Cunningham, *Archaeological Survey of India*, vol. ii. (Simla 1871); Price, *Trans. of Memoirs of Dījahāngir*, p. 137 (London 1829). (M. LONGWORTH DAMES.)

HASAN AGHA, Khalifa of Khair al-Dīn in Algiers. He was born in Sardinia and had been taken prisoner by Khair al-Dīn on a raid and enrolled among his eunuchs. He soon won the confidence of his master who made him *kiaya* (major-domo) and entrusted him with the government of Algiers during his campaign against Tunis [see **KHAIK AL-DĪN**]. When Khair al-Dīn was recalled to Turkey in 1636, he left the government in his hands and Hasan filled his office to the general satisfaction. "To this day", writes Haëdo, "many of those who knew him say that there never was a more just Pasha".

Charles V's attack on Algiers fell within the period of his administration (1541). According to Haëdo, Hasan showed exceptional valour and personally contributed to the defeat of the imperial

troops. According to contemporary historians, on the other hand, Hasan's attitude was rather ambiguous. They say that he had been won over by the proposals of Count d'Alcaudète, governor of Oran, and only the resistance of several generals prevented him handing over the city to Charles V. In any case, after the collapse of the Spanish expedition, Hasan marched against the king of Kūko, who had made an alliance with the Christians, and forced him to pay tribute and deliver up his son as a hostage (1542). According to Haedo, he undertook a campaign to the West to protect the king of Tlemcen against the Spaniards in Oran, but this campaign is rather uncertain. Soon afterwards Hasan fell suddenly into disgrace, retired into private life and died unnoticed in 1549 at the age of 58. He was interred in a *kubba*, which his *kiaya* had built near the Bāb al-Wād and the inscription is preserved in the Algiers Museum. (G. Colin, *Corpus des Inscriptions arabes et turques de l'Algérie, département d'Alger*, Algiers 1900, n^o. 202).

HASAN BABA, Dey of Algiers (1682—1683), usually called Baba Hasan. He was previously a *ra'is* (corsair captain) and took part in the revolution of 1671, which put an end to the rule of the Aghas and replaced it by that of the Deys. As son-in-law of Hādīdj Muhammad, who was the first to fill the office of Dey, he held the actual power in name of his father-in-law. He made many enemies by his arrogance, mistrust, and cruelty but suppressed with a strong arm all attempts at rebellion. In 1680, under the pretext of restoring the order broken by the rivalry of the sons of Murād Bey, he attacked Tunis; in 1681, he fought in the West against Mūlay Ismā'il's troops. When in 1682 Hādīdj Muhammad fled to Tripoli on hearing that the French had sent a fleet against him under Duquesne, Hasan Baba took over the reins of government. During the first bombardment of Algiers (20th Aug.—12th Sept. 1682) he ruled the town with a rod of iron and executed without mercy every one who dared complain or speak of negotiations. In the following year Duquesne again appeared before the city. After several days' bombardment (26th—29th June) the Dey was brought to negotiate with the French admiral. He handed over the chief of the Ra'is, Hādīdj Husain (Mezzo Morto), as hostage and released the Christian prisoners. As an agreement could not be reached regarding the indemnity to be paid to the French, Mezzo Morto was allowed to go on shore, as he said he would hasten the negotiations. Scarcely had he disembarked however when he called the Ra'is together, forced an entrance to the Djenina, had Hasan Baba murdered, and was thereupon elected Dey (22nd July 1683).

HASANBEYZADE, a Turkish historian, son of Küçük Hasanbey, who had been secretary of state (*ra'is al-kuttāb*) during the grand-vizirate of Khādīm Meshī Suleimān Pasha (Dhu 'l-Hidjja 993—25th Rabī' II 994 = 1585), adopted his father's career and took part in the Hungarian campaigns during 1598—1603 as secretary to Serdar Sātūrdji Mehmed Pasha, later as *tedhke-redji* and, after 1601, as *ra'is al-kuttāb* to his successors, the grand-vizier Ibrāhīm Pasha (died 9th Muharram 1010 = 10th July 1601) and Yemishdji Hasan Pasha (dismissed 27th Rabī' II 1012 = 4th Oct. 1603). In 1018 we find him *Anadolu defterdārī* (superintendent of the finance office of Anatolia); according to Hādīdjī Khalifa, *Lex. Bibl.*, N^o. 2160, he died in 1046 (1636-1637). The first part of his history of the house of 'Osmān (*Tārīkh-i Āl-i 'Osmān*), dedicated to Sulṭān Murād IV, is merely an extract from Sa'd al-Dīn's well known *Tādji al-Tawārīkh*; the second part, covering the period from the accession of Suleimān I to the second accession of Muṣṭafā (1032) is in its later sections based on his own researches and is often quoted by the Turkish historians Pečewī, Hādīdjī Khalifa (*Fedhke*) and Na'imā as a valuable authority. Manuscripts of this work are not common (Vienna Library, N^o. 1046—1049, of which 1046 is complete, and 1049 has a continuation down to 1045 A. H.). There is a biography of Hasanbeyzade in Ahmed Resmī's *Sefinet al-Ruṣṣā*, p. 26 sq. (copied word for word by Djemāl al-Dīn, *Ainū-i Zurefā*, p. 21 sq.). (J. H. MORDTMANN.)

HASAN BUZURG, TĀDJ AL-DUNYĀ WA 'L-DĪN B. HUSAIN GURGĀN B. AḤBUKA B. ILKĀN NOYAN, usually called **SHAIKH HASAN**, the founder of the Djalā'irid dynasty in Baghdād after the death of the Ilkhān Abū Sa'īd. He attained a high position while the latter was still alive, as his mother was a daughter of the Ilkhān Arghūn. He was therefore spared when accused, probably falsely, in 732 (1332) of having designs on the life of the Ilkhān Abū Sa'īd and the death sentence was commuted to banishment to Kamakh. In the following year he received the governorship of Asia Minor. After the death of Abū Sa'īd 736 (1335) a struggle for the throne soon broke out; the newly elected Khān Arpa lost his throne and life in battle with 'Alī Pādshāh, governor of Baghdād, who had paid homage to another descendant of Hūlāgū, named Mūsā. **Shaiikh Hasan** then rose against him and put forward another claimant, Muhammad. The two rivals met at Alātāgh near Karadere on the 14th Dhu 'l-Hidjja 736 (24th July 1336); **Shaiikh Hasan** was victorious and made Tabriz his headquarters, while Mūsā retired to Baghdād. But as it was not only a feud between Hasan and Mūsā but between two Mongol tribes, Djalā'ir and Uirat, the Emirs of Khurasān chose a new Khān Togha Timūr, to whom Mūsā submitted. But they were defeated by **Shaiikh Hasan** in a battle near Marāgha in 737 = 1337. Mūsā was taken prisoner and slain. In the meanwhile a new rival to Hasan had appeared in "Little" Hasan (see **HASAN KÜÇÜK**), who won a battle and even succeeded in capturing and putting to death Muhammad, the Khān recognised by **Shaiikh Hasan**. **Shaiikh Hasan** had saved himself in time by fleeing to Tabriz and was able to come to terms with his rival, while he thought to gain new support by paying homage

to Togha-Timur. But when the latter proved unreliable, he looked around for another *roi fainéant* and paid homage to Shāh Djahān Timur, a descendant of Abakā. He then went to Baghdad (740 = 1339-1340) and establishing himself securely there made away with Shāh Djahān Timur and reigned independently till his death in 757 (1356). We cannot here detail the wars which he had still to wage during these years; it is sufficient to remark that he succeeded in maintaining his position and was careful to show his devotion to the 'Alids by restoring the sanctuary at Nedjef. His son Uwais [q. v.] succeeded him.

HASAN ÇELEBI KINĀLĪ-ZĀDE, a famous Ottoman scholar and biographer of poets. Born in 953 (1546-1547) in Brusa, the son of Kīnālī-zāde Mewlānā 'Alī Çelebi b. Emir-Allāh, famous as a poet and scholar, then muderris in the Hamza-Bey-Medrese, Hasan, like his father, devoted himself to the study of law and theology. After an active and honourable career as muderris and kādī in Brusa, Adrianople, Aleppo, Cairo, Gallipoli, Eiyūb and New Zagra, he died kādī of Rosetta in Egypt on the 12th Shawwāl 1012 (14th March 1604).

Hasan Çelebi was, as is the custom with Turkish scholars, also a poet, although only an imitator. He wrote marginal notes on the *Durer we Ghurer* as well as additions and notes on some important theological works and certain other writings. But his great work, which was to bring him lasting fame, is his great collection of 607 biographies of poets, the *Tezkeret al-Shu'arā*, which is dedicated to the historian Khōdjā Sa'd al-Din and was completed in 994 (1586). The work is of inestimable value for its biographical details and the numerous quotations. Of the many Ottoman biographies of poets it is considered the best in spite of its pompous style, its affected bombast and its fondness for anecdotes. Hasan Çelebi discusses the poets from the earliest times under three heads, a) Sultāns, b) princes and c) other poets. His little weakness for enshrining all members of his family in his work as poets is not to be taken too much amiss.

HASAN DIHLAWI, AMĪR NAJDM AL-DĪN, styled the Sa'di of Hindustān (Barani, p. 360), was born in 651 (= 1253) at Dihli, where his father 'Alā al-Din Sistānī, known as 'Alā-i-Sandjari, had settled. Together with his friend, the poet Amir Khusrāw, he spent five years at Multān in the service of Muḥammad Sultān, the eldest son of Ghiyāth al-Din Balban [q. v.] and subsequently

became one of the court-poets of Sultān 'Alā al-Din Khildji (695—715), in honour of whom most of his panegyrics were written. At the age of 53, he became a *murid* of Nizām al-Din Awliya [q. v.], in honour of whom he wrote a *mathnawī*; he also wrote down the saint's discourses from day to day during the years 717—722 and collected them in a work entitled *Fawā'id al-Fiwā'id* (Rieu, p. 972). In 714 (= 1314) he completed his *Diwān*, which is said to contain about 10,000 verses; he also wrote prose works (e. g. *Siyar al-Awliya*), which appear to have been lost. When Muḥammad b. Taghlaq moved the population of Dihli to Dawlatābād Hasan accompanied the Sultān to his new capital and is said to have died there in 727 (= 1327); but the date of his death is variously given by different authorities.

Nassau Lees), p. 711—712; Dawlatshāh, *Tadhkirat al-Shu'arā* (ed. E. G. Browne), v. Index; Rieu, *Cat. Pers. MSS. Brit. Mus.*, p. 618; 'Abd al-Muktadir, *Cat. Pers. MSS. Bankipore*, i. 196—197.

HASAN KÜÇÜK, "little Hasan", so-called to distinguish him from his contemporary and rival *Shaikh* Hasan (cf. HASAN BUZURG, p. 279^b sq.), was a son of Timūrtash b. Čoban [q. v.] and after his father's overthrow remained in hiding in Asia Minor until the struggle for the throne on the death of Abū Sa'īd in 736 (1335) afforded him the opportunity of playing a leading part. He pretended that his father had not perished in Egypt but had escaped from prison and reached Asia Minor again after long wanderings and made a Turkish slave play the part of his father. The members of the once powerful Čobanid family soon gathered round this false Timūrtash and also the Mongol Uirats, who were dissatisfied with the rule of the Djālā'irid *Shaikh* Hasan. He thus became powerful enough to challenge *Shaikh* Hasan and defeated him in 738 (1338) near Nakhdiuwān. But after this victory he nearly fell a victim to his guile, for his pretended father tried to dispose of him by assassination. He escaped however and sought refuge with the princess Satibeg, daughter of the Ilkhān Uldjaitū and widow of Čoban and Arpakhān, whom he now recognised as Khān, at the same time coming to terms with *Shaikh* Hasan and disposing of the false Timūrtash. When *Shaikh* Hasan soon afterwards had homage paid to Togha Timūr, he began to intrigue with the latter also and promised him the hand of the princess Satibeg. Togha Timūr fell into the snare and was at once betrayed by Hasan himself, so that the only course open to him was to fly as swiftly as possible to Khōrasān. But as *Shaikh* Hasan soon found another *roi fainéant* Shāh Djahān Timūr, Hasan Küçük thought to imitate him and paid homage to another Hūlāgid, Sulaimān Khān, to whom he married Satibeg. He next waged war, not unsuccessfully, on *Shaikh* Hasan and Togha Timūr, but was murdered by his own wife 'Izzat Malik on the 27th Radjab 744 (15th Dec. 1343) on a campaign against Baghdād. His place was taken by his brothers Ashraf and Vaghībasti, but they soon quarrelled; Ashraf had his brother slain and ruled alone till his fate overtook him and he met a violent end in 756 (= 1355).

Bibliography: See the article HASAN BUZURG.

HASAN PASHA, Beylerbey of Algiers. He was the son of Khair al-Din [q.v.] and a Moors. His father's influence with the Porte obtained him the office of Pasha of Algiers in 1544 and he was entrusted with the task of restoring Turkish power in western Algeria where it had been considerably weakened. In 1546, Hasan conducted a campaign against the Spaniards in the Tlemcen district, but just as he had come face to face with the Christian troops near Arbal he had to return to Algiers as his father had died. He succeeded him as Beylerbey and soon afterwards undertook a new western campaign, this time against the Moors, who had occupied Tlemcen in 1551. An army composed of Janissaries under the command of Hasan Corso and Kabyls under the Sultān of the Benī 'Abbās (Sultān of Labes in the European authorities) defeated the Moors, followed them up to the Mulūya and regained Tlemcen (1552). During this time Hasan was carrying out important works in Algiers; he increased the fortifications, built the Burdj Mūlāy Hasan (Fort l'Empereur), on the Kudyat al-Šabūn, erected public baths and a hospital for the Janissaries. His hostility to French policy, however, induced the Porte to recall him to Constantinople and replace him by Šalāh Ra'is (1552—1556).

In 1557, he returned to Africa. The disturbances that followed on the death of Šalāh Ra'is, notably the rebellion of Hasan Corso and the murder of Pasha Tekelerli forced the Sultān to send him once more to Algiers as Beylerbey. In the west the Sherif Muḥammad al-Mahdi had taken advantage of this unrest to invade the Tlemcen country again and to occupy the city; in Meshwar alone a Turkish garrison held out under the command of Kā'id Saffa. After Hasan had restored peace in Algiers he took the field against the Moors who vacated Tlemcen on his approach. The Turks pursued them up to the walls of Fās, where they inflicted a disastrous defeat on them. The Beylerbey had however to retire hurriedly lest he should be cut off by the Spaniards in Oran. (1557). When the latter besieged Mostaghanem in the following year, Hasan came to its aid and routed the Spaniards (26th Aug. 1558). The Christians had now to confine themselves to Oran and ceased to be dangerous to the Turks.

Now that Hasan had peace in this direction, he planned the subjection of the Kabyls. In order to be secure against any insubordination among the Janissaries he organised a force of Spanish renegades. By his marriage with the daughter of the Sultān of Kuko he secured the assistance of a number of Kabyl tribes and thereupon undertook a campaign against Aḥmad b. al-Kādi, the chief of the Benī 'Abbās. The latter was beaten and killed in an encounter at the Ka'ā of the Benī 'Abbās. His brother Mokrani continued the war but became a Turkish tributary in 1559.

The intrigues of the Sherifs and the naval preparations of the Spaniards prevented Hasan from completing the subjection of the Kabyls. He therefore resolved to leave the latter opponents alone for the moment. After the destruction of the Spanish fleet under the Duke of Medina Coeli by Piali Pasha at Djerba (15th March 1561) the Beylerbey was able to devote his whole energies to the Moors. He was just about to begin the war

with them when the Janissaries, who were discontented with the creation of new Kabyl troops, seized him and sent him in chains to Constantinople.

It was not difficult for Hasan to clear himself of the charges against him laid before the Porte. He then returned for a third time to Algiers where an envoy of the Sultān had already restored order and executed Agha Hasan, the ringleader of the conspiracy against the Beylerbey. Hasan was now determined to clear the Spaniards out of the country and set about the capture of Oran and Mars al-Kabir. At the head of an army of 30,000 men he began the siege of these two towns, while his fleet blockaded them from the sea (April 1567). After two months of vain essays and repeated assaults, in which the Beylerbey himself risked his life, the arrival of a relieving fleet of Spaniards forced the Turks to retreat. Hasan was not able to resume his plan again. Soon afterwards he had to lead the Algerian galleys to Malta which the Turks were besieging. Here he lost a portion of his ships, but the fighting qualities which he showed on this occasion won him the rank of Kapūdān Pasha (1567). He died in 1570 and was buried beside his father Khair al-Din in Büyük Dere.

(G. YVER.)

HASAN PASHA, known as YEMİSHDJI, (the greengrocer) was a native of Albania and entering the service of the Serai rose from *süflü baltadji* (halberdier) to *kapudji bashi* (chamberlain). His countryman, the grand vizier Sinān Pasha made him an agha of the Janissaries in the beginning of Dhu 'l-Kā'da 1002 (8th July 1594) during the Hungarian war; in Rabi' II 1003 (December 1594), he was dismissed, but reinstated in Shawwāl 1003 (June 1595); in Djumādā I 1004 (January 1596) he became wālī of Shīrwān and on his return from there Wazīr of the Diwān. In this office he carried out the currency reform of Rabi' I 1009. On the 1st Sha'bān 1009 (5th February 1601) he was appointed deputy (*kā'immakām*) for the Grand Vizier Ibrāhīm Pasha during his absence in the field and appointed his successor when Ibrāhīm died on the 9th Muḥarram 1010 (10th July 1601). As Serdār he continued the campaign in Hungary (defeat at Stuhlweissenburg on the 15th Oct. 1601; relief of Kanischa, recapture of Stuhlweissenburg on the 29th August 1602; capture of Pest and siege of Ofen by the Archduke Mathias late in the autumn of 1602) and only returned in January 1603 on hearing of the unrest in the capital caused by the Sipāhis. Although he succeeded in suppressing the riots, he was nevertheless dismissed through the intrigues of his enemies on the 27th Rabi' II

1012 (10th Oct. 1603) and strangled by the Sulṭān's orders on the 12th D̲j̲umādā I (18th Oct.) of the same year.

Bibliography: Biographies in the *Hadīkat al-Wuzerā* of 'Osmān-zāde Tā'ib, p. 50, and in the *Sid̲j̲ill-i 'Osmānī*, ii. 126 sq.; cf. also the pertinent sections in Pečewi, *Hād̲j̲d̲j̲i Khalifa (Fed̲h̲like and Takwīm al-Tawārīkh)*, Na'īmā and von Hammer, *Geschichte des Osmanischen Reiches*, Vol. iv. (J. H. MORDTMANN.)

HASAN PASHA, son of Ḥusain, governor of the Yemen for nearly a quarter of a century, whence he received the name Yemenli, was a native of Albania and held the office of *hastāndjibāshi* in Constantinople when Sulṭān Murād III sent him in D̲j̲umādā I 988 (June 1580) to the Yemen to restore Ottoman prestige in this province, the greater part of which had fallen into the hands of the Zaidī Imām Muṭahhar. In the course of five years he succeeded in subduing the unruly Sherifs partly by force and partly by guile and regained the fortresses which they had seized. To prevent further risings he deported the Āl Muṭahhar to Constantinople at the end of 1584, where they were kept in custody to the end of their lives. In the next few years he subdued a number of smaller strongholds and conquered the Yāfi' and other districts so that by 1591, the land could be considered pacified. Six years later a new and dangerous rebellion broke out among the Zaidis led by the Mahdī al-Kāsim b. Muḥammad; the latter occupied the district of Kaukebān and the fortress of Thulā and was only driven out in 1598 after fierce fighting, but continued to hold out for some years more in Shāhārā. At the end of Red̲j̲eb 1012 (beginning of 1604), Ḥasan Pasha was recalled at this own request and returned to Constantinople. At the end of Šafar 1014 (middle of July 1605) he became governor of Egypt, which post he filled till the end of Muḥarram 1016 (end of May 1607). A few months after his return from there he died in Constantinople on the 9th or 16th Red̲j̲eb 1016 (beginning of November 1607).

HASAN PASHA. [See ŠOKOLLI and DJAZĀ'IRLI HASAN PASHA.]

HASAN PASHA AL-SEIYID, a native of a village in the district of Karahisār-i šarkī, entered the Janissaries, in 1146 attained the rank of *kul-kaya* (lieutenant-general), took part in the Persian campaigns and in the middle of Rabī' I 1151 (beginning of July 1738) during the war with Austria was promoted to be agha of Janissaries. After receiving the rank of pasha of three tails for his bravery in this war, he was appointed Grand Vizier on the 4th Šhābān 1156 (23rd Sept. 1743) in spite of the fact that he could neither read nor write. The continuation of the war with Nādir Shāh, the cessation by the convention of 18th January 1744 of the border warfare with Austria, which had been going on intermittently since the Peace of Belgrade (1739), and various

diplomatic steps, which were instigated by the celebrated adventurer Bonneval Ahmed Pasha [q. v.] with a view to the reception of the Porte into the European Concert, all fell within his period of office. As a result of Serai intrigues he was dismissed on the 22nd Red̲j̲eb 1159 (10th Aug. 1746) and banished to Rhodes. In the following year the governorship of Itschil and a little later that of Diyārbakr was given him, and he died in the latter town at the end of 1161 (1748).

(Biographies); cf. also *Hadīkat [al-D̲j̲ewāmi]*, i. 89, and v. Hammer, *Geschichte des Osmanischen Reiches*, viii. 39, 46—75. (J. H. MORDTMANN.)

HASAN PASHA SHERIF (in Wāṣif, *CELEBI ZĀDE AL-SEIYID HASAN*) was the son of Rusūḳ Celebi al-Hād̲j̲d̲j̲ Suleimān Agha, who is mentioned in the year 1770 as leader of the troops of Rusūḳ, Silistria and Giurgewo in the war against Russia (1769—1774). He himself took part with distinction in the Krim-Khān Gīrāi's raid into the Ukraine in the winter of 1769 which war became celebrated in Baron Tott's description (*Mémoires*, iii. 171—201), as *serden gēdā aghasi* (chief of volunteers). In the course of the campaign he was rewarded for the financial support which he had given the Grand-Vizier Muḥsinzāde by being granted the rank of *kapud̲j̲i bāshi* and on the 23rd D̲j̲umādā II 1187 (11th Aug. 1773) was appointed commander of Rusūḳ with the rank of vizier. After the conclusion of peace (1774) he fell into disgrace, lost the rank of vizier and spent a number of years in exile in Philippopolis and Salonica. After the outbreak of war with Russia at the end of 1201 (autumn 1787) he was again given various military commands on the Danube and, after the death of D̲j̲azā'irli Ḥasan Pasha on the 1st Šhābān 1204 (16th April 1790), he was appointed Grand-Vizier and generalissimo in his place. While his brother Seiyid Meḥammed was able to inflict a considerable reverse on the Austrian and their Russian allies on the 25th Ramaḍān 1204 (8th June 1790), his own campaign against the Russians was most unfortunate; towards the end of the year the latter captured in rapid succession the fortresses of Kilia, Tulča, Isaḳdja and Ismā'il and, as Sherif Ḥasan Pasha had moreover brought suspicion upon himself by all kinds of arbitrary actions and the frankness of his reports, he was surprised in the night of 9th D̲j̲umādā II 1205 (12—17th February 1791) in his quarters in Shumla and shot by the Sulṭān's orders.

HASANĪ, in the plural *Hasanīyūn*, a kind of patronymic, or *nisba* given to the 'Alid [q. v.] Sherifs, descendants of al-Ḥasan son of 'Alī and Faṭima, the daughter of the Prophet Muḥammad. *Hasanī* is used in opposition to *Husainī*, the surname of the Sherifs, who trace their descent from al-Ḥusain the second son of 'Alī and Faṭima.

In Morocco, however, the surname Ḥasanī is particularly applied to the Sherifs descended from Muḥammad al-Nafs al-Zakiya, to distinguish them

from their cousins the Idrisids [q. v.]. These Sherifs, formerly located particularly in the south of Morocco, have played a considerable part in the history of N.-W. Africa. The date and cause of their installation in the country is not known. Legend says that they arrived there at the time of the rise of Marinid dynasty. A number of pious Muslims of Sidjilmāsa, a town in the south of the Great Atlas, returning from the pilgrimage to Mecca are said to have stopped at Yanbu^c, a town on the Arabian coast, to the west of Medina. There they became friendly with a Sherif named al-Ḥasan. Appreciating the spiritual advantages of attending his discourses and the heavenly benefits obtained by his intervention they persuaded him to follow them and settle with them in their own country. This individual was surnamed *al-Dākhil*, i. e. he who introduces his family (into a country). The expectations of the devout Muslims were fulfilled: al-Ḥasan and his sons were a source of blessings to their new country.

At this time the people of the Wādī Dra'a found to their grief that their palms were dying and the fruit would not ripen. It was said to them: "If you bring a Sherif to settle among you as the people of Sidjilmāsa have done, your fruits will undoubtedly be as good as theirs". The people of Dra'a took this advice and brought from Yanbu^c the Sherif Mūlāy Zidān b. Aḥmad, cousin-german of al-Ḥasan al-Dākhil through his father. Al-Ḥasan's descendants spread throughout Tafilelt and formed the stock of 'Alawī Sherifs, so called after their ancestor 'Alī al-Marrākushī. Those of Zidān lived in the Wādī Dra'a and were the ancestors of the Sa'dī Sultāns, so called after an ethnic group, the Banū Sa'd b. Abū Bakr, among whom the sons of Zidān had settled together.

No less turbulent than the Idrisid Sherifs of northern Morocco, the Sherifs of Sidjilmāsa or the Banū Sa'd had frequently quarrels to settle with the Marinids. But being farther from the seat of the central government, behind the formidable natural rampart of the High Atlas, they were more easily able to organise themselves either to render themselves independent or to extend their influence. Supported by solidly constituted Arab groups, aided by the religious faction, controlled entirely by the Sherifs of different origins, the Sa'dīs succeeded in overthrowing the Berber Emir dynasties of Mo-

rocco and in guiding the destinies of the country for over a century (1555—1664). Seven years after their disappearance from the centre of turmoil, about 1671, Mūlāy Ismā'il was the true founder of the Sherifi dynasty which still rules Morocco.

ḤASANWAIH F. AL-ḤUSAIN AL-BARZĪKĀNĪ, a Kurd chief, founder of a dynasty which bears his name, which maintained itself for about half a century. Two other chiefs of his tribe, the brothers Wandād and Ghānim were also particularly distinguished. When Wandād died in 349 = 960-961 he was succeeded by his son 'Abd al-Wahhāb, who had soon to cede his territory to Ḥasanwaih. The power of the latter now increased more and more. His rule extended over a great part of Kurdistan and included the towns of Dīnawar, Hamadhān and Nahawand. Although he forced caravans to pay heavy tribute and made the roads unsafe by his raids, Rukn al-Dawla did not trouble about him, as Ḥasanwaih supported the Dailamīs in their wars against the Khorāsānians. But in Muḥarram 359 = Nov.-Dec. 969 Rukn al-Dawla had finally to send an army under the vizier Ibn al-'Amīd against him. The latter died on the road and his son had to make peace with Ḥasanwaih. After the death of Ḥasanwaih in 369 = 979-980, his son Badr [q.v.] was recognised as governor of Kurdistan by the Būyid 'Aḍud al-Dawla. In 905 = 1014-1015 Badr was murdered and the dynasty of the Ḥasanwaihids disappeared with his grandson Ḳāhīr (Ṭāhīr) b. Hilāl, who succeeded him but was defeated and thrown into prison in the same year by the Būyid Shams al-Dawla.

GENEALOGICAL TABLE.

HASANĪ SHERIFS OF MOROCCO.

HĀSHID and **BAKIL**, a large confederation of tribes in South Arabia. The genealogy of the Hāshid is given by the Arabs of South Arabia at the present day as Hāshid al-Aṣghar b. Djuṣham b. Nawf b. Hāshid al-Akbar b. Djuṣham b. Hamdān. Bakil is held by them to be the son of Hāshid al-Akbar. Their land, called by Niebuhr Balad al-Kabā'il "land of the tribes", lies near Ṣan'ā' [q. v.] and stretches eastwards to Ma'rib [q. v.] and Nadjran [q. v.] and northwards right up to the desert as far as eastwards of Ṣa'da [q. v.].

The Hāshid, who number 22,000 warriors, are divided into three main groups; al-Kharif (with three subdivisions [*thuth*, "third"]: Djubar, Kalbiyin and al-Sayad), Banū Ṣuraim (north of the Khārif, with nine subdivisions [*ts'fe* "ninth"] including Khamr) and al-Usaimāt (Usamed in Niebuhr) to the north of the latter up to two days' journey from Ṣa'da with three subdivisions, including the 'Usaimāt al-Watā'. At the present day the Beled Hamdān (north of Ṣan'ā') and Sanhān (s. w. of Ṣan'ā') are also reckoned to the Hāshid.

The following are included in the lands of the Hāshid, the Kā'a Shams, Kā'a Hais (with an ancient cistern and Himyarite cemetery), and the Kā'a al-Bawn (parts of the Wādī Hirrān), Djebel Dhi Bin (Debin in Niebuhr), with the Wādī of the same name (a tributary of the Wādī Shuwāba [Hirrān]), the villages of Hūt, Araḳet (in Sayad), Khamr (an ancient Himyarite town, according to Hamdāni, the birth-place of As'ad Tubba'), the ruins of Tafār (on the north bank of the Wādī Shuwāba with mosque and tomb of a saint. Near the Bawn at Djebel Tanlin (*Thalin* in *al-Ikhl* of Hamdāni), on the northern peak of which is a very ancient Himyarite mausoleum (with many inscriptions), the tomb of the saint Khālid, to which the Hāshid still bring offerings, lies the famous ruin of Nā'it (Nā'at, ناعيت) of the South Arabian inscriptions, formerly with 20 palaces, among them Dhū La'wa), which Hamdāni calls the most splendid that he had ever seen.

The Hāshid have a bad name throughout South Arabia. The explorer E. Glaser, who visited their territory, on the other hand describes them as frank and kindly in their nature. Unlike the Bakil there is a certain tribal spirit among them and many gifted poets are still to be found among them, whose productions are not inferior to those of a Neshwān.

The Bakil (بكيل) of the South Arabian inscriptions), who live to the east of the lands of the Hāshid, include the following tribes: Bal-Hārith [q. v.], Bilād al-Bustān (between the Ḥaḍir Shu'aib and Hamdān [s. HADUR]), Khawlān [q. v.], Djabr, Arḥab (north of the Bal-Hārith), Nihm (Nehm, east of Arḥab), 'Ayāl Ṣorēh (Ṣoraiḥ, west of Arḥab), al-Djāwf [q. v.], Nawf, Dhū Muḥammad (in Niebuhr Dōm Muḥammed), Dhū Ḥusain, Sufyān, Murhiba (Merhebe, the two latter north of Arḥab), Wādī'a (Wada'a, Wadey in Niebuhr, north of Nadjran), Hamdān (different from that at Ṣan'ā'), 'Ayāl Sālim, Wa'ila, 'Amāliṣa and Ahl Ammār (perhaps identical with the Āl-Amaar, which Miles [in a letter to Sprenger] mentions among the tribes of the Wādī Dawāsir). Ṣan'ā' itself was at one time considered to belong to the Bakil. The Bakil are said to number 80,000 warriors.

Of the tribes mentioned we have detailed accounts in modern times of the Arḥab whose land

was visited and explored by Glaser in 1885. It is a small territory but rich in ancient monuments. It is bounded on the south by the Balhārith, on the east by the Nihm, on the north by the Sufyān, Murhiba and Hāshid (al-Kharif, the subdivisions Djubar and Sayad) and in the west by the 'Ayāl Ṣorēh and Hamdān. It is divided into two main groups, Zuhair (with five subdivisions) and Dhaibān (in Niebuhr Daifan) with Hīsān (with seven subdivisions, among them the Ahl Maṣṣūr and Ḥakam). In the land of the Zuhair are the following places, Djirbet, Shassarim, Zabbād (with Himyarite ruins, often mentioned in South Arabian inscriptions), Ṣirwāh (different from that near Ma'rib [q. v.], rich in ruins; in this district at the so-called Ḥaḍjar [stone of] Arḥab, the Arḥab hold their assemblies on important occasions), Khubba (with the ruins of al-Medinetān and Ḥiṣn Sanad, near the basalt cone of Ḍurb), the famous village of Madar (south of Ṣirwāh), Shira', Iara-fāt, Bait Marrān, Shāhir, Bawsan, and Raḍjaw. In the land of the Dhaibān lie the famous ruins of Itwa (Etwa) and Riyām; in Hīsān is the large village of Hizam (with the tribe of the same name). Among the wādis in the land of the Arḥab may be mentioned the great Wādī Khārid. The plateau of Arḥab is volcanic in character. The west of the land is studded with basalt cones like the land of the Hamdān and Ayāl Ṣorēh.

Like the other once flourishing lands of the Hāshid and Bakil, Arḥab is now poverty-stricken and deserted; in the lower parts poor crops of cereals (wheat and barley) are found, in the higher, perhaps dhura (a kind of millet). The once splendid vinegroves of this district have long since been utterly ruined. In Hamdān's time Arḥab was famous for an excellent breed of cattle.

The Hāshid and Bakil belong to the Zaidī sect and are mostly independent (only the Balhārith, Bilād al-Bustān, Khawlān and Ayāl Ṣorēh are under Turkish suzerainty). On account of the increasing impoverishment of their lands many of the Hāshid and Bakil have been forced to leave their territory; we thus find Hāshid in the district of Djebel Bura' (in the south of Kuḥriya land [q. v.]) and Dhū Muḥammad in the land of Ta'izz [q. v.]. They usually enter the armies of the neighbouring rulers (the Imām of Ṣan'ā', and the Sharif of Mecca). Even in India they are sought as mercenaries.

During Glaser's stay in Ṣan'ā' in 1885, a fierce war was raging between the Bakil and the Hāshid. The feud was caused by the Bakil (Sufyān) who carried off two women of the Hāshid, whereupon the latter began massacres in the villages of the Sufyān in Khawlān. The settlement of the dispute was conducted by the governor-general of Ṣan'ā', 'Izzet Pasha, who thereby won a certain influence over these tribes.

Hamdāni in his *Djāzira* gives us a detailed account of the Hāshid and Bakil. He mentions the most of the above-named tribes. In his time they inhabited the same districts as at the present day. They lived in the "Balad Hamdān" [q. v.], which was divided into two parts, the east belonging to the Bakil and the west to the Hāshid; in the lands of the Bakil there were a certain number of Hāshid and vice versa.

In Hamdāni's time the land of the Hāshid included Ruḥāla (chiefly inhabited by the Wādī'a),

the great plain of al-Bawn (in common with the Bakīl, with the villages of Raida [with the citadel of Talfum], Hamuda, 'Athār, al-Ghail, Kā'a, Urhuk, Zibra, the latter belonging to the Hātib of al-Khārif), the two ruins of Itwa and Riyām, Ukānīṭ (אִכְנִיט of the inscriptions, a large town, in common with the Bakīl), the ruin of Madar (Madr, in common with the Bakīl and Yām), Athāfīt (called Durnā in the Djāhiliya; here the poet al-A'shā of Hamdān used to live during the date-harvest), the Balad al-Ṣayad (with al-Khashab, Dhū

Bin [דְּבִין of the inscriptions], Yanā'a or Yunā'a, al-Khārif (חֲרִיפ) of the inscriptions, with the market Hamal or Humil dating from heathen times and the villages of 'Aṣumān and al-Huṣr or al-Huṣar, the Balad Wādī'a (with Sanām, Humdān, [so *Djaṣira*, p. 112, 6, the index on the other hand has Hamudān, Ṭamu'), Hind and Hunaida, Balad Khaiwān (the largest district of the Hāshid, the east was inhabited by the Bakīl), Khamir, Lā'a (the beginning of the Hāshid in the south, with the two mountains Aknāf [between the Wādī Lā'a and Wādī Sudud] and Ahzum or Ahzam and the villages of Tais, Nuḍār, Shāhidh, al-Bakir, the markets of Ṭamām and al-'Ariḳa), Balad Ḥadjūr (with 40,000 inhabitants; with the villages of al-Djuraib [large market for Tihāma, Mecca, and all Hamdān, which used to be visited by 20,000], Suḥaib, Ḥairān and Djadlān), 'Uḍhar Shā'b, Hinwam (a very fertile district, rich in palms and honey; was inhabited by the brave and distinguished clan of al-Ahnūm, which numbered 5000 warriors), the two fortified hills of 'Aishān and Shuhāra or Shāhāra, with the precious stone called Sa'wānī, after Wādī Sa'wān near Ṣan'ā [a black stone with white veins], the Djebel Ḥadīdja, Mawtak and the great mountain Sharaḥ (lower part) the markets of al-Kalābidj, Bārā (both belonging to the Djahar), Ṣāfir, al-Fāḳi'a, Kuṭāba.

The lands of the Bakīl included: al-Ṣama', Ḥadaḳān (both in the west of the Raḥba of Ṣan'ā), Maṭira 'Uḍhar or 'Uḍhar Maṭira (with numerous wādīs, which flow into the Khārid, and with many cornfields and vineyards), the Djebel Dhaibān, rich in vines (inhabited by the brave and distinguished group of tribes Dhaibān b. 'Alīyān), Ḥarib al-Raḍrād (with silver-mines; on the boundary between the Nihm, Murhība, Ballarīth and Upper Khaw-lān), the Wādī Maḥṣam (inhabited by the Murhība and Nihm), the Upper Djawf (with the villages of Shuwāba, Hīrān [on the tributaries of the Khārid of the same name], Ṣawlān, the Djebel Warwar (with market), which belong to the Sufyān b. Ar-ḥab), al-Sabī', the villages between Khaiwān and Sa'da (including al-Khadniya, 'Iyān, Birkān or Barkān), the Balad Shākir h. Bakīl (with the great mountain of Baraṭ [with a very healthy climate, rich in cornfields, inhabited by the clan Duhma, presumably the Duhheme or Dōm Mūsā of Niebuhr], Djadira, Ṭulāḥ [Ṭulāḥ]; the Wādīs of this Balad, which flow to the Ghā'it, Djawf and Nadj-rān, were rich in wild asses), al-Ḥaḍan, (inhabited by the Wā'ila b. Shākir). Markets of the Bakīl were the Warwar already mentioned, Ghuraḳ and Raida (the latter in the land of the Hāshid).

According to Yāḳūt, a very poisonous plant grows in the land of the Hāshid and Bakīl, which is known only to them and is found nowhere else. The Hāshid and Bakīl therefore guard it carefully and use it very sparingly, as the Egyptians do with

the plants from which they press balsam. Several kings of the Banū Nadjāh died of this poison.

Sprenger, *Die alte Geographie Arabiens*, p. 158-159, 179-180, 305; E. Glaser, *Meine Reise durch Arabien und Hāshid in A. Petermanns Mitteilungen*, xxx. [1884], p. 170-183, 204-213, and xxxii. [1886], Table I. (J. SCHLEIFER.)

HĀSHIM B. 'ABD AL-MANĀF, ancestor of the Hāshimids. The tradition that Muḥammad belonged to this family is confirmed by several ancient poems e.g. A'shā in Ibn Hishām, p. 256, 1, who calls Muḥammad Hāshim's son, cf. also p. 633, 18; 799, 13. But whether Hāshim really was 'Abd al-Muṭṭalib's father and Muḥammad's grandfather, as tradition avers, is by no means so certain, as the association of the Banū Hāshim with the Banū Muṭṭalib, *ibid.* p. 536, 14, or the enumeration of the Meccan families in Ḥassān b. Thābit (*Kāmil*, p. 141, sq.) do not exactly corroborate it. In any case, all that the Arabs tell of his life is mere legend. He is said to have supervised the provision of water for the pilgrims and to have been a merchant honoured alike by the Emperor and the Nadjāshī, who first instituted the two annual caravans of the Meccans. He received his name because he had broken (*hashama*) bread for the hungry during a famine. His wife Salmā bint 'Amr belonged to the Khazradj family of al-Nadjdjār, but this is probably one of the many fictions of the Mcdinese to make their relationship with the Prophet tenable (cf. the articles AMINA and 'ABD AL-MUṬṬALIB). According to tradition, Hāshim died in Ghazza [q. v.] and was buried there.

Bibliography: Ibn Hishām, p. 68 sq., Ṭabari, *Annales*, ed. de Goeje, i. 1082-1084, 1088-1091; Ibn Sa'd, ed. Sachau, i. 1, 43-47; Caussin de Perceval, *Essai sur l'histoire des Arabes*, i. 256 sq.; Wüstenfeld, *Zeitschr. d. Deutsch. Morgenl. Ges.*, vii. 28-31; Caetani, *Annali dell' Islam*, i. 109 sq. (FR. BUHL)

HĀSHIYA (A.) 1. is identical with HĀSHW [q. v.] in its third, fourth and fifth senses; 2. the margin of a page: hence a marginal note, a supercommentary upon a commentary (SHARḤ, q. v.) upon a text (MATN, q. v.). The whole text is comprised in the *sharḥ*, but only a word or two in the *hāshiya*, though the latter may be more extensive than the original text. For other meanings of *hāshiya* see Lane, *Lexicon*, and Dozy, *Supplément*.

(T. II. WEIR.)
HĀSHMET, an Ottoman poet, son of the Kādī-Asker 'Abbās Efendi, a contemporary and favourite of Rāghib Pasha. He chose a career in law and theology. But before he had passed through the various grades of the Muderisat, he was banished to Brusa with the poet Nevres Efendi for his satirical verses in 1175 (1761-1762) and afterwards alone to Rhodes, where he died in 1182 (1768-1769) and was buried beside Murād Ra'īs. Hāshmet was as good a marksman and swords-

man as he was an excellent poet. His great strength lies in ingenious imitations and adaptations to the ideas and language of his predecessors, not in original works. In him the characteristic feature of Ottoman poetry in general, great skill in imitation, (a parasitical kind of poesy, flourishing only on a foreign growth of assumed reputation), became a veritable genius for adaptation. In his *ḡasidas* he imitates Nāfi, in his *ghazels* a number of poets. He is only entitled to a modest place as an original poet, which he also tried to be. A vigorous and robust tone marks his more independent poems. The boldness with which he attacks his highly-placed enemies is striking.

His *Dīwān* was not published by himself but by the Brusa scholar, Seiyyid Mehmed Sa'īd Imām-zāde, with a laudatory preface from the latter's pen in 1180 (1766-1767). It was printed in four parts at Būlāk in 1257 (1841). Of his prose works there have survived: *Intisāb al-mulūk* (The Service of the Kings), a vision which Hashmet professes to have had on the accession of Muṣṭafā III; a *Sūz-nāme* or *Wilāyet-nāme*, the description of the festivities on the occasion of the birth of the princess Heibet Allāh 1172 (1359); the *Sened al-Shu'arā'*, a work dedicated to Raghib Paṣḥa and accompanied by a metrical introduction by him; lastly the explanation of a sūra of the Qur'ān and of the Hādiths transmitted in metrical form.

Bibliography: M. Nāḡī, *Esūmi* (1308), p. 121; Thureiya, *Sidḡill-i 'Othmānī* (1311), ii. 233; Hammer, *Geschichte der Osmanischen Dichtkunst*, ii. 322; Gibb, *A History of Ottoman Poetry*, iv. 140-150; Rieu, *Catalogue*, p. 204. (THEODOR MENZEL.)

HASHR (A.), assembly, particularly that on the day of resurrection (*yaum al-Ḥaṣhr*). Cf. the article KĪYĀMA. — Title of Sūra lix.

HASHW, the stuffing of a pillow, cushion, vegetable, etc. Hence: 1. 'Medial'. You say "Its alif has become medial (*hashwan*)". 2. A relative clause. Sibawaihi calls a *ḡila* a *hashw* (*Mufaṣṣal*, ed. Broch, p. 57). 3. A parenthesis, with which nothing in the sentence is syntactically connected, synonymous with *īḥirād* (Hāriri, *Maḡāmāt*, ed. De Sacy, p. 85, 86). 4. A redundancy or tautology or otiose expression, as *Sudd' al-ra's* (headache of the head). It differs from *ta'kid* in that the latter always serves to remove a doubt (Hāriri, *loc. cit.*). 5. In prosody, the portion of either hemistich of a verse between the first and the last foot. (Freytag, *Darstellung der arabischen Verskunst*, p. 119, 346, 327). A verse consisting of the foot *mafā'ilun* repeated four times would have no *hashw*.

Bibliography: Sprenger and Lees, *Dictionary of Technical Terms*, Pt. i. p. 395 sq.; Djurdjāni, *Ta'rifāt*, ed. Flügel, p. 31 and 92. (T. H. WEIR.)

HASHWIYA, also **HASHAWIYA** or **AHL AL-HASHW**, a contemptuous term for those among the men of Tradition (*Aṣḡāb al-Hādith*, q. v.), who recognised the coarsely anthropomorphic traditions as genuine, without criticism and even with a kind of preference, and interpreted them literally. A few names of individuals who made themselves notorious in this way and who belonged neither to the Karrāmiya nor to those *Shī'is* who did the same, are mentioned by al-Shahrastāni, ed. Cureton, p. 77. The Sālīmiya also (cf. Goldziher in *Zeitschr. der Deutsch. Mor-*

genl. Gesells., Ixi., 79) are among them. The Mu'tazila scorned the whole of the *Aṣḡāb al-Hādith* as *Hashwiya* because they tolerated anthropomorphic expressions, although without the lack of good taste of the *Ihashwiya* proper and often with the retention of the "how" (*bilā kaifa*).

Bibliography: Van Vloten in *Actes du 11^e Congrès international des Oriental.*, 3^e Session, p. 99 sq.; M. Th. Houtsma in *Zeitschr. für Assyriologie*, xxvi. 196 sqq. (where further references are given).

HĀSIK (HASEK), a town in the Mahra country [q. v.], east of Mirbāt [q. v.] in 17° 21' N. Lat. and 55° 23' E. Long., at the foot of the high mountain of Nūs (Lūs), the *Ἀσίκων* of the *Periplus Maris Erythraei*. Before the town lies the "bay of herbs" (Djūn al-Ihashish), the bay of Hāsik (Ra's Hāsik), also called Kurya and Murya Bay after the two islands lying opposite (Kharyān and Maryān in Idrisi). Idrisi describes Hāsik as a small fortified town four days cast of Mirbāt, with many inhabitants, who are fishermen. Ibn Baṭṭūṭa landed here on his way through to 'Omān and found the houses built of fishbones with roofs of camelskins. In Ibn Baṭṭūṭa's and Idrisi's time there was great intercourse between Hāsik and the island of Soḡotrā [q. v.] to the south. The frankincense, which was produced in the Mahra country, was exported through Hāsik. The town is now quite ruined. It is called Sūk Hāsik and is inhabited by the Korah (or Ḳorah) and other tribes of the frankincense country.

Opposite Hāsik, according to Miles about 20 miles from the coast, lie the "seven isles of Zenobia" (the *ἑπτὰ νῆσοι, αἱ Ζηνοβίου λεγόμεναι* of the *Periplus*), the Kharyān and Maryān group of Idrisi, called the *Djazā'ir* Ibn Khalfān, after a prominent Mahri family, by the Arabs of the south coast. The most westerly of the islands and the one nearest the coast bears the name Hāsiki or Hāsikiya i. e. the island belonging to Hāsik (the Portuguese, who visited this island in 1888, called it Hezquie). Like the most easterly of the islands, Kibliya, it is covered by a large number of peaked hills mainly composed of red and streaked granite and inhabited by pelicans and diving birds. Hulton, who visited the islands in 1836, found only one of them, Hallaniya, inhabited by men, twenty-three ichthyophagi. He found that their language resembled that of Soḡotrā. The huts in which they lived consisted of loose stones above which were laid fishbones covered with seaweed. They belonged to the Bait (Banū) Djanaba (Djenabi = *Ζηνοβίος* of the *Periplus*) to the same tribe as lived on the coast between Hāsik and Ra's al-Hadd. Their ancestors are said to have migrated hither several centuries ago, after being driven from Hāsik and Mirbāt as a result of feuds with their neighbours. Ptolemy and Pliny call the people of these islands *Ἀσικῖται* or Ascitae, a name doubtless connected with Hāsik, although the ancients connected this name with *ἀσκάς* "wine-skin".

HĀSSĀN B. MĀLIK, grandson of the Kalbī chief Bahdal b. Unaif [q. v.] and uncle of the Caliph Yazīd I. These qualifications as well as the prestige of his family and of the powerful tribe of Kalb procured him in the reigns of Mu'āwīya and Yazīd the post of governor of Palestine and the Jordan territory. He had previously distinguished himself in battle in the Syrian army at Šiffin. He then accompanied the young Yazīd, when the latter went to Damascus to ascend the Caliph's throne. During the reign of his nephew he was the most influential person at court. On Yazīd's sudden death and the succession soon after of Mu'āwīya II, his grand-nephew, Ibn Bahdal — as he was usually called — became governor of the Djund of Jordan, the only one which, through his intervention, had remained faithful to the Omayyad cause. He now advanced against Damascus to be able to follow events on the scene and to champion the interests of the younger sons of the Caliph Yazīd, who had been entrusted to his guardianship. He took up his abode with them in Djabīya. From here he is said, by a series of clever manoeuvres, to have succeeded in unmasking Dahhāk b. Kais [q. v.] who was a traitor to the Omayyad cause. Another story however, given by Ibn Sa'd, ascribes this diplomatic success with more justice — as Fr. Buhl has shown — to the able 'Ubad Allāh, son of Ziyād. The latter also persuaded Marwān b. al-Ḥakam to come forward as a claimant to the vacant throne. When Ḥassān took up the candidature of his grandnephew Khalid b. Yazīd, the Omayyads and their supporters were forced to come to him at Djabīya. There an assembly was held under the presidency of the Kalbī chief [cf. DĪJĀBIYA, i. 988 sq.].

After 40 days' negotiations Marwān b. al-Ḥakam was chosen Caliph. But before Ibn Bahdal recognised him, he extorted his consent to the succession of the young Khālīd after Marwān's death, important privileges for his tribe, and the confirmation of all the privileges which his family had enjoyed under the Sufyānids. Henceforth his influence began to decline. When Marwān died, he is said to have pledged him to recognise 'Abd al-Malik as his successor. On 'Amr al-Ashdaq's [q. v.] rebellion, Ḥassān took 'Abd al-Malik's side and was among the Omayyads at the murder of this rebel. After this event the name of this Kalbī chief, who had held the fortunes of the Omayyad dynasty in his hand for a long period, is no longer mentioned.

HĀSSĀN B. AL-NU'MĀN AL-ḤASSĀNĪ, governor of Ifrīkiya. After Zuhair's departure (which is not to be explained by the religious scruples to which it is usually attributed), and his defeat and death at Barqa, Ifrīkiya remained without a governor, the Caliph 'Abd al-Malik being wholly occupied with his struggle with Ibn

Zuhair. On the conclusion of this war Ḥassān was sent to Ifrīkiya to pacify or rather to reconquer it. He first of all attacked Carthage, which still belonged to the Byzantines. The city was taken by storm but a number of the inhabitants were able to escape to Sicily. The fall of Carthage produced great consternation at the court of Constantinople. The emperor Leontios equipped a fleet, which appeared before Carthage under the patrician Johannes in 697. Ḥassān could not oppose it; he had just been beaten on the banks of the Wādī Nīnī by the Berbers, who had risen under the prophetess celebrated under the Arabic name of Kāhina [q. v.] and were cooperating with the Greeks. Ḥassān and the few of his followers who had survived the disaster were haid pressed to Gabes and did not stop till they reached Barqa. There he awaited help from the Caliph. In 698 Carthage was besieged by the Muslims from land and sea and again taken and the patrician Johannes returned to the east with the remnants of his fleet. Ḥassān conquered all the fortresses in Ifrīkiya occupied by the Greeks and then took the field against Kāhina. As usual the Berbers after their first success had been unable to agree among themselves; the heroine was thus defeated by treachery and killed in Awrās at a well which afterwards bore her name (according to others at Tabacco). Ḥassān was next proceeding to levy *kharaḍj* on the whole of the conquered country when he was suddenly dismissed by 'Abd al-'Azīz, the governor of Egypt, and deprived of all his estates. He died in 80 (699-700). The chronology of his campaigns against Carthage and the Berbers was uncertain even by al-'Idhārī's time; here that of Diehl is followed.

HĀSSĀN B. THĀBIT of the tribe of al-Khazraj both on his father's and mother's side, was born at Madīna about the year 563, being thus some seven or eight years older than Muḥammad. He was the most eminent city poet of his age. He attached himself as court poet to the kings of Ḥassān at Dhillik, the sons and grandsons of al-Ḥārith al-A'rajī. Here he met with al-Nābigha and 'Alkama, and for his panegyric upon 'Amr, recited in their presence, was rewarded with a pension. This did not prevent him from visiting al-Nu'mān Abū Kābūs of al-Ilīra. The visit aroused

the jealousy of the Ḥassānid, but Ḥassān succeeded in allaying his suspicions. On the return of al-Nābigha to the favour of al-Nu'mān, Ḥassān prudently withdrew. At the fair of 'Ukāz his claim to preeminence had been rejected by his Badawī rival, and his inferiority demonstrated. He is said to have been about sixty years of age when he deemed it prudent to throw in his lot with Muḥammad, who was fast winning his way to the front. This did not alienate the friendship of the Ḥassānids, though Ḥassān, in view of Muḥammad's raids, did not deem it prudent to visit his old friends. To Muḥammad the services of Ḥassān were invaluable in replying to the lampoons of the unbelieving poets; and the Prophet showed his appreciation of them by presenting him with an estate and the Egyptian slave Sirīn, sister of Mary the Copt, and even forgave the part he played in the matter of 'Ā'isha and Ṣafwān. His most notable service to Islām was perhaps the conversion of Tamīm, whose champions he worsted in a contest of verse. He survived not only Muḥammad but also Abū Bakr and 'Umar, upon all of whom he has some fine elegies; but he was especially devoted to 'Uthmān, who had lived in his brother's house in Madīna after the Hidjra [q. v.], and the guilt of whose murder he laid at the door of 'Alī. He is said to have died at the age of 120 years: his family became extinct.

Ḥassān was the founder of the religious poetry of Islām. His verses abound with Kur'ānic phrases, but they are also full of the boasting (*fakhr*) of the Ignorance. His forte, however, was satire and scurrility. It was these qualities which made him a useful instrument to Muḥammad. To European taste his poetry is preferable to that of the desert poets; but its chief value is as a source for the history of Islām.

Bibliography: *Dīwān*, Tunis 1864, Bombay 1865, Leyden 1910 (ed. by Hartwig Hirschfeld, Gibb Memorial Series); Ibn Hishām, cd. Wüstefeld, by index. (T. H. WEIR.)

ḤATĪF (A.) means one who cries out, summons, proclaims, with a voice harsh, high, strong. The root is also used to express the ringing sound of a bow, the yearning of a pigeon, a moaning wind, rolling thunder. For these forces see *Lisān*, xi. 259, but *ḥatūf* in the sense "thunder-cloud" is found only in *Asās al-Balāgha* and connects with the modern Arabian use of *ḥattāfī* in the sense "steady rain" (Socin, *Diwan aus Centralarabien*, i. 188, l. 11). More narrowly it is used to describe a voice which comes, while the speaker remains invisible, bringing mysterious information, or warning, or summoning, or inspiring with poetry. The last is common in Persian, e. g. in Nizāmī, see W. Bacher, *Nizāmī's Leben u. Werke*, p. 11, note 12, p. 41, note 5. It brings tidings of death (*Aghānī*, xxi. 126, l. 2); is heard in connection with a family of *kāhins* (*Aghānī*, xv, 76, l. 28); by it a serpent-*djinnī* (*shudjā'*) shows its gratitude (*Aghānī*, xix. 86, l. 2). It is thus a method by which the *djinn* manifest themselves, and may be contrasted with the *ṭā'if* or *ṭā'if al-khayāl*, which is seen, while the *ḥatīf* is only heard, and which had apparently satanic associations (*Aghānī*, vii. 131, last l., and Lane, *Lexicon*, 1905-1906a). Yet in *Aghānī* xiii. 65, l. 16, a *ṭā'if* is heard but not seen. The narrative in *Aghānī*, vii. 131, of how a *ḥatīf* brought to Buthaina news of the death of Djāmīl is de-

tailed and psychologically very suggestive. As an auditory hallucination, veridical or otherwise, it could easily be paralleled in Gurney and Myers' *Phantasms of the Living* (also *Encycl. Brit.*, xii. 862) and explained on their hypothesis. But for the *ḥatīf* other words were quite commonly used in older Arabic (*munādi*, *ṣā'ih*, *dā'i*) and so, while the phenomenon is closely parallel to the Hebrew *Bath Kōl*. (cf. *Bat kol* in *Jewish Encycl.*, ii. 588 sqq.) the word *ḥatīf* is only one descriptive among others and not a specific name. Goldziher (*Arabische Philologie*, i. 210 sqq.) distinguishes the more frequent *ḥamḥām*, or unintelligible sounds of the *djinn* from these rarer voices carrying a meaning, and Wellhausen even thinks of the *ḥatīf* as a later development under the influence of the civilization of the towns (*Reste*, p. 139, note). For a later sceptical attitude, with a rationalistic explanation, see the Mu'tazilite Mas'ūdī in *Murūdj*, iii. 323 sqq. But this attitude made little way and the *ḥatīf* in later, and especially in religious literature, lost its vagueness and became more and more defined and frequent. The stories of the lives and experiences of the saints (*awliyā'*) are so full of occurrences that separate references are needless. *Ḥatīf's* gave many testimonies to the truth of the prophetship of Muḥammad, and according to Sprenger (*Leben*, iii. 57), there were at least two books written on these under the title *Hawāṭif al-Djānn* by Abū Bakr al-Kharā'iṭī and Ibn Abi Dunyā (d. 281). See on the latter Ḥādīdjī Khalifa (*sub tit.*) and Brockelmann, *Gesch.*, i. 154; the *Fihrist* (p. 185) does not mention this book in dealing with him. In magic such voices can be sent at will by the use of certain rites. This is called *irṣāl al-hawāṭif*, and the messages committed to them will be heard by the persons mentioned in the spell (Aḥmad al-Zarkāwī, *Mafātīḥ*, pp. 175, 198). Finally, we have, in Persian and Turkish, the Perso-Arabic compound *ḥatīf-i-djān* "inward monitor" (Gibb, *Hist. of Ottoman Poetry*, i. 513). The mediæval usage in the sense of "herald" belongs to the lexicons, see Dozy, *sub voce*.

Bibliography: It has been given in the article. The important passages are in Goldziher, *Arabische Philologie*, i., especially p. 212 and in Wellhausen, *Reste*, p. 139. Cf. Sprenger, *Leben*, i. 216. (D. B. MACDONALD.)

ḤATĪF, SA'YID AḤMAD ḤATĪF, a Persian poet of Isfahan, died in 1128 (1784). He is the author of a famous *tardjī'* (poem with a refrain), translated by Schlechta-Wssehrd in the *Zeitschr. d. Deutsch. Morgenl. Gesells.*, v. 80 sqq., and was celebrated as a writer of ghazels. Specimens of the latter are given in Bland, *A Century of Persian Ghazels*, p. 38 sqq. Manuscripts of his *Dīwān* are rare; there is one in the Bodleian Library, cf. *Ethé, Catalogue*, N^o. 1188.

Bibliography: Defrémery in *Journ. Asiat.*, 5th Series, Vol. vii. 130 sqq.; *Ethé* in the *Grundr. d. Iran. Phil.*, ii. 313 sq.

ḤATĪFĪ, 'ABD ALLĀH, a Persian poet, son of Djāmī's [q. v.] sister, born at Khardjird in the district of Djām, which belonged to Herāt, and died in 927 (1521). He celebrated the conquests of Timūr in an epic entitled *Timūr-nāmah* (also *Ẓafar-nāmah*), lithogr., Lucknow 1869. He also intended to compose a "five" (*khamṣa*), i. e. a collection of five long poems, but never carried his plan into operation. We possess however a

Laila u Madjūn (ed. Sir William Jones, Calcutta 1788, and lithogr. Lucknow 1279), which was to form a part of it, as well as a *Haft Manzar*. He was visited by Shāh Ismā'il when the latter returned from the conquest of Khorāsān in 917 (1511) and was commanded to compose a poem on this event; but he only composed about a thousand verses of it; the *Shāh-nāmāh* of the Ṣafawids, which it was intended to be, was never completed.

Pavet de Courteille, Vol. i. p. 409); Hammer, *Redekünste Persians*, p. 355; Ouseley, *Notices*, p. 143; Rien, *Catal. Persian MSS.*, p. 652; Ethé, *Grundriss d. iran. Philologie*, ii. 237, 239, 246—248, 579, 586—587. (CL. HUART.)

HĀTİM. [See KA'BA].

HĀTİM AL-ṬĀ'Ī B. 'ABD ALLĀH B. SA'ĪD, a knight and poet of the pre-Muhammadan period, who lived from the last half of the sixth into the beginning of the seventh century, a contemporary of the poets al-Nābigha, Bishr b. Abī Khāzim, and 'Abid b. al-Abras. He displayed in a high degree the virtues of the *Murūwa* [q. v.], particularly hospitality and liberality, in the practice of which he paid no regard to his own needs. This tendency to extravagant generosity was revealed in him even as a youth; the consequence was that his grandfather, under whose guardianship he had lived since the early death of his father, abandoned him. Legend pictures him as the ideal type of the pre-Muhammadan Arab. (For further particulars of him and his relations with the kings of Hīra see Schulthess *op. cit.*, introduction).

His generosity became proverbial (*adjwad min Ḥātim*) and he was called al-Djāwad or al-Adjwad. It is even related that after his death he used to attend to those who appealed to his hospitality at his grave (cf. Goldziher, *Muh. Stud.*, i. 234). This grave was probably on a mountain (Uwārid, Yākūt, iii. 740) in Tungha on the Wādī Ḥā'il (in al-Mas'ūdī *Tungha* should be read for *Bakka* and *Ḥā'il* for al-Khābil following Yākūt, i. 880) where he is said to have lived. On the right and on the left of his tomb, according to al-Mas'ūdī (cf. Diwān, N^o. xiv., and Lane, *The Thousand and One Nights*, new ed., ii. 295 sq.), there were four stone figures representing maidens with dishevelled hair mourning over his grave. At his tomb there was also shown the remains of the large kettle out of which Ḥātim used to feed his guests. According to Palgrave's *Narrative*, i. 224 sq., the grave seems still to be known in this district.

His verses are for the most part concerned with the praise of generosity and unselfishness. His *Diwān*, which in its present form probably contains a number of verses that are not his, was possibly originally much larger (*Fihrist*, p. 132, *paen.*, about 200 *waraka*). Ḥātim became a very popular figure in Arab literature. In Persia he became the hero of a very popular romance, *Kiṣṣa-i Ḥātim Ṭā'ī* (also *Kiṣṣa-i haft Sair* (*Su'āl-i Ḥātim Ṭā'ī*), transl. by D. Forbes (London 1830, O. T. F.) from a version which differs markedly from the Calcutta editions (ed. J. Atkinson, 1818, and 1827) (see Forbes, *op. cit.*, Preface, p. vii.); the *Haft Inṣāf-i Ḥātim Ṭā'ī* forms a continuation.

A briefer account of Ḥātim's life and deeds was given by Husain Wā'iz Kāshifī (died 910 = 1504-1505) in *Kiṣṣa u Āthār-i Ḥātim Ṭā'ī* or *Kisāla-i Ḥātimīya*, ed. Schefer, *Chrestomathie Persane*, i. 173 sqq. There is also a Turkish version of the romance, *Dāstān-i Ḥātim Ṭā'ī*, (Constantinople 1272). A number of editions of a Hindūstānī translation of the *Kiṣṣa-i Ḥātim*, entitled *Arā'ish-i Mahfil*, are given in the *India Office Catalogue*, ii. 2, *Hindustani Books*, by J. F. Blumhardt, p. 135 sq., cf. also Garcin de Tassy, *Hist. de la Litt. Hindouie et Hindoustanie*, i. 552 sq.; on a metrical version of the romance in Hindī and Hindūstānī, cf. Garcin de Tassy, *op. cit.*, i. 497, iii. 148.

(C. VAN ARENDONK.)

HĀTṬĪN or **HĪTṬĪN**, in the Talmud Kefar Ḥaṭṭīye, a village to the west of and above Tiberias on a fertile plain, the southern border of which is formed by a steep limestone ridge. At both the western and eastern ends of the ridge there is a higher summit called Kurūn Ḥaṭṭīn. A tradition, known in the xiith century, the origin of which is uncertain, places the tomb of the prophet Shu'aib (Yitro) here; the little chapel, which has been rebuilt in modern times and is annually visited by the Druses, lies on an elevation in a rocky valley at the western summit. On the uneven tableland southeast of the rocky ridge was fought the battle which destroyed the power of the Crusaders, when Salāh al-Dīn won a great victory over the Christians on the 5th July 1187. After the Frankish troops, tormented by heat and thirst, had been some cut down, others put to flight, the remainder retired to the eastern summit, where many were thrown over the steep southern side. In memory of this the victor built a small chapel on the summit, called Kubbāt al-Naṣr.

(FR. BUHL.)

HAUSAS, a negro people in the Sūdān. They occupy the zone included between the Sahara on the north, Bornu on the east, the bend of the Niger on the west and the coast countries

of the Gulf of Guinea (Togo, Dahomey, Benin and the Cameroons) on the south. It is one of the largest ethnic groups in Africa; according to Robinson it numbers about 15,000,000 souls.

The Hausas are very clearly distinguished in physique from other black races. As a rule they are tall; their hands and feet are small, their features regular and their physiognomy intelligent. They are active and quick-witted and are fond of sport and war. Their physical qualities and their bravery make the Hausas excellent soldiers. Therefore the English in Nigeria and the Germans in Togoland and the Cameroons recruit their police forces from among them.

The Hausas live by agriculture, industry and commerce. The soil, tilled by the hoe and improved by manuring, produces rice, millet and especially cotton, which is manufactured in the country itself. Industry indeed is well developed and bears witness to the relatively high degree of civilization which the inhabitants have attained. The textile industry is particularly flourishing. The cotton thread spun by the women is dyed in various colours, then woven into long narrow strips, which are used to make different articles of clothing (robes, shirts, trousers and burnuses). These clothes are famous for their fineness and are exported all over the Sūdān. Basketwork, tanning, shoemaking and saddlery are equally prosperous as well as goldsmithery and the manufacture of metal goods for domestic use or ornament. In all these works the Hausa show a well developed artistic sense.

They are also able and enterprising merchants. Their towns, particularly Kano, have very frequent markets. Every year their caravans make the three months' journey across the Sahara, carrying to Tripoli the products of the Sūdān, clothstuffs, leather, ivory, and ostrich feathers, and returning laden with European products. Other caravans go to Upper Egypt and the shores of the Red Sea. Lastly the pilgrimage to Mecca, methodically organised, furnishes the Hausa with the opportunity and excuse for lucrative trading operations. They were at one time great slave traders but European intervention has considerably reduced this traffic. Colonies of Hausa merchants, numbering sometimes 2000—3000 individuals, are established not only in the principal places of the Sūdān but also at Ghadāmes, Ghāt, Tripoli, Tunis, Cairo, Massawa and in the majority of the towns of the Atlantic coast (Lagos, Akra, Freetown etc.).

Islām is now the religion of the Hausas. Introduced in the xvth century, it made considerable progress in the xixth as a result of the conquest of the country by the Pūl (Fulbe) who imposed it by force on the conquered people. Only the tribes of the forest or mountain districts have remained fetish-worshippers. In religious matters however the Hausas show a singular lukewarmness. According to Robinson, mosques are hardly found, except in Sokotō and Kano. "In the large towns" writes the same author, "perhaps half the population are nominally Mohammedans, whilst the rest can hardly be said to have any definite form of religion at all" (*Hausaland*, p. 184). If the idols have disappeared, overthrown by the Fulbe, ancient superstitions have survived, such, for example, as the belief in lucky and unlucky days, the use of talismans to cure diseases, a custom exploited by the Hādjīs returned from

Mecca, who are credited with possessing the power of writing infallible charms. In spite however of the rather unorthodox character of these practices the Hausas are none the less active propagators of Islām among their fetish-worshipping neighbours.

At the same time as their religion they spread around them the use of their language, which has become the *lingua franca* of the Sūdān and even of certain parts of the Sahara. The character and classification of this language has been often discussed since Schon made the first specimens of it known to European scholars. Some philologists (e. g. Miller and Lepsius) relying on certain morphological analogies which it presents with the Berber dialects, proposed to class it in the Hamitic family. According to another view put forward by M. Delafosse and supported by M. Lippert, "Hausa is a language of negro origin on account of its very large number of radicals and vocalic terminations. This negro language has been profoundly influenced in grammar by the languages of the Hamitic family and has borrowed a considerable number of radicals and roots.... Semitic influence on this language has been almost nil; not more remarkable, in any case, than on any language spoken by Muslims and equal to the influence of the European languages on the dialects of the coast (importation of foreign words designating new objects)". The literature consists of a number of chronicles, tales and popular songs which have been collected and published by Europeans.

History. The origin of the Hausas is very uncertain. Barth identifies them, but in a very hypothetical fashion, with the Atarantes of Herodotus. One fact is certain: the Hausas used to live in a more northern region than that which they now occupy, which corresponded to Damerghū and the oasis of Air. The Hilālī invasion brought into these lands Tūāregs driven southwards by the Berber tribes of Northern Africa. For some time these two races lived in harmony and their intermarriage produced half-castes, the ancestors of the servile tribes who now live in dependence on the Tūāreg. Then, the resources of the oasis becoming insufficient, the Hausas migrated southwards and founded various states of which the most ancient appears to be that of Biram. According to a mythical genealogy given by Barth, Biram is actually considered the ancestor of the Hausas. His descendants, Gober, Kano, Rano, Katsena and Segzeg (Zaria) were the creators of the kingdoms which still bear these names and which are called the seven legitimate Hausas (*Hausa bokoi*). The other states, the population of which has become much mixed with foreign elements (Yoruba, Nūpe, Guari, Yauri, Bautshi, Sanfara and Kebi), were known as bastard Hausas (*Hausa banya bokoi*). These kingdoms varied in extent. The oldest, Biram and Rano, were not much larger than their capitals, the others attained a considerable development. The Sultāns of Gober and later those of Katsena, Kano and Zaria conquered vast territories and were able to put in the field armies of 2000 horsemen and 10,000 foot-soldiers.

The earliest mention of a Hausa kingdom, Gober, is found in Ibn Baṭṭūṭa. When this traveller visited the Sūdān (1353), the Hausa were still pagans. Although certain legends ascribe the introduction of Islām to missionaries sent by the Caliph 'Omar, this religion was in reality brought to the Hausas

at the end of the xivth century by merchants coming from the countries of the central Niger and Bornū, which had long been islamised. Their propaganda was perhaps strengthened by the preaching of the celebrated marabout of Tuāt, Muḥammad b. ʿAbd al-Kādir al-Maghilī. In any case, by the end of the xvth century Kano and Katsena had become recognised centres of intellectual culture. Many marabouts of Djenna and Timbuktu stopped there on their return from the pilgrimage to Mecca and taught theology and Mālikī law there to the native students. The conversion of the Hausas was not complete however and even in the xviiith century the people of Guber relapsed for a time into paganism.

We know very little about the history of the different Hausa states. Their material prosperity seems however to have been remarkable in spite of the bloody wars they had to wage against their neighbours, notably the Songhai and the people of Bornū. As a result of the Moroccan conquest Katsena inherited the economic importance of Gao and, according to Barth, had more than 100,000 inhabitants. Kano became and has remained to the present time the most important market in the whole Sūdān.

The political organisation of the country was profoundly modified in the beginning of the xixth century. Till then the various states had remained independent of one another. They were now incorporated in the vast empire the foundations of which were laid in 1802 by the Fulbe marabout ʿOṭmān dan Fodio (cf. the article FUL). In fifteen years all the Hausa country was conquered, the local sultāns were dethroned and replaced by governors dependent on the Sultān of Sokoto, the capital built by ʿOṭmān. On the latter's death the empire was divided into two sultanates with Sokoto and Gando as capitals and the various provinces were shared between the two sovereigns. The conquerors were however in part absorbed in and assimilated to the conquered. The Fulbe established in the towns mixed with the Hausa and gradually lost their own language and civilization by this intercourse. The extension of the conquest even developed the spirit of initiative and enterprise in the Hausas. They broke their original bounds on all sides and introduced their language and the Muslim religion into the neighbouring countries. This is why we find them settled in large numbers in Togoland, in Adamawa and the Cameroons. Lastly, in the last quarter of the xixth century, Europeans, informed by travellers of the richness of the country, have endeavoured to submit it to their rule. The French and English disputed access to the Hausa country at the same time as to the lands of the lower Niger. The English were successful and the Anglo-French treaty of the 5th August 1890, completed by the agreements of the 12th July 1893, the 14th June 1898, and the Anglo-German agreement of 15th November 1893, left practically the whole of the Hausa country in the sphere of British influence.

(G. YVER.)

HAWĀLA (A.), literally "turn"; in Muslim law the transference of a debt from one person to another. The *hawāla* is an agreement by which a debtor is freed from a debt by another becoming responsible for it (N. Seignette, *Code Musulman par Khatib*, p. 173). This transference of the obligation is the angle around which this legal mechanism "turns".

The word *hawāla* then comes to denote the document by which the transference of the debt is completed and next receives the meaning of cheque, or order to pay, to a public chest also.

Bibliography: N. de Tonnauw, *Das Muslimische Recht aus den Quellen dargestellt*, Leipzig, p. 139 sqq.; A. Querry, *Droit Musulman* (Shrī), i. 480. (CH. HUART.)

HAWĀRĪ, apostle. The word is borrowed from the Ethiopic, where *hawāryā* has the same meaning (see Noldeke, *Beiträge zur sem. Sprachwiss.*, p. 48). The derivations from the Arabic "he who wears white clothes" etc. are erroneous. Tradition delights to give foreign epithets which were current among the "people of the scripture", to the earliest missionaries of Islām. Abū Bakr is called *al-Siddiq*, ʿUmar *al-Fārūq*, al-Zubair Ibn al-ʿAwwām *al-Hawārī*.

At the same time we find the collective name *al-Hawāriyūn* for twelve individuals, who are said to have been appointed *naḳibs* of the Medīnese at the "second Akāba" by Muḥammad (or by those present) as "surety for their people just as the apostles were sureties for ʿIsā b. Maryām

and I (Muḥammad) am for my people". Christian influence is also found elsewhere in the account of the "second Akāba", the total number of those present being usually given as 70 or 72, apparently on the analogy of the Evangelical accounts of the 70 or 72 apostles (St. Luke, x. 1, 17).

Of these twelve Hawārīyūn 9 are said to have belonged to the Khazradj and 3 to the Aws. They were: Sa'd b. 'Ubāda, As'ad b. Zurāra, Sa'd b. al-Rabi', Sa'd b. Abi Khaithama, Mundhir b. 'Amr, 'Abd Allāh b. Rawāḥa, al-Barā' b. Ma'rūr, Abu 'l-Haitham b. al-Taiyihān, Usaid b. Hudair, 'Abd Allāh b. 'Amr, 'Ubāda b. al-Ṣāmit, Rāfi' b. Mālik.

According to an other account however, the Hawārīyūn belonged exclusively to the tribe of Kuraish viz., Abū Bakr, 'Umar, 'Uthmān, 'Alī, Ḥamza, Dja'far, Abū 'Ubaida b. al-Djarrāh, 'Uthmān b. Ma'zūn, 'Abd al-Raḥmān b. 'Awf, Sa'd b. Abi Waḳḳās, Talḥa b. 'Ubaid Allāh, al-Zubair b. al-'Awwām (cf. *Ḳiṣaṣ al-Anbiyā'*, Cairo 1290, p. 344). From these accounts it is again clear how the rivalry between Anṣār and Muḥādjirūn has influenced Tradition.

The tradition regarding these twelve Muslim apostles has perhaps, like so many traditions, arisen as a deduction from a statement in the *Qur'ān*. In Sūra 3, 45, 61, 14, Jesus says: "Who are My Anṣār for God (s'cause)?" and the Hawārīyūn answered: "We are the Anṣār of God".

The parallel with Muḥammad's own position is here clear enough and it is obvious that Muslim Hawārīyūn were found to be a necessity alongside of the Muslim Anṣār.

There are statements in several Muslim writers regarding the disciples of Jesus, which for the most part go back to passages in the Apostles. Cf. the articles 'Isā and MĀ'IDA.

(A. J. WENSINCK.)

HAWĀSHĪ. [See HĀSHIYA.]

HAWĀSHIM or HĀSHIMIDS is the name given to those Sherifs of Mecca, descendants of a Ḥasanid named Abū Hāshim Muḥammad, who ruled there from 455 (1063) to 597 (1201). Their names are Abū Hāshim Muḥammad till 487 (1094), his son Abū Fulaita Kāsim till 517 or 518 (1124), Fulaita b. Kāsim till 527 (1133), Hāshim b. Fulaita till 549 (1154), according to other statements till 551 (1156), Kāsim b. Hāshim till 556 (1161) 'Isā b. Fulaita till 570 (1174-1175). The latter's sons, Mukthir and Dā'ūd, as well as Maṣṣūr b. Dā'ūd then disputed the succession, till finally another Ḥasanid named Kaṭāda [q. v.] took advantage of this family quarrel to seize the town of Mecca and transmitted the Sherifate to his descendants. None of these Hawāshim did anything remarkable; at first their ambiguous attitude on the question, whether the Fātimid or Abbāsīd Caliph was to be mentioned in prayer, more than once brought great misfortune on the Meccans. For further details cf. Wüstenfeld, *Geschichte der Stadt Mekka*, p. 222 sqq., and Snouck Hurgronje, *Mekka*, i. 62 sqq., where the native sources are also given.

HAWĀZIN, a large North Arabian tribe. Their genealogy is Hawāzin b. Maṣṣūr b. 'Ikrima b. Khaṣafa b. Kais Ailān b. Muḍar. Among the important clans of the Hawāzin may be mentioned the Thakīf in Ṭā'if northeast of Mecca where there is still a powerful tribe of them, the 'Āmir b. Sa'sa'a [q. v.], the Djusham, the Sa'd b. Bakr

(Ḥalima b. Abi Dhuwaib, the nurse of the Prophet, was descended from them) and Hilāl. They were of the same stock as the Sulaim. During the Djāhiliya they worshipped the idol Djihār in 'Ukāz, the large and much frequented market of the Thakīf between Ṭā'if and Nakhlā, where the poets used to recite their poems on the public market-place.

They were scattered through Nejd (on the Yemen border) and the Eastern Ḥidjāz near Mecca. Among places which belonged to them may be mentioned: Amlah, 'Ads al-Matāḥil, al-Dardā, al-Dabān, Faif al-Rih; among wādis, Awṣā, Iṣya, Turaba and Zabya (so Yakut *Mu'jam*, ii. 917; Hamdānī, *Djazira*, p. 50, 9 gives Runiya and Turaba as belonging to the Hilāl, but as the Hilāl are a clan of the Hawāzin and as in other districts places which had once belonged to the Hawāzin or their clans were later inhabited by the Hilāl, e. g. Ṭā'if, Runiya and Zabya may be identical in which case there is a misreading between *r* and *z* or *b* and *n*); among waters, Dhu 'l-Hulaifa and Tiyan (Wüstenfeld, *Register*, p. 220, Tayān); among mountains, al-Muḍaiyih.

Towards the middle of the sixth century after the collapse of Yemeni suzerainty over the Ma'addi tribes, the Hawāzin had to pay tribute to the chief of the Ghatafan, Zuhair b. Djadhima of 'Abs. When the latter was slain on the day of Nafrawāt by the 'Āmir b. Sa'sa'a in revenge for a massacre which he had instigated among one of their clans, the Ghani [q. v.], the Hawāzin became independent. After the conclusion of peace between the 'Abs and Dhubyān, they united for common action against the Hawāzin (Djusham, 'Āmir and Naṣr b. Mu'awiya) and the Sulaim their allies. Among the resulting battles were Rakhm, Nubā' and Liwā in which the Hawāzin were defeated.

In the ninth decade of the sixth century the Fijār or sacrilegious wars began (so called because they took place chiefly in the sacred month Dhu 'l-Ka'da, by which the latter was profaned) between the Hawāzin on the one side and the Kuraish and other Kināna tribes on the other. The cause of the first Fijār day, which took place on the market place of 'Ukāz was the aggressive attitude of Badr b. Ma'shar of the tribe of Ghifar, a branch of the Kināna, towards Aḥmar b. Māzin of the Hawāzin and the insulting of a man and woman of the Hawāzin by the Kuraish and Kināna soon after. After a cessation of hostilities for some time, war broke out again when 'Urwa al-Raḥḥāl, an important member of the Hawāzin (of the clan of Kilāb), who was leading a caravan of Nu'mān b. Mundhir, king of Ḥira, to the market of 'Ukāz, was treacherously murdered by Barrād b. Kais, a client of Ḥarb b. Umaiya, chief of the Kuraish, in the land of the Ghatafan. The Kuraish, who were in the market of 'Ukāz at the time, hearing of the murder, left 'Ukāz surreptitiously before the conclusion of the market to return to Mecca. They were pursued by the Hawāzin and the battle of Nakhlā resulted. The Kuraish, fewer in numbers than their opponents, retired to the sacred district of Mecca (*ḥaram*) and thus escaped being followed up by their pursuers. The Prophet is said on this day to have been engaged in collecting the arrows shot by their enemies on the battlefield for his relatives, the Kuraish, being then according to some 14 and, according to others, 20 years of age. In the month of Dhu 'l-Ka'da of the following year, the Hawāzin, reinforced by the Sulaim,

were the first to arrive at the market of 'Ukāz and took up a position on the hill of Samta. The Kuraish, who appeared soon afterwards on the battlefield under Harb b. Umaiya, at first won the upper hand over their opponents but had finally to retire. The fortune of war again proved favourable to the Hawāzin a few months later in the battle of Ablā (near 'Ukāz). This was followed by a battle on the field of 'Ukāz itself. In order not to be able to run away and to make good former defeats, a number of the Kuraish had their feet tied together (among them the five sons of Umaiya, who thence received the name *al-Anābis* the "lions"), a stratagem repeated in modern times in the war between the Egyptians under Muḥammad 'Alī Pasha and the Wahhābis, in which a great many of the Arabs were found dying in this position. They thus withstood the enemy and the Hawāzin had to retire. The last battle between the Hawāzin and Kuraish, which was followed by definite peace, was that of Huraira, in which the Hawāzin put their enemies to flight.

When Muḥammad conquered Mecca in 8 = 630, the Hawāzin decided to march against Mecca under Mālik b. 'Awf. On Mālik's advice they were followed by their women, children and cattle. Muḥammad, warned by spies of the intended attack, went to meet them with an army of 4000 men. They met in the valley of Hunain [q. v.] (about 10 miles from Mecca behind Mount 'Arafa). The Hawāzin suddenly fell upon the rear of the Muslims, who began to flee in panic. Inspired by the Prophet, who collected his most intimate companions (including his uncle 'Abbās, Abū Sufyān, Abū Bakr and 'Omar) around him and as in the battle of Badr [q. v.] cursed his enemies by throwing a handful of dust against them with the words "may your face be covered with destruction", the Muslims took courage and attacked the enemy. The Hawāzin were put to flight and left many dead upon the field; their women, children and cattle fell into the hands of the Muslims and were brought to Dajrāna. A number of the Hawāzin then retired to the valley of Awfās. Abū Mūsā al-Ash'arī, who went against them, drove them to seek refuge among the hills. They then fortified themselves in Tā'if. Muḥammad besieged the town, but had to raise the siege after twenty days (on account of a dream, it is said) and returned to Dajrāna. Here the Prophet received a deputation of the Hawāzin who offered the submission of the tribe, if their families and possessions were restored to them. Muḥammad offered them the choice between their families and their possessions. The Hawāzin chose the former and peace was made; Mālik b. 'Awf was then chosen *amīl* of the Hawāzin. During the general secession under Abū Bakr, a number of the Hawāzin rebelled but submitted to Khālīd b. al-Walīd after the battle of Buzākha in 11 = 32, like the Sulaim and other tribes.

HAWĪZA, earlier HUWAIZA (diminutive from Hūz), a town in the swamp-country (*Khār al-a'zam*) east of the Tigris in a very unhealthy situation. The town and its Nabataean population had a bad reputation even among the Arabs, as is clear from Abu 'l-Wafā' Zād b. Khūdkām's words quoted by Yāqūt; he draws a repulsive picture of both in language imitated from Korānic phraseology. The older Arab geographers do not mention Hawīza, because, as Yāqūt says, Dubais b. 'Afif al-Asādī, who died in 386 (996), was the first to build there, while Ḥamd 'Allāh Mustawfī ascribes the foundation of the town to Shāpūr Dhu 'l-Aktāf; according to the latter, in the viiith century it was one of the most flourishing towns in Khūzistān. Hawīza is still a centre of the Mandaean. Cf. above, i. 678^a *supra*.

Bibliography: Yāqūt, *Mu'djam*, ii. 371 sq.; Le Strange, *The Lands of the Eastern Caliphate*, p. 241.

HAWRA, see AL-DHIYĀB (DHIYĀB).

HAWRA (HÖRA), a town in Ḥaḍramūt, N. E. of Hadjarēn [q. v.] on the Djebel of the same name. The little Wādī Hōra flows past it, running for the earlier part of its course parallel to the large Wādī 'Ain (see ḤADRAMAWT, p. 208^a) and then joining it. At the upper end of the town there is a large *ḥiṣn* with seven stories, flanked by corner towers, which commands the town. Here the ḥākīm resides; he is appointed by the Ku'aitis of Shibām [q. v.], to whom the town belongs. Hawra possesses a small bazaar and two mosques and is surrounded by gardens and fields, on which corn, indigo and tobacco are grown. The streets of the town are narrow and dirty. Leo Hirsch estimates the population at 2000. The figure given by Wrede for the population of this town, 8000, is much exaggerated like other figures given by this otherwise very meritorious explorer.

HAWRĀN, the 𐤆𐤍𐤓𐤏𐤃 of the Bible, Ḥawrānu

of the cuneiform inscriptions, Ἀρπυρίης of Josephus etc., is a district on the other side of Jordan, which has no well marked boundaries. Hawrān proper is the Djebel Hawrān with the plain of al-Nukra; in the wider sense the name covers the land up to the district of Djaidūr, the Nahr al-'Allān, a tributary of the Yarmūk, the Wādī 'l-Shallāla and southwards as far as al-Balkā [q. v.] and the steppes (*al-Ḥammād*). The Turkish mutasarriflik of Hawrān however also comprises the district of Djaidūr, as well as Djawlān (Gaulanitis), Adjlūn (Gilead) and al-Balkā. The governor (*mutasarrif*) resides at Shaikh Sa'd; Buṣr al-Ḥarīrī, al-Suwaidā, al-Kunaitira, Der'at (Edrei), Irbid and al-Salt are the headquarters of the *kā'immaḳām*'s subordinate to him. Under the Mamlūks of Egypt the province was called al-Kibliya and the residence of the wālī was at Der'at. At an earlier period the ancient Boṣrā [q. v.] was the capital.

Hawrān is entirely a lava formation and is exceedingly fertile, the plain of al-Nukra being the granary of Syria; on the other hand, the adjoining trachon of al-Ledjā is a dreadful desert. The Hawrān range (the Asalmanō of the ancients, usually called Djebel al-Durūz after its present inhabitants, is the highest elevation of the east Jordan country and attains a height of 6000 feet.

Historical. Hawrān is rich in historical associations. In so far as these reach back to remote times or belong to the Roman and Byzantine periods, they need not be dealt with here. That even before the Arab conquest there was an Arab kingdom here under Byzantine protection has already been mentioned in the article GHASSĀN [q. v.]. The capital of Bozra was the first town to be conquered by the Arabs (634) and after the institution of the *djund* [q. v.] Hawrān belonged to the Djund Dimashk, as it has always since, although this military system of division afterwards fell into disuse and with the introduction of civil administrative divisions the name Wilāyet Dimashk appeared. The history of Hawrān thus coincides with that of Syria. For a time it attained greater importance during the Crusades, when the Muslims driven out of Palestine migrated hither and were able to make a stand against the Christians here. After the fall of the kingdom of Jerusalem, these immigrants returned to their old homes and Hawrān had only a scattered population of Arab tribes left, who are included under the general name of 'Urbān al-Djebel.

In the xviiith century the resettlement of Hawrān by the Druses of Libanon began. It was brought about by the victory of the Shihābids over their opponents, the Yemenis, in 1711, whereupon the latter migrated to Hawrān. At their head was the Ḥamdān family whose abode was in Suwaidā. These migrations became more and more frequent in the xixth century, when the condition of Libanon became worse and worse for the Druses. In Hawrān on the other hand, they led quite an independent existence, paid no taxes, and in consequence of the fertility of the soil soon attained great prosperity. When the Ḥamdān, who had hitherto taken first place among the leading Druse families, became extinct, the Atrash took their place. Finally, in 1852, the Porte decided to send troops thither to bring them into submission but they were again withdrawn on the outbreak of the Crimean War. Midḥat Pasha [q. v.] therefore sought to come to an arrangement with the Druses peacefully, and appointed one of their *shaikhs* ka'immaḳām of Hawrān with his headquarters in Suwaidā; the latter succeeded in arranging the administration of the province on the Turkish fashion, but, although the Shaikhs were quite satisfied as they had now the support of the Ottoman government behind them, the peasants were very discontented and became rebellious, so that utter anarchy soon reigned again in Hawrān and the Druses in 1895 even besieged the Muslim population of the village of al-Ḥarāk in the Nukra, who had taken refuge in the mosque, forced them to surrender and destroyed the mosque. The Porte had again to intervene and bloody battles were fought, which did not however lead to the final pacification of the country, until finally 'Abd Allāh Pasha's strong measures succeeded in breaking the resistance of the Druses and introduced a tolerable state of affairs.

HAWSHABĪ (plural *Hawashib*), a tribe in South Arabia, of pure Ḥimyarite descent. Their land lies roughly between 44° 45' and 45° 5' East Long. (Greenw.) and between 13° 11' and 13° 30' North Lat. and is bounded in the south by Lahdī (Lahedī) [q. v.], in the west by the land of the Ṣubaiḥī (Sobēḥī) [q. v.] and of the Ḥudrīyā [q. v.], in the north by the land of the Dja'da [q. v.] and in the east by the lower Yāfi'. The climate is tropical, the land fertile, producing wheat, coffee and cotton. Among the mountains may be mentioned Djebel Shi'ab (about 6000 feet high). The Wādīs Nūra and Bonna (Banna) bound the land in the west and east. The capital and seat of the Sultān (Shaikh, 'Akil) is Raha, with a ḥiṣn and many stone houses. The Sultān receives an annual revenue from England and has to provide 1500 men when called upon. The inhabitants of the country, which is reputed unsafe, are Kabā'il (independent tribes) who only obey the Sultān in case of war. They are Shāfi'is and mainly cattle-rearers. They are constantly fighting with their neighbours. In 1870 they went to war with the Yāfi', in 1871, with the Ṣubaiḥī. They are said to number 12,000—15,000. Ḥamdānī mentions them as inhabitants of the Djebel Ṣābir (Ṣabr).

Bibliography: Ḥamdānī, *Djazira*, p. 78, 79, 19; Yāqūt, *Mu'djam*, iii. 367; Ritter, *Erkunde*, xii. 676; H. v. Maltzan, *Reise nach Süd-arabien*, p. 350—352. (J. SCHLEIFER.)

AL-HAWṬA, the name given in South Arabia to a district which is considered holy and regarded as a place of refuge. The substantive *al-hawṭa* denotes a place surrounded by a wall, then a place under the protection of a saint, who is buried there. The most important Hawṭa in South Arabia is that at 'Ināt ('Aināt [q. v.] in Ḥadramūt, where the famous Shaikh Munṣab Bū Bakr b. Sālim is buried. The second in importance is the Hawṭa in the land of the Wāḥidī [q. v.]. The name Hawṭa is also borne by the capital of the land of the 'Abādīl, Lahdī (Lahedī) [q. v.], because several saints are buried there. Cf. Landberg, *Arabica*, v. 205-206. (J. SCHLEIFER.)

AL-HAWṬA (HŪTA), a town in South Arabia in the land of the Upper Wāḥidī [q. v.] on the Wādī 'Amāḳin. It has over 1000 inhabitants who belong for the most part to the *Mashā'ikh* of the family of Muḥammad b. 'Umar, who is said to be descended from 'Abd al-Kādir al-Djilānī (flourished in the vith century), about 100 fortresslike houses and in addition to a large mosque has seven smaller ones, a large market with shops, many looms and a considerable cotton industry. Al-Hawṭa is a free, independent town and pays no taxes. Next to 'Ināt [q. v.] it is the most

important place of refuge in South Arabia. The saint of al-Hawṭa who, is buried in the great mosque, is the *faḳīh* 'Alī b. Muḥammad, a contemporary of the famous *Shāikh* Bū Bakr b. Sālim of 'Ināṭ. The *faḳīh* 'Alī is said himself to have planned this town to be a city of refuge and to have laid out its boundaries. The boundary stones (*madā'a*, plur. *madā'i*) still stand upright. On the birthday of the Mawlā of al-Hawṭa, which is celebrated on three days (Monday, Tuesday and Wednesday), after the appearance of the "fifth autumn star" at the beginning of the northeastern monsoon, a great market is held in the town, which is visited by people from great distances, e.g. from Harīb [q. v.] and 'Omān. The neighbourhood of al-Hawṭa is very fertile. A mountain of some size rises above the town, where chamois, which are numerous there, are hunted.

Bibliography: H. v. Maltzan, *Reise nach Südarabien*, p. 130; Landberg, *Arabica*, v. 189—192. (J. SCHLEIFER.)

HAWWĀ, the wife of Adam, created in Paradise out of a left rib from her sleeping husband, which operation caused him no pain. Otherwise no man would cleave to his wife (*Tha'labi*, p. 18; *Kisā'i*, p. 31). As she was formed from a living being, he called her Hawwā (*ibid.*, also *Ṭabari*, i. 109; *Ibn al-Aṭhīr*, i. 24, cf. *Genesis* 2, 27). As Adam was created out of dust and Hawwā out of a bone, man becomes more beautiful with increasing years but woman more ugly (*Tha'labi*, *ibid.*, agreeing with *Deut. R.*, 6, *Genesis R.*, 14 u. 17. Hawwā (*Sūra* vii. 20) bore the main guilt of the first sin, as, tempted by Iblīs, she ate of the tree of evil. Tradition relates that Hawwā offered her husband first wine, than the forbidden fruit and so became the cause of original sin (*Tha'labi* and *Gen. R.*, *ibid.*). Wine is therefore considered the source of all evil. Another tradition says that this meal plunged mankind into eternal grief. (*Tha'labi* and the *Midrash*, *ibid.*). Ten punishments, including menstruation, pregnancy and travail, remind the daughters of Eve of their mother's trespass. To console her, Hawwā received the assurance that every pious woman, devoted to her husband, would share Paradise in recompense for the mortal agonies of travail. If she died in child-bed, she would be enrolled in the body of martyrs and united with her husband in Paradise. Jewish and Arab sources mention in almost the same words the marriage of Adam and Hawwā at which God, Gabriel and the other angels were present (*Raba B.*, 75, *Sanh.*, 8, *Erubin*, 11, *Gen. R.*, 11, 17, *Levit. R.*, 20, *Kohleth R.*, 8 and *Kisā'i*, p. 35). After the expulsion from Paradise Adam and Hawwā made the pilgrimage to Mecca, observed several ceremonies and Hawwā had her first menstruation. Then Adam stamped on the ground and the well of Zemzem burst forth and she used it for a bath of purification. Hawwā died two years after Adam and was buried beside him.

Bibliography: *Ṭabari*, *Annales*, i. 109 sqq.; *Ibn al-Aṭhīr*, i. 24—26; *Tha'labi*, *Kiṣaṣ al-Anbiyā'*, ed. Cairo, 1312, p. 18—29; *Kisā'i*, *Kiṣaṣ al-Anbiyā'*, p. 30—78; Grünbaum, *Beiträge*, p. 64 sqq.; Weil, *Bibl. Legenden* etc., p. 17—30. (J. EISENBERG.)

AL-HAWWĀ' (A.), Snakecharmer, name of the constellation Ophiuchos (see above ii. 222b).

HĀYIL (AL-HĀYEL, HAIL, HĀEYL), the capital of the land of Djebel Shammar [q. v.] in western Nedjd in the centre of a long plain called Sāhila al-Khammashīya, which lies between the parallel ranges of Adja' (M'nif) and Salmā (Fitti) about 5000 feet about the level of the sea. The town, which is one of the main stations on the route for Persian pilgrims to Mecca, is surrounded by walls about 20 feet high and round and square towers. It is divided into eleven quarters and has a large mosque, a fortified palace with two towers of imposing height, an important market with many warehouses and shops, in which in addition to foodstuffs (rice, meal, spices, coffee etc.) there are exposed clothstuffs, garments, weapons, tools (spades, crowbars), ores (iron, tin, lead ingots) etc., and large parks and gardens. Clothstuffs are imported from Manchester and Bombay, garments from Djawf and Baghdād, tools and ores from Europe. The trade of Hāyil is important, but industry (chiefly carried on by women, embroidery and needlework) very insignificant. Artisans (smiths, metalworkers, carpenters) are few in number in the town. The houses are well built and mostly of one storey, and the streets clean. Outside the town there are many gardens, palmgroves and single houses, which belong some to the chief citizens of the town, some to the members of the royal family of Shammar. According to Palgrave, the population is 20,000—30,000, while Doughty puts it at only 3000.

The suburb of Hāyil is Sweifse (Suwaifse). About the year 1867 after a famine a pestilence raged here which carried off about 200 individuals in a period of two months. During Doughty's stay here the houses were almost empty and the palmgroves quite abandoned. Wāsīt, a second suburb of Hāyil, was likewise uninhabited and falling into ruins as a result of this pestilence, when Doughty visited it; the palm-trees had shrivelled up and died as a result of this period of neglected irrigation. In Hāyil itself 700—800 are said to have died of the plague; after the plague a pernicious fever raged in the town for two years. Behind Wāsīt is the Maḳbara (cemetery) of Hāyil, the tombstones in which after the Bedouin fashion are devoid of ornament or decoration and usually contain only the name of the deceased. Between the Maḳbara and the town is a small colony of nomads, Shammar Bedouins, some of whom are related to the ruling family and stay here only during the spring.

In the beginning of last century the government of Hāyil was in the hands of the family of Bait 'Alī. Towards the year 1820 'Abd Allāh b. Rashīd, a rich and distinguished chief of the prominent family of Dja'āfir, attempted to win the throne for himself with the help of his numerous and influential kinsmen. War resulted; 'Abd Allāh lost and had to go into exile but after about ten years he returned to Hāyil with the help of the Wahhābī chief Fāṣal, who owed the conquest of the province of Haṣā [q. v.] to 'Abd Allāh and was appointed hereditary governor (Emir) of Djebel Shammar by the Wahhābī chief out of gratitude for his services. The Bait 'Alī were driven out of the town and almost exterminated by 'Abd Allāh's elder brother 'Ubaid (Abeyd, called "the wolf"). 'Abd Allāh built the great palace. A period of prosperity for Hāyil began under his son and successor Telāl, who reigned twenty years,

dying in 1864; Telāl improved the defences of the town, built the great mosque and market, and laid out the beautiful gardens of the town: in order to improve trade and industry he invited merchants from Baṣra, Wāsit and other towns, artisans from Medina and Yemen and entered into commercial relations with the other towns of Arabia and Persia. During Doughty's stay in Hāyil, Muḥammad b. Rashid, then the richest horse-owner in Najd, (Doughty estimates the value of his horses at £250,000), was Amir.

Hamdānī mentions a Wādī Hāyil in Ḥimā (Ḥariya), which may be identical with our town. Yākūt mentions Hāyil as a wādī between two ranges of the Ṭayī (i. e. Adja and Salmā) and as a large district, according to some between Yamāma and the Bilād of the Bāhila, according to others in Yamāma itself, inhabited either by the Kuṣhair or the Numair and the Banū Ḥimmān (Ḥammān) of the Tamīm. Sprenger identifies Hāyil with the "Αἴην Κόμην in Ptolemy.

Euting, *Tagbuch einer Reise im Inner-Arabien*, i. 173—240. (J. SCHLEIFER.)

HAZĀDI, the sixth metre of the prosody of the Arabs, has as its scheme two *mafā'ilun* (originally, or rather in accordance with the system, three) in each half-verse. It has one 'arūd and two *qarab*:

Mafā'ilun, mafā'ilun, mafā'ilun, mafā'ilun
" " " *fa'ulun* (= *mafā'i*).

The suppression of the *n* (*kaff*) is, except in the *qarab*, very usual, while that of the *i* (*kabū*) is rare; but the loss of one necessitates the retention of the other. We also find, though rarely, that *ma* is omitted at the beginning of a poem. This last omission (*kharm*) is called *shatar* or *kharaḥ*, when it is combined with *kabū* or *kaff*.

In Persian, Turkish, and Hindustānī a *hazādi* is found, which usually consists of 4 or 3, rarely of only two feet in the half verse. This metre also shows numerous other irregularities, particularly in Persian, but these cannot be discussed here. For the bibliography, cf. the article 'ARŪD.

(MOH. BEN CHENER.)

HAZĀRA, HAZĀRISTĀN (Afghānistān). The name Hazāra is applied to the race which inhabits the mountain country north and west of the valleys of the Helmand and Tarnak, extending northwards to the Hindūkush and Koh-i Bābā and westwards nearly to Herāt and the Harūd-valley, but the most westerly tribes in this area are known as the Čahār Aimāk and are distinguished from the Hazāra proper by creed and language, being Turki-speaking Sunnis, while the Hazāra are Shī'is and speak Persian. They are however predominantly of Mongolian blood as their features clearly show, although no doubt mixed with the original Ghōrī stock of these mountains from which they acquired the Persian language. They are supposed by some to be the descendants of the army of Mangū, but evidence is lacking as to the actual facts. It cannot be doubted however

that after the Mongol irruption which fell with extreme violence on the Ghōris, who offered a determined resistance, the depopulated tracts were occupied by Mongol settlers, and that both strains are represented among the Hazāras of the present day. They are still a hardy and industrious race, and often seek employment as navvies or labourers in other work where physical strength is required; they have also shown a desire for military service in British India. They are on bad terms with the Afghāns under whose rule they dwell, and in 1891-1892 they rebelled against the Amir 'Abd al-Rahmān, but were ultimately suppressed.

The name 'Hazāra' is no doubt a Persian version of the Turkish *ming*, and refers to the 'thousands' in which the invading Mongol armies were organized. The whole country is known from its inhabitants as Hazāristān and also as the Hazāradjāt or 'the thousands'.

Bibliography: Ferrier, *Caravan Journeys* (London 1857), Chap. xvi.; Elphinstone, *Caulbul* (London 1839), Vol. i.; Holdich, *Gates of India* (London 1910). (M. LONGWORTH DAMES.)

HAZĀRA, a district till lately included in the Pandjāb, now part of the north-west Frontier Province of British India. It consists of a number of valleys and mountainous tracts at the base of the western Himalaya between Kashmīr and the Indus from lat. 33° 44' to 35° 10' N. and long. 72° 33' to 76° 6' E. Area 3062 sq. m. Population 528,666, almost entirely Musalman of the Sunni persuasion. Hindūs number only 4 per cent. The most northerly part is the long narrow valley of Kagan watered by the Kunhār R. a tributary of the Djehlam. The remainder of the district is drained by tributaries of the Indus. The Indus is the western boundary in the south, but to the north-west lies a block of mountain country between the district and the Indus. This block known as the Black Mountain is inhabited by independent Pathān tribes. Within the district the population consists partly of Pathān tribes (Djadūn, Tarin, Utmānzai, Mishwānī, Swātī and Dilāzāk), and partly of tribes which were at one time Hindūs by religion (Gakhar, Tanāoli, Gūdjār, Awān, Karral, Dhund and some minor tribes). There is also a small tribe known as Turk, believed to be the descendants of the Karluḡs whom Timūr brought into the district. The Gakhars, Gūdjars and some of the others, are probably descendants of the Scythian (Kushan and Ephthalite) invaders who entered India between 100 B.C. and 500 A.D. The common language of the country is Hindki, a dialect of the Lahnda or western Pandjāhi, but Pashto is spoken by the Mishwānī and some of the Utmānzais, Swātīs and Tarkhelis. The Gūdjars speak a dialect of their own (see GŪDJAR).

The ancient name of the country was Urasha (still found in the valley of Rash near Abbottābād). Ptolemy mentions it under the name of Arsa, its ruler in Alexander's time was called Arsakēs according to Arrian. It formed part of the dominions of Asoka, whose edicts in the Kharoṣṭhī character are found at Mansēhrā. In Hiouen Tsiang's time (7th cent. A.D.) by whom it is named Wu-la-shi it was dependent on Kashmir, and is frequently mentioned in the *Rādjatarangini*. The town of Pakhlī on the Indus has been thought to represent the Paktyikē of Herodotus, and under the Mughal Emperors according to the *Am-i Akbari* the whole country between Kashmīr and the Indus

was comprised in Pakhlī. Invasions from Kashmīr continued up till the 12th century. The Mongol invasions do not seem to have affected Hazāra directly, but the Karlugh Turks who were associated with the Shāhs of Khwārizm and established a principality in Bannū and the Kurām valley, seem to have spread into the country along the Indus further north, and were known in Mongol fashion as the Karlugh 'Ming' or Hazāra. The name of Hazāra seems undoubtedly to be derived from their settlement, as were those of the neighbouring tracts of Caē Hazāra and Takht Hazāra in the Atak district from similar settlements of Mongol or Turkish 'Hazāras'. The *Pin-i Akbarī* asserts that Timūr left the Karlughs as a garrison in Pakhlī (Blochmann's trans. p. 454) but it does not seem that he introduced them into the district. He probably found them already established and made them his garrison, as a race of his own kindred. The evidence shows that their first settlement on the Indus was two hundred years before his time. As time went on the Afghan tribes from beyond the Indus, especially the Swātīs and Tanāolīs, invaded the country and made important settlements. The power of the Gakhar chiefs and of the Karlughs declined in proportion. From 1748 Hazāra formed part of the Durrānī kingdom, and in 1819 was annexed by Rāṇjīt Singh to the Sikh monarchy. Perpetual wars with the tribal chiefs followed. After the first Sikh war in 1845-1846 Abbott was deputed by the British Government to organize the country and he continued his labours with great success after the annexation in 1849. Abbottābād, the headquarters of the district, was founded in 1853 and named after him. It is now a town of 8000 inhabitants and the site of a military cantonment. Since his time the district has continued to prosper, but there have been frequent troubles with the independent tribes of the Black mountain, and expeditions against them were undertaken in the years 1852, 1868, 1888 and 1891 besides some minor operations.

(M. LONGWORTH DAMES.)

HAZĀRASP, a town not far from Khiva but nearer the Oxus, with which it is connected by a canal. According to al-Mukaddasī, the town was of the same size as Khiva and surrounded by a ditch. It was peculiarly suited to be a fortress on account of the latter and the many canals, which cut up the surrounding country and rendered access difficult. Atsiz sought refuge here when he rebelled against Sandjar but the town was taken by the Saldjūk sultān after a two months' siege in 542 (1147). In the time of Yākūt, who visited it in 616 (1219), Hazārasp was a well fortified and rich town. It still exists to-day under the same name.

HAZĀRASPIDS, a name given to the Banu Fadlōya, who ruled for two centuries in Great Lūristān (543—740 = 1140—1339). For details see the article LUR.

HAZĪN, Shaikh Muḥammad 'Alī b. Abī Tālib, was born at Isfahān in 1103 (1692). After visiting many countries of Arabia and Persia, he finally settled in India in 1146 (1733). He died at Benares in 1130 (1766). Among his works the following may be mentioned: *A Dīwān* in Persian; *Faras Nāma*, a treatise on farriery; *Khawāṣṣ al-Hayawān*, or *Tadhkirat al-Saiyia*, a treatise on Zoology; *Tadhkirat al-Aḥwāl*, memoirs of his own life, with an account of his travels (translation by F. G. Balfour, *The life of Shaikh Muḥammad 'Alī Hazīn*, 1830); *Tadhkirat al-Mu'asirin*, notices on some poets who lived in Persia during the author's time.

HAZIRĀN, name of the ninth month of the Syrian year.

HEBRON. [See AL-KHALIL.]

HELMAND. The principal river of Afghānistān. The name also takes the forms Hirmand and Hilmand; it is the Etymandros of Arrian, the Erymanthus of Polybius and the Hačumat of the Avesta. It rises in an elevated valley on the western side of the Paghmān range, which is part of the lofty system of mountains to the west of Kābul connected with the Hindū-Kush and Kōh-i-Bāba, and after a long course through the unexplored valleys of eastern Hazāristān in a south-westerly direction emerges into the open plains of S. Afghānistān near Girishk. Below Girishk, near the ruins of Bust it receives the joint stream of the Arghandāb, Tarnak and Arghasān which drain S. E. Afghānistān. On approaching Sistān it suddenly turns north and finally flows into the Hāmūn or Lake of Sistān [see art. HĀMŪN]. The irrigation of the plains of Sistān is drawn from the Helmand.

(M. LONGWORTH DAMES.)

HENNA, the henna shrub, *Lawsonia inermis* L., a tall slender shrub, reaching a height of 9—12 feet, occasionally becoming practically a tree, belonging to the family of *Hythariaceae*, with white clustered flowers yielding a pleasant odour and smooth, entire leaves; it is grown in congenial soil all over North Africa, Persia and India.

The flowers are used to prepare fragrant essences and oils. With the powder made from the dried leaves the nails, the palms of the hands and the soles of the feet are dyed orange yellow throughout the east, in Persia also the hair of the head and beard. Dark hair assumes a cochineal shade, while light hair becomes a burning red. The powder is mixed with lukewarm water and, after the hair has been carefully cleaned, applied as a paste; it must remain at least an hour. If a deep black colour is desired, it must be next dyed with paste

made from *reng*, an indigo plant. To preserve the peculiar lustre produced by the *henna* the hair is often again treated with *henna* for another quarter of an hour after the application of the *reng*.

The tails of the royal horses are also dyed with *henna* and white horses are turned to dun coloured, or painted with tassels and tufts with stencils.

The flowers, fruit and leaves of the *henna* have of course many applications in medicine.

HENOCH, (See IDRIS.)

HERĀT, an ancient city in Afghānistān, situated 24° 22' N. and 62° 9' E. It gives its name to a province and is the centre of the administration and trade of a large district. Population from 15,000 to 20,000. The Great Mosque built in the 15th cent. is celebrated for its beauty. The Maṣallā a group of buildings outside the walls was destroyed for defensive purposes when fortifications were under construction in 1885. The history of Herāt begins in the Avesta. It is undoubtedly the Haroyu or Haraēva of the Vendidad, the Haraiva of the Achaemenian inscriptions and the Arcia of the Greeks where Alexander founded Alexandria Areion. It retained its importance under the Sassanians and the Khalifat. After the conquest of Persia Herāt took part in the general rising against the Arabs in 'Othmān's reign, and was taken in Ibn 'Amir's expedition in 31 (652). Its importance continued under the Sāmānids, Ghaznavids, and Saljūqs. It suffered greatly under the Mongol invasions. It was taken by Tūli son of Čingiz Khān in 619 (1222) and the Musulmān population massacred. The chiefs of the Kurt family, who were of Tadjik descent, retained possession of Herāt and ruled the surrounding district under Mongol supremacy till 706 (1307) when the Mongols took the town, but Ghīyāth al-Dīn regained the favour of Uljāitū, and restored the prosperity of Herāt. The Kurts held it until its final destruction by Timūr in 785 (1383). The Timūrids under Shāh Rukh made Herāt their capital after Timūr's death, and prosperity began to return to it. Many fine buildings were erected during this period and the town became a centre of art and learning. Shāh Rukh's reign lasted from 807 (1404) to 850 (1447) and after some short reigns Husain Baikarā obtained the power and ruled from 873 (1468) to 913 (1507), and throughout this period Herāt was a great and prosperous centre. Towards the end of his reign the defection of the Arghūns and the invasion of Shaibānī weakened Husain's kingdom, and Herāt was taken by Shaibānī in 913 (1507). Bābar tried in vain to recover it, but it did not remain long in the possession of Shaibānī, who was defeated and slain in 916 (1510) by Shāh Ismā'il who had just founded the Ṣafawī dynasty and established the Shī'a creed in Persia. He enforced it with severity in Herāt, which had hitherto been Sunnī. Henceforward Herāt remained under Persian rule, but did not enjoy security at first, for it was sacked by the Shaibānids under 'Ubaid Allāh in 941 (1538). After the decay of the Ṣafavid rule Herāt was included in the kingdom of the Durrānis under Aḥmad Shāh and his descendants who held it even after they had lost the

rest of Afghānistān. Maḥmūd Shāh was succeeded by his son Kāmran who was murdered in 1258 (1842). The Persians had long had designs on Herāt and were, it has been supposed, encouraged by the hope of Russian assistance. In 1837 Muḥammad Shāh Kādjar besieged Herāt. The defence was organized by E. Pottinger, a young English officer, and after the siege had lasted a year it was abandoned. After Kāmran's death however in 1258 (1842) the Persians renewed their attack and this time with success. The town remained in their possession till 1280 (1863) when Dōst Muḥammad retook it, dying himself while in camp before its walls. During the wars between Shēr 'Alī and his brothers Herāt remained faithful to him and was held by his son Ya'qūb. After Shēr 'Alī's death and the accession of 'Abd al-Raḥmān another son of Shēr 'Alī 'Aiyūb still held Herāt and there collected an army with which he attacked the English force at Kandahār. 'Abd al-Raḥmān fortified the town strongly in 1885 during the events which followed the Boundary Commission of that year, and it was during this process that the Maṣallā was destroyed as Holdich has related.

AL-HEREWĪ, ABŪ ISMĀ'IL 'ABD ALLĀH B. MUḤAMMAD B. 'ALĪ B. MUḤAMMAD B. AḤMAD B. 'ALĪ B. DĪA'FAR B. MANŠŪR B. MATT AL-ANŠĀRĪ AL-HEREWĪ AL-ḤANBALĪ, a descendant of Abū Aiyūb al-Anšārī, was born in 396 (1005) in Kuhandiz, the Kaṣaba of Herāt, and died there in Dhū 'l-Hidjja 481 (1089).

He visited Baghdād and al-Raiy and attended the lectures of Abū 'l-Faḍl Muḥammad b. Aḥmad al-Djārūdī, the expositor of the Qur'ān Yahyā b. 'Ammār al-Sidjzī, Abū Dharr al-Herewī etc. His most notable pupils were Abū 'l-Waqt 'Abd al-Awwal b. 'Isā al-Sidjzī, Abū 'l-Faḍl Muḥammad b. Ismā'il al-Kāfī. He was a great traditionalist, a defender of Ḥanbalī orthodoxy and a bitter opponent of the *bid'ā*; he was further an expositor of the Qur'ān and an inspired preacher, he had also a sound knowledge of history, literature, theology and Ṣūfism. He was banished for a time to Balkh for his continual warfare on the enemies of the Sunna, and was five times threatened with death. Accused of anthropomorphism, he only owed his escape to his devotion to the Qur'ān and Sunna.

He it was also who induced the people of Herāt to use names of the form 'Abd combined with a divine attribute.

Of his works the following have survived: 1. *Kitāb Manāzil al-Sā'irin*, Ṣūfī treatise, Berlin, *Verzeichn.*, n^o. 2826—2827, Brit. Mus., *Cat. Cod. Orient.*, n^o. 753, Ind. Off., Loth, *Catal.*, n^o. 599, Bibl. Khed., *Catal.* vii. 556; 2. *Kitāb Dhamm al-Kalām wa Ahlihi*, against speculative theology, Brit. Mus., 1571; *Ṭabaqāt al-Ṣūfiya*, a collection of Ṣūfī biographies, an improved and extended edition of Abū 'Abd al-Raḥmān Muḥānī-

mad b. al-Husain al-Sulamī's work, also preserved in the Persian translation of Mir al-Dīn 'Abd al-Rahmān b. Aḥmad al-Djāmī (*Nafahāt al-Uns min Ḥaḍarāt al-Kuds*).

Bibliography: Dhahabi, *Tadhkirat al-Huffāz*, Haidarābād, n. d., iii. 375; Suyūṭī, *Tabaḥāt al-Huffāz*, Gottingae 1833, xiv. 27; do., *Tabaḥāt al-Mufasssīrīn*, Leiden 1839, n^o. 45; Brockelmann, *Gesch. d. ar. Litt.* i. 433.

(MOH. BEN CHENER.)

HERĪ (OR HARI) RŪD, a large river in Afghānistān which rises in the Kōh-i Bābā and flows westwards through a long narrow valley between the Siyāh Būbak and Sufed Kōh Mts. to Herāt and Ghōriān, where it turns to the North. At Zu 'l-fikār it leaves Afghan territory and flows by Sarakhs into the Tedjend oasis where it finally disappears, the water being mostly used in irrigation. It forms the boundary for part of its lower course between Persian territory on the left bank and Afghānistān and Turkistān on the right.

Bibliography: Holdich, *The Gates of India*. (M. LONGWORTH DAMES.)

HERSEK i. e. Herzegowina. [See BOSNIA.]

HIBAT ALLĀH b. MUHAMMAD b. AL-MUTṬA-LIB, MAJID AL-DĪN ABU 'L-MA'ALĪ, vizier of the caliph al-Mustaḥhir. Hibat Allāh was appointed vizier in Muḥarram 501 = Aug.-Sept. 1107 but dismissed in Ramaḍān at the instigation of the Saldjūk Sultān Muḥammad b. Malikshāh. The caliph restored him his office soon after on condition that he pledged himself not to take any *dhimmī* into his service, but he was again dismissed in 502 = 1108-1109 or 503 = 1109-1110 and forced to seek asylum for himself and his family with the Sultān.

HIDĀD (A.). A widow's mourning garment. [See 'IDDĀ.]

HIDJĀ' (A.), a lampoon. "The *hidjā'* is originally a charm or curse; the word itself, the etymology of which is not quite clear, perhaps means something like incantation. The origins of the *hidjā'* are connected with the old notion that words solemnly uttered by individuals qualified or authorized to do so have a permanent effect on the persons or objects to which they refer. In the original *hidjā'* the poet thus appears with the magic power of his verse inspired by the *Djins*". Goldziher, *Abhandlungen zur Arab. Philologie*, i. 27 sqq., who gives the words of Balaam as the oldest example of *hidjā'* and *op. cit.*, p. 69, note 4 compares the Arabic word with the Hebrew *ḥit'at* (Is. viii. 19). The *hidjā'* as a branch of poetry was particularly cultivated by the Arab poets; several poets were masters in this kind of verse but *Djarir* [q. v.] may be awarded the palm.

HIDJĀB (A.), any partition which separates two things; whence in medicine the diaphragm (Abu 'Abd Allāh al-Khwārizmī, *Mafātīḥ al-'Ulūm*, p. 156; P. de Koning, *Trois Traités d'Anatomie*, p. 350. 816). — In the *Qur'ān* it has the sense of "curtain, veil", e. g. one should speak with women from behind a curtain (*Sūra xxxiii. 53*); in the next world the elect and the damned will be separated by a curtain (*vii. 44*); the term here seems to be synonymous with *al-a'rāf* and was therefore early explained as "wall" (*Tabarī, Tafsīr*, viii. 126; Baiḍawī, ii. 326) in allusion to *Qur'ān*

lviii. 13. The unbelievers said to the Prophet: "There is a *hidjāb* between thee and us" (*xli. 4*). It is not possible for a man to hear God speaking unless by a revelation or from behind a curtain (*xlii. 50*), as was the case with Moses (*Asbāt*, according to al-Suddī; *Tabarī, Tafsīr*, xxv. p. 45). Among the mystics *hidjāb*, meaning "all that veils the end", signifies the impression produced on the heart by the phenomena constituting the visible world, which prevents it admitting the revelation of truth (*Djurdjānī, Définitiones*, p. 86; 'Abd al-Razzāk, *Technical Terms*, p. 35, n^o. 116). The passions (*nafs*) are the main cause of the obscurity; but each limb has a special passion that gives rise to a particular veil; substances, accidents, elements, bodies, forms, and qualities are so many veils which conceal divine secrets. The higher truth is hidden from all men except saints (*walī*) alone. The opposite of *hidjāb* is *kashf*; the condition of soul in the former case is called *ḥabq* (contraction) in the second *basf* (expansion). Mystic love (*wadīd*) is aroused on account of the obstacle opposed to it in the first case (occultation), and satisfied by contemplation in the second (revelation). These expressions are borrowed from the Gnostics (*Pistis Sophia* in E. de Faye, *Gnostiques et gnosticisme*, 1913, p. 269).

Bibliography: 'Alī b. 'Othmān al-Djullābī al-Hudjwī, *Kashf al-Mahdīyūb*, transl. Nicholson (Gibb Memorial), p. 48, 149, 325, 374, 414; Hirschfeld, *New Researches into the Exegesis of the Qur'an*, p. 43. (CL. HU'ART.)

AL-ḤIDJĀZ, a territory in Arabia on the Red Sea, with indefinite boundaries, which is at once understood when we reflect that the word *hidjāz* means 'barrier' and is applied in Arab topography to the mountains of Sarāt, which shut off the highlands (Nedjd) from the flat coastlands (Tihāma). As the name of a district, *Ḥidjāz* is limited to that part of the west coast, which does not belong to Yemen, to be more exact, to that stretch of land which extends from 'Akra to al-Iḥh on the Red Sea with the corresponding hinterland. Neither the highlands of 'Asīr [q. v.] in the south nor the ancient land of Madyan and Ḥisām in the north belong to the *Ḥidjāz* proper, although they are often included in it, cf. above i. 367 *infra* sq. In the Turkish administrative system, the *Ḥidjāz* is a wilāyet whose capital is Mecca, and is divided into 3 sandjaks, Mecca, Medina and *Djidda*. Although this division was never actually carried out in detail and the Turkish institutions and officers existed for the most part on paper only, it is useful as establishing the area of the *Ḥidjāz* proper. Recently however the Porte has made the sandjak of Medina into an independent mutasarrıflık which is governed by the *Shaikh* al-Ḥaram and a Muḥāfiz, the commander of the Turkish troops. For further information see the article MEDINA.

Al-Ḥidjāz consists of two very different parts, the flat, barren and hot coast land (Tihāma) and the mountainous hinterland. In Tihāma, which is almost devoid of vegetation — for there are no large wādis in this part of Arabia — the few permanent settlements are on the coast, with the exception of Mecca, which owes its existence to the ancient holy places there (e. g. the Zamzam well). On account of the many coral banks there are no good harbours on the coast, only more or less available anchorages, which in ancient times suf-

ficed for small ships and were then more visited than at the present day. Some, like Leukekome, which Sprenger has recognised in al-Ḥawīā², and Dīār [q. v. i. 1016^b], the ancient harbour of Mecca, are now quite deserted, while on the other hand Vanbu^c [q. v.], the present harbour, and particularly Dījidda [q. v. i. 1041], have developed into important towns on account of the pilgrims landing there. The scanty population is in general dependent for its livelihood on fishing.

The mountainous hinterland is in places not unfertile, for example in the volcanic district of Medina and particularly in the beautiful oasis of al-Ṭāʾif [q. v.] which from ancient times has been a favourite summer resort of rich Meccans on account of its wealth of fruit and its cooler climate. The hills themselves, the Djebel Karā east of Mecca, reach a height of 6000—6500 feet. The highest are the hills of al-Ṭāʾif (6168 feet) and Djebel Raḍwā west of Medina (5900 feet). Only the date-crops are of any importance; the land would not be able to sustain its inhabitants if imports from Europe, Egypt and India did not come to its help. The exports are insignificant.

The Ḥidjāz owes its real importance to the two holy cities, Mecca and Medina, which occupy quite a special position in the Muslim world and will be dealt with in special articles. In addition to the coast-towns and al-Ṭāʾif already mentioned, the Arab geographers give the following, Kōih, Khaibar [q. v.], al-Marwa, al-Ḥawrā², al-Sukyā, al-Awnid, al-Djuhfa, and al-ʿUshaira and of minor importance Badr [q. v.], Khulais, al-Ḥidjr [q. v.], al-Suwārikiya, al-Fur^c, al-Saira, Djahala, Mahāyī and Ḥadha. Besides these there is a fairly long list of names, which owe their fame to the circumstance that Islām has consecrated them — when they were not already sites of primitive cults — either through historical associations or as outposts of the sacred territory (*ḥaram*) of Mecca. It would be useless to detail these here; when they are of sufficient importance for religious reasons they will be found either in the articles MECCA and MEDINA or in special articles.

The population of al-Ḥidjāz consists of Arab Bedouins, except in the large towns where it is more or less mixed, particularly in Dījidda, less in Mecca itself. The old Arab tribal names Thāmūd [q. v.], Aws [q. v.], and Khazraj [q. v.] in Medina, Kuraish [q. v.] in Mecca, have their place in history while Thaḳif [q. v.] and Hudhail [q. v.] are still known as the inhabitants of Ṭāʾif and the southern Ḥidjāz. We may also mention Bali [q. v.], Djuhaina [q. v.], Sulaim [q. v.], Hutaim [q. v.], and Ḥarb [q. v.].

The various pilgrim-routes which meet in Mecca have lost most of their former importance with the development of steamships, which has caused the majority of pilgrims to travel via Dījidda, and will be still more deserted when the Mecca railway, which now runs from Damascus to Medina reaches the holy city. Cf. M. Hartmann, *Die Mekkah in Orient. Literaturzeitung*, 1908, p. 1 sqq.

The history of the Ḥidjāz is the history of Mecca and Medina so that the reader may be referred to these articles.

Bibliography: Cf. the notes above i. 372^b on the geographical literature of Arabia and also the bibliographies to the articles on MECCA and MEDINA. Of recent literature we may mention al-Batanūni, *al-Rihla al-Ḥidjāziya*², Cairo 1329;

ʿAbd al-Muḥsin, *al-Rihla al-Yamaniya li-Ṣāhib al-Dawla Ifusainpūshā, Amīr Mekka*, Cairo 1330, and Lammens, *Le Berceau de l'Islam*, p. 9 sqq.

AL-ḤIDJR (HADJER, HADJSCHER, HODSCHER, AL-HIEGR in Ritter) a town in Arabia, a day's journey from Wādī l-Kura [q. v.] south of Taima [q. v.] identical with the ancient commercial town of *Ḍyzz* in Ptolemy and *Egra* in Pliny. The town no longer exists. At present the name al-Ḥidjr is given by the Bedouins to the flat valley between Mabrak al-Nāka (Mazham) and Bir al-Qhanam which stretches for several miles and has a fertile soil with many wells at which numerous Bedouins encamp with their herds. Two roads lead from al-Ḥidjr to Mecca, the Nadjd road, the modern pilgrim route, and the Marw road, which was in ancient times the road followed by the pilgrims to Mecca. To the west of al-Ḥidjr is a mountain of five isolated sandstone cliffs, called *Athālith* (in Doughty, *Travels*, always written *Ethlib*), on which are carved a large number of artistic monuments (including the Kaṣr al-Bint, Bait al-Ḥaikh, Bait Akhramāt, Maḥall al-Madīlis, and Diwān, which are adorned with numerous sculptured figures of birds and animals and many inscriptions). Ch. M. Doughty, the first European to visit Ḥidjr (1876-1877) and to examine closely the cliffs with their carvings, found the latter (except one, the Diwān) to be exclusively tombs (family vaults) with niches and remains of human bodies. Pilgrims going to Mecca rest on Mount *Athālith* for a day and offer up prayers here. In ancient times there lived here a godless and arrogant cave-dwelling people, the *Thāmūd* [q. v.], of whom it is related in the *Kurān* that they hewed their houses out of rock. To convert them God sent a kinsman of theirs, the prophet Ṣāliḥ [q. v.], to them, who made a camel and her young one arise out a cleft in the rock as evidence of his divine mission. But when they continued in their idolatry and slew the camel which Ṣāliḥ begged them to spare, God sent an earthquake which destroyed them. The sandstone cliffs of al-Ḥidjr with the monuments carved in them are also called *Mawāʾin Ṣāliḥ* "Salih's towns" after Ṣāliḥ. According to the Arab legend, the patriarch Abraham, by Gabriel's command, abandoned Hagar and her son Ishmael in al-Ḥidjr. Ishmael is also said to be buried here beside his mother. Al-Ḥidjr also finds a place in the history of the Prophet. When Muḥammad was going through Tabūk towards Damascus in the year 9 (631) he came with his army into the neighbourhood of al-Ḥidjr. The troops wanted to rest here to refresh themselves at the wells but the Prophet would not allow them to enter this place that had been visited by the wrath of God. In modern times the Wahhābī chief Saʿūd wished to build a town here but the scheme fell through on account of the vehement objections of the *ʿulamāʾ* to rebuilding on a site cursed by God. Ḥidjr, since Doughty's visit, has been twice visited by the Alsatian C. Huber, in 1879 and again (with Euting) in 1884.

(J. SCHLEIFER.)

AL-HIDJR, a district in Arabia near Bisha [q. v.] and the land of the Khath'am. It is called after Hidjr b. al-Azd. The land of al-Hidjr was very fertile and rich in fields of wheat and barley and had many fruit-trees (apples, peaches, figs, plums and almonds). Among the clans of Hidjr Hamdānī mentions the 'Amir (with the subdivision 'Abd), Aṣābigha, Rabī'a, Ṣhahr (with the divisions al-Asmar, Bal-Hārith, Mālik, Naṣr and Nāzila). Among places in the land of al-Hidjr he mentions Ashdān (very important), al-Bāha, Djahwa (the largest town in al-Hidjr), Ḥalabā, al-Khaḍra', Naḍḍa, Raḥab, Zunāma, among wādīs Aid, Bāḥān, Dhābub, 'Ibīl (with the village of Ḥubal), Ḳarīb, Khāt, Nihyān (with many fruit-trees) Rayamā, Sadawān and Tanūma (with 60 villages).

Bibliography: Hamdānī, *Djazīra*, (ed. Müller), p. 70, 22; 121, 10—123, 4; 217, 13. (J. SCHLEIFER.)

HIDJRA, the name of a village (indeed of several) in South Arabia which is exclusively inhabited by *Sāda* or *Aṣḥāf* ("lords", "notables", descendants of the Prophet) and is considered sacrosanct. These villages (e. g. Ḥaifa in Arḥab [cf. ḤASHID and BAKIL]) may not be overrun in war. The members of the Hidjra, who are chiefly judges (*kuḍāt*) and jurists (*fukahā*) receive from the tribe to which they belong a certificate of their membership of the Hidjra and enjoy great esteem, which surpasses that of a *ṣhaikh*. Individual members are also found scattered throughout the villages as writers and preachers.

Another Hidjra different from the preceding is that of Djebel Dīn (see ḤASHID and BAKIL) of a more monastic character, whose members attend to the tomb of the saint (*walī*) Ḳudam b. Ḳādim on this hill. Cf. also the article *ḤAWṬA*.
